**1979-1980 Institute Calendar**

### Fall Quarter - 1979-80
- **June 11-August 17** - CCE Mail-in Registration for Fall
- **June 11-August 31** - CCE Walk-in Registration for Fall
- **September 4, 5** - CCE Open Registration
- **September 5-9** - Move-In Day - New Resident Students
- **September 7** - New Student Registration, Day College
- **September 7, 8** - Graduate Registration
- **September 8** - Returning Student Registration, Day College
- **September 10** - Non-Matriculated Student Day College Registration
- **September 10** - Classes Begin - Day and CCE
- **September 11** - Physical Education Registration
- **November 15** - Last Day of Classes (Day College)
- **November 16, 17, 19, 20** - Exam Week
- **November 20** - Last Day of Classes (CCE)
- **Nov. 21 - Dec. 2** - Fall/Winter Break

### Winter Quarter - 1979-80
- **October 29 - Nov. 9** - CCE Mail-in Registration for Winter
- **October 29 - Nov. 20** - CCE Walk-in Registration for Winter
- **December 3** - Day College Registration (Undergraduate and Graduate)
- **December 3** - First Day of Classes (CCE)
- **December 4** - Non-Matriculated Student Day College Registration
- **December 4** - First Day of Classes (Day College)
- **December 5** - Physical Education Registration
- **December 22** - Last Day of Classes Before Christmas Break
- **January 7** - Classes Resume After Christmas Break
- **February 5** - Teaching Effectiveness Conference
- **February 6** - Last Day of Classes (Day College)
- **February 26** - Last Day of Classes (CCE)
- **Feb. 27, 28, 29** - Exam Week
- **March 1** - Last Day of Classes (CCE)
- **March 2-9** - Winter/Spring Break

### Spring Quarter - 1979-80
- **Feb. 4-Feb. 15** - CCE Mail-in Registration for Spring
- **Feb. 4-Feb. 29** - CCE Walk-in Registration for Spring
- **March 4, 5** - CCE Open Registration
- **March 10** - Day College Registration (Undergraduate and Graduate)
- **March 10** - First Day of Classes (CCE)
- **March 11** - Non-Matriculated Student Day College Registration
- **March 12** - First Day of Classes (Day College)
- **March 12** - Physical Education Registration
- **May 19** - Last Day of Classes (Day College)
- **May 20, 21, 22, 23** - Exam Week
- **May 24** - Last Day of Classes (CCE)
- **May 24** - Commencement
- **May 25-June 1** - Spring/Summer Break

### Summer Quarter - 1979-80
- **April 28 - May 9** - CCE Mail-in Registration for Summer
- **April 28-May 23** - CCE Walk-in Registration for Summer
- **May 27-28** - CCE Open Registration
- **June 2** - Day College Registration (Undergraduate and Graduate)
- **June 2** - First Day of Classes (CCE)
- **June 3** - Non-Matriculated Student Day College Registration
- **June 3** - First Day of Classes (Day College)
- **June 6** - Physical Education Registration
- **July 4** - Holiday (No Classes)
- **August 12** - Last Day of Classes (Day College)
- **August 13, 14, 15** - Exam Week
- **August 16** - Last Day of Classes (CCE)

### Dates of Various Summer Sessions to be announced.

### Registration Schedule for Day College - 1979-1980

The main entrance, more commonly known to RIT folks as “The Circle,” contains the George Eastman Memorial Building which houses the seven-floor administrative tower, the College of Business and the offices of Institute College. The College-Alumni Union, center of constant and varied activity, is just out of the photo’s left-hand edge, and the George H. Clark Memorial Gymnasium, Frank Ritter Memorial Ice Arena and Edith Woodward Memorial Pool are directly behind the spot from which this picture was made.
About this bulletin—

The RIT Undergraduate Bulletin does not constitute a contract between the Institute and its students on either a collective or individual basis. It represents RIT’s best academic, social, and financial planning at the time the Undergraduate Bulletin was published. Course and curriculum changes, modifications of tuition, fee, dormitory, meal and other charges, plus unforeseen changes in other aspects of RIT life sometimes occur after the bulletin has been printed but before the changes can be incorporated in a later edition of the same publication. Because of this, Rochester Institute of Technology does not assume a contractual obligation with its students for the contents of this Undergraduate Bulletin.

RIT admits and hires men and women, veterans and disabled individuals of any race, color, national or ethnic origin, or marital status, in compliance with all appropriate legislation, including the Age Discrimination Act. The compliance officer is James Papero.

General Information and Undergraduate Study 1979/80

Rochester Institute of Technology
4 Introduction

RIT at a Glance

A Data Capsule

Location
Main campus in the suburban town of Henrietta, New York, integral part of the Rochester metropolitan area of about 700,000 people; Metropolitan Center in downtown (urban) Rochester proper, and the Eisenhower College campus in rural Seneca Falls, New York

Type
Private, coeducational, non-sectarian

Orientation
Science, technology, the fine and graphic arts, management, selected social professions, with strong emphasis on professional competency

Size
Full-time equivalency enrollment in fall, 1978 was 8,706 students

Calendar
RIT operates on the quarter plan, each quarter being 11 weeks in duration. Many classes also are available during the Summer (see current Official Institute Calendar, inside the front cover of this Bulletin).

Degrees
Associate in Arts (AA), Associate in Science (AS), Associate in Applied Science (AAS), Bachelor of Fine Arts (BFA), Bachelor of Science (BS), Bachelor of Technology (B. Tech), Master of Business Administration (MBA), Master of Engineering (ME), Master of Fine Arts (MFA), Master of Science (MS), Master of Science for Teachers (MST)

Facilities
Recently completed $140 million campus with complete academic and sports facilities; includes indoor ice rink and pool

Housing
Residence halls for single students, with on-campus apartments and townhouses for married students

Sports
Full intercollegiate sports schedule, as well as intramural and recreational programs

Other cocurricular activities
Fraternities, sororities, professional and honorary societies, special interest clubs, service organizations

Alumni
37,000 in all 50 states and worldwide

Placement
The Institute makes every effort to help students find employment, both during school and after graduation. The Placement Office acts in four principal areas as a liaison between employers and those students seeking positions. These areas include: part-time jobs on campus and within the community, summer work, cooperative employment, senior and alumni placement.
What Is RIT?

Observing this year its 150th anniversary, Rochester Institute of Technology is a privately endowed, coeducational, non-sectarian major institution of higher education; its principal task is preparing students for technological competence in a world of change.

RIT is composed of 10 colleges: Business, Continuing Education, Eisenhower College, Engineering, Fine and Applied Arts, General Studies, Graphic Arts and Photography, Science, the federally-funded National Technical Institute for the Deaf, and Institute College (engineering technologies, computer science, packaging science and other career fields).

As the information contained in these pages shows, RIT offers a variety of master's, bachelor's and associate's degrees, as well as certain certificate and diploma programs. Some of these offerings are unique or unusual: packaging science, nuclear medicine technology, printing, photographic science, and the programs of the School for American Craftsmen and the previously-mentioned National Technical Institute for the Deaf (NTID).

Many of the programs are Co-op, a formal program of campus study augmented by work off campus in the student's chosen field. Pioneered by RIT in New York State, the cooperative educational concept epitomizes the Institute's "learn by doing" philosophy. During the past academic year, nearly 2,000 students in business, engineering, science, engineering technology, printing and computer science and technology, alternated academic quarters with work quarters during their last two or three undergraduate years.

RIT's students reflect the diversity of its programs. They come from almost every state in the union and many foreign countries. Forty per cent transfer from two-year colleges or other four-year institutions. Older and part-time students are comprising a greater and greater proportion of the total enrollment.

The percentage of women also is increasing; today more than a quarter of the Institute's students are female.

An increasing number of RIT alumni are entering graduate schools, but RIT maintains its focus on preparation for moving directly into professional occupations. RIT continues to place basic emphasis upon teaching as the essential responsibility of the faculty. In support of this are such activities as an Institute Committee on Effective Teaching and individual and group projects to improve teaching productivity. However, faculty are engaged also in research and other scholarly activities.

The Institute's alumni number 37,000 in every state and worldwide. RIT's modern campus in Henrietta, south of Rochester, occupies 400 acres on a 1,300 acre site. It houses complete academic and sports facilities, including an indoor ice rink and Olympic-size swimming pool. The academic/administrative complex of 13 buildings, which has received several architectural awards, is arranged as three adjacent quadrangles. The residential complex of 16 interconnected buildings is reached by a quarter-mile mall past tennis courts and playing fields. Adjacent to the residential area is the NTID academic/residence complex, completed in 1974.

Many of the Institute's full-time day students live in Institute-operated residence halls. Three apartment villages with a total of 579 units house married students and upperclassmen.

With its comparatively small campus in Seneca Falls, RIT's Eisenhowe College offers students a rural life-style distinctly different from the other Institute facilities. Chartered in 1965 and opened in 1968 as the national memorial to former President Dwight D. Eisenhower, the College is situated on the west shore of Cayuga Lake, on the southeastern side of the upper New York State village. The community of approximately 9,000 persons is near the Montezuma National Wildlife Refuge and within an hour's driving distance of Syracuse, Ithaca and Rochester. The Institute maintains its Metropolitan Center at 50 West Main Street in downtown Rochester. The College of Continuing Education offers day and evening courses in which students pursue a range of aspirations from hobbies to master's degrees. More than 1,200 students are currently advancing their educational, vocational, and avocational objectives at the Metropolitan Center. Besides its curricular uses, the Metropolitan Center provides many technical and community service programs.

An ongoing intent
When the Rochester Athenaeum was founded in 1829, its intent was to prepare students for "the making of a living and the living of a life." One hundred and fifty years later, RIT's seventh president, Dr. M. Richard Rose, continues to articulate that purpose: "This saying speaks of making a living and living a life not as two distinct processes, but as one. It is an idea that is central to the type of education that we do best here at RIT."
Enrollment in other than registered or otherwise approved programs may jeopardize a student's eligibility for certain student aid awards. All the above programs are registered according to the indicated HEGIS* code.

NOTE: For information on offerings of the College of Continuing Education, Eisenhower College or the National Technical Institute for the Deaf, please write to that respective college for its Official Bulletin or catalog.
Career Education
Is a ‘Very Old New Idea’ at RIT

RIT’s particular philosophy of education is called career education.

And today, a lot of institutions of higher education are trying to convince you it’s the hottest-and newest-thing down the educational pike in a long time.

Nonsense!

An interest in career education has characterized RIT from its beginnings. With the establishment in 1885 of the Mechanics Institute, a predecessor of RIT, evening courses were offered for workingmen who wanted to upgrade their skills in the booming post-Civil War economy. In 1891, Mechanics Institute and the Rochester Athenaeum were consolidated, and over the next decade developed and taught five three-year courses-mechanics, architecture, design, art and teaching. There were evening classes for employed persons and day classes available to homemakers.

When we started career education in the 1880’s, we called it common sense. Our goal then was to prepare graduates for “the making of a living and the living of a life.” And over the years, we’ve developed that philosophy of career education into a science.

Career education? In simplest terms, it’s an education that prepares a student to leave college and go to work doing what he or she wants to do.

At RIT, it’s an education in engineering or fine arts or science or social work or criminal justice or any of the other multitude of programs offered through the nine day and evening colleges.

But it’s an education with a difference.

At RIT, it means our graduates can go directly from here to where they want to be- in the professional world, doing professional work. Or they can choose further study and research in graduate programs.

It means our students develop a technical competence that means something outside the academic world.

And it means we recognize that a lot of people already have careers— but want to further their knowledge. So we have programs and courses of study designed to accommodate these special needs.

Career education a new idea? Maybe some places.

But at RIT, where we’ve made a career out of career education, it’s the oldest young idea around.
RIT’s History Mirrors the Growth Of the Rochester Community

From their origins 150 years ago, the Athenaeum, the Mechanics Institute and RIT have been closely linked with the community.

Professor Dane Gordon of the College of General Studies is writing an official history of the Institute.

Professor Gordon recently talked about some materials from his work which exemplify the Institute’s contribution to local, state, and national history.

Contributions to general education in Rochester: the early years
The Village of Rochesterville was only 12 years old when the Athenaeum was founded in 1829. A community whose population was rapidly growing as a result of the Erie Canal, it needed an educational structure. With Colonel Nathaniel Rochester as its first president, the Athenaeum met in recently built Reynolds Arcade. The few who could afford $5 a year had access to a library of 400 books and many papers and journals from Britain and America.

After Reynolds added Corinthian Hall to the rear of his arcade in 1849, overflow crowds gathered to hear such distinguished lecturers as Richard H. Dana, Horace Greeley, Ralph Waldo Emerson and Oliver Wendell Holmes, and singers such as Adelina Patti and Jenny Lind.

“The Athenaeum,” says Gordon, “succeeded quite well in leading the intellectual life of Rochester.”

The post-Civil War period
The growing number of manufacturers in Rochester created the need for skilled workers trained by some means other than apprenticeship. On Oct. 21, 1885, the Mechanics Institute was organized to provide practical education to better prepare people for their lifetime occupations.

Organizers of the Institute were mainly people from the business community, but there were also several prominent newsmen and men particularly interested in education.

The most loyal supporter and benefactor was Capt. Henry Lomb, the immigrant who had worked his way up to co-director of Bausch and Lomb. Interested in education at all levels, he started a kindergarten class as a branch of the Institute in 1887. The following year the Rochester Board of Education took it over and established kindergarten classes in all its elementary schools. Lomb also started homemaking courses in the Rochester public schools by providing free cooking classes for 11th and 12th graders from 1898 to 1908.

The Mechanics Institute’s fourth president, John A. Randall, noted in 1922 that one of every two families in Rochester were in some way associated with the Institute. Almost 1,000 workers were studying there. Half the art teachers, many manual teachers, and 38 of 42 home economics teachers in the Rochester public schools were Mechanics Institute graduates. “That’s quite an achievement in 37 years,” Gordon comments.

World War I and its aftermath
“The first world war had a long-term and damaging impact upon the Mechanics Institute,” Gordon notes. The Institute supported the war effort with a total commitment. Beginning in 1917 the government sent 250 men to the Institute every 60 days for intensive practical training in such skills as building houses and machines, assembling and disassembling automobiles, occupational therapy, conservation of fuel, and cooking. The cabinet shops in the manual training building were changed to a lens grinding plant for war workers. Near the end of the war all students were placed on a war-time basis to help in farming.

After the war, a large number of handicapped men were sent by the
Community and Campus 9

U.S. Veterans Affairs Bureau to the Mechanics Institute for rehabilitation.

"It was extremely difficult for the Institute to resume its normal academic program," Gordon relates. Equipment needed updating and buildings needed repairs. Younger civilian students had been frightened away by the older and generally rougher returned soldiers. Certain programs, such as the School of Industrial Arts, had been destroyed by the war. Community support in the form of donations of money helped the Institute survive the post-war years.

Links with business and industry

The Mechanics Institute was founded to supply the needs of Rochester industries for skilled workers. Eventually that changed to professional employees, but the link with business and industry has remained a fundamental purpose.

The Institute was the second educational institution in the country to embrace the cooperative education plan in which students complement their classroom studies with periods of employment in their career fields. Co-op, which began here in 1912, remains an integral part of RIT's modern curricula.

In the 1930's the Institute became famous for its job charts, which identified job expectations, responsibilities, and promotional prospects. The educational preparation for the jobs was adapted accordingly.

The Institute's philosophy of career preparation, firm from the beginning, was explicitly established in a declaration of a conference on the Educational Needs of Rochester held in 1922: "The Institute must continuously pass the test of utility in the work lives of its students." Two years later a special commission was appointed by the board of directors to consider the place of the Institute in the educational future of the community.

Granddaddy of the AAS degree in New York State

In the 1940's New York State established a number of Institutes of Applied Arts and Sciences as its old 'ag and tech' institutions. After RIT (the name had been changed to Rochester Institute of Technology in 1944) in 1950 became the first institution in the state to receive approval to grant the associate in applied science degree, the state's assistant commissioner for higher education asked for someone from RIT to evaluate the state schools.

The College of Continuing Education

The Athenaeum began as an evening school, and the College of Continuing Education keeps up that tradition. From its earliest years the Institute accommodated students who took only a course or two at a time.

The National Technical Institute for the Deaf. The Institute's new campus in Henrietta, its diversity of technical professional curricula, and its philosophy fit well with the purpose of NTID to determine means for incorporating deaf students into a non-deaf world.

"The purpose of RIT had long been to help any student relate better to his environment both professionally and socially," Gordon says. "It was the guiding principle in 1885, repeated and acted upon many times since."

Eisenhower College

On March 30, 1979, members of the boards of trustees of Eisenhower College and Rochester Institute of Technology resolved to have Eisenhower become the tenth college of RIT. The new options which are made available to students by this association of a career oriented institute and a liberal arts college still are unfolding. In addition to the numerous programs available through RIT, Eisenhower currently offers study in the humanities, social sciences, and math and science. The foundation for the four-year programs offered by Eisenhower is the World Studies Core.

The Rochester Area Community Is A Good Place To Live and Study

Rochester is a good place to live and a great place to go to school. The Greater Rochester area, city and immediate suburbs has a population of about 700,000. Rochester, widely known for its leadership in technology and science, is an ideal location for Rochester Institute of Technology. An international photographic center and the largest producer of optical goods in the United States, Rochester manufactures electronic and communications systems, fine machine tools, signaling devices, dental equipment and a variety of precision instruments. It is a food processing center, and its printing and lithographic houses are widely noted for quality work. These local industries, along with others throughout the nation, have contributed to the Institute's financial support; many have maintained cooperative employment; and all have provided a congenial and sympathetic community atmosphere for RIT. Rochester is a noted cultural center where support of music, art, theater, libraries, and museums is a matter of civic pride. For students of the Institute, this cultural environment is an appreciable advantage.

RIT as an institution is very much involved with the city. So are many of its students and faculty. They use the appropriate people in business, government, and community action groups as resources to strengthen this involvement; they learn about the problems of the city and contribute ideas and talents to the solution of them. Recent examples of class projects are an exhibit interpreting plans for future transportation systems serving greater Rochester and a multimedia presentation aimed at developing public support for revitalizing the downtown business district.

Institutional Advancement Division provides a link with the community. The Institutional Advancement Division at RIT is responsible for building bridges between campus and community. It keeps the community informed of significant programs and activities on campus and tells interested audiences-prospective students, donors, employers and others-what they should know about RIT. There are continuing efforts to communicate to the special constituents of Eisenhower College, the National Technical Institute for the Deaf, the Development Department, and the College of Continuing Education.

The division as a whole, working with all the colleges and other staffs, tries to build a concept of the community as a classroom and to build on RIT's long standing reputation as an institution deeply devoted to and involved with the community of which it is a part.
The Main Campus in Henrietta

Is a 1,300 Acre Suburban Site

RIT’s campus in the Rochester suburb of Henrietta has received a variety of architectural awards, and been heralded as one of the most significant building accomplishments in the Monroe County area.

The main portion of the Henrietta campus was completed in 1968. An academic/residence complex to house facilities of the National Technical Institute for the Deaf was completed in 1974. Valued at $140 million, it now occupies some 400 acres of the 1,300-acre site.

The campus is located about five miles from downtown Rochester, on Jefferson Road (Route 252) near the Ballantyne Bridge.

The third-largest city in New York State, Rochester is located in the Finger Lakes Region midway between Buffalo and Syracuse, within easy driving distance of Toronto, (Ontario, Canada), one of North America’s most exciting cities. The area boasts ski centers, golf courses, fishing streams, state parks, hunting ranges and international road races.

The Institute is only a short distance from shopping centers, motels, the New York State Thruway (Interchange 46), and Rochester’s major expressways. There is regular transit to the campus, and ample free parking is available.

RIT’s Metropolitan Center, located in the heart of downtown Rochester at 50 W. Main Street, is easily reached by public transportation.

The campus as presently developed has an academic/administrative complex of 13 buildings arranged in three adjacent quadrangles. The residential complex of 16 interconnected buildings is reached by a quarter-mile mall past the tennis courts and playing fields. Adjacent to this is the NTID academic/residence complex.

The main campus includes nearly 1,300 acres of land and will provide for the growth and development of the Institute for many years to come. Present buildings will enable the Institute to increase its combined enrollment in both day and evening divisions to about 20,000.

A campus map is located inside the back cover of this Bulletin.
"We have reached the place in our project where it is physically impossible for everyone to decide everything, and for that reason I urge that you go ahead..."

These were the words that set in motion the major decisions on art works for the RIT campus. They were written by Dr. Mark Ellingson, former RIT president, in the midst of those hectic, energy-absorbing days of building the present RIT campus in the 1960's.

Arthur L. Stern, then chairman of the Board of Trustees; his wife, Molly; and Mrs. Vanderbilt Webb, chairperson of the American Crafts Council and a member of the Honorary Board of Trustees, accepted the responsibility for choosing the 17 major art works on campus. They were aided by Harold J. Brennan, then dean of the College of Fine and Applied Arts, and Harris Prior, past director of the Rochester Memorial Art Gallery.

Working with a budget that was set at one per cent of the total cost of building the campus, they selected an impressive collection, including creations by several RIT alumni and faculty.

Some works, like the two wall murals in the Eastman Building by noted artist Josef Albers, became inextricable parts of the buildings they enhance. Others, like the bronze sculpture by Henry Moore, have been moved from their original locations to fresh viewing places.

In addition to the major collection, there are about 600 art works acquired over the years by the Institute, including portraits of the founders and benefactors, prints, paintings, and drawings by faculty, students and others, and even a Walt Disney original cartoon.

Many of these can be found throughout campus in offices, reception areas, and meeting rooms. Some are kept in storage in the College of Fine and Applied Arts, available for viewing upon request.

People on campus are collectors, too, and private offices and desks show everything from a Dr. Seuss drawing to a model of an 1879 railroad locomotive, to Etruscan vases.

All in all, this institution, begun 150 years ago as a cultural center, pays ample tribute to its historic interests in the arts.
Jose de Rivera’s stainless steel sculpture (facing page) is located on the quadrangle between the Wallace Memorial Library, the College of General Studies and the College of Engineering; the abstract form is based on the Mobius strip discovered by 19th century German mathematician August Ferdinand Mobius; the strip consists of a band that has been given a half twist before joining the ends together, resulting in a look of one continuous edge and one plane.

Henry Moore’s three-piece sculpture (top photo)—one of seven bronzes cast from the same mold—represents one of the artist’s consistent themes, the reclining figure; it has been moved twice and stands now at the entrance to the Max Lowenthal Memorial Building. RIT Professor William A. Keyser, Jr. (above, left) of the School for American Craftsmen poses with some of his ecclesiastical art sculptures from wood during an exhibit of his work in the Biever Gallery. At right, Bauhaus Artist Josef Albers came to RIT to supervise personally the painting of the monumental wall murals conceived by him for the main lobby of the George Eastman Memorial Building.
The RIT Student Body’s Only Characteristic Is Diversity

There is no typical RIT student.
And if the student body could be characterized, it would be only by its diversity.
Some of our students have just graduated from high school. Some are transferring to RIT after going to college somewhere else. Some are returning to college after a long period of time.
RIT is an institute where artists of almost every persuasion go to school with accounting majors; where those interested in a career in social work study with those interested in mechanical engineering.
Students have come from every state in the United States and many foreign countries. They come from widely differing economic and social backgrounds.
Yet, despite their diversity, they all have ideas about where they’re going in life.
The latest survey of incoming freshmen and transfers showed that despite their diversity, most RIT students had one thing in common: they wanted a professional/technical career. This is what RIT is all about. Long before the word “career” suddenly became a popular expression, RIT stood solidly behind the idea that education for work—for a job—was worthwhile and sound.
And over the years it built up a lot of experience in moving graduates directly into a career.

Veterans
The veteran, often a little older and usually ready to move directly toward a career goal, will find at RIT a serious purpose in education where he or she can make up lost time with the minimum problems of adjustment. Many programs at the Institute help vets deal with the machinery of the Veteran’s Administration and with the opportunities the government gives them.
Study at RIT is approved under PL89-358 (Readjustment, 1966) PL835 or PL894 (Rehab) and PL634 (War Orphans). For benefits, a veteran may obtain an application for the Certificate of Eligibility from the Veteran’s Affairs Office, located on the first floor of the administration building.

Transfer students
About 45 percent of all full-time students attending RIT transferred from another two-year or four-year college. RIT doesn’t simply absorb them and ignore their previous experience; RIT thinks it’s valuable. So in order to continue building on its excellent relationship with two-year colleges, RIT has established the Center for Community/Junior College Relations. This is an excellent two-way channel for cooperative action. For information on transferring to RIT, see page 24.

Deaf students
The 850 students registered through the National Technical Institute for the Deaf (NTID) make a distinct contribution to the educational processes of the Institute. They are RIT students in every sense: they come from varied backgrounds, they are registered in a wide variety of academic fields and fully share in the extracurricular and social life. Deaf and hearing students often share the same dormitories and sometimes the same room. They play on the same teams, attend many of the same classes. And hearing students also participate in programs for deaf students by interpreting, tutoring, and taking class notes for them. RIT is proud of its share in this national educational effort for deaf people. For more information on NTID see page 154.
RIT takes pride in the diversity of its student body—a diversity actively promoted by the Office of Admission. Women, veterans, middle age students, minorities, international students, commuters and the handicapped are all viewed by Admission Director E. Louis Guard as people with individual needs that require support from RIT’s student services.

“Each of the admission staff members is assigned a particular group of students who may have special needs,” he says. “In addition to daily counseling and recruiting responsibilities, each counselor acts as special advisor and program coordinator for a different group on campus.”

“Arthur C. Friedel keeps in constant contact with the international students on campus, who are here from as far away as Algeria and Taiwan.

The international student population at RIT is steadily increasing due to the unique educational opportunities offered. Graduates return to their respective countries with the knowledge and expertise needed for application to solve economic, technical and environmental problems.

“She actively recruits minority students, conducts special career days for prospective students, and acts as their liaison and advisor once they get here,” Guard relates.

Another admission staff member takes particular interest in women on campus, and is sensitive to the fact that RIT has been viewed as a technical, and therefore male-oriented, institution. “Dorothy Lowe is involved in encouraging women to undertake careers in technical fields, and telling them about the many options open to them,” Guard explains. “We also assist students in locating services they may need on campus—child care, chaplaincy, counseling, or career development assistance.”

The intense involvement of the admission staff allows them to keep in contact with students currently enrolled. Guard points out that although his role as director is primarily managerial, he acts as advisor to a fraternity and still does counseling.

“If we’re going to counsel incoming students intelligently, we all have to be involved with the day-to-day concerns of students who are already here. Our advisory functions keep us in touch,” he remarks. “Plus the input of the students who work with us part-time in the office—they’re great for providing regular feedback.”

The actual admission procedure is another way in which the admission staff maintains personal contact with students. A prospective student can expect the admission staff member who initially interviews him or her to act as a liaison throughout the admission process. The counselor takes personal responsibility for following up on the status of each applicant.

Guard explains that the Office of Admission is more interrelated with other departments. “We work closely with Financial Aid, the Counseling Center, the Learning Development Center, Central Placement, Records and Institutional Research, the NTID Admission Office, alumni, and with each of the colleges so that better communication can be maintained all around. That’s just one of the ways in which we’re trying to make life-and-learning-easier for students as they experience the educational process.”

A native of Geneva, New York, Guard is a graduate of the University of Buffalo.
‘Vets Try Harder’
Coordinator Says

“Because our veterans are a little older and realize the value of an education, they undoubtedly try harder,” says Gene Clark, Coordinator of Veterans Affairs. "They have proven that one’s level of maturity and interest in self-development are key factors in successful completion of one’s goals. Our average veteran at RIT usually has the added responsibility of a family. With this, of course, comes the added financial pressure of maintaining a home, and more often than not, a full-time job. And because of the complexities of governmental regulations and benefit payment,” says Clark, “our veterans have become very dependent on our ability to service their needs. They come to the VA Office for counseling, information, assistance with problems, tuition deferments, and just to say ‘Hello.’

We, for the most part, are all veterans, and feel that having been there makes it easier for those who are to follow.”

The Veteran’s Affairs Office is open daily from 8:30 a.m. until 7 p.m. Monday through Thursday, and until 4:30 on Friday. The coordinator, secretary, veteran’s administrative reps on campus, and work study staff are constantly handling inquiries and assisting veterans with VA related information. With their assistance a veteran can be sure of a steady transition into and through the educational experience.

“Successful contact with our veterans has proven that problems can be effectively dealt with before they have a negative impact on our vets,” maintains Clark, who is concerned that many veterans, and children of veterans, both deceased and disabled, are not utilizing their benefits. “The rates have been increased and length of eligibility increased to 10 years for program completion,” he says.

Gene came to RIT after working as an outreach counselor and education specialist with Veteran’s Outreach. He’s an Air Force veteran and presently serves as a commissioned artillery officer with the U.S. National Guard. His degree in business administration and his military expertise provide a background enabling him to successfully assist veterans and their dependents.
Orientation and Special Programs

Since the Office of Orientation and Special Programs was created, Ann Hayes, director of Orientation and Special Programs, and a number of students have been chipping away at some of the special student’s concerns.

In September of each year, RIT provides incoming students with an orientation program to familiarize them with their new environment. This program includes tours, special workshops, department meetings, parents sessions, and social interaction. The entire week’s events beginning after Labor Day is planned and implemented by a volunteer student group known as the “SOS Committee.”

One of the new dimensions, which was first begun two years ago because of student recommendations, is the Summer Transfer and Advisement Program. This special option is offered in June prior to student enrollment in the fall. It is also open to students who may be starting the following Winter or Spring Quarters as well. All students planning to transfer to RIT are encouraged to apply early in order to qualify for this program option.

During the orientation process, students also are provided a student handbook known as Facts, which contains policies, procedures and helpful survival hints about RIT.

Special attention is given commuter students during the fall orientation program by participation in the two-day commuter live-in. This program provides commuters the opportunity to live in the residence halls for two days and attend special workshops geared to meet their needs as commuters.

In addition to the above, special programs have been developed for married students, international students, and resident students.

The Special Programs aspect of the office concentrates its efforts as a resource area for married students, commuters, and transfer students. This function includes working on an ongoing basis with the representative student groups for the population. Hall of the RIT student population consists of commuters.

RIT has an active Commuter Association and a Married Student organization (married students make up one-third of the commuter population) which have achieved some gains in improving the situation for their constituents. A Commuter Advisory Board and Married Students Coordinating Committee act as liaisons between the office, student organizations, and other administrative offices.

Student committees are exploring academic concerns, social activities, resident-commuter relations, transportation, and communications through the Commuter Association.

The Commuter Association provides a ride board system and an off-campus apartment listing to help commuters who want to coordinate car pools and find places to live. If commuters want to stay on campus for just one or two nights, there are guest rooms in Greek houses to accommodate them.

Quarter contracts are available for the commuter who wants to experience dormitory living when space is available.

Lockers have been installed in the lower level of the College-Alumni Union so commuters have a place to put their belongings. They may register for a locker in the Commuter Lounge.

A new dimension in commuter involvement is the Commuter Council started in 1978. The members represent constituents from the various geographic areas of Monroe County. Those interested in becoming members are welcome to visit the commuter lounge.

Married students living in on-campus apartments receive News and Events, the Institute newsletter, and Reporter, the student magazine. The Talisman Film Festival has scheduled special Saturday afternoon matinees for children of married students.

A commuter-married student lounge was created three years ago and is located in the lower level of the College-Alumni Union. The Commuter Association and the Married Student Organization offices are also located in the lounge area.

Many of the activities for residents and commuters aim to bring the two groups together.

“Each group can learn from the other,” believes Ms. Hayes. “The commuter student knows the city and can invite the resident into a home occasionally. The resident student may know the campus better.” A commuter host program has been started to encourage commuters to invite residents to their homes during holidays and quarter breaks.

The Residence Halls Association and the Commuter Association also host a Winter Quarter Live-In as a follow-up to the Orientation Live-In.

The resident student, Ms. Hayes has observed, usually makes a break from home and develops an independent personality sooner than the commuter.

RIT’s Counseling Center serves about an equal number of residents and commuters. Dr. Richard Marchand, one of the counselors, believes the problems of the two groups are similar, but the commuters’ are exacerbated by the tension of living with parents or being married.

Recognizing that the situations of commuters aren’t unique to RIT, Ms. Hayes doesn’t expect the difficulties to be resolved completely.

“1 hope to lessen the barriers by encouraging more interaction between commuters and residents,” she says. “Commuters will never be as integrated as resident students unless they become more involved in campus activities.”
Co-operative Education Bridges
The Gap from Classes to Careers

Kathy Carpenter (right), an NTID student at RIT, found Cooperative Education employment with the IBM Corporation, during the summer of 1978.

Co-op offers the RIT student the best of two worlds—the world of classroom and laboratory and the world of work. These two elements are combined to provide an education well recognized for its benefits.

A leader in the cooperative education movement since 1912, RIT made a further step in 1977 with the establishment of the Division of Career Education. Working with all colleges and departments at the Institute, the new division will encourage further types of experiential education which help the student in academic studies, at the same time refining his or her career goals.

A further benefit is immediately obvious to the student—the possibility of earning part of one’s college expenses from cooperative employment. In addition, a good track record with one or more employers can be of real assistance in finding a good position after graduation.

Faculty and staff assist the student in identifying the type of experience related to the chosen discipline which will meet career development needs. Application procedures are taught and referrals are made to employment opportunities as they develop. Geographic mobility is strongly recommended to applicants to take advantage of the best openings on a nation-wide basis.

At least 2,000 students will participate in the various programs this year. Many field experiences are developed by RIT counselors and faculty members, but the students must compete for the positions and they are encouraged to initiate contacts of their own with professionals in their field of interest.

The cooperative work blocks are scheduled in the upper division (third, fourth and fifth) years, with the exception of chemistry which starts in the second year. Most students in the Colleges of Business, Engineering, Science, and Institute College follow the pattern of alternating between single blocks of full-time studies and full-time work; a double-block arrangement (six consecutive months) is sometimes feasible if convenient for the employer and the class scheduling needs of the student.

Several variations are followed in other departments: The School of Health Related Professions uses a one year internship mode, Social Work and Criminal Justice include a junior year field experience component, the School of Printing and Department of Packaging Science offer optional co-op plans. The above is for illustration; it is not intended to be a complete catalog of possibilities. Applicants should contact the school or department of their choice for further details about the growing opportunities in experiential education.
What Will it Cost?

Payment Procedure/The Estimated Quarterly Bill
Charges at RIT are computed on a quarterly basis. The Institute must receive payment in full for each quarter before registration will be allowed. Any preregistered student whose payment is not received by the due date will not be eligible to register until payment is received. Payments sent by mail should be made by check, payable to Rochester Institute of Technology. Due dates for the 1979-80 school year are as follows:
- Fall Qtr. Aug. 10, 1979
- Winter Qtr. Nov. 5, 1979
- Spring Qtr. Feb. 11, 1980
- Summer Qtr. May 5, 1980

The student should receive the Estimated Quarterly Billing Packet approximately one month prior to the quarterly due date. The packet will contain all the necessary information required to complete the Estimated Bill accurately and quickly. Upon receipt of the Institute’s copy of the Estimated Bill and the student’s payment in full, the Bursar’s Office will process the payment and clear the student for registration.

Students whose college costs are paid by the G.I. Benefit Plan or their employer are required to submit an Estimated Bill accompanied by the proper authorized form. Estimated Billing Packets will be mailed to the student’s permanent address, without exception. In addition, the Estimated Billers will be available at the Day College cashier’s window.

Financial standing
Tuition and fees paid to the Institute cover approximately 60-70 percent of the actual expense of a student’s education. The rest of the cost is borne by the Institute through income on its endowment and from the gifts of alumni and other friends.

Students, former students, and graduates are in good financial standing when their account is paid in full in the Bursar’s Office. Any student whose account is not paid in full will not receive grade reports, transcripts, diplomas or other forms of recognition or recommendation from the institute.

The institute reserves the right to change its prices without prior notice.

Other fees
- Students enrolled in chemistry laboratory classes must purchase Breakage Deposit Cards at $5 each. In most cases the total will not exceed $15 for the year. This requirement applies to students of all departments who are enrolled in chemistry courses.
- Students enrolled in courses requiring the use of the photography chemistry laboratories are required to make a $10 locker key deposit.
- A Residence Halls Association Fee, currently $7, is established by the student governing bodies to be used for the benefit of students in residence. With the first bill, there is also a Security Deposit, explained in the Housing Office information. A late registration fee of $25 is charged to any student who fails to register by the designated quarterly Open Registration Day.

Deferred payment plan
For those students who are not able to pay the amount due by the designated due date, RIT has made arrangements for deferred payment through a local bank. For further information regarding this plan call the RIT Bursar’s Office at (716) 475-6186.

Books and supplies
These vary widely with the program followed, and to some extent the electives chosen. Those having minimal expenses (e.g., sciences, professional photography, a realistic allowance is $600 in addition to cameras (but in photographic sciences and photo finishing, expenses are minimal)).

Additional Expenses
We can tell you what tuition, room, and board, and fees will cost you. But estimates of personal expenses are up to the individual student. When estimating what you’ll spend for a year at college, remember to count travel expenses, clothes, meals not counted in your board plan, and spending money. A typical full-time student would have the following academic year expenses:

<table>
<thead>
<tr>
<th>Service</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tuition</td>
<td>$3,495</td>
</tr>
<tr>
<td>Fees</td>
<td>$42</td>
</tr>

</table>

Note: Books and supplies are not shown in the tables above, since they vary so much with each program. It is, however, essential that they be remembered in budgeting for upperclass years. This is especially true for students in arts and photography.

†Does not include $56 Orientation Fee.

*In cooperative programs, students pay tuition only for quarters at RIT; normally two per year in alternate quarters.
**Students in College of Business attend classes for 11 quarters over the 4-year program. Payments are due for quarters assigned to school, which may differ in time but not in quantity from above chart.
***If printing students elect to follow the voluntary cooperative plan, tuition is charged only for quarters at RIT.

Any undergraduate carrying over 18 quarter credit hours will be charged regular tuition plus $99 for each quarter credit hour over 18.

Tuition for part-time undergraduate students (carrying fewer than 12 quarter credit hours) is at the rate of $99 per quarter credit hour. Student Activity Fee is not assessed.

Note: RIT matriculated day college students taking CCE courses will be charged the day college tuition rates.

A graduation fee of $15 is payable at the beginning of the Spring Quarter of the year in which the student expects to receive an associate’s or bachelor’s degree. The graduation fee charge for those receiving a master’s degree is $20 which also includes rental of the master’s hood.
Refund Policies

Advance deposits are non-refundable.

The acceptable reasons for the withdrawal with refund during the quarter are:

For a full refund
1. Active military service: A student called to active military service during the first eight weeks of the term may receive a full tuition refund. If called after the eighth week, he may elect to complete the course by making special arrangements with both his instructor and department, or to withdraw and receive a full tuition refund. If he withdraws, he will have to repeat the course at a later date.
2. Academic reasons: Students sometimes register before grades for the previous quarter are available. If such a student later finds that he or she is subject to academic suspension, or has failed prerequisites, the student will be given a full refund upon withdrawal. It remains the student’s responsibility to contact his or her department to assure that the withdrawal form and refund are properly processed.

For a partial refund
A partial refund will be made during a quarter if withdrawal is necessitated for one of the following reasons:
1. Illness, certified by the attending physician, causing excessive absence from classes.
2. Withdrawal for academic reasons at the request of the Institute during a quarter.
3. Transfer by employer, making class attendance impossible.
4. Withdrawal for academic or personal reasons at the request of the student, approved by the student’s advisor or department representative, the Institute Coordinator for Academic Advising and the Bursar.

These partial refunds will be made according to the following withdrawal schedule:

During the first week of classes— 90%
During the second week of classes- 75%
During the third week of classes- 60%
During the fourth week of classes- 50%
Fifth and subsequent weeks- no refund

A student is not "officially withdrawn" until he or she receives the student’s copy of the withdrawal form. The date on which a withdrawal form is properly completed shall be the date of "official withdrawal" used to determine the refundable amount.

If a student drops his or her course load from full-time (12 or more credits) to part-time (less than 12 credits) status during the official Drop Period, he or she may contact the Bursar for a refund based on the differential between the full-time tuition payments and the total per credit charge for the part-time load. Courses dropped after the official Drop Period will not result in a tuition refund.

Fees are not refundable.

Appeals Process
An official appeals process exists for those who feel that individual circumstances warrant exceptions from published policy. The initial inquiry in this process should be made to Mr. Richard B. Schonblom, bursar. Matters which cannot be resolved will be referred for further action to Mr. William J. Welch, controller.

Room and board
To complete a withdrawal from RIT, a resident student or non-resident student on a meal plan must check out with Housing and/or Food Service. Refunds, when granted, are from the date of official check-out.

Partial refund schedule:
1. Room
   a) During the first week of classes 90% of unused room charge
   b) During the second week of classes 75% of unused room charge
   c) During the third week of classes 60% of unused room charge
   d) During the fourth week of classes 50% of unused room charge
   e) Fifth and subsequent weeks-No refund

2. Board
   a) During the first four weeks, 75% of unused board charge
   b) After the first four weeks, 50% of the unused board charge

Student Financial Aid
Can Help with the Costs

There are a variety of scholarship, loan, grant, fellowship and other aid programs available to help you pay for your college education. And the best way to find out about them is to check with the RIT Student Financial Aid Office as soon as possible.

The main objective of the Student Financial Aid Office is to help students (including freshmen, transfer, upperclass, and graduate students) and their parents plan for and meet the costs of attending RIT.

While students and parents are expected to contribute to college expenses as their resources permit, RIT’s Student Aid Office can be of special assistance to students whose resources are insufficient to meet the entire cost of attending RIT.

It is RIT’s intent that qualified students will be considered for financial assistance according to financial need. Normally this is arranged as a package of aid, consisting of scholarship, grant, loan and/or employment, in conjunction with outside scholarships such as New York State Tuition Assistance Program Awards and Regents Scholarships or other state awards. The RIT Scholarship Committee bases its award on scholastic achievement as well as need. The full range of Veterans Administration benefits are available.

RIT’s cooperative programs offer participating students an opportunity to make a very significant contribution to their total college expenses— from 40% to 60% during Co-op years—in addition to the valuable experience gained on the job.

Additionally, through the Central Placement Office, there are many part-time positions available to help defray expenses. Those needing the
income from full-time employment should consider attending RIT’s College of Continuing Education evenings.

Inquiries for all types of financial assistance should be directed to the RIT Office of Student Financial Aid.

Scholarships
The RIT Board of Trustees has provided a scholarship fund from which general awards are made to entering freshmen and transfer students. Other scholarships have been provided by the gifts of the alumni and friends, and the income from permanent funds.

Scholarships from these sources may vary in size from $100 to $3,276. The amount of the scholarship and the recipients are determined on the basis of entrance examination data, high school record and the need for financial aid. These scholarships are awarded for one year only. Students receiving scholarship aid may apply for renewal of their scholarship as upperclassmen. Entering freshmen and transfers is contingent upon a cumulative grade point average of 3.00 through the Winter Quarter of the year preceding the one for which the award is requested. In each case the stipend is based on financial need.

A number of industry- or business-sponsored scholarships are available to entering students in specific departments. In some cases the scholarships are restricted to students from a particular geographic area. In general, scholarships of this type are for three to five years of study, and the student must maintain a specified academic average. Scholarships in this category vary in size from $300 to $4,000.

Tuition payment plans
Monthly payment programs are available through a number of commercial banks and agencies. Inquiries regarding these programs should be directed to the RIT Student Financial Aid Office.

Non-residents
There are no additional charges or fees for RIT students coming from states other than New York.

To apply for aid
To be considered for financial aid, a student should be enrolled as a full-time or part-time degree student or have been offered admission as a full-time degree student.

Although applications for scholarship aid aren’t processed until a student has been accepted, a student shouldn’t wait until receiving notification of acceptance to file for aid; this should be done when applying to the Institute.

Students are urged to submit all required admission data to the RIT Admission Office and file a Financial Aid Form with College Scholarship Service no earlier than January 1 of the year prior to entrance. Copies of these forms must be received at the College Scholarship Service no later than March 1; applications received after March 1 will receive secondary consideration.

The confidential statement forms, published by the College Scholarship Service, may be obtained at local high school guidance offices, local colleges’ financial aid offices, RIT’s Financial Aid Office, or by writing directly to the College Scholarship Service, Box 176, Princeton, New Jersey, 08540.

Notification of awards can be expected two to four weeks after arrival of the necessary financial aid analysis and your admission acceptance.

RIT awards financial assistance largely on the basis of need. Financial need is defined as the difference between the cost of an education and the amount of money an applicant and his or her family can make available from their income and assets to meet the expenses of that education.

Selection and Eligibility
To be awarded financial aid, an individual must be admitted as a matriculated student. RIT makes every effort to continue financial assistance to students each year provided they remain in good academic standing and financial need continues to be demonstrated.

A student is in good academic standing and is maintaining satisfactory progress if he/she has been accepted into a program of study (matriculated) and is currently enrolled in this institution.

Awards are based primarily on financial need and the availability of funds. Academic achievements and community involvement may also be considered. Renewal awards to upperclassmen may be increased or decreased and may be offered in different combinations of grant, loan and work.

Responsibilities
Recipients of financial aid from the Institute are responsible for reporting any significant changes in their financial situation during the year to the Director of Financial Aid, who will review and may revise the applicant’s financial aid accordingly. Financial aid recipients are also expected to obtain summer employment to assist in financing their education.

Admission Procedures and Services

Specific entrance data for each college is listed in a chart near the beginning of each college section in this bulletin. For each program, we have indicated the required high school subjects, desirable elective subjects and other factors considered by the Admission Committee. We have also indicated the minimum grade point averages required of students who are transferring from another college.

General Information
Your high school or previous college record is usually the best predictor of success. If your high school rank is below the 50th percentile of your class, some other factors that could indicate a potential for success are: (1) better than average grades in the required high school subjects, (2) an improving record of achievement as you progressed through high school/college, (3) above average admission test scores, (4) graduation from a highly competitive high school whose graduates are usually successful in college, and (5) post high school experience in service or employment that gives evidence of potential for success.

When applying for admission to RIT, one seeks to register in a degree program of one of the individual colleges. However, there is opportunity for selecting courses in other colleges as they meet personal goal objectives, and some programs are purposely designed for interdisciplinary experience. In general, serious thought about a career is assumed. Education is thus more direct, and graduates are eagerly sought for their professional competence.

To apply as a freshman student
To apply as a freshman student, you must submit your completed undergraduate application and non-refundable $25 fee, official high school transcript and entrance examination scores. Applicants are required to have results of the Scholastic Aptitude Test (SAT) or the ACT American College Test submitted to the Admission Office. Locations of test centers throughout the world, test dates and application fee information can be obtained from your school or by writing to: College Entrance Examination Board, P.O. Box 592 Princeton, N.J. 08540; or P.O. Box 1025, Berkeley, Calif. 94701; The American College Testing Program, P.O. Box 168, Iowa City, Iowa.

To apply as a transfer student
RIT welcomes transfer students. Currently, more than 45 percent of our students began their college education at another college.

To apply as a transfer student, you must submit your completed undergraduate application and nonrefundable $25 fee to the Admission Office.

In addition, the following rules apply to transfers:
1. You do need to submit official transcripts of all college study completed.
2. Provide us with a list of the courses you are now taking not listed on your transcript, and any others you expect to complete prior to coming to RIT.
3. If your earlier study was outside New York State, send descriptive catalog(s) of previous study to our Admission Office with your name on inside cover(s), so we may give you full credit.
4. If you've already earned 16 or more college credits, submission of SAT or ACT test scores is optional.
5. If you've completed two or more years of college prior to enrollment at RIT, you do not need to submit your high school transcript.

All transfer applicants are responsible for insuring that required official transcripts and other documents have been received by the RIT Admission Office.

Transfer credit
If you've completed studies at another college before coming to RIT, we'll place you at the highest level at which your success in a program can reasonably be expected.

We'll give you junior standing in most programs if you've earned an associate's degree (AA, AS, and AAS) or equivalent in programs comparable to the RIT program you select. A cumulative average of "C" or better is required.

We'll admit you to transfer adjustment study in the summer term to facilitate your transfer, particularly if you'll be majoring in electrical engineering, art or photography. See applicable program descriptions in this bulletin.

If you've had only a small amount of college study or will be making a significant program change when you come to RIT, we'll determine your transfer credit on an evaluation of individual courses in which you earned a "C" grade or better.

Admission will be based on our prediction of probable success in the RIT program of your choice.

RIT students who wish to take courses at other accredited institutions and receive transfer credit towards their RIT degree need to secure the prior written approval of the dean(s) of the RIT college(s) concerned in order to assure the appropriateness of the course content and course level for those courses.

Articulation Council
A coordinating council on two-year college/RIT articulation has been established to better serve students transferring from two-year colleges.

This council's responsibilities are:
1) To act as a referral body to solve articulation problems. Although all articulation problems are within the scope of this body, articulation of an academic nature (e.g., transfer of courses) is of primary concern.
2) To make possible sufficient communications between the faculty, staff, and students of community colleges and the faculty, staff, and students at RIT. This communication includes mutual visitations as well as other activities.
3) To serve as a sounding board within the Institute, and elsewhere to identify the implications of RIT-community/junior college relations. The purpose of this objective, again, is to help insuring two-year college students a smooth transfer to RIT.
4) To aid in the development and evaluation of research activities relating to two-year colleges.

Membership in the council includes the dean of each of the colleges or the dean's appointed representative. In addition, Student Affairs, ROTC, Financial Aid, Admission, Records, the Office of the Provost, and other related administrative offices are represented. These members are familiar with the two-year colleges, its academic, fiscal, and administrative structures, its goals, philosophies, and types of courses and curriculum.

Credit by examination
RIT grants credit for satisfactory scores on examinations covering objectives and contents parallel to
the RIT courses for which you seek credit. Usually these are CEEB Advanced Placement or College Level Examinations, New York State Proficiency Examinations, or RIT-provided examinations. Contact the director of Admission for procedures.

Credit for Non-Traditional Learning
Credit may be acquired through an evaluation of non-traditional studies or learning acquired from life experience. Requests for credits where an existing course at RIT matches the student’s experiential learning should be directed to the Admission Office.

Visit to campus
Although not required, we encourage campus visits and personal interviews in order that you may see firsthand our modern 1,300 acre campus and be provided answers to questions you may have. A personal visit will hopefully further overall student understanding of the Institute, what it has to offer academically and the many services that are available.

To arrange for a tour or counselor interview, simply call the Admission Office, (716) 475-6631, Monday through Friday between 9 a.m. and 4:30 p.m.

Action on applications
RIT accepts students on a “rolling admission” basis. This means that applications are reviewed and decisions regarding acceptance are made within a few weeks after the application and supporting documents are received in the Office of Admission. RIT begins accepting applications in September for the following September.

Because of this policy, and because many of RIT’s programs fill to capacity very early in the year, it is to a student’s advantage to apply as early as possible for admission.

When all required information is received you will be notified of one of the following actions:
1. Acceptance to your program of study. A transfer student will receive an evaluation showing credit granted and our estimate of time needed to complete your selected program.
2. Acceptance to program of study, but placed on a waiting list because available places in that curriculum have been filled. When vacancies occur, those judged to be the strongest candidates are selected from the waiting list. The probability of vacancies on the waiting list is not predictable. Those remaining on waiting lists will be considered for future entrance dates only if they specifically so request.
3. Deferral of action until more recent grades, test scores or other data requested are available. RIT admits students without regard to race, color, sex, marital status, disability, or national or ethnic origin.

Early Admissions
Occasionally, a student will complete the prescribed number and adequate distribution of high school units in three years of high school with the exception of fourth year English and/or History. In such instances he/she may seek admission to RIT under the Early Admissions Program i.e., without certification of high school graduation. If admitted, the student must fulfill the senior year high school course and first year college course concurrently, and upon successful completion of the course, is then certified for high school graduation by the high school.

Physical examination
A physical examination is required. Submit your exam report on the form provided with your offer of admission before your first RIT registration.

Admission deposit
The $100 non-refundable admission deposit reserves a place in your class and is credited to your first quarter’s tuition. The due date will be indicated with your offer of admission. For students entering in September, this is May 1, or within two weeks after acceptance, whichever is later.

International students
Students from countries outside the United States are extended a cordial welcome to study at RIT. Arthur Friedel serves as International Student Advisor. He assists students from other lands with some of the normal difficulties they are apt to face and helps students whenever possible adjust to the new scholastic setting.

The international community is well represented at RIT, with approximately 70 faculty and 150 students from more than 60 countries.

The basic requirement for admission is the satisfactory completion of secondary school, which may vary from country to country, but generally represents 12 years of study.

International students should be prepared to meet all expenses in full, as employment opportunities are limited and student aid is rarely available. The admission procedures apply in full. In addition, applicants whose native language is not English are required to submit scores from the Test of English as a Foreign Language (T.O.E.F.L.) administered around the world by ETS, Princeton, New Jersey, U.S.A.

If not in English, all documents submitted must be accompanied by certified English translations. If admitted and the financial statement is satisfactory, the student will be sent Form 1-20 for presentation to the American Consul in application for a “Non-Immigrant, F Student Visa.” Foreign applicants completing their applications after April 1 seldom have enough time to finish all the necessary details in time for enrollment in September.

Women’s opportunities
The Women’s Information Center, housed in the Admission Office, provides prospective women students of all ages with career information and opportunities available at RIT.

Whether you’re a high school student or an experienced homemaker exploring a second career, we encourage you to seek our assistance while you clarify and re-examine your personal career goals. New and exciting career opportunities are available in areas that traditionally were thought of as being male-dominated. Majors in accounting, engineering and photographic marketing management are just a few of the many programs available at RIT for women who are interested in pursuing challenging careers.

The Women’s Information Center is prepared to draw upon the various Institute resources and support services ranging from child care to vocational testing; from counseling services for those just beginning to explore the world of work to placement services for those ready to begin the job search. Through this assistance and referral, the center can give you a better insight into the opportunities and challenges at RIT.

Anyone interested in learning more about RIT’s career programs and support services can contact the Women’s Information Center in the Admission Office, at (716) 475-6631.
Registration and Student Records
Keep Track of Your and Your Courses

The Department of Records and Institutional Research operates the systems in which courses are scheduled, students register and student academic records are maintained.

The scheduling process
The development of a quarterly master schedule of courses is coordinated by the Registrar’s Office in conjunction with the academic departments. The goal is to produce academic schedules that fulfill curricular requirements and the interests of the student body.

The registration process
To be registered a student must (1) be scheduled into courses and (2) make a financial commitment.

Approximately six weeks into the Fall, Winter and Spring Quarters, a prereregistration for the following quarter is conducted.

Prereregistration is conducted for the student’s academic department. For each quarter the Bursar’s Office establishes a due date for payment.

The due dates for the 1979-80 academic year are Fall Quarter-8-10-79, Winter Quarter-11-5-79, Spring Quarter-2/11/80, Summer Quarter-5/5/80. A student who preregistered and makes satisfactory financial arrangements by the specified due date is considered registered and will receive a listing of his or her scheduled courses (a program notice) in the mail before open registration.

These students will also appear on the first day class lists. If their schedules are complete and correct, the student is not necessary for them to attend open registration.

Open registration
Any student who does not receive a program notice in the mail or who wishes to add and/or drop courses listed on his or her program notice must come to open registration.

Each entering student will be notified by mail of the date and hour of registration for his or her first quarter. Thereafter, students are responsible for consulting the Institute calendar for registration dates and times.

A student who has successfully completed the registration process by the billing due date will be on the first day class lists. A student who has made schedule adjustments or registered initially at open registration must use his or her copy of the Change in Class Schedule Form as proof of registration for each class listed.

Late and non-matriculated student registration
Late registration and registration for non-matriculated students occur the day following open registration.

Students who are not formally accepted into a program register as non-matriculated students. Matriculated students who did not complete both steps in the registration process by the end of open registration must register late.

Late registrants are subject to a $25 processing fee. There will be instructions on how to complete non-matriculated/late registration at the start of that registration.

Financial commitment
After registration any student who has added courses but who has not made his or her financial commitment with the Bursar will be dropped from all courses during the second week of the quarter.

The record keeping process
Transcripts
The official academic record of each student is maintained in the Registrar’s Office. A transcript of his or her record can usually be obtained by a student within 48 hours after the request is submitted in writing.

All courses registered for and all grades received to date will be shown on the transcript. A student must be in good financial standing with the Institute before a transcript request will be processed.

During exam week and the week following exams, it may take more than 48 hours to prepare a complete transcript. The charge for each copy of a transcript is one dollar.

In most cases, the Family Rights and Privacy Act prohibits the release of information without the specific written consent of the student.

Grade reports
Grade reports are prepared after the completion of each quarter. For Fall and Winter Quarters, day college, undergraduate students will receive their grade reports through their department mail folders. For Spring and Summer Quarters, all grade reports will be mailed directly to the permanent address.

Student Retention
Based on the current student retention rate of 49 percent for regular students entering the first year level and graduating four to five years later (the period between entry and graduation depending upon a student’s particular program of study).

Excluding part-time and non-degree students in the College of Continuing Education, 75 percent of first year full-time day students register for their second year; 79 percent of the second year students continue for their third year, and 83 percent of third year students continue through graduation (fourth or fifth year, depending upon the program).

RIT is currently developing a comprehensive study of the progress of students which would include factors to predict retention for all student populations such as those on cooperative education work blocks and the large number of part-time and non-degree students.

The statistics reported herein have been computed in a manner consistent with data reported to the State Education Department through the Institute’s Division of Records and Institutional Research.
The Steps Toward Earning Your Degree(s)

Graduate degree programs
The many programs leading to graduate degrees are fully described in the separate Graduate Bulletin, available from the Admission Office. A master’s degree may be obtained in: accounting, chemistry, engineering, electrical engineering, mechanical engineering, business administration, art education, fine and applied arts, applied and mathematical statistics, photographic science and instrumentation, photography, printing technology, printing education, instructional technologies, business technology for community college faculty, career information, and computer science and technology.

Upon completion of the stipulated requirements, a student’s academic department certifies him or her for a degree. A statement of requirement completion will be listed on the transcript in the appropriate term. After commencement, a statement verifying that a degree has been awarded will be posted to the transcript. Degrees for fall, winter, and spring graduates are mailed during the Summer Quarter. Degrees for summer graduates are mailed during the Fall Quarter.

Grading system
Grades representing the students’ progress in each of the courses for which they are registered are given on a grade report form at the end of each quarter of attendance. The letter grades are as follows:

- A - Excellent
- B - Good
- C - Satisfactory
- D - Minimum Passing
- E - Conditional Failure
- F - Failure
- I - Incomplete
- R - Registered
- S - Satisfactory (non-credit)
- W - Withdrawn
- Z - Audited

A grade of “W” will be assigned in courses from which a student withdraws after the second week of classes or if a student withdraws from all courses in a given quarter. A student can change from credit to audit or from audit to credit status for a course only during the first 10 days of classes.

The grade of T is assigned for transfer credit awarded for courses taken at an accredited institution and receiving a grade of “C” or above, and are deemed applicable to an undergraduate student’s program.

An X grade indicates successful completion of an external or Institute examination, provided such examination covers or parallels the objectives and content of the indicated course. Credit must be assigned in advance of any credit received through registration for the indicated course.

For exact policy and procedural statements on the above see the Educational Policy and Procedures Manual available in the Student Association Office or on reserve in the Wallace Memorial Library.

Quality Points
Each course has credit hour value based upon the number of hours per week in class, laboratory or studio, and the amount of outside work expected of the student. Each letter grade yields quality points per credit hour as follows:

- A - 4 quality points
- B - 3 quality points
- C - 2 quality points
- D - 1 quality point
- E and F count as 0 in computing grade point average (G.P.A.).

An X grade indicates successful completion of an external or Institute examination, provided such examination covers or parallels the objectives and content of the indicated course. Credit must be assigned in advance of any credit received through registration for the indicated course.

The grade point average is computed by the following formula:

G.P.A. = Total quality points earned
Total hours

Academic Standing
An RIT student is in good academic standing and maintaining satisfactory progress if he/she has been accepted into a program of study (matriculated) and is currently enrolled at this institution. Institute Policy with respect to suspension affects continuing enrollment, as specified in the following policy.

Academic Probation and Suspension Policy
Matriculated undergraduate full-time and part-time degree students will be placed on probation or suspended from the Institute according to the criteria enumerated...
below. All actions are taken at the end of the quarter, however, a student may petition the dean of the college for reconsideration of probation or suspension should the removal of an incomplete grade (I) raise the appropriate Grade Point Average above those stated below. Each matriculated student will generate three different grade point averages. The **Institute** average reflects all course work completed at RIT. The **Program** average reflects course work completed at RIT applicable to graduation in a student’s current academic program. The current academic program refers to the institute and college degree course requirements specified by the degree granting college and noted in the institute catalog. The third average, in the **Principal Field of Study**, reflects course work completed in a student’s specialized field of study.

1. Any student whose Program Quarterly Grade Point Average falls below a 2.00* or whose Cumulative Grade Point Average in the principal field of study** (based upon at least 20 credit hours attempted in the principal field at RIT) falls below 2.00 will be placed on probation.

2. Any student who has been placed on probation according to (1) above is removed from probation for achievement of both a 2.00 Program Quarterly Grade Point Average and a 2.00 Cumulative Grade Point Average in the principal field of study, based upon at least 20 credit hours attempted in the principal field at RIT.

3. Any student who is on probation according to (1) above and who is not removed from probation in the two succeeding periods of study in which credit is earned, will be suspended from RIT for a period of not less than one quarter.

4. Any student who has been placed on probation after having been removed from probation and whose Program Cumulative Grade Point Average is below 2.00 will be suspended. Any student who has been placed on probation after having been removed from probation and whose Program Cumulative Grade Point Average is 2.00 or above will be granted one quarter to be removed from probation or he/she will be suspended from RIT.

5. Any student whose Program Quarterly Grade Point Average falls below 1.00 will be suspended from RIT.

6. Any student who has been readmitted to his or her original program, after having been suspended, and then goes on probation will be suspended from RIT.

7. A suspended student may not enroll in any academic course at the Institute while on suspension. When there is evidence that the student’s scholastic problems are the result of inappropriate program choice, or other extenuating circumstances, the suspension may be waived or the student may be admitted to another program or allowed to take courses on a non-matriculated basis if it is approved by the dean of the college in which the enrollment is required.

8. A student may apply to the Office of Admissions for re-admission at the end of his suspension. His re-admission must be approved by the dean of the college he wishes to attend upon his return (this may be his original college or another).

**Disciplinary probation**

Students are expected to conduct themselves at all times in such a way as to reflect credit on themselves and the Institute. Any student guilty of flagrant violation of good conduct may be warned, placed on probation, or in serious cases, dismissed from the Institute.

---

*"C" Average

**The principal field of study is defined to be all courses within the college offering the program. For the Computer Engineering, Packaging, Criminal Justice, Social Work and Printing Systems Management programs, programs within the College of Continuing Education and NTID, and new interdisciplinary programs the appropriate professional courses will be identified (and so indicated in official publications) as being part of the principal field of study.*
Class attendance and other rules
Students are expected to fulfill the attendance requirements of their individual classes. Rules and regulations relating to conduct in the residence halls, and use of general campus facilities are issued directly by the appropriate offices of the Institute, and published in the student handbook.

It is the responsibility of all students to attend their scheduled classes regularly and punctually in order to promote their progress and to maintain conditions conducive to effective learning.

Absences for whatever reason do not relieve students of responsibility for fulfilling normal requirements in any course. In particular, it is the students’ responsibility to make individual arrangements in advance of missing class due to personal obligations such as religious holidays, job interviews, athletic contests, etc., in order that they may meet their obligations without penalty for missing class. Attendance at Saturday classes may be required. The Institute reserves the right to alter any of its courses at anytime.

What You’ll Need For Graduation

The following general requirements apply to students who are candidates for an undergraduate degree.

Certificates and diplomas
1. Satisfactorily meet the program requirements of the College.

Associate’s and baccalaureate degrees
1. Successfully complete all required courses of the Institute and college, including cooperative employment where applicable.
2. Full payment or satisfactory adjustment of all financial obligations.
3. A minimum of 45 quarter credit hours shall be successfully completed in residence at the Institute in the college granting the degree (inclusive of service courses). If the student has successfully completed 45 quarter credit hours in residence he or she may petition the dean to study 15 quarter credit hours in absentia in the final year of the degree; a minimum 30 of the final 45 quarter credit hours are to be completed in residence.
4. A program grade point average of 2.00.
5. Minimum number of quarter credit hours as required by that college, but in no case shall this be less than 90 quarter credit hours for the associate’s degree and 180 quarter credit hours for the baccalaureate degree.
6. Physical education requirements as published in this official bulletin.
7. Demonstrate competence in writing skills as established in the Institute’s writing policies.

Writing Policy
Rochester Institute of Technology is implementing a writing policy meant to insure that each graduate develops sufficient skill in the use of the English language to function as an educated member of society and meet any special demands for communication likely to be placed upon him in his intended career.

Beginning in September, 1980, students who entered the Institute in Fall 1978 or later will be required to demonstrate this skill as a condition for graduation. For the present academic year students will be required only to participate in certain activities intended to develop writing skills. The specific requirements of each degree program will be determined by each College. The nature and standards of the graduation writing requirement will be consistent with Institute policy and will be reviewed by the Institute Writing Committee.

For the master’s degree
See separate Graduate Bulletin, available from the Admission Office.

Commencement
Candidates for the Institute’s certificates, diplomas, associate, baccalaureate and masters degrees are expected to attend commencement ceremonies. Candidates may be excused from such attendance with the explicit approval of their dean.

Accreditation
The Institute is chartered by the legislature of the State of New York and accredited by the Middle States Association of Colleges and Secondary Schools. In addition to institutional accreditation, curricula in some of the colleges are accredited by appropriate professional accreditation bodies. Specific mention of these are included in the college descriptions, where applicable.
Student Affairs Offers Services

For Help In and Out of Classroom

What happens in the classroom is a big part of a college education. But what happens outside the classroom can be almost as important.

The Division of Student Affairs at RIT coordinates all the services provided to students during their years at college.

The Division includes Physical Education, Athletics, Residence Halls, Student Health services, College-Alumni Union, Religious Activities and the Chaplaincy, Counseling Center, Learning Development Center, Higher Education Opportunity Program (HEOP), Orientation and Special Programs, Upward Bound and Special Services.

Life on campus is a living, as well as a learning, experience. Students, with the counseling of trained resident staffs, have their own governing organizations, and develop social programs. A wide variety of athletic, social and professional activities is available for all students.

Complementary Education

Viewed as a necessary dimension of the student’s education at RIT, Complementary Education formally recognizes and encourages important experiences that happen outside the classroom that complete and enhance the traditional academic activities of the Institute. Its essential aim is to further the professional development of students by aiding the colleges in establishing programs within the context of their own curriculum. It will supplement their curriculum in four broad content areas - personal and social development, learning skill development, civic competence, and aesthetics.

Complementary Education is multi-faceted. The Complementary Education Grants Program makes funds available to students, faculty and staff who want to develop unique kinds of experiences. These projects are not credit-bearing, but formal recognition that describes what was learned is offered. Certification also is given to non-funded projects already taking place where students are involved in more extended activities that do not entail academic credit. Such documentation is valuable to students in developing their employment placement credentials. Complementary Education also sponsors the Institute Forum, a year-long series of nationally known speakers in related on-campus programs focusing each year on a different topic dealing with quality of life and our society.

Student Affairs
Mixes Academics, Social and Cultural

Student Programs

In everything from the first days of Student Orientation until time for Commencement, a big part of the work done by the Division of Student Affairs is to try to “integrate academic programming and social programming” says Dr. Tom Plough, associate vice president for Student Affairs.

“Most of our students are very career oriented...and we find that instead of having to worry about how to keep them studying, we have to worry about how to get them out of the academic buildings at night.”

“I’d say that this kind of intensity is a real characteristic of our students. They seem to be reluctant to get involved out of the classroom,” Plough says. “Our challenge in the Student Affairs Division is to make it convenient and stimulating for our students to explore other complementary activities which may be helpful in developing their professional competence, such as exploring leisure time activities and career options as well as attending various informal seminars on such topics as consumer education, assertiveness training, composition skills, and others.”

Dr. Tom Plough

Plough wears several hats at RIT
As administrator in the Student Affairs Division, he works with students and other administrators coordinating programs for service areas like the Student Health Service, the Athletic Department and Department of Physical Education, Recreation Office and others.

In addition, he teaches sociology courses at both the undergraduate and graduate levels through the College of General Studies.

And he is involved in various special academic administrative assignments such as the Academic Leadership Development Series and the Academic Program Planning Group for Eisenhower College.

Plough holds a B.A. (social sciences), an MS (student personnel administration), and a Ph.D. (higher education administration) from Michigan State University.
Learning Development Services

Extra Help for Those Who Need it: HEOP

"Basically, what we’re doing is making it possible for disadvantaged students to come to college. Without HEOP, these students wouldn’t have been offered acceptance to RIT."

Charles Hetzel speaks with pride about RIT’s Higher Education Opportunity Program, of which he is director.

"The students in the program not only have financial difficulty, but also have not excelled in school," he explains. "However, it’s had nothing to do with academic potential. They’ve had problems historically with lack of encouragement from guidance counselors, poor schools, younger sisters and brothers to take care of, time-consuming jobs—any number of things. It’s not that these students aren’t college material, it’s just that they’re underprepared.

"HEOP’s responsibility is to help them to reach and maintain academic competence."

Many of the students who are in RIT’s HEOP are deficient in essential math and verbal skills. But they’re competing with students who have been nurtured in supportive environments and have graduated from competitive schools. And professors are rarely aware that a student is in HEOP.

"We’re kind of a mini-student services department," Mr. Hetzel says. "We make acceptance and financial aid decisions, provide remedial instruction and tutoring, and do personal, academic and career counseling. At the same time, our students have complete access to all of RIT’s student services."

The HEOP staff, which consists of Mr. Hetzel, an assistant director, two counselors and a remedial specialist, maintains an open-door policy. "We have to be especially sensitive to the needs and problems of the disadvantaged student," stresses Mr. Hetzel, who holds master’s degrees in urban education and reading. "Each student is assigned a counselor for the duration of their years at RIT. That counselor gets to know each student on a personal level, to be really conversant with the student’s problems. And the counselors are always available should an academic or social difficulty arise."

Each student who is admitted to the program as a freshman must enter a five-week pre-freshman program conducted each summer.

"They take math and remedial reading as necessary. But everyone has to take Introduction to Psychology, which prepares them for the real thing. The instructor tries to incorporate different facets of a college course, such as a research paper, a personal opinion paper, and different types of tests. Students learn to use the library, organize a paper, and read a textbook effectively. The instructor also comments on individual behavior, allowing us to pinpoint individual problems, such as poor attendance, or lack of assertiveness."

In the eight years of its existence, HEOP has graduated 100 students, many of whom have landed excellent jobs. Graduates in technical fields have the highest success rate, according to Mr. Hetzel. "It’s not quite as easy for a social worker right now. But the fact that these students have graduated from college, considering their initial academic weaknesses, is a tremendous accomplishment."

Every student admitted into HEOP must be both academically and financially disadvantaged. They are all provided with full financial support, which is provided jointly by RIT, state and federal money. Up to a year’s supplemental grant is available to any student who may need extra time to complete his or her program of study.
Learning Development Center

RIT students have a unique opportunity to improve their reading efficiency, study techniques, vocabulary mastery, effective listening and critical thinking abilities, mathematical understandings, computation skills, writing competence, and general facility in the uses of the English language through individual or group instruction provided by the Center. In cooperation with the Counseling Center, the Learning Development Center also provides counseling, diagnosis, and corrective development background instruction for students not working up to capacity or whose achievement records are unsatisfactory because of needs in basic academic areas.

In addition to these programs, the Center provides individual tutoring in most college-level courses, a College Restoration Program (described in a later section) for RIT students on probation or liable to suspension for academic reasons, and special programs for student groups and clubs.

Consultation, testing, and instructional services are free to all RIT students.

A Place for Students To Learn How To Learn

Educational troubleshooters is how the director describes himself and his staff.

“We usually work with individuals on a short-term basis to correct a specific learning problem,” says Paul Kazmierski, director of the Learning Development Center.

LDC is beginning its third decade of operation as an academic support service to RIT students, faculty and the Rochester community. Known by many alumni and friends of the Institute as the Reading & Study Clinic, the center officially adopted its new name in 1974.

“Our subject here really is ‘learning about learning’ and we wanted our name to reflect that scope,” explains Dr. Kazmierski.

Faculty, staff and students pondered the name change for nine months. “We think our name gets away from the associations of illness connoted in the word ‘clinic’ and better represents what we are doing” says Kazmierski.

The new name fits especially well with the center’s expanding efforts in faculty development. When the center began operation on the RIT campus in the 1950’s, RIT was just moving toward offering more degree programs. At that time skill development for students became especially critical and faculty was involved at the center in student referrals and some shared teaching.

But in the future, LDC hopes to see more interfacing with faculty to improve instruction.

“We will be spending more time on process education,” predicts Dr. Kazmierski. (Process education includes the skills, systems and methods of learning, exclusive of specific content.)

During the 1978-79 school year, the Learning Development Center saw more than 2,000 RIT students and helped nearly 700 community people. The current LDC staff consists of 10 full-time members and 70 part-time instructors. The center also trains students to assist in a number of programs. In the thick of the school year, there are as many as 90 people involved in instruction.

“We run a variety of different courses in reading, writing, math, and listening skills, plus some special workshops built around students’ requests,” says Dr. Kazmierski. Two of the most popular mini courses in the past have been “How to Write a $25,000 Resume” and “How to Psych-Out Your Prof and Cheat Legally on Examinations.” These courses draw large numbers of students and both will be retained next year.

No “typical” student uses the Learning Development Center, according to the director, who cited several examples of students with widely different interests, needs and grade point averages. People with “A” averages enroll as readily as students who are failing.

But the student who isn’t making it presents a special concern to the center.

“These students are struggling so hard to keep their heads above water that it is very difficult to get them to take the necessary time to work on underdeveloped skills,” says Dr. Harvey Edwards, a member of the staff.

The center has developed two programs geared especially for students who are failing or who anticipate difficulty gaining entrance to college: the College Anticipation Program and the College Restoration Program. Both programs are highly structured and require students to attend classes approximately seven hours a day, five days a week, for the academic term.

Although the majority of LDC’s work is centered on the RIT campus, it is well known in the Rochester community. Several community agencies refer clients to the RIT facility for diagnostic evaluation or specific course work.

College Restoration: Helping the Student To Come Back

The College Restoration Program is a specialized program of instruction for students who have been dismissed from college or put on probation for academic reasons. After having been accepted into the program, the student is classified for one academic quarter as a special student of RIT’s College of General studies, and pursues an individualized program designed in cooperation with the Counseling Center and the Learning Development Center.
The entire program is designed to strengthen the student’s self-motivation, self-discipline, and self-confidence. Successful completion of this program should qualify students for readmission to the college or department of their choice, or for entrance to another educational program. A student is offered acceptance to the program on the basis of a series of tests, including aptitude, personality and achievement. Once it has been determined that the College Restoration Program can be helpful, an individual program is planned for each student. The content of the program depends upon the student’s needs and rate of progress during the program, but usually includes the following areas:

- College Course: Each student in the College Restoration Program may enroll in one or more courses chosen from the Institute’s regular offerings. Selection of the courses is under the strict guidance of the Learning Development Center.
- Counseling: Weekly sessions with an academic advisor provide the student with an opportunity to clarify directions and goals, to discuss the relationship of his or her skills courses to the general studies courses, and to review progress in the student’s academic program.
- Counseling Center sessions give the student a chance to discuss problems, their causes and effects, with an RIT counselor.
- Learning Development Instruction: As defined by particular needs, the student is also enrolled in a block of laboratories, classes, workshops and tutorials in reading, writing, study skills and mathematics. Every student is asked to sign a contract with the College Restoration Program, in which he or she agrees to attend all scheduled classes, labs, tutorials and workshops, as well as meetings with the academic counselor. In addition, the student agrees to keep a daily journal, which serves to help the student to evaluate his or her own study skills and strategies, to incorporate suggestions for new strategies, and to react to the effectiveness of these new strategies in light of identified needs and goals.

Although the College Restoration Program does not guarantee a participant readmission to his or her former college or state, or a transfer student at another school, the program does provide recommendations and resumes of student achievement in the program to colleges upon request by the student or college.

Counseling Center Aids in Personal, Career Matters
RIT makes available its extensive counseling and testing facilities to all students registered in day or evening regular sessions at no additional charge. Any student may see a counselor promptly for assistance in solving a personal problem or in clarifying career plans.

- The Counseling Center, located in Grace Watson Hall, offers these services:
  - Counseling: Concerns with academic adjustment, career choice, interpersonal relationships, personal-emotional adjustments, drug or alcohol abuse, and marriage may be discussed individually with a counselor or in a group on a confidential basis. When appropriate, tests may be used to obtain more information about interests, abilities, aptitudes, and personality characteristics.
  - Approaches to Self and Others Series: Throughout the academic year the Counseling Center offers a series of workshops, seminars, and non-credit courses in aspects of personal development.

- Counseling Center sessions give the student a chance to discuss problems, their causes and effects, with an RIT counselor.

Learning Development Instruction: As defined by particular needs, the student is also enrolled in a block of laboratories, classes, workshops and tutorials in reading, writing, study skills and mathematics. Every student is asked to sign a contract with the College Restoration Program, in which he or she agrees to attend all scheduled classes, labs, tutorials and workshops, as well as meetings with the academic counselor. In addition, the student agrees to keep a daily journal, which serves to help the student to evaluate his or her own study skills and strategies, to incorporate suggestions for new strategies, and to react to the effectiveness of these new strategies in light of identified needs and goals.

The health team at Student Health Service consists of primary care physicians, nurse practitioners, registered nurses, consulting psychiatrists, a gynecologist, and an emergency medical technician. Professional personnel oriented to social and cultural enrichment and a leadership seminar. The objective of Special Services is to maximize students’ chances of completing college.

Special Services programs are initiated through a joint effort of staff and students. Some of the activities featured are:
- Forum on Careers—a series of workshops facilitated by professionals in the major fields of study offered at RIT.
- The Awards Program—at the end of the academic year, Special Services provides a dinner, which is a social and academic achievement recognition event.
- The Leadership Seminar is a summer activity in which leadership potential of students is enhanced through training workshops and practical application.

The program is designed to support students who, because of financial pressures, educational unpreparedness, physical handicaps, or language difficulties, experience frustration in a college setting.

For more information about Special Services contact Claire Hurst, assistant director, at 475-2832 (Grace Watson Hall, Counseling Center).

Student Health Service
The Student Health Service is on campus to help you make decisions concerning your health, to provide counseling regarding health and medical matters, to treat health problems, and to refer to consultants in specialized fields, if necessary.

All medical information is strictly confidential and will not be released without your consent. Exceptions to this rule are made only when reports are required by the public health laws of New York State. Students should submit the Medical History and Evaluation form, as current, complete and honest background medical information is important for us to render proper care.

The health team at Student Health Service consists of primary care physicians, nurse practitioners, registered nurses, consulting psychiatrists, a gynecologist, and an emergency medical technician. Professional personnel oriented to
the needs of the deaf are included on the staff. Students are seen on a walk-in basis between 8:30 a.m. and 4 p.m., Mondays through Fridays. Between 4 p.m. and 4:30 p.m. only emergency care will be provided. From 4:30 p.m. to midnight Monday through Friday, emergency care is provided in the residence halls by an emergency medical technician.

Health Insurance
Expenses for hospital care, consultations, X-rays, and laboratory tests are the responsibility of the individual student. Due to the high cost of such services, it is imperative that they be covered by some sort of health insurance.

A brochure describing benefits of an Institute-sponsored plan is mailed to each student prior to registration. All students are automatically enrolled and billed unless a written refusal and proof of alternate insurance is provided to the bursar.

Student Housing
The Residence Halls
The residence halls provide a living environment for approximately 3,500 students. The Department of Residence Halls, as an integral part of the Division of Student Affairs, has as its primary goal the development of a residential setting consistent with the overall educational philosophy of the Institute.

RIT recognizes the significant effect the residence hall environment has on the social, academic, educational, and total human development of a student. The aim of the Residence Halls Department is to create an environment that promotes this development.

All first-year students are required to live in the residence halls, except those who live with their families. Resident students enrolled in cooperative employment programs are charged only for the period of occupancy. Each student is required to sign a Room and Board Request and Assignment Form, which is included with the housing information mailing.

RIT realizes that the student body is not homogeneous and that students exhibit diversity in interests, background, experience, needs and maturity. In recognition of this, a variety of living options is available. Many residence areas are coeducational; men and women living in separate rooms are housed on the same floor. New students are not assigned to a coeducational area unless they specifically request it.

Most residence hall units have double rooms only. However, some units do include a limited number of single rooms. These single rooms are not available to entering students. During fall quarter some entering students may be assigned to triple rooms.

All corridors and rooms are carpeted. A bed, desk, chair, dresser, closet, and window covering are provided for each student in a room. Each corridor in the unit has its own bathroom, equipped with showers. Some suites are available, composed of three bedrooms connected to a common bathroom. Each house has its own lounge furnished for study and relaxation. Coin-operated laundry facilities are available in the basement.

Each student is furnished information on housing arrangements by the Housing Office after the tuition deposit is paid. All residents must participate in one of the Institute board plans. The charges for residency and meals are included in the section on student expenses.

Apartment Housing
Housing for married as well as certain single students, faculty and staff is available in Institute owned apartments and townhouses. A brochure describing the three complexes, Colony Manor, Perkins Green and Riverknoll, is available from the Married Student Housing Office, 113 Kimball Drive, Rochester, NY 14623; (716) 475-1290.
Student Activities Will Keep You Busy...

New Student Orientation
All new Fall Quarter students (freshman and transfer) are required to pay the Orientation Fee of $20. Orientation is a four-to-five day schedule designed to welcome the new student to the RIT community and its services. Orientation includes department meetings, registration, tours, seminars, lectures and various social events.

Student Association
The Student Association is the governing body for students. It represents the student population by working with RIT administration, faculty and staff to communicate the needs and desires of the student body and to communicate the decisions of the administration to the students. It pulls together the student body to formulate and express student opinion and the Student Judiciary, which provides for the self-discipline of the student body.

All full-time undergraduate students become members of the RIT Student Association through payment of the Student Association Fee. Part-time, non-matriculated, or graduate students may become members of the Student Association, if they wish to participate in student-sponsored activities, by paying the Student Association Fee.

College-Alumni Union
The College-Alumni Union, a primary focal point at the main entrance to the academic plaza, is designed specifically to service events sponsored by and for the entire campus community-students, faculty, administrative groups, alumni and guests. A staff is available to assist and advise the various individuals and groups in planning and coordinating their activities. In addition, a complete information service is located in the main foyer.
The three-level facility, the center of co-curricular activities, features the 525-seat Ingle Auditorium; a self-service bookstore; a complete game room for bowling, billiards, table tennis; a unisex hairstyling salon; a candy and tobacco counter; three separate dining areas comprised of the main cafeteria, the Ritskellar, and the Clark Dining Room; meeting rooms and lounges. In addition to offices for the staff, there are the offices of Career Education, Student Affairs, Chaplains, College Activities Board, Student Government Association, WITR Radio Station, Student Television Systems, Techmila, Reporter, and Commuter Association.

The College Activities Board

The College Activities Board, composed of students, faculty and College Union staff representatives, is responsible for providing a balanced program of activities that reflect and enhance the special social, cultural, recreational and educational needs of the campus community.

Social Events

Major social events on the activities calendar include Fall Weekend, Homecoming, Winter Weekend and Spring Weekend. Many other dances, parties, speakers and events are sponsored by the College Activities Board, the Residence Hall Association, the Greek Council, special interest clubs of many kinds, and department and professional associations, such as Alpha Chi Sigma, Delta Lambda Epsilon, Delta Sigma Pi, Phi Gamma Nu, and Sigma Pi Sigma. Three national sororities and six national fraternities offer social activities and promote high scholastic and social standards among members.

Student professional associations

A number of national technical associations have student affiliate chapters on the RIT campus. Frequently sponsored by parent chapters in Rochester, these societies play an important part in Institute life by bringing together students who have common interests in special subjects. The associations are both professional and social in purpose.

Student publications

RIT students produce some of the most professional collegiate publications in the country. The Student Association Fee helps to finance most student publications, distributed to all full-time students’.
The Reporter is published by students weekly, except during examinations and holidays and serves as the student news magazine.

Techmila, the student yearbook, contains a student-edited pictorial and written description of student life at the Institute during the year. The Reporter and Techmila have consistently won state and national awards.

An activities calendar is issued quarterly.

A student handbook is issued early in the year, as a cooperative effort of students and staff. This includes the student directory listing addresses, telephone numbers, and other information about students. This becomes a handy year-long reference of activities and people.

These publications draw their talented staffs—artists, photographers, writers, managers, and printers—from the entire student body.

Religious activities

The religious program is voluntary, active and enlightened, designed to minister to the varieties of religious faith in a responsible, attractive manner among future-oriented students. Chaplains representing the three major religious groupings maintain offices on the campus. They are available for pastoral counseling, advisory work, teaching, and sacramental ministries. There is a regular schedule of religious services on campus. Churches in the area have shown interest in establishing relations with students, and transportation to and from services may be arranged.

Hillel Foundation, Catholic Campus Ministry, and Lutheran Campus Ministry have local branches on campus, and other religious organizations are welcome to the facilities in the College-Alumni Union. Representatives of these campus organizations form the RIT Office of Campus Ministry.

The Black Awareness Coordinating Committee

The Black Awareness Coordinating Committee is organized to foster an awareness of the role of black men and women in the total society, and to create a greater understanding among black students at RIT. Each year the Committee sponsors various social and cultural programs which are designed to achieve these objectives.
The RIT Alumni Association is an organization of more than 37,000 graduates and former students of the Institute. All graduates are automatically members. Its objectives are to advance the growth and development of RIT through individual and group endeavor within industry and the community; to foster beneficial relationships among alumni, students and the Institute; and to encourage outstanding academic and extracurricular achievement by the undergraduates.

There are a number of services available to alumni, including a travel program to destinations throughout the world; a bi-monthly publication for alumni; free use of the library and athletic facilities (with ID card); help from the Central Placement Office in locating a job; and many social events, including Homecoming.

There are also many programs within which alumni work with the Institute’s various departments. These include admission, placement, and alumni-student interaction programs. Alumni in many metropolitan areas throughout the country are participating in activities of service to the Institute. The Institute recognizes the value of its alumni and places a strong emphasis on their participation in planning for the future.

Through the direction of the Alumni Affairs Office, the Alumni Association provides the organization through which alumni may assist the financial development of the Institute. The aid is channeled through the Alumni Annual Fund, which provides support for the operations of the Institute.

The Office of Alumni Relations, located on the fourth floor of the George Eastman Building, is the center of alumni activity on campus. The office maintains the alumni records, assists in conducting the business of the association, and serves as the communications center and clearing house for all alumni activities. Alumni are always welcome at this office.
The Physical Education Department has designed and developed an exceptional program of diversified physical activities and experiences to meet the growing needs and interests of students and the current trends of society. The curriculum includes courses in meaningful recreational, safety, and physical fitness activities which contribute to the physical and emotional well-being of students. The program also provides an opportunity for students to acquire lifetime skills in a variety of activities. Registration for classes is conducted in the main gymnasium two days following academic registration, from 7 a.m. to 3 p.m.

The courses available include:
- Golf
- Advanced Golf
- Team Handball
- Softball
- Tennis
- Badminton
- Table Tennis
- Volleyball/Softball
- Soccer
- Touch Football
- Lacrosse
- Bicycling
- Field Hockey
- Basketball
- Advanced Basketball
- Ice Skating
- Ice Hockey
- Ice Fishing
- Skiing
- Bowling
- Conditioning (Women)
- Weight Training
- Jogging
- Jogging and Conditioning
- Gymnastics
- Water Polo
- LifeSaving
- Water Safety Instruction
- Beginning Scuba Diving
- Advanced Scuba Diving
- Modern Dance
- Ballroom Dance
- Creative Movement for the Deaf
- English Horseback Riding
- Western Horseback Riding
- Beginning First Aid
- Advanced First Aid
- Care and Prevention of Athletic Injuries
- Beginning Skeet and Trap
- Advanced Skeet and Trap
- Hunting
- Predator Hunting
- Fishing
- Women’s Track and Field
- Judo
- Karate
- Fitness for Life
- Racquetball
- Juggling
- Volleyball
- Cross Country Skiing
- Run for Your Life
- Fencing
- Swimming
- Advanced Swimming
- Swimming for Fitness
- Diving
- Yoga
- Self Defense
- Outdoor Living
- Kung Fu
- Billiards
A nominal fee is charged in some courses requiring specialized facilities and instruction.

**Note:** courses listed above represent those offered during the school year. Not all courses are offered every quarter. Consult the Physical Education Office for quarterly courses.

**Requirements for degrees**

**For the baccalaureate degree**
All candidates for the baccalaureate degree enrolled through the day colleges must successfully complete six quarters, or the equivalent of two years, of physical education. This requirement is normally met during the first and second year of matriculation, but may be done at any time.

**For the associate's degree**
All candidates for the associate's degree enrolled through the day colleges are required to successfully complete three quarters or the equivalent of one year, of physical education. This requirement is normally met during the first year of matriculation, but may be done anytime.

**Transfer students**
All students who transfer to RIT from any other college or university also must comply with the physical education requirements for the associate’s and baccalaureate degree, either at RIT or as transferable credit.

Transfer students who have earned an associate's degree from another institution, and who are required to complete a work-study assignment, are required to complete only three quarters, or the equivalent of one year, of physical education at RIT.

**Intramural and Recreation Activities**

The intramural program at RIT provides a wide range of individual and team activities designed to meet the structured and competitive needs of students who do not wish to participate in intercollegiate athletics. This program is a vital part of the recreational opportunities and services afforded all students to help balance academic endeavors with relaxing and enjoyable leisure time activities.

Information relative to the types of activities offered each quarter and registration dates will be posted and announced to the student body well in advance of the scheduled events. In addition to the intramural program, daily opportunities are provided in all facilities for unstructured, free play endeavors. For those interested in competing, but not at the intercollegiate level, five sports are offered on an intramural basis. These include touch football, basketball, hockey, softball and coed volleyball.

Indoor and outdoor facilities are available at RIT personnel, including two gymnasiums, ice arena, swimming pool, fencing, weight and wrestling rooms. Outdoor facilities include numerous athletic fields, 12 tennis courts and an all-weather track.

Daily facility hours for recreation are posted in the Physical Education Building and any changes to the schedule will be posted on the Reservation Board in the lobby of the gymnasium.

Locker facilities are available and may be rented upon payment of a locker gym pass fee.
The RIT Tigers are members of the National Collegiate Athletic Association (NCAA), Eastern College Athletic Conference (ECAC), Independent College Athletic Conference (ICAC) and New York State Association of Intercollegiate Athletics for Women (NYSAIAW). The ICAC, which RIT joined in 1971, has seven member schools, including Alfred, Clarkson, Hobart, Ithaca, Rensselaer Polytechnic Institute, St. Lawrence and RIT.

Eligibility for intercollegiate athletic competition is governed by NCAA and ECAC rules. A student must be full-time (minimum 12 quarter hours of credit), day-school enrolled and making satisfactory progress toward a baccalaureate degree.

Intercollegiate competition for men is broken into three quarters. In the fall, the men compete in soccer, cross country, tennis, golf and baseball. During the winter quarter the Tigers compete in basketball, bowling, hockey, rifle, swimming and wrestling. In the spring the Tigers are involved in baseball, golf, tennis, lacrosse and track.

Institute teams have won titles in just about every sport and boast numerous All-American athletes.

Women’s intercollegiate competition is growing rapidly. Presently the women compete in volleyball and tennis (fall), and hockey, bowling and swimming (winter). The women are governed by NYSAIAW rules.

The Institute offers excellent facilities for intercollegiate competition. These include the George H. Clark Memorial Gymnasium (seating 2,200), Edith Woodward Memorial Swimming Pool (500), Franks. Ritter Memorial Ice Arena (2,200) and wrestling and weight rooms. Outdoors, RIT offers one of the best baseball fields in the region, 12 tennis courts, an all-weather track and recently-installed fields for soccer and lacrosse.
Community Living

Day Care
The Horton Child Care Center is a preschool and kindergarten for children of students, faculty and staff at RIT. It is located in Riverknoll housing, adjacent to the academic buildings. The center offers all-day and half-day programs for children ages 2 years 9 months through 5 and has an after-school care program for children ages 6-8. It is open all four academic quarters. The summer quarter has a day camp format and is open to children 2 years 9 months through 8. Some tuition aid is available.

Inquiries and application can be made by writing the Director, Horton Child Care Center, 85 Kimball Drive, Rochester, NY 14623, (716) 424-1244.

Identification Card
All day students and evening students (CCE) are required to have an official Institute Identification Card. Your card must be carried with you at all times, and loss reported at once, to the I.D. Office, 475-2125. All I.D. cards must be validated quarterly. Replacement of lost cards is $5.

Automobile registration
Those students having automobiles on campus must register these vehicles with the Protective Services Department at the time they first register for classes, or upon bringing the automobile onto campus for the first time. Failure to register a vehicle to be parked on campus will result in a $20 fine for the initial parking infraction. Fines are $10 and $20 and if unpaid, or not otherwise reconciled, are automatically charged to students’ accounts.

Protective Services department
There is a professional security and safety staff on duty 24 hours a day, all of whom are Institute employees. While this staff constantly patrols all campus areas. RIT does not assume liability for lost or stolen personal effects of students, faculty or staff. We therefore urge you to maintain an insurance policy on your own or through your family insurance program for personal property casualty experiences away from home.

For on-campus emergencies requiring immediate medical, firefighting, or law enforcement attention, call emergency telephone number 475-3333. For routine matters call extension 475-2853.

Textbooks and supplies
Textbooks, school supplies, art and design supplies, and photographic supplies and equipment may be purchased at the RIT bookstore. Also in stock are general reading material and monogrammed items.

An estimate of expenses likely to be incurred in a specific area of study may be obtained by contacting departmental offices. The major portion of the expenditures for textbooks and supplies is made at the beginning of each quarter (see also “Books and Supplies” on page 19).
Career Education Division

Dennis C. Nystrom heads the Division of Career Education at RIT. Established in 1977, the Division exists to provide leadership and service to students and academic units of the Institute regarding career education activities. Generally speaking, the Division supports programming and services that strengthen the linkages between the employment sector and the Institute. Its primary objective is to help students learn about the reality opportunities and limitations of the world of work. This is accomplished through four basic program activities including:

1. Academic and Career Advisement
2. Cooperative and Experiential Education
3. Career Education Research
4. Central Placement Services

Academic and Career Advisement

Academic and career advisement’s role at RIT is to assist the entering and continuing student with the development of career goals and academic plans. Advisement seeks to provide each student with a consistent system of communication with faculty and other professionals who possess expertise in the student’s areas of interest. Advisement is continually developing a bank of career information for faculty and student use. The system aids the RIT student in academic planning to meet individual career-entry needs. It coordinates its activities with RIT’s individual colleges to help the student develop skills in academic planning and career exploration within a general discipline. Academic and career advisement also seeks to broaden student awareness of career alternatives within the current job market.

Each student has an advisor who is a faculty member in his or her college. Other faculty of the Institute, the coordinators of academic and career advising in the major academic areas, and Counseling Center Professionals stand ready to answer academic and career planning questions.

Cooperative and Experiential Education

Cooperative and experiential education provides the RIT student with experience related to his or her life career plans. A complement to academic course work, co-op and other forms of experiential education provide the environment for testing academics in career-related situations. Through combined efforts of students, RIT faculty, the Division of Career Education, and representatives of specific career fields, the student gains first-hand experience related to his or her career interests. Cooperative and experiential education promote learning beyond the classroom.

Cooperative education denotes RIT’s philosophy of preparedness for a working society and offers students opportunities to develop further expertise in chosen career fields. During the typical co-op quarter, the student learns through actual employment within his or her discipline.

Colleges requiring cooperative education for graduation encourage the student to use the four quarters of co-op, interspersed with academic quarters, to develop a personal career path. The co-op experience is coordinated by the four partners, and it typically occurs within the junior and senior years.

The cooperative education program encourages students to seek learning/employment in geographic areas that they prefer for permanent employment and in areas that represent the growth of that particular job market. In many instances the co-op block leads to career possibilities upon graduation. Both student and employer have a chance to learn what each has to offer the other.

In addition to cooperative education, other forms of experiential education are available through various RIT colleges and programs. Like co-op, experiential learning opportunities are designed to provide a closer linkage between the realities of the classroom and the realities of the workplace. Internships, field work, simulations, and other forms of experiential learning are common educational activities at RIT.

Career Education Research

Action-oriented career education research is constantly being conducted by RIT faculty, staff, and various business and industry advising groups. However, thanks to a two-year grant from the Mobil Oil Foundation, the Division of Career Education is developing a centralized career education research system. The career education research function will provide two basic types of research information so necessary for a career education institution.

First, the career education research function will provide a vehicle and support to RIT faculty, staff, and selected students for the conduct of career education research related to their particular areas or disciplines. Secondly, the career education research group will look at more broadly-based career concerns. Information relative to such topics as mid-career crisis and change, diminishing individual productivity growth, emerging career areas, multiple career planning, and many others is needed to keep RIT at the ‘cutting edge’ of career development knowledge.
Central Placement Services

Judith Vollmer-Miller, director of Central Placement, says her office offers “a continuum of career direction.”

“We encourage students to come in even before they enroll. Or a student’s first acquaintance may be as a freshman, when looking for help in finding a part-time job on campus or a summer job.”

“We see most students for the first time when they’re ready for a co-op job, since many of RIT’s schools and colleges require that kind of experience for graduation.”

Looking for a co-op job can be excellent preparation for the real thing. The Placement Office provides leads, shows students how to write a resume and to use the office’s resource library, and trains them in interviewing techniques. And the office refers students directly to companies who have requested students to work on a co-op basis.

Placement helps students find positions which are geared to their academic level, so they can utilize their course work on the job. As the student advances, the Placement Office aids the employers in developing more complex and challenging tasks for each successive co-op assignment.

But Ms. Vollmer-Miller stresses the fact that the effort is a joint responsibility. “Placement doesn’t ‘place’ people,” she explains. “Our function is to provide guidance and information for planning a career. The student has to do just as much work as we do – probably much more – to land a job.”

The same is true when it comes to looking for a permanent position during the senior year. The Placement Office provides the same kind of guidance, including individualized counseling, to any student who seeks it. “We also have a job bank, and invite recruiters to interview seniors right here in campus. And opportunities have been excellent. During the 1978-1979 academic year, over 460 companies visited RIT, and conducted roughly 6,200 interviews with students. Based on survey information collected from approximately 58 percent of the 1977-78 baccalaureate degree graduates, Central Placement Services records indicate that more than 79 percent of the respondents secured employment in their chosen career field or entrance into graduate school soon after graduation. These figures are, of course, based on the information collected from only those responding to the follow-up survey.

But then, RIT has an edge on the competition, according to Ms. Vollmer-Miller. “It’s a known fact that employers are actively seeking RIT grads, for a number of reasons. They’re career oriented, and their education has been developed around current needs of business and industry. And they’re more aware of their career objectives. Usually they’ve chosen a field before they even come to RIT, and have had a chance to narrow it down to a specific type of position during their co-op experiences.

“So even in difficult economic times, when opportunities shrink, ours shrink less.”

Placement’s continuum goes on after a student graduates. Alumni are welcome to use the Placement Office. And the guidance and training that a student receives during his or her school years will also serve when it’s time for a job change.

“Five years from now, there won’t be anyone right there to help,” Ms. Vollmer-Miller says. “If a student makes optimum use of our service while he or she is here, it will make future job hunts easier.”

Ms. Vollmer-Miller’s responsibilities include managing a staff of 16, coordinating the four different functions (part-time and summer work, cooperative employment, senior counseling and alumni placement), and counseling students herself. “I think it’s critical for me to keep in contact with students so that I can keep abreast of their expectations, goals, and competencies.

“And all of us are involved daily with contacts in business and industry, in order to maintain RIT’s visibility and market RIT graduates.”

A native of Pennsylvania, Ms. Vollmer-Miller holds a BA from Duquesne University and an MBA from RIT. She has been with RIT’s Central Placement Services since 1971, as assistant director, associate director and as director since 1976.

Function

The function of Central Placement Services is to aid students in making appropriate contacts with part-time, co-op, and full-time employers and to provide career counseling. The services offered are essentially the same for all students but vary in degree according to individual needs. They fall into the three major categories of counseling, instructional and administrative services.

Counseling Services assist in assessing general career interests and abilities, identifying specific employment options, implementing the job search, and evaluating the individual’s success to date.

Instructional Services are provided through group sessions which allow the Placement staff an opportunity to discuss with students, specific topics related to career planning, employers’ forums which help students obtain firsthand information on employment opportunities and what is expected of them on the job; and the resource library which is a source of information about specific organizations.

Administration Services include on-campus interviews, which are arranged and monitored by the Placement Office; job development, accomplished by having counselors visit employers at their places of business; job listings, which make students and alumni aware of existing openings; and coordination of work experience programs such as co-op and summer internships.

The staff and facilities of Central Placement Services are available to students Monday through Friday, 8:30 a.m. to 4:30 p.m. CPS is located on the second floor wing of the George Eastman Memorial Building.
Educational Support and Development

Seeks To Improve Quality of Learning

The Educational Support and Development Division is made up of three areas whose goal it is to improve the quality and effectiveness of learning and instruction at RIT by providing a full scope of media-related resources. Specific functions of the areas include: instructional, curriculum, and faculty development projects (Office of Instructional Development); provision and production of audiovisual instructional materials and the provision of equipment, facilities and assistance required by faculty and students in their use (Instructional Media Services); and selecting, distributing, and providing bibliographic services for the instructional use of existing printed materials (Wallace Memorial Library).

Instructional Media Services

Reno Antonietti, Director

Instructional Media Services provides a complete range of audio-visual support services to faculty and students. IMS consists of a television center, production services, audio-visual distribution services and a Media Resource Center.

Television

This center is utilized as both a distribution system for delivery of instructional media to locations throughout the campus and as a production system to create both black and white and color programming. A professional staff of producer/directors and graphic artists and engineers are available to aid faculty in the development of programs ranging from complete courses to short modules for use within a course. The center has a wide variety of video cameras and recorders including portable units for remote location programs and fully equipped color studios. Thus flexibility is available to meet the instructional needs of the Institute. All standard video-tape formats are available ranging from two inch broadcast to half-inch and 3/4 inch videocassette.

Production Services

A professional staff of producer/directors, designers, artists and photographers are available to assist faculty in creating instructional media. The services are at two levels:

1. General services to meet the daily routine needs of faculty and students and,
2. Producer services to aid the faculty in the development of more sophisticated mediated instruction.
In addition, consultation and advisement is provided in the selection, purchase and use of television, photography, cinematography, animation, graphics and audio.

Audiovisual Distribution Services
Faculty and students are provided access to the large number of instructional materials available from sources throughout the country. Research assistance is provided to search out and recommend the best of these materials. Equipment and projectionist services are also available as well as the loan of a variety of audiovisual hardware.

Media Resource Center
This center, located just inside the library entrance on the main floor, contains a variety of non-print media and audiovisual equipment for individual student use. In addition, the center contains an outstanding collection of over 70,000 slides as well as viewing facilities for the collection of approximately 500 motion picture prints. Videocassette playback equipment is also available for individual use.

Instructional Development studies the process of instruction
Lawrence W. Belle, Director
Instructional Development’s primary goal is to search out and implement ways of improving the overall process of instruction at RIT. This is approached through cooperative planning, design, implementation, and evaluation of a variety of learning systems appropriate to the Institute.
Through the Institute’s Committee on Projects Relating to Productivity, Instructional Development provides support for all approved projects designed to improve the quality of undergraduate instruction. Part of this support includes helping applicants prepare projects before they are funded and assisting in their implementation.
Instructional Development works closely with the colleges and departments within the Institute to extend learning off campus. The office also helps academic deans, the dean of Records and Institutional Research, and others to identify RIT’s priorities for improving the quality and cost of instruction.
In support of the Committee for Effective Teaching, Instructional Development participates in faculty development programs and also provides academic counseling at the personal request of a faculty member. The office also provides individual consultation to faculty members interested in such areas as: the specification of course objectives, test measurement, evaluation techniques, and visualized instruction.
RIT’s Wallace Memorial Library
Is a True Multi-media Learning Center

Information comes in many forms other than printed pages bound between two covers. When a student wants to research a topic in RIT’s Wallace Memorial Library, he or she may find a number of resources indexed in the catalog: printed matter in miniature on microfilm and microfiche, videocassettes, motion pictures, slides, filmstrips, sound/filmstrips, slidetapes, Super 8 cartridges with audiocassettes, and the traditional books and magazines.

RIT has the largest microfilm collection and the greatest use of non-print media of any area college library, reports Gary MacMillan, library director. Particularly adapted to an institution of technology and the arts and sciences, the Wallace Memorial Library contains, in addition to material in the usual form of books, magazines, newspapers and pamphlets, material in the form of microfilm, microfiche, films and recordings. To assist the students in the use of all these resources, reference librarians are on duty during the week and on weekends. Located throughout the three floors of the library are over 900 student study stations, including individual study carrells and group study rooms.

During the year student work in art and photography is exhibited in display gallery areas. Outstanding student art work is permanently displayed within the building. And there are several lounge areas throughout.

The library contains a special collection of materials on the deaf to serve the National Technical Institute for the Deaf and to support research by anyone wishing to pursue studies in the problems of deafness. A Special Collections area houses the Archives, rare books, faculty writings and RIT theses. Supplementing the main library is the Graduate Chemistry Library. The regular hours for the library are: Monday - Thursday, 8 a.m. - 11 p.m.; Friday, 8 a.m. - 6 p.m.; Saturday, 9 a.m. - 6 p.m.; Sunday, Noon - 9 p.m. Special hours for exam time, breaks, and holidays are posted and publicized.
"We're a pretty advanced library, technologically speaking," Wallace Memorial Library Director Gary MacMillan says. "Books are losing some of their importance and other media are taking over...there's a growing awareness here that there are other ways to get information than from the printed word," he says. And so, Wallace Library has phased out the traditional clumsy card catalog in favor of a microfiche system. "The entire card catalog," MacMillan says, "can be held in a notebook."

MacMillan came to RIT in December, 1970, fresh from a job at the University of Liberia in West Africa, where he was working in a joint United States government-Cornell University program.

A native of Alpena, Michigan, he's a graduate of Kalamazoo College (psychology/sociology) and the University of Michigan (library science).

"A library doesn't mean just books anymore," he says. "It's a collection of information kept in the way that's easiest to retrieve."
The Career Decision Program Enables Students to Explore Academic Objectives

Students often are attracted to RIT because of the opportunity to specialize in a career-oriented or technical program beginning with their first year of college. Most RIT students have chosen a career area when they arrive at RIT as freshmen students. However, others may be considering a technical, career-oriented education, but want an opportunity to explore several career fields before making a decision about a particular career objective.

The Career Decision Program is designed for the latter group, as well as for students who want to explore educational-vocational possibilities more generally.

The major goal of the Career Decision Program is to assist participating students in formulating an educational-vocational plan or in taking the next steps compatible with their still emerging plans. Such next steps might include applying for admission to one of RIT’s degree programs, applying to another college or university for a program not offered at RIT, or possibly deciding to prepare for a career not requiring a college degree.

In addition to sampling introductory and foundation courses in one or more of RIT’s departments, full-time Career Decision students enroll for general education courses, an independent “Career Study” course, and a “Career Exploration Laboratory.”

For example, a particular Career Decision student may have tentatively chosen to prepare for a career in printing management. During the first term in the program, one might enroll in beginning printing courses (such as Typography I and Layout and Printing Design). In order to leave other options open while earning additional college credit, registration could be made for two general education courses (such as English Composition and Introduction to Psychology).

Another student may be fairly certain he or she wants to be either an accountant or an engineer, but needs further information about these fields in order to consider goals and values more thoroughly. With counseling, it may be decided to spend a year in the Career Decision Program sampling both accounting and engineering courses.

While in the program, each of these students completes at least one in-depth study of a career area and assesses personal qualifications and desired satisfactions in relation to career possibilities.

The formal “Career Study” course and the accompanying “Career Exploration Laboratory” are supplemented by the student’s regular individual meetings with his or her assigned counselor in the Counseling Center. As part of these counseling sessions, the student may take aptitude, interest and personality tests, may consider personal values and occupational information through a computer-assisted career exploration system, or may discuss the advantages and disadvantages of various career plans based on increasingly clarified personal goals.

Depending upon available classroom space and the student’s academic readiness, Career Decision students may sample courses in any major area represented by RIT departments, although possibilities for exploration in art, crafts and photography are very limited.

Career Decision students must, of course, meet standards and requirements of the RIT schools and colleges to which they may apply after making a decision. Additional time may be necessary to complete degree requirements because the Career Decision student has spent time in preliminary exploration. After no more than one academic year (one to three quarters), each student may reasonably anticipate:

• A clearer basis for making a decision regarding long-range career plans.
• Credit for courses which would likely apply to RIT or other colleges.
• Assistance in matriculating in the curriculum of the student’s choice at RIT or at another institution, provided that relevant standards and requirements are met.

By special permission, a student may enroll for portions of this program on a part-time basis.

Program

In addition to general education courses, the career study courses and exploration laboratory, each student enrolls in specialized course work in one or more of the major fields available at RIT. The range of options includes:

Business
Accounting
Business Administration
General Dietetics and Nutritional Care
Food Service Administration and
Hotel/Tourist Industries Management
Photographic Marketing
Retailing
Engineering
Computer Engineering
Electrical Engineering
Industrial Engineering
Mechanical Engineering
Fine Arts
Communication Design
Fine Arts
Environmental Design

College of Business Offers Programs Of Lasting Value in a Changing World

Physical facilities include well-appointed classrooms and laboratories and modern equipment. Student learning is extended further through other facilities, including an up-to-date and complete library of books and periodicals, as well as through use of fabric collections, films, professional speakers and field trips, applicable to the various fields of study.

Business Program Allows Options, Great Flexibility

RIT’s curricula in the College of Business have been improved significantly during the past decade. The Institute’s business programs now allow greater flexibility; there are many more elective courses from which a student may choose.

The College of Business has 1,300 students and 45 faculty members. Besides the upgrading of the curricula, there have been other developments during the recent past. Such developments as taking significant steps to revitalize the retailing and food-tourism programs and progress toward establishing a good learning center in the college.

However, along with these new directions, the college is maintaining its commitment to focus on the applied aspects of business subject matter rather than the theoretical only.

What does the future hold? For one thing, the college wants to explore program options that will provide the student with opportunities for managerial and executive positions in both the private and the not-for-profit sectors.

“Our programs should cover all types of institutions,” leaders in the college feel. “We should design and develop programs to provide the student with managerial and executive experience in a variety of institutions, public or private.”

There are great opportunities in the public sector for business graduates, RIT feels.

What do we believe a business career offers a person? Perhaps the answer to that question was best summarized by a former dean of the college in the following statement:

“The possibilities for a student to grow into a highly creative, innovative person, to deal with exceptionally complex and complicated social, economic, and business problems, and to earn a good salary, are as good in business as in most other fields.”
Admission at a Glance:
College of Business Programs

The major programs in this college are: accounting, business administration, retailing, food administration and tourist industries management, and photographic marketing. All faculty in the college have outstanding academic and practical experience. They are aware of the newest theories and applications in their areas of expertise. The Co-op program is especially strong. This helps graduates get jobs.

Accounting—Graduates of the public accounting option meet candidacy requirements for the C.P.A. examination. There is a general accounting option for students who desire a broader and more flexible range of accounting and business electives. Degrees granted: AAS-2 year; BS-4 year.

Business Administration—Provides business basics in accounting, management, mathematics, economics, computer science, and behavioral science. Students may select concentrations in finance, management or marketing. Degrees granted: AAS-2 year; BS-4 year.

Food Service Administration—Prepares graduates for managerial positions in restaurants and food service operations such as hotels, schools, business firms, and governmental agencies. The Hotel and Tourist Industries Management option develops comprehensive managerial skills for the rapidly expanding field of tourism. Degrees granted: AAS-2 year; BS-4 year.

Dietetics—Graduates can develop within a broad spectrum of interests from service to management positions in hospitals, nursing homes, and in the growing field of community nutrition (sponsored by national, state and local agencies). Also, large national restaurant chains often have dietitians in responsible staff positions. Degrees granted: AAS-2 year; BS-4 year.

Retailing—Prepares students for five broad areas within the retail field: merchandising, operations, finance, personnel, and sales promotion. These competencies will help graduates achieve middle and upper-middle management positions after some years of on-the-job experience. Degrees granted: AAS-2 year; BS-4 year.

Photographic Marketing—Designed to provide students with knowledge of the photographic process in combination with the economic, financial, and marketing principles necessary to establish and maintain a photographic wholesale or retail business. Degrees granted: AAS-2 year; BS-4 year.

One third of the courses in each program consists of electives in social science, literature, and humanities.

Four years of English are required in all programs, except where state requirements differ.
Accreditation and professional memberships

The public accounting curriculum of the School of Business Administration is registered with the New York State Education Department and graduates meet the educational requirements for candidacy for the Certified Public Accountant examination.

Graduates who earn a BS degree with a major in general dietetics in the Department of Food Administration and Tourist Industries Management are qualified to apply for American Dietetic Association internships. Graduates of the coordinated dietetics program meet both the academic and clinical requirements for membership in the American Dietetic Association.

Memberships in professional organizations contribute to the quality of the programs in the College of Business. The School of Business Administration maintains membership in the American Association of Collegiate Schools of Business Assembly and the Middle Atlantic Association of Colleges of Business Administration. Programs in the Department of Food Administration are recognized by the American Dietetic Association.

The School of Retailing is a member of the American Collegiate Retailing Association, an organization to promote the profession of retail management and to maintain high standards of education for the retail profession.

The plan of education

Each program within the College of Business includes a "core group" of business subjects in addition to courses in communications, social studies and the humanities. This provides for an understanding of the complex relationships existing within the business organization. The student also concentrates in-depth in a particular subject area, with each successive course built upon accumulated knowledge and skills, providing a challenge equal to the student's capabilities.

Cooperative employment is an integral part of the program in the College of Business. Under the supervision of the director of cooperative education, each student obtains up to four quarters of practical work experience in varied phases of his or her field of interest, not limited to the local area. Every effort is made to help students find a position that will further their career goals. Since this work experience is related to the student's total career objective, the students gain more stimulation from class work and are prepared to assume some increased responsibility during successive work periods. The students also develop judgment and initiative, keener understanding of their major field and the special phases which interest them, and greater possibility of moving more rapidly toward their goals after graduation.

The cooperative plan

Cooperative employment arrangements for students in BS degree programs are made prior to the summer quarter of the second year. Students are then assigned to A and B Sections; students in Section A work on their cooperative jobs in the Summer Quarter while those in Section B attend classes. The two sections interchange at the beginning of the Fall Quarter of the third year when students in Section A attend classes and those in Section B are cooperatively employed. This interchange of study-work periods continues until the Summer Quarter of the fourth year when both groups attend classes.

Transfer students are required to complete a minimum number of cooperative employment quarters which are determined by evaluation of the individual's record and program.

For more information about Co-op at RIT, see page 18.

Graduation requirements

The minimum academic requirements in the College of Business are:

- AAS degree: The degree of associate in applied science is awarded upon earning a minimum grade point average of 2.0 in the departmentally approved program.
- BS degree: The bachelor of science degree is granted if the student has (1) earned a minimum grade point average of 2.0 in the departmentally approved program, and (2) completed the required number of supervised field education assignments for the program.

Transfer programs

Junior standing will be granted to qualified students from accredited institutions who possess an associate's degree or its equivalent and who wish to continue their education for the baccalaureate degree. Students interested in business administration, retailing, or food management may complete all requirements for the BS degree in two years, which includes six academic quarters and two quarters of cooperative employment.

A transfer student must (1) complete a minimum of 102 quarter credit hours with an earned minimum grade point average of 2.0 in the departmentally approved program, and (2) complete two quarters of approved cooperative education assignments.

Due to the special requirements of the accounting program and the dietetics program, the amount of transferable credit and the estimated time to complete work for these degrees must be determined by evaluation of each individual's record. In every instance, however, it is the policy of the college to recognize as fully as possible the past academic accomplishments of each student.

Graduate programs
The College of Business offers master's degree programs in business administration and accounting on a part-time and full-time basis.

The programs are professional in nature and acquaint the student with all aspects of business management as well as offering a concentration in a field of specialization. Specific details are contained in the Graduate Bulletin, available from the Admission Office.

Course descriptions
For a complete outline of courses offered at RIT, please request the Course Description catalog from the Admission Office.
Business Administration Program Provides Mastery in a Marketable Skill

Objectives
The basic objective of the School of Business Administration is to create and provide experiences which lead to the continuing growth of the individual in achieving his or her occupational, social, and personal goals. The programs offered provide for an understanding of the concepts essential to competence in business management.

To provide an education that will allow the graduate to perform and grow in this dynamic and complex field of business, the programs in the School of Business Administration are designed to: (1) make students aware of the world about them; (2) open and stimulate students' minds to initiate-and welcome-new ideas and techniques; (3) provide mastery in a marketable skill.

Programs of Study

Accounting
The accounting major has two options: the public accounting option and a general accounting option. The public accounting major has been registered with the State Education Department of New York, which means that graduates meet the requirements for candidacy for the Certified Public Accountant examination.

The general accounting option has been designed for students with varied interests. Not only has the curriculum been designed to help prepare students for the Certificate in Management Accounting examination as administered by the Institute of Management Accounting of the National Association of Accountants, but also the student has the opportunity to gain a more in-depth knowledge in taxation, international accounting, and accounting for non-profit organizations by electing courses in a seminar series.

Undergraduate Programs 55

**Business Administration**
The curriculum is designed to provide an understanding of and competency in essential business management principles and techniques. Additionally, the student may elect a concentration in accounting, consumer services, finance, management or marketing.

**Photo Marketing Management**
This program of study in photographic marketing is designed to provide students with a thorough knowledge of the photographic process in order that they may have an understanding of how their products work. At the same time, they will be involved in learning the economic, financial and marketing principles necessary to successfully establish and maintain a prosperous photographic wholesale or retail business.

This four-year baccalaureate program is directed towards marketing, merchandising, promotion and personnel management in the photographic dealer industry; however, those choosing to terminate after two years are awarded an AAS degree and should qualify for a store manager's position.

Note: A minimum of eight quarter credit hours of science must be earned. If science transfer credit is allowed, the student must take a comparable number of hours in either business or general studies. Transfer students with insufficient background in accounting, economics, management and/or marketing will be required to take the following courses in place of business electives: Financial Accounting BBUA-210, 211; Economics SSSE-301 and/or 302; Management BBUB-401, Marketing BBUB-263.

*See Pg. 98 for General Studies requirements.
†See Pg. 40 for Policy on Physical Education.
Upon successful completion of second year, the associate of applied science degree is awarded. 
Total of 120 quarter credit hours is required for the BS degree.
It is recommended that students seeking the baccalaureate degree spend the summer of their junior year in a work block-type program.
Professional electives may be selected from either the College of Business or School of Photographic Arts and Sciences, in consultation with advisor.
Refer to School of Photographic Arts and Sciences for descriptions of photography courses.
Food Administration, Tourist Industries Management Teaches Sophistication and Vital Efficiency

George T. Alley, Director

RIT’s Department of Food Administration and Tourist Industries Management is preparing students for a wide variety of careers ranging from restaurant, hotel and tourism management to dietetics. A career in the food and hospitality industries has become highly specialized in the business world. Efficient and sophisticated management is vital and requires a diversity of skills from many disciplines. Students study accounting, economics, computer science, business management, behavioral science, food preparation, nutrition, and other related areas.

The philosophy of the department dictates that each student must combine practical experience with classroom theory to meet graduation requirements. Under a cooperative employment plan, work assignments are related to the students’ interests in the hospitality field. They are diversified in order to provide a variety of experiences, and are progressive, reflecting growth in knowledge and practical experience. The department requires 1,600 hours of work experience between the sophomore and senior years-more than any other four year hospitality management program in the country. The work-study program provides financial assistance, stimulates classroom experience and serves as a preview for determining career direction in the industry.

Objectives
It is the mission of the Department of Food Administration and Tourist Industries Management to prepare students to excel in their chosen profession by developing:

1. theoretical and technical knowledge essential to successful attainment of professional, executive level management,
2. the ability to apply knowledge and original thinking to solving management problems,
3. the skills and techniques of leadership,
4. an awareness and desire for a lifetime of learning,

5. an intellectual spirit for constructive thought and action in building a good life and effective citizenship.

Programs of study

The Food Service Administration program is designed to prepare persons for managerial positions in restaurants and food service operations of differing types of institutions such as hotels, schools, business firms, and governmental agencies.

The hotel and tourist industries management program option is aimed at developing comprehensive managerial skills for the rapidly expanding and complex field of tourism.

General dietetics is a well defined and structured professional program for persons interested in pursuing a career in the administrative and/or therapeutic aspects of food and nutritional needs in health care facilities.
Food Service Administration
Hotel and Tourist Industries
Management Option

The hospitality service industries employ more people than any other industry in the nation. These industries cover the wide scope of public feeding, lodging and tourism. During the first two years, emphasis in the program is upon basic course work which is common to food and tourist industries and is directed at those aspiring to managerial positions in restaurants, hotels, motor lodges, resorts, clubs, airlines, colleges and schools, and other types of accommodation businesses. In the third and fourth years, students may elect either the Food Service Administration or Hotel and Tourist Management option according to their career directions.

The U.S. Department of Labor predicts that between 1978 and 1985 over 7,000 hotel managers or assistant manager positions will be available for qualified personnel in each one of those years.

The Hotel and Tourist Industries Management option is a professionally oriented curriculum for students seeking careers involving the development, management, and operation of hotel, tourist and recreation enterprises. The composite of discipline areas allows the student to understand the physical characteristics of tourist and recreation properties, as well as gaining the business expertise to manage and successfully market their recreational attributes.

Opportunities
Our nation is now a service economy which means that the majority of employment opportunities will be service oriented. The food service area ranks as the nation’s fourth largest industry while hotels rank seventh. Combined, they enjoy a rank of third. The closely interrelated tourism industry is one of the fastest developing businesses in the United States. With the continued expansion of U.S. food companies and hotels into foreign markets, international tourism offers ever increasing opportunities for professionally trained individuals.

Cooperative Work Experience

RIT’s hospitality education program is relevant to what’s happening in the world today by blending classroom study with on-the-job, paid work experience. Students study the theory of a discipline and have 1,600 hours of practical application. Their diversified academic and practical backgrounds enhance their career opportunities.
60 Undergraduate Programs

Two-Year transfer program for Food Administration and Hotel/Tourism

Students who possess an associate's degree or its equivalent in related fields from accredited institutions and are interested in continuing their education for the baccalaureate degree in food administration and tourist industries may enter with junior standing and complete the BS degree in two years.

Transfer students must complete a minimum of 102 quarter credit hours with an earned minimum grade point average of 2.0 in the departmentally approved program, and complete two quarters of approved cooperative education assignments.

Transfer students with less than two years of college or from other educational backgrounds can be accommodated. The amount of transfer credit will be determined by evaluation of the individual's transcript.

Hotel and Food Options

For Food/Hotel/Tourism majors, concentrations may be developed in Marketing or Accounting and Finance. These concentrations can be created by selecting from the following list of elective courses:

Marketing
BBUM-420 Consumer Behavior
BBUM-510 Consumer Services Analysis
BBUM-551 Marketing Research
BBUM-552 Advertising
BBUM-553 Sales Management
BBUM-555 International Marketing

Accounting & Finance
BBUA-211 Managerial Accounting
BBUA-308, 309, 310 Intermediate Accounting I, II, III
BBUA-503 Financial Problems
BBUF-554 Seminar in Finance

Students may either specialize in or combine areas of food, lodging or resort and recreation management.

General Dietetics and Nutritional Care
Dietetics encompasses the complete range of nutritional services from management of food service systems to therapeutics. The term dietitian has been defined as a specialist educated for a profession responsible for the nutritional care of individuals and groups. Many in this field have positions of management, not only on the staff of hospitals, but also in supervisory posts in government agencies-national, state and local-and in the growing field of community nutrition.

Opportunities
As a dietitian you will be involved with people of all ages, cultures and economic means. If you enjoy people and learn to understand them as individuals, then you can help solve their food needs.

Dietitians are health professionals who apply the science and art of human nutrition. They help individuals and families choose foods for adequate nutrition in health or disease throughout the life cycle. Dietitians also supervise the preparation and service of food to groups, develop modified diets, participate in nutrition research and supervise the nutritional aspects of health care.

You may become a...

Clinical Dietitian
You will be a member of the health care team which may include physicians, dentists, nurses, psychologists, medical social service workers, and others. Hospitals, clinics, and other health care facilities require your professional services. You will assess nutritional needs, develop individualized dietary plans and provide dietary counseling. In an organization that provides foodservice, you cooperate and coordinate activities with the department management team.

Administrative Dietitian
You will be a member of the department’s management team responsible for the food service systems that provide optimal nutrition and quality food. You will establish and maintain standards of food production and service, sanitation, safety and security. You will administer personnel policies and plan orientation and inservice educational programs. You will develop menu patterns and evaluate their acceptance. You will develop specifications for buying food, equipment and supplies. Your services are sought by hospitals, universities, schools, industries and other institutions providing group foodservice.

Community Dietitian
You will function as a member of the community health care team. Your job is to plan and coordinate the nutritional aspects of improved health and the prevention of disease. You will counsel individuals and/or families in nutritional principles, food selection and economics, and adapt teaching plans to a client’s lifestyle. You can work for a variety of community organizations and government agencies which may include day care centers, public health facilities and others.

With additional work experience and/or advanced degrees, you may work as a dietetic consultant, research dietitian or teach in the field of dietetics.

Programs
The Department of Food Administration and Tourist Industries Management offers two options in dietetics: the traditional program in general dietetics and the Coordinated Undergraduate Program (CUP) in general dietetics.

I. The Traditional Program in General Dietetics
The curriculum in general dietetics leading to a baccalaureate degree at RIT meets the education requirements of the American Dietetic Association. The courses included are in the areas of physical, biological and social sciences; food principles and management; nutrition in health and disease; accounting and finance. Four year students must complete three quarters of approved cooperative work experience.

In addition to completing an approved academic program, persons seeking certification as a Registered Dietitian (R.D.) need to have an approved clinical experience and pass the qualifying comprehensive examination of the American Dietetic Association.

Due to the special professional requirements of the American Dietetic Association, the amount of transferable credit and estimated time to complete work for the BS degree in General Dietetics must be determined by evaluation of each individual’s record.

Transfer students must complete a minimum of 102 quarter credit hours with an earned minimum grade point average of 2.0 in the departmentally approved program, and complete two quarters of approved cooperative education assignments.

II. Coordinated Undergraduate Program in General Dietetics (CUP)
The coordinated dietetics program combines the undergraduate curriculum and planned clinical study to meet the academic and clinical requirements for membership in the American Dietetic Association (ADA).
This program is planned to integrate formal teaching and supervised clinical experience in hospitals, nursing homes, school food services and community health agencies. Clinical facilities in several large hospitals provide a comprehensive health care environment for student learning.

Academic and clinical phases are taught together to reinforce each other. Learning experience involves team teaching by RIT faculty and clinical instructors, each contributing their expertise in the profession.

Completion of the program leads to a bachelor of science degree plus ADA membership. Successful completion of a national examination qualifies the member to become a registered dietitian.

All RIT dietetics students are enrolled in the traditional program in general dietetics in the first two years. Upon completion of the necessary preprofessional (first and second year) courses, students may apply for admission into the coordinated dietetics program.

Applications for the coordinated undergraduate program must be submitted by March 1 to be considered for admission into the professional phase the following September.

Cooperative work experience is not required of students in the coordinated program because clinical hours have been planned in the junior and senior years of the professional phase.

Another set of CUP application forms from the Department of Food Administration must be completed and submitted to the department by March 1.
Two-year transfer program for coordinated dietetics
RIT makes every effort to facilitate transfer credit. Due to specific areas of study required by the American Dietetic Association and RIT, transfer students applying for admission to the professional phase of CUP in Dietetics must meet course prerequisites listed in the preprofessional phase. The following areas of study must be completed:
- Food and Nutrition Principles
- Microbiology
- General and Organic Chemistry
- Biochemistry
- Physiology
- Management Courses:
  - Mathematics, Accounting and Statistics
  - Economics
TOTAL of 24 credit hours of General Studies (including Introduction to Sociology)
Applicants are required to have a minimum grade point average of 2.5 on the basis of 4.0 scale from two years of basic preprofessional courses before they are considered for admission in the coordinated program.
Students who are not accepted in the coordinated program may be admitted to the traditional program in general dietetics. Due to the special professional requirements of the American Dietetic Association, the amount of transferable credit and estimated time to complete work for the B.S. degree must be determined by evaluation of each individual’s transcript.

Undergraduate Programs 63
School of Retailing Offers Education in A Dynamic Field

The major objectives of the School of Retailing is to educate young men and women for retail business management competence in order that their education will help them to achieve middle and upper-middle management positions after some years of on-the-job experience, as well as to provide a base for beginning management positions.

To achieve this major objective, the student should have a basic understanding of the major functional areas of business—accounting, finance, personnel and marketing; depth of knowledge of the marketing process for the retail industry; a broad background in natural and social sciences and in the humanities; and understanding of the tools common to most management functions; and an awareness of the need for life-long learning.

The dynamic nature of retailing and retail institutions creates an ever expanding number of career opportunities. Retail organizations offer highly rewarding and challenging positions in five broad areas: merchandising, operations, finance, personnel, and sales promotion. Merchandising covers selection, buying and selling; operations covers the general operation of the company’s physical plant as well as customer services; finance includes accounting, credit sales, collection, statistical and internal audit; personnel is responsible for selection, training, placing, advancement, and welfare of all employees; sales promotion is responsible for advertising display and publicity.

Program

The retailing program is designed to provide the student with a basic and comprehensive foundation of theory and practice in the management of retail institutions. In addition to the required core of retail and business subjects, the student may elect concentrations in the following areas:

- **Fashion Merchandising** is a group of selected courses in history and trends of fashion; fashion apparel and accessories; buying, promotion and coordination of fashion merchandise. A wide range of employment opportunities as assistant buyers, buyers and fashion coordinators exists in the fashion merchandising field.

- **Interior Design** is a well-developed sequence of courses covering topics of basic and advanced color and design principles, planning and creating home and commercial interiors; and historical design trends. Employment opportunities are in home and office furnishing design, display, store layout and design, and commercial contract design departments.

  - **Management** is the core retail program with elective courses in business administration providing strong academic preparation for a variety of managerial positions in store management.

  The cooperative employment component of the program provides the needed balance between classroom and experience. Co-op plays an integral part in the total education of the retail student. See page 52 for details.

Two-year transfer program

Junior standing will be granted to qualified students with an associate’s degree or equivalent in a related field from accredited institutions. The bachelor of science degree will be awarded in two years, which includes six academic quarters and two quarters of cooperative field education. The student’s program is determined on the basis of his or her previous education and field interest.
Retailing Professional Electives
(Each carries 4 Quarter Credit Hours)
BRER-511 Textiles (Basic)
BRER-521 Fashion (History)
BRER-524 Fashion (Accessories)
BRER-523 Fashion (Current)
BRER-531 Interior Design (Basic)
BRER-532 Interior Design I
BRER-533 Interior Design II
BRER-534 Interior Design (History)
BRER-535 Interior Design (Advanced)
BRER-545 Color and Design (Display)
BRER-554 Seminar in Retailing

Additional electives may be chosen from the School of Business Administration or approved electives from other colleges of the Institute.

Course descriptions
For a complete outline of courses offered at RIT, please request the Course Description catalog from the Admission Office.
The College of Continuing Education Helps Meet Varying Community Needs

What is the College of Continuing Education?

Robert A. Clark, Acting Dean

Continuing education has always been a part of the philosophy of Rochester Institute of Technology. Since its inception the Institute has been concerned with adult learners who wish to develop themselves personally or to enhance their occupational competencies.

For many people the College of Continuing Education (CCE) provides an alternative to full-time study insomuch as personal commitments, work schedules or other obligations are accommodated through part-time study at night, on weekends or during the day. Working closely with the other eight colleges of the Institute, as well as with industry and the community, the College of Continuing Education develops convenient educational opportunities for continuing learners.

Class hours and course offerings are scheduled to meet the specific needs of employers, employees and non-working people alike. As a result, many people have been able to attain educational goals not otherwise available.

The college aims to provide higher educational experiences for all who desire them. Under the CCE Open Admission Policy, students are free to take any course or to pursue any degree for which they have sufficient background. Academic advisors are available throughout the year to answer questions regarding course or program choices.

For students who choose to follow a specific program of study, a variety of options is available in fields as diverse as management and photography, machine tool and general education.

The college confers the diploma of the Institute in thirteen fields, as well as a certificate in management. Twenty-one options lead to the associate in applied science, and the associate in arts degree is offered in general education.

Thirteen programs lead to the bachelor of science. Programs designed primarily for transfer students with associate degrees are offered, leading to the bachelor of technology degree in electrical or mechanical technology.

For graduate students the master of science degree is offered in applied and mathematical statistics.

In addition to credit courses, the college offers workshops, seminars, and short courses to meet specific needs of community groups, professional organizations, agencies, industries, business and government. Non-credit programs include offerings as diverse as career exploration seminars, workshops in professional development for secretaries, breakfast seminars for managers, and continuing education for health field personnel.
Another alternative offered through CCE is the RIT Summer Session. Along with the opportunity for RIT students to continue work in chosen academic programs, RIT’s unique summer offerings also feature learning opportunities for students from other colleges and representatives from business and industry. Concentrated courses combining the resources of the entire Institute are offered in numerous subject areas and unusual formats. There’s much more to the College of Continuing Education. If you’d like information about courses, programs, Summer Session and special events, write or phone:

The Eisenhower College Campus Adds World Studies Orientation to RIT

On March 30, 1979, members of the boards of trustees of Eisenhower College and Rochester Institute of Technology resolved to have Eisenhower become the tenth college of RIT.

The new options which are to be made available to students by this association of a career oriented institute and a liberal arts college still are unfolding.

With its comparatively small campus in Seneca Falls, Eisenhower College offers students of RIT a lifestyle distinctly different from that available at the suburban Rochester campus. Chartered in 1965 and opened in 1968, it stands as the national memorial to former President Dwight David Eisenhower.

The College is situated on the west shore of Cayuga Lake, on the southeastern side of Seneca Falls. The community of approximately 9,000 persons is three and a half miles from the Montezuma National Wildlife Refuge and within an hour of Syracuse, Ithaca and Rochester.

Facilities

Eisenhower's 286 acre campus includes 18 buildings, athletic fields, tennis courts, a par-three golf course, ponds, a memorial park, and shoreline property along Cayuga Lake. With the exception of a 140-year-old barn which serves as a student pub, every major building on campus has been completed within the past 11 years. The College is designed with foresight to provide ready access for handicapped persons.

Eisenhower's modern residence halls accommodate 70 to 170 students each, and are staffed by professional residence coordinators and student resident assistants. Nearly all students reside on campus. A variety of living arrangements are available, including private quarters or rooms with a roommate.

Programs

In addition to the numerous programs available through RIT, Eisenhower offers four-year programs structured on the foundation of a World Studies Core.

Attempting to study anything on a global scale is an ambitious undertaking, and Eisenhower's World Studies Core is suited to ambitious students who want to build their lives and careers on a foundation of world understanding.

While the subject matter studied is classic, we feel safe in calling this particular area "one-of-a-kind." It was carefully designed and is being constantly updated to present the most clear and complete overview possible.

Who Should Apply, and How?

Students wishing to consider study at the Eisenhower campus may request an application for admission through the RIT or Eisenhower College Admissions Offices. Eisenhower employs a "rolling admission" plan, so decisions regarding acceptance are made as soon as the application for admission, supporting SAT or ACT scores, and appropriate transcripts are received. Candidates are notified as soon as decisions are made.
In RIT's Career Decision Program, a student who is not yet certain of his or her college major takes special courses for career exploration and, at the same time, gets intensive career counseling. The program’s basic objective is to enable a student to make a sound career choice by the end of his or her first year of college. The Eisenhower Campus provides an ideal setting for this kind of study. The small intimate atmosphere allows students the opportunity of exploring one or more specialized career fields, obtaining a year of college credit, and receiving individual professional career guidance.

Extra Curricular and Co-Curricular Activities
At Eisenhower you’ll find not only an ample number of clubs, teams and projects to accommodate a full range of interests, but also a variety of creative people with interesting ideas who approach extracurricular life with the same intensity as they do their studies.

Student participation in campus affairs is extensive. The Student Senate handles an annual budget of more than $100,000 and oversees all co-curricular activities. A student judiciary serves as a peer review body for student disciplinary cases. Eisenhower’s location in upstate New York provides opportunities for outdoor activities in every season. Sailing on the Finger Lakes, hiking in state parks or the Montezuma Wildlife Refuge, and skiing at nearby slopes are popular pastimes for Eisenhower students. The College also sponsors numerous intercollegiate and intramural athletic activities for men and women.

If you have minimal athletic instincts, you can turn your attention to Eisenhower’s co-curricular offerings. Campus media include: The General Star and The Paper (newspapers), Renaissance 20 (yearbook), Logos (literary magazine), and WIKE (radio).

There are also groups with close ties to academic disciplines such as the Anthropology Club, Political Science Club, and French and Spanish Clubs; and special interest clubs such as the Outing Club, Sailing Club, and Photography Club. And there are groups for performers, like the Eisenhower Student Players, the College Community Chorus, and the Chamber Music Ensemble. These campus groups - and many more not listed here - seek new members each year, so be assured that if you want to participate, you can.

For many students, Eisenhower provides the first contact with a small college located in a small community. It’s usually a pleasant surprise for those accustomed to much larger numbers to find themselves on a campus where people know each other and care about each other.

There’s an easy-going intimacy at Eisenhower that helps you get to know others. As a result, you begin to know more about yourself. If you are considering the Eisenhower alternative, we encourage you to contact either the RIT or Eisenhower Admission Office to ask any other questions you may have about the Eisenhower option.

College of Engineering’s Programs Build Foundation for Specialization

Richard A. Kenyon, Dean

The College of Engineering program is strong in fundamentals

The programs offered by the College of Engineering are planned to prepare students to fit into present-day industrial and community life, and to lay a foundation for graduate work in specialized fields. This is accomplished by offering curricula which are strong in fundamentals, yet lead to specialization in the junior and senior years, and maintain a balance among humanistic-social subjects, the physical sciences, and professional courses.

Five-year programs
The college offers four five-year cooperative programs leading to the bachelor of science degree with majors in electrical, computer, industrial and mechanical engineering.

Resources
The Departments of Electrical, Industrial and Mechanical Engineering maintain extensive laboratory facilities in the Gleason Engineering Building to provide students with ample opportunities to work with up-to-date equipment in their respective fields. The laboratories are structured and outfitted to provide basic laboratory work as a part of the engineering curricula, to offer students the opportunity for independent laboratory projects, and to provide facilities for fundamental research by students and faculty. The program in computer engineering, offered jointly by the Department of Electrical Engineering and the School of Computer Science and Technology, utilizes the facilities of both departments and the RIT computer facility.

Need for Engineers Never Greater, Says Dean Kenyon

“Perhaps never in the history of society, certainly not in the history of this country, has there been a greater need for people trained in the engineering professions—those who have engineering skills plus awareness and concern for larger social problems,” says Dr. Richard A. Kenyon, dean of the College of Engineering.

“Never has there been a greater opportunity for engineers and other technically trained people to work with experts of all other disciplines on the solution of complex, multifaceted, people-oriented problems. Indicative of the demand for new engineering talent is the continually increasing starting salary. For the 1979 graduate, the average starting salary will be in excess of $18,000 per year.

“The RIT College of Engineering is perhaps unique in New York State in that it provides integrated cooperative work experience for all its students. The graduate of RIT’s five-year engineering program has not only a bachelor of science degree and the academic training it connotes, but also more than a year of engineering work experience in a real world setting. RIT’s engineering programs prepare the graduate to earn a living and to live a life. Besides being well-prepared for immediate careers in engineering, an increasing number of RIT alumni enter the top graduate schools in the country for advanced study leading to careers in such diverse areas as research, teaching, management, medicine, law and public service.

“Although RIT is a large and growing technical multiversity, its engineering school, with approximately 1100 students, is sufficiently small and close knit to maintain a very intimate student-faculty relationship. RIT’s engineering faculty is widely recognized for its involvement in research and professional activity, but its fundamental role is undergraduate teaching. Perhaps RIT’s combination of theory with practice offered in the setting of a 150-year-old school on a brand new campus is just the place you have been seeking to pursue the next step in your career path.”
Undergraduate Programs

Admission at a Glance:

College of Engineering Programs

Four five-year cooperative programs leading to the BS degree are offered. The four majors are: electrical, computer, industrial and mechanical engineering.

The programs prepare students for employment in the modern industrial world. There are extensive laboratory and experimental facilities available for student use. The programs in mechanical, industrial, and electrical engineering are accredited by the Engineer's Council for Professional Development.

Electrical Engineering—Students first develop proficiency in mathematics, science, and engineering fundamentals. Fundamental electrical studies include: electromagnetics, energy conversion, circuit theory, and electronics. Degree granted: BS-5 year.

Electrical Engineering AAS Transfer program—This is a specialized program that provides a clearly defined route to the bachelor of science degree in Electrical Engineering for holders of an AAS degree in Electrical Technology. Incoming students enroll in transfer adjustment courses the summer before entering as third-year students. Degree granted: BS-3 year.

Computer Engineering—This program, jointly sponsored by the Department of Electrical Engineering and the School of Computer Science and Technology, offers a blend of computer science and electrical engineering which is designed to enable the graduates to intelligently incorporate computers within engineering products. Degree granted: BS-5 year.

Mechanical Engineering—Students devote the first two years to the study of mathematics, physics, chemistry, and mechanics. There are two options in upper years: applied mechanics, and thermal fluid sciences. Degree granted: BS-5 year.

Electrical Engineering AAS Transfer program—This is a specialized program that provides a clearly defined route to the bachelor of science degree in Electrical Engineering for holders of an AAS degree in Electrical Technology. Incoming students enroll in transfer adjustment courses the summer before entering as third-year students. Degree granted: BS-3 year.

Mechanical Engineering—Students learn design improvement and installation of integrated systems of people, materials, and equipment. Students also develop specialized knowledge in mathematics and physical science with methods of engineering. Degree granted: BS-5 year.

Industrial Engineering—Students learn design improvement and installation of integrated systems of people, materials, and equipment. Students also develop specialized knowledge in mathematics and physical science with methods of engineering. Degree granted: BS-5 year.

The cooperative plan
Students in the five-year cooperative programs attend classes during the Fall, Winter, and Spring Quarters of their first and second years. Prior to the beginning of the third year, students are assigned to A and B Sections; in any given quarter, one section follows cooperative employment while the other attends classes. Employment arrangements are made by each student through the Co-op coordinator in Central Placement. The chart illustrates the cooperative program as offered by the College of Engineering.

Transfer programs
The College of Engineering at RIT has for many years admitted graduates from two-year engineering science and technology programs at community colleges and technical institutes. The rapid integration of these transfer students into the baccalaureate programs in significant numbers has provided an added dimension and a uniqueness to the College of Engineering.

In virtually all cases, graduates of the two-year engineering science programs are able to enter the regular third year program in any of RIT's four engineering programs.

For those students who have completed programs in electrical or electronics technology with a high scholastic average, there is a three-year AAS Transfer Program leading to a bachelor of science degree in electrical engineering. Qualified graduates of mechanical technology programs desire of earning a bachelor of science degree in mechanical engineering take an individualized transfer program that best suits their particular background and meets their career objectives. Two-year technology graduates will, of course, wish also to consider the educational opportunities available to them through RIT's upper-division bachelor of technology programs in the School of Engineering Technology.

Orientation
The engineering programs are strongly oriented toward mathematics and the physical sciences. Emphasis is placed upon the study of these subjects in the first two years to provide a foundation for the applied sciences and for the engineering subjects which are scheduled later in the programs.

Careers
Graduates qualify for professional work in design and development of equipment and systems, research and experimental work, supervision of technical projects and managerial positions in industry. An increasing number of graduates continue their education for the master of science or the doctor of philosophy degrees.

Entrance requirements (BS)
Applicants for the engineering programs must be high school graduates, and must have completed elementary and intermediate algebra, plane geometry, trigonometry, and both physics and chemistry while in high school. Advanced algebra, solid geometry, and calculus, while not required, are highly desirable. The applicant's proficiency in the required entrance subjects should be high since these provide a good index of his or her ability to cope with the more advanced courses in the science programs.

All applicants are required to take entrance examinations as described in the general section of this bulletin.

Graduation requirements
The minimum requirements for the bachelor of science degree in the College of Engineering are:
1. Satisfactory completion of the program with no failing grades.
2. A minimum number of quality points equal to at least twice the number of quarter hours required.

Prospective students should consult the individual program description for additional information.

Accreditation
The programs of study leading to the bachelor of science degree in electrical engineering, industrial engineering and mechanical engineering are accredited by the Engineers' Council for Professional Development. The College is a member institution of the American Society for Engineering Education.

The program in Computer Engineering is 'registered for professional purposes' with the State Education Department of the State of New York as a preparatory step to seeking ECPD accreditation.

All graduating seniors are eligible to sit for the Intern Engineer portion of the New York State Professional Engineering Examination during their final quarter in school.

Part-time students
An increasing number of students desire to pursue their engineering degree on a part-time basis while maintaining full-time employment in industry. In response to the needs of such students, the College of Engineering has expanded its scheduling of classes in the upper-division of the Mechanical and Electrical Engineering programs so that these courses may be taken during the late afternoon and early evening as well as during the day.

Students wishing to pursue part-time studies must qualify for matriculation as regular third year engineering students through normal admission procedures. As with full-time students, part-time students are required to complete the equivalent of five quarters of approved cooperative work experience. Arrangements are made for part-time students to utilize approved portions of their regular employment to satisfy the co-op requirements. Persons wishing further information on part-time studies in either Electrical or Mechanical Engineering should consult the relevant department head.
Graduate degrees
Programs leading to the master of science degrees are offered in both the electrical engineering and mechanical engineering departments. The programs may be pursued on a part-time or full-time basis since the majority of courses are offered in the late afternoon and early evening.

In addition, the College of Engineering offers a post-baccalaureate professional program leading to the master of engineering degree. The degree is without discipline designation, and study may be pursued in such areas as electrical engineering, industrial engineering, mechanical engineering, environmental studies, engineering management, and systems engineering. The program is unique in that it extends the undergraduate cooperative concept to the graduate level in an industrial internship for which academic credit is granted. Designed as a full-time program, the master of engineering degree may also be pursued on a part-time basis by engineers employed in local industry.

For further information on graduate programs in the College of Engineering, request the Graduate Bulletin or contact the director of Graduate Programs, College of Engineering.

Course descriptions
For a complete outline of courses offered at RIT, please request the Course Description catalog from the Admission Office.

RIT's Solar 'Energy House' was built in cooperation with RIT's College of Engineering, Rochester Gas and Electric Corporation and the Rochester Home Builders Association.
Diversity of Training Offered in Electrical Engineering

Harvey E. Rhody, Head

The cooperative five-year engineering program

The bachelor of science program in electrical engineering at RIT has been developed in direct response to the increasing diversity in talent and training required of engineers by society. While providing a sound engineering core, the program offers significant opportunity for personalized curriculum planning. Individualized study plans may range from intense specialization to broad general coverage with ample opportunity for interdisciplinary activity in all cases. An integrated cooperative work/study program adds to this flexibility to produce a mature graduate with well-developed academic and industrial perspectives.

The role of the engineer has been defined as "applying the laws of mathematics and the principles of science to the solution of practical problems." Within this definition, the content of the program and the sequence of courses are easily understood.

The first two years of the program are devoted to the mastery of those laws of mathematics and principles of science with an introduction to engineering fundamentals. After this basic groundwork has been covered, the third year begins the study of core electrical engineering subjects in circuit theory and electronics, along with some advanced mathematics. The fourth year continues this exposure to basic electrical engineering topics in electromagnetics, communications, controls, energy conversion, and advanced electronics.

The fifth and final year allows the student to specialize in areas suited to his or her professional interests. The professional electives may be taken, with the approval of the student’s advisor, from courses offered by the Electrical Engineering Department, the College of Engineering and the College of Science. The free electives may be chosen from offerings anywhere in the Institute.

In today's world, engineering decisions are rarely taken in a vacuum but rather within an ethical and socio-economic framework. For this reason, spread throughout the curriculum are general studies courses which permit students to increase their understanding of this decision framework and to improve their ability to communicate effectively.

Engineering Science transfer program

A powerful force in current engineering education is the emergence of the community college offering two-year programs in engineering science leading to the associate in science degree. In New York State these programs have resulted from the combined efforts of educators from both public and private institutions, and from both community colleges and major universities. Accordingly these programs represent and provide the general footing upon which engineering education must be based. The electrical engineering program at RIT is sufficiently related to these programs that transfer is possible and encouraged directly into the third year of the RIT curriculum, with a full two years' credit granted to the holders of an accredited AS degree in engineering science. Transfer students should see page 40 for policy on physical education.

#### AAS Transfer Program

Dr. Roger E. Heintz, Coordinator

In addition to the transfer of students holding the AS degree in engineering science, the Electrical Engineering Department at RIT has a long and rewarding history of students transferring into electrical engineering from the successful completion of AAS programs in electrical technology at community colleges. A specialized program for these students is available in our AAS Transfer Program. This program is unique within the State of New York. It provides a clearly defined avenue to the bachelor of science degree for holders of the AAS degree in electrical technology.

Incoming students are brought to the campus in the summer (fourth) quarter immediately following their AAS program. On the basis of personal interviews with faculty members from mathematics, computer science, and electrical engineering, an individual program is designed for each AAS transfer student. The objective is to use this initial summer quarter to bring the students to the point where the remainder of their bachelor of science program can be constructed from existing, regularly scheduled Institute courses. Beyond this initial summer quarter, the AAS transfer student follows a cooperative work/study plan leading to the bachelor of science degree at the end of his or her third academic year at RIT. Professional and free elective opportunities are also provided in this plan for the expression of individual student interests.

All AAS transfer students will be required to take a minimum of 115 quarter credit hours at RIT, minus applicable transfer credits.

*AAS transfer students have Co-op during Fall and Spring quarters.*

*See Pg. 98 for General Studies requirements.*

*See Pg. 40 for Policy on Physical Education.*

†Summer prior to third year.
Computer Engineering

Roy S. Czernekowski, Program Coordinator

The computer engineering program is jointly offered by the Department of Electrical Engineering and the School of Computer Science and Technology. The program is designed to prepare the graduate to participate in each of the two areas normally associated with hardware aspects of computer engineering.

A study of the circuits and devices used in large scale digital systems and a grounding in the mathematical theories of their description permit the graduate to engage in the design and construction of these systems.

In addition, a comprehensive background in electrical engineering subjects, advanced programming techniques, and real-time computation techniques allows the graduate to work in the expanding area of the applications of digital computers, especially minicomputers and microprocessors, to the control of engineering systems.

The cooperative work/study program of the final three years enables the student to apply the principles and techniques of computer engineering to real industrial problems and thus complete the preparation for a challenging career in this expanding field.

Principal field of study

For students matriculated in the interdisciplinary Computer Engineering Program, the principal field of study is defined to be all courses taken in the College of Engineering and the School of Computer Science and Technology. Matriculated students not maintaining a 2.00 cumulative grade point average in their principal field of study are subject to academic probation or suspension according to Institute policy.

Undergraduate Programs 77
Industrial Engineering
Department Concerned With Systems Involving People, Machines And Materials

Richard Reeve, Head

Industrial engineering differs from other branches of the engineering profession in at least two ways. First, industrial engineering education is relevant to most types of industry and commercial activity. Second, it is that major branch of engineering concerned not only with machines, but with people as well. Specifically, industrial engineering is concerned with the design, improvement, and installation of integrated systems of people, materials, and equipment. It draws upon specialized knowledge and skill in the mathematical and physical sciences, together with the principles and methods of engineering analysis and design. The industrial engineering curriculum covers the principal concepts of human performance, quantitative methods, computer programming and applications, management systems, and manufacturing processes. The curriculum emphasizes balance rather than specialization.

Careers
Some of the activities of industrial engineers include work measurement, operations research, applied statistics, human factors, plant layout, materials handling, production planning and control, quality control, manufacturing, and management consulting.

Balance rather than specialization has allowed our graduates to pursue varied career paths. Examples of this diversity, along with the role that an industrial engineer might function within, are reflected through the following partial listing of recent industrial engineering Co-op assignments.

1. Hospitals
   a. improve efficiency of a patient therapy department
   b. optimal patient scheduling for physicians
   c. establishment of a medical peer review system
   d. establishment of outpatient clinic staffing levels
   e. economic investigation-new versus repaired breakdown analysis
   f. investigation of waiting lines in connection with a product line
   g. investigation of delivery service which involved scheduling, route modification, and material handling
   h. assisted in setting up a production control monitoring board
   i. computer programming relating to pricing policies, blending problems, and truck scheduling
   j. downtime studies of various operations using time study and work sampling
   k. development and computerization of a forecasting model
Transfer programs

Transfer programs for industrial engineering students are arranged on an individual basis. This allows a student to build an industrial engineering program which best takes into account his or her previous education and work experience. Students completing an AAS in engineering Science normally receive credit for the first two years and start their program at RIT with the third year class.

Further information

If you are interested in learning more about the opportunities within industrial engineering and the nature of the cooperative work assignments in industrial engineering, write to the department for further information.
Because of their comprehensive training and education in the areas of production and economics, mechanical engineers are often called upon to assume management positions.

The first two years of the undergraduate program are devoted to an intensive study of mathematics, physics, chemistry, and mechanics—the basic tools of the technologist—and to a thorough grounding in the humanities. The final three years of the program integrate the cooperative work experience with the professional subject matter of the mechanical engineering discipline.

In the fourth and fifth years, the mechanical engineering student selects one of two options for intensive study. These areas of concentration are in the two traditional branches of mechanical engineering; namely, applied mechanics and thermal fluid science. Both options offer a core of three courses and a number of additional electives.

Students may use a total of four professional and free electives to extend their educational experience in their options. They may also use courses from other options and graduate levels as professional and free electives. Such flexibility permits each individual to prepare for employment or graduate school in his or her specific area of interest.

Transfer programs
An increasing number of students choose to pursue their studies leading to the bachelor of science degree in mechanical engineering by first completing the two-year associate in applied science program at a community college or technical college, often within commuting distance of their homes. Many will anticipate transfer to an engineering college and will pursue the engineering science program which represents the equivalent of the first two years in the average four-year engineering program. Others, for various reasons, will elect to follow a mechanical technology program for the first two years.

The Mechanical Engineering Department at RIT has a long-standing tradition of admitting graduates from these two-year programs and very quickly integrating them into the BS program in engineering. The addition of these transfer students in significant numbers to our regular undergraduate students has provided an added dimension and a uniqueness to the RIT engineering program.

The AAS graduate in engineering science with above average scholastic achievement can generally anticipate entering the BS program in mechanical engineering as a regular third-year student. In a few cases it may be necessary to alter one or two courses in the program to accommodate differences in the programs of preparation in the first two years. However, these changes are generally minor.

The AAS graduate in mechanical achievement should seriously consider transfer to a BS program in mechanical engineering as one alternative for continuing formal education. Because the basic philosophy underlying the technology programs and the engineering programs is significantly different, the AAS graduate in technology requires a somewhat special program to adapt his or her previous educational experience to the BS program in engineering.

Recognizing that no single program of study can effectively integrate all mechanical technology graduates into the engineering curriculum, each qualified transfer student is given a program of study that best meets his or her career goals, satisfies the basic accrediting requirements for the BS degree, provides a meaningful cooperative work experience, and permits the student to fulfill the degree requirements in a reasonable period of time.

Combined five-year BS/MS degree program
In addition to the bachelor of science and master of science degree programs described under the section entitled "College of Engineering," a combined BS/MS degree program is also available for the mechanical engineering student. Admission into the program is based on the student’s cumulative grade point average, which must be at least 3.0, letters of recommendation from the faculty, and a personal
interview by a departmental committee. Application for admission into the program is normally made in the Winter Quarter of the second year. However, in exceptional cases, admission may be possible as late as the Spring Quarter of the third year. Students who are admitted into the program in their second year are expected to start their cooperative work experience in the Summer quarter of that year. All students in the program are required to maintain a cumulative grade point average of at least 3.0. Further information regarding this program can be obtained from the Department of Mechanical Engineering.

The Mechanical Engineering Department is staffed to offer professional courses in the areas of thermal systems, applied mechanics, manufacturing, environmental science, systems analysis, and materials science. The laboratories of the department are equipped to provide extensive experimentation in these areas and students are encouraged to pursue independent research in addition to that required in their programs.

A transfer student who has completed the Winter Quarter at RIT and who achieved a cumulative grade point average of at least 3.0 may apply for admission into the five-year combined BS/MS degree program.

Course descriptions
For a complete outline of courses offered at RIT, please request the Course Description catalog from the Admission Office.

Mechanical Engineering options
(4 Credits each)
Option A: Applied Mechanics
Required Courses
EMEM-632 Advanced
Mechanical Systems Design
EMEM-672 Selected Machine Elements
EMEM-694 Stress Analysis
Electives:
EMEM-664 Engineering Acoustic and Noise Control
EMEM-670 Thermal Stresses
EMEM-676 Kinematic Analysis of Mechanisms
EMEM-679 Dynamics of Physical Systems II
EMEM-685 Advanced Strength of Materials
EMEM-689 Patent Law and Protection
Selected Graduate Level Courses

Option B: Thermal Fluid Science
Required Courses:
EMEM-635 Industrial Heat Transfer
EMEM-652 Fluid Mechanics of Turbomachinery
EMEM-660 Refrigeration and Air Conditioning
Electives:
EMEM-601 Alternate Energy Sources
EMEM-650 Gas Dynamics
EMEM-667 Introduction to Air Pollution
Elective:
EMEM-669 Introduction to Water Pollution
EMEM-677 Modern Energy Conversion
EMEM-680 Advanced Thermodynamics
EMEM-690 Environment and the Engineer
EMEM-695 Solid Waste Management
EMEM-696 Nuclear Power
Selected Graduate Level Courses
Competence Is the Basis for Creativity

In College of Fine and Applied Arts

Robert H. Johnston, Dean

The College of Fine and Applied Arts offers programs in the arts and crafts through curricula in the School of Art and Design and the School for American Craftsmen. Concentrations, or majors, in the School of Art and Design are given in communication design, environmental design, painting, printmaking and medical illustration. In the School for American Craftsmen concentrations are given in ceramics and ceramic sculpture, glass, metalcrafts and jewelry, weaving and textile design, and woodworking and furniture design.

The studies in the two schools of the college express a common educational ideal: the conviction that technical competence provides the most satisfactory foundation for the expression of creative invention. However, the mastery of techniques is seen as a means, not an end; the end of education in the arts is the exercise of creative imagination.

Resources

The equipment and studios of the School of Art and Design are superior in every respect. A comprehensive art library of source material and an outstanding collection of slides are available for reference; and instructional films and other visual aids are utilized. Exhibitions, held in the Bevier Gallery, feature the work of contemporary painters, designers, and graphic artists, as well as work by faculty and students. Exhibition space in the Bevier Gallery extends the classroom into the public arena. In this gallery the focus is to bring attention to excellence in ideas, concepts, and aesthetic endeavors through the arts, crafts, and design expressions. Openings are planned for students to meet the artists. The Student Honors Show hangs through the summer and the opening of classes in September. Professional designers, photographers, and graphic arts personalities are invited to lecture and give demonstrations. Rochester industry and commerce often sponsor pilot programs which are carried on under faculty supervision.

An added resource is the community of Rochester itself, with its many opportunities for educational, cultural, and social enrichment. Exhibitions, programs in the performing arts, and lectures are available to provide extracurricular learning for the interested student. The resources of the School for American Craftsmen available for the student are exceptional: excellent equipment and facilities and a unique and challenging program combining learning and doing.

The faculty in the College of Fine and Applied Arts are productive in the fields in which they teach, and the honors and prizes they have won are a reflection of the prestige they enjoy as artists and craftspeople. They have been broadly educated in Europe and the United States, and are well acquainted with...
contemporary practice in their art or craft. While the teaching staff is composed of professional artists and craftspeople, able to practice their art or craft with distinction, they are, as well, interested and sympathetic teachers and counselors.

The Wallace Memorial Library is particularly strong in the extensive list of contemporary periodicals in the arts and crafts available for study and research.

Accreditation
The programs of study offered in the College of Fine and Applied Arts are fully accredited: courses of study have been approved by the New York State Department of Education, the Middle States Association of Colleges and Secondary Schools, and the National Association of Schools of Art. The college is a charter member institution of the National Association of Schools of Art.

Plan of education
The programs in the College of Fine and Applied Arts are two and four years in length and lead to the associate in applied science and the bachelor of fine arts degrees. Students attend school for three quarters, each eleven weeks in length, during the school year. Advanced study at the graduate level is offered which leads to the master of fine arts and the master of science for teachers degrees. The former may be earned normally in two years, the latter in one. Both graduate degrees may be earned in programs carried during the regular and summer studies. Among the programs offered for the master of science in teaching degree is a concentration in art education designed for those holding the bachelor of fine arts degree (or a bachelor of arts degree with an art major) which leads to the graduate degree and permanent certification to teach in the public schools of the State of New York.

Those interested in graduate study should request a copy of the Graduate Bulletin, which describes the degrees offered, the programs of study, and the procedures governing admission.

Course descriptions
For a complete outline of courses offered at RIT, please request the Course Description catalog from the Admission Office.
‘We Have a Heck of A Faculty Here,’ Says Dean Johnston

One of only four Ph.D. paleo-ceramists in the world, Dr. Robert Johnston, dean of the College of Fine and Applied Arts, thinks remaining active and visible in your professional area is a valuable asset as an educator.

“The faculty in this college are involved in their own work as well as in teaching,” he comments. “All have gained regional recognition and some have achieved international reputations,” he notes. He starts mentioning the names one by one, people like furniture design professor William Keyser whose work traveled throughout the U.S. in the Johnson & Johnson “Objects U.S.A.” show; James Thomas whose sculpture was exhibited recently in two Paris shows; Hans Christensen whose silver pieces are owned by three European royal families; and Toby Thompson who designs for international industrial fairs.

“We have a heck of a faculty here,” Johnson says. “They could be taken anywhere in the world and you’d have a superb school.”

As a paleo-ceramist, Dr. Johnston stays active in his own field. After a day at the college he typically spends four hours a night in his lab at home. Paleo-ceramists use scientific and technical procedures to date and analyze ceramic and glass pieces taken from archeological "digs."

Through 1985, Dr. Johnston will be working summers as the ceramic expert on excavations of Old Carthage in Tunisia and in Jordan. “At the Jordan site we are excavating the ‘five cities of the plain,’ one of which could be the Biblical Sodom,” he says.

Dean Johnston made porcelain objects in his spare hours until a few years ago and is now learning to play the banjo using a method called "frailing" developed by Appalachian mountain people. “I think I’ll play at our gallery shows and save the college money,” he jokes.

Johnston believes there is something uniquely advantageous for art students studying in the midst of an institute of technology. “The beauty of this location is that the artist and the technically-oriented student are brought in close contact,” he says. Interaction of students with business and the community-at-large is another factor that he thinks makes the RIT education different.

The college’s design students, for instance, have worked with several Rochester corporations and social agencies on projects. A student-designed system to place informational kiosks in downtown Rochester is currently being implemented by the city.

Graphics for the dedication of the new city hall were designed by an Art and Design student. The Environmental Design department has been selected to compete in the Armco Project, a national competition involving “Design for Health Care.” Painters and printmakers have exhibited in national and regional shows.

“Our students aren’t surprised by the pressures on the outside once they graduate because they’ve worked with those pressures while they’re here,” he explains.

Students in the college’s School for American Craftsmen have their own mode of education. Their program combines an apprenticeship in one of five craft studios with a college academic program. Although Johnston
describes the college as “totally committed to employable skills,” a fine arts component attracts students who want to major in printmaking, painting, or medical illustration.

“A high appreciation and concern for mankind should be reflected in the arts,” comments Johnston in evaluating the philosophic link among the college’s programs.

In the College of Fine and Applied Arts the schools use their facilities to broaden and deepen the art interests of the students. Seminars, lectures, exhibitions, and films draw the students in the colleges together by providing stimulating experiences that serve to indicate that the arts have a common character as well as a divergence of aim and service. Purely social activities, as well as educational ones, also serve to unify the interests of the students.

Transfer program
The College of Fine and Applied Arts offers a summer transfer program for art majors. Successful completion of this program qualifies students for second year standing in the following options: communication design, environmental design, painting, printmaking or medical illustration.

Designed especially, though not exclusively, for graduates of community colleges, this transfer program is open to students with:
1. good academic standing at another college,
2. one or two years of college, with a heavy emphasis in studio art (minimum of 12 semester or 18 quarter credit hours).
3. presentation of an acceptable art portfolio demonstrating strength in one or more areas.
Summer Session
The College of Fine and Applied Arts offers a program of summer study in both the School of Art and Design and the School for American Craftsmen that is arranged for designers, teachers, and craftspeople. Both basic and advanced workshops are given, as well as graduate courses. Those interested should write the director of the Summer Session for information.

Junior year abroad
The School for American Craftsmen, in cooperation with the Scandinavian Seminars, offers a junior year abroad in the field of the crafts. This permits certain well-qualified students to spend their third year of study in one of the Scandinavian countries, after which they return for a fourth year of study at RIT. Full credit for the year of satisfactory study overseas will be granted toward the BFA degree. Information on the junior year abroad program can be obtained by writing the dean, College of Fine and Applied Arts.

Policy regarding student work
The College of Fine and Applied Arts reserves the right to retain student work for educational use or exhibition for a period of time not to exceed one and one-half quarters beyond the year the object has been made. The college also reserves the right to select an example or examples for its permanent collection. In such cases, where work is selected for the permanent collection the material cost only will be paid by the college. It is an honor to have one’s work in the permanent collection of the College of Fine and Applied Arts.

Attendance regulations
The programs of the college utilize the studios and shop experiences as an essential part of the educational program; therefore it is imperative that the student regularly attend all classes unless specifically excused for special projects or activities by the instructors. Failure to attend classes, and to complete assignments, will be taken into consideration in grading.

Professional approach
Educational programs in the College of Fine and Applied Arts are related to the kinds of art services which the society needs, and based on teaching projects which can be made realistic and meaningful to the student. The problems duplicate, as far as possible, those found in the working situation after graduation. The courses are full-time, instruction is largely on an individual basis, and full opportunity is given for personal development. Exhibitions, lectures, and field trips add breadth and variety to the formal programs of study.

A unique feature of the educational programs offered in the College of Fine and Applied Arts is its emphasis on the professional approach to the understanding and solution of problems. Instructional services provided by a professionally experienced and oriented faculty, plus the well-equipped shops and studios designed with the needs of professional artists or craftspeople in mind, further emphasize the practical character of the program of instruction.
Students are asked to demonstrate a professional attitude and purpose: to apply themselves to the requirements of the program, to cooperate in the fulfillment of its goals, and to assume some responsibility for their educational development through independent work.

Relationship with other RIT schools
Educational facilities of a rare sort in the arts are available to the student in the School of Art and Design: the superior resources of the School of Photographic Arts and Sciences and the School of Printing. A program of instruction which emphasizes production, as well as design of the crafts, gives a unique character to the educational program in the School for American Craftsmen.

The School of Art and Design, in addition to its major concentrations, offers courses in drawing, design, and art electives required in the curriculum. Craft electives are taught by the School for American Craftsmen. Students may elect, with advising and as space is available, elective courses in the college; these complement their programs and interests.

Portfolio Guidelines For Undergraduate Applicants

The following guidelines are presented for all undergraduate students (including transfers) applying to the College of Fine and Applied Arts. Presentation of the portfolio is one of the requirements used in totally assessing the performance and academic capabilities of the applicant.

1. The portfolio must contain examples of at least 10 pieces of the applicant’s best work: 35mm slides are preferred, displayed in an 8 1/2" x 11" vinyl slide protector page.

For medical illustration applicants, six additional drawings of natural forms (shells, figures, animals) rendered in a single medium are required.

School for American Craftsmen applicants should submit samples of work in the area of their selected craft major.

2. Original examples of art work may be submitted in place of slides if brought by the applicant at the time of a personal interview, after formal application is made. Personal interviews are not required, however if you desire one, please contact Mr. Kener Bond, assistant dean, at (716) 475-2643 for an appointment.

3. Slides will be returned by the College of Fine and Applied Arts only when return postage is enclosed.

4. While every precaution will be taken to insure proper care and handling, the Institute assumes no responsibility for loss or damage to slides.

5. Identify slides by name and address.

6. Please send portfolio and all other application materials to:

Rochester Institute of Technology
Office of Admission
One Lomb Memorial Drive
Rochester, New York 14623
Telephone: (716) 475-6631
Admission at a Glance: College of Fine and Applied Arts

This college is composed of the School of Art and Design and the School for American Craftsmen. Students are urged to develop the highest technical abilities as well as personal creative expression. The faculty includes many of the nation’s most outstanding and creative artists and craftsmen. Students learn by working in the studios equipped with excellent facilities. Most graduates earn their living utilizing their RIT background.

Communication Design—Prepares students to convey and interchange thoughts, concepts, options, and information. Career fields include applied art, designing for industry, art agencies, government, social, or non-profit organizations. Graduates can serve as creative members of problem solving teams. Degrees granted: AAS-2 year; BFA-4 year.

Fine Arts—Students may concentrate in printmaking, painting or medical illustration and take other art electives. They prepare as professional artists and have exploratory potential for later careers in teaching. Medical illustrators enter research areas in hospitals and publishing and teaching institutions. Degrees granted: AAS-2 year; BFA-4 year.

Environmental Design—Prepares students to design effectively for social, industrial and environmental conditions. Interior and exterior space, and product design are relevant to the designer. Concern is given to future forecasting and emphasizes the humanistic and larger environments. Degrees granted: AAS-2 year; BFA-4 year.

Ceramics and Ceramic Sculpture—Graduates are self-employed as designer craftsmen, designers or technicians in industry, teachers, or administrators of craft programs. Professional competencies are developed in such areas as fabrication, chemistry and application of glazes, organization of ceramic shop for efficient production, ceramic raw materials, kiln types, fuels and construction. Degrees granted: AAS-2 year; BFA-4 year.

Glass—Graduates are self-employed designer craftsmen, designers or technicians in industry, teachers, or administrators of craft programs. Professional competencies are developed in organization and construction of the glass studio, functions and care of tools, analysis of glass as a material, glass fabrication, glass design, engraving, cold-working techniques, mixing of batch glass, color and fusing techniques. Degrees granted: AAS-2 year; BFA-4 year.

Metalcrafts and Jewelry—Graduates are self-employed designer craftsmen, designers or technicians in industry, teachers, or administrators of craft programs. Professional competencies are developed in use of equipment, metalcrafts, techniques and production in various metals, raising, forging, forming, planishing, enameling, design of jewelry, flatware, holloware. Degrees granted: AAS-2 year; BFA-4 year.

Weaving and Textile Design—Graduates are self-employed designer craftsmen, designers or technicians in industry, teachers, or administrators of craft programs. Professional competencies are developed in such areas as fabric design, analysis of equipment and problems, pattern drafting, analysis of fibers, use of eight to ten harness looms, techniques of weaving, design within price range and use. Degrees granted: AAS-2 year; BFA-4 year.

Woodworking and Furniture Design—Graduates are self-employed designer craftsmen, designers or technicians in industry, teachers, or administrators of craft programs. Professional competencies are developed in such areas as functions and care of woodworking tools, wood as a material, techniques of wood fabrication, design, layout, construction analysis, veneering and finishing, estimating and production. Degrees granted: AAS-2 year; BFA-4 year.

*One-third of the courses in each program consists of electives in social science, literature and humanities.

*Four years of English are required in all programs (except where state requirements differ).
School of Art and Design Encourages Imagination, Creative Ability, Competence

Peter Giopulos, Director

Philip Bornarth, Representative to Academic Council for Fine Arts

Robert Heischman, Representative to Academic Council for Foundation Studies

Craig McArt, Representative to Academic Council for Environmental Design

Fred Meyer, Representative to Academic Council for Graduate Studies

James VerHague, Representative to Academic Council for Communication Design

The objectives of the programs are to prepare students for a wide variety of positions in which art is related to commerce and industry. Students are prepared to accept major responsibility for the design and execution of projects in communication design, environmental design, painting, printmaking and medical illustration.

The educational objectives of the School of Art and Design are to encourage imagination, creative ability, and a sense of artistic discrimination; to develop the skills essential to professional competence; to relate the various arts and to assist students in finding the means to enjoy them; and to cooperate with the College of General Studies in helping students grow culturally and socially, and to inspire them to make their maximum contributions as creative artists and citizens.

Programs

Major concentrations are offered in communication design, environmental design and the fine arts (painting, printmaking, medical illustration). Electives may be pursued, beginning in the second year, in painting, printmaking, design applications, communication design and the crafts. The first year forms the foundation preparation for the major concentration, with courses required in drawing and two- and three-dimensional design. The communication designer is in the service of ideas and humanity. He or she has the abilities and competence needed for effectively planning, imparting and interchanging thoughts, concepts, opinions, and information. He or she is an inventive and creative member of the problem solving teams in the contemporary world of business, industry, agriculture, government, education, and religion. This designer utilizes typography, symbols or photography to create images for a client. The program in environmental design prepares students to design effectively for the social, industrial and environmental condition. The curriculum concerns itself with the preparation for future forecasting, with an emphasis upon the humanistic and larger environment. Interior and exterior space designed to serve people and product design is studied.

The fine arts serve the student who is interested in concentrated study in areas of painting, printmaking, or medical illustration, and electives of additional art choices. Students emerging from this program are prepared as professional artists and have exploratory potentialities for later careers in teaching. An option within fine arts exists with concentration in medical illustration for a few further

‡See Pg. 40 for Policy on Physical Education.
Upon successful completion of the second year, the associate in applied science (fine arts—painting) degree is awarded.
The objectives of the programs of study of the School for American Craftsmen are to provide for creative growth, the development of professional competence, and intellectual and cultural enrichment. Students who complete the two-year program are prepared for work in the design studios and workshops of established craftspeople, or as technicians in industry. Those who complete the four-year course of study are prepared for careers as self-employed designer-craftspeople, as designers or technicians in industry, or as teachers or administrators of crafts programs.

In order to achieve the desired occupational goals, the educational objectives seek to stimulate creative imagination and technical invention, develop knowledge of process and command of skills, foster appreciation, not only of the crafts, but the related arts. The program strives to inspire the student to seek continual improvement through analysis and self-evaluation, and to cooperate with the College of General Studies in assisting students to develop personally and socially.

Student responsibilities
Students are responsible for the care and cleanliness of their shops and for the care and maintenance of the tools and machines with which they work. No student may use any machine until instruction in its proper use has been given, and responsibility for observing safety precautions is assumed by each student upon entering the school. Some unique supplies are provided for convenience and choice, but financial obligations must be met for successful completion of courses. Fees for kiln firings, supplies, and furnace use are student responsibilities.
Programs of study
The School for American Craftsmen offers a full-time program of study with opportunity for concentration in one of five craft fields: ceramics and ceramic sculpture, metalcrafts and jewelry, weaving and textile design, woodworking and furniture design, and glass. After satisfactory completion of two years of study the associate in applied science degree is granted. Those with the aptitude and interest for further study may continue for two additional years. After successful completion of the four-year program the bachelor of fine arts is awarded.

College of General Studies Gives Students Solid Look at Humanities, Social Sciences, Enhancing Understanding of Self, Society

Mary Sullivan, Dean

The College of General Studies provides each student with a program of liberal education which develops his or her potential as an intellectually aware and responsible human being. It is, therefore, the foundation for the student’s entire educational experience. As part of that broader experience which may be called the student’s general education, this program of liberal education is distinguishable from the student’s professional education in that its purpose is to nurture not specifically professional knowledge or skill, but each student’s capacities as a thinking, creating, and responsible person. Thereby enriched, RIT students will be all the better prepared for their professions and their lives, for they will be able to understand and interpret the problems, as well as the personal and social illuminations, found in the study of the many and varied fields of human endeavor.

The program of the College of General Studies, in which all RIT students participate, aims to accomplish the following goals with and on behalf of each RIT student:

- To develop the student’s ability to think rationally, to read critically, to speak and to write cogently and clearly;
- To develop the student’s ability to analyze issues, to question assumptions, to investigate problems, and to seek solutions;
- To develop the student’s understanding of aesthetic values and their relevance to life;
- To expand the student’s intellectual horizons by acquaintance with the western heritage;
- To develop the student’s awareness of how the past invariably affects the present and the future;
- To promote the student’s understanding of our society and how it interrelates with and is indebted to other cultures, thereby liberating the student from a narrow provincialism;
- To acquaint the student with the basic principles and dynamics of individual and group behavior in the many areas of human interaction;
- To develop the student’s understanding of the nature of ethical values;
- To develop the student’s awareness of the social, ecological, and ethical consequences of technology, and to foster a sense of responsibility to self and society;
- To develop the student’s ability to bring together varied insights and methods of analysis for the purpose of better understanding complex human and social problems.
These goals are fostered throughout a student’s education at RIT by the General Studies curriculum which offers each student the opportunity to acquire these abilities and understandings through courses in the humanities and social sciences. In addition to regular courses, a student may engage in independent study. These are planned by both student and instructor and provide an opportunity for the student to develop initiative and imagination in a flexible program of study.

Included in the college are degree programs in criminal justice and social work, which are described on the following pages. The close involvement of these programs with the humanistic studies of the other General Studies divisions is an example of what the college is endeavoring to do throughout its curriculum, that is, to demonstrate the interrelation of all fields of learning.
Plan of education
The courses of the College of General Studies are available to students registered in one of the colleges of the Institute.* The basic curriculum of the college requires the student to take 24 quarter credit hours of lower division core courses followed by 30 quarter credit hours of upper division electives. Because of particular needs or requirements, some exceptions to this basic curriculum may be found. The program outlines of each school or department list the general studies requirements by year of study.

During the first two years the student will take four-credit hour courses which will involve him or her in basic studies in language, literature, history, philosophy, the behavioral sciences, and critical approaches to art or science.

During the final two years the student will have the opportunity to deepen his or her knowledge in areas of particular interest. The student will elect six five-credit hour courses from a broad range of possibilities in three areas: Language and Literature, Science and Humanities, and Social Science.

It should be noted that all lower division courses carry four quarter credit and all upper division courses carry five quarter hours of credit. Further, all courses in the lower division and upper division meet three scheduled class hours each week. The discrepancy between credit hours and class hours is offset by carefully planned and extensive out-of-class assignments and projects. The purpose of this plan is to provide the student with opportunities for extended responsibility beyond those normally found in a regular class situation.

The College of General Studies will enroll students who are not currently degree candidates. Individual programs will be developed for each student.

Diploma courses will not normally be counted toward the completion of a degree in social work or criminal justice, and cannot normally be used toward the completion of general studies requirements.

Faculty
The faculty of the College of General Studies is selected from candidates with advanced study in the social sciences and humanities. These men and women are dedicated teachers who have chosen as their professional goals provision of rich and meaningful learning experiences for the student and continuing growth in their scholarly fields.

Lower division requirement
Students must have two courses from each of the above areas: Language and Literature, Social Science, Science and Humanities. Students may not repeat a discipline within an area-even though the courses in a particular discipline are quite different; only one course in, for instance, literature may be taken to meet lower division requirements. Each quarter, students should contact their advisor for the choice of electives, which may be restricted to a given area: Language and Literature, Social Science, Science and Humanities.

Upper division requirement
Students may select any six courses at the upper division level.

Resources
The college is fortunate in having a wide variety of resources both within the Institute and in the community. At RIT the Bevier Gallery, Wallace Memorial Library, and an extensive record collection are supplemented by audiovisual material and visiting discussion leaders.

Community resources include the Rochester Public Library, and the libraries of several local companies. The RIT library will arrange interlibrary loans with state or company libraries upon request. Advantage is also taken of such other resources as the George Eastman House of Photography, the Rochester Museum of Arts and Sciences, the Memorial Art Gallery, Kilbourn Hall, and the Eastman Theatre.

Summer Session
Under the auspices of the Institute Summer Session, the College of General Studies, upon sufficient demand, offers a number of courses in Language and Literature, Science and Humanities, and Social Science. Information concerning courses to be offered can be obtained by contacting the director, Summer Session, or by requesting the Summer Session Bulletin from the College of Continuing Education or RIT Office of Admission.

*Degree programs in social work and criminal justice are available to students through the College of Continuing Education, and are described on later pages of this section.
Admission at a Glance:

College of General Studies—

Criminal Justice, Social Work

Two programs leading to the BS degree are offered. They are criminal justice and social work.

Also, the college offers a wide variety of liberal arts electives for students enrolled in other RIT programs. The purpose is to help students develop an awareness of the humanistic world in which they live. Students, therefore, can complement their technological knowledge with courses in language, literature, social science, science, and humanities.

Social Work—Prepares students to assist individuals, groups and communities in the identification and solution of problems, with an awareness of social issues and services. A education for those professionals already employed in a variety of criminal justice agencies. The generic nature of the curriculum provides individual career tailoring and offers unique opportunities for practical on-the-job learning experiences. Degree granted: BS-4 year.

Criminal Justice—The program is designed to prepare students for responsible positions in criminal justice and provide continuing education for those professionals already employed in a variety of criminal justice agencies. The generic nature of the curriculum provides individual career tailoring and offers unique opportunities for practical on-the-job learning experiences. Degree granted: BS-4 year.

Baccalaureate Degree Program in Criminal Justice

John O. Ballard, Director

The criminal justice curriculum is designed to prepare students for entrance into many careers in the criminal justice system, and to provide continuing education for men and women already pursuing professional criminal justice careers. The program will also serve as a foundation for well qualified students who are interested in graduate study in criminal justice and a variety of related fields, for example: law, public administration, community services or sociology. The curriculum provides the opportunity for professional elective courses in addition to those that are required. At the same time, students have the opportunity to select liberal education courses from among the regular general studies curricular offerings in the social sciences, science and humanities, and language and literature. Through the required professional courses, the opportunity for a thorough understanding of the broad field of criminal justice will be provided for the student. Through the professional electives, the student will have the opportunity to begin specialization in a particular area within the criminal justice field. In both the professional courses and the general studies courses, students will be stimulated to develop their own skills. Through careful academic guidance, they will be encouraged to design a well-balanced program of study leading to professional competence as well as to breadth in personal development.

Field experience

In keeping with the long standing tradition of RIT, field experience provides criminal justice students the opportunity to witness and participate in the concrete situations of an ongoing criminal justice agency. As an integral part of the criminal justice curriculum, field experience was designed to allow students to experience, in an on-the-job setting, the realities of working within the criminal justice system. Students, during their junior or senior year at RIT, spend 22 weeks working in a variety of agencies in the criminal justice system.

The objectives of field experience are concerned with providing the student with an educational and practical work experience in the criminal justice field, as well as to demonstrate to those responsible for the administration of criminal justice the importance of career education and the advantages of joining in partnership with academic institutions for the furtherance of mutual goals. Some of the traditional agencies that students might be exposed to during the field experience (internship) program, include: law enforcement (state and local); probation and parole; security; correctional institutions (state and local); division of youth programs; halfway houses; adult and juvenile counseling programs, public defenders’ and district attorneys’ offices.

Employment Opportunities

The Occupational Outlook Handbook for the period between 1978 and 1985, prepared by the Bureau of Labor Statistics, indicates a projected need for substantial numbers of new employees in the criminal justice system. Examples of employment opportunities in criminal justice agencies include: police, courts, prisons, probation, parole, half-way houses, community treatment centers, jails, retail and industrial security, customs, narcotics control, drug treatment, data processing, youth service programs, counseling, crime control planning and research. In addition to the existing opportunities, there are new positions and criminal justice tasks constantly being created because criminal justice is a changing and expanding field.

Transfer Policy

Junior standing for the first two years is offered for an associate’s degree in an appropriate major. Holders of liberal arts or other two-year degrees will be granted credit for the first two years except for required professional courses. All transfer students must demonstrate competency in professional courses required in the first and second years or must take these courses. Field experience (internship) for qualified transfer students is offered during their senior year.

Criminal Justice Faculty

The faculty of the Department of Criminal Justice is comprised of highly qualified individuals who possess advanced degrees in criminal justice or related areas, plus practical criminal justice experience. These men and women are dedicated teachers who have chosen, as their professional goals, continuing growth in their fields and provision of rich meaningful learning experiences for the student. Among the full-time faculty there is represented expertise and experience in: law enforcement, institutional corrections, probation, parole, criminal law, civil law, security, and research.
Alternatives to Incarceration

Counseling within the Criminal Corrections

The Institute to fulfill professional justice agencies, as well as from his faculty advisor, to take his professional elective courses with the advice of his faculty advisor. In some cases, a student may be permitted, with written approval from his faculty advisor, to take courses from other colleges within the Institute to fulfill professional elective requirements.

*See Pg. 88 for General Studies requirements. Students in criminal justice are required to take one additional lower division course, which may be chosen from any of the three General Studies areas listed.

†See Pg. 40 for Policy on Physical Education

‡Computer Science or math courses may be taken in place of the science electives.

°In-service students are required to take two professional electives per quarter, for a total of 16 credit hours. This total is usually the 16 hours required for Field Experience.

§Minority groups in Criminal Justice. Courses in other disciplines may be taken with permission.

The full-time faculty is supplemented by practitioners who are employed locally by criminal justice agencies, as well as instructors from the College of General Studies and College of Business and other colleges within the Institute.

Student Body

The criminal justice student body is composed of men and women from the several regions of New York State and from a number of areas in the northeast, midwest, and central Atlantic states. Of the approximately 250 students currently enrolled, about 25 percent are women. Approximately 20 percent of the students are currently employed in some facet of the criminal justice system.

Principal field of study

For students matriculated in the Criminal Justice Program, the principal field of study includes all courses offered by the Criminal Justice Department and/or equivalent CCE courses. Also included as part of the principal field of study are the following General Studies courses: GSSS-210; GSSS-502; GSSP-210; GSSP-203; GSSP-503. Matriculated students not maintaining a 2.00 cumulative grade point average in their principal field of study are subject to academic probation or suspension according to Institute policy.

Professional Elective Options

The following list of professional electives is illustrative of those offered periodically within the Criminal Justice Department. These courses are grouped under only one general heading, even though many are appropriate for students with tangential career objectives.

A student is encouraged to select professional elective courses with the advice of his faculty advisor. In some cases, a student may be permitted, with written approval from his faculty advisor, to take courses from other colleges within the Institute to fulfill professional elective requirements.

Social Work Program
Offered in Response To Community Needs

Arnold J. Berman, Director

Since its inception in 1829, Rochester Institute of Technology has had a long tradition of community service. Its program in social work is a response to the needs of communities, and is viewed as a continuing step in RIT's community commitment.

It is conceived as a broad generic major to prepare baccalaureate-level social workers and is designed to respond to the trend in the profession toward a wider variety of social work practice roles. This trend has received wide support among social work employers, and the National Association of Social Workers and the Council on Social Work Education have officially supported the development of baccalaureate professional curricula. The bachelor of science degree program is the initial entry into the field of social work, and may also prepare students who wish to continue their professional education on the graduate level.

Accreditation
The bachelor of science degree program in social work is fully accredited by the Council on Social Work Education. The most recent reaccreditation occurred during the 1978-1979 academic year and extends through 1983-1984.

Career Opportunities
Because the curriculum leading to the BS in social work contains a variety of social science offerings, the student will be able to choose a broad spectrum of career goals in addition to the possibility of a variety of graduate programs related to the helping services.

Graduates of the RIT social work program are employed in agencies providing services to the following types of clientele: alcohol and drug abusers, delinquents, unwed mothers, those on probation and parole, those in family court situations, people with emotional problems, mentally retarded, deaf people, children and their families, and senior citizens.

Employment is also available in agencies that provide such special services as community planning and intervention, metropolitan planning, rural social services, hospital work, corrections work, school social work, day care center work, legal services, and human service education.

Principal field of study
For students matriculated in the Social Work Program, the principal field of study is defined to be:
(1) required social work courses (including field placement);
(2) professional electives; and
(3) required service courses offered through the College of General Studies. Matriculated students not maintaining a 2.00 cumulative grade point average in their principal field of study are subject to academic probation or suspension according to Institute policy.

Curriculum
The curriculum leading to the baccalaureate degree in social work rests on the following general areas of content:

1. A continuum of social work and social welfare courses
This would include material on social welfare, sources of social conflict, the involvement of government in social welfare, voluntary social welfare services, decision making, economic factors affecting poverty, employment levels, guaranteed annual income, personal social services, and the democratic-humanitarian values of our society as these may emerge in social welfare practice.
In addition, content on the characteristics and attributes of social work as a profession will be closely examined. The varying roles of the social worker including his or her relationship to clients and agencies will be studied, as well as the various philosophical and ethical bases of action, the motivation required for effective delivery of service, career opportunities, organizational settings, group identification, and such issues as bureaucracy versus individualism.

Further, generic methods courses will be offered before and concurrently with field instruction. Emphasis will be placed on the development of Interventive skills and on the differential use of common principles in a diversity of situations requiring social work intervention.

Also, a senior seminar and project will give the student an opportunity to reflect on his or her social work study and experience, and to focus on future professional and humanitarian goals.

2. A broad spectrum of foundation courses in the social sciences and humanities

Through liberal education opportunities it is hoped to assist students in their intellectual, aesthetic, and social development, to stimulate their curiosity, and to sharpen their ability to engage in independent inquiry. Work in human behavior and the social environment is designed to help students become aware of alternative approaches to human problems, and to see their role in a wider philosophical and historical perspective.

These courses promote a greater awareness of psychological, social, political, and economic issues so that the student's professional training in social work is supported by a solid foundation of knowledge and theory. In addition, these academic opportunities will be used to help students develop those techniques indispensable to good written and oral communication and pursue a vigorous intellectual independence.

3. Field observation, volunteer opportunities, and field instruction

A continuous range of learning opportunities is provided throughout the curriculum by required experiences or elected situations. Observation and volunteer work in a social, governmental, or educational institution is encouraged in the first and second years.

A unique feature of RIT's social work program is its 600 hours of full-time agency field instruction which usually occurs in the third year. Students must meet specific knowledge, attitudinal and skill criteria as set forth in the Field Placement Policy before advancing to a field placement (see the Social Work Department Student Handbook for a full statement of this policy).

Further "hands-on" opportunities for field experience may be available in the fourth year in connection with the Senior Seminar and Project course. The Independent Study option also may be used to extend experience in the field. All work in this area will be under the supervision of RIT faculty.

4. Professional electives

The social work program at RIT offers professional elective concentration in five areas: Social Work (Self Awareness, Gerontology), Advocacy, Rural Services, Women, Mental Health, Children and Families, Intervention, and other courses: Alcoholism and Drug Abuse; Deafness; Criminal Justice; and Management.

In addition to courses offered by the Social Work Department, professional electives that complement a student's unique career plans may also be selected from other RIT departments.

5. Open electives

Some academic credits are allotted to the pursuit of any other interests which students select.

Course Descriptions

For a description of course content and sequencing, please request the Course Description Catalog from the Admission Office.
Graphic Arts and Photography Developing Specialized Studies for Specialized Fields

Lothar K. Engelmann, Dean

The College of Graphic Arts and Photography encompasses the School of Photographic Arts and Sciences, the School of Printing, and the Graphic Arts Research Center. The School of Photographic Arts and Sciences was established in 1930 with a two-year course for the training of technicians for the photographic industry. It now offers undergraduate programs leading to a BS degree in photographic science and instrumentation, a BS degree in professional photography, and a BFA degree in photographic illustration. A program in photographic management and marketing given jointly by the School of Photographic Arts and Sciences and the College of Business leads to the BS degree. A program in biomedical photographic communications leading to AAS and BS degrees is also offered. Graduate programs lead to an MS degree in photographic science and instrumentation, and an MFA degree in photography. More than 900 students are enrolled from nearly every state and many foreign countries. The curriculum in photographic science and instrumentation is the only accredited program of its kind leading to the BS and MS degrees.

In 1937 the Institute absorbed the Empire State School of Printing with the object of establishing advanced technological education in printing and the graphic arts. The School of Printing offers programs leading to the bachelor of science degree in printing with 14 options for specialization. The BS program in newspaper production management provides graduates who can synthesize the new technologies into the newspaper technical departments and provide long-range management planning to this important segment of the printing industry. The newly-approved BS program in Printing Systems Management combines printing and information engineering. It prepares graduates for optimizing operating conditions in the complex printing establishment. It also offers programs leading to the MS degree in printing technology and printing education. Over 650 degree candidates are enrolled in the School of Printing. Students come from almost every state, and students from many foreign countries have registered in printing programs.

The Graphic Arts Research Center, with its own full-time staff, conducts research in various fields of the graphic arts. It also conducts short, highly specialized courses for men and women engaged professionally in the graphic arts.

Technological Changes Can Only Widen The Photographer’s Spectrum, Says Dean

Dr. Lothar K. Engelmann heads RIT’s College of Graphic Arts and Photography, which includes the School of Printing, School of Photographic Arts and Sciences and the Graphic Arts Research Center.

He considers his position as dean of that college “a unique opportunity to combine my scientific and managerial background with my interests in the arts and humanities and with my hobbies, particularly photography.” Programs offered by the college cover a broad spectrum, from sophisticated printing technology to fine arts photography.

Born in Germany, Dr. Engelmann earned a master’s degree in chemistry and a doctorate in the natural sciences at the University of Frankfurt. His industry experience in the graphic arts began with a German photo manufacturing company and he eventually became head of its photo paper department.

After moving to the U.S., Dr. Engelmann, whose father was a printer, worked at a company specializing in chemicals for the fanning industry and obtained several patents in this field.

Returning to the photo industry, Dr. Engelmann went to Polaroid Corporation where he was involved in emulsion development for color film, and then to 3M Company where he worked in silver halide research and production control of photographic materials. He came to RIT as dean of the college in 1969.

What’s in the future for education in photography and printing?

“As society becomes more visually oriented and technology changes, the role of the photographer will change too. To meet these changes, the photographer of the future must be able to function on several different levels: First, he or she must be thoroughly familiar with the technical aspects of photographic processes, materials, and hardware; second, he or she must have enough visual and aesthetic acumen to perform as a virtuoso; and third, he or she must have a general education which will prepare him or her to interact with other professionals and with society in general.”

“To a greater or lesser degree, depending on the area of concentration, these three elements must be integrated into photographic education. In addition to maintaining this triple approach, the school will put more emphasis on the experiential as well as incorporating new technological developments into the curriculum.”

He concludes with the belief that future and inevitable technological changes can only widen the spectrum for the industry and the photographer.

Printing is continuing its evolution from an industry based on crafts to one based on science and engineering and programs in the School of Printing are changing to keep pace with the new
technologies. According to Dr. Engelmann, there is and will be increased emphasis on courses in computer technology, electronics, chemistry and other sciences, as well as on management and leadership training.

“Our goal,” says Dr. Engelmann, “is to teach the principles of sophisticated technical processes to potential managers. With a thorough understanding of the fundamentals involved, today’s RIT graduate is well-prepared to adjust to future technological changes.”

To insure that its educational programs will meet the immediate and future needs of the printing industry, the School of Printing works with an industry advisory committee whose 25 members represent leading printing, supply and equipment firms throughout the U.S. and Canada.

Enrollment in the School of Printing is expected to increase during the next five years.

Resources

The college is housed in a building that has been specifically designed for instruction in photography and printing. Its many specialized laboratories and wide range of equipment make it the most complete of any degree-granting institution in these fields.

The faculty has been carefully selected on the basis of their teaching effectiveness and ability to relate well with students. They are also individuals who are educationally qualified and have had extensive professional experience and training in the graphic arts industries.

The establishment of two distinguished professorships highlights this qualification of the college’s teaching staff. The Melbert B. Cary, Jr., Professorship emphasizes the School of Printing’s involvement in typography and design generally, while the James E. McGhee Professorship highlights the School of Photographic Arts and Sciences’ interest in photographic processing and finishing, as well as in the photographic marketing and management areas.

Rochester is the world center of research and development in photography and a center of research in the graphic arts, as well as a city well-known for quality printing. It is an ideal environment for students in either photography or the graphic arts because they have access to a faculty which is close to progress in these fields, and through guest lectures, field visits, and meetings of scientific and professional organizations, they can personally meet many of these leaders in research and development.

The RIT library is rich in both photography and the graphic arts, and the cooperation of the George Eastman House of Photography and the library of the Kodak Research Laboratories makes available one of the largest collections of reference materials for these fields to be found anywhere.

Two special libraries are housed in the college directly, the Graphic Arts Research Center Library and the Cary Library. The latter contains the Melbert B. Cary, Jr., Graphic Arts Collection, with more than 4,000 volumes of rare books illustrating the past and present of fine printing.

Plan of education

The college seeks to prepare men and women to be professionally competent in their chosen area and to have an appreciation and understanding of our cultural heritage and democratic institutions. Although the primary concern of the college itself is with science and technology, and the occupational aspects of life, it requires of every student courses in communication, the humanities, and the social and natural sciences. These form an integrated program of liberal education in the College of General Studies and require from one-quarter to one-third of the student’s time.

The college operates on the quarter plan, each quarter being 11 weeks in length. Many classes are available during the summer.

Most programs of the college include a senior thesis as a requirement for the bachelor’s degree. This involves independent study and research on a subject chosen by the student and approved by his or her advisor. The thesis provides the student the opportunity to make a detailed study of a subject of particular interest. It often requires extensive reading, thus making the student more conversant with the literature and, where laboratory research is involved, the student acquires experience in the design of experiments, the conduct of
research, and the writing of technical reports. A number of these reports have been presented at meetings of scientific and professional societies and printed in appropriate journals.

The School of Printing offers a Senior Seminar which brings to campus each year some 15-20 industry people who discuss new developments and technologies in the graphic arts and how students can prepare to meet new challenges evolving from them.

Transfers
With the growth of community, junior, and two-year technical colleges throughout the country, many men and women have a better chance to identify their occupational and professional goals. The college recognizes the value of these programs and, for students who perceive such goals within the scope of the college’s programs, every effort is made to accept the maximum amount of transfer credit from the two-year college curriculum. Some scholarships are available.

Degrees and requirements
Candidates for the BS and BFA degrees must complete the requirements of a major program, and they must also complete satisfactory thesis work.

Requirements for the MS degree in photographic science and instrumentation, printing technology, and printing education, for the MFA degree in photography and the MST degree in printing education are to be found in the Graduate Bulletin.

Except for the newspaper production and printing systems management programs, the associate in applied science degree is awarded all students who successfully complete the requirements of the first two years of the BS or BFA program and have a minimum number of quality points equal to or at least two times the number of quarter hours required.

Summer Session and special programs
During the Summer Session the School of Printing offers a wide range of technical and management courses which may be taken for credit.

Special, intensive summer courses are also available in graphic arts orientation, flexography, gravure and screen printing.

Additional specialized short-term summer programs can be designed by the School of Printing to meet the particular needs of paper, ink and equipment manufacturers and related segments of the graphic arts industry.

The School of Photographic Arts and Sciences offers several special courses each summer to meet professional or avocational needs not met by the four-year programs.

Information on summer programs in either school can be obtained from the director of the Summer Session.

Graphic Arts Research Center
GARC serves the printing and graphic communications industry through research, continuing education, and the dissemination of information. It acts as an interface between RIT’s academic programs and the commercial world of production and research. GARC’s professional staff has been recruited from industry and research organizations. This experienced staff provides realistic counsel when lecturing or acting as undergraduate and graduate thesis advisors in the field of printing as well as in the field of photographic science. GARC’s facilities are used in conjunction with lectures, seminars, and demonstrations for special students. GARC information is made available to students in such publications as Graphic Arts Literature Abstracts, and GARC reports of research efforts.

The Science and Technology section consists of fundamental research programs in color theory, color measurement and specification, paper technology, image evaluation, screenless lithography, study methods for gray balance determination, and photometric measurement of dot area.

The Physical Testing Laboratory which emphasizes color reproduction, conducts industry-supported programs for testing paper, ink, and other printing products. Its facilities also accommodate test runs for the Science and Technology section. And many of the continuing education programs (seminars in Web Offset Newspaper Training, Paper-Ink-Press, Compositions Systems, and Color Reproduction) use the lab facilities, including the four-unit perfecting web offset press.

The Information Services library houses an extensive international collection of literature relevant to the graphic arts. From its extensive holdings it offers the following services to both the educational and industrial communities.

Graphic Arts Literature Abstracts (GALA)—Formerly called Graphic Arts Index, GALA represents a new and expanded effort into current awareness and retrospective retrieval efforts within the graphic arts. GALA, published monthly on a subscription basis, offers subject categorized, fully indexed informative abstracts of the graphic arts literature as gleaned from the timely scanning of over 200 international publications, periodicals and conference proceedings.

Admission at a Glance
College of Graphic Arts and Photography

General Information on RIT’s admission requirements, procedures and services is included in detail on Pages 24-25 of this Bulletin.

The School of Photographic Arts and Sciences, the School of Printing, and the Graphic Arts Research Center are included in this college.

The college is internationally known for its excellence and the contributions of its graduates to the world of communication. Faculty are experts in their fields and students work in laboratories with equipment of unsurpassed quality and variety. Students develop their creative abilities as well as technical competence.

Photographic Science and Instrumentation—Students learn the application of physics, chemistry, and mathematics to photography; of the materials and processes of photography; of the application of photographic processes to science and technology. Course content is comparable to that of engineering programs—mathematics, physics, and chemistry of radiation-sensitive systems, optics and image formation. Degrees granted: AAS-2 year; BS-4 year.

Photographic Illustration—Students use photography to solve visual communication problems leading to vocations in studio, mass media, and museum practices. Students develop innovative and individualized responses to visual problems, and are expected to become sensitive to contemporary graphic design. Degrees granted: AAS-2 year; BFA-4 year.
Professional Photography—Students learn skills in business as well as photography to enable them to seek employment in fields of their choice. Demands a high degree of application of students’ evolving abilities to obtain professional competence. Degrees granted: AAS-2 year; BS-4 year.

Photographic Processing and Finishing Management—Students develop a thorough knowledge of photographic process, production techniques and procedures, and business, including aspects of promotion and selling in a competitive market. Degrees granted: AAS-2 year; BS-4 year.

Biomedical Photographic Communications—Prepares students for a career in media production working with allied health teams in hospitals, medical and dental research centers, and other health institutions. Students can qualify for employment at end of second year and have received the educational background necessary to apply for registration as a Registered Photographic Technician. Degrees granted: AAS-2 year; BS-4 year.

Newspaper Production Management—Prepares students for careers in technical management for the newspaper industry by developing appreciation of tactics and strategies for evaluating and controlling production problems, incorporates engineering approaches to problem solving. Degree granted: BS-4 year.

Printing Systems Management—Prepares students for career that emphasizes measurement and control techniques, problem solving and optimization of operating condition in the industrial technological environment in the printing industry. Degree granted: BS-4 year.

Freshman Admission Requirements

School of Photographic Arts and Sciences
Trains for Visual Problem Solving

Russell Kraus, Director

The program offerings of the School of Photographic Arts and Sciences are designed to prepare students for photographic career fields. The studies involve both technical and creative experiences for visual problem solving. Some chemicals and specialized equipment are supplied. Students are encouraged to purchase photographic equipment that will further their chosen careers. All first-year BFA and BS students in professional photography are required to have their own hand-held small or medium format camera and a professional exposure meter. All upperclass professional photography students are required to have their own view camera and allied equipment.

Speakers and field trips broaden the student's viewpoint. Participation in the field trips and summer study courses in Europe are encouraged.

Faculty
The School of Photographic Arts and Sciences faculty represents a remarkable cross section of various photographic fields. Many faculty members possess not only formal degrees but recognition from professional societies in the form of honors and titles indicating professional excellence.

Programs of study
The School of Photographic Arts and Sciences offers an undergraduate (BS) in photographic science and instrumentation; an undergraduate (BFA) program in photographic illustration; an undergraduate (BS) program in professional photography; an undergraduate (BS) program in photographic processing and finishing management; an undergraduate (BS) program in biomedical photography/biomedical photographic communications.

Graduate programs
The School of Photographic Arts and Sciences offers two master's degree programs: MFA in photography and the MS in photographic science and instrumentation. These are described in the separate Graduate Bulletin, available through the Admission Office.

Summer Session
The School of Photographic Arts and Sciences offers a wide selection of photographic courses in the Summer Session. These range from beginning photography courses to those requiring a substantial photographic background. A special course is offered for high school and college art teachers desiring to build a background in basic photography. For detailed information write the director of Summer Sessions for a bulletin.

Memberships
The School of Photographic Arts and Sciences maintains memberships in a number of professional organizations: American Management Association, American Society of Training and Development, Association of Professional Color Laboratories, Master Photo Dealers and Finishers Association, National Microfilm Association, Professional Photographers of America, Society of Motion Picture and Television Engineers, Society of Photographic Scientists and Engineers, University Film Association.
Requirements for admission

All applicants for admission must meet the general requirements for admission to the Institute. The requirements for admission to the School of Photographic Arts and Sciences vary with the program.

All applicants, except those transferring from other colleges and universities, must take entrance examinations.

Photographic Science and Instrumentation

Applicants for admission to the undergraduate program in photographic science and instrumentation must have had three years of high school mathematics through trigonometry and either physics or chemistry. Their high school record should indicate a capacity to undertake a science program with a reasonable chance of success.

Photographic Illustration

Applicants for admission to photographic illustration must have had one year of mathematics and one year of science. Art courses are recommended.

Professional Photography

Applicants for professional photography should have had two years of high school mathematics, including either intermediate algebra or plane geometry, and one year of science.

Biomedical Photographic Communications

Applicants for this undergraduate program must have had elementary algebra, plane geometry or intermediate algebra, trigonometry and biology. Chemistry and/or physics is recommended. A report is required from the applicant covering visits to photographic departments of at least two hospitals. A personal interview may be required.

Photographic Processing and Finishing Management

Applicants for admission in this program should have had two years of high school mathematics, elementary and intermediate algebra, and chemistry. Additional science is recommended.

Transfer students

A transfer student is a student with acceptable transfer credits who has been accepted into a degree program. He or she may be classified as a first, second, third or fourth year student. Transfer students should be aware that because of credits carried with them to RIT, they may have a lighter than normal academic load. Normally a student may not carry more than two photographic lab courses.

Transfer credit and transfer programs

Transfer credit will be given for applicable courses completed at accredited institutions with a grade of "C" (average) or better. It is not possible for photography students to transfer into the common first year (professional photography or photographic illustration) from photographic science or photographic processing finishing management or other programs at RIT, without incurring loss in time or added expense. Regular transfer procedures apply.

Credit for photography courses will not be accepted without a substantiating portfolio. This work will be reviewed by the appropriate faculty.

Transfer students should expect to have light schedules during part of their residence at RIT because of prerequisite requirements and scheduling problems.

Summer transfer

A summer transfer student is one who meets the qualifications of the transfer conditions as outlined above.

There are transfer programs into the second or third year of most of the majors offered by the school. These are for students who have transfer credits in science, art, business, and/or photography. Students in the transfer stream may find it necessary to attend classes during one or more summers.

Course descriptions

For a complete outline of courses offered at RIT, please request the Course Description catalog from the Admission Office.
Requirements for admission to second year**

Photographic Science
A total of 39 quarter credits, including 12 acceptable quarter credits in general studies, acceptable courses in calculus (12 quarter credits) or higher mathematics, and general physics or chemistry of not less than one year in either, and three additional credits in photography or science, plus a “C” grade or higher in summer course *PPHS-200 (Fundamentals of Photographic Science) prior to admission to the second year.

Photographic Illustration
A total of 30 quarter credits, including 12 acceptable credits in general studies and six acceptable credits in studio courses in drawing and design, and 12 credits in photography or additional art courses, plus a “C” grade or better in summer course *PPHG-200 (Photography) and PPHG-210 (Materials and Processes of Photography).

Professional Photography
A total of 33 quarter credits, including 12 acceptable credits in general studies, an acceptable science course (nine quarter credits), and/or an acceptable design studio course (six quarter credits); plus 12 credits in photography, additional art courses, or science courses; and a “C” grade or better in summer course *PPHG-200 (Photography) and PPHG-210 (Materials and Processes of Photography).

Photographic Processing and Finishing Management
A total of 37 quarter credits, including 12 acceptable credits in general studies, acceptable credits in college math (six quarter credits) and 16 quarter credits in a combination of business and management, plus three additional credits in photography or science.

Requirements for admission to third year

Photographic Science
A total of 80 quarter credits including 24 acceptable quarter credits in general studies, a minimum of 20 quarter credits in calculus or higher mathematics, and acceptable courses of not less than one year each in general chemistry and general physics, a computer programming course, plus a “C” grade or better in summer course *PPHS-200 and PPHS-210 (Fundamentals of Photographic Science I and II) prior to admission to the third year.

Photographic Illustration
A total of 93 quarter credits including 24 acceptable quarter credits in general studies. The remainder of 69 quarter credits must include a minimum of 12 quarter credits of studio courses in design and drawing, plus nine credits of History and Aesthetics of Photography, or their equivalents. (A candidate lacking some of these credits will be expected to make them up before graduation.) Forty-eight credit hours of photography are required. If there are insufficient photography studio courses the applicant will be required to take PPHG-200 and PPHG-210 during the summer.

Professional Photography
A total of 96 quarter credits including 24 acceptable quarter credits in general studies, nine credits in science or higher mathematics and six credits of design. Also 57 quarter credits in any combination of photography-related courses of which 48 credits must be equivalent to PPHG-201, 202, 203, PPHP-301, 302, 303, and PPHP-311,312 and 313.

*These are summer courses required by those persons who do not have a sufficient photographic background. Maximum of 24 student accepted.

**There is a limit of approximately 100 students in each of the second years of photographic illustration and professional photography.
Photographic Science and Instrumentation

Ronald Francis, Staff Chairman

Photographic science is concerned with the materials and processes of photography; photographic instrumentation with the application of photographic processes to science and technology. A primary objective of the photographic scientist is the improvement of existing materials and processes of photography and the development of new methods and materials. The instrumentation engineer is concerned with the planning of new applications of photography or the adaptation of existing methods to new or special requirements. Whereas chemists, physicists, and engineers of disciplines other than photography are employed in both of these activities, there is a need, on an increasing scale, for the specialist in photographic science and instrumentation.

A broad segment of American business is an employer of graduates of the Photographic Science and Instrumentation Division; for example, aerospace, business machines, information handling, microelectronics, scientific instruments, graphic arts, industrial chemicals, and photographic materials and equipment. Aside from industry, many graduates are employed by governmental agencies and laboratories. Graduates with an interest in marketing often move into positions as sales and technical representatives.

The Photographic Science and Instrumentation Division offers three programs leading to both undergraduate and graduate degrees: a four-year program resulting in a bachelor of science degree, a five-year program resulting in simultaneous awarding of the bachelor of science and master of science degrees, and an MS degree program for students holding a bachelor of science degree in science or engineering.

In addition, it is possible for students with satisfactory credits in mathematics, chemistry, and physics to transfer into either the four-year or five-year program at the beginning of the second or third year by taking a transfer program during the summer quarter preceding transfer.

In recognition of the division's belief that much degree-relevant learning in photographic science and instrumentation can take place outside the Institute's classrooms, all undergraduates are encouraged to acquire photoscience industrial experience during their program at RIT.

Four-year program
Bachelor of Science in Photographic Science and Instrumentation

The course content in this program is typical of science and engineering programs. The first two years contain fundamental courses in mathematics, chemistry, and physics. The student simultaneously applies these fundamentals to the study of photographic materials and instrumentation. The photographic science core program then continues with courses in radiometry, the structure of images, color and vision, and methods of engineering photographic systems. Third and fourth year students select elective courses in photographic science and instrumentation, engineering, science, mathematics, and graphic arts to broaden their base of knowledge. An undergraduate thesis is required.

Opportunities also exist to perform thesis work under the direction of selected scientists and engineers in other RIT colleges as well as from local industry as adjunct faculty.

Five-year program
Bachelor of Science and Master of Science in Photographic Science and Instrumentation

Course content during the first three years is similar to the bachelor of science program and provides the student with a background in mathematics, chemistry, physics, and basic photographic science and instrumentation. The fourth year is spent taking advanced elective courses in chemistry, physics, mathematics, engineering, and/or photographic science and instrumentation. The fifth year is devoted to graduate courses and a graduate thesis.

Admission into the five-year program is normally made at the end of the third year. Completed applications should be sent to the Admission Office.

Graduate program,
Master of Science in Photographic Science and Instrumentation

The graduate program is designed to prepare persons holding a bachelor of science degree in physics, chemistry, or engineering for positions in the field of photographic science and instrumentation. Applicants without acceptable understanding of photographic materials and processes are required to take a summer course before final admission to the graduate program. This full-time summer course, PPHG-700 (Principles of Photographic Science) begins in June and runs for ten weeks. Certain graduate courses are offered during the evening on a rotating basis for those desiring to obtain the master of science degree on a part-time basis. Information regarding which courses are offered in which years during the evening may be obtained from the division.

The graduate program is administered by the Council on Graduate Studies and is under the direction of the graduate coordinator (see Graduate Bulletin for particulars).

Upon successful completion of the second year, the associate in applied science degree is awarded. 

*See Pg. 98 for General Studies requirements.

†See Pg. 40 for Policy on Physical Education.

Others to be selected in consultation with advisors and staff chairperson.

Undergraduates with proper prerequisites may take graduate electives for undergraduate credit upon approval of advisors and staff chairperson.
Photographic Illustration
Illustration Photography
Film Making
Photojournalism
Photography as a Fine Art

C. James Gleason, Staff Chairman

The curriculum leading to a bachelor of fine arts degree in photographic illustration is planned to prepare the student for those areas of photography which require the solving of visual communication problems with a sound technical base. Students are encouraged to develop innovative and individualized responses to visual problems; they are expected to become sensitive to contemporary graphic design and to visual aspects of their society; they are asked to be perceptive and responsible citizens of an evolving society.

Career opportunities
The photo students who elect the BFA program may produce advertising photography for magazines, direct mail pieces, posters, billboards, and packages. They may produce editorial photography, magazine illustrations, picture essays, and book illustrations. They may illustrate brochures, annual reports, and other visual materials for business, government, and educational institutions. They may make educational, entertainment business films and TV commercials. They are qualified to function as artists using photography as a principal means of expression. They may become scholars, photohistorians, photojournalists, or museum curators.

Areas of concentration
The bachelor of fine arts program is subdivided into four major areas of concentration, each of which is varied enough to provide the student with a broad-based photographic education. Each is also flexible enough in approach to provide the student who so desires within the advisory system, to select those courses which provide for and best suit his or her particular needs.

The first year is common to photographic illustration and professional photography programs. After the first year, the student elects to continue in either photographic illustration or professional photography. This is based on educational background and availability of faculty and facility.

Major photographic electives
Film Making
Illustration Photography
Photojournalism
Photography as a Fine Art

(All BFA students must select one of these majors as a two-year involvement)
114 Undergraduate Programs

Bachelor of Fine Arts professional electives
PPHF-401, 402, 403 Film Making I
PPHF-407, 408, 409 History and Aesthetics of Film
PPHF-421, 422 Scriptwriting
PPHL-411, 412, 413 Photomontage and History of Photography
PPHL-521, 522, 523 Color Photography Workshop

Second Year
FADF-321, 322, 323 Design
PPHL-301, 302, 303 History and Aesthetics of Photography
PPHL-311, 312, 313 B.F.A. Photography II
PPPL-391, 392, 393 B.F.A. Photography III
PPPL-399 Independent Study

Third Year
FSCF-225, 226, 227 Art and Civilization
PPHL-304, 305, 306 History and Aesthetics of Photography
PPHL-314, 315, 316 B.F.A. Photography IV
PPPL-391, 392, 393 B.F.A. Photography V
PPPL-399 Independent Study

Fourth Year
FSCF-325, 326 American Art
FSCF-327 Contemporary Tendencies in Art

†Upon successful completion of the second year, the associate in applied science degree is awarded.
‡See Pg. 98 for General Studies requirements.
§See Pg. 40 for Policy on Physical Education.

Photography has long been a part of RIT. In this recollection from an earlier decade, courtesy of the Wallace Library Archives, Instructor John Elberfeld and two of his students examine a micrograph for photographing the internal structure of metals.
Professional Photography

Donald L. Bruening, Staff Chairman

The professional photography curriculum is a challenging and rewarding program which prepares the student for a career in the business of visual communication and related fields. The student learns from professionals, men and women who have come from the profession and who have established their marks in fields ranging from advertising illustration, through commercial, industrial photography, portraiture, color processing and special laboratory techniques, to research and sales. The student can specialize in any of these fields, or get a very broad background for future growth and specialization.

The first two years the student acquires a broad base of knowledge and skills, both in the aesthetic, art based aspects of image making and in the technical areas of photography which support creative efforts. In the third and fourth years each student plans, with the help of his or her advisor, an advanced program, selecting from a number of elective courses, based on the field of interest. These elective courses include offerings in: advertising photography, advanced color techniques and dye transfer, audiovisual, corporate publications, engineering and instrumentation, film making, illustration photography, industrial photography, photojournalism, portraiture, process control, reproduction techniques, and television production. A student can concentrate his or her efforts and achieve a high degree of competence in any of these areas.

In the professional photography program, the student can also prepare for a career in photo-related areas such as that of studio management, technical representation, and similar professions.

Upperclass students with high grade point standings can "work with a master" on a one-to-one basis through independent studies. At the student's initiative off-campus work-study may be arranged to give on-the-job experience. Profession related courses may be taken in RIT's School of Art and Design or School of Printing. Emphasis is also placed on business skills and the realities of current and projected trends, both within the profession, and in the socio-economic environment of which the graduate expects to become a part.

Broadly stated, this preparation involves studies and experiences in both technical and creative aspects of visual problem solving. The curriculum is planned to give students skills in business as well as photography, to qualify to seek employment in the field of their choice.

Science option electives (second year)
SMAM-201, 202, 203 College Algebra and Trigonometry
SCHG-281, 282, 283 General Chemistry
SSEG-201, 202, 203, 204 Contemporary Science
SBIG-201, 202, 203 General Biology
SPSG-211, 212, 213 College Physics
And also the following may be considered if all necessary prerequisites have been met, and with approval of the staff chairperson.
SCHG-205, 206, 207 Chemical Principles
SCHC-211, 212, 213 General Chemistry

New Business Course Requirements
The new business courses required in the third year are: New Ventures Development, Small Business Management and Finance, and Small Business Marketing and Planning. These three courses (4 credit hours each) must be completed on the RIT campus. These courses are unique and not transferable.

Non-Photographic Electives
All students are required to complete 12 hours of non-
photographic electives prior to completing the Bachelor of Science degree. These elective courses may be taken from the offerings in:
1. The Communication Design Program, College of Fine and Applied Arts
2. College of Business
3. College of Engineering
4. Audiovisual Communications Program, Institute College
5. College of Science
6. School of Printing

There will be no seats specifically set aside in courses in these programs for photo students. A student must meet prerequisites for any course he desires to enter, or have permission from the instructor. This may mean that students must wait until registration days at the opening of each quarter to register for these courses. Courses from other areas of the Institute may be utilized after careful consultation with and approval from the student’s advisor in writing. Students may transfer up to 4 quarter credit hours of non-photographic electives to RIT toward this 12 hour requirement.

Bachelor of Science professional electives
PPHF-401, 402, 403 Film Making I
PPFH-407, 408, 409 History and Aesthetics of Film
PPHF-421, 422 Scriptwriting
PPHF-501, 502, 503 Film Making II
PPHP-407, 508, 509 Introduction to TV Production
PPHL-411, 412, 413 Photojournalism I
PPHL-511, 512, 513 Photojournalism II
PPHM-301, 302, 303 Machine Processing
PPHP-407 AV Preparation and Presentations
PPHP-408 Scientific and Technical Applications of Photography
PPHP-409 Corporate and Special Interest Publications
PPHP-421, 422, 423 Advertising Photography
PPHP-431 Forensic Photography
PPHP-441, 442, 443 Advanced Color Printing
PPHP-501, 502, 503 Industrial Photography Seminar
PPHP-521, 522, 523 Advanced Color Seminar
PPHP-541, 542, 543 Portrait Photography
PPHP-551, 552, 553 Special Topics
PPRT-591, 592, 593 Reproduction Photography, Offset Platemaking, Offset Presswork

Others to be selected in consultation with advisor and staff chairperson.

Film and Television Courses Accent Creative Media

Richard Floberg, Coordinator

The courses in film and television are designed for students who recognize the motion picture medium as an expressive force uniquely important in today’s world. They are intended to acquaint students with film and television as creative media and to develop the skills of production.

Offered to students in professional photography, photographic illustration or biomedical photographic communications, these courses are structured as lecture-laboratory courses, designed to develop individual skills in communicating with moving images and the aesthetic principles governing film as a form of art.

Other Institute students, with a basic knowledge of photography, may enroll if they are given permission by the course instructor. Students typically produce several short films or programs, working through all phases of production: scripting, preproduction planning, budgeting, shooting, sound editing and working with a laboratory. Students combine their learning of visual and sound artistry through hands-on experience with camera and sound equipment. The film projects are often designed by the individual student; they receive individualized instruction as they bring forth purposeful expression in a wide variety of styles.

Photo Management Program Trains Industry Managers

James E. McMillion, Jr., Coordinator

The curriculum in photographic management is designed to prepare individuals to assume management positions in the photographic processing and finishing industry. The student pursuing this course of study will be involved with obtaining: (1) a thorough knowledge of the photographic process in order to obtain the highest possible quality from the process; (2) production techniques and procedures necessary to obtain quality in the shortest possible time; and (3) the business aspects of promoting and selling the economically-produced quality product in a competitive market.

Students in this program will spend a large portion of their time in our fully equipped color processing and finishing laboratory to gain hands-on experience in production, quality control, and management techniques.

This is a four-year baccalaureate program with the career objective of plant supervision and management; however, those choosing to terminate after two years are awarded the AAS degree and should qualify for area supervisory positions in a finishing plant.

Photographic Processing and Finishing Management

Professional electives

- EIEI-482 Production Control
- PPHM-501, 502, 503 Marketing
- PPHM-510 Operation, Care and Maintenance of Photofinishing Equipment
- PPHM-511, 512, 513 Independent Study
- PPHP-411, 412, 413 Advanced Color Printing

Others to be selected in consultation with advisors.

*See Pg. 98 for General Studies requirements.
†See Pg. 104 for Policy on Physical Education.
‡Professional electives must be chosen in consultation with the student's academic advisor.
§Upon successful completion of second year, the associate of applied science degree is awarded. It is required that students seeking the baccalaureate degree spend a summer in an internship program.
Biomedical Photographic Communications

Nile R. Root, Coordinator

The biomedical photographic communications program is designed to prepare the student for a career in media production within the scientific community. The biomedical photographer can be part of the allied health teams in hospitals, medical and dental research centers or in other health institutions.

The first year courses introduce basic theories and principles as well as practical experience with photographic equipment and photographic processing. The courses are integrated to prepare the student for a summer internship in a medical or scientific facility. The completion of the summer internship is required for the associate’s degree in biomedical photography.

The second year rounds out the prerequisites for a beginning career in biomedical photography. Courses include photomacrography, photomicrography, and other specific studies required for this career. The junior and senior years’ curricula include electives in film making, television and advanced color printing, which can be selected in consultation with the advisor.

Transfer candidates must have an evaluation prior to admission. A personal interview may be required of the candidate for this program. The student may be required to attend summer courses to satisfy prerequisite courses.

The Biological Photographic Association, the certifying and registering professional organization in the biomedical photography field, has cooperated in the preparation of criteria and in program development. Thus the RIT program can provide the educational background which will form the basis for qualifying to become a Registered Biological Photographer (RBP), after the student enters into his or her profession full-time.

†Associate’s degree awarded upon successful completion of second year.

**Possible recommended professional electives:
PPHF-401, 402, 403 Film Making I
PPRT-591, 592, 593 Reproduction Photography, Offset Plate Making, Offset Presswork.
Electives will be made with the coordinator’s permission.
Other electives with advisor’s consultation.

Business Electives............................................................................
**Professional Electives........................................................................
Technology, Management, Aesthetics

Emphasized in the School of Printing

Mark F. Guldin, Director

The School of Printing at Rochester Institute of Technology is one of the relatively few educational institutions in the United States that offers major degree programs in printing. It is the largest degree-granting school in its field in the country, and enjoys a position of leadership because of its extensive laboratory facilities, its up-to-date programs of study, and its competent faculty.

The primary objective of the School of Printing is to prepare students—both men and women—for successful careers in the printing, publishing and allied industries. While students get considerable hands-on experience with the latest equipment in many technological areas, the emphasis is on learning “why” rather than “how-to.” Printing school graduates have successful careers in management at all levels in the graphic arts industry, in selling, in supervision, in design, and in research among others.

These occupational objectives involve certain educational objectives. These are to help the student to develop the following: a broad understanding of the procedures involved in the major important processes; an appreciation of the aesthetic qualities of good printing; an understanding of the applications of science and engineering in the graphic arts; a knowledge of theory and practice in the various aspects of management; skills in communication, and an understanding of the student’s professional and general environment as a means of developing personally as a well-rounded individual and a responsible citizen.

Career opportunities

The graduate with a BS degree in printing has available a variety of career choices. The printing industry is one of the country’s largest, employing not only persons skilled in its own special technologies but also chemists, physicists, engineers, accountants, printing educators, marketing specialists, designers, artists, photographers, copy editors, computer specialists, production and traffic managers, and the closely-related packaging specialist. RIT has all of these programs within its 10 colleges—men and women in the School of Printing have this unique opportunity to elect courses that give them a breadth in preparation for a career of their own choosing in this growing field.
Special requirements for admission

General requirements for admission are given in the general information section of this bulletin. In addition, it is important that an applicant have an interest in printing, which may be shown by success in high school printing courses, by extracurricular activities in connection with a school newspaper or yearbook, by employment in a printing establishment, or by gaining an idea of the activities and opportunities in the field through investigation or personal associations. While high school graduation is stated as a basic requirement for admission, with intermediate algebra or plane geometry and one year of science as specific prerequisites, preference is given to applicants who have had some additional work in mathematics, physics, or chemistry.

Scholarships and financial aids

Scholarships available to students in the School of Printing number approximately 55, and range in value from $100 to full tuition. Some of these awards may be continued beyond one year depending upon the records made. Competitive scholarships are offered through the National Scholarship Trust Fund of the Education Council of the Graphic Arts Industry. Anyone interested in applying for one of these scholarships should do so early in the senior year in high school, since the application must be filed in advance of the date set for competitive examinations. If information is not available in the local high school, the candidate should write to:

Education Council of the Graphics Arts Industry
4615 Forbes Avenue
Pittsburgh, Pa. 15213

For information regarding scholarships administered by the Institute, write to the Financial Aid Office.

Programs of study

The School of Printing offers a four-year course of study that leads to the bachelor of science degree in printing. The degree of associate in applied science is offered upon successful completion of the first two years. Continuation beyond the second year depends upon the satisfactory completion of the first two years and a grade point average of at least 2.0.

The four-year program prepares graduates for a wide variety of technical and management positions in the printing and related industries. Among these are positions in administration and general management, production management, production and quality control, sales and sales management, estimating, cost and financial control, process and plant development, graphic design, newspaper production management and graphic arts research. A variety of positions in commercial printing, packaging, and service industries are available to graduates, as are positions in the book, newspaper, and magazine publishing industries. The cooperative plan of education is available in the School of Printing for those choosing this option.

The two-year portion of the program is for those who wish to enter employment after two years of college study. Graduates of this program obtain employment as an assistant in such classifications as estimating, production control, specification writing, purchasing, copy preparation, typography and layout, and sales.

Graduates of two-year colleges are encouraged to transfer into the four-year program. Transfer students find that many of their two-year college credits are applicable toward the four-year degree.

The printing program includes a group, or core, of basic required courses that is indicated in the program outline on page 126. Students have the opportunity to expand their own areas of interest by selecting course combinations, or developing individual program sequences from approved elective courses.

Two-year programs for college graduates

Many college graduates with baccalaureate degrees may complete the professional requirements for the bachelor of science degree in printing in two years of concentrated study. This is because they have already satisfied many requirements in general studies, mathematics, and science elsewhere. Upon admission, such students are usually given the equivalent of two years of credit.

Those who have taken courses which parallel those required in their chosen majors in the School of Printing normally are given additional transfer credit, if grades are "C" or better.

Cooperative program

The cooperative program in printing is a flexible and voluntary program which will be available to printing students who have successfully completed the first two years of the required printing program and to qualified printing transfer students accepted at the junior-year level. The intent of the cooperative program in printing is to afford students the opportunity of enlarging and improving their college education by combining formal, classroom learning with practical work experiences. Printing students following the cooperative program will have a wide variety of graphic arts work experiences available to them. This cooperative program in printing will require up to five years for completing BS degree requirements.

Graduate program

The School of Printing also offers a graduate program leading to the master of science degree, described in the separate Graduate Bulletin. Information concerning this program is available from the Admission Office.

Organization

For purposes of program administration, planning, supervision, and student counseling, the School of Printing is organized into four divisions: Design, Photography-Plate-Press, Management, and Graduate.

While each student is expected to use initiative in selecting elective courses, each division administers program sequences which may be developed from professional elective courses.
It is necessary for most people in the graphic arts to have an appreciation for good design and typography because much of their time will be spent evaluating the printed word from the standpoint of design and production. Many printing firms have organized their own design and composition facilities in order to offer a complete service to their customers and, in turn, have a need for employing well-qualified people in these areas. In addition, the needs of inplant, and corporate advertising departments for educated people in the creative fields and for printing buyers are extensive. For these reasons, the Design-Composition Division not only offers introductory creative courses for those students who will pursue other areas of endeavor, but also offers sequences in the design field in which the student may specialize. These sequences include:

**Book design and book production**
A sequence designed to prepare students to fill a variety of positions in the book publishing and book manufacturing industries. Although particularly oriented for those interested in book design, this flexible program can be altered to fit the specific needs of others interested in the wide range of opportunities the publishing industry has to offer.

**Design and typography**
A program for those students with a basic interest in the aesthetics of printing. The student is given a broad range of courses, calligraphy to typography, design to copy preparation, which are important for entering the field of design, typography, or any of the other creative fields of the printing industry.

**Composing room procedures**
A sequence giving printing students an overview of typesetting techniques and the handling of materials as they are related to layout and design. The diversity and challenges in this field are reflected through a series of courses ranging from electronics in computerized typesetting through estimating and other management areas related to the composing room.
Photography-Plate-Press Division

Edward A. Brabant, Staff Chairman

The production segment of the industry is the core area of most printing facilities. Every manager in the industry from design through sales and from personnel through finance must have a firm grasp of this core area if their decisions are to be valuable ones. This is the “home area” for the production manager in plants producing books, newspapers, forms or commercial printing. For these reasons, the Photography-Plate-Press Division offers courses in all the major printing processes, encompassing operations and materials in camerawork, stripping, platemaking, presswork, inks, substrates and finishing.

This division administers sequences in various production areas such as:

Lithographic technology
This program gives the student an in-depth knowledge of lithographic management. The student is prepared for positions such as technical service representative, production scheduling, quality control analysis, and technical sales.

Packaging printing
This sequence, offered in conjunction with the Department of Packaging Science, emphasizes the problems encountered in printing on many different kinds of materials, and in packaging many different kinds of products. This program prepares students for positions in production and sales with the packaging printer, an expanding segment of the graphic arts.

Reproduction photography
A program for students who wish to specialize in the photomechanical processes in printing. The student is prepared for management positions with camera service departments within printing firms and with color separation service companies.

Flexographic Technology
A sequence for students who wish to enter the flexography industry with a background designed to be particularly helpful for their careers. This allows the student to use elective credits to emphasize appropriate technical course work and take advantage of many management electives.
Management Division

Walter A. Campbell, Staff Chairman

To facilitate a high level decision-making process, it is necessary for most management personnel in the graphic arts to have a clear understanding of the interrelationships that exist among the marketing, financial, personnel, and production segments of the industry. To this end, the Management Division offers course work in these various areas. In collaboration with the other divisions, the Management Division provides the "topping" for shaping future managers in the graphic arts. In collaboration with the other divisions, the seven full-time faculty members and two part-time specialists in this division, all of whom have significant work experience in the printing industry, offer sequences of courses in the following areas:

Estimating

Estimating is at the very heart of the successful economic well-being of the printing industry. Accurate job costing and analysis can mean the difference between success and failure for any printing concern. This sequence prepares students for positions found in every segment of the industry from commercial printing through packaging and specialized forms manufacturing.

Computer applications

Computers are of increasing importance to the printer as they can perform the usual business data processing tasks as well as the more involved specialized applications in typesetting and optical character reading devices. This sequence is designed to provide the student with a basic understanding of computers and of their potential in production management.

Newspaper production management

A program for students who wish to specialize in newspaper management. This sequence emphasizes production, labor, finance, and marketing in relation to the newspaper industry. New technological changes in the industry are emphasized.

Financial management

This sequence utilizes courses in both the School of Printing and the College of Business. Students prepare themselves for the financial aspects of managing a graphic arts business.

Personnel management

This sequence introduces the student to basic concepts of personnel management from a behavioral science standpoint. Drawing heavily on courses in the College of General Studies, the sequence prepares persons for positions in personnel management, labor relations, and other positions where the ability to work closely with individuals is of prime importance.

Production management

Students in this sequence are prepared to enter all phases of printing dealing with production problems in the commercial printing industry as well as in the newspaper, book, and magazine publishing industries. Management positions evolving from this sequence are that of scheduler, assistant production manager, and production manager.

Sales-marketing

This program prepares students for positions in printing sales and marketing, printing equipment sales, and typographic sales as well as positions as technical representatives for graphic arts supply firms. Students are also prepared for sales positions in allied industries such as ink, paper, and packaging, and for positions as printing buyers and brokers.
Electives
The following electives supplement required courses. Each student elects courses to suit his or her individual interests and objectives, and to meet the credit requirements of the printing program. Selection is subject to prerequisite requirements and availability of courses.

General Studies electives
In general, the program requires that the student take one course per quarter from this area which includes subjects such as economics, psychology, language, communications, literature and fine arts appreciation. See page 98 for more specific details regarding distribution requirements.

Math/Science electives
Each student must take nine credits of college mathematics as recommended by the School of Printing.

Professional electives
These are usually selected from the printing management and technology electives listed below but may also include courses from the Colleges of Business or Engineering or other colleges in the Institute for which the subject matter is approved as being relevant to the student’s individual needs.

Course description
For a complete outline of courses offered at RIT, please request the Course Description catalog from the Admission Office.

Printing electives
Printing Management
PPRM-402 Estimating II (Cr-4)
PPRM-404 Printing Production Management II (Cr-4)
PPRM-502 Financial Controls II (Cr-4)
PPRM-504 Statistics of Quality Control II (Cr-4)
PPRM-506 Business Law (Cr-3)
PPRM-507 Computer Estimating Workshop (Cr-4)

Electives
PPRM-509 Economics of Production Management (Cr-4)
PPRM-510 Personnel Relations II (Cr-4)
PPRM-511 Labor Relations in Graphic Arts (Cr-4)
PPRM-512 Collective Bargaining in the Graphic Arts (Cr-3)
PPRM-513 Sales in the Graphic Arts (Cr-4)
PPRM-514 Newspaper Management (Cr-4)
PPRM-515 Legal Problems of Publishing (Cr-4)
PPRM-516 Marketing in the Graphic Arts (Cr-4)
PPRM-518 Purchasing in the Graphic Arts (Cr-3)
PPRM-599 Independent Study (Cr-Arranged)

Printing Technology
PPRT-213 Principles of Copy Preparation (Cr-3)
PPRT-301 Typography II (Cr-4)
PPRT-303 Layout and Printing Design (Cr-4)
PPRT-304 Advanced Relief Press (Cr-4)
PPRT-306 Tone Reproduction Photography (Cr-3)
PPRT-307 Lithographic Plates (Cr-3)

Newspaper Production Management

Robert G. Hacker, Coordinator

The printing and publishing industries are undergoing dynamic changes in technology. Within the newspaper field these changes are particularly drastic, completely altering how things are accomplished. Coupled with this are the advances in technology and market penetration of related information-handling industries resulting in increasingly strong competition for newspapers in the areas of reader interest and advertising appeal. These advances have made it imperative for newspapers to alter not only the way in which a newspaper is printed and distributed but the very method by which the information is prepared and processed—perhaps even what shall be produced. The earlier distinctions between editorial, advertising and production blur as production becomes increasingly a function of advertising and editorial preparation, a direction enveloping previously distinct business functions as well. These trends will result in the integration of these departments into a single entity utilizing a computer system to handle, transmit, and process information and control the production and delivery of the resultant product.

This new approach requires new abilities and expertise of the people who will steer this changing industry. Graduates of the newspaper production management program will have to compete with the existing pools of talent and expertise as the functions of production merge with those of other departments.

They must be prepared in both the new technology and in the ability to steer existing manpower and management systems through potentially stormy change to a goal of a useful and profitable position in the marketplace. The revolutionary changes in this field, themselves, point to the need for a “new person” to deal with the technological and managerial problems of such change. This program is intended to fulfill the developing industry need for such people.

Career opportunities

The graduate with a BS degree in newspaper production management has numerous career choices within the newspaper industry. Many young people find entry positions as production assistants, assistant production managers, assistant business managers and computer specialists. These can lead to positions of production director, director of data processing, operations director, business manager and publisher. All these positions present a distinct challenge in an industry undergoing vast technological change.

Requirements for admission

General requirements for admission are given in the general information section of this bulletin. In addition it is highly desirable that an applicant have a deep interest in newspaper management which can be shown by success in working on a school newspaper, working for a daily or weekly newspaper or by a general interest in the mass media.

High school graduation is a requirement for admission along with course work in elementary algebra, trigonometry, intermediate algebra, physics or chemistry. Preference is given to those applicants who have had additional work in mathematics, physics or chemistry.

Scholarships and financial aid

In addition to the scholarships generally available to School of Printing students, there are a number of scholarships available for students enrolled in the newspaper production management program. Additional scholarships are available through the National Scholarship Trust Fund of the Educational Council of the Graphic Arts Industry. If information is not available in the local high school, the candidate should write to:

Education Council of the Graphic Arts Industry 4615 Forbes Avenue Pittsburgh, PA 15213

For information regarding scholarships administered by the Institute, write to the Financial Aid Office.

Program of study

The School of Printing offers a four-year course of study leading to a bachelor of science degree in newspaper production management. Employing about 383,000 people, the newspaper industry continues to be the third largest employing segment of the total manufacturing industry in the country. With 8,200 establishments producing over 1,700 dailies and 7,400 weeklies, the four-year program in production management prepares graduates for entry level positions in these establishments.

The U.S. Industrial Outlook says of the newspaper industry, “The continuing development and implementation of new technologies, successful research efforts and educational programs will support a growth rate ranging between 7 and 8 per cent per year to the mid-1980’s. The program stresses management, engineering, the sciences, computer and printing technology, along with liberal studies.

The cooperative plan of education is available in the School of Printing for those choosing this program. Graduates of two-year colleges are encouraged to transfer into the four-year program. Transfer students find that many of their two-year college credits are applicable toward the four-year degree.
Cooperative program
The cooperative program in newspaper production management is a flexible and voluntary program available to students who have successfully completed the first two years of the required newspaper production management program, and to transfer students accepted at the junior level. A wide variety of work experiences are available in the newspaper industry where students’ practical work experiences can build upon the formal classroom learning. This cooperative program can require up to five years for completing the BS requirements.

Organization
The BS program in newspaper management is organized under the management division of the School of Printing. This division offers many courses in the marketing, financial, personnel, and production segments of the industry and are available to the newspaper production management students.

Electives
The following electives supplement required courses. Each student elects courses to suit his or her individual interests and objectives, and to meet the credit requirements of the printing program. Selection is subject to prerequisite requirements and availability of courses.

General Studies electives
In general, the program requires that the student take one course per quarter from this area which includes subjects such as economics, psychology, language communications, literature and fine arts appreciation. See page 98 for more specific details regarding distribution requirements.

Math/Science electives
For students with a strong mathematics background, math courses other than SMAM-201, 202, 203 may be taken. Prerequisites for this program are high school algebra and trigonometry. Math choices could be SMAM-204 Modern Algebra, SMAM-214, 215 Introduction to Calculus, SMAM-216, 217, Introduction to Math of Business and Finance, SMAM-309 Statistics.

The second year science sequence must be Chemistry SCHG-281, 282, 283. The third year recommended science sequence is ICSS-200, ICSP-305, ICSS-575.

Professional electives
These are usually selected from the electives listed below but may also include any other School of Printing course.

Recommended professional electives
PPRM-516 Marketing in the Graphic Arts
ICSP-215 Programming Language-Fortran
ICSP-310 Programming Systems Design
PPRT-323 Newspaper Color
PPRT-324 Newspaper Composition
PPRM-702 Computer in Management

Printing Systems Management

Walter G. Campbell, Coordinator

There is a need in the printing industry for people who have a competency in both printing and industrial engineering.

The main focus for such people is on printing processes so that operating conditions in printing plants and allied industries can be optimized. They must be able to collect data on plant operation, interpret the data, and make appropriate operational adjustments in line with those data. At the same time, they must be up-to-date with technical changes and new development in the printing industry.

Working with computers, methods analysis, electronics, mechanics, and many different kinds of people are everyday occurrences. The program in Printing Systems Management integrates coursework in printing technology, printing management, industrial engineering, math/science, and general education to prepare people for the printing industry, who are excellent problem solvers when analyzing printing plant operations.

Career opportunities

The graduate with a BS degree in Printing Systems Management has many career choices within the printing industry. Many find beginning positions as production assistants, assistant production managers, assistant plant engineers, computer engineering specialists, and systems analysts. These can lead to positions of production manager, director of computer technology, plant engineer, and operations manager.

Requirements for admission

General requirements for admission are given in the general information section of this bulletin. In addition, it is highly desirable that the applicant have a great interest in both printing and industrial engineering which can be shown by success in working on a school newspaper or yearbook, by working summers in a printing plant or by general interest in graphic communications and engineering.

High school graduation is a requirement along with coursework in elementary algebra, plane geometry, intermediate algebra,
trigonometry, physics and chemistry. Preference is given to those who have had additional work in mathematics, physics and chemistry.

Scholarships and financial aid
There are a number of scholarships in the School of Printing which range in value from $100 to full tuition. Some of these may be continued beyond one year depending upon how well the student has performed. Competitive scholarships are offered through the National Scholarship Trust Fund of the Education Council of the Graphic Arts industry. Anyone interested in applying for one of these scholarships should do so early in the senior year in high school, since the application must be filed in advance of the date set for competitive examinations. If information is not available in the local high school, the candidate should write to:

Education Council of the Graphic Arts Industry
4615 Forbes Avenue
Pittsburgh, Pa. 15213

For information regarding scholarships administered by the Institute, write to or contact the Financial Aid Office, 475-2186.

Program of study
The School of Printing offers a four-year course of study leading to a bachelor of science degree in printing systems management. The program includes a total of 196 quarter credits. Of these there are 35 in printing technology, 29 in printing management, 40 in industrial engineering, 32 in math/science, 54 in general studies and six electives.

Employing about 1.1 million people, the commercial printing industry has about 40,000 plants. Although many of these plants are quite small, nearly 8,000 of them would be sufficient size to require the services of a graduate of the printing systems management program, and many of these firms have stressed the need for people educated in both printing and industrial engineering.

The U.S. Industrial Outlook says that, "The stability and growth that has existed in the commercial printing industry for more than a decade is expected to continue into the 1980's". This program is designed to complement the industry's growth by stressing management, engineering, the sciences, along with computer and printing technology.

Graduates of two-year colleges are encouraged to transfer into the four-year program. Qualified transfer students find that many of their two-year college credits are applicable toward the four-year degree.

Cooperative program
The cooperative program in printing systems management is a flexible and voluntary program available to students who have successfully completed the first two years of the required printing systems management program, and to qualified transfer students accepted at the junior level. A wide variety of work experiences is available in the printing industry where students' practical work experiences can build upon the formal classroom learning. This cooperative program can require up to five years for completing the BS requirements.

Organization
The BS program in printing systems management is organized under the management division of the School of Printing. This division offers many courses in the marketing, financial, personnel, and production segments of the industry and are available to the printing systems management students.
Undergraduate Programs

Electives
Students may elect professional courses in printing or industrial engineering to complete their two-elective course requirement.

General Studies electives
In general, the program requires that the student take one course per quarter from this area which includes subjects such as economics, psychology, language communications, literature and fine arts appreciation. See page 98 for more specific details regarding distribution requirements.

Principal field of study
For students matriculated in the Printing Systems Management Program, the principal field of study consists of all course work in the School of Printing and the Department of Industrial Engineering. Matriculated students not maintaining a 2.0 cumulative grade point average in their principal field of study are subject to academic probation or suspension according to Institute policy.

Institute College Provides Students
With Tailor-Made Programs of Study

Roy I. Satre, Jr., Dean

Organized in 1973, Institute College is the ninth of 10 colleges within the administrative framework of Rochester Institute of Technology. It incorporates the School of Engineering Technology, the School of Computer Science and Technology, the Department of Packaging Science, the Center for Community/Junior College Relations and the Department of Instructional Technology.

In 1968, the Center for Community College Faculty Development was formed, its primary function being the training of faculty for two-year college career programs. In 1970, a new School of Applied Science (now called the School of Engineering Technology) evolved from the Center, offering upper-division baccalaureate programs to graduates of civil, electrical and mechanical engineering technology curricula from the two-year colleges. In 1972, the name of the Center was changed to Center for Community/Junior College Relations. This Center now incorporates Faculty Development and Community/Junior College Articulation. Major emphasis is on closer relationships with two-year colleges as they relate to upper-division transfer to RIT.

Both the School of Engineering Technology and the Center for Community/Junior College Relations have expanded rapidly to include additional curricula designed to meet their original objectives. At the same time, they have established close relationships with many two-year colleges. By so doing, they can build upon the curricula of the associate’s degree granting institutions and supply faculty in those areas of technical and professional education where a demonstrated need exists.

Also in 1972, the Department of Packaging Science was established to offer courses leading to the bachelor of science degree in packaging science. This department became functional in September 1973.

The Department of Packaging Science draws heavily upon courses offered in other schools and colleges of the Institute. With the addition of several packaging science courses, the broadly-developed curriculum is representative of the areas of knowledge that are basic to the packaging science industry.

Computer Science and Technology—an existing program since 1971—became a department of Institute College in June 1973 and a school in the same college in July 1976. This school is also closely related to the two-year colleges and has an active upper-division component besides offering the freshmen and sophomore years.

The Department of Instructional Technology was established in June of 1974 to offer both upper-division work in audiovisual communications and graduate programs in instructional technology. The audiovisual curriculum serves graduates of the two-year colleges and upon completion of an additional two years leads to the bachelor of science degree.

Resources
Since Institute College is geared toward programs of practical application, it is necessary that well-planned laboratory and shop facilities be made available to students in upper division and graduate courses.

Institute College utilizes some of the finest facilities and equipment available. The new packaging science laboratories, the computer science facilities and equipment, and the new instructional technology laboratory have all seen additional equipment installed. The School of Engineering Technology’s sharing of facilities with the College
of Engineering allows the use of the most modern and sophisticated equipment in the engineering technology curricula. The added availability of remote terminals feeding into the Sigma 9 computer (and others) gives the student a maximum opportunity to utilize computers in his or her curriculum.

Memberships
Institute College holds institutional membership in the American Association of Community and Junior Colleges, and the New York State Association of Junior Colleges.

Acceptance of the associate’s degree
The School of Engineering Technology and the Department of Instructional Technology (Audiovisual Communications) function as upper-division units only. Holders of an appropriate associate’s degree from a community, junior, or technical college (or other similar two-year institutions) will receive full credit for those curricula leading to the bachelor’s degree.

Engineering Technology students may receive the engineering technology, B. Tech in three years of additional study in the cooperative education program.

Audiovisual Communications’ transfers may receive the BS degree with two additional years of study.

The School of Computer Science and Technology and the department of Packaging Science admit students into the upper division years and accept the associate degree at full value if the associate degree is obtained in a computer related program or a packaging science program, respectively. They also conduct a four-year curriculum into which high school graduates are admitted.

Faculty
Members of the professional staff have had considerable experience in the industrial field and/or teaching in two-year and four-year colleges, and have completed graduate programs in the various fields of their specialties.

Program planning
Each student in Institute College is considered individually when his or her program is planned. The diversity of subject background from the two-year colleges necessitates an almost tailor-made pattern of courses for the individual. In this process, students can be assured of building upon previous courses and knowledge of their particular field, assuring that their associate’s degrees retain the integrity they deserve, and guaranteeing, as far as possible, that previously studied material will not be repeated.

Course descriptions
For a complete outline of courses offered at RIT, please request the Course Description catalog from the Admission Office.

‘We Have Few Educational Inhibitions,’ Says Dean Roy Satre
Dean Roy I. Satre

“‘This is the most invigorating environment I’ve ever experienced in higher education,” says Dr. Roy I. Satre, dean of Institute College.
Institute College, begun in 1972, is the newest college on the Henrietta campus and one its dean calls the "growingest." Originally designed to provide an administrative structure for RIT’s Center for Community/Junior College Relations and the School of Engineering Technology, the College has since added the School of Computer Science and Technology, the Department of Packaging Science, and the Department of Instructional Technology.

“We've more than doubled our enrollment and budget in the last five years,” states Satre, who thinks Institute College’s lack of tradition is one of its strong points.

“If someone—a faculty member, administrator, or student—has a good idea it’s much more likely to be aired here at RIT than in many other educational institutions,” he says.

Satre was the first dean of Niagara County Community College and the founding president of the Community College of the Finger Lakes prior to joining RIT. Educated as a botanist and bio-ecologist before the term ecology was popularized, he taught college courses in conservation for several years.

Satre rates the Institute College faculty highly and believes the college's system of advisory committees from industry also help keep the programs current and industry-oriented.

“I think we attract a good faculty because we have few educational inhibitions and tabus at RIT; faculty members appreciate not having to go through endless red tape in order to try a creative idea,” concludes the dean.
Admission at a Glance:
Institute College Programs

This college includes the Department of Instructional Technology, the School of Engineering Technology, the School of Computer Science and Technology, and the Department of Packaging Science.

Programs offered by this college further reflect RIT's concern to provide students with relevant, career-oriented programs that lead to rewarding employment. The Institute College prepares its students for a world of rapidly expanding technological applications.

Applied Software Science: Designed to prepare students to enter employment as applied software specialists, applications programmers, or research programmers. Degrees granted: AAS-2 year; B. Tech.-4-5 year.

Computer Science: General computer science, prepares graduates to enter employment as research programmers or enter graduate schools for specialized training. Degrees granted: AAS-2 year; BS-4-5 year.

Computer Systems: Oriented to prepare management, systems analysts, information systems designers, and business applications programmers. Systems application area is selected from the other RIT programs. Degrees granted: AAS-2 year; B. Tech.-4-5 year.

Audiovisual Communications Program

Clinton Wallington, Chairman

Bachelor of Science in Audiovisual Communications

With little fanfare, the use of audiovisual materials for training, for public relations, and for presentations has grown markedly. The unusual-slide/tape training packages, multi-image presentations, audio and video cassettes—is now the commonplace. The field which we label “audiovisual communications” is so broad and diversified that it carries different meanings for each of us. But behind the scenes is a core of professional audiovisual specialists who translate ideas into media. While the growth of the field brings a need for specialists in particular medium such as photography, television, or filmmaking, there is a demand for the audiovisual generalist who can work in a variety of media and manage the production process from client need to finished product.

But increasingly, the demand has this general audiovisual specialist who can perform a large variety of tasks and has the skills and knowledge to analyze and solve problems in a wide range of communications settings. While programs of study exist at the two-year college level (associate’s degree) and at the graduate school level (usually in schools of education), there was a major gap at the four-year college level (bachelor’s degree). To earn a bachelor’s degree, the graduate from a two-year college had to transfer into a program that was not in audiovisual communications.

Now RIT’s Audiovisual Communications program in the Department of Instructional Technology is specifically designed to fill this need. It is an upper division transfer program leading to a bachelor of science degree after two years of study. For the first time graduates of two-year colleges can transfer into a four-year college without changing their major field.

RIT’s Audiovisual Communications program is thus an important steppingstone to better job opportunities or to further graduate study in this exciting and dynamic field. It is also one of only a few programs in the nation offering a baccalaureate degree in this field.

It is innovative in concept, pragmatic in its approach, and emphasizes a strong career orientation for its students.

Objectives
The primary objectives of the BS program in audiovisual communications are to prepare fully qualified individuals for professional employment as audiovisual communications specialists. This rapidly growing field is concerned with effectively and efficiently transmitting information by using systematically designed audiovisual materials. The bachelor of science program is concerned with training professionals in the rigorous process of designing and producing these materials. An advisory committee from industry, potential employers, and educational institutions helps to make the curriculum up-to-date and relevant.

Curriculum
The curriculum concentrates on three major areas: audiovisual program design, audiovisual management, and production skills. The major emphasis is on acquiring technical competence, a mastery of skills and techniques. Course assignments are made to permit hands-on experience in designing, producing and evaluating audiovisual products in specific training situations. By requiring core courses in each of the three areas, and permitting electives from a wide range of courses, a high degree of individualization is accomplished. Course requirements may be adjusted to meet individual needs through student/faculty advisement conferences.

Admission requirements
The two-year BS degree program accepts transfer students of two-year colleges who hold an associate’s degree in such areas as audiovisual technology, media specialist, photography, film making, television production, graphic design, commercial art, and other related fields. Graduates from other programs in two-year colleges will be considered but may be required to take courses to make up any deficiencies in audiovisual production skills.

Graduation requirements
The BS degree requires the completion of 96 quarter credit hours, a normal two-year program. If not acquired at the two-year college, RIT also requires two years of physical education.
Audiovisual Management electives
ICAV-460 Selection, Storage and Dissemination of Media Resources
ICAV-461 Visual Information Resources
ICAV-502 Practicum in Audiovisual Management
ICAV-560 Media Facilities Design
Other electives may be taken in the College of Business and the College of Continuing Education with the approval of the appropriate department and the student’s academic advisor.

Audiovisual Program Design elective
ICAV-501 Practicum in Audiovisual Program Design
Other electives may be taken in the College of Continuing Education with the approval of the appropriate department and the student’s academic advisor.

Audiovisual Production electives
ICAV-485 Electronics in AV
ICAV-490 Audio Techniques
ICAV-503 Practicum in Production
ICAV-570 Survey of AV Hardware
ICAV-580 Producing Multimedia Presentations
Other electives may be taken in the College of Continuing Education, the School of Engineering, Technology, and the School of Photographic Arts and Sciences, with permission of the appropriate department and the student’s academic advisor.

Richard T. Cheng, Director

The School of Computer Science and Technology offers programs leading to BS, B. Tech and MS degrees. The school accepts both high school graduates and two-year college graduates as freshmen and upper division classmen respectively. All degree programs offered in the School of Computer Science and Technology are designed to meet the manpower demands of industry, government and educational institutions. In addition to theoretical foundations, practical aspects of computer science or computer technology are emphasized. The opportunity for hands-on experience with computer systems is provided and encouraged. Graduates of the School of Computer Science and Technology are fully prepared for employment in computer industries, computer applications departments, or enrollment in graduate schools to pursue advanced studies.

Computer science and technology covers a very wide spectrum of the field of computing. A computer scientist or technologist may be specialized in areas such as computing theory, scientific computing, data processing, systems software, numerical analysis, operating systems, information processing, data base systems, programming languages, systems analysis, and many others. It is important to note that programming is merely a tool in computer science and itself is not computer science. An undergraduate computer science and technology student is required to take a certain number of computer science courses in a selected option that will provide a good foundation in computing and useful specialties for employment.

Programs

The School of Computer Science and Technology offers the following programs:

1. Computer science (BS) degree program with options in computer science and applied software science
2. Computer technology (B. Tech) degree program with options in computer systems and system software science
3. A computer engineering (BS) program jointly offered with the Department of Electrical Engineering. (For details see the College of Engineering section.)

Students entering as freshmen may change options during the first three years of study without losing credit for courses they have taken except computer engineering. Transfer students will have one year to change options without losing credits. The only concern is mathematics requirements and professional or free electives, which differ between the various options. Students in all computer science and technology programs are required to obtain one year (four quarters) of Co-op work experience before graduation.

Richard T. Cheng, Acting staff chairperson

The computer science program of the School of Computer Science and Technology offers options in computer science and applied software science. As a result of the mathematical requirements of the BS degree program, students with strong interest in mathematics are encouraged to pursue the BS degree options. In the case of students who are interested in computer science and technology, but are weak in mathematics, the bachelor of technology options would be the more desirable choice.

The computer science option is designed for students who are not sure which specialty will be pursued and for those who wish to enter graduate studies immediately following graduation. The applied
software science option is designed for students who wish to work as scientific applications specialists upon graduation. However, the applied software science option also fully prepares its students for graduate studies.

**Computer Science option**  
Guy Johnson, Coordinator

This program is designed to provide students with a broad and flexible background in computing theories and applications. Students who have decided not to specialize in an applied area should take this approach. In general, the program provides instruction in the following areas:

1. Computer science: required and elective courses including courses in automata theory, formal languages and logical design.
2. Math and/or science: including courses in calculus, physics, and numerous electives.
3. General studies: including courses in language, literature, science, humanities and the social sciences.

Graduates from this program are fully capable of entering employment or pursuing further educational goals at the graduate level.
140 Undergraduate Programs

**Applied Software Science option**
Rodger Baker, Coordinator

This program is designed to provide competence in scientific and technical application software. All technical and scientific fields, such as engineering, physical science, mathematics, library science, psychology and others, rely heavily on the computer to achieve analysis, design, production, control and test. The applied software specialist is needed to make the computer applicable to a chosen field(s). Employment is to be found as scientific programmer or scientific system analyst in any of the above fields.

Students with strong mathematical backgrounds or interests are encouraged to choose this option.

**Computer Technology program**
Wiley R. McKinzie, Staff Chairperson

The computer technology program of the School of Computer Science and Technology offers two options leading to the bachelor of technology degree. Course work reflects how these options are more specialized and directed toward particular areas than the bachelor of science degree program.

The options of this program are structured such that approximately 50 percent of the course work is in computer science and another 25 percent is in a professional elective area chosen outside computer science from such areas as business, mathematics, engineering, etc. This additional course work allows the students to tailor their overall program to a computer application or technical area of their own choosing. The remaining course work is in liberal arts (i.e., general studies electives) and mathematics. The required mathematics courses (i.e., Modern Algebra, Introduction to Calculus, and Statistics) give these students the necessary mathematical background to deal with many problems in computer science and computer technology. Students who want a more intensive background in mathematics can take the classical calculus and probability and statistics course sequence to meet the mathematics requirements and apply the additional hours towards their professional elective requirement.

Finally, six quarters of physical education and four quarters of Co-op work experience are required. Two options are currently offered: computer systems and systems software science.

Students transferring to RIT with an associate's degree in data processing, accounting, etc., will find the bachelor of technology program particularly attractive. Except in unusual cases, these students can expect to receive full transfer credit for their AAS course work and a balanced mapping of these courses into the required curriculum. Since the students enter the program as juniors, they are normally eligible to begin their Co-op work experience after one quarter of course work at RIT.

Most graduates of the computer technology program go on to full-time employment in their chosen application or technical area of computer science. Some, however, choose to continue on to graduate school; the appropriateness of their undergraduate degree for graduate study largely depends on the composition of their professional elective area.

Computer Systems option

Wiley R. McKinzie, Coordinator

This program is designed to provide students with a broad background in computing with an emphasis on data processing applications. Graduates from this program are qualified to enter positions such as information systems designer and business applications programmer with ultimate career goals of management systems analyst or lead applications programmer. These positions not only require a strong computing background, but also a sound foundation in analytical and business skills. A student may choose an area of concentration in supportive disciplines such as business, mathematics, engineering, or other relevant curriculum at RIT, for professional electives. The computer systems curriculum is designed to facilitate transfer for graduates of two-year degree programs in data processing or business.

Systems Software Science option

Wiley R. McKinzie, Coordinator

This program is designed to provide students with a broad background in computer systems software and competence in systems software programming. Systems software is a system of programs which extends the power and flexibility of the computer to make it a more viable problem solving tool for the applications programming areas such as data process and scientific computing. Systems software programming is concerned with the design, implementation, modification, and maintenance of systems software (e.g., compilers, operating systems, system utilities etc.). Therefore, students are required to obtain a firm understanding of computer systems software and computer systems hardware concepts. Students will develop a high degree of competence in assembly language programming which is the media for system software programming. Graduates are prepared to enter employment as systems programmers or systems software specialists. Any relevant curriculum at RIT may be chosen for professional electives.

Engineering Technology... Non-Traditional Programs Lead to Traditional Careers

James D. Forman, Director

Engineering technology is a relatively new field in higher education, and RIT was a pioneer in the development of such programs. Originally conceived as associate’s degree level educational programs, engineering technology curricula were designed to prepare people to work with engineers and scientists as technicians. This educational role is presently being carried out primarily in two-year community colleges and technical institutes.

More recently, RIT again was a pioneer in the development of baccalaureate programs in engineering technology. The School of Engineering Technology was established to offer upper-division (junior-senior) level work in civil engineering technology (environmental and construction options), electrical engineering technology, manufacturing technology and mechanical engineering technology.

The School of Engineering Technology upper-division programs are designed specifically to accept graduates of associate’s degree programs in similar engineering technology fields, and provide a continuation of study in the student’s area of specialization. Each program area consists of a carefully integrated program heavily involved in professional studies, coupled with liberal education, mathematics, and on-the-job experience.

Each student is considered individually when his or her program is planned. Through the selection of technical electives students can build and tailor their program based on previous knowledge and Co-op experience to launch a career that best meets their needs and aspirations.

The graduate—an engineering technologist—is a distinct type of professional whose main concern and interest is with existing operation, maintenance, and management of products and processes. As such, the graduate qualifies for positions to fulfill a role within the broad engineering requirements of business, industry and government. At the present time, the New York State Board for Engineering and Land Surveying requires the B. Tech graduate to achieve additional experience prior to becoming eligible for the New York State Professional Engineer examination. Requirements differ in other states.

The Co-op plan provides opportunity for individual students to learn and become familiar with direct application of techniques, skills, and the latest developments in their field. Students are encouraged to explore and test the wide range of opportunities available. Such things as the specific type of work, the size of the company, the geographic location, and familiarization with the industrial community and environment can and do affect an individual’s decision on the direction a future career might take. Only Co-op can provide a suitable trial ground.

Obviously, Co-op can also provide a significant income during the work periods which help defray a major
portion of one's educational expenses. In the School of Engineering Technology each student is assisted in finding work related to specific career goals, however, as is the case in any employment situation, the major impetus must originate with the individual student. In some School of Engineering technology programs the entering (junior) class is divided into two sections with one half of the class beginning their RIT program on a Co-op job, and the other half beginning with their academic work. Detailed schedules are provided in the description of the individual programs on the following pages.

Admission requirements
The School of Engineering Technology accepts only transfer students. Admission to the bachelor of technology degree programs in the School of Engineering technology is open to persons holding an associate's degree in air conditioning technology, civil or construction technology, electrical technology, manufacturing technology, mechanical technology, a comparable associate's degree program, or an acceptable equivalent.

Admission may be offered to students with other associate degrees or program backgrounds. In such cases, students should contact the School of Engineering Technology for an individual evaluation of the appropriateness of their previous academic experience.

RIT's College of Engineering also is able to accept engineering technology associate's degree graduates; however, additional work is required, depending upon the specific program and the student's past scholastic performance.

Program requirements
School of Engineering Technology students are required to successfully complete the prescribed program including Co-op experience.
144 Undergraduate Programs

A total of 39 quarter credit hours of general studies for the B. Tech degree (associate’s degree program plus RIT course work) is required. The quantity of general studies to be completed at RIT is, therefore, 39 quarter hours minus the amount of general studies transferred from the two-year college. Unless suitable physical education credit is transferred, students are also required to complete up to three physical education electives with passing grades (see policy statement on page 40).

Graduation requirements
The minimum requirements for the B. Tech degree in engineering technology are (1) successful completion of the prescribed program including Co-op work experience, (2) minimum cumulative quality point average of 2.0.

Accreditation
The program of study leading to the bachelor of technology degree in civil engineering technology, (environmental option), electrical engineering technology, and mechanical engineering technology, are all ECPD (Engineer’s Council for Professional Development) accredited engineering technology programs. The School of Engineering Technology is a member institution of the American Society for Engineering Education.

Environmental option cooperative education schedule

Students following the Environmental Option will observe the schedule of cooperative education shown above. All students, whether Block I or II, have the opportunity for one summer of employment, and one 6-month long employment session.

*Entering students will take SMAT-421 or SMAT-422 depending on an evaluation of their mathematics background. Those students assigned to SMAT-422 will be taking a 3-course sequence in Solution of Engineering Problems and will, therefore, defer taking ITEC-414 until the first quarter of the fifth year (in lieu of a technical elective).

*Offered in Spring Quarter Only

*See Pg. 96 for General Studies requirements

*See Pg. 40 for Policy on Physical Education.
Civil Engineering Technology, upper-division baccalaureate program

Russell L. Vesper, Staff Chairman

The civil engineering profession requires the services of many individuals with a wide range of backgrounds and interests—technicians, technologists, and engineers.

The technologist translates the innovative concepts of the engineer into functioning systems and structures, using the language of codes, working drawings, specifications, and construction.

All students enter this program at the third-year level, having already received an associate's degree in civil or construction technology or an acceptable equivalent.

Entering students have a choice of following either a curriculum oriented towards environmental controls or towards the construction industry. However, since both programs of study are sufficiently broad in scope and allow for elective courses, graduates of either path of study should find wide-ranging employment opportunities.

Cooperative education plan

Experience gained in the cooperative education plan is especially valuable. A large number of students work in their Co-op jobs for consulting engineers. Their duties include inspection of construction, surveying, and drafting. Several Co-op students work in water and wastewater treatment plants, operating control panels, performing laboratory tests and doing routine maintenance work. (It is possible to obtain an operator's license while on this type of assignment.) Other students work for town engineering departments, state agencies, construction companies, industrial construction departments, and testing agencies.

Graduates of this program can expect to find employment with consulting engineers, in supervisory positions of pollution control facilities, construction companies, industrial firms, and the engineering departments of various federal, state and local governmental agencies. Also, several graduates have successfully completed master's degrees in civil and environmental engineering at other schools of engineering.

With departmental approval, technical electives may be selected from existing courses in mathematics, chemistry, physics, engineering, and technology. Also, independent study projects may be pursued for credit in cases where students demonstrate unusual ability and obtain sponsorship of a faculty advisor.

*Refer to College of Continuing Education Course Catalog.
The bachelor of technology program in electrical engineering technology offered at Rochester Institute of Technology is an upper-division program. The upper-division feature of the program provides a viable transfer option to those students who have completed their associate’s degree and desire to continue their education in technology. All students enter the program at the third year or junior level as transfers from existing two-year associate’s degree electrical technology programs.

The first two quarters of course work are designed to provide uniform mastery in the fields of mathematics and circuit theory. The remaining four quarters of course work consist of professional courses with elective options in the fields of electrical power, communications, and digital computer design. Elective courses are available for the student to pursue his or her chosen option and to provide course work that complements his or her professional objectives. Professional electives are normally assumed to be those shown as technical electives. However, the Institute provides a wide variety of course offerings and students are urged to make full use of these offerings in developing their professional programs. Academic advisors are provided to assist the student in this selection process.

For students who wish to concentrate their electives in the computer area, a sequence of courses is shown which provides a strong program in this area. This sequence includes recommended course offerings from the School of Computer Science and Technology. The curriculum also includes one year of cooperative work experience and, thus, provides important training in the solution of real technical problems.

Entering students are divided into two groups, A and B, and are assigned to work or school according to the schedules shown. Note that half of the entering students will begin their program of studies at RIT by working on their co-op job.

Technical electives (each carries 4 quarter credit hours)

- ITEE-521 Electromagnetic Fields and Antennas
- ITEE-524 Microwave Systems
- ITEE-534 Communications Systems I
- ITEE-535 Communications Systems II
- ITEE-536 Control Systems II
- ITEE-539 Digital Computer Design I
- ITEE-543 Microprocessors
- ITEE-544 I.C. Theory and Applications
- ITEE-545 Applications of Linear C's
- ITEE-548 D.C. and A.C. Machine Design
- ITEE-550 Power Systems I
- ITEE-551 Protective Relaying
- ITEE-554 Electronic Optic Devices
- ITEE-556 Transmission Lines and Filters
- ITEM-425 Statistical Quality Control
- ITEM-550 Topics in Machine Design for Electrical Majors

Note that half of the entering students will begin their program of studies at RIT by working on their co-op job.

Mechanical Engineering Technology, upper division baccalaureate program

This program is designed for students with an associate's degree in Mechanical Engineering Technology or the equivalent of 90 quarter credit hours (60 semester hours) of appropriate college level work. Students having the AAS degree in such fields as air conditioning technology follow a course sequence adapted to their backgrounds.

The program in Mechanical Engineering Technology is an ECPD accredited engineering technology program, and is operated on the co-operative work-study plan.

In the early quarters, the student expands his skills in the fundamental area of mechanics, mathematics, and materials technology. In the senior quarters, he selects technical electives in his area of interest, concentrating on machine design manufacturing. A substantial measure of laboratory work is required including the preparation of quality reports. Thus, technical communication skills are enhanced to benefit the student's co-op work experience as well as his future professional performance.

Graduates of this program are prepared to occupy professional positions in mechanical design, engineering testing, field service engineering, technical sales, and plant operations.

Mechanical electives
ITEM-406 Dynamics of Machinery
ITEM-451 Vibration and Noise
ITEM-507 Design Practice
ITEM-508 Special Topics in Machine Design
ITEM-535 Analog Control Systems
ITEM-540 Thermal Technology
ITEM-599 Independent Study

Technical electives—energy specialization
ITEC-434 Environmental Pollution
ITEC-544 Contracts and Specifications
ITEM-541 Alternative Energy Applications
ITEM-600 System Design Project I
ITEM-601 System Design Project II

Other electives may be taken in Institute College, the College of Continuing Education, College of Engineering and College of Science with the approval of the appropriate department and the student’s academic advisor.

Courses are scheduled with the work-study program in mind. Entering students are divided into two sections (A or B), with work and academic assignments alternating as shown in the table.

*Entering students will take SMAT-420 or 421 depending on an evaluation of their mathematics background. Those students assigned to SMAT-420 will be taking a 3 course sequence in Solutions of Engineering Problems and will substitute this course for a technical elective in the fourth year.

See Pg. 88 for General Studies requirements.

**See Pg. 40 for Policy on Physical Education.
Manufacturing Technology, upper-division baccalaureate program

Background
 Leaders in the manufacturing engineering profession estimate that the present shortage of qualified manufacturing technologists is between 50,000 and 100,000 people - and this need is increasing. The two principal factors generating this demand are industrial productivity and technological innovations. The rate of increase of productivity in American industry is lagging that of most industrial nations.

Realizing that competitive position in world markets, domestic markets, and profits are tied to the productivity of manufacturing units there is considerable effort by industrial organisations to improve their productivity. This nation-wide effort is causing organizational and planning changes in many corporations which now recognize the manufacturing unit as the key to profits - for example, many corporations have placed manufacturing engineers in charge of new product design functions in an effort to insure product manufacturability.

These efforts to improve productivity have led to the rapid introduction of new, often exotic, processes, equipment, and increased amounts of automation. This factor has created a demand for personnel well versed in the newer manufacturing technologies: numerical control, machine tools, micro-processor controls, computer-aided manufacturing, and manufacturing systems.

Objectives of the program
 The primary objectives of the baccalaureate program in manufacturing technology are to prepare individuals for professional employment as manufacturing technologists. This program is designed to provide the academic skills necessary for applying both today's and tomorrow's manufacturing technologies. These academic skills are enhanced by a full co-op work-study program in manufacturing industries.

Throughout the academic program, a large measure of hands-on laboratory experiences related to manufacturing technology are provided.

Curriculum
 The manufacturing technology curriculum has been designed with the aid and consultation of professionals in the field. It includes those courses which these people feel are fundamental for professional success in the field. The program includes courses in mathematics, computer programming, metal removal and forming, materials science, numerical control, and economic analysis. Also, students are encouraged to select technical electives to enhance their particular areas of interest.

Admission requirements
 The B.Tech program admits students holding an associate's degree in manufacturing technology or mechanical technology, or the equivalent. Interested persons not holding the associate's degree are advised to contact the program coordinator to discuss admission.

Manufacturing Technology electives
 ITEM-425 Statistical Quality Control
 ITEM-431 Production Management
 ITEM-480 Methods Analysis
 ITEM-490 Production Planning
 ITEM-514 Special Topics in Material Forming
 ITEM-515 Manufacturing Technology
 ITEM-599 Independent Study
 Other electives may be taken in the Institute College, College of Continuing Education, College of Engineering and College of Science with the approval of the appropriate department and the student's academic advisor.

Packaging Science Program Utilizes RIT Strengths In New Careers

Harold J. Raphael, Director

The Packaging Science program, leading to the bachelor of science degree, is broadly interdisciplinary providing educational opportunities for men and women seeking careers in the multi-faceted packaging industry.

Graduates are prepared for initial employment in such areas as packaging development, sales, purchasing, structural and graphic design, production, research, and marketing.

Packaging is a $50 billion industry exhibiting dynamic growth and providing employment for many thousands of men and women with wide-ranging skills and expertise.

Since the end of World War II the development of a package for a given product has become increasingly complex involving input from many areas of business and from people with diverse backgrounds. This has resulted in the need for specially trained professionals able to work with concepts, individuals, materials, and machines. Qualified persons in this area are in demand and find themselves in a rapidly changing, challenging career. The RIT program trains people for this exciting profession.

The degree program in Packaging Science was developed because of a close and well-established relationship between the packaging industry and Rochester Institute of Technology over many years.

Packaging has become increasingly related to total marketing concepts. It has even greater dependence upon new developments in materials and processes. Therefore, the industry requires management personnel with strong backgrounds in business, engineering, science and the creative dimension.

All of these educational disciplines are found in the department curricula of RIT. This interdisciplinary program synthesizes these existing and recognized strengths with additional offerings recommended by representatives of the industry.

Characteristics of the program

The program has these characteristics:
1. It is career oriented-the graduate is ready to enter directly into a position of responsibility.
2. It is interdisciplinary-the student becomes familiar with the many facets of packaging through courses in several RIT colleges.
3. It is flexible-the program offers three options: management, design, and technical, with ample opportunity for electives according to interest.
4. It is representative of industry needs-the content developed with the assistance of the Rochester Area Packaging Association, consultants from the packaging industry, and educational specialists.
5. It is adaptable to a modified cooperative plan, used widely in other RIT programs.

Admission requirements

The four-year BS degree program considers for admission high school graduates who meet the following requirements: English, 4 years; mathematics, elementary algebra and either plane geometry or intermediate algebra; science, 1 year. Candidates are evaluated in relation to career objectives, designated option, and other indications of potential success in the program. A portfolio is required of those students electing the design option.
Upper division (transfer)
Transferring into the program with advanced standing is particularly advantageous, since RIT has had many years of experience in assimilating graduates of two-year colleges into its programs and moving them from this point in their education directly into a chosen career field. Some candidates now in four-year colleges will find in the packaging science program a career opportunity with developing potential. Associate’s degree holders (AA, AS, AAS) have courses arranged to meet the requirements of the program and to correct deficiencies resulting from work taken at other institutions not offering the courses required for graduation. With a selective choice of electives by students in the two-year colleges, it is possible to complete the packaging science curriculum in two additional years at RIT.

Principal field of study
For students matriculated in the interdisciplinary Packaging Science Program, the principal field of study is defined to be all courses in the Packaging Science Department as well as the required courses in the College of Science for the Technical Option, the required courses in the College of Fine and Applied Arts for the Design Option or the required courses in the College of Business for the Management Option. Matriculated students not maintaining a 2.0 cumulative grade point average in their principal field of study are subject to academic probation or suspension according to Institute policy.

Packaging: Room
For Talented People
In Expanding Field
Packaging: A Career for the Future

Maybe you don’t remember a time before milk cartons, pre-packaged meats, butter tubs, tape cassettes, film cartridges, and reclosable bottles. But, we haven’t always had the products we use packaged this way.

Milk, for instance, used to come in glass bottles, and years before that it was ladled into tin milk containers from a large milk can. Probably ninety percent of the things you buy come in some sort of protective package. Have you ever stopped to think how each package was designed and produced?

Actually, packaging isn’t applied just to the consumer items that are found in retail stores. It is applied to military supplies, industrial products both large and small, and to products which are shipped around the world.

Diesel engines and automobiles, as well as aspirin, sulphuric acid, and hospital supplies all have to be packaged under certain conditions.

But let’s get back to what the packaging professional must do to develop a typical package for consumer products. For those talented in art, there is a continuing need for package designers. These are the people who create the “wow” colors, supergraphics, and unusual package features of many contemporary packages. They are also the people who have developed features such as child-proof medicine caps and convenient zip-openings. Frequently, designers work with advertising and marketing specialists.

For those people who lean toward science and mathematics, the technology of packaging may be most interesting. Packaging engineers scientifically test packages for durability, strength, and other important qualities. Trips to the moon would never have been possible without the technological know-how that helped design compact, protective packaging for instruments, food and other items. Development of mass-production machines and special printing techniques also fall into the realm of packaging professionals.

Because packaging is an expanding industry, it has plenty of room for people with a business background. Management, purchasing, selling, and marketing are just some of the ways people with a management degree in packaging can function.

Today, and in the future, the challenge of our highly industrialized nation to produce effective, economical, and environmentally sound packages will require well-trained men and women.

National Technical Institute for the Deaf
 Prepares Many for Meaningful Careers

William E. Castle, Dean and Director

The National Technical Institute for the Deaf was created to provide deaf students with the technological training that will lead to meaningful employment in business, industry, government and education. Public Law 89-36 authorized the establishment of NTID, and Rochester Institute of Technology was chosen as the sponsoring institution in late 1966 by the Department of Health, Education and Welfare. In the fall of 1968, a pilot group of 71 deaf students began their studies at NTID and for the academic year 1979-80 enrollment will be approximately 1,000.

Relationship of NTID to RIT
While NTID is a national institution, it also is an integral part of RIT as one of its 10 colleges, and is governed by the RIT Board of Trustees. It is the first large-scale effort to educate deaf students on a college campus planned primarily for hearing students.

The fact that NTID is located on a regular college campus is seen as an important factor in the development of personal, social and communication competence of deaf students. Educational opportunities are available for deaf students through programs that lead to certificates, diplomas and associate's degrees. Many deaf students take RIT courses or are cross-registered full-time or part-time into the associate's, baccalaureate and master's degree programs of RIT.

Cross registration
Qualified deaf students may take selected courses or enroll in programs offered by other RIT colleges. These students are called cross-registered.

An NTID student cross-registered in courses in any RIT college has the support services of interpreters, tutors, note-takers, speech and hearing specialists, and counselors available to them.

There are several ways to become a cross-registered student.

1. Deaf students may take selected courses in another RIT college.
2. After completing a program of study offered by NTID, students may wish to continue their education in another RIT college.
3. Deaf students may enroll directly from high school or transfer directly from another college into an RIT program.

To enroll in another RIT college, NTID students discuss the possibility with their counselor, academic advisor and a member of the educational support team assigned to the college of their choice. The final decision as to whether the student is admitted is left to the college in which the student seeks enrollment.

Benefits of interaction
The varied educational opportunities enable the deaf and hearing to learn together. The interaction of hearing and deaf extends to housing, sports and other social and community activities. Residence halls are available for single students with on-campus apartments and townhouses for married students. There is a full intercollegiate sports schedule as well as intramural and recreational programs. Fraternities and sororities are active on campus along with professional and honorary societies, special interest clubs and service organizations.

The entire educational program for NTID students is designed to help deaf students develop the technical, personal/social, and communication skills necessary to compete in the hearing world of work.

Facilities and services
A new three-building complex is the site of the National Technical Institute for the Deaf. It is built on the campus of Rochester Institute of Technology. Deaf and hearing students share facilities on campus.
The largest structure is an academic building. In it are classrooms, laboratories and shops, administrative offices, faculty and staff offices, a research and training center, a theatre, a speech and hearing center and a student development area.

The residence hall contains dormitory rooms, baggage and storage areas, project areas, study areas and conference rooms.

The dining hall/commons building has a dining room and all the other facilities needed to provide food service.

All the buildings were designed for convenience and educational values to students. The new complex enables NTID to make the classroom and housing area an environment that provides a combined living/learning experience.

Educational philosophy
The major objective of NTID is to provide qualified deaf students with technical education in science, business, engineering and applied arts which will lead to well-paying and satisfying jobs.

Special support services at NTID are intended to help deaf students achieve personal, social and cultural growth.

NTID also strives to learn as much as possible about methods of teaching the deaf. It is exploring new educational technologies which may help all deaf persons. Special training programs are designed to develop skilled instructors and other professionals to work with the deaf and to give NTID employees the opportunity to learn all methods of communication.

Summer Vestibule program
The Summer Vestibule program is a series of educational experiences designed to prepare deaf students for further postsecondary training; to determine academic strengths and weaknesses and to provide an environment for developing program and career choices. During the summer program, new students have the opportunity to explore and evaluate, through program sampling, the various programs of study available through NTID. Concurrently, the faculty has the opportunity to evaluate the students' abilities and interests and to offer counsel and planning for the Fall Quarter.

The counseling staff helps students to more fully understand their abilities, interests, and achievement levels through the interpretation and discussion of test data, background experiences, and work values. Aptitudes and interests are then related to available academic programs and possible occupations. This gives students the opportunity to select a program and career which best suits their individualized needs. The staff is also available for assisting students to make satisfactory adjustments to college life and develop interpersonal relationship skills. The students are also guided through a series of specially designed living
arrangements and self-governance experiences. This program has proven invaluable in preparing students to participate in the collegiate environment.

**Special support services**

Special support services are provided to the NTID student. Interpreter services are available where required for any class in which one or more deaf students are in attendance. In many classes for baccalaureate programs, hearing students-on a voluntary basis-take notes on special notetaking pads and give copies of them to NTID students.

In addition, counseling and speech and hearing services are conducted on an individual basis for each NTID student. Services to assist in career development and social and cultural development are an important part of the total NTID program. All special support services are geared toward helping the deaf student gain the maximum benefit from his or her educational experiences at NTID-experiences that will lead to meaningful employment.

**Complementary education**

Experiences set up to enrich and increase students’ educational opportunities are provided. Complementary education supports academic classes and provides personal development skills. There is no credit for these experiences but they will enable students to become successful professionals in their chosen careers by making them more rounded individuals.

Such activities as athletics, the student newspaper, student government and clubs are not only fun, but give many deaf students the opportunity to become leaders.

In addition to intramural athletics, deaf students may also be members of RIT varsity teams in intercollegiate competition. Deaf athletes have helped RIT to winning seasons in hockey, track and swimming. There are many NTID students with an interest in all sports.

**Placement/employment**

NTID has a highly individualized job placement program for all deaf students. Employers are not pressured to hire the deaf-an NTID graduate has good, solid technical skills which will be an asset to any employer.

In addition, NTID job development personnel pave the way for future placements by acquainting prospective employers with deafness and the technical capabilities of NTID grads. This is done through a variety of personal interactions with company representatives. One type of interaction is NTID regional employment seminars which have thus far been conducted in Philadelphia, Chicago, St. Louis, Denver, Houston, Dallas, New York City, Los Angeles and San Francisco.

NTID’s co-op program is responsible for opening up some full-time positions. Employers find most deaf students to be highly motivated and conscientious workers.

Placement does not end when a deaf graduate is employed. Follow-up work with employers and graduates enables NTID to constantly monitor and update each educational program; this assists placement specialists as they prepare to help new graduates find a place in business and industry nationwide.
NTID students annually elect a member to the RIT Policy Council. There a student has the chance to help make decisions that will affect the future of all students. Additionally, the deaf students have organized the NTID Student Congress as a subsidiary to the RIT Student Association.

Admission
Admission to NTID is based on each student’s potential to finish a program of study which will give him or her the skills to get a good job.

The NTID programs are designed for students who have finished the educational program in their home community which meets their learning needs, in the opinion of school authorities, counselors and others who know the students. Generally, it is expected that students now enrolled in public or private secondary school programs serving the deaf will take advantage of the possibilities for education and training that these programs may have for them.

Charges and fees
The cost of attending the National Technical Institute for the Deaf includes tuition, room, board and academic fees. For more specific information on admission, costs and programs, please consult the separate NTID Bulletin, available from NTID.
College of Science Stresses Training
For Where the Real World Jobs Are Found

John D. Paliouras, Dean

The undergraduate in the College of Science at RIT gets a different kind of education than at any other school in New York State. Our program combines work-study with the potential for undergraduate research and a strong faculty-student interaction brought about by the smallness of the various departments and the resulting classes. Our main interest is high quality teaching at the undergraduate level.

The industrial work-study program, which pays a salary, enables students to obtain this high quality education at a cost comparable to a public education. In addition, it allows students to see what industry is all about early in their undergraduate training rather than waiting until after graduation.

Our stress is on the practice of science in the real world, not just classroom lecturing. We're career-oriented and train students for where the jobs are.

In addition to the industrial work-study experience, the science student at RIT is exposed to research by having the opportunity to work with a faculty member on a project. A number of these projects have resulted in publication in scientific literature.

We seek faculty members with a proper blend of interests in both teaching and research. Research permits the faculty member to practice his profession and stay up-to-date, and provides projects for our students.

The modern trend in undergraduate education is to expose the student to the methods of undertaking a research project. This is an important to a science education as many of the lecture-type courses students are required to take as part of their major programs.

The College of Science is an ideal size to provide quality undergraduate education. It has 60 faculty members in the sciences and mathematics, most of whom hold the Ph.D. degree. This size provides faculty with a variety of expertise in sciences and mathematics, so a student can find a faculty member with whom to interact regarding a particular interest.

When the college moved into the new science building in 1968, it was very fortunate that RIT received about a million dollars in federal funds to permit the purchase of a wide variety of scientific instrumentation. We are as well-equipped as some universities which stress graduate education, but in our case this equipment is used by the undergraduates.

Our faculty realizes its responsibility to maintain up-to-date curricula so that our graduates will fit into the current needs of industry as well as meet the requirements of graduate schools. This challenge includes not only modern trends in science, but such things as the use of computers and sophisticated, modern lab equipment.

Many high school students don’t know which of the sciences they wish to major in. We encourage such students to come to RIT as undeclared science majors. Programs can be designed which will enable them to postpone a definite commitment to a particular major in science for one or sometimes two years without any loss of time toward a degree. This option has been attractive to quite a few high school students.

The best way to evaluate college programs is the success of the graduates. Our graduates have been very successful in both industry and graduate schools. We have found, for example, that they are doing exceedingly well in passing Ph.D. qualifying exams early in their graduate programs. In terms of industrial success, employers report that our graduates not only have good training for industry, but because of their work experience, immediately fit into the industrial way of life with a high degree of initiative and seriousness of purpose.
New Dean Believes Teaching a ‘Must’ For Administrator

Now in his 15th year with RIT’s College of Science, Dr. John D. Paliouras spent six years as associate dean of the college, before becoming dean in 1979. A teacher, author and a mathematician by training, Dr. Paliouras insists on “keeping in touch with the student and the classroom” even though his administrative duties do not allow him to teach “as much as I would like to,” as he puts it. “Teaching is the central activity of our institution; everything else is there to support that activity. To put the same idea in different terms, students and their future are by far the number one concern for all of us; they are the reason for our existence as an educational institution.”

During the 17 years of its history as an integral academic unit of RIT, the College of Science has developed into a first rate educational center which not only services and supports nearly all of RIT programs but offers a great variety of its own major programs. In addition to the four basic programs leading to a bachelor’s degree in biology, chemistry, mathematics, and physics, the college has developed one associate’s degree program in chemical technology, four bachelor’s degree programs in biomedical computing, computational mathematics, medical technology, nuclear medicine technology, and two master’s programs in chemistry and clinical chemistry.

In an effort to increase the diversity of its programs and hence enhance the educational alternatives for its students, the College of Science has entered into an institutional dual degree program with the Massachusetts College of Pharmacy allowing students to pursue studies in biology/pharmacy or chemistry/pharmacy.

The programs

The College of Science has undergraduate programs in biology, chemistry, mathematics, computational mathematics, physics, chemical technology, medical technology, nuclear medicine technology, pharmacy, biomedical computing, and pre-medicine and dentistry.

Choice of majors

A student may enroll in the College of Science as a science major without designating a specific major. In consultation with an advisor, a program will be designed to meet the student’s individual needs and goals. The program can be flexible and cover a number of introductory college level courses in science. Prior to the end of the first year, the student should decide upon a specific major and then enroll as a candidate for a degree in one of the departments: biology, chemistry, mathematics, physics, or School of Health Related Professions.

Declared major

The student who has definitely decided upon a specific major field will indicate a choice when applying, and may therefore be enrolled as a candidate for a degree in that department upon admittance by the Institute. A program will be designed to prepare the student for competency in his or her chosen profession.

The programs in the College of Science are sufficiently flexible to allow the student to obtain an in-depth background in a discipline other than the chosen major. A wide selection of elective courses in such areas as business, chemistry, photography, computer science, physics, mathematics, and biology, makes it possible to take a series of courses which could result in an elective concentration (i.e., minor) in an area related to but not required for the major.

To illustrate, the following is a typical distribution of courses for the first year as a science major.

Each of the departments has majors programs operating on a five-year cooperative work/study plan, and the Chemistry Department has a three-year cooperative program in chemical technology and a program leading to the master of science degree.

Graduates of the five-year programs in the College of Science receive a bachelor of science degree. These graduates qualify for professional work in processing and laboratory operations, research and experimental work, or supervision of technical projects, as well as for graduate education leading to the master of science or doctor of philosophy degrees.

The transfer plan

Students with associate’s degrees in a comparable program from other educational institutions normally can expect to transfer at the junior year level. Transfer credit is granted for those studies which parallel Institute courses in the curriculum for which admission is sought.

Transfer students applying for a program at RIT, similar to their previous college study, are expected to present an associate’s degree program in

![Science major](image-url)

*See Pg. 28 for General Study requirements.
†See Pg. 40 for Policy on Physical Education.
‡Any two of these three in a given quarter.
accumulative average of "C" or above. Students making significant program changes will be evaluated on the probability of their success in the new program, with the grades earned in previous study only a part of the criteria.

It is also RIT policy to grant credit by examination in lieu of course credits, for subjects that parallel the objectives and content of courses for which advanced credit is being sought. Contact the director of Admission for policy and procedures.

The cooperative plan
The school year is divided into four 11-week quarters, Fall, Winter, Spring, and Summer. Students in the biology, mathematics, and physics programs attend classes at the Institute during the fall, winter, and spring for the first and second year.

At the beginning of their third year, employment arrangements are made for students in the five-year cooperative programs. Students are assigned to A and B Sections for the last three years of attendance. Students in Section A attend classes during the Fall Quarter while those in section B work on their cooperative jobs. The two sections interchange at the beginning of the Winter Quarter, when students in Section B attend classes and those in Section A work in industry. This interchange of the work/study periods continues throughout the remainder of the third, fourth and fifth years. The work/study periods continue throughout the remainder of the third, fourth and fifth years. The work/study section to which the student is assigned is designated by the coordinator of employment.

The accompanying diagrams illustrate the cooperative schedule as it applies to students in the five-year programs. Students in the five-year chemistry program participate in the Co-op program as described above except their Co-op experience starts at the beginning of their second year. Chemistry majors thus spend one year on campus and then spend alternate quarters in full-time study and full-time Co-op employment for the next four years.

Chemical Technology
Candidates enrolled in the chemical technology program spend their initial quarter in classes at the Institute. At the completion of the first quarter, the class is divided into two sections and each section alternates between academic and industrial quarters for the duration of the three-year program.

The diagram (left) illustrates the cooperative schedule for the chemical technology program.

Admission at a Glance:
College of Science Programs

General Information on RIT’s admission requirements, procedures and services is included in detail on Pages 24-25 of this Bulletin.

Undergraduate programs are offered in the areas listed below. The programs offered are flexible enough so that students can take courses to meet their individual needs and, at the same time, obtain a quality career-oriented education. Students can take electives in such courses as computer science, photography, or business.

The Co-op plan of this college is ideal for students eager to increase their chances for employment after graduation.

Biology- Prepares students for graduate study in biological disciplines and medical arts. Also for occupations in medical research labs, food and agriculturally related industries, pharmaceuticals and environmental organizations. Degrees granted: AS-2 year; BS-5 year.

Biology/ or Chemistry/Pharmacy- A five-year inter-institutional dual degree program in affiliation with the Massachusetts College of Pharmacy. Prepares students with a thorough education in either biology or chemistry and pharmacy. Graduate pharmacists can choose from a variety of career areas including community, clinical, sales, teaching or marketing. The program also is excellent preparation for entrance to graduate programs in pharmacology, dentistry and medicine. Degrees granted: AS-2 year; Dual BS-5 years.
### Biomedical Computing
Graduates are prepared to assume positions on the staffs of medical and/or industrial laboratories or hospital computer departments, or to work with physicians and other health professionals in a clinical environment and medical research projects. Degree granted: BS-3 year.

### Chemistry
Graduates qualify for higher level positions in several fields of chemistry including professional industrial work in processing and laboratory operational research and experimental work, supervision of technical projects, managerial positions and graduate study. Degree granted: AS-3 year; BS-5 year.

### Chemical Technology
A three-year Co-op curriculum that leads to direct industrial employment. Emphasis is on the qualitative and quantitative analysis skills and knowledge to perform industrial laboratory tasks. Degree granted: AAS.

### Mathematics, Computational Mathematics
Graduates qualify for positions in industry and business as well as graduate study. A combination of mathematics courses and electives in computer science enhances employment opportunities. Degrees granted: AS-2 year; BS-5 year.

### Physics
Graduates find employment opportunities with industrial, academic and government agencies, or pursue graduate study in such areas as biophysics, atmospheric science, applied science or industrial business administration. Degree granted: AS-2 year; BS-5 year.

### Pre-Medicine, Dentistry, Etc.
Students interested in pursuing a career in medicine, dentistry, optometry, osteopathic medicine, veterinary science or podiatry, major in any College of Science or Institute program; no formal program exists specifically for preparation for these careers. The faculty Pre-professional Advisory Committee counsels and assists RIT students in making application to these professional schools. Degrees are awarded in the programs chosen by the students.

1. About one-third of the program includes electives in social science, literature, and humanities.
2. Four years of English are required in all programs, except where state requirements differ.
Demand Increasing For Science Careers

The demand for scientists, technologists, and well-trained technicians continues to increase. You can take advantage of the outstanding job prospects in science with a bachelor's degree or less.

In chemistry, biology, mathematics and physics, a person with a bachelor's degree can work at the research assistant level; in marketing, sales and service of scientific products; or in high school teaching.

The public's growing concern with ecology, energy, health and other social needs insures jobs for the scientists and technologists who have the know-how to combat the problems.

In industry and in government (the two major employers), the disciplines that apply scientific and technical knowledge to the solution of practical problems are more promising than purely theoretical studies.

Interdisciplinary areas such as biomedicine, environmental chemistry and geophysics offer good career opportunities.

In this age of the computer, mathematicians are increasingly important in a number of fields. The allied health professions make up another mushrooming area. Two programs currently offered in the College of Science at RIT-medical technology and nuclear medicine technology (which involves the clinical use of radioactive materials)-requires three years of classroom study and a fourth year of clinical training in a hospital. After that a student can take a certifying examination. The biomedical computing program combines a knowledge of computer science and health science. The curriculum requires two years of classroom study followed by three years of alternating classroom and co-op work experience in a health setting.

Science technicians don't always need four-year degrees. The chemical technology curriculum at RIT is an associate in applied science program which trains chemical technicians to perform experiments, record data and results, and communicate them to project directors. The three-year program combines work with study-the student alternates quarters in the classroom with quarters in a job.

If you attend a college with such a cooperative work-study arrangement, you can gain practical on-the-job experience, decide whether it's what you want to do with the rest of your life, and make money to pay a good chunk of your college expenses.

Cooperative education, which is an important part of RIT's baccalaureate programs in biology, chemistry, mathematics and physics, brings the cost of a private college education in line with that at a public university.

Science graduates with cooperative education experience also will find their starting salaries in their post-college jobs higher than people their age without experience. A number of RIT's College of Science graduates earned upwards of $14,000 each in their first year of full-time employment.

A science background can provide a good starting point for advanced study in other areas such as law, medicine, dentistry, optometry, pharmacy, engineering, and business, as well as in the traditional science disciplines. The Ph.D. in one of the sciences will most likely work in research and development in the laboratory or in university teaching.
Biology Program Prepares Students For Employment Or Graduate Study

Paul A. Haefner, Jr., Head

The Department of Biology offers programs leading to the AS and BS degrees in Biology.

The program of the Department of Biology prepares students for the pursuit of graduate degrees in a variety of biological disciplines as well as the medical arts. Students terminating their education at the BS level find rewarding positions in occupations related to the life sciences, including biomedical research laboratories, food and agriculturally related industries, the pharmaceutical industry and environmental organizations.

Requirements for the AS degree in Biology

The student must meet the minimum graduation requirements of the Institute as described on page 29 and in addition must complete the requirements contained in the particular program listed below or its equivalent.

The program must include a minimum of six quarter courses in biology, six quarter courses in non-biological sciences and six quarter courses in general studies.

Requirements for the BS degree in Biology

The student must meet the minimum graduation requirements of the Institute as described on page 29 in this Bulletin. In addition, the student must complete a minimum of 60 quarter credit hours in biology.

A required core of courses comprises 44 quarter credit hours in biology (General Biology, General Ecology, Botany, Introductory Microbiology, Genetics, Biological Laboratory Techniques, Biology Seminar, one quarter course in Anatomy, one quarter course in Physiology, and Communication Skills for the Biological Sciences). The remaining 16 hours are selected from biology electives.

Additional requirements for the BS degree in biology include a minimum of six courses in chemistry including three in general analytical and three in organic chemistry. A minimum of three courses in physics and three courses in mathematics, including at least two courses in calculus, is also required.

Institute requirements for General Studies may be found on page 98. The policy on Physical Education is described on page 40.

The Specialization Track

In conjunction with a faculty advisor, individual student programs can be established to meet particular needs, interests, and goals. Because these tracks are designed around the common core curriculum, the student has the added advantage of being prepared for alternate career goals, should the situation arise. The following tracks are available at RIT:

1. Post-graduate. A student achieving the BS degree in biology at RIT will have the essential prerequisites for entry into most universities offering advanced degrees in biological sciences.

2. Pre-professional. Students interested in careers in medicine, optometry, dentistry, and veterinary science can satisfy the requirements for admission to professional schools by majoring in biology at RIT.
3. Biological Research. This program, which includes a variety of courses such as pharmacology, toxicology, and animal surgery, leads to employment in laboratories engaged in pure and applied biological research or in clinical and medical research.

4. Microbiology. This is similar to the biological research program, but emphasizes microbiological aspects that lead to careers in clinical laboratories, in food and drug quality control and in wastewater and sewage treatment facilities.

5. Instrumentation. A variety of courses in biological instrumentation and techniques, including electron microscopy, support a career in biological technology, an area of expertise in demand by biological, clinical, and medical laboratories.

6. Environmental Science. This track prepares the student for careers in ecological research and management in areas such as conservation, field biology and environmental toxicology. Students may pursue terrestrial, freshwater and marine science options.

7. Pharmacy. An inter-institutional program between RIT and the Massachusetts College of Pharmacy educates the student for the practice of pharmacy. Three years are spent at RIT as a biology major, the final two years are in residence at MCP. Bachelor’s degrees are awarded from both institutions.

Pharmacy/Biology, Chemistry Double Program Prepares Pharmacists

Edward B. Stockham, Program Director

RIT has joined forces with the largest and second oldest college of pharmacy in the country, Massachusetts College of Pharmacy, to offer a double degree program in pharmacy. Graduates of the five-year program earn a bachelor of science degree in pharmacy from Massachusetts College of Pharmacy and bachelor of science degree in either biology or chemistry from RIT. Pharmacists work in community or chain store pharmacies, hospitals or other health care institutions, in sales or product development for the pharmaceutical industry, and for cosmetic firms, government agencies, insurance companies, and social service agencies. Pharmacists must have a comprehensive knowledge of drugs, including their compositions, chemical and physical properties, and pharmacological activities in the patient, and must be familiar with tests for drug purity and strength. They also serve as a prime source of drug and health information for patients and other health professionals. Additionally, in many health care settings pharmacists are becoming more involved with the clinical use of drugs and drug therapy.

RIT’s program is designed to give students a thorough background in the basic sciences as well as exposure to general studies; professional training in pharmacy; and clinical experience in pharmacy in a health care setting. Students in the program spend three years at RIT (specializing in either biology or chemistry). Their fourth and fifth years are spent studying pharmacy at the Massachusetts College of Pharmacy in Boston. A summer internship concludes the program. Graduates of this inter-institutional program receive a BS degree in Pharmacy from the Massachusetts College of Pharmacy and a BS degree in their area of specialization (biology or chemistry) from RIT.
Admission to the Massachusetts College of Pharmacy phase
Admission to Massachusetts College of Pharmacy is open to a minimum of 10 RIT pharmacy students who apply for admission during their third year of study at RIT through Massachusetts College of Pharmacy's normal transfer-student admission process. Students must possess a cumulative grade point average of at least 3.0 to be eligible for admission to Massachusetts College of Pharmacy. Those who are not selected or who do not maintain the academic average necessary for transferring may remain at RIT and complete their degree program.

Requirements for the AS and BS degrees in biology or chemistry and pharmacy
The student must meet the minimum requirements of the Institute as described on page 29 and in addition must complete the requirements contained in one of the particular options listed on these pages or its equivalent as determined and approved by the departments. The bachelor of science degree in pharmacy from the Massachusetts College of Pharmacy requires five years of study, a summer internship and 260 hours of credit for a degree.

Accreditation
The Massachusetts College of Pharmacy is accredited by the New England Association of Schools and Colleges and The American Council on Pharmaceutical Education.

Course descriptions
For a complete outline of courses offered at RIT, please request the Course Description catalog from the Admission Office.

Transfer to Massachusetts College of Pharmacy Phase
Biology or chemistry major students accepted for transfer admission into Massachusetts College of Pharmacy will enter the third year (their fourth year) of the pharmacy program. The curriculum of study includes courses in medical terminology, pharmaceutics, public health, virology, pharmacy orientation, pathology, medicinal chemistry, biopharmaceutics, pharmacy law, dispensing, and general education electives. The pharmacy program is concluded with a clinical pharmacy internship in the Boston area. MCP will grant the bachelor of science degree in pharmacy.

The Institute will accept 45 transfer credits from MCP toward the bachelor’s of science degrees in either Biology or Chemistry from RIT depending on the option followed during the first three years of study at RIT. While enrolled at MCP the student must utilize 15 of the minimum hours of MCP electives to satisfy RIT’s general studies requirement.
### Chemistry Provides Full Range of Options

Earl Krakower, Head

The Department of Chemistry offers programs leading to the AS degree in chemistry, the AAS degree in chemical technology, the BS degree in chemistry and the MS degree in chemistry.

The AAS degree in chemical technology involves a three-year curriculum and incorporates direct industrial cooperative employment. The chemical technology curriculum is designed to integrate the component skills, knowledge, and attributes necessary for the performance of industrial laboratory tasks. Emphasis is placed on laboratory experiences centered about qualitative and quantitative analysis. Advanced laboratory work is designed to teach the student special laboratory techniques and modern instrumentation.

The five-year program in chemistry leads to the bachelor of science degree and has been approved by the Committee on Professional Training of the American Chemical Society. Graduates qualify for higher level positions in the several fields of chemistry including professional industrial work in processing and laboratory operations, research and experimental work, supervision of technical projects, and managerial positions. A number of graduates continue their education for the MS or Ph.D. degrees in chemistry, or pursue careers in pharmacy, medicine, dentistry, and optometry.

### Requirements for the AS and BS degrees in chemistry and the AAS degree in chemical technology

The student must meet the minimum graduation requirements of the Institute as described on page 29 and in addition must complete the requirements contained in the particular program listed herein or its equivalent as determined and approved by the Chemistry Department.

As part of the BS requirements, the student must pass a series of comprehensive chemistry exams that are offered during the senior year.

To meet the requirements leading to the BS degree approved by the Committee on Professional Training of the American Chemical Society, the student must take specifically designated courses in chemistry and related sciences and must complete a minimum of 186 quarter credit hours and 372 quality points. In conjunction with a faculty advisor, individual student programs will be established to meet particular needs, interests, and goals. A planned elective concentration in another field such as biology, physics, computer science, mathematics, business, or photo science is possible.

Mathematics Program Can Be Designed With Or Without Co-op
Edward A. Newburg, Head

The Department of Mathematics offers two degree programs, one in mathematics and one in computational mathematics. Each program leads to the AS and then the BS degrees.

The AS degree will ordinarily be completed in two years and involves no cooperative employment. The BS degree involves a five-year curriculum and incorporates industrial cooperative employment during the third, fourth and fifth years. However, the Department of Mathematics will design a special curriculum for students who do not desire to participate in the system of cooperative employment.

The program leading to the BS in mathematics is a traditional applied mathematics program requiring a minor concentration in one of a variety of fields of application chosen by the student.

The program leading to the BS in computational mathematics emphasizes some of the more modern topics in applied mathematics and incorporates a strong minor in computer science.

Graduates of either program qualify for positions in industrial institutions and business concerns as well as for graduate studies leading to an MS or Ph.D. degree, not only in mathematics but in a number of other fields as well.

Requirements for the AS and BS degrees in mathematics or computational mathematics

The student must meet the minimum requirements of the Institute as described on page 29 and in addition must complete the requirements contained in one of the particular programs listed below or its equivalent as determined and approved by the Mathematics Department. In conjunction with a faculty advisor, individual student programs will be established to meet particular needs, interests, and goals.

NOTE: A detailed analysis of the above program is contained in a brochure prepared by the Department of Mathematics and is available upon request.

*See Pg. 98 for General Studies requirements.

†See Pg. 50 for Policy on Physical Education.

‡One of the following introductory sequences, including the associated laboratory:

  - SMAM-201, 202, 203 General Biology
  - SMAM-211, 212 General Chemistry
  - SMAM-220, 221, 222 Organic Chemistry
  - SMAM-251, 252, 253 Calculus
  - SMAM-301, 302, 303 Mathematical Statistics
  - SMAM-311, 312, 313 University Physics
  - SMSP-201, 202, 203 General Physics

*Given in alternate years and blocks.

The primary objective of these unspecified electives is to fulfill the requirement of a minor concentration in one of the areas mentioned above. After that requirement is fulfilled, the electives become entirely free electives.

Physics Grads
Head for Industry, Government Or Academia
V. V. Raman, Head

The Physics Department offers programs leading to the AS and BS degrees in physics.

The BS degree in physics is a five-year program with a cooperative work experience. Graduates with this degree find employment opportunities with industrial, academic, and government agencies, or continue their education in MS or Ph.D. programs in physics or physics-related areas, such as biophysics, atmospheric science, or industrial business administration.

Requirements for the AS and BS degrees in physics
The student must meet the minimum graduation requirements of the Institute as described on page 29 and in addition must complete the requirements contained in the particular program listed below or its equivalent as determined and approved by the Physics Department. In conjunction with a faculty advisor, individual student programs will be established to meet particular needs, interests, and goals. A planned elective concentration in another field such as biology, chemistry, mathematics, computer science, business, or photo science is possible.

Course descriptions
For a complete outline of course offered at RIT, please request the Course Description catalog from the Admission Office.
Dietetics & Nutritional Care is a bachelor’s degree program in the Department of Food Administration and Tourist Industries Management within the College of Business. RIT’s two options (General Dietetics/Coordinated Undergraduate Program) in dietetics prepare students for the complete range of nutritional employment from management of food systems to therapeutics.

Medical illustration is an option within the bachelor of fine arts degree program in the College of Fine and Applied Arts. Medical illustrators work as part of teams supplying the growing needs for professional audiovisual media of a medical nature.

Medical technology is a bachelor’s degree program in the College of Science which educates students to perform medical laboratory analysis in clinical laboratories.

Nuclear medicine technology is a bachelor’s degree program in the College of Science which prepares students to assist physicians in procedures that require the use of radioactive materials and nuclear instrumentation.

Clinical Chemistry is a master’s degree program in the College of Science which provides the academic background for individuals who aspire to careers in middle management in clinical chemistry laboratories.

School of Health Related Professions Coordinates Various Institute Programs

Edward B. Stockham, Director

RIT has educated health professionals for more than a quarter of a century, since a program in dietetics was started in 1950. The School of Health Related Professions in 1976 began coordinating the Institute’s certificate, associate’s, bachelor’s, and master’s degree programs in the health fields and its continuing education programs in health, as well as in planning for future programs.

The student in the health professions looks on a bright employment future. Studies have documented a critical need for allied health professionals. Allied health professionals work as members of health-care teams supporting the services of physicians, dentists, and other health professionals. They are in increasing demand because physicians more and more are delegating functions that do not require their level of training and experience.

Because the allied health professions offer job options at various degree levels, RIT is training people for various stages on the career ladder.

The Institute’s current health-related programs are listed below. Besides the brief descriptions here, you can find out further information on each by consulting the appropriate page in this Bulletin or other Institute publications as indicated in the chart on this page.

Biomedical Computing is a bachelor’s degree program in the College of Science, which prepares professionals with competence in computing for health industries.

Biomedical photographic communications is an undergraduate and bachelor’s degree program in the College of Graphic Arts and Photography. It educates people to work in audiovisual and educational resource departments in hospitals, medical and dental schools, research centers, and other health institutions.

Health sciences applications of instructional technology is an option within the Institute College’s master’s degree program in instructional technology. Its graduates are prepared to work with health professionals in designing and evaluating instructional systems and materials for the allied health professions such as nursing, medicine, and dentistry.

Health institutions management is an associate’s degree program within the College of Continuing Education. Its graduates are prepared for administrative positions in hospitals, nursing homes and related health service areas.

Pharmacy (with either Biology or Chemistry options) is a double bachelor’s degree program offered through the College of Science in cooperation with Massachusetts College of Pharmacy. Its graduates are prepared to work as pharmacists in the health care industry or research.
Biomedical Computing Specialists Use Computers In Health Industry

William A. Burns, Acting Program Director

The program is a joint effort of the College of Science's School of Health Related Professions and Institute College's School of Computer Science and Technology, and leads to a bachelor of science degree in biomedical computing. Students in the program receive training in the basic and medical sciences; specialized training in computer science with an emphasis on clinical, hospital, and laboratory applications; and experiential learning in biomedical computing in a hospital, clinic or medical laboratory setting. The program is one of only a few such programs in the United States and prepares students to apply computers to medical record keeping, diagnosis, patient monitoring, laboratory analysis, instrumentation and medical research. The program was begun because of the widespread use of computers for a broad spectrum of purposes within the health industry. At many of the larger medical centers, the use of computers to acquire, process, display and store medical data has become widespread. Like RIT's other science curricula, the Biomedical Computing program combines cooperative work experience (Co-op) and in-classroom study. The program spans five years to allow students to alternate quarters in school with quarters in paid employment during their last three years. Co-op allows students the opportunity to practice new skills in real-life situations and to test their chosen fields before making a lifelong commitment. The experiences they acquire not only make their education more relevant, but also make them more valuable to prospective employers.

Requirements for the BS degree in Biomedical Computing
The student must meet the minimum graduation requirements of the Institute as described on page 29 and in addition must complete the requirements contained in the particular program listed below or its equivalent as determined and approved by the School. Transfer students usually will be required to take 100 quarter credit hours, depending on the program they completed at their previous school. Specific requirements will be determined by the School.

Course descriptions
For a complete outline of courses offered at RIT, please request the Course Description catalog for the Admission Office.
Medical Technology Program Prepares Students for Lab Work in Variety of Situations

William A. Burns, Program Director

The major function of the medical technology program, which leads to the bachelor of science degree is the preparation of students for employment in hospital laboratories, industrial-medical or research laboratories, and pharmaceutical companies. This program has been accepted by the Board of Registry of Medical Technologists of the American Society of Clinical Pathologists as meeting all requirements prior to the Registry examination.

Students enrolled in the medical technology program attend classes at RIT during the Fall, Winter and Spring Quarters for three years. In the Fall Quarter of their third year, they apply for internship to hospital schools of medical technology that are approved by the American Society of Clinical Pathologists. They will then spend their fourth academic year at the hospital that accepts them as an intern in medical technology. At the present time a new integrated internship year is being developed by the medical technology faculty. This new development will provide a second track for completion of a BS degree in medical technology. The students in this track will spend one half of their fourth year at RIT training in clinical methods of analyses and they will spend the last half of this year in hospital laboratories for observation, instruction, and practical training.

The medical technology program is affiliated with Rochester General Hospital, St. Mary’s Hospital in Rochester, and Buffalo’s Millard Fillmore Hospital. Students may, however, seek admission to any approved hospital for their internship.
Nuclear Medicine Technology Program
Includes One Year Clinical Training

Dr. Jerome Wagner, Program Director

The program leading to the BS degree in nuclear medicine technology spans four years, the first three of which are spent on campus. The fourth year consists of clinical training at one or more approved hospitals.

Clinical training in nuclear medicine technology

The NMT clinical internship begins in early September and ends in mid-September of the following year. The first two weeks of training are an intensive introduction to the theory and practice of nuclear medicine technology taught by physicians and technologists from the program’s affiliated hospitals. Classes during this time are held on the RIT campus, and laboratory sessions take place at Rochester hospitals.

Most of the internship is performed in nuclear medicine departments of the program’s hospital affiliates. Each student is assigned (subject to the hospital’s approval) a particular combination of three hospitals and trains approximately four months in each. The teaching is done primarily by physicians and technologists on the hospital staffs. Student progress and performance is monitored by the RIT nuclear medicine technology coordinator who makes periodic visits to the hospital departments. Readings, problem assignments and project work are an integral part of the student’s clinical training. Several times during each four-month rotation, students return to the RIT campus for a half-day of lectures and discussions.

Training during the hospital internship emphasizes the following areas: (a) radiation safety and protection; (b) patient positioning and nursing procedures; (c) radionuclide imaging and external monitoring; (d) nuclear medicine department administrative procedures.

The internship also includes a substantial component of training in radioimmunoassay theory and practice. One week of classroom and laboratory work in RIA at RIT during the winter of the internship year is followed by four weeks of radioimmunoassay clinical training at one of the affiliated hospitals.

The RIT nuclear medicine technology program has affiliations with the following Upstate New York hospitals: Syracuse area-Community General Hospital; Crouse-Irving Memorial Hospital; Veterans Administration Hospital; Rochester area-The Genesee Hospital; Highland Hospital; Rochester General Hospital; Strong Memorial Hospital. Binghamton area-Our Lady of Lourdes Hospital; Charles Wilson Memorial Hospital. Canandaigua area-Frederick Ferris Thompson Hospital. Buffalo area-Sisters of Charity Hospital.

The RIT program is also affiliated with Veterans Administration Hospital, St. Louis, Missouri. Students who wish to intern at this hospital make application in the month of January preceding the start of the clinical year. Students selected for internships there receive a stipend and spend the entire year in St. Louis.
Requirements for the BS degree in nuclear medicine technology

The student must meet the minimum graduation requirements of the Institute as described on page 29 and in addition must complete the requirements contained in the particular program listed below or its equivalent as determined and approved by the School of Health Related Professions. In conjunction with a faculty advisor, individual student programs will be established to meet particular needs, interests, and goals. A planned elective concentration in another field such as biology, chemistry, mathematics, computer science, business, or photo science is possible.

Accreditation

The nuclear medicine technology program has been accredited by the Joint Review Committee on Education Programs in NMT of the American Medical Association.

**Program electives must be approved by the Nuclear Medicine Technology Program Director and can be used to concentrate in an area related to Nuclear Medicine.
The general objective of the Reserve Officers' Training Corps is to produce junior officers who, by education, training, attitude, maturity and qualities, are suitable for continued development as officers in the United States Army. The intermediate objectives of the program are to develop in each student:
1. The fundamentals of self-discipline, integrity, and responsibility;
2. An appreciation of the role of a participating citizen in matters dealing with national defense;
3. The ability to evaluate situations, to make decisions, to understand people, and to practice those attributes considered essential in a leader.

Four-year program
The Army ROTC program at Rochester Institute of Technology is voluntary and open to all male and female students enrolled on a full-time basis. Students are eligible to enroll in this program any time during their freshman or sophomore years. They may also disenroll at any time during these first two years without obligation. Upon completion of the sophomore year, the student may request enrollment in the Advanced ROTC Course for the junior and senior years.

Two-year program
This program is offered to all qualified students with two school years remaining who did not previously participate in ROTC. Students in this program attend a six-week Basic Summer Camp between their sophomore and junior years, in lieu of the first two years of ROTC normally presented in the classroom. Upon successful completion of this basic camp, the student is enrolled in the Advanced Course for the last two years. It should be noted that interested students should begin processing applications for this program early in the sophomore year.

Commissioning
In both the two-year and four-year programs, the student must successfully complete all degree requirements. Additionally, each student attends a six-week Advanced Summer Camp, usually between the junior and senior year, prior to being commissioned as a second lieutenant on graduation day.

ROTC sponsors many extra-curricular and hands-on type activities through which the cadet may find an opportunity to develop leadership potential, broaden overall cultural, civic and social backgrounds, and enjoy voluntary weekend outdoor events. All courses receive full academic credit as free electives.
Scholarships
Full-tuition scholarships are available on a competitive basis to freshmen, sophomores, and juniors. Under this program, the Army pays for all tuition fees, lab fees, textbooks, and other required expenses, except room and board. In addition, all students entering the Advanced Course receive $100 per month, with or without a scholarship, for ten months of each academic year. Throughout the entire program, the ROTC student is provided textbooks and related materials free of charge.

For further information
Additional information about ROTC may be obtained by visiting the unit's fifth floor offices in the administration building or by calling 475-2881, 2882.

Endowed Professorships

College of Business

J. Warren McClure Professorship in Marketing
Established: 1977
Donor: Mr. and Mrs. J. Warren McClure
Purpose: To perpetuate Mr. McClure's professional interest in marketing.
Held by: Professor Herbert J. Mossien

College of Continuing Education

Frederick H. Minett Professorship in Continuing Education
Established: 1972
Donor: Mr. Minett by bequest
Purpose: To provide a permanent memorial for Mr. Minett and to recognize his interest in students who obtain their education through the evening division.
Held by: Presently open

Paul A. Miller Distinguished Professorship in Continuing Education
Established: 1978
Donor: RIT Board of Trustees
Purpose: To honor Dr. Miller on the occasion of his retirement as President of the Institute and to give lasting recognition to his standing as an acknowledged authority in the field of continuing education.
Held by: Presently open

Russell C. McCarthy Chair
Established: 1979
Donors: Mr. Fred Gordon, Mr. Lucius Gordon, Mixing Equipment Company and General Railway Signal Company, units of General Signal Corporation, and other friends of Mr. McCarthy.
Purpose: To honor Mr. McCarthy as Manager of the Industrial Management Council for twenty years and his role as a champion of and an authority on industry and business. Mr. McCarthy

College of Engineering

James E. Gleason Professorship in Mechanical Engineering
Established: 1967
Donor: Estate of James E. Gleason
Purpose: To provide a permanent memorial for Mr. Gleason who served as a Trustee of RIT from 1930 until 1964, and to strengthen RIT in the field in which he received his education.
Held by: Presently open

College of Fine And Applied Arts

Charlotte Fredericks Mowris Professorship in Contemporary Crafts
Established: 1976
Donor: Mrs. Charles F. Mowris
Purpose: To perpetuate her interest in the School for American Craftsmen through the work of faculty and students as talented craftsmen.
Held by: Professor Hans Christensen

College of General Studies

Caroline Werner Gannett Professorship in the Humanities
Established: 1974
Donor Mrs. Frank E. Gannett
Purpose: To perpetuate Mrs. Gannett’s lifelong interest in education especially those fields of study that have a humanistic perspective.
Held by: Professor Raymond H. Merritt

College of Graphic Arts

Melbert B. Cary, Jr. Professorship in Graphic Arts
Established: 1969
Donor: Mary Flagler Cary Charitable Trust
Purpose: To provide a permanent memorial for Mr. Cary as a former president of the American Institute of Graphic Arts and to perpetuate his interest in the field.
Held by: Professor Herbert H. Johnson

James E. McGhee Professorship in Photographic Management
Established: 1967
Donor: Master Photodealers & Finishers Association and friends of Mr. McGhee
Purpose: To provide a permanent memorial for Mr. McGhee, a former vice president of the Eastman Kodak Company and lifelong friend of the photo finishing industry.
Held by: Professor James E. McMillion

Paul and Louise Miller Distinguished Professorship in Newspaper Production Management
Established: 1976
Donor: Frank E. Gannett Newspaper Foundation
Purpose: To honor the former chairman of the Board of the Gannett Company, and to perpetuate his interest in good management practices in the newspaper industry.
Held by: Professor Robert G. Hacker

All Institute

William A. Kern Professorship in Communications
Established: 1971
Donor: Rochester Telephone Corporation
Purpose: To commemorate the 100th Anniversary of that company and to provide a memorial for a former president of the company and a man who served as RIT Trustee from 1959 to 1964.
Officers

M. Richard Rose, BS, MS, Ph.D.
President

Todd H. Bullard, BA, MA, Ph.D.
Provost and Vice President, Academic Affairs

D. Robert Frisina, BA, MA, Ph.D.
Senior Vice President, Institutional Advancement

William E. Castle, BA, MA, Ph.D.
Dean and Director, National Technical Institute for the Deaf

Jon L. Prime, BS, M.Ed.
Vice President, Finance and Administration

Fred W. Smith, BA, MA, Ph.D.
Vice President, Student Affairs

Alfred L. Davis, AB, MA
Administrative Secretary to the Board of Trustees

Deans

Paul Bernstein, BS, MA, Ph.D.
Graduate Studies

George E.D. Brady, BA, Ed.M
Records and Institutional Research

William E. Castle, BS, MA, Ph.D.
National Technical Institute for the Deaf

Robert A. Clark, BS, Ph.D.
College of Continuing Education (Acting)

Joseph D. Coffee, Jr., AB
Eisenhower College (President)

Lothar K. Engelmann, BS, MS, Ph.D.
College of Graphic Arts and Photography

Dale F. Gibson, BA, MBA
College of Business (Acting)

Donald A. Hoppe, BS, MS
Administrative Services

Robert H. Johnston, BS, MA, Ph.D.
College of Fine and Applied Arts

Richard A. Kenyon, BME, MS, Ph.D.
College of Engineering

Dennis C. Nystrom, BS, Ed.D
Division of Career Education

John E. Paliouras, BA, MA, Ph.D.
College of Science

Roy I. Satre, Jr., BA, MA, Ph.D.
Institute College

Mary Sullivan, BA, MA, Ph.D.
College of General Studies

Faculty and Staff

College of Business

Dale F. Gibson, BA, MBA, Acting Dean; Associate Professor

Raymond F. Von Deben, BS, MS, Assistant Dean, Student Services; Professor

Janet C. Barnard, BS, M.Ed., Ed.D., Coordinator of Undergraduate Business Administration Planning; Assistant Professor

Eugene H. Fram, BS, ML, Ed.D., Director, Center for Management Study; Professor

George Alley, BA, MS, Director, Department of Food Administration; Professor

Ardon L. Travis, BS, M.Ed., Ed.D., Director of Experiential Learning Programs; Associate Professor

Mary Dean Gridley, BA, Winthrop College; MAT, University of South Carolina-Coordinator of Experiential Learning Programs; Instructor

School of Business Administration and School of Retailing

Robert J. Barbato, BA, LeMoyne College; Assistant Professor

William E. Beatty, BA, Western Maryland; ML, Pittsburgh; MBA, New York University-Associate Professor

Thomas R. Burns, BBA, Ohio State; J.D., Notre Dame-Lecturer

Richard J. Butler, BS, MS, Clarkson College-Assistant Professor

Henry J. Cassia, BA, MBA, New York University-Associate Professor

You-Keng Chiang, BA, Central University, Chunking; MA, Ph.D., Chicago-Professor

Thomas E. Comte, BS, University of California-Davis; MBA, Columbia University; Ph.D., University of Missouri at Columbia-Assistant Professor

Dorothy Cotton, Fashion Specialist, Public Relations Consultant-Lecturer

Frederick D. Crowley, BBA, Iona College; MBA Iona College-Assistant Professor

William P. Curington, BS, University of Texas-Austin; MILR, Michigan State University; MA, Syracuse University-Assistant Professor

Terry L. Dennis, BS, Clarkson College; MS, Ph.D., Purdue-Associate Professor

Andue J. DuBrin, AB, Hunter College; MS, Purdue, Ph.D., Michigan State-Professor

William E. Dunkman, BS, Commercial Engineering, Cincinnati; MS, Ph.D., Columbia-Professor

Stanley M. Dye, BA, Haverford College; C.P.A., New York-Distinguished Lecturer

James C. Galloway, AB, Rochester; MBA, University of Pennsylvania-Assistant Professor

John K. Hartley, Jr., BS, MS, Georgia Institute of Technology-Associate Professor

John A. Helmuth, IL, BA, MA, Old Dominion University-Assistant Professor

Gene G. Hoff, BBA, Hartwick; MBA, University of Rochester; CMA- Assistant Professor

Frank E. Holley, BS, University of Illinois-Distinguished Lecturer

Paul A. Lebowitz, BA, Case Western University; MS, Rochester Institute of Technology; CPA, New York-Instructor

Margaret S. Marshall, BA, MS, West Virginia-Lecturer

James E. McMillion, Jr., BFA, MFA, Ohio State-Professor, James E. McGhee Professor in Photographic Management

E. James Meddaugh, BS, Rutgers; MBA, Drexel; Ph.D., Pennsylvania State; C.P.A., New York-Associate Professor

William L. Mihal, BS, MS, Clarkson College; PhD., University of Rochester-Associate Professor

Herbert J. Mossien, BS, Alfred-J. Warren McClure Professor in Marketing

James E. Pawlukiewicz, BS, MA, University of Kentucky-Assistant Professor

Keith G. Provan, BS, American University; MBA, Boston University; Ph.D., SUNY-Buffalo-Assistant Professor

John L. Roman, BS, MS, SUNY-Albany-Instructor
Jose A. Ruilan, BS, Western Carolina University; MS, Rochester Institute of Technology-Instructor
Joseph H. Schuler, Jr., BFA, Syracuse; MS, MA, Rochester Institute of Technology-Instructor
Dean C. Siewers, BS, Marietta; MBA, Duke University; Ph.D., University of North Carolina-Assistant Professor
Pennsylvania State; Ph.D., University of Technology-lnstructor
Linda Underhill, BSE, Massachusetts Institute of Technology-Assistant Professor
John S. Zdanowicz, BS, Rochester Institute of Technology-Instructor
Syracuse; Ph.D., Rochester Institute of Technology-Instructor
Stanley M. Widrick, Associate Professor
Frank A. Bucci, DBA, MBA, SUNY at Buffalo; Ph.D., Syracuse College of Technology; MBA, SUNY at Buffalo; Ph.D., Syracuse University-Assistant Professor
Hollister Spencer, BA, MBA, Harvard; DBA, Arizona State-Associate Professor
William Stevenson, BIE, MBA, Ph.D., Syracuse College of Technology-Instructor
Philip R. Tyler, DBA, Michigan State-Associate Professor
Paul H. Van Ness, BA, MBA, University of Michigan-Associate Professor
Syracuse; MS, Ph.D., Rensselaer Polytechnic Institute-Professor
Stanley M. Widrick, BS, Clarkson College of Technology; MBA, SUNY at Buffalo; Ph.D., Syracuse University-Assistant Professor
Thomas A. Williams, BS, Clarkson; MS, Ph.D., Rensselaer Polytechnic Institute-Professor
Eugene O. Wilson, BS, MS, Syracuse; MBA, Rochester-Associate Professor
Julian E. Yudelson, BS, University of Pennsylvania; MBA, Emory University; Ph.D., Northwestern University-Associate Professor
John S. Zdanowicz, BS, Rochester Institute of Technology; MBA, Ph.D., Michigan State-Associate Professor

Department of Food Administration and Tourist Industries Management
Frank A. Bucci, BS, New Hampshire; MS, Rochester Institute of Technology-Instructor
Francis M. Domoy, BA, MA, SUNY-Buffalo; Ph.D., Michigan State University-Associate Professor
Leila P. Hopkins, BS, Tennessee; MS, Iowa State; R.D.-Assistant Professor
Janet M. Sim, BS, Colorado State; MS, Iowa State-Associate Professor
Linda Underhill, BS, MS, Rochester Institute of Technology-Instructor
Carol B. Whitlock, BS, MS, Pennsylvania State; Ph.D., Massachusetts-Assistant Professor

Clinical Faculty
Jean Fox, Director of Dietetics, Rochester General Hospital
Jean Queale, Chief of Dietetic Service, The Veterans Administration Hospital, Canandaigua, New York

College of Continuing Education
Administrative Officers
Robert A. Clark, BS, Ph.D.; Acting Dean-Professor
Norman A. Flannigan, BS, M.Ed., Ph.D.; Assistant Dean, Operations-Associate Professor
Harold M. Kentner, BA, MA, Assistant Dean, Community Relations-Professor
Evening Programs and Summer Session
Frederick P. Gardner, BA, MS, Ed.D., Executive Director-Associate Professor
Betty J. Glasenapp, ABA, Administrative Coordinator, Summer Sessions
Advising, Evaluation and Staff Development
Ronald J. Hilton, BA, MA, Executive Director-Associate Professor
Brenda G. Gumbs, BA, MS, Coordinator of Advising
External Programs and Special Courses
Dorothy K. Paynter, BA, M.Ed., Acting Executive Director-Associate Professor
Jessie M. James, BA-Program Consultant, Instructor
Robert M. Way, AB, MS, Program Consultant-Associate Professor
Promotion and Publications
George L. Bedirian, BA, MA, MS, Coordinator, Promotion and Publications-Lecturer
Cheryl Gattalaro, BA, Promotions and Publications Associate

Academic Areas
Business and Community Studies
Rolf A. Zerges, BS, MA Academic Administrator, Chairperson, Business Administration and Community Studies-Associate Professor

John H. Hickman, BA, JD., Chairperson, Management Studies-Associate Professor
William J. Walsh, C.P.A. Chairperson of Accounting-Lecturer

Humanistic Studies
Andrea C. Walter, BA, MA, Ed.D.-Acting Academic Administrator, Chairperson, Humanities and Communications, Associate Professor
Walter R. Bieder, BA, MA, Chairperson, Behavioral Science-Associate Professor
Jean Schanker, BFA, MF, Chairperson, Fine Arts and Design
Surjit Singh, MFA, Chairperson, Crafts-Associate Professor

Technical Studies
Robert A. Clark, BS, Ph.D., Academic Administrator, Chairperson, Chemistry-Professor
Austin J. Bonis, BS, MA, Ph.D., Chairperson, Statistics, Professor
Lloyd B. Andrus, Lecturer
Andrew Davidhazy, BFA, MFA, Chairperson, Photography, Associate Professor
Mari DiQuilillo, BS, MS, Chairperson, Engineering Drawing-Associate Professor
Frederick P. Frey, Jr., BS, MS, Chairperson, Mathematics-Associate Professor
Alfred C. Haacke, BS, Chairperson, Computer Systems, Physics and Electromechanical Technology-Associate Professor
Robert Holmes, BSME, Senior Technical Associate-Lecturer
Bernard A. Logan, BS, M.Ed., Chairperson, Electrical and B. Tech.-Associate Professor
Louis H. Rohr, Ph.B, MS, Chairperson, Mechanical-Assistant Professor
Joseph Waldinsperger, NYS Vocational Certification, Chairperson, Machine Shop-Associate Professor

School for Applied Industrial Studies
Orville Adler, B. Tech, Senior Technical Associate-Lecturer
Edwin Spong, Manpower Specialist
Operations Areas
Nortine King, Management Diploma-Coordinator, Information Services
Genevieve Knapp, Management Diploma-Coordinator, Financial Services
Janet Switzer, Management Diploma-Registration Services

Adjunct Faculty
Refer to the College of Continuing Education catalog of programs and schedule of classes, available from CCE.

Eisenhower College
Joseph D. Coffee, Jr., AB, Columbia University-President
A detailed listing of RIT’s Eisenhower College faculty may be obtained by writing for the Eisenhower College Bulletin, available from the Office of Admission.

College of Engineering
Richard A. Kenyon, BME, MS, Ph.D., P.E., Dean, Professor
Douglas M. Marshall, BSEM, MSEM, Associate Dean, Associate Professor
Harvey Rhody, BSEE, MSEE, Ph.D., Department Head, Electrical Engineering; Associate Professor
Richard Reeve, BS, MS, Ph.D., Department Head, Industrial Engineering; Professor
Robert M. Desmond, BSME, MSME, Ph.D., P.E., Department Head, Mechanical Engineering; Professor
Swaminathan Madhu, MA, MSEE, Ph.D., Director of Graduate Programs, Professor
Roy S. Czernikowski, BEE, ME, Ph.D., Coordinator, Computer Engineering Program; Associate Professor
Roger E. Heintz, BSEE, MSEE, Ph.D., Coordinator of Transfer Programs, Electrical Engineering; Associate Professor
Betty M. Weatherhog, Administrative Assistant to the Dean

Electrical Engineering Department
Robert C. Baker, BEE, MSEE, Cornell; P.E.-Associate Professor
Frank J. Bogacki, BSEE, Gannon College; MSEE, Pennsylvania-Associate Professor
George Brown, BSEE, Vanderbilt; MSEE, Rochester-Associate Professor
Roy S. Czernikowski, BEE, Catholic University of America; ME, Ph.D.; Rensselaer Polytechnic Institute-Associate Professor
Kenneth W. Hsu, BS, National Taiwan Normal University, China; MSEE, Ph.D., Marquette-Associate Professor
Robert E. Lee, BSME, MSEE, Ph.D., Rochester-Associate Professor
Swaminathan Madhu, MA, University of Madras; MSEE, Tennessee, Ph.D., Washington-Professor
James E. Palmer, BSc, University of Western Ontario; MSEE, University of Pennsylvania; Ph.D, Case Institute of Technology-Professor
George W. Reed, BEE, Clarkson College; MEE, Delaware; P.E.-Professor
Harvey Rhody, BSEE, Wisconsin; MSEE, Cincinnati; Ph.D., Syracuse-Associate Professor
Edward R. Salem, BSEE, Pennsylvania State; MSEE, Catholic University of America; Ph.D.; Buffalo-Associate Professor
Tapan K. Sarkar, B. Tech., Indian Institute of Technology, India; MScE, University of New Brunswick, Canada; MSEE, Ph.D., Syracuse-Associate Professor
Mohamed K. El-Sherbiny, BSEE, MSEE, University of Assiut, Egypt; Ph.D., Iowa State University-Visiting Associate Professor
Raman M. Unnikrishnan, BSEE, University of Kerala, India; MSEE, South Dakota State University; Ph.D., Missouri-Associate Professor
Fung-I Tseng, BSEE, Taiwan University; MSEE, Chiao-Tung University, Taiwan; Ph.D., Syracuse-Associate Professor
Watson F. Walker, BSEE, Brooklyn Polytechnic Institute; Ph.D., Syracuse-Professor

Industrial Engineering Department
Richard Reeve, BS, MS, Ph.D., Buffalo-Professor
Gary D. Christie, BS, Rochester Institute of Technology; MSIE, Virginia Polytechnic Institute & State University-Instructor
Jasper E. Shealy, BS, Georgia Institute of Technology; MS, Ph.D., SUNY at Buffalo-Associate Professor
Ralph H. Stearns, BS, Pennsylvania; MBA, New York University; P.E. (Mass.);Associate Professor

Mechanical Engineering Department
William Bober, BCE, City College of New York; MS, Pratt Institute; Ph.D., Purdue; P.E.-Associate Professor
Richard G. Budynas, BME, Union College; MSME, Rochester; Ph.D., Massachusetts; P.E.-Associate Professor
Robert M. Desmond, BSME, Worcester Polytechnic Institute; MSME, Ph.D., Minnesota; P.E.-Professor
Robert A. Ellison, BME, City College of New York; MSME, Ph.D., Rochester, P.E.-Associate Professor
Charles W. Haines, AB, Earlham; MS, Rensselaer Polytechnic Institute; Mathematics and Mechanical Engineering-Associate Professor
William F. Halblieb, BSGE, Massachusetts Institute of Technology; MSME, Rochester, Ph.D., Cornell; P.E.-Professor
Richard B. Hetnarski, MSME, Gdansk Technical University; MS, Warsaw University; Dr. Tech. Sc., Polish Academy of Sciences; P.E.-Professor
Bhalchandra V. Karlekar, BME, College of Engineering, Baroda, India, MSME, Ph.D., Illinois State; P.E.-Professor
Richard A. Kenyon, BME, Clarkson College; MS, Cornell; Ph.D., Syracuse; P.E.-Professor
Douglas M. Marshall, BSEM, MSEM, West Virginia-Associate Professor
Chris Nilsen, BS, Rochester Institute of Technology; MSME, Rochester Polytechnic Institute; Ph.D., Michigan State; P.E.-Associate Professor
Alan H. Nye, BSEM, MSME, Clarkson College; Ph.D., Rochester-Visiting Assistant Professor
Sukumar Sikdar, Assistant Dean; Professor
Alexander E. Martens, Kener E. Bond, Jr., Peter Giopulos, Craftsmen; Professor
Grace K. Golden, University
Roger Morton, University of Rochester
John C. Bancroft, Adjunct Faculty
Bresslaw (Germany); MSEE, LLB, George Washington University
Dominick J. Fantauzzo, BFA, MS, Rochester Institute of Technology
James K. Golden, BSME, University of Missouri
David DeMarle, BS (Chemistry), Iowa State University
Dominick J. Fantauzzo, MS, Rochester Institute of Technology
Grace K. Golden, BSME, University of Missouri
Ralph E. Harper, BA, Rochester; LLB, George Washington University
Alexander E. Martens, BSEE, Bresslaw (Germany); MSEE, University of Rochester
Roger Morton, Ph.D., Monash University
Sukumar Sikdar, Ph.D., Kharagpur (India)

Academic Technical Associates
Donald E. Buss-Technical Associate, Electrical Engineering Department
Kenneth R. Hood-Lecturer and Senior Technical Associate, Mechanical Engineering Department

Adjunct Faculty
John C. Bancroft, BSc., MSc., University of Calgary, Ph.D., Brigham Young University
David DeMarle, BS (Chemistry), Iowa State University
Dominick J. Fantauzzo, BS, MS, Rochester Institute of Technology
Grace K. Golden, BSME, University of Missouri
Ralph E. Harper, BA, Rochester; LLB, George Washington University
Alexander E. Martens, BSEE, Bresslaw (Germany); MSEE, University of Rochester
Roger Morton, Ph.D., Monash University
Sukumar Sikdar, Ph.D., Kharagpur (India)

College of Fine And Applied Arts
Robert H. Johnston, BS, MA, Ph.D., Dean, Director, School for American Craftsman; Professor
Peter Giopulos, BFA, M.Ed., Associate Dean; Director, Art and Design; Associate Professor
Kener E. Bond, Jr., B.Ed., MFA, Assistant Dean; Professor

Philip W. Bornarth, BAE, MAE, Art Institute of Chicago, Academic Representative, Fine Arts; Professor
Robert A. Cole, BA, MS, Maryland, Academic Representative, Foundation Studies; Assistant Professor
Gary Griffin, BA, California State University; MFA, Tyler School of Art, Temple, Academic Representative, School for American Craftsmen; Assistant Professor
Craig J. McArt, BID, Syracuse University; MFA, Rochester Institute of Technology; Academic Representative, Environmental Design; Associate Professor
Fred Meyer, BFA, MFA, Cranbrook Academy of Arts; Academic Representative, Graduate Studies; Professor
James Ver Hague, BS, Massachusetts Institute of Technology; MS, Rensselaer Polytechnic Institute; BA, State University of New York at Buffalo; MFA, State University of New York at Buffalo; Academic Representative, Communication Design; Assistant Professor

School of Art and Design
Norman A. Bate, BFA, Pratt Institute; MFA, Illinois State-Professor
Eric Bellmann, BS, SUNY College at Buffalo; MFA, Rochester Institute of Technology; Advanced Studies, Pratt Center for Contemporary Printmaking-Lecturer
Susan Carter, AB, Smith College; BFA, MFA, Yale-Assistant Professor
David Dickinson, Chelsea School of Art, London, England; SKHS, Oslo, Norway; MFA, Rochester Institute of Technology-Lecturer
William W. DuBois, BFA, Ohio University; M.Ed., Bowling Green State University-Assistant Professor
Alan Fisher, BS, Indiana University; MFA, Rochester Institute of Technology-Lecturer
Alonzo K. Foster, BA, University of Delaware; MFA, Rochester Institute of Technology-Lecturer
Ruth E. Gutfrucht, BFA, MFA, Rochester Institute of Technology-Professor
Robert Heischman, BFA, Miami University; UCFA, Ruskin School of Art-Assistant Professor
James Hennessey, BS, Illinois Institute of Technology; MFA, California Institute of the Arts-Assistant Professor

Barbara Hodik, BS Ed., Benedictine College; MA, New York University; Ph.D., Pennsylvania State-Associate Professor
Paul Hoogesteger, BD, University of Michigan-Lecturer
Robert Kerr, BFA, Illinois State-Associate Professor
Frederick Lipp, BFE, School of the Art Institute of Chicago; MFA, Rochester Institute of Technology-Assistant Professor
Bernadette Merkel, BFA, MFA, Rochester Institute of Technology-Professor
Edward C. Miller, BFA, SUNY at Buffalo; MFA, Illinois State-Associate Professor
Cesar E. Paredes, BS, MS, Rochester Institute of Technology-Lecturer
Ronald E. Padgham, BFA, Ohio Wesleyan; MFA, Syracuse University; Ed.D, University of Rochester-Associate Professor
R. Roger Remington, BFA, Rochester Institute of Technology; MS, University of Wisconsin; Professor
Marlene Scott, BS, SUNY at Buffalo; MFA, Michigan State-Associate Professor
Luvon Sheppard, BFA, MST, Rochester Institute of Technology-Instructor
Bruce Sodervick, BS, Indiana State; MFA, Southern Illinois-Associate Professor
Joan Szable, BFA, Madonna College, MA, Catholic University of America-Professor
James E. Thomas, BS, Philadelphia College of Art; MFA, Pennsylvania State-Associate Professor
Toby Thompson, BID, Syracuse; MFA, Rochester Institute of Technology-Professor
Ann VerHague, BA, BS, Rensselaer Polytechnic Institute-Lecturer
Robert Wabnitz, Diploma, Rochester Institute of Technology; Certificate, University of Rochester-Adjunct Professor
Beverly Wachsmuth, University of Minnesota, Augsburg College-Lecturer
Sheila Wells, BA, California College of Arts and Crafts; MFA, Rochester Institute of Technology-Associate Professor
Michael White, BFA, MFA, Rochester Institute of Technology-Lecturer
Lawrence Williams, BFA, Kansas City Art Institute; MFA, Illinois State-Professor
Norman Williams, BFA, Syracuse; MS, Syracuse-Associate Professor
Stanley H. Witmeyer, Diploma, Rochester Institute of Technology; BS, SUNY at Buffalo; MFA, Syracuse-Professor Emeritus
Richard Wolf, BFA, Pratt Institute-Visiting Assistant Professor

School for American Craftsmen
Donald G. Bujnowski, BS, SUNY at Buffalo; MA, Minnesota-Professor

Hans Christensen, Diploma, National College of Arts and Crafts, Copenhagen-Charlotte Fredericks Mowris Professor in Contemporary Crafts
Hobart Cowles, BFA, Wesleyan; MA, Ohio State-Professor
Amy Davison, BFA, Tufts University; MFA, Tyler School of Art-Visiting Assistant Professor
William A. Keyser, Jr., BS, Carnegie-Mellon Institute of Technology; MFA, Rochester Institute of Technology-Professor
Max L. Lenderman, BS, MS, Indiana State; MFA, Kansas-Assistant Professor
Jon Meyer, BS, University of Vermont; Orrefors Glass Studio, Sweden-Assistant Professor
Robert D. Schmitz, BS, East Carolina University; MS, Alfred University; MFA, Wisconsin-Assistant Professor
Douglas E. Sigler, BFA, Rochester Institute of Technology; MFA, Rochester Institute of Technology-Associate Professor

College of General Studies
Mary Sullivan, BA, MA, Ph.D., Dean-Assistant Professor
Dane R. Gordon, BA, BD, MA, Assistant Dean-Professor
John O. Ballard, BA, MPA, Director, Criminal Justice Program-Associate Professor
Arnold J. Berman, BA, MA, MSW, Director, Social Work Program-Professor
Edwin O. Hennick, BSE, Staff Chairperson, Science and Humanities-Associate Professor

Louis E. Neff, AB, MA, Staff Chairperson, Social Science-Associate Professor
Thomas J. O’Brien, BS, MA, Staff Chairperson, Language and Literature-Professor
Raymond H. Merritt, BA, St. Olaf College; BD, Luther Theological Seminary; MA, Ph.D., University of Minnesota-Caroline Werner Gannett Professor in the Humanities

Language and Literature staff
Samuel Abrams, AB, Brooklyn College; MA, University of Illinois-Visiting Assistant Professor
Helen Baron, BA, University of Michigan; MA, Teachers College, Columbia-Lecturer
Sarah Collins, AB, Centre College; MA, Ph.D., Indiana University-Professor
William De Ritter, BA, St. Lawrence; MA, University of Rochester-Associate Professor
Marion H. Fey, BA, Salem College; MA, University of Florida-Lecturer
Robert E. Golden, AB, Michigan State; Ph.D., University of Rochester-Associate Professor
Helen Hadsinskyj, BA, University of Khrkova, Ukraine-Visiting Assistant Professor
Lakshmi Mani, BA, MA, Calcutta; MA, SUC at Genesee; Ph.D., McGill-Associate Professor
Stanley D. McKenzie, BS, Massachusetts Institute of Technology; MA, Ph.D., Rochester-Associate Professor
Joseph M. Nasser, BA, University of Toledo; Ph.D., SUNY at Binghamton-Lecturer
Thomas J. O’Brien, BS, University of Rochester; MA, Columbia University-Professor
Katherine M. Quill, BA, Smith College; MA, Ph.D., University of Rochester-Lecturer
James J. Philbin, BA, Connecticut; MA, Stanford-Professor
Mark L. Price, BA, MA, Miami University-Assistant Professor
L. Robert Sanders, BA, MA, SUNY at Albany-Professor
Norris M. Shea, BA, Gannon; MA, Western Reserve-Professor
Caroline Snyder, BA, MA, Radcliffe; Ph.D., Harvard-Associate Professor
Elaine M. Spaul, BA, George Washington University; MA, Georgetown University-Lecturer

Karim M. Strand, BA, Northwestern University; MAT, Brown University; Ph.D., Northwestern University-Lecturer
Sister Mary Sullivan, BA, Nazareth College; MA, Ph.D., University of Notre Dame-Associate Professor
U.T. Summers, AB, Vassar; MA, Radcliffe-Assistant Professor
Dorothy R. Warded, BA, Wellesley College; B. Litt., Oxford University (England)-Lecturer

Jane B. Weedman, BS, Indiana University; MA, University of Dayton; Ph.D., SUNY at Buffalo-Lecturer

Science and Humanities staff
Bruce A. Austin, BA, Rider College; MS, Illinois State University at Normal-Instructor
Douglas R. Coffey, BFA, Denver; MA, Western Reserve-Associate Professor
Norman R. Coombs, BS, MS, Ph.D., Wisconsin-Professor
Keith Foley, B. Music, MM, Eastman School of Music-Lecturer
Josephine M. Gray, BA, Rochester; MS, SUC at Brockport-Assistant Professor
Dane R. Gordon, BA, MA, University of Cambridge; BD, University of London; MA, University of Rochester-Professor
Edwin O. Hennick, BSE, Michigan State; M.Ed., Rochester-Associate Professor
Nabil M. Kaylani, BA, American University of Beirut; MA, Ph.D., Clark University-Professor
Glenn J. Kist, AB, MA, Xavier; Ph.D., Loyola University, Chicago-Associate Professor
Richard D. Lunt, BA, Oberlin; MA, Ph.D., New Mexico-Professor
Salvatore Mondello, BA, MA, Ph.D., New York University-Professor
Linda I. Nagle, BA, University of Tampa; MA, Ph.D., Rutgers University-Visiting Assistant Professor
Pellegrino Nazzaro, BA, P. Giannone; Ph.D., University of Naples-Professor
Egidio Papa, BA, Aloisiano College, Gallarate, Italy; Ph.D., Gregorian University, Rome-Assistant Professor
Howard Pollack, B. Music, University of Michigan; Doctoral Studies, Cornell University-Lecturer
John T. Sanders, BA, Purdue University; MA, Boston University; Ph.D., Boston University-Associate Professor

Syracuse-Professor Emeritus
David B. Suits, BA, Purdue University; MA, Ph.D., University of Waterloo-Assistant Professor
Hertha J. Schulze, BA, Minnesota; MA, Radcliffe; Ph.D., Minnesota-Associate Professor
Houghton Wetherald, BA, Brown; MFA, Oberlin-Associate Professor
John A. White, BA, Ph.D., Cambridge University-Assistant Professor
Fred L. Wilson, BA, Murray State University; Ph.D., University of Kansas-Professor (temporary joint appointment with NTID)
Hans W. Zandvoort, MFA, Royal Academy of Fine Arts, The Hague-Associate Professor

Social Science staff
Louis J. Andoline, BS, Rochester Institute of Technology; MA, Kent State University-Associate Professor
Brian P. Barry, BA, St. John Fisher; MSS, Ph.D., Syracuse-Associate Professor
N. Evelyn Brandon, BS, MS, Howard- Associate Professor
Robert J. Brown, BS, SUNY, at Potsdam; Ph.D., Syracuse-Associate Professor
Todd H. Bullard, BA, West Liberty State College; MA, West Virginia; Ph.D., Pittsburgh-Professor
Kathleen C. Chen, BA, Rangoon University, Burma; MA, Bryn Mawr College; Ph.D., Pennsylvania State-Associate Professor
Constantino Dumangane, Sr., BA, MPA, Syracuse-Associate Professor
Louis R. Eitscher III, BA, Houghton; MA, American-University-Associate Professor
Janet E. Farnum, BA, SUNY at Brockport; Ph.D., University of Rochester-Visiting Assistant Professor
Joseph E. Fitzpatrick, BA, M.Ed., Buffalo-Professor
Roger W. Harnish, BA, University of Rochester; MS, Ph.D., Oklahoma State-Associate Professor
Samuel Haskell, BA, Cornell University; MA, Ph.D., University of Tennessee-Lecturer
Morton Isaacs, BA, Chicago; BS, MA, Columbia; Ph.D., Yeshiva-Associate Professor
H. John Jacobi, BA, MA, Ph.D., Pennsylvania State University-Visiting Assistant Professor
Joanne M. Jacobs, BA, University of Rochester; MA, SUNY at Buffalo-Assistant Professor

Hoyoung Lee, BA, Seoul National University, Korea; MA, Ph.D., Maryland-Associate Professor
Boris Mikolji, BA, University of Graz; MA, Ph.D., Western Reserve-Professor
Francena L. Miller, BS, MS, Cornell; Ph.D., Pennsylvania State-Professor
Paul A. Miller, BS, West Virginia; MA, Ph.D., Michigan State-Professor
Louis E. Neff, AB, Denver; MA, Mexico City College-Associate Professor
Thomas R. Plough, BA, MA, Ph.D., Michigan State-Associate Professor
Chitra Ramaswami, BA, Radcliffe College, Harvard University; MA, Delhi School of Economics, Delhi, India-Lecturer
Ajit S. Sahbarwal, B. Com., Delhi University; MA, University of Rochester-Assistant Professor
Julian Salinsjak, BS, Sir George Williams, Montreal; Ph.D., Alpen University, Austria-Professor
Fred W. Smith, BA, MA, Wheaton College; Ph.D., Michigan State-Professor
Michael Vernarelli, BS, University of Michigan; MA, Ph.D., SUNY at Binghamton-Instructor

Criminal Justice staff
John O. Ballard, BA, MPA, Indiana University-Associate Professor
Paul Brule, BA, Wittenberg University; MA, Xavier University Graduate School-Visting Assistant Professor
Patricia M. Carter, BA, Muskingum College; MA, SUNY at Albany; Ed.D, Western Colorado University-Assistant Professor
Richard B. Lewis, BA, SUNY at Albany; MS, Southern Illinois—Assistant Professor
John A. Murley, BA, University of Dallas; MA, Claremont Graduate School and University Center-Assistant Professor

Social Work staff
Arnold J. Berman, BA, Hofstra University; MA, New York University; MSW, Syracuse University-Assistant Professor
Kijana Crawford-Adeleye, BA, Tougaloo College; MSW, Atlanta University-Associate Professor
Leonard A. Gravitz, BSEd., SUNY Cortland; MA, MSW, Washington University-Associate Professor
Helen W. Irving, BS, Gordon College; MSW, Syracuse University-Instructor

Richard Morales, BA, Michigan State University, Michigan; MA, SUC at Brockport; MSW, Syracuse University-Assistant Professor
Marjorie R. Schmale, BS, St. Joseph College; MS, Smith College-Visiting Assistant Professor
Marshall L. Smith, BA, MSW, University of Michigan; Ph.D., SUNY at Buffalo-Assistant Professor
Michael R. Stone, BA, SUNY at Geneseo; MSW, West Virginia University-Lecturer
Betty Toney, BA, Pasadena Nazarene; MS, University of California at Berkeley-Assistant Professor (joint appointment with NTID)

College of Graphic Arts
And Photography
Lothar K. Engelmann, BS, MS, Ph.D., Dean, Professor
John L. Kronenberg, BS, Associate Dean

School of Photographic Arts and Sciences administrative staff
Russell C. Kraus, BA, Ed.D., Director, School of Photographic Arts and Sciences-Associate Professor
David A. Engdahl, BS, M.Ed., Associate Director, School of Photographic Arts and Sciences-Professor
Donald L. Bruening, BA, MBA, Staff Chairman, Professional Photography-Professor
John C. Compton, MS, Coordinator, Foundation Year Photography-Associate Professor
Richard Floberg, BA, MS, Coordinator, Film Making and Television-Associate Professor
Ronald Francis, AB, Ph.D., Staff Chairman, Photographic Science and Instrumentation-Professor
C. James Gleason, BA, MS, Staff Chairman, Photographic Illustration-Associate Professor
John E. Karpen, BS, MFA, Coordinator, MS Program-Associate Professor
James E. McMillion, Jr., MFA, Coordinator, Photographic Processing and Finishing Management-Professor
Nile R. Root, MS, Coordinator, Biomedical Photographic Communications-Associate Professor.
Charles A. Arnold, Jr.,
School of Photographic Arts
Professor
Rochester Institute of Technology-
Island School of Design; MFA,
William D. Siegfried,
and Sciences faculty
Mohamed F. Abouelata,
Technologist
Technologist
Lily
Director of Training
Web Offset Laboratory
Irving Pobboravaky,
Zenon A. Elyji,
Associate
H. Brent Archer,
AAS, Research Associate
Chester J. Daniels,
BS, MS,-Senior Technologist
Zenon A. Elyjiw,
Senior Technologist
Richard N. McAllen,
AAS,-Director, Web Offset Laboratory
Milton Pearson,
BS, Senior Technologist
Irving Pobboravaky,
BS, MS, Senior Technologist
Lily Shung-Technical Librarian
William D. Siegfried,
AB, BS, MA,
director of Training
School of Photographic Arts and Sciences Faculty
Mohamed F. Abouelata, BS, Cairo; MS, Tennessee-Associate Professor
Charles A. Arnold, Jr., BFA, Rhode Island School of Design; MFA, Rochester Institute of Technology-Professor
Joseph J. Benenate, BFA, Massachusetts College of Art; MST, Rochester Institute of Technology-Assistant Professor
Terry L. Bollmann, AB, Drury College-Assistant Professor
Donald L. Bruening, BA, Mount St. Mary’s Seminary; MBA, Rochester Institute of Technology-Professor
Owen Butler, BFA, Rochester Institute of Technology-Assistant Professor
Burt H. Carroll, B.Ch., Cornell, Ph.D., Wisconsin-Professor
John F. Carson, BS, MSEE, Massachusetts Institute of Technology-Associate Professor
Guenther Cartwright, BA, University of Oregon, MFA, Buffalo-Assistant Professor
Kathleen Collins, AB, Stanford; MFA, Rochester Institute of Technology-Assistant Professor
John C. Compton, BS, MS, Rochester Institute of Technology-Associate Professor
Neil Croom, BS, State University College of Forestry; M.Ed., Syracuse-Professor
Ira B. Current, BA, Colorado-Associate Professor
Andrew Davidhazy, BFA, MFA, Rochester Institute of Technology-Associate Professor
Mary A. Donadio, BS, Nazareth-Lecturer
William W. DuBois, BFA, Ohio University; M.Ed., Bowling Green State University-Assistant Professor
Walter A. Elling, BA, Rochester-Associate Professor
David A. Engdahl, BS, M.Ed., University of Rochester-Professor
Richard Floberg, BA, Iowa State; MS, Boston University-Associate Professor
Ronald Francis, AB, Colby College; Ph.D., Massachusetts Institute of Technology-Professor
Michael A. Geissinger, BFA, MST, Rochester Institute of Technology-Associate Professor
C. James Gleason, BA, Kent State; MS, Rochester Institute of Technology-Associate Professor
Bruce W. Grant, BA, Goddard - Instructor
Albert R. Handy, Certificate, Architectural Engineering, Pratt Institute-Associate professor
Thomas Hill, BS, Wisconsin-Associate Professor
Bradley T. Hindson, BA, Rutgers; MFA, Ohio State- Associate Professor
Theron T. Holden, AB, Hamilton College-Lecturer
Thomas P. Iten, BFA, MS, Rochester Institute of Technology-Associate Professor
Hugo C. Jelinek, Diploma, Commercial Academy, Prague, Czechoslovakia-Assistant Professor
John E. Karpen, BS, MFA, Rochester Institute of Technology-Associate Professor
Robert Kayser, BS, City College of New York; MS, Rochester Institute of Technology-Assistant Professor
Weston D. Kemp, MFA, Rochester Institute of Technology-Associate Professor
Russell C. Kraus, BA, William Patterson College; Ed.D., University of Massachusetts-Associate Professor
John E. Karpen, MS, Rochester Institute of Technology-Assistant Professor
Leon LeBeau, Ph.D., University of Illinois—Adjunct Professor
Henry W. Leichtner, Master Photographer-Lecturer
Howard LeVant, BS, Chicago-Assistant Professor
Douglas A. Lyttle, BS, Michigan-Professor
Robert Mayer, BFA, MFA, Ohio University-Visiting Assistant Professor
James E. McMillion, Jr., BFA, MFA, Ohio State-James E. McGhee Professor in Photographic Management
Beatrice Nettles, BFA, Florida; MFA, Illinois-Associate Professor
John Pfahl, BFA, MS, Syracuse-Associate Professor
Michael Putnam, BA, Berkeley-Visiting Professor
James Reilly, BA, Franklin & Marshall; MA, Buffalo-Lecturer and Technical Associate
Martin A. Rennalis, Prof. Cert. (Film), West Indies Film, Kingston, Jamaica; Prof. Cert. (Film), Colonial Film Unit, London; MS, Boston University-Associate Professor
Albert D. Rickmers, BS, Bloomsburg State; M.Ed., St. Bonaventure; MS, Rochester Institute of Technology-Professor
David J. Robertson, BFA, Pratt Institute; MA, Columbia University Teachers College-Professor
Faculty and Staff 187

Nile R. Root, MS, Rochester Institute of Technology-Associate Professor
Elliott Rubenstein, BA, MA, St. John’s University; MFAPA, Buffalo-Assistant Professor
Lawrence Scarff, AAS, Rochester Institute of Technology-Lecturer
William S. Shoemaker, BS, Rochester, MS, University of Miami-Professor
Donald L. Smith, BS, Rochester Institute of Technology-Associate Professor
Arnold M. Sorvari, BFA, MST, MFA, Rochester Institute of Technology-Professor
Malcolm Spaul, BS, St. Lawrence University; MFA, Rochester Institute of Technology-Lecturer
Leslie D. Strobel, BS, Ed.D., Rochester-Professor
Erik Timmerman, BS, Wisconsin; MFA, Southern California-Associate Professor
John F. Trauger, AB, Bucknell; MLS, SUC at Geneseo-Associate Professor
Charles C. Werberig, BFA, MS, Syracuse-Professor
Tom Muir Wilson, BFA, Cranbrook Academy of Art; MFA, Rochester Institute of Technology-Associate Professor
Richard D. Zakia, BS, Rochester Institute of Technology, Ed.D., Rochester-Professor

School of Printing faculty

Beier E. Arpag, BS, Rochester Institute of Technology-Associate Professor
William H. Birkett, BS, Illinois; MBA, Michigan, CMA, Associate Professor
Edward A. Brabant, BS, Rochester Institute of Technology-Professor
Joseph E. Brown, BS, Carnegie-Mellon University; MS, Kansas State-Associate Professor
Walter A. Campbell, BA, Hobart; MBA, M.Ed., Rochester-Associate Professor
Walter R. Capell, BA, Buffalo; J.D., New York Law School-Lecturer
Gary J. Corbett, BA, St. Francis College, MBA, Fordham University-Instructor
W. Frederick Craig, BS, West Virginia Institute of Technology; M.Ed., Rochester-Associate Professor
Clifton T. Frazier, BS, West Virginia Institute of Technology; M.Ed., Rochester-Associate Professor

Carl E. Gross, BS, Rochester Institute of Technology-Instructor
Robert G. Hacker, BS, Illinois State; MS, South Dakota State; Ph.D., Iowa-Paul and Louise Miller Professor in Newspaper Management
Walter G. Horne, BS, Rochester Institute of Technology, M.Ed., Rochester-Professor
Alfred F. Horton, AAS, Rochester Institute of Technology-Associate Professor
James I. Horton, BS, Rochester Institute of Technology-M.Ed., Rochester-Assistant Professor
Herbert H. Johnson, BS, Rochester Institute of Technology-Melbert B. Cary, Jr., Professor in Graphic Arts
Alexander S. Lawson, Diploma, Rochester Institute of Technology-Adjunct Professor and Professor Emeritus
Daniel M. Levine, BFA, Colorado; MS, Rochester Institute of Technology-Instructor
Joseph L. Noga, BS, Connecticut; MS, Bridgeport-Associate Professor
Archibald D. Provan, BS, Rochester Institute of Technology; M.Ed., Rochester-Associate Professor
Harry Rab, BSME, MSME, Newark College of Engineering-Assistant Professor
Werner Rebsamen, Diploma, Academy of Fine Arts, Zurich-Assistant Professor
Emely E. Schneider, BS, Southern Illinois University; M.Ed. Rochester-Associate Professor
Anthony R. Sears, BS, Rochester Institute of Technology-Professor
Julius L. Silver, BA, Brooklyn College; Ph.D., Connecticut-Professor
Miles F. Southworth, BS, Michigan; M.Ed., Rochester-Professor
Hector Sutherland, AB, Dartmouth; MA, New York University-Professor
Ruth Terry-Lecturer
Robert S. Tompkins, Composition Specialist-Assistant Professor
James R. Walsh, BS, Rochester Institute of Technology, M.Ed., Rochester-Associate Professor
Robert J. Webster, BS, SUNY at Buffalo; MS, Ball State-Associate Professor
Charles J. Weigand, BS, MS, SUC at Oswego-Assistant Professor
Hermann Zapf, Calligrapher and Type Designer-Adjunct Professor

Academic Technical Associates
David L. Dembroski-Technical Associate, School of Printing
Kenneth L. Fretz, BS, Technical Associate, School of Photography
Clair W. Fyke-Technical Associate, School of Printing
Richard N. Norman, BS, Technical Associate, School of Photography
William Peterson, AAS, Manager, Photographic Facilities, School of Photography
Paul J. Rogers-Coordinator, Technical Services, School of Printing

Institute College

Roy I. Satre, Jr., BA, MA, Ph.D., Dean-Professor
Donna McDonough, BS, MS, Assistant to the Dean
Richard T. Cheng, BS, MSEE, Ph.D.,-Director, School of Computer Science and Technology; Professor
James D. Forman, AAS, BS, MS, Director, School of Engineering Technology, Professor
Harold J. Raphael, BS, MS, Ph.D.-Director, Department of Packaging Science; Professor
Richard L. Rinehart, BS, MS, Ed.D.-Director, Center for Community/ Junior College Relations; Professor
Clinton J. Wallington, BA, Ph.D.-Chairperson, Department of Instructional Technology; Professor

Center for Community/ Junior College Relations
Larry D. Hoffman, BSEE, MSEE, Ph.D.-, Iowa State-Associate Professor
Richard L. Rinehart, BS, Michigan State University; MS, University of Michigan; Ed.D., Michigan State University-Professor

School of Computer Science and Technology
Rodger W. Baker, BM, BS, MS, University of Rochester-Associate Professor
Richard Cheng, BS, Taiwan, MS, University of Wisconsin; Ph.D., University of Illinois-Urbana-Professor
James A. Chmura, BS, MS, Rutgers University-Associate Professor
John F. Adams, BEE, MSEE, Clarkson College-Staff Chairman, Electrical Engineering Technology-Professor
Russell L. Vesper, AAS, Fort Lewis A & M College; BSCE, MSCE, New Mexico; P.E.-Staff Chairman, Civil Engineering Technology; Associate Professor
Ronald F. Amberger, BME, Rensselaer Polytechnic Institute; M.Eng., Penn State University; P.E.-Associate Professor
John Tsan-Hsiang Chen, B.Ed, National Taiwan Normal University; MS, Wisconsin; MS, Marguette; Ph.D, Missouri-Associate Professor
Raymond Conway, BE, University College, Dublin; M.Sc., University of London; MBA, University of Dublin-Professor
Thomas J. Dingman, AAS, Hudson Valley Community College; BSEE, MS (ET) Rochester Institute of Technology-Assistant Professor
Robert H. Easton, BS, U.S. Military Academy; MSCE, Iowa State University, P.E.-Assistant Professor
Brendon P. Feeley, Diploma, Dublin College of Technology; MS, Trinity College, Dublin; C. Mfg. E.-Assistant Professor
Kevin M. Foley, AAS, Monroe Community College, BS, SUNY College Environmental Science and Forestry, Syracuse University-Instructor
Burton S. Garrell, BSME, Stevens Institute of Technology; MS, Michigan State-Associate Professor
Joseph D. Greenfield, BEE, City College of New York; MSEE, Pennsylvania State-Professor
Alan C.H. Hu, BSCE, Ta Tung University, Shanghai; MPH, Minnesota; Ph.D., Oklahoma-Professor
William C. Larsen, BS, MSCE, Dartmouth; P.E.
Robert E. McGrath, Jr., MSCE, Syracuse University; P.E.-Associate Professor
Robert A. Merrill, BS, Clarkson College; MS, Northeastern; P.E.-Associate Professor
James A. Reynolds, AAS, BS, Rochester Institute of Technology; MSEE, Illinois-Associate Professor
John D. Sherrick, BEE, Clarkson; MSEE, Worcester Polytechnic-Visiting Assistant Professor
Martin J. Siebach, AAS, BS, Rochester Institute of Technology; MSEE, Illinois, P.E.-Associate Professor

Vincent E. Speed, BSME, MIE, University of Toledo; MBA, Rochester Institute of Technology; P.E.-Assistant Professor

School of Engineering Technology Adjunct Faculty
Dewayne D. Day, BS, Sanitary Engineering, Pennsylvania State University; P.E.-Director of Division of Environmental Sanitation, Monroe County Health Department
Elias C. Tomias, BCE, Rensselaer Polytechnic Institute, MSCE, Ohio State, P.E.-Associate Partner, Erdman and Anthony, Consulting Engineers

Instructional Technology
Wallace S. Goya, BA, University of Hawaii; MS, Indiana University-Assistant Professor

Packaging Science
Daniel L. Goodwin, BS, MS, Michigan State University-Assistant Professor

National Technical Institute for the Deaf
Administration
William E. Castle, BS, Northern State Teachers College; MA, State University of Iowa; Ph.D., Stanford University-Professor, Dean and Director
Jan L. Baader, Certicate/Diploma, Moser Business Institute-Administrative Assistant
Richard L. Cattanach, BS BA, University of Wisconsin; MSBA, University of Denver; DBA, Arizona State University; CPA, Arizona and Alaska-Assistant to the Director/Dean

Edward Scouten, BA, University of Nebraska; MA, Gallaudet-Professor, History Specialist

College of Business Support Team
Thomas A. Connolly, BS, Rochester Institute of Technology; MS, Canisius College-Associate Professor, Acting Chairman

Social Work and Criminal Justice Support Team
Dean K. Santos, BA, University of Minnesota; MSW, San Diego State University-Assistant Professor, Staff Chairperson

Institute College/College of Engineering Support Team
Paul L. Taylor, BS, Georgia Institute of Technology; MS, Washington University-Assistant Professor, Staff Chairperson

College of Science Support Team
John H. Parker, BA, Ph.D., University of Rochester-Chairperson/Assistant Dean

College of Graphic Arts & Photography Support Team
John J. Head, Jr., BFA, Pennsylvania State University; MFA, Rochester Institute of Technology-Instructor, Staff Chairperson

College of Fine and Applied Arts Support Team
Thomas G. Raco, BFA, MFA, Rochester Institute of Technology-Associate Professor, Assistant Dean for NTID

College of General Studies Support Team (Academic Department for General Education)
Barry R. Culhane, BA, University of Windsor, Canada; Ed.D., University of Rochester-Assistant Professor, Chairperson

Faculty
Full listings of NTID faculty and other support staff are published in NTID Bulletins, available from NTID.

College of Science
John E. Paliouras, BA, MA, Ph.D.-Dean; Professor
William A. Burns, BA, MS-Associate Dean; Professor
William N. Bigler, AB, MS, Ph.D.-Department Head, Clinical Sciences; Associate Professor
Paul A. Haefner, Jr., BS, MS, Ph.D.-Department Head, Biology; Professor
Earl Krakower, BS, Ph.D.-Department Head, Chemistry; Professor
Edward A. Newburg, BS, MS, Ph.D.-Department Head, Mathematics; Professor
Varadaraja V. Raman, BS, MS, Ph.D.-Department Head, Physics; Professor
Edward B. Stockham, AB, Ph.D.-Director, School of Health Related Professions; Associate Professor
Barbara R. Fox, BA, MS-Assistant to the Dean for Support Services
David A. Lamb, Operations Manager
Judy A. Witzel, AAS-Administrative Assistant
Y. Stephen Yamamoto, BS, Ph.D.-Experiential Learning Coordinator

Biology Department
Margaret B. D’Ambruso, BA, Wilson College; MA, Wellesley College-Associate Professor
Jean A. Douthwright-Fasse, BS, Skidmore College; MS, Pennsylvania State University; MS, Ph.D., University of Rochester-Visiting Assistant Professor
G. Thomas Frederick, BS, MS, Ph.D., Ohio State University-Assistant Professor
Russell M. Gardner, MA, California State University-Ph.D., Indiana University-Visiting Assistant Professor
Paul A. Haefner, Jr., BS, Franklin & Marshall College; MS, Ph.D., University of Delaware-Professor
M. Joseph Klingensmith, BS, Illinois State; MS, Ph.D., Michigan State-Professor
Carole A. Sack, BA, Ph.D., Michigan State-Associate Professor

Franz K. Seischab, BS, Cornell; MS, SUC at Geneseo; Ph.D., University of Syracuse-Associate Professor
Raymond Sowinski, BS, Ph.D., Indiana University-Associate Professor
Egon Stark, BS, MS, University of Manitoba; Ph.D., Purdue-Professor

Chemistry Department
Jerry M. Adduci, BS, Rochester; Ph.D., Pennsylvania State-Associate Professor
William N. Bigler, AB, California; MS, San Jose State; Ph.D., Colorado State-Associate Professor
James E. Frey, BS, Ph.D., Lehigh University-Assistant Professor
Robert E. Gilman, AB, Dartmouth; MS, Ph.D., Michigan-Professor
William J. Hayles, BA, Wesleyan; Ph.D., Iowa State-Professor
Kay Henzel, BS, Bucknell University; Ph.D., Ohio State University-Visiting Assistant Professor
David A. Hilborn, BS, Lafayette; Visiting Assistant Professor
Earl Krakower, BS, McGill; Ph.D., University of British Columbia-Professor
Edwin Lillie, BA, Dublin University; Ph.D., Queen’s University (Belfast, N. Ireland)-Visiting Assistant Professor
Joseph L. Lippert, BS, South Dakota School of Mines and Technology; Ph.D., Colorado-Associate Professor
Harriet Moeur, BS, Bucknell; Ph.D., Berkeley-Visiting Assistant Professor
Terence C. Morrill, BS, Syracuse; MS, San Jose State; Ph.D., Colorado-Professor
Nina M. Sandberg, AB, Cornell; MS, Wichita; Ed.D., Florida-Associate Professor
Edward B. Stockham, AB, Ph.D., University of Pennsylvania-Associate Professor
Gerald A. Takacs, BS, University of Alberta; Ph.D., Wisconsin-Associate Professor
Craig Van Antwerp, BS, Juniata College; Ph.D., Stanford-Visiting Assistant Professor
James Wilson, Jr., BA, New York University; M.Ed., Rochester-Professor
Mathematics Department
Neil Bromberg, Sc.B., Brown; MS, Ph.D., New York University-Visiting Assistant Professor
Patricia Clark, S.B., S.M., Massachusetts Institute of Technology; Ph.D., University of Rochester-Visiting Assistant Professor
David M. Crystal, BS, MS, SUNY at Albany-Assistant Professor
John D. Paliouras, AB, MA, University of Michigan-Associate Professor
John J. Shaw, BS, MS, SUNY at Buffalo-Assistant Professor
Lezlie K. Novak, BS, MA, University of Rochester-Visiting Assistant Professor
James C. Runyon, BEE, Cornell; MSSEE, Rochester-Assistant Professor
Pasquale Saeva, BS, Niagara; MS, Bowling Green State; MS, Rochester Institute of Technology-Associate Professor
Richard J. Hoerner, B.S., SUNY at Albany-Assistant Professor
Olympia Nicodemi, BA, New York University; MA, Ph.D., University of Rochester-Visiting Assistant Professor
John D. Paliouras, BA, Alfred; MA, Ph.D., University of Illinois—Professor
John F. Randolph, BS, W. Texas State, MA, University of Michigan; MA, Syracuse; Ph.D., Cornell-Professor
Carl C. Reed, BS, California Institute of Technology; Ph.D., Cornell University-Visiting Assistant Professor
School of Health Related Professions
Administrative Officers
Edward B. Stockham, AB, Ph.D., University of Pennsylvania-Director and Program Director Pharmacy-Associate Professor
George Alley, BA, MS, Program Director, General Dietetic/Coordinated Undergraduate Program
William N. Bigler, AB, California; MA, San Jose State, Ph.D., Colorado State; Program Director, Clinical Chemistry-Associate Professor
Philip W. Bornarth, BAE, MAE, Art Institute of Chicago, Academic Representative, Medical Illustration-Professor
William A. Burns, BA, University of Arizona; MS, Elmita; Head, Department of Clinical Sciences; Program Director, Biomedical Computing and Medical Technology-Professor
Robert A. Clark, BS, Ph.D., Maryland Academic Administrator, Technical Sciences/CCE, Program Coordinator, Allied Health Continuing Education Programs-Associate Professor
Patrick Coyle, Program Director, Optical Finishing Technology/NTID-Assistant Professor
Marilyn G. Fowler, RRA, BS, Program Director, Medical Record Technician/NTID-Assistant Professor
Frederick R. Hamil, AAS, SUNY at Fredonia; MS, SUNY at Brockport; Chairperson, Department of Applied Science/Allied Health Professions; Program Director, Medical Laboratory Technician/NTID-Associate Professor
Nile R. Root, RBP, Program Director, Biomedical Photography/Biomedical Photographic Communications-Assistant Professor
Jerome Wagner, BS, Case Institute of Technology; MS, Ph.D., University of Wisconsin; Program Director, Nuclear Medicine Technology-Assistant Professor
Clinton J. Wallington, BA, Ph.D., Chairperson, Department of Instructional Technology; Program Director, Health Sciences Option-Professor
Rolf A. Zerges, BS, MA, Academic Administrator, Business and Community Studies/CCE; Program Director, Health Institution Management-Associate Professor
Faculty and Staff 191-

Department of Clinical Sciences
William A. Burns, BA, University of Arizona; MS, Elmira-Program Director; BA, University of Arizona; MS, Elmira-Professor

Lawrence N. Chessin, MD-Head, Infectious Disease Unit, The Genesee Hospital-Consultant

Biomedical Computing
William A. Burns, Acting Program Director; BA, University of Arizona; MS, Elmira-Professor

Frank K. Seischab, BS, Cornell; MS, SUNY at Geneseo-Associate Professor

Clinical Chemistry
William Bigler, AB, California; MS, San Jose State; Ph.D., Colorado State; Program Director-Associate Professor

Clinical Faculty
Richard M. Bayer, Ph.D., Rutgers University; Rochester General Hospital

Norman P. Kubasik, Ph.D., Syracuse University, Upstate Medical Center; Genesee Hospital, Rochester, N.Y.

Royden N. Rand, BA, Cornell; MA, Ph.D., University of Buffalo; Eastman Kodak Health, Safety and Human Factors Laboratory

James D. Salvatore, MS, University of Rochester; University of Rochester

Harrison E. Sine, Jr., Ph.D., SUNY at Buffalo; The Genesee Hospital, Rochester, N.Y.

Medical Technology
William A. Burns, BA, University of Arizona; MS, Elmira-Program Director, Professor

James C. Aumer, BS, MS, Michigan Technological University-Clinical Laboratory

Clinical Faculty
Alvin J. Marx, M.D. Director, School of Medical Technology, St. Mary's Hospital, Rochester, N.Y.

Edward H. Jenis, M.D., Director, School of Medical Technology, Millard Fillmore Hospital, Buffalo, New York

Wanda Schreck, MT(ASCP), Coordinator, School of Medical Technology, Millard Fillmore Hospital, Buffalo, N.Y.

Janet Seeley, MT(ASCP), Education Coordinator, School of Medical Technology, Rochester General Hospital, Rochester, N.Y.

Barbara Stein, MS, MT(ASCP) Acting Education Coordinator, School of Medical Technology, St. Mary’s Hospital, Rochester, N.Y.

Zymut M. Tomkiewicz, M.D. Director, School of Medical Technology, Rochester General Hospital, Rochester, N.Y.

Nuclear Medicine Technology
Jerome Wagner, BS, Case Institute of Technology; MS, Ph.D., University of Wisconsin-Program Director, Assistant Professor

Margaret T. Jaconski, BS, RT(AART), NMT, Upstate Medical Center-Clinical Coordinator and Instructor

Earl H. Sexton, BS, Tufts; MS, Massachusetts Institute of Technology; MST, Cornell; Ph.D., SUNY at Albany-Associate Professor

Patricia Cooke, BS, NMT(AART), Rochester Institute of Technology-Associate Clinical Coordinator and Instructor

Clinical Faculty
James Victor Baumgartner, BS, RT, NMT, RIA Specialist, Our Lady of Lourdes Memorial Hospital, Binghamton, N.Y.

Edward G. Bell, M.D., Director, Department of Nuclear Medicine, Crouse-Irving Memorial Hospital, Syracuse, N.Y.

Johan P. Bonk, M.D., Attending Radiologist, Community-General Hospital, Syracuse, New York

Arthur Coleman, M.D., Chief of Radiology, Director of Nuclear Medicine, Department of Radiology, Sisters of Charity Hospital, Buffalo, N.Y.

Margaret Corkish, RT, NMT, Supervisor, Nuclear Medicine Technology, Genesee Hospital, Rochester, N.Y.

Linda Decker, RT, NMT, Chief Radiologist, Division of Nuclear Medicine, The University of Rochester Medical Center, Rochester, N.Y.

Robert M. Donati, M.D., Program Director, Nuclear Medicine, St. Louis Veterans Administration Hospital, St. Louis, MO.

Janet Seley, MT(ASCP), Education Coordinator, School of Medical Technology, Rochester General Hospital, Rochester, N.Y.

Barbara Stein, MS, MT(ASCP) Acting Education Coordinator, School of Medical Technology, St. Mary’s Hospital, Rochester, N.Y.

Zymut M. Tomkiewicz, M.D. Director, School of Medical Technology, Rochester General Hospital, Rochester, N.Y.

Nuclear Medicine Technology
Jerome Wagner, BS, Case Institute of Technology; MS, Ph.D., University of Wisconsin-Program Director, Assistant Professor

Margaret T. Jaconski, BS, RT(AART), NMT, Upstate Medical Center-Clinical Coordinator and Instructor

Earl H. Sexton, BS, Tufts; MS, Massachusetts Institute of Technology; MST, Cornell; Ph.D., SUNY at Albany-Associate Professor

Patricia Cooke, BS, NMT(AART), Rochester Institute of Technology-Associate Clinical Coordinator and Instructor

Clinical Faculty
James Victor Baumgartner, BS, RT, NMT, RIA Specialist, Our Lady of Lourdes Memorial Hospital, Binghamton, N.Y.

Edward G. Bell, M.D., Director, Department of Nuclear Medicine, Crouse-Irving Memorial Hospital, Syracuse, N.Y.

Johan P. Bonk, M.D., Attending Radiologist, Community-General Hospital, Syracuse, New York

Arthur Coleman, M.D., Chief of Radiology, Director of Nuclear Medicine, Department of Radiology, Sisters of Charity Hospital, Buffalo, N.Y.

Margaret Corkish, RT, NMT, Supervisor, Nuclear Medicine Technology, Genesee Hospital, Rochester, N.Y.

Linda Decker, RT, NMT, Chief Radiologist, Division of Nuclear Medicine, The University of Rochester Medical Center, Rochester, N.Y.

Robert M. Donati, M.D., Program Director, Nuclear Medicine, St. Louis Veterans Administration Hospital, St. Louis, MO.

Milton H. Dunsky, M.D.m Acting Chief, Nuclear Medicine Service, Veterans Administration Hospital, Syracuse, N.Y.

Frederick S. Erdman, M.D., Chief Department of Radiology, F.F. Thompson Hospital, Canandaigua, N.Y.

Russell D. Esken, RT, NMT, Chief Technologist, Department of Nuclear Medicine, Veterans Administration Hospital, Syracuse, N.Y.

William Goldman, M.D., Director, Department of Nuclear Medicine, Community-General Hospital of Greater Syracuse, Syracuse, N.Y.

Linda Grasso, BS, Chief Technologist, Charles S. Wilson Memorial Hospital, Johnson City, N.Y.

Joseph Greco, BS, MS, Assistant Supervisor, Clinical Chemistry Laboratory, The Genesee Hospital, Rochester, N.Y.

Charles A. Henry, ARRT, RT, NMT, Chief Technologist & Departmental Administrator, Crouse-Irving Memorial Hospital, Syracuse, N.Y.

David Horn, RT, NMT, Chief Nuclear Medicine Technologist, Community-General Hospital of Greater Syracuse, Syracuse, N.Y.

Baird D. Jay, M.D., Chief Radiologist, Charles S. Wilson Memorial Hospital, Johnson City, N.Y.

Robert E. Knack, M.D., Director, Department of Nuclear Medicine, Our Lady of Lourdes Memorial Hospital, Binghamton, N.Y.

Anthony J. Leone, Jr., M.D., Director of Radiology, Genesee Hospital, Rochester, N.Y.

Charles L. Lewis, M.D., Chief, Radiation Oncology & Nuclear Medicine, Greater Syracuse Memorial Hospital, Binghamton, N.Y.

Ruthann Lewis, RT, NMT, Supervisor, Nuclear Medicine Technology, Rochester General Hospital

Joan Minisce, ARRT, RT, NMT, Chief Technologist, Department of Nuclear Medicine, F.F. Thompson Hospital, Canandaigua, N.Y.

Robert E. O’Mara, M.D., Professor of Radiology, Chief, Division of Nuclear Medicine, The University of Rochester Medical Center, Rochester, N.Y.

Azu Owunawanne, Ph.D., Division of Nuclear Medicine, University of Rochester Medical Center, Rochester, N.Y.
Medical Laboratory Technician
Frederic R. Hamil, AAS, SUNY at Alfred Tech; BS, SUNY at Fredonia; MS, SUNY at Brockport-Program Director, Associate Professor

Henry P. Maher, Jr., AB, Assumption College; MS, Northwestern University; MS, Rochester Institute of Technology-Associate Professor

Beverly J. Price, AAS, SUNY at Alfred Tech; BSMT, MS, Rochester Institute of Technology-Assistant Professor

Dale L. Rockwell, AB, Clark University; BS, Gallaudet; BS, Rochester Institute of Technology; MA, Wesleyan University-Associate Professor

Leoba A. Schneider, BS, St. Francis College; MS, Notre Dame University-Associate Professor, Curriculum Development Specialist

Psychiatric Management
Joanne Wyble, MT(ASCP) Medical Technologist, Park Ridge Hospital, Rochester, N.Y.

Biomedical Photographic Communications Program
Nile R. Root, RBP, Program Director-Assistant Professor

Robert C. Wabnitz, Certificate, Rochester, Art Director, Medical Illustration Department, University of Rochester Medical Center-Lecturer

General Dietetics/Coordinated Undergraduate Program
George Alley, BA, MS, Program Director-Professor

Leila P. Hopkins, BS, Tennessee; MS, Iowa State- Assistant Professor

Janet M. Sim, BS, Colorado State; MS, Iowa State-Associate Professor

Clinical Faculty
Jean Fox, Director of Dietetics, Rochester General Hospital

Jean Queale, Chief of Dietetics, Service, The Veterans Administration Hospital, Canandaigua, New York

Medical Illustration Program Option
Philip W. Bornarth, BAE, MAE, Art Institute of Chicago, Academic Representative-Professor

Robert Wabnitz, Diploma, Rochester Institute of Technology, Certificate, University of Rochester-Adjunct Professor

Health Institutions Management Program
Rolf A. Zerges, BS, MA, Program Director-Associate Professor

Allied Health Continuing Education Programs
Robert A. Clark, BS, Ph.D., Maryland; Coordinator-Associate Professor

Robert M. Way, AB, Syracuse University; MS, Rochester Institute of Technology-Associate Professor

Sheila D. Rosenfeld, M.Ed., RT (NMT), Educational Coordinator, St. Louis Veterans Hospital, St. Louis, MO.

Marsha Sundman, AS, RT, NMT, Chief Technologist, Department of Radiology, Highland Hospital, Rochester, N.Y.

Sue Tokarz, BS, RT, NMT, Chief Technologist, Department of Radiology, Sisters of Charity Hospital, Buffalo, N.Y.

Herman A. Wallinga, M.D., Staff Radiologist of Highland Hospital, Rochester, N.Y. and F.F. Thompson Hospital, Canandaigua, N.Y.

David Weber, Ph.D., Associate Professor of Radiology (Nuclear Medicine), Assistant Professor, Radiation Biology and Biophysics, The University of Rochester Medical Center, Rochester, N.Y.

George A. Wilson, M.D., Assistant Professor of Radiology, University of Rochester Medical Center, Rochester, N.Y.

Howard Wolson, BS, Biochemist, Special Determinations Laboratory, Highland Hospital, Rochester, N.Y.

Department of Applied Science/Allied Health Professions - NTID
Frederic R. Hamil, AAS, SUNY at Alfred Tech; BS, SUNY at Fredonia; MS, SUNY at Brockport-Associate Professor, Chairperson

Optical Finishing Technology
Patrick Coyle, Program Director-Assistant Professor

John W. Monna, Certificate/Diploma, Rochester Institute of Technology-Instructor

Douglas Wachter, AAS, Corning Community College; BS, M.Ed., SUNY at Brockport-Lecturer

Medical Record Technician
Marilyn G. Fowler, RRA, Certificate, School for Medical Records Librarians; BS, Empire State College-Program Director, Assistant Professor

Cynthia Mann, AAS, National Technical Institute for the Deaf-Teaching Assistant

Larry K. Quinsland, BA, MA, MS, University of Wisconsin-Assistant Professor

Sheila D. Rosenfeld, M.Ed., RT (NMT), Educational Coordinator, St. Louis Veterans Hospital, St. Louis, MO.

Marsha Sundman, AS, RT, NMT, Chief Technologist, Department of Radiology, Highland Hospital, Rochester, N.Y.

Sue Tokarz, BS, RT, NMT, Chief Technologist, Department of Radiology, Sisters of Charity Hospital, Buffalo, N.Y.

Herman A. Wallinga, M.D., Staff Radiologist of Highland Hospital, Rochester, N.Y. and F.F. Thompson Hospital, Canandaigua, N.Y.

David Weber, Ph.D., Associate Professor of Radiology (Nuclear Medicine), Assistant Professor, Radiation Biology and Biophysics, The University of Rochester Medical Center, Rochester, N.Y.

George A. Wilson, M.D., Assistant Professor of Radiology, University of Rochester Medical Center, Rochester, N.Y.

Howard Wolson, BS, Biochemist, Special Determinations Laboratory, Highland Hospital, Rochester, N.Y.

Department of Applied Science/Allied Health Professions - NTID
Frederic R. Hamil, AAS, SUNY at Alfred Tech; BS, SUNY at Fredonia; MS, SUNY at Brockport-Associate Professor, Chairperson

Optical Finishing Technology
Patrick Coyle, Program Director-Assistant Professor

John W. Monna, Certificate/Diploma, Rochester Institute of Technology-Instructor

Douglas Wachter, AAS, Corning Community College; BS, M.Ed., SUNY at Brockport-Lecturer

Medical Record Technician
Marilyn G. Fowler, RRA, Certificate, School for Medical Records Librarians; BS, Empire State College-Program Director, Assistant Professor

Cynthia Mann, AAS, National Technical Institute for the Deaf-Teaching Assistant

Larry K. Quinsland, BA, MA, MS, University of Wisconsin-Assistant Professor

Medical Laboratory Technician
Frederic R. Hamil, AAS, SUNY at Alfred Tech; BS, SUNY at Fredonia; MS, SUNY at Brockport-Program Director, Associate Professor

Henry P. Maher, Jr., AB, Assumption College; MS, Northwestern University; MS, Rochester Institute of Technology-Associate Professor

Beverly J. Price, AAS, SUNY at Alfred Tech; BSMT, MS, Rochester Institute of Technology-Assistant Professor

Dale L. Rockwell, AB, Clark University; BS, Gallaudet; BS, Rochester Institute of Technology; MA, Wesleyan University-Associate Professor

Leoba A. Schneider, BS, St. Francis College; MS, Notre Dame University-Associate Professor, Curriculum Development Specialist

Clinical Faculty
Calvin Brown, Histology, Supervisor; Park Ridge Hospital, Rochester, N.Y.

Sharon Jameson, MT(ASCP) Microbiology, Supervisor, Park Ridge Hospital, Rochester, N.Y.

Darlene Kreighbaum, MT(ASCP) Microbiology, Park Ridge Hospital, Rochester, N.Y.

Dorothy Lamkin, MT(ASCP) Clinical Chemistry, Park Ridge Hospital, Rochester, N.Y.

June Nogle, MT(ASCP) Chief Technologist/Clinical Coordinator, Park Ridge Hospital, Rochester, N.Y.

Vincente Rabasa, M.D. Director of Laboratories/Medical Director, Park Ridge Hospital, Rochester, N.Y.

Joseph Rapini, MT(ASCP) Medical Technologist, Park Ridge Hospital, Rochester, N.Y.

Janet Scoones-Dewart, MT(ASCP) Clinical Chemistry, Supervisor, Park Ridge Hospital, Rochester, N.Y.

Joel S. Vasant, MT(ASCP) Hematology Supervisor, Park Ridge Hospital, Rochester, N.Y.
Career Education Division

Dennis C. Nyström, BS, California State College; Ed.D., Texas A & M-Dean, Division of Career Education; Professor

Donald D. Baker, BA, Trinity College; Ed.M., Ed.D., University of Rochester-Director, Career Education Program Development

William W. DuBois, BSA, Ohio University; M.Ed., Bowling Green State University-Director, Experiential Learning for Visual Arts and Sciences; Associate Professor

Mary Dean Gridley, BA, Winthrop College; MAT, University of South Carolina-Coordinator, Experiential Learning Programs: College of Business-Instructor

Ralph H. Stearns, BS, Pennsylvania; MBA, New York University; P.E., (Mass.)-Director, Experiential Learning; Engineering and Related Technologies-Associate Professor

Arden L. Travis, BS, Syracuse University; M.Ed., Alfred University; Ed.D., SUNY Buffalo-Director, Experiential Learning; College of Business; Associate Professor

Judith Vollmer-Miller, BA, Duquesne University; MBA, Rochester Institute of Technology-Director, Career Placement

Central Placement Services

Judith Vollmer-Miller, BA, Duquesne University; MBA, Rochester Institute of Technology-Director; Richard A. Bircher, BA, St. John Fisher-Assistant Director

James R. Austin, BA, St. John Fisher; MS, Rochester Institute of Technology-Placement Counselor

Charles W. Dispenza, BS, MS, Cornell-Placement Counselor

Richard S. Elliott, BS, Cornell; MS, Rochester Institute of Technology-Coordinator of Employment Opportunities-NTID

Jeanne M. Ferranti, BS, University of Northern Colorado-Placement Counselor

John R. Peck, BA, St. John Fisher-Placement Counselor

Marva W. Tyler, BS, Cheyney State College-Placement Counselor

Educational Support and Development Division

Charles W. Haines, AB, Earhart College; MS, Ph.D., Rensselaer Polytechnic Institute-Assistant Provost, Associate Professor

Instructional Development

Lawrence W. Belle, BA, MA, Case Western Reserve University; Ph.D., University of Rochester-Director, Associate Professor

Thomas C. Forrester, BS, BA, Gordon College-Instructional Developer, (Assistant Professor)

Gordon I. Goodman, BA, SUNY at Binghamton; MS, Rochester Institute of Technology-Instructional Developer

Mildred J. Noland, BS, MS, Ph.D., Indiana University-Instructional Developer, (Assistant Professor)

Clinton J. Wallington, BA, University of Missouri at Kansas City; Ph.D., University of Southern California-Senior Associate, Professor

Instructional Media Services

Reno Antonietti, BS, Rochester College of Technology; MLS, SUC at Geneseo-Director, (Associate Professor)

David C. Abbott, BFA, MFA, Rochester Institute of Technology-Producer/Designer, (Assistant Professor)

Stanley Bissell, BS, Ohio Wesleyan; MA, University of Auckland, New Zealand; M.L.S., SUC at Geneseo-Specialist, (Assistant Professor)

Harvey B. Carapella, BFA, Rochester Institute of Technology-Producer/Designer, (Assistant Professor)

Jeffrey Cepull, BS, Rochester Institute of Technology-Photographic Supervisor

June L. Cherry-Traffic Manager, Television

David M. Cronister, BS, Rochester Institute of Technology-Television Director (Instructor)

Douglas Finch, AB, Cornell University; MAT, SUC at Cortland-Audiovisual Technician

Richard A. Finnie, AAS, BET, Rochester Institute of Technology-Maintenance Engineer

Robert K. Gascon, Engineering Manager, Television

Joan S. Green, BS, Ohio State; M.Ed., Trenton State; Rochester Institute of Technology-Assistant Director, (Assistant Professor)

Susan B. Hubregsen, BFA, Rochester Institute of Technology-Graphics Supervisor, (Instructor)

Larry A. Mc Knight, AAS, BS, Rochester Institute of Technology-Assistant Director, (Assistant Professor)

Joan Marsh, BFA, Rochester Institute of Technology-Graphic Assistant

Robert J. Michel-Operations Engineer, Television

David Stone, AAS, Monroe Community College-Assistant Producer

Wallace Memorial Library

Gary D. MacMillan, BA, Kalamazoo College; AMLS, University of Michigan-Director, Professor

Raymond Abell, BFA, University of Hartford Art School; MFA, Ohio University; MLS, SUC at Geneseo-Reference Librarian (Instructor)

Karen Caviglia, BA, Kansas University; MA, Indiana University; MLS, SUC at Geneseo-Reference Librarian, (Instructor)

Christine DeGolyer, AB, Cornell University; MLS, Syracuse University-Reference Librarian, (Assistant Professor)

Lois A. Goodman, BA, CUNY at Brooklyn; MLS, Pratt Institute-Head, Public Services, (Associate Professor)

Charlotte Holcomb, BA, Western Michigan University; MLS, Syracuse University-Head, Monographic Ordering Department (Instructor)

Janice E. Linehan, BA, Merrimack College; MLS, Rutgers-Reference Librarian, (Associate Professor)

Ruth B. Lunt, BA, Oberlin; MLS, SUC at Geneseo-Reference Librarian, (Associate Professor)

Thomas G. McFadden, BA, College of Idaho; MA, Brown University; MLS, University of Pittsburgh-Reference Librarian, (Instructor)

Patricia Pitkin, BA, MLS, SUC at Geneseo-Head, Automated and Technical Services, (Assistant Professor)
Catherine M. Schell, B.Ed., Boston College; MA, University of Chicago; MS/LS, Columbia University-Head, Serials, (Instructor)
Gladys M. Taylor, BS, SUC at Geneseo; MA, Cornell-Archivist, (Associate Professor)
Gregory M. Toth, BA, University of Toronto; MA, University of Virginia; MLS, SUC at Geneseo-Reference Librarian, (Assistant Professor)

Finance and Administration

Division

Jon L. Prime, BS, Bradley University; M.Ed., Rochester-Vice President
H. Donald Scott, BA, University of Virginia; BS, Cornell University-Assistant Vice President, Finance and Administration and Director of Business Services

Administrative Services

Donald A. Hoppe, BS, MS, Iowa-Dean
Gerda Dymza, BA, Brown-Director, Horton Child Care Center

Apartment Housing

Edward O. Ingerick-Manager

Audit Services

Joseph Pickard, BS, Arizona Univ., MBA, Rochester Institute of Technology-Director
Jan Layne, BA, Ohio State, MBA, Rochester Institute of Technology-Staff Auditor

Bookstore

Charles O. Bills, BA, Syracuse-Manager
David L. McIntyre, AAS, Jamestown Community College-Assistant Manager
Frederick P. Burger, BA, Buffalo State-Photo Dept. Manager
Ellen Tonelli, AAS, Monroe Community College-Tradebook/Gift Dept. Manager

Campus Services

William H. Mets, AAS, NYSU at Farmington; BS, U of R-Director
William Allen, BS, U of Louisville-Director, Protective Services

Lodewyk Boyon, AAS, Grolius College-Director, Plant Engineering
Roy Demenint, BS, Clarkson College-Director, Operations
Elizabeth Nolan, Manager, Administrative Services

Computer Services

Michael F. Charles, BA, SUNY at Buffalo; MBA, Canisius-Director
Gail Allen, BA, SUNY at Cortland-Programmer
Elaine Anselm-Programmer
Jeanne M.L. Brzezinski, AAS, Monroe Community College-Programmer

Edgar N. Buffan, BS, Rochester Institute of Technology-Jr. Programmer Specialist (Instructor)
Michael Floeser, BT, Rochester Institute of Technology-Jr. Systems Programmer
Barbara Friedman, BS, MALS SUNY at Stony Brook-Data Base Administrator (Assistant Professor)
Gregory Hawryschuk, AAS, Monroe Community College; BS, MBA, Rochester Institute of Technology-Systems Coordinator
George C. Hopkins, Jr., Assistant Director/Manager of Data Center Operations
Irvin Horn, BS, Rochester Institute of Technology-Systems Programmer
Gary Hugo, BA, Alfred University-Sr. System Programmer
Barbara King-System Programmer
Peter F. Kulp, BA, Rochester Institute of Technology-Manager, Applications Programming
Carol Lindsey, BA, Keuka; MS, Rochester Institute of Technology-Sr. Software Specialist (Instructor)
Andrew W. Ludwick, BS, Rochester Institute of Technology-Programmer
Sheila Maass, AAS, Alfred State-Administrative Assistant
David B. McCandish, BA, Johns Hopkins; MS, University of Rochester-Sr. Programmer (Instructor)
Robert R. Miller, BS, Boston College-Systems Coordinator
Richard E. Rowley-Data Center Operations Supervisor
Ronald E. Steppenbeck, BS, MS, Rochester Institute of Technology-Manager, User Services; Associate Professor

Wendy P. Thompson, AAS, Monroe Community College-Programmer Supervisor
Edward B. True, BS, MS, Rochester Institute of Technology-Manager, Technical Services
Robert C. Weeks, Jr., BA, State University of New York; MS, Rochester Institute of Technology-Systems Coordinator
Stephen A. Wilkins, AAS, SUC at Morrisville; BSBA, Kansas State; MS Rochester Institute of Technology-Sr. Software Specialist (Assistant Professor)

Controller

William J. Welch, BBA, Niagara; CPA, New York-Controller
David R. Moszah, AAS, Alfred State-Assistant Controller
Pam Alvarez, BA, SUNY Brockport-Financial Aid Counselor
Elaine C. Barnes, BS, MBA, Rochester Institute of Technology-Staff Accountant
William J. Bianchi, BS, Rochester Institute of Technology-Staff Accountant
Jennie T. Bills, BS, SUNY Brockport-Assistant Director, Student Financial Aid
John A. Brodie, BS, Rochester Institute of Technology-Director, Financial Analysis
David B. Caiman, BS, Rochester Institute of Technology-Budget Director
Rosemarie Gross-Collection Supervisor, Bursar’s Office
Valerie A. Liotta-Payroll Operations Specialist
James C. Murphy, BS, University of Rochester-Director, Payroll/Accounting Services
Marie Nityman-Technical Assistant, Financial Analysis
Dennis W. Rawlins, BS, St. John Fisher College-Assistant Bursar
Richard B. Schonblom, BS, Rochester Institute of Technology-Bursar
Rosemary Sherman, BS, MBA, Rochester Institute of Technology-Counselor, Financial Aid
Pervesh Singh, BS, Jiwaji University (India); MBA University of Scranton-Director, Student Financial Aid
Irene White-Supervisor, Payroll
Food Service
James L. Fox, BA, Florida State University-Director
James C. Bingham, AAS, Morrisville; BS, Rochester Institute of Technology-Assistant Director
Robert O. Day, AAS, Rochester Institute of Technology-Catering Manager
Eugene P. Lawless, AAS, Cobleskill; BS, Rochester Institute of Technology-Production Manager, College Union Building
Craig A. Neal, AAS, Morrisville; BS, Rochester Institute of Technology-Assistant Director, Dining Commons
Stephen F. Scherer, AAS, Rochester Institute of Technology-Assistant Manager, Dining Commons
Gary Gasper, AAS, Morrisville-Manager of the Cellar, Corner Store

Ice Arena
Edward Ziegler, Director

Personnel
Everett C. Merritt, BA, Syracuse; MILR, Cornell-Director
Elizabeth Bianchi-Benefits Coordinator
Katherine Carcaci-Personnel Assistant, Employment
James M. Papero, BS, Ed.M., Rochester-Administrator, Affirmative Action
Sandra A. Parker, BA, Wooster-Compensation Analyst

Property and Risk Management
C. Douglas Burns, Director

Purchasing
William H. Batcheller-Director
Arthur D’Angelo-Supervisor, Mail Services
Frank Coca-Cola-Supervisor, Printing and Duplicating Services
Robert Goldstein-Purchasing Agent
Lawrence Thibault-Purchasing Agent

Special Events
Edward Steffens, BS, MBA, Rochester Institute of Technology-Director
Carole Bower-Events Specialist

Institutional Advancement Division
D. Robert Frisina, BA, Westminster College, Fulton, Mo.; MA, Gallaudet; Ph.D., Northwestern University-Senior Vice President
William H. Williams, BA, San Jose State College; MS, Syracuse University, CDP-Assistant to the Senior Vice President

Admissions
E. Louis Guard, BS, SUNY at Buffalo-Director of Admissions
Barbara Bell, BA, Indiana University; MS, Syracuse University-Minority Recruiter
Joseph Dengler, BS, Rochester Institute of Technology-Associate Director of Admissions, RIT/NTID
David F. Finney, BA, Westminster College; MA, Bowling Green State University-Assistant Director
Arthur C. Friedel, III, BS, Rochester Institute of Technology-Assistant Director
Richard M. Fuller, BA, Ithaca College; MA, Bowling Green State University-Assistant Director
George C. Hedden, BA, SUNY at Buffalo-Assistant Director
Edward A. Lincoln, BA, Eisenhower College-Assistant to the Director, Admissions

Dorothy Lowe, BS, SUNY at Buffalo; Ed.M., University of Rochester-Coordinator of Women’s Projects
James Miller, BS, Pennsylvania State University-Director of Admissions, Eisenhower College; Director of Admissions Operations, RIT
Pamela A. Neureuther, BA, SUNY at Oswego-Admissions Counselor

Alumni Affairs
Jack Smith, BA, University of Pittsburgh-Director
Christine M. Hall, BA, Nazareth; M.Ed., University of Rochester-Director of Alumni Relations

Communications
Jack Smith, BA, University of Pittsburgh-Director of Communications and Alumni Affairs
Ed Bouwmeester-Graphic Designer
James Castelino, SUNY at Brockport-Photo Lab Coordinator
Michael R. Franco, BA, Boston College, MS, Boston University-Assistant Director of Communications/Media Relations
Eleanor M. Hayes-Administrative Assistant
Walter Kowalik, Jr., AA, Geneseo Community College; BA, SUNY at Buffalo-Graphic Designer
James Leach, BA, Utica College; BA, SUNY, Plattsburgh-Director of Public Relations, Eisenhower College
Marlene Ledbetter, BS, MA, Syracuse University-Communications Coordinator
John Massey, BS, Rochester Institute of Technology-Director of Design
William McKee, BA, Syracuse University-Communications Coordinator
Sue Ann Miller, BA, University of Miami-Photographer
Megan Neumann, AB, MLS, Indiana University-Production Assistant
Carolyn P. Rankin, BA, University of Rochester-Assistant Director, Media Relations
Rod Reilly, AAS, Rochester Institute of Technology-Photographer
Jo Ann Thompson-Assistant to the Director of Publications
Lynda Whelan, BFA, Rochester Institute of Technology-Graphic Designer
Norman E. Wright-Director of Publications

Development
Daniel C. Cashman, BS, Rhode Island-Director, Grants and Contract Administration
Mary Laurino-Office Manager
Norman Miles, BA, University of Rochester: MA, Syracuse University-Director, National Development
John H. Potter, BS, BA, University of Missouri-Director of Planned Giving
Student Affairs Division

Fred W. Smith, BA, MA, Wheaton College; Ph.D., Michigan State; Vic President for Student Affairs, and Dean of Complementary Education; Professor

Thomas R. Plough, BA, MA, Ph.D., Michigan State-Associate Vice President for Student Affairs; Associate Professor

Paul R. Kazmierski, BA, B.Ed., M.Ed., Duquesne; Ph.D., Syracuse-Assistant Dean for Learning Development Services (Professor)

Stanley D. McKenzie, BS, Massachusetts Institute of Technology; MA, Ph.D., University of Rochester-Assistant to the Vice President for Judicial Affairs

Elaine M. Spauld, BA, George Washington University; MA, Georgetown University-Assistant in Student Life, Instructor

Orientation and Special Programs

Ann Hayes, Director of Orientation and Special Programs

Athletics and Physical Education

William H. Carey, BS, MS, SUC at Cortland-Director, Athletics, (Associate Professor)

Bruce E. Proper, BS, Ithaca-Director, Physical Education, Intramurals and Recreation, (Associate Professor)

Louis A. Alexander, Jr., BS, University of Rochester-Coordinator, Student Recruitment and Alumni Relations, Athletic Department, (Professor)

A. Stephen Walls, BS, Syracuse; Ed.M., University of Rochester-Coordinator, Intramurals and Recreation (Assistant Professor)

Helen F. Smith-Director, Women's Physical Education and Assistant Athletic Director for Women, (Associate Professor)

Geneva Miller, AA, Monroe Community College; BA, University of Rochester; MA, SUC at Brockport-Counselor (Assistant Professor)

Health Services

Ellen Wolf, BS, MNP, University of Rochester; RN, Mount St. Mary's School of Nursing-Director

Sheila Leavitt, AB, Bowdoin College; MD, University of Rochester

Richard Perlmuter, BA, State University of New York at Buffalo; MD, University of Pennsylvania

Jean R. Sherman, AB, Goucher College; MD, The Johns Hopkins University School of Medicine

Helen Brabant, RN, University of Rochester School of Nursing

Keith Delano, AAS, Rochester Institute of Technology-Certified Emergency Medical Technician

Mary Hansen, BS, MS, University of Rochester; RN, Rochester General Hospital School of Nursing

Virginia Parry, BSN, McGill University; NP, University of Rochester
John M. Whitely, BS, Rochester Institute of Technology-Registrar

Victoria Aspridy, BS, Oswego State University; MS, Brockport State University-Registrar/Registration/Scheduling Officer

Joanne W. Beardsley, BS, St. Lawrence University-Records

Gary J. Bonvillain, BS, Rochester Institute of Technology-Assistant Registrar

H. David Shuster, BA, San Diego State University; MA, Ed.D., University of Rochester-Research Associate

Faculty and Staff Emeriti

Hans J. Barbel, Professor Emeritus, Art and Design
Harold J. Brennan, Dean Emeritus, College of Fine and Applied Arts
Harold J. Brodie, Professor Emeritus, Mechanical Engineering
Mary E. Burnet, Professor Emeritus, Business Administration
Murray A. Cayley, Chaplain Emeritus, Student Personnel Services
Frank A. Clement, Professor Emeritus, General Studies
Warren C. Davis, Professor Emeritus, General Studies
Silvio DeCristofaro, Professor Emeritus, College of Continuing Education
Mark Ellingson, President Emeritus
Rose K. Fewster, Associate Professor Emeritus, Business Administration
A. Frank Geist, Associate Professor Emeritus, Mechanical Engineering
Mykola Hadinsky, Professor Emeritus, Physics
Sherman Hagberg, Professor Emeritus, Mechanical Engineering
Frances H. Hamblin, Professor Emeritus, General Studies
Kenneth C. Hickman, Director Emeritus, Distillation Laboratory
Edwina B. Hogadone, Dean Emeritus, College of Business
Georgie C. Hoke, Department Head Emeritus, Food Administration
Clayton E. Hughes, Professor Emeritus, General Studies
Charles W. Hunt, Associate Professor Emeritus, Printing

Marion L’Amoreaux, Associate Professor Emeritus, Reading and Study Clinic
Alexander S. Lawson, Professor Emeritus, Printing
George H. Lecain, Professor Emeritus, Mechanical Engineering
Earle M. Morecock, Dean Emeritus, College of Applied Science
Russell A. Norton, Professor Emeritus, College of Continuing Education
Robert D. Pease, Dean Emeritus, College of Continuing Education
Donald L. Ritchie, Professor Emeritus, Printing
Donald C. Robinson, Department Head Emeritus, Electrical Engineering
Paul Schuleshko, Professor Emeritus, Mechanical Engineering
Gerhard Schumann, Professor Emeritus, Photographic Arts and Sciences
Leo F. Smith, Vice President Emeritus, Academic Administration
Vernon R. Titus, Professor Emeritus, Management
Hollis N. Todd, Professor Emeritus, Photographic Arts and Sciences
Clarence E. Tuites, Professor Emeritus, Electrical Engineering
Norman J. Weinreber, Associate Professor Emeritus, Institute College
Mason E. Wescott, Professor Emeritus, Statistics
Helen W. Wheeler, Associate Professor Emeritus, Reading and Study Clinic
Frans Wildenhain, Professor Emeritus, School for American Craftsmen
Edwin M. Wilson, Professor Emeritus, Photographic Arts and Sciences
Viola M. Wilson, Associate Professor Emeritus, Food Administration
Stanley H. Wittmer, Professor Emeritus, College of Fine and Applied Arts

Donna Southworth, RN, BSN, University of Michigan
Donna White, RN, Columbia University Presbyterian Hospital School of Nursing; MS, University of Rochester

Higher Education Opportunity Program

Charles W. Hetzel, BA, Beloit College; MS, University of Wisconsin-Director
Warren Crichlow, BS, MS Ed., SUC at Brockport-Assistant Director
E. Leonard Gumbs, BS, SUC Oswego; MS, SUC Brockport
Denise Riley, BA, SUC at Brockport, MA, Michigan State University-Counselor

Learning Development Center

Paul R. Kazmierski, BA, B.Ed., M.Ed., Duquesne; Ph.D., Syracuse-Director (Professor)
Irene M. Payne, BS, MS, SUC at Geneseo-Associate Director (Associate Professor)
R. William Gage, BS, Rochester Institute of Technology; MA, University of Rochester-Assistant Director (Assistant Professor)
Gladys Abraham, BA, SUNY at Albany; MS, SUC at Brockport-Assistant Professor
Marcia Birken, AB, Mount Holyoke College; MS, Courant Institute of Mathematical Sciences, New York University (Instructor)
Harvey J. Edwards, BA, Brown; MA, Ph.D., Rutgers-Associate Professor
Sue Heard, BA, Ed.D., Duquesne University-Clinical Supervisor (Instructor)
Joseph M. Nasser, BA, MA, English University of Toledo; Ph.D., SUNY at Binghamton-Assistant Professor
Mary Pizzente, BS, SUC at Geneseo; MS Ed., Syracuse-Assistant Professor
J. Wixson Smith, BS, SUC at Geneseo; MS, Rochester Institute of Technology-Assistant Professor

Records and Institutional Research

George E.D. Brady, BA, Ed.M., University of Buffalo-Dean
