### Fall Quarter (20101)

- **April 20-September 6, 2010**
  - Fall registration
- **September 6**
  - Day, evening, and online classes begin
- **September 11**
  - Saturday classes begin
- **September 12**
  - Last day to add/drop courses
- **September 13**
  - First day to withdraw online via SIS; receive a "W" grade
- **October 29**
  - Last day to withdraw online with a "W" grade
- **November 12**
  - Last day and evening classes
- **November 15, 16, 17, 18, 19**
  - Final exams
- **November 20**
  - Last Saturday and online classes
- **November 21-28**
  - Fall/Winter break
- **November 25-26**
  - Thanksgiving (University closed)

### Winter Quarter (20102)

- **October 19-November 29, 2010**
  - Winter registration
- **November 29**
  - Day, evening, and online classes begin
- **December 4**
  - Saturday classes begin
- **December 5**
  - Last day to add/drop courses
- **December 6**
  - First day to withdraw online via SIS; receive a "W" grade
- **December 17**
  - Last day and evening classes before break
- **December 18**
  - Last Saturday and online classes before break
- **December 19-January 2, 2011**
  - Holiday break
- **December 25-January 2, 2011**
  - University closed
- **January 3**
  - Day, evening, and online classes resume
- **January 8**
  - Saturday classes resume
- **February 4**
  - Last day to withdraw online with a "W" grade
- **February 18**
  - Last day and evening classes
- **February 21, 22, 23, 24, 25**
  - Final exams
- **February 26**
  - Last Saturday and online classes
- **February 27-March 6**
  - Winter/Spring break

### Spring Quarter (20103)

- **January 25-March 7, 2011**
  - Spring registration
- **March 7**
  - Day, evening, and online classes begin
- **March 12**
  - Saturday classes begin
- **March 13**
  - Last day to add/drop courses
- **March 14**
  - First day to withdraw online via SIS; receive a "W" grade
- **April 29**
  - Last day to withdraw online with a "W" grade
- **May 13**
  - Last day and evening classes
- **May 14**
  - Last Saturday and online classes
- **May 16, 17, 18, 19, 20**
  - Final exams
- **May 20**
  - Academic Convocation and Commencement Ceremonies
- **May 21**
  - Commencement Ceremonies
- **May 22-June 5**
  - Spring/Summer break
- **May 30**
  - Memorial Day (University closed)

### Summer Quarter (20104)

- **April 12-June 6, 2011**
  - Summer quarter registration
- **June 6**
  - Day, evening, and online classes begin
- **June 11**
  - Saturday classes begin
- **June 12**
  - Last day to add/drop summer courses
- **June 13**
  - First day to withdraw online via SIS; receive a "W" grade
- **July 4**
  - Independence Day (University closed)
- **July 29**
  - Last day to withdraw online with a "W" grade
- **August 12**
  - Last day and evening classes
- **August 15, 16, 17, 18**
  - Final exams
- **August 20**
  - Last Saturday and online classes

*Refer to the 2010-11 Registration Guide for specific registration dates and times, or the Student Information System (SIS) at http://infocenter.rit.edu.*
Course Number Index

RIT course numbering: Throughout this bulletin and in registration materials that are published quarterly, courses are generally referred to by their seven-digit registration number. The first two digits refer to the college offering the course. The third and fourth digits identify the discipline within the college. The final three digits are unique to each course and identify whether the course is noncredit (less than 099); lower division (100–399); upper division (400–699); or graduate level (700 and above).

Course numbering: RIT courses are generally referred to by their seven-digit registration number. The first two digits refer to the college offering the course. The third and fourth digits identify the discipline within the college. The final three digits are unique to each course and identify whether the course is noncredit (less than 099); lower division (100–399); upper division (400–699); or graduate level (700 and above).

0606-099 Co-op Preparation Course
This course is intended for third-year students. It introduces the concept of cooperative education and the services of the office of cooperative education and placement, and provides the student with basic job search skills; research and identification of potential employers; resume writing and correspondence; interviewing techniques. Ethics of the job search and expectations of employers will also be covered. This course is required for students in MMET programs before registering for co-op and using the services of the office of cooperative education and career services. Class 1, Credit 0

Packaging Science

0607-201 Principles of Packaging
An overview of packaging that includes the historical development of packaging, the functions of packaging, and the materials, processes and technology employed to protect goods during handling, shipment, and storage. A brief review of container types, package design and development, and research and testing are presented, along with information about economic importance, social implications and packaging as a profession. Class 3, Credit 3

0607-301 Engineering Design Graphics
A basic course in engineering drawing. Topics include, but are not limited to, lettering, line quality, use of instruments, free-hand sketching, orthographic projections, pictorials, sections, auxiliary views and dimensioning. Students learn how drawing is accomplished using a computer-aided drafting (CAD) application package. Drawing assignments required, concentrating on packaging applications. Class 3, Lab 2, Credit 4

0607-311 Packaging Materials I
The study of packaging materials from extraction through conversion and production, physical and chemical properties and uses. Emphasis is on metals and plastics used in packaging and on adhesives and other component materials. Recognized standard testing procedures are presented and students gain practical experience in the operation of various testing instruments, interpretation of results, and evaluation of properties and performance characteristics. (0607-201) Class 3, Lab 2, Credit 4

0607-312 Packaging Materials II
The study of packaging materials from extraction through conversion and production, physical and chemical properties and uses. Emphasis is on paper, paperboard, wood, glass, and propellants used in packaging applications. Recognized standard testing procedures are presented and students gain experience in the operation of various testing instruments, interpretation of results, and evaluation of properties and performance characteristics. (0607-201) Class 3, Lab 2, Credit 4

0607-321 Rigid Containers
A detailed study of primary packages that includes the history, manufacturing processes, characteristics, and applications for containers in direct contact with the product. Structural design, chemical compatibility, and suitability of container for intended use are analyzed for basic container types. Students practice structural design and testing of prototype containers. Primary emphasis is on rigid paperboard, glass, plastic, and metal containers. (0607-301, 311, 312, 341) Class 3, Lab 2, Credit 4

0607-322 Flexible Containers
Corollary course for 0607-321. Primary emphasis is on flexible paper, foil, plastic and laminated materials and on selected processing techniques. Topics to include folding cartons, heat seal technology and test methodologies, permeability theory, modeling and empirical testing. (0607-301, 311, 312, 341) Class 3, Lab 2, Credit 4

0607-341 Computer Applications
Application of computer techniques for packaging. Review and analysis of current computer software packages for packaging and packaging-related applications, including design, optimum sizing, prototyping, simulation, and specification preparation. (0607-301) Class 3, Lab 2, Credit 4

0607-401 Career Seminar
Career opportunities in packaging science methods and procedures used in obtaining co-op and entry-level positions will be reviewed. Topics will also cover career advancement within the corporate organization and job changes. (Required prior to co-op, second year.) Class 1, Credit 1

0607-420 Technical Communication
An introduction to the principles of effective written technical communication for the packaging professional. Topics include memos, business letters, summary activity reports, technical proposals, and research papers. Open only to packaging majors and required as part of the packaging programs writing skills certification process. A grade of C or better is required. (0502-227 and 0607-321, 322) Class 3, Credit 3
0607-431 Packaging Productions Systems
A study of package forming and filling, closing, product/package identification, inspection, and other machinery commonly used in packaging, plus consideration of handling and storage/retrieval systems. Students become aware of project management techniques, setting timelines, critical path, and resource evaluation. Quality issues are integrated into line and machinery designs. Students gain practice in setting up complete production lines for packaging various products. (0607-321, 322) Class 4, Credit 4

0607-432 Packaging for Distribution
An exploration of different shipping, storage, and use environments common to various products and packages. Structural design of shipping containers for product physical protection and methods for testing and predicting package performance are studied. (0607-321, 322) Class 2, Lab 4, Credit 4

0607-433 Packaging for Marketing
A study of the interrelationship between packaging and marketing, detailing how the retail consumer package can be used as a marketing tool. The course concentrates on a systematic approach to developing an optimum package for a given product to meet the demands of the retail market. Advertising, marketing demographics, and the impact of color upon packaging are considered. Students gain practice in the development of a complete package system. (0607-431, 432 and 0105-363 or equivalent) Class 4, Credit 4

0607-462 Packaging Regulations
A detailed study of federal, state, and local regulations that affect packaging. History of the development of packaging law; detailed study of recent packaging regulations, including the Fair Packaging and Labeling Act and the Poison Prevention Packaging Act; consideration of Food and Drug Administration regulation of packaging, including requirements for tamper-evident packaging; hazardous materials packaging regulations administered by the Department of Transportation; freight classifications, freight claims; weights and measures law; consumer product safety law; environmental law; and patent, trademark, and copyright law as they apply to packaging. (0607-431, 432) Class 4, Credit 4

0607-485 Principles of Shock and Vibration
A study of the factors involved in analyzing potential damage to packaged items resulting from impact or vibration forces. Students are expected to master basic mathematical and physical concepts and to use various pieces of testing equipment. (0607-432) Class 2, Lab 4, Credit 4

0607-499 Packaging Co-op
One quarter of appropriate work experience in the packaging industry. Two quarters of co-op experience are required. (0607-321, 322) Credit 0

0607-502 Packaging Materials
This course is the first in a three-course bridge program. It is intended to introduce non-packaging students to the manufacture, physical and chemical properties of basic packaging materials and the evaluation of materials. Materials to be covered will include fiber, glass, polymers, aluminum, and steel. (This course is part of the packaging minor and cannot be taken by packaging majors.) Class 4, Credit 4

0607-503 Packaging Container Systems
This course is the second in a three-course bridge program. It is intended to introduce non-packaging students to the study of primary packages which come in direct contact with products. History, manufacturing processes, characteristics, and application as well as evaluation of containers will be reviewed. (This course is part of the packaging minor and cannot be taken by packaging majors.) Class 4, Credit 4

0607-504 Concepts to Consumers
This course is the third in a three-course bridge program. It is intended to introduce non-packaging students to the role packaging plays from product and package conception and development, through development, marketing, manufacturing and distribution to the final consumer and ultimate disposal. (This course is part of the packaging minor and cannot be taken by packaging majors) Class 4, Credit 4

0607-520 Packaging Management
A study of packaging organization in the contemporary corporation and project management techniques available to the packaging manager. Organization theory is discussed and compared with typical industry practice. Other topics include PERT, value analysis and the impact of regulatory agencies upon packaging from a management standpoint. (0607-321, 322, or 504) Class 4, Credit 4

0607-524 Packaging Economics
A study of firm behavior with concentration on production costs and revenues. Market structures are analyzed in order to develop an understanding of how packaging fits into the general economy. Students are instructed in the use of basic economic reference materials for research purposes. A paper is required. (0607-321, 322, or 504) Class 4, Credit 4

0607-530 Packaging and the Environment
Consideration of packaging in a social context. Factors that enhance secondary use, recycling, recovery of resources and proper disposal are discussed. Package design in relation to solid waste disposal and materials and energy shortages are considered. Other topics of current social interest are discussed. Primarily a discussion class for senior students. Open to nonmajors. (0607-321, 322, or 504) Class 4, Credit 4

0607-531 Packaging Process Control
An advanced course designed to give packaging students instruction in design, process, and quality control techniques for packaging applications. Topics include the concepts of zero defects, computer applications for control charts, and acceptance sampling. (0607-321, 322, and 1016-319 or equivalent) Class 4, Credit 4

0607-536 Medical Products Packaging
A study of unique requirements for pharmaceuticals and packaging materials and containers for sterilized devices. Current sterilization techniques, impacts on material properties, and distribution requirements are considered for this specialized product group. FDA regulations for product development and manufacturing GMPs are addressed. (0607-321, 322, or 504) Class 4, Credit 4

0607-555 Export Packaging
This course consists of the study of particular forms and requirements for packaging for the export environment. Preservation techniques, international logistics, bulk intermediate containers, packing requirements, the export handling, transport and storage environment and related topics. (0607-321, 322, or 504) Class 4, Credit 4

0607-568 Food Preservation and Packaging
A study of food products, common methods of processing and preservation, impact on quality and nutritional value of the product, and the relationships with common packaging methods and distribution practices. (0607-321, 322, or 504) Class 4, Credit 4

0607-575 Technical Skills for Professional Sales
Introduction to a systematic problem-solving methodology in the sales profession. The core of the course explains the systematic 13 steps that lead to professional sales success. The rationale for each step is thoroughly explained, as are the procedures for implementing it. This course is required for all entering TM and D students. (0607-321, 322) Class 4, Credit 4

0607-577 Packaging Internship
This course number is used by students in the packaging science program for earning internship credits. The number of credits and the nature of on-location experience is determined by the student's adviser, subject to approval of the department. Credit variable 1–8

0607-590 Senior Thesis
An in-depth study of a selected phase of packaging that enables the student to make use of the knowledge and skills acquired during the course of the program. Credit 4

0607-596 Honors Packaging Science Independent Study
A supervised investigation within an advanced packaging science area of student interest. The student must be a registered CAST/RIT honors program student. Consent of the instructor and the department approval are required. Variable Credit 1–4

0607-598 Independent Study
Undergraduate research, in consultation with the instructor, on any packaging-related topic. Approvals are necessary from the department chair. (Undergraduate Research and Independent Study (0607-598 and 599) combined total credit allowed is limited to a maximum of 8 credits.) Credit variable 1–8

0607-599 Independent Study
Independent study, in consultation with the instructor, on any packaging-related topic. Approvals are necessary from the department chair. (Undergraduate Research and Independent Study (0607-598 and 599) combined total credit allowed is limited to a maximum of 8 credits.) Credit variable 1–8
Civil Engineering Technology

Introduction to CET, Freshman
0608-198
This course introduces students to the CET program in order to ease the college transition. Information is provided on cooperative education, technical electives, liberal arts core and concentration courses, and pre-registration procedures. Discussion of topics may include PE registration and NICET certification. Class 1, Credit 1

Introduction to CET, Transfer
0608-199
This course introduces students to the CET program in order to ease the transition from their previous colleges. Information is provided on cooperative education, technical electives, liberal arts core and concentration courses, and pre-registration procedures. Discussion of topics may include PE registration and NICET certification. Class 1, Credit 1

Engineering Graphics with CAD
0608-211
An introduction to engineering graphics as a means of communication in the technical fields. The course is laboratory oriented and provides the student with basic skills to create and edit professional 2D and 3D drawings with this comprehensive first course in the use of AutoCAD software for Mechanical, Architectural and Civil drawings. The course assumes no prior knowledge of engineering drawing or AutoCAD.

Problem Solving and Communications with Computers
0608-225
This course provides students with a solid foundation in the use of basic computer software programs that have common applications in future courses and in the workplace. The programs include word processing, spreadsheets, and public presentation software. The class structure includes instruction of new skills and practicing these procedures with laboratory problems.

Land Development Computer Applications
0608-303
Civil Engineers will learn to use AutoDesk Land Desk Development (including Civil Design and Survey Modules) software to create a Mortgage Survey Map from field notes, to create a Topographic Base Map from field notes, and to design a Site Plan that will include a building layout, roadway alignment, profiles, cross sections, grading, storm sewers, earthwork, and pond design.

Structural Loads and Systems
0608-304
An introduction to structural loading and load combinations. Calculation of structural loads on buildings in accordance with the New York State 2002 Code (NYS 2002), the International Building Code (IBC) 2000 Code, and the ASCE 7-02 Code. Structural loads to be studied include dead loads, live loads, snow loads, wind loads and seismic or earthquake loads. Selection of structural systems for resisting lateral loads in building structures. (0608-302, 0610-303) Credit 2

Structural Computer Applications
0608-305
Introduction to commercially available structural analysis and design software that is widely used in structural engineering practice. The software is used in the analysis of 2D and 3D trusses and frames, beams, slabs, and walls. (0610-302, 0610-303, 0608-380) Credit 2

Surveying I
0608-320
An introduction to surveying. Topics include note keeping, leveling, vertical and horizontal measurement, traverses, and topographic mapping. Students apply lecture lessons to assignments in the field using modern surveying equipment. (1016-204) Class 3, Credit 4, Lab 2

Materials of Construction
0608-330
A study of Portland cement concrete and asphalt cement concrete. Aggregates, Portland cement, and asphalt cement (each an ingredient in the concrete) are studied extensively. Mass-volume relationships are explored. Laboratory work focuses on testing aggregates, designing Portland cement concrete mixes, and testing Portland cement concrete cylinders using ASTM standards. Students also test mortar (ASTM standard) and asphalt concrete (NYS DOT standards) in the laboratory. Class 3, Credit 4, Lab 2

Surveying II
0608-340
An introduction to the fundamentals of route surveying and earthwork. Topics include simple horizontal curves, reverse curves, compound curves, transitional spiral curves, and vertical curves. Techniques for estimating earthwork volume quantities are covered, along with development of drawing profiles and cross sections. Mass-haul diagrams are explored. Laboratory exercises include designing and laying out various types of curves in the field. (0608-320/ Surveying I) Class 3, Credit 4, Lab 2

Elements of Soil Mechanics
0608-360
An introduction to soil mechanics and its application to problems encountered in civil engineering. Major topics include soil classification, strength and compressibility analysis, effect of water on soil characteristics, and modern and traditional soil improvement techniques. Laboratory tests commonly used to evaluate engineering properties of soils are performed. (0610-302, 0610-303, or equivalent) Class 3, Credit 4, Lab 2

Elementary Structures
0608-380
Applications of the principles of statics and strength of materials to the design and analysis of basic structural elements such as beams, T beams, columns, slabs, and footings. The available time is split evenly between structural steel (allowable stress design using AISC guidelines) and reinforced concrete (strength design using ACI code). Design and analysis of steel connections are covered. (0610-302, 0610-303) Class 4, Credit 4

Applied Mechanics of Materials
0608-404
Basic strength of materials and statics are reviewed. Advanced topics are covered to include stress and strain, Mohr’s circle concept, transversely loaded members, statically indeterminate problems, Euler’s equations and column design principles. (0610-302, 0610-303) Class 3, Recitation 2, Credit 4

Hydraulics
0608-420
A study of principal physical and mechanical properties of liquids, hydrostatic pressure and forces; pressure-measuring devices; buoyancy and flotation; principles of kinematics and dynamics; Bernoulli Law; concept of momentum. Flow of liquids in closed conduits, and introductory principles of piping systems design; pumps and pump selection; flow of water in open channels and introduction to their design. (Physics, 0610-302, 0610-303) Class 3, Credit 3

Hydraulics Laboratory
0608-421
An experimental study of principal physical properties of liquids and major laws of fluid mechanics. Operating various laboratory equipment and devices along with concurrently taking 0608-420, Hydraulics, for principal theoretical studies of physical and mechanical properties of liquids, hydrostatics, fluid kinematics and dynamics. Class 3, Credit 1

Elements of Building Construction
0608-422
Elements and details of building construction, both residential and commercial, are explored. The course does not focus on design, but rather on specific building components, and on how these components work together to create a functional building. Some of the topics include: foundations, wood light frame, heavy timber frame, steel, concrete, masonry, glass, roof, curtiling wall systems, and interior finishes. The role of building codes in design and construction is introduced. Class 4, Credit 4

Water and Wastewater Transport Systems
0608-432
A brief overview of surface and groundwater sources. Hydraulic design of sewers, storm drains, and potable water systems, including piping and pumping systems, storage, and ancillary facilities. (0608-420) Class 1, Recitation 1, Credit 2
0608-438  Principle Treatment Water and Sewer
An introduction to water and wastewater treatment, interpretation of ana-
alyzed physical, chemical and biological water quality parameters associated
with the design and operation of treatment processes. Fundamental principles
and applications of physical, chemical and biological processes employed
in water and waste-water treatment and the analysis of waste assimilative
capacity of streams are introduced. (1011-272, 276, 0608-420, 0608-432) Class 3,
Credit 3, Lab 2

0608-444  Mechanical Equipment for Building
A presentation of mechanical and electrical equipment used in both residential
and commercial building construction. The course investigates HVAC, plum-
bling, and electrical systems/equipment with an emphasis on function rather
than design. Heat loss, psychrometers, duct sizing, and refrigeration systems
are among the topics covered. Class 2, Credit 2

0608-460  Construction Equipment
The fundamentals of equipment characteristics, uses, and earthwork pro-
ductivity are explored. The course investigates excavators, loaders, scrapers,
off-highway trucks, bulldozers, and other earth-moving machines, as well as
cranes. Students gain practice in machine selection and equipment fleet assem-
bly using productivity, operating costs, and owning costs as criteria. Credit 2

0608-470  Timber and Design Construction
Discussion of the properties of structural lumber including grades, sizes and
design properties. Design of beams, columns, trusses, plywood diaphragms,
shear walls, and glued-laminated timber. The provisions of various building
codes are investigated, and the specification of the American Forest and Paper
Association is followed. A comprehensive group design project is assigned
and some computer work using a spreadsheet program is involved. (0608-404)
Class 4, Credit 4

0608-480  Groundwater Hydraulics
Groundwater movement and engineering applications. Topics include con-
duction dewatering, groundwater remediation, flow-net analysis, flow
analysis to wells and trenches, design of groundwater collection systems,
pump selection, and groundwater's interaction with engineered structures.
Application of groundwater software. (0608-420) Class 4, Credit 4

0608-482  Stormwater Management
Presents the concept of the hydrologic cycle and the evaluation of its com-
ponents. Course concentration on the analysis of stream and surface water
hydrology, management of stormwater runoff, practical engineering proce-
dures, and hydrologic software. (0608-420) Class 4, Credit 4

0608-485  Hydraulic Structures
Analysis and design of engineered systems in lakes and streams. Topics may
include drainage channels, erosion protection, bridge piers and scour, dam
spillways and ancillary structures, docks, breakwaters, harbor structures, and
roadway systems. Many of these hydraulic systems will be evaluated using
USCOE and USDOT design manuals. Approximately one half of the course
work involves the application of various software in analysis and design.
(0608-420, 0608-432) Class 3, Recitation 2, Credit 4

0608-490  Structural Analysis
An introduction to loads, and the analysis of statically determinate and inde-
terminate structures by classical and modern techniques. The types of struc-
tures covered include beams, trusses, and frames which are loaded in the plane
of the structure. Topics include introduction to cables and arches, influence
lines and the effect of moving loads, determination of the degree of indetermi-
nacy, approximate methods (including the Portal Method), moment distribution,
and an introduction to matrix methods. Some computer work using a
popular structural analysis software is involved. (0608-404) Class 4, Credit 4

0608-496  Reinforced Concrete Design
Design of members and frames of reinforced concrete. Topics include prin-
ciples of structural design; loads; properties of concrete and reinforcement;
design of slabs, beams, columns, and footings. Emphasis is on the use of the
ACI code, and a comprehensive group design project is assigned. Some computer
work is involved. (0608-303, 305, 404, 490) Class 4, Credit 4

0608-497  Structural Steel Design
Design of members and frames of structural steel and their connections.
Topics include principles of structural design, loads, types of steels, tension
members, columns, noncomposite and composite beams, beam-columns, col-
umn base plates, and simple bolted and welded connections. The use of the
AISC LRFD specification is emphasized and a comprehensive group design
project is assigned. Some computer work is involved. (0608-303, 305, 404, 490)
Class 4, Credit 4

0608-499  Civil Tech Co-op
One quarter of appropriate work experience in industry. (0606-099) Credit 0

0608-500  Labor Relations
An introduction to the fundamentals of labor laws as well as the understand-
ing that good workplace relations depend upon interpersonal skills on a one-
on-one basis. Topical legislative and regulatory subjects include the Fair Labor
Standards Act, National Labor Relations Act, Davis-Bacon Act, Americans
with Disabilities Act, Civil Rights Act and other requirements of the work-
place. In addition, time is devoted to an understanding of conflict resolution,
sexual harassment, age-in-hiring, family leave, and other managerial require-
ments and considerations that make the workplace effective and productive.
Course content applies to conduct in engineering offices, construction firms,
and public works agencies and authorities. Several speakers from open shop
and union backgrounds share their views and experiences with the class. The
assumption is that graduates of the program will assume managerial posi-
tions. Class 2, Credit 2

0608-509  Cost Estimating
An introduction to direct cost estimating for construction projects. The esti-
mating techniques covered include quantity take-off, labor productivity, and
pricing (labor, material, and equipment). Drawings, sketches, and specifi-
cations are used as a basis for developing quantities involving site work,
concrete, masonry, steel, and carpentry. Students also gain experience using
Timberline Precision Estimating, an application software package used as a
tool in the development cost estimates. (0608-422) Class 4, Credit 4

0608-510  Design of Water Treatment
Principles of water treatment plant design. The course emphasizes the compo-
nents of common municipal treatment works, although some industrial treat-
ment processes are also covered. (0608-420, 0608-435) Class 2, Credit 2

0608-511  Design of Wastewater Facilities
Principles of wastewater treatment plant design, conceptual and hydraulic
design of activated sludge and trickling filter plants are studied. Tertiary
treatment facilities, such as nitrogen and phosphorous removal are discussed.
Process, plant design, and construction elements are stressed. (0608-432, 0608-
438) Class 1, Recitation 2, Credit 2

0608-514  Land Use Planning
The environmental and social aspects as well as the engineering and cost
considerations of land-use planning are covered. Topics include are zon-
ing concepts, master plans, subdivision regulations and design criteria, flood
plains, environmentally sensitive areas, wetlands, other planning and control
tools, solar access planning, and urban revitalization. Students are involved in
an independent project consisting of a concept design for a subdivision or other
land-use project. Extensive use is made of field trips and attendance at appro-
priate meetings or work sessions. (0608-211, 220, 320, 340, 432) Class 4, Credit 4

0608-525  Civil Engineering in Resource Recovery
and Waste Management
An introduction to civil engineering aspects of dealing with resource recovery
and “waste” management, on source reduction and resource recovery. Topics
covered are the history of the problems, societal reaction and legislation, mini-
mizing, and recovering “wastes.” Emphasis is on those aspects in which the
civil engineer plays a role such as municipal solid waste landfills and hazard-
ous waste permanent storage facilities, land application of biosolids, compost-
ing, and environmental protection projects, including the “brownfields” pro-
gram. Use is made of lectures, reading materials, outside speakers, field trips,
and certain projects. A section of the course focuses on international aspects
of resource recovery and waste management. (0608-438) Class 4, Credit 4

0608-527  Soil Mechanics and Foundations
A study of physical, mechanical and engineering properties of soils; methods
of determination of bearing capacity; stress distribution within soil mass and
settlement; spread footing analysis and design; lateral earth pressure and
retaining walls analysis and design; pile foundation analysis and design prin-
ciples and slope stability; (0608-360, 404, 0608-528 Soil Mechanics Laboratory,
must be taken concurrently) Class 3, Credit 3

0608-528  Soil Mechanics Laboratory
The soil mechanics laboratory is to be taken concurrently with 0608-527.
Exercises include tests in internal friction by direct shear, unconfined compres-
sion, triaxial compression, and consolidation. Credit 1, Lab 2
This course exposes students to the fields of highway, airport, and rail engineering. The areas of administration, planning, design, construction, maintenance, and operation are covered. After the introductory material is presented, stress is placed on specific skills needed in these fields, including highway, rail and airport standards; geometry and alignment; drainage; earthwork; safety standards; and structures. Ample field exposure to all elements is part of the formal structured program. Each student is required to perform an independent project consisting of the design of a section of highway. (0608-303, 0608-340) Class 3, Credit 4, Lab 2

This course works in conjunction with Transpiration Engineering, providing detailed engineering knowledge on asphalt and Portland cement concrete pavement design. Included with the theoretical knowledge will be the development of, and practice in, the necessary design skill. The course includes the design of new pavements, and also addresses the very active programs in pavement recycling, bridge, and pavement rehabilitation, and strengthening. Problems are attacked in a practical manner, utilizing the expertise of national organizations and state highway departments involved in this work. (0608-330) Class 4, Credit 4

This course includes a fundamental overview of contract law, followed by the application of this material in the contracts for construction. Subsequently, the student is exposed to construction specifications. Substantial use is made of actual documents such as those of the New York State Department of Transportation, the Construction Specification Institute and trade standards such as ANSI, ASTM, and others. Students are required to develop and assemble a mock-up set of contract documents. Arbitration, design-build, and partnering are discussed. Class 2, Credit 2

A treatment of legal and ethical aspects of the profession; review of codes of ethics and current professional problems. Features several guest speakers representing different segments of the civil engineering technology field. Class 1, Credit 1

An introduction to construction management. Topics include the various project delivery systems for building construction, along with planning, project organization, bonds, insurance, change orders, submittals, and contract documents. CPM scheduling is covered in detail. Students gain experience using Primavera Inc’s Suretrak, a Windows-based application software package used for construction project planning and scheduling. (0608-509, 0608-422) Class 4, Credit 4

Study of the basic principles of engineering dynamics. Topics include kinematics of particles, force, mass, and acceleration, work and energy, force impulse and momentum, and an introduction to vibrations and structural dynamics. Applications to practical engineering problems are emphasized. (0608-404, 0608-490) Class 4, Credit 4

A supervised investigation within a civil engineering technology area of student interest. Consent of the sponsor and departmental approval are required. Students are limited to a maximum of four quarter credit hours of independent study projects and two sections in any quarter, plus a maximum of eight quarter credit hours of independent study credits earned toward degree requirements. Credit 1–4

This course provides first-year students an opportunity to develop skills necessary to succeed in the ECT Engineering Technology Program. Through interactions in a small group environment, students will make friends with other students in their major, create a stronger bond with RIT, and develop a working relationship with their academic adviser. The students will become more knowledgeable about the ECT Engineering Technology disciplines, career options, and ethical issues Students are required to successfully complete both quarters of ECT ET FYE. (0608-505, 0608-508, 0608-509, 0608-510, 0608-511) Class 3, Credit 4, Lab 2

This course is a continuation of ECT ET FYE I and provides first-year students an opportunity to develop skills necessary to succeed in the ECT Engineering Technology Program. The ECT Engineering Technology First Year Enrichment Course (ECT ET FYE) will focus on providing you with proven strategies to enhance your personal, academic and professional success and facilitate your transition to the ECT ET and RIT community. (Students are required to successfully complete both quarters of ECT ET FYE.) (Upon completion of ECT ET FYE I and II the student will fulfill the wellness graduation requirement.)

An introduction to DC circuit analysis techniques. Topics include resistance with circuit techniques of Ohm’s Law; current and voltage division; simplification of series, parallel, series-parallel circuits, bridge and ladder networks. Kirchhoff’s Laws, Thevenin’s, Theorem, Mesh analysis. (Corequisite 1016-230) Class 2, Lab 2, Recitation 2, Credit 4

This course provides first-year students an opportunity to develop skills necessary to succeed in the ECT Engineering Technology Program. The ECT Engineering Technology First Year Enrichment Course (ECT ET FYE) will focus on providing you with proven strategies to enhance your personal, academic and professional success and facilitate your transition to the ECT ET and RIT community. (Students are required to successfully complete both quarters of ECT ET FYE.) (Upon completion of ECT ET FYE I and II the student will fulfill the wellness graduation requirement.)

A continuation of Circuit Theory I. This course continues the development of circuit analysis and design techniques including Thevenin, Norton, and Superposition Theorems and Nodal analysis. Inductance and Capacitance are introduced and transient circuits are studied. An introduction to AC circuits is included. (0609-214) Class 2, Lab 2, Recitation 2, Credit 4

A continuation of Circuit Theory II with emphasis on the characteristics and analysis of AC circuits. Including the topics of reactance, impedance, AC power and power factor, resonance, maximum power transfer, frequency, and bandwidth. (0609-215 C or better) Class 2, Lab 2, Recitation 2, Credit 4

Continuous-time and discrete-time linear, time-invariant, and causal systems are examined throughout the course. Theoretical concepts covered are: the Fourier representation of a periodic waveform; the Laplace transform; convolution; signal sampling; and the z-transform. MATLAB is presented and used extensively. (0609-216, corequisite 1016-304) Class 3, Credit 4, Recitation 2

Topics include power concepts, magnetism, electro-magnetic force, fields, armature, commutators, rotors, stators, brushes, starters, controllers, DC machines, AC motors, alternators, single-phase and three-phase dynamos, three-phase circuits, phasors, transformer properties, isolation, efficiency and voltage regulation. (0609-202 or 0609-216 or 0609-411) Class 3, Lab 2, Credit 4

An introduction to electronic circuits using semiconductor diodes and bipolar junction transistors. Emphasis is placed on device characteristics and specifications, biasing circuits, transistor modeling and applications in small signal amplifiers. Note: This course has been renumbered; originally 0609-203. (0609-202 or 0609-216) Class 3, Lab 2, Credit 4

A continuing course in the analysis and design of electronic circuits. Emphasis will be on the characteristics, operation, and biasing of both insulated gate field effect transistors and the use of small signal parameters. Students are introduced to frequency response of circuits, differential amplifiers and power electronics, including class A, B, and D amplifiers. (0609-360 or 0609-203) Class 3, Lab 2, Credit 4

The operational amplifier is covered in detail. A wide range of its application are explained and explored, including many amplifiers and comparators. DC and AC characteristics are studied. Frequency responses of RC and op-amp circuits are covered. (0609-361 and 1016-231) Class 3, Lab 2, Credit 4

This course applies the concepts of circuits and electronics to basic analog communication circuits for amplitude and frequency modulation. Topics studied are RF amplifiers, Fourier Analysis, AM and FM transmission and reception, phase-locked loops, synthesizers, oscillators, and DS and SSB communication systems, antennas and EM wave propagation. (0609-362) Class 3, Lab 2, Credit 4
0609-403 Advanced Circuit Theory
An introduction to advanced circuit analysis techniques, including signal decomposition by Fourier Series, circuit characterization in the plane using Bode straight line approximation or polezero plots, Laplace transform methods for solution of circuit transients, and investigations of active circuit stability. (1016-304, 0609-333, 0609-202 or 0609-216 or equivalent with Psice or other simulation software) Class 4, Credit 4

0609-404 Control Systems I
Closed-loop control systems are analyzed with respect to their stability, steady-state accuracy, and transient response. The design of compensation to improve system performance is included. (0609-403, 1016-304) Class 3, Lab 2, Credit 4

0609-407 Career Orientation
This course is an introduction to the cooperative educational placement process at RIT, the programs in the department, and RIT resources. Topics include engineering technology vs. engineering, review of resources available at RIT, the co-operative education placement process, the ethical expectations of employers for co-op students, and RIT during a job search. (Third-year student in Electrical Computer or Telecommunications Engineering Technology during the current academic year.) Class 1, Credit 1

0609-408 Transmission Lines
Development and application of the general transmission line equation starting from the distributed lumped LC model. Topics include the propagation of electromagnetic waves in a coaxial line; voltage, current and impedance; graphical methods for analysis; transmission lines as circuit elements. (1016-304, 0609-202 or 0609-216, 0609-403) Lecture 3, Lab 2, Credit 4

0609-410 Patents and Trade Secrets
This course explores the legal characteristics and limitations of intellectual property rights protected by patents and trade secrets through study of relevant statutes, court decisions, and inventor behavior. The course is appropriate for anyone who anticipates involvement in the creation or management of intellectual property rights. Note: A party’s legal rights depend upon their unique and specific factual situation. This course does not provide legal advice or direction. (Third-year status or permission of instructor) Credit 4

0609-411 Electrical Principles I
A service course offered to non-electrical majors studying in the technical disciplines. Topics covered include basic electrical circuits, network theorems, power and energy concepts, power factor correction, and basics of transformers. The laboratory is an integral part of the course, where the experiments complement lecture material. (1016-204 or equivalent) Class 3, Lab 2, Credit 4

0609-412 Electrical Principles II
An introductory survey course in the basics of analog and digital electronics. Analog topics include basic semiconductors, transistor circuits and operational amplifiers. Fundamental digital logic concepts include an introduction to combinational and sequential logic. Various transducers and associated circuits are introduced. (0609-411) Class 3, Lab 2, Credit 4

0609-413 Applied Microprocessors
Applications of a contemporary microcontroller will be used to teach engineering technology students digital logic, assembly programming and microprocessor interfacing. This course is intended as a service course for non-electrical majors who have not taken digital fundamentals. The labs for this course use an assembler terminal emulator and download software. (0609-411) Class 3, Lab 2, Credit 4

0609-414 Basic Electrical Principles
This is a basic study of important electrical concepts for both AC and DC circuits. Topics covered include AC/DC circuit theory, single and three-phase power distribution, power factor, line losses, efficiency, AC motors and transformers, energy costs, wiring methods, instrumentation, and circuit protection. (1016-232) Class 3, Lab 2, Credit 4

0609-416 Automated Data Acquisitions
This course is an introduction to automated data acquisition and analysis, the LabVIEW software package is introduced and used to perform data acquisition, analysis of data, and control of instrumentation. (0609-202 or 0609-216 or 0609-411) Class 3, Lab 2, Credit 4

0609-426 Analog Simulation Seminar
Analog Simulation Seminar is an introductory course in schematic entry simulation, and simulation results interpretation of analog circuit designs. The analog simulation tool will be used to perform DC, time domain, and frequency domain analysis of both passive and active analog circuits. (0609-202 or 0609-216) Class 1, Lab 2, Credit 2

0609-442 Advanced Electronics
Operational amplifiers and special purpose integrated circuits are used in signal generation, regulation and active filtering. The use of discrete power devices (SCRs, diacs, and triacs) and optoelectronic components (LEDs and photodiodes) are studied. (0609-362 or equivalent) Class 3, Lab 2, Credit 4

0609-499 Electrical Technology Co-op
One quarter of appropriate work experience in industry. (0609-362, 0618-438, 0609-407, or permission of adviser) Credit 0

0609-511 Laser Technology
This course in laser technology focuses on laser sources, laser drive electronics, temperature control and, laser optics. In the laboratory students create real images using a laser and electronics they design. Motion control and image data synchronization techniques are discussed and utilized in creation of a working printer. Laser safety training will precede lab work. Class 3, Lab 2

0609-534 Communication Systems I
Analog Modulation schemes and systems, and the Fourier Series are reviewed. The Fourier Transform is introduced. The noise figure, noise temperature and signal-to-noise ratio of a system are introduced. Phase-locked loop concepts and applications to communications systems and an introduction to digital communication signals and systems are presented. (0609-363-333) Class 3, Lab 2, Credit 4

0609-547 Digital Signal Processing
A practical applied course in the processing of signals using digital techniques. Starts with foundational concepts in sampling, probability, statistics, noise fixed and floating point number systems and describes how they affect realworld performance of Digital Signal Processing (DSP) systems. Fundamental principles of convolution, linearity, duality, impulse responses, and discrete fourier transforms are sued to develop FIR and IIR digital filters and to explain DSP techniques such as windowing. In the corequisite lab, students get an integrative experience writing DSP code that executes in real-time on DSP hardware. (1016-304, 0609-333) Class 3, Lab 2, Credit 4

0609-550 Power Systems I
Basic elements of a power system, energy sources, substation configuration, load cycles, balanced and unbalanced three-phase circuits, power factor correction, transmission line configurations and impedance, voltage regulation of transformers, and the per unit system are studied. Load flow and economic operation are introduced. (0609-337 or 0609-411 and permission of instructor) Class 3, Recitation 2, Credit 4

0609-552 Power Systems II
Load flow and economic operation of power systems are studied. The symmetrical component method of three-phase circuit analysis is used for fault analysis. Power system relay protection, supervisory control, power quality and system stability are introduced. (0609-550) Class 3, Recitation 2, Credit 4

0609-554 Electronic Optic Devices
Lecture topics to be covered include: light measurement and units, optics and optoelectronic transmitters and drivers. Radiometric and photometric units, black body radiators, optical flux and intensity of LEDs will be calculated using numerical and definite integration. Reflection and refraction from mirror and lens surfaces will be studied. LEDs and laser theory of operation and applications will be analyzed. Laboratory topics to be covered include: fiber optic construction, splicing, connector application and polishing, testing, bending and OTDR, theory and advanced operation. (0609-362) Class 3, Lab 2, Credit 4

0609-580 Senior Project
Selected independent study of design project by electrical technology students with the approval of the department. Approval must be granted first week of fall or winter quarter for spring quarter registration. Class/Lab as required, Credit 4
Mechanical Engineering Technology

Introduction to Materials Technology
This is a survey course of engineering materials and how these materials are matched to the service requirements of components. Emphasis is on metals; their structure, properties, heat treating, and applications. (0610-304 concurrently) Class 3, Credit 3

Design Dimensioning and Tolerancing
This course focuses on dimensioning and tolerancing of parts and assemblies. Geometric dimensioning and tolerancing is emphasized throughout lectures, CADD exercises, and physical measurement of parts. The course is project-based where the students examine an assembly to produce free-hand sketches, 3D models of the assembly and its parts, 2D prints, and a bill of materials. Emphasis is placed on proper dimensioning and modeling techniques. (0617-220, 262) Class 3, Studio 2, Credit 4

Introduction to Statics
An introduction to the analysis of static structures covering free-body diagrams, forces, moments, vectors, equilibrium, friction, and analysis of structures and machine members. Applications are drawn from mechanical and civil engineering technology. (1017-211) Class 4, Lab 1, Credit 4

Strength of Materials
Students study how forces and moments affect axial, shearing, and bending stresses and deflections of structural and machine members. The relationships between stress and strain, for both axial and torsional loading are explored. Beams, shafts, bolted or pinned joints and columns are analyzed and designed based on stress and deformation. Combined stress states are analyzed, including using Mohr’s circle. Applications are drawn from the fields of mechanical and civil engineering technology. (A grade of C or better in 0610-302) Class 4, Lab 1, Credit 4

Materials Testing
This laboratory course deals with the equipment, instrumentation and ASTM Standard Test Procedures used to perform physical tests on various materials, and the preparation of laboratory reports. (0610-211 concurrently) Class 0, Lab 2, Credit 1

Pneumatic and Hydraulic Systems
This course involves the study of the basics of fluid power. Areas of study are pressure viscosity, turbulence, flow, thermal properties, and displacement. Hydraulic/pneumatic components such as pumps, actuators, valves accumulators, lines, directional controls, sealing devices servomechanisms, hydraulic fluids, and fluid containers are studied. (0610-302 concurrently) Class 3, Lab 2, Credit 4

Computational Methods for Engineering Technology
Students develop proficiency in solving simultaneous equations, numerical differentiation and integration, and curve fitting of data using mathematical and computational techniques. These applications are evaluated critically and students develop the ability to select the most appropriate methodology for a given problem. Students critically evaluate the solution results while working on project assignments in teams. (Corequisite 1016-231) Class 2, Credit 1
0610-410 Applied Mechanics II
The basic concepts of statics and strength of materials are briefly reviewed. Additional strength of materials topics are introduced with the view of developing basic analytical procedures for the preliminary design of engineering structures and machine components. Topics include combined stress, transformation of plane stress, principal stresses and maximum shear stress, Mohr’s circle, thin walled pressure vessels, columns and structure stability. The fundamentals of kinetics and kinetics of particle motion are developed, including the study of Newton’s Laws of Motion, energy methods, and impulse and momentum. Offered as a service course to electrical engineering technology and electrical/mechanical technology students. (0610-408, 1016-232 concurrently) Class 3, Recitation 1, Credit 4

0610-416 Materials Technology
The interrelation of properties, structure, processing, and performance for non-metallic materials is studied. Emphasis is placed on materials and process selection for design application. Failure mechanisms are discussed, along with ways to minimize the effects of these mechanisms. (0610-211, 1011-208) Class 4, Credit 4

0610-432 Computers in Mechanical Technology
This course reviews the use of fundamental operations and features of the Microsoft Windows operating system. A set of projects are assigned to utilize the most commonly used features of Word, Excel, and PowerPoint and to introduce other features which are important to engineering analysis and related report generation. The basic capabilities of MathCAD are utilized to perform calculations to generate graphs and to solve equations, as well as to organize and document solutions to a variety of engineering analysis problems. Class 1, Lab 2, Credit 2

0610-440 Applied Thermodynamic I
This is the first course in the first and second laws of thermodynamics and their applications. Thermodynamic properties of fluids including ideal gases and pure substances are studied. Thermodynamic processes and applications of thermodynamic principles to steam cycles and refrigeration cycles. (1016-232 or permission of adviser) Class 3, Recitation 2, Credit 4

0610-441 Thermodynamics and Heat Transfer
The first and second laws of thermodynamics and their applications. Thermodynamic properties of fluids, including ideal gases and pure substances, are studied. Introduction to heat transfer by conduction, radiation, and convection. Selection of heat exchangers. (1016-232 or permission of adviser) Class 3, Recitation 2, Credit 4

0610-442 Heat Transfer
The first course in heat transfer. The theory and application of the fundamentals of heat conduction, convection and radiation. The design and application of heat transfer apparatus. (0610-440 0610-460) Class 3, Lab/recitation 2, Credit 4

0610-451 Vibration and Noise
A study of the basic concepts of vibration and noise. Designing equipment for survival in vibration and shock environments. Methods of reducing noise in machinery structures. Environmental tests for vibration and shock. Methods of vibration and noise analysis will be demonstrated. (1016-304, 0610-405) Class 4, Credit 4

0610-460 Applied Fluid Mechanics
The fundamentals of fluid statics and dynamics are studied. This includes the principles and applications of fluid statics, fluid kinematics, fluid kinetics, the energy conservation principle, dimensional analysis and fluid momentum. Also covered are laminar and turbulent flow in pipes and products, fluid machinery, fluid meters, and lifting vanes. (1016-304) Class 3, Recitation 2, Credit 4

0610-465 Thermo Fluid Lab
Students perform laboratory experiments in thermodynamics, fluid mechanics and heat transfer. Students will do a group project involving the design of an experiment, its instrumentation, method of test, data analysis and final report presentation. Special emphasis is placed on report preparation and computer-aided data reduction. (0610-440, 460) Class 1, Lab 3, Credit 3

0610-499 Mechanical Engineering Technology Co-op
One quarter of appropriate work experience in industry. (0606-099) Credit 0

0610-506 Machine Design I
The static theories of failure and mechanical fatigue analysis are reviewed. These concepts are applied to the selection, analysis, and design of power transmission shafts, power screws, fasteners, springs, and spur gears. The design and selection of both hydrodynamic and rolling element bearings are studied. (0610-403) Class 3, Studio 2 Credit 4

0610-508 Machine Design II
The study of the machine design principles in a design team environment to complete the design, build, and test a product or mechanical system. Group projects from industry or school laboratory are emphasized. (0610-405, 506) Class 3, Lab/Project 2, Credit 4

0610-509 Product Design
Integrates product development and design processes with establishing a need for the product; developing concepts; generating and evaluating the product concepts; developing specifications and design reviews; considering production, service and retirement. Special emphasis is placed on team work (concurrent engineering), determining customer requirements (quality function deployment), design for manufacturing and assembly (DFMA) and quality/ reliability. Students learn how to reduce material and part costs, assembly time and the number of parts in the product. Class 4, Credit 4

0610-512 Computer Integrated Mechanical Design
The use of computer simulation and finite element method in solving mechanical design problems, such as stress concentration, dynamic impact, thermal stresses. Industrial projects are emphasized. (0610-405, 506) Class 2, Lab 3, Credit 4

0610-515 Plastics Processing Technology
Various methods used to manufacture plastics products. Topics include compression molding, rotational molding, extrusion, injection molding, blow molding, and thermoforming. (Fourth-year status) Class 4, Credit 4

0610-516 Plastic Product Design and Materials Selection
The study of design guidelines for plastics products based on the interrelationships between product design, the material selected, the manufacturing process selected, and the tooling to be used. (0610-515 or permission of the adviser) Class 4, Credit 4

0610-517 Product Ideation and Concept Solution
This course introduces the principles utilized in the early phase of the design process. Topics include the process of generating and formulating an idea, developing a Voice of the Customer (VOC) survey, utilizing a House of Quality (HOQ) matrix for developing a product requirements document, brainstorming and ranking concepts through the Plough Concept Selection Matrix technique, among others. Patenting and intellectual property issues will be discussed and selected ideas will be evaluated against patent searches. This is planned to be the first in a series of three courses that will result in the completion of a product utilizing these methods. (Third-year status or permission of instructor) Class 4, Credit 4

0610-518 Development and Design of New Products
This course is designed to offer the student an experience of what it is like to develop an idea into a real product. In this second of three courses the student will be responsible for taking the ideas generated in previous courses and developing that into a working design. This design process will require the student to perform a design feasibility study, develop a product specifications document, and be responsible for defining a preliminary manufacturing and assembly feasibility assessment. CAD will now be the “tool-of-choice” where all work will be documented and handled with a standard release procedure that parallels industry protocols. It is expected that this product phase will require the implementation of many foundation principles from previous courses. (Third-year status or permission from instructor) Class 3, Credit 4

0610-519 Product Realization
This course is intended to offer the student an experience of what it is like to develop an idea into a real product. In this third of three courses the student will be responsible for taking a project that is in the final design phase (from the Development and Design of New Products course) and provide the support necessary to develop models and working prototypes. The student will be responsible for applying Design, Manufacturing, and Assembly analysis along with other appropriate disciplines such as Value Analysis and Process control. The results of these disciplines will guide the student into developing a fabrication process that will actually produce products at a reasonable quantity to sell. The student will also be responsible for setting up test procedures and evaluating the product for robustness according to a Product Specification Document. (Third-year status or permission from instructor) Credit 4
0610-523 Instrumentation and Characteristics in Plastics
This course is intended for fourth or fifth-year students interested in understanding fundamental instrumentation used for the characterization of plastics. Major emphasis is on interplay between analytical and experimental methods in the solution and development of plastic products. In addition to theory and basic principles, the instrumentation and apparatus necessary for methods are examined in polymer permeability testing, and characterization by differential scanning calorimeter (DSC), thermogravimetric analysis (TG A), Fourier transform infrared spectroscopy (FT-IR), and mechanical testing in an environmental chamber. Credit 4

0610-530 Instrumentation
The design and use of force, torque, pressure, flow, temperature, acceleration, velocity, and displacement instrument transducers. Laboratory experiments demonstrate calibration and set-up techniques and analysis of data. Principles of uncertainty, dynamic response, signal conditioning and computerized data acquisition are explained. (0609-411, 1016-304) Class 4, Credit 4

0610-540 Applied Thermodynamics II
The application of thermodynamics to vapor power cycles, internal combustion engines, compressors, refrigeration, air conditioning, psychrometrics and combustion processes are studied. Emerging technologies such as distributed generation, cogeneration and total energy plants are covered. (0610-440) Class 3, Lab 1, Credit 4

0610-542 HVAC System Engineering
Principles and applications of refrigeration, air conditioning, comfort heating and ventilating are studied. Thermodynamics of air conditioning processes, psychrometrics, moisture calculations and load estimating and operating costs are covered. (0610-440, 460) Class 4, Credit 4

0610-543 Energy Management
Technical, management and cost aspects of energy conservation. Technical aspects of reducing energy consumption in utilities, processes, buildings, heating, air conditioning and ventilation systems. Special topics such as furnace efficiency, heat recovery, heat pumps, pumping and piping, and architectural considerations. (0610-542 or permission of instructor) Class 4, Credit 4

0610-555 Land Vehicle Dynamics
Dynamic modeling of land vehicles, including tire mechanics and suspension and steering systems. Both cars and motorcycles will be analyzed, modeled and tested. Students will develop computer models and do physical testing for real vehicles. (0610-405) Class 3 Lab 2, Credit 4

0610-570 Robust Design
The fundamental principles of robust design are developed. The history of the robust design engineering methodology is presented. The concepts of the loss function, concept selection, parameter design and tolerance design are covered in detail. A structured design engineering methodology is taught with strict attention to the importance of linking engineering knowledge to Taguchi’s approach to designed experiments. Metrics and analysis techniques are developed to optimize the performance of product or process components in spite of the variability of their design, manufacturing or customer use environments. Specific attention is paid to a number of case studies to reinforce the students’ conceptualization of the methods and their focus on engineering of optimized products and processes. (Fifth-year student or department approval) Class 4, Credit 4

0610-596 Honors MET Independent Study
A supervised investigation within an advanced mechanical engineering technology area of student interest. The student must be a registered CAST/RIT honors program student. Consent of the instructor and department approval are required. Credit variable 1-4

0610-599 Mechanical Technology Independent Study
A supervised investigation within a mechanical technology area of student interest. Consent of the instructor and departmental approval are required. Credit 1-8

0610-630 Tolerance Design
This is a comprehensive course on the topics of analytical and experimental development of design and production tolerances. The course covers worst case and statistical tolerance analysis, 6 Sigma methods for tolerancing, Monte Carlo Simulation Sensitivity Analysis of systems, and Taguchi’s approach to tolerance design. Special emphasis will be given to developing tolerances for complex aggregations of technologies. System tolerance and cost balancing is covered in detail. The use of tolerance design in critical parameter management will be covered. Students will conduct a project in computer-aided tolerance analysis. (Permission of instructor) Credit 4

Telecommunications Engineering Technology

0614-250 Fundamentals of Audio Engineering
This four (4) credit course provides an introductory level study of the technology used in recording, production, and distribution of sound. Topics include Microphone design types; selection and application, Digital Recording: The Mixing Console and mixing techniques, introduction to Signal Processing equipment and associated techniques, an introduction to the concepts relating to Digital Audio Technology such as Sampling, The Nyquist Theorem, Alias Frequencies, Quantization, Dynamic Range, Compression and their applications will be covered. (1016-204, 1016-225) Class 4, Credit 4

0614-270 Introduction to Cable Networks and Technology
Like all providers of telecommunications services today, the cable industry has evolved over the decades to become an integral part of a dynamic and competitive industry. It has adopted and pioneered technologies and applications for delivery of various types of content from voice to multimedia. This course provides a technical overview of the architectures and technologies that have been employed during the first days of Community Access Television (CATV) to those used by Multiple Service Operators (MSOs) of today to offer voice, data, video, and wireless services. Credit 4

0614-271 Telecommunications Fundamentals
A survey of and introduction to the structure and regulation of the telecommunications industry. The basics of data communications, telephony, switching systems, ISDN, multiplexing and networks are introduced. Data communication components, codes and techniques are identified. Methods for selecting, implementing and managing a computer network or telephone system are reviewed. Class 4, Credit 4

0614-325 Introduction to Digital Audio Production
This four (4) credit course presents the fundamentals of the technology implemented in recording, editing, mixing and mastering audio. Pro Tools, by Digidesign, is the industry standard platform, as it is the most widely used application for music and post-production in today’s audio engineering environment. Topics include basics of digital audio, session creating, importing media, introduction to MIDI, and basic techniques in recording, editing, mixing and mastering. (0614-250) Class 4, Credit 4

0614-345 Intermediate Digital Audio Production
Provides an intermediate level of study of the technology used in recording, editing, mixing, and mastering audio. Pro Tools by Digidesign is the selected platform as it is the most widely used application for music and post-production in the world today. Students are introduced to core concepts and skills necessary to operate a Digidesign Pro Tools LE 7.4 system running large sessions with up to 48 tracks. Topics include optimizing host-based Pro Tools performance, control surface operation, managing session data and media files, recording MIDI and audio, working with templates and virtual instruments, editing and time-adjusting MIDI and audio, audio editing techniques, mixing, and automation. (0614-325) Class 4, Credit 4

0614-440 Management Topics for Engineering
This course provides future engineers with a sound foundation in business principles. It will encompass four main topics in one course: engineering economics, ethics, diversity, and project management with business principles covered as part of each topic. This topic will primarily be covered in one two-hour lab each week. The first half of the “traditional” lecture series will introduce and develop a keen understanding of core engineering economics. The second half of the course will introduce and develop business engineering ethics and the role of diversity in the workplace. (Third-year or higher, at least one co-op block, knowledge of a spreadsheet application like EXCEL, and knowledge of algebra.)
0614-450 Principles of Digital Video Processing for Networked Communications
This course will explore the creation, processing, and distribution of raw and compressed digital video formats over different communication networks such as wireless, cable, and fiber. The course will have a special emphasis on digital television applications such as DTV, HDTV, and IPTV. The course will also explore different video distribution network topologies and protocols for the Internet, cable, and enterprise networks for video conferencing. (0614-271 Telecommunications Fundamentals or instructor permission) Credit 4

0614-464 Voice Communication Systems
Voice is perhaps the most basic form of communication and modern networks must continue to support high-quality voice communication. This course examines the basic characteristics of voice in both the time and frequency domain and shows on-line how these characteristics affect the requirements of communication networks. Both analog and digital representations of voice signals are considered, including advanced voice coding (e.g., G.729) for wireless and VoIP systems. The course covers baseband and carrier-based transmission of voice as well as Real Time Protocol (RTP) for VoIP. Signaling protocols for call processing for both circuit-switched and packet-switched communication are also covered. This course is similar to 0614-465, but it has no associated laboratory course and it requires a research paper. Students may not take both this course and 0614-464 for credit. (0614-271) Credit 4

0614-465 Voice Communication Technology
Voice is perhaps the most basic form of communication and modern networks must continue to support high-quality voice communication. This course examines the basic characteristics of voice in both the time and frequency domain and shows how these characteristics affect the requirements of communication networks. Both analog and digital representations of voice signals are considered, including advanced voice coding (e.g., G.729) for wireless and VoIP systems. The course covers baseband and carrier-based transmission of voice as well as Real Time Protocol (RTP) for VoIP. Signaling protocols for call processing for both circuit-switched and packet-switched communication are also covered. Students may not take both this course and 0614-464 for credit. (0614-271) Credit 3

0614-466 Voice Telecommunications Lab
This course provides the laboratory component for material presented in 0614-465 and 0614-466. Day and evening sections are offered in sequence with offerings of course 0614-465. Distance learning sections are offered as an intensive weekend lab in conjunction with Distance Learning section 0614-464. Distance learning students must have completed either prerequisite prior to attending the scheduled RTP intensive weekend lab. On-campus day and evening students may register concurrently with on-campus offerings of 0614-465. Class 0, Lab 2, Credit 1

0614-475 Switching Technologies
This course covers modern and current switching, protocol, transmission, signaling, and transport concepts used in public and private telecommunications networks. Concepts in MPLS, GMPLS, Signaling System #7, SONET, optical, packet, and circuit switching fabrics are studied. Circuit Switching, Frame Relay and ATM are introduced for comparison. (0614-465 and 0614-466 or 0614-464, 0614-477) Class 4, Credit 4

0614-477 Networking Technologies
This course provides a practical study of voice and data communications from the point of the OSI seven-layer and the TCP/IP five-layer protocol model. Traditional circuit switched telecommunications as well as VoIP are studied. This course covers the operation of the lower four layers in detail by examining some of the foundation laws including Nyquist and Shannon as well as selected protocols. Emphasis is placed on data internetworking, local-area networking and wide-area networking. This course is a problem-based course in that students apply the learning to various computation and network mathematical problems. Lab work ensures a level of networking competency and provides reinforcement of concepts developed in the lecture. (1016-319, 1016-261, 0614-271 or permission of the instructor)

0614-479 Network Management
Modern telecommunication networks include powerful network elements that can be remotely configured and that collect a large amount of information about the status and performance of the network. Network management is the process of configuring, controlling and monitoring a network, usually from a remote location. This course provides both a general overview of network management and an in-depth study of network management using the Simple Network Management Protocol (SNMP). The course includes laboratory exercises using the facilities in the REDCOM Telecommunications Systems Laboratory. (0614-465/466 or 0614-464, 0614-477 or permission of the instructor) Credit 4, Class 3, Lab 2

0614-480 Introduction to Telecommunications Policy
This course provides an introductory overview of domestic and international telecommunications policy and issues with special emphasis on domestic policy, regulation and law. Current issues, trends and standards will also be discussed. The course starts with a basic definition of telecommunications and why policy, regulation/deregulation and law are important to understand. It then moves to the history of U.S. telecommunications development with emphasis on the regulatory environment and continues with discussions of current U.S. regulatory policy at the state and federal levels. Current sweeping changes in the regulatory and legal arenas and the move to a new U.S. and world model will be discussed. Credit 4

0614-483 Telecommunications Transmissions Systems
Fundamentals of transmission systems are introduced. Different types of transmission systems such as coaxial, fiber optic, microwave, and satellite systems are studied and compared. At the end of this course students will be able to apply transmission system theory to the analysis and design of copper, fiber optic, and wireless transmission systems. (0609-333, 1016-304) Class 3, Lab 0, Credit 3

0614-484 Telecommunications Transmissions Lab
Laboratory and applications experience with transmission system concepts and analysis is provided to complement the lecture material in 0614-483 Telecommunication Transmission Systems. Students will use circuit simulation software, spreadsheet software, and laboratory equipment to analyze, measure and characterize transmission system hardware components. (0614-483) (On-campus offerings allow concurrent registration in 0614-483) Class 0, Lab 2, Credit 1

0614-499 Telecommunications Engineering Technology Co-op
One quarter of appropriate work experience in a telecommunications-related industry. (0609-363, 0609-407, 0614-465 and 0614-466, 0614-477 or permission of academic adviser) Credit 0

0614-520 Fiber-optic Telecommunications Technology
An introduction to fiber optic telecommunications technology. Review of basic optics including ray, wave and quantum optics. Light propagation through multi-mode and single-mode fiber attenuation, dispersion and nonlinear effects. Introduction to optical components used in communications systems including light emitting diodes, laser diodes, photodiodes and passive optical components. Optical amplifiers and wave division multiplexing. Emphasis on reading and understanding manufacturers’ data sheets for fiber and optical devices. (0614-483 or 0609-408, 1017-212/222 and 1016-304) or equivalent courses) Class 4, Credit 4

0614-561 Telecommunications Network Engineering
Today’s telecommunications networks rely on timing and synchronization, Quality of Service and capacity engineering. This course studies current and next generation methods and practices in the implementation of the above mentioned topics with respect to carrier networks that handle real time and non-real time traffic. Routing protocols and layer 3 addressing are also covered with respect to IP networks. (0614-475, 0614-477, 1016-304; corequisite 0614-562) Class 3, Credit 3

0614-562 Telecommunications Network Engineering Lab
This course provides the laboratory experience to complement 0614-561 Telecommunications Network Engineering. IP-based voice switches and routers are configured and tested for interoperability between traditional voice, IP telephony, data and transport equipment. (Corequisite 0614-561) Lab 2, Credit 1

0614-574 Network Planning and Design
This course teaches the art and science of metropolitan and wide area network design for both modern delay (data) networks and traditional blocking (voice) networks; the greatest emphasis in on modern delay networks. Both qualitative and quantitative approaches are used as the student progresses through the network analysis, architecture and network design processes. This course is not appropriate for undergraduate RIT credit if the student has completed the graduate RIT course Network Planning and Design (0614-774) with an A or B grade within the past five years. (0614-561, 0614-562, 0614-473 or permission of the instructor. This is a fifth year undergraduate course.) Credit 4

0614-596 Honors Independent Study
This course allows upper-class telecommunications engineering technology honors students the opportunity to independently investigate, under faculty supervision, aspects of the telecommunications industry that are not currently covered in existing courses. Proposals for an honors independent study must be approved by the sponsoring faculty, the telecommunications engineering technology program chair and ECT-ET Honors Advocate. Credit variable 2–4

**Manufacturing Engineering Technology**

- **0617-220 Manufacturing Processes I**
  - This course will focus on the understanding and application of basic manufacturing processes. Students will be challenged to discover and learn how typical industrial piece parts and assemblies are constructed. Topics include material properties, powder metal processes, bulk deformation processes, metal removal processes, and sheet metal forming processes. 
  - Class 2, Credit 4

- **0617-262 Solid Modeling and Design**
  - This course introduces students to the engineering design process and solid modeling. Students learn visualization skills, parametric solid modeling and creation of engineering drawings which meet industrial drafting standards. Design projects are used to reinforce concepts and provide practical design experience. 
  - Class 3, Lab 2, Credit 4

- **0617-271 Fundamentals of Solid Modeling**
  - This course is intended for transfer students who have a background in a solid modeling package other than is used in 0610-220. Students will learn the fundamentals of Solidworks, in preparation for taking 0610-220. (Permission of instructor) 
  - Lab 2, Credit 1

- **0617-410 Computers in Manufacturing**
  - A course dealing with concepts in data acquisition and control and application of computers for manufacturing process integration. This course will introduce the concepts in digital and hexadecimal number systems, digital logic, parallel and serial communication, microcomputer architecture, sensors and actuators and real-time programming. Concepts in networking and distributed systems will also be introduced. Students will use C or C++ programming language to control experimental setups in the laboratory. (C or C++ Programming) 
  - Class 3, Lab 2, Credits 4

- **0617-420 Manufacturing Processes II**
  - This is the second of two courses that teaches manufacturing processes. The first covers basic traditional processes and this course goes on to cover what are commonly referred to as nontraditional manufacturing methods. Within this category are processes such as electrical discharge machining, water jet machining, photochemical machining, ultrasonic machining, lasers, plasma cutting, rapid prototyping, etc. This is a project-based course; the student will individually, or in a team, investigate one of the processes in depth, and how it is applied to a specific part. (0617-220) 
  - Class 4, Credit 4

- **0617-436 Engineering Economics**
  - A study of techniques required to make economic decisions. Topics covered in the course include cash flow analysis, present worth analysis, annual worth analysis, rate of return evaluations, benefit cost analysis, break even analysis, replacement analysis, bonds, the effect of tax on cash flows, and sensitivity analysis. 
  - Class 4, Credit 4

- **0617-440 Productions and Operations Management I**
  - This course in production and operations management focuses on operations terminology, operations strategy, design for manufacturing, project planning/control, value analysis, and statistical quality control. 
  - Class 4, Credit 4

- **0617-441 Production and Operations Management II**
  - This course is designed to provide the student with knowledge of the latest theories and practices of operations management employed by world class manufacturing organizations. Topics include TQM, MRP, JIT, lean manufacturing, six sigma, theory of constraints, work simplification and operations research. 
  - Class 4, Credit 4

- **0617-455 Introduction to Surface Mount Electronics**
  - This course will provide a thorough understanding of the technology, components, equipment, design and manufacturing process for surface mount electronics manufacturing. As an introductory course, it will provide students with a strong foundation needed for advanced work in surface mount technology (SMT). The laboratory demonstrations will provide the students an orientation and familiarization of the manufacturing equipment and process for printed circuit board assembly 
  - Class 4, Credit 4

- **0617-456 Advanced Concepts in Electronic Packaging**
  - This course deals with advanced topics in surface mount electronics packaging. Topics include: electronics packaging standards, single-chip and water level packaging technologies, advanced passive component technology, high density interconnection and microvias technology, thermal management, thermomechanical behavior of packaging, solder metallurgy and joint formation for packaging, failure modes, mechanisms and reliability testing. 
  - (0617-455)

- **0617-457 Electronics Packaging Lab**
  - This laboratory class will provide the hands-on training in surface mount electronics packaging. Students will learn to set-up and operate production scale equipment, understand process parameters and their influence and characterize the entire PCB assembly process. Lab experiments will also include analytical evaluation of raw materials such as solder paste viscosity, tackiness, wettability, component and board solder ability, solder balling, etc. 
  - Class 0, Lab 2, Credit 1

- **0617-460 Computer-Aided Design**
  - CAD is introduced as an integral part of the computer integrated manufacturing process. Basic concepts of CAD software and hardware, interactive graphics, CAD Applications, CAD Economics and the interrelationship of CAD and CAM are discussed. The course work gives the student the skills needed to create 3D Solid Models using a Parametric 3D Solid Modeling application. Emphasis is placed on laboratory work such as creating Solid Models and Assemblies containing Solid Models with limited view creation and dimensioning. 
  - Class 4, Credit 4

- **0617-470 Controls for Manufacturing Automation**
  - This course deals with the principles and application of programmable logic controllers (PLC). Topics include PLC hardware, programming and application of PLCs in a computer integrated manufacturing (CIM) environment. Students will also be exposed to man-machine interface (MMI) and PLC networks. 
  - (0609-411) Class 3, Lab 2, Credit 4

- **0617-471 Computer Numerical Control**
  - An advanced course in Computer Numerical Control. Emphasis is placed on machine language and computer aided parts program generation, tool path verification and program editing. Students create three axis programs for CAD, generate models, then modern their instructions to CNC machine tools to actually cut the finished part from raw stock. CAD/CAM integration and Product Lifecycle Management (PLM) concepts are presented. 
  - (0617-220 or 460) Class 2, Lab 2, Credit 4

- **0617-472 Tool Engineering**
  - The course teaches the principles of design for industrial tooling. The course discusses the concepts of jig, fixture, measurement, die and automated equipment design, engineering analysis and manufacture. Workplace locating, supporting and clamping systems are emphasized. 
  - (0617-420, 262) Class 2, Lab 2, Credit 4

- **0617-475 Computer Aided Manufacturing**
  - This course deals with the design and evaluation of manufacturing systems and the use of computers in support of integrated product design, development and manufacturing activities. Group technology, process planning, shop floor control, concurrent engineering and flexible manufacturing systems are the principal topics. Emphasis is placed on practice and experience. 
  - (0617-440, 470, 485) Class 3, Lab 2, Credit 4
0617-485 Robots in Manufacturing
This course deals with the technology and application of robots in a computer integrated manufacturing (CIM) environment. It will provide a thorough understanding of robotic hardware and software. The hardware aspects include robot configurations, drive mechanisms, power systems (hydraulic, pneumatic and servo actuators), end-effectors, sensors and control systems. The software aspects deals with the various methods of textual and lead through programming. Digital interfacing of robots with other CIM components such as programmable logic controllers, computer-controlled machines, conveyors, etc., will be introduced. Robotic cell design and the socio-economic impact of robotics will also be discussed. A strong laboratory hands-on training component is part of the course. (0610-302 or permission of instructor) Class 3, Lab 2, Credit 4

0617-499 Manufacturing Technology Co-op
One quarter of experience in a job related to the student’s major. (0606-099) Credit 0

0617-510 Process Design
A project-oriented capstone course to enable students to design, develop, implement, and test a computer-integrated manufacturing (CIM) Cell. The students are required to work in teams and identify suitable product and process concepts that fit into a CIM environment. The students must demonstrate successful operation of the cell to receive a satisfactory grade. (0617-475 must be taken immediately prior to this course) (0617-436, 440, 441, 485) Class 1, Lab 4, Credit 4

0617-530 Special Topics in CIM
This course is designed as a technical elective offered to enable students to pursue subjects of special interest to themselves. Subject matter is limited to the area of CIM. Students will be given the opportunity to present a proposal outlining their goals for the course. Upon approval by the course instructor students will be given wide latitude to investigate their CIM area of interest to a breadth and depth not available in a structured course. Students will be expected to work in areas and on problems of concern to the manufacturing industry. Acceptable projects will include those undertaken in response to specific requirements of an industry unit, individual research or research in conjunction with faculty or fellow students, library research, intercollegiate competitions, or investigative or original (innovative) papers suitable for publication. Credit 2–5

0617-596 Honors Manufacturing Engineering Technology Independent Study
A supervised investigation within an advanced manufacturing engineering technology area of student interest. The student must be a registered CAST/ RIT honors program student. Consent of the instructor and the department approval are required. Variable credit 1–4

0617-599 Independent Study
A supervised investigation within a manufacturing technology area of student interest. Consent of the instructor and department approval are required. Credit 1–8

Computer Engineering Technology

0618-231 Technical Programming I
The first course of a three-course sequence in developing software for the solution of technical applications. Specifically, procedure-oriented programming of the C++ language will be employed to develop software solutions for engineering and scientific applications. Object-oriented programming will be introduced by the use of predefined objects. Class 3, Lab 2, Credit 4

0618-232 Technical Programming II
The second course of a three-course sequence in developing software for the solution of technical applications. Specifically, object-oriented programming of the C++ language will be employed to develop software solutions for engineering and scientific applications. Fundamental data structures (arrays, pointers, records) will be introduced. (0618-231) Class 3, Lab 2, Credit 4

0618-233 Technical Programming III
The final course of a three-course sequence in developing software for the solution of technical applications. Specifically, class-oriented and advanced data types (lists, strings, stacks, queues, trees, and graphs) will be studied and employed to develop software solutions for engineering and scientific applications. These applications will include an introduction to numerical methods (i.e., root finding, bisection method, secant method, numerical integration, trapezoidal rule, and Simpson’s rule). (0618-232) Class 3, Lab 2, Credit 4

0618-301 Digital Fundamentals
A first course in digital fundamentals. Topics include binary arithmetic, Boolean algebra, logic gates, Karnaugh mapping, sequential and combinational logic circuits, and an introduction to state machines. (0618-213 or equivalent) Class 3, Lab 2, Credit 4

0618-303 Microcomputers
An introductory course involving the hardware and structure of a basic microprocessor based microcomputer. Emphasis will center on the hardware characteristics, design considerations, trouble shooting skills and interfacing principles. (0618-301 and a formal, structured programming course) Class 3, Lab 2, Credit 4

0618-339 Microcontrollers
An advanced course in interfacing microcontrollers to sensors, actuators, and input/output devices. Topics include: the measurement of light and temperature levels, interfacing issues related to keypads, LCD panels and LED display modules, and concepts of analog to digital conversion, pulse width modulation and serial communications. It is assumed that the student is already familiar with assembly and system language programming of microprocessors. (0618-301 and 0618-303) Class 3, Lab 2, Credit 4

0618-371 Special Topics
Special Topics is an experimental lower-division course intended as a means for offering innovative topics not reflected in the current curriculum. Class, Credit variable

0618-438 Digital Systems Design
An advanced course in the design techniques of complex combinatorial and sequential logic circuits CMOS and dynamic electrical properties and input/output structures will be analyzed. The internal structure of FPGAs (Field-Programmable Gate Array) and CPLDs (Complex Programmable Logic Device) will be discussed. Emphasis is on the use of systematic design procedures for implementing combinatorial and sequential designs using VHDL. (Co-requisite: (0618-303, 0609-360) Class 3, Lab 2, Credit 4

0618-439 Principles of Electronic Design Automation
An introductory course in the VHDL Hardware Descriptive Language (VHDL). The course provides an in depth coverage of the language and describes the VHDL design environments that will be used for synthesis and verification. Topics include the behavioral, dataflow, and structural modeling of both combinational and sequential logic, design methodologies, synthesis and optimization. An IEEE-1076 standard VHDL development system will be extensively utilized to synthesize VHDL for PLD, CPLD and FPGA applications. (0618-438, 231 or a formal, structured programming course) Class 3, Lab 2, Credit 4

0618-499 Computer Engineering Technology Co-op
One quarter of appropriate work experience in a computer related industry. (0618-339, 0618-233, 0609-407 or permission of academic adviser) Credit 0

13 | College of Applied Science and Technology
0618-502 Verilog Design I
An introductory course in the Verilog Language. The course provides an in-depth coverage of the language and describes the Verilog design environments that will be used for synthesis and verification. Topics include the behavioral, data-flow, and structural modeling of both combinational and sequential logic, design methodologies, synthesis and optimization. Verilog development system will be extensively utilized to synthesize FPGA applications. (0618-438, and a formal, structured programming course) Credit 2

0618-503 Verilog Design II
An advanced course in the Verilog Language. The course provides an in-depth coverage of the language and describes the Verilog design environments that will be used for synthesis and verification. Topics include the behavioral, advanced testbenching techniques, file IO, memory models, clock generation models, self-checking testbenches, regression testing, and synthesis techniques—designing for speed and cost. Project-based labs targeting the Spartan II family of Xilinx FPGAs. Advanced FPGA techniques, delay lock loops, IO configuration, constraints and static timing, and gate simulations. Complex RTL Design project using hierarchy and multiple designers on a project. Configuration management and coding standards. (0618-502)

0618-561 Embedded Systems Design I
A beginning course in embedded systems architecture. This is the first in a three-course sequence. System design principles are developed and analyzed. Formal modular assembly language and C are studied for embedded systems. Focus is on monitors operation and peripheral interfacing. Students design and debug hardware and software to augment an existing system. (0618-438, 439 and a formal, structured C or C++ programming course) Class 3, Lab 2, Credit 4

0618-562 Embedded System Design II
This is the second of a three-course embedded systems sequence. General embedded hardware and software principles are expanded upon as students develop hardware and software for a 32-bit soft-core microprocessor-based system. A hardware description language is used for extensive hardware development and debug. Various performance enhancement techniques such as dynamic memory allocation, hardware accelerators and cache memory are studies in detail. Interfacing to peripherals including, but not limited to, VGA, CODEC, LCD display and PS/2 is implemented in the laboratory assignments. (0618-561 with a C or better) Class 3, Lab 2, Credit 4

0618-563 Embedded System Design III
This is the final of a three-course embedded systems sequence. Students expand upon the 32-bit microprocessor based system they built in 0618-562. More complex peripherals, cache principles, multi master systems, arbitration and resource sharing, and bus standards are covered in detail. (0618-562 and a formal, structured C or C++ programming course) Class 3, Lab 2, Credit 4

0618-580 Senior Project
A course that provides the student an opportunity to pursue a supervised design project of mutual interest to him/herself and the sponsoring faculty. The design project must be within the computer engineering technology discipline. (Fifth-year status in the computer engineering technology program) Credit 4

0618-596 Honors Independent Study
This course allows upper-class computer engineering technology honors students the opportunity to independently investigate, under faculty supervision, aspects of the computer industry that are not currently covered in existing courses. Proposals for an honors independent study must be approved by the sponsoring faculty, the computer engineering technology program chair and ECT-ET Honors advocate. Credit variable 2–4

0618-599 Independent Study
This course allows upper-class computer engineering technology students the opportunity to independently investigate, under faculty supervision, aspects of the electrical industry that are not currently covered in existing course. Proposals for an independent study must be approved by both the sponsoring faculty and the computer engineering technology program chair. Credit variable 2–4

0618-599 Embedded System Design II
An advanced course in the Verilog Language. The course provides an in-depth coverage of the language and describes the Verilog design environments that will be used for synthesis and verification. Topics include the behavioral, advanced testbenching techniques, file IO, memory models, clock generation models, self-checking testbenches, regression testing, and synthesis techniques—designing for speed and cost. Project-based labs targeting the Spartan II family of Xilinx FPGAs. Advanced FPGA techniques, delay lock loops, IO configuration, constraints and static timing, and gate simulations. Complex RTL Design project using hierarchy and multiple designers on a project. Configuration management and coding standards. (0618-502)

0619-221 Basic Computer Applications
This course teaches students basic computer applications used in the service industry. Emphasis is on word-processing, spreadsheets, and computer-developed presentations. Students have projects and tests in each of the three areas. Class 2, Credit 2

0619-320 Global Standards in the Service Industry
Globalization of commerce carries with it increasing global standards. This course examines different kinds of standards, especially those related to international trade and commerce. Students are expected to identify situations in which standards are mandated, identify the relevant standards, and then describe the applications of the appropriate standards. The course also looks at current issues and emerging trends in standards. Credit 4, Class 4

0619-322 Service Management in a Global Economy
This course is an introduction to the basic concepts of Service Quality Management and the service economy in the United States and world-wide. A large proportion of the U.S. economy is based on purchase of services, including information, hospitality, business, education and training, financial, design, consulting, and legal services. Demand for quality service experiences is expanding globally. Developing and managing appropriate high-quality, personalized service offerings is critical to business success. Concepts of designing, implementing, monitoring, and evaluating quality in service delivery will be explored. Credit 4

0619-410 Assessing Service Quality
Excellence in customer service is the hallmark of success in service industries. But what exactly is service excellence? This course surveys the various services related to measuring customer satisfaction. It examines those issues that cause service quality problems and what service organizations can do to solve these problems and improve service. Guidelines for developing questionnaires are discussed, with emphasis on issues of reliability and validity. The role and mechanisms associated with focus groups are addressed. (0116-301 or permission of instructor) Class 4, Credit 4

0619-426 Technology in Service Systems
Predicting the future…adapting to change…connecting and communica- ting…lifelong learning….A fundamental societal revolution has begun which is changing the nature of work and leisure. Explore the emerging and future work worlds, consumer trends, and the technologies that are changing the way society works. Emphasis is on technologies impacting the food, nutrition, hotel and travel service industries. Technologies explored may include those associated with communication, information retrieval, imaging, marketing, employee training, product quality, production customization, customer service, security, health, entertainment and customer interface, as time permits. Student teams will chart the flow of product/service systems and identify technologies to enhance them to meet customer needs. Individual (personal) and team (business) websites will be constructed. Class 4, Credit 4

0619-470 Leadership in Service Culture
The leadership and executive development course prepares you to assume leadership and management roles as you prepare to enter the work force. Principles, applications and exercises specifically designed around hospitality and tourism industry examples will enable you to more effectively progress as future leaders and managers in the hospitality and tourism industries. You will also begin to establish your own personal leadership and management style based on examples and exercises. The course makes extensive use of lectures, laboratories and industry expertise. (Junior status or permission of instructor) Class 4, Credit 4

0619-480 Human Resource Management
This course presents hospitality and service management students with a complete repertoire of human resource management (HRM) issues. It addresses all of the current HRM topics and is designed to enhance the student’s ability to deal effectively with HRM topics. The laboratories attempt to develop conceptual thinking abilities. The course also focuses on HRM training techniques—an area of specific concern in the hospitality industry. By emphasizing various training techniques and practices, highly skilled graduates can immediately employ one of the hospitality industry’s most valuable tools-training to aid in the retention and management of human resources. The course makes extensive use of lectures and laboratory exercises. Class 4, Credit 4
Nutrition Management

0621-221 Food Identification and Assessment

The focus of this course is on experiencing essential aspects of important food categories. The experiences will include tasting and touching the foods, describing the sensory characteristics of each, observing aspects of production and preparation, and some hands-on opportunities for cooking. The food items will be related to the Food Pyramid guidelines of the USDA and to current and anticipated food trends and issues. Projects, videos, and field trips will be used to maximize student learning. Because foods are rarely eaten alone, information on pairing of various food items with each other and with wines will be included. Food categories will include fruits, vegetables, meats, seafood, dairy products, oils, chocolate, breads, pasta, grains, and rice. Common specifications, safety issues, cultural connections, and information on processing will be covered as appropriate to each category. Class 4, Credit 4

0621-225 Principles of Food Production

Introduction to the basic principles involved in the preparation of high-quality food. Topics include product identification, market forms, varieties availability, composition, standards of quality, preparation techniques, and function of foods and ingredients. Standard methods of preparation will be introduced. Professionalism in appearance and work habits, self-organization, sanitation, management, teamwork, and techniques for efficient food production are stressed. Uniform and professional knife and pastry kits are required. Class 2, Credit 4, Lab 4

0621-310 Commodity Market Analysis

An overview of the commodity futures and options market. Special emphasis is placed on the fundamental economic factors affecting agricultural and energy-based futures prices. The economic principles and policies supporting hedging and speculating strategies are analyzed. Students are introduced to technical price analysis, basis analysis and global economics of foodservice commodities. Class 4, Credit 4

0621-314 Sanitation and Safety

Survey of micro-organisms of importance to the food industry; emphasis on causes and prevention of food spoilage and poisoning. Responsibilities of management to provide and establish safe working conditions and policies; discussion of current problems confronting the industry as a result of recent legislative developments as they relate to safety and health. Class 2, Credit 2
0621-315 Foodservice Marketing
Provides students with a business-to-business perspective of the marketing of products to the foodservice industry. Also provides an understanding of distribution systems and foodservice marketing environments. Both macro and micro marketing environments and issues are explored. The class considers various marketing mix elements as they relate to segments of the foodservice industry. Case studies and readings are utilized to give students realistic opportunities to analyze and develop practical solutions. Class 4, Credit 4

0621-318 Food and Beverage Marketing
An introductory course involving the basic principles involved in the management of food and beverage operations. Topics include food and beverage marketing, menu planning, nutrition principles, staffing, cost, production and preparation procedures, service and design. Both commercial and non-commercial food operations will be discussed. Class 4, Credit 4

0621-321 Menu Planning and Merchandising
The menu is the main focus of the foodservice operation, and its relationship to efficient operation, merchandising, theme and customer satisfaction is considered. Truth in menu issues, layout, copywriting, standardized recipes and pricing techniques are explored. A wide variety of menus are critiqued. The student plans and produces a menu for a theme restaurant and also creates a cycle or other menu for a specific customer and situation. Class 2, Credit 2

0621-324 Food Purchasing
Principles of foodservice purchasing; selection and procurement, distribution systems and the purchasing function and activities. Topics include measurement, foodservice purchasing terminology, organization, specifications, recipe standardization, recipe conversion, optimal purchasing practices and purchasing principles for major food commodity categories including government and industry standards. Class 2, Credit 2

0621-331 Restaurant Operations
Entry-level production and service skills for line positions currently used in the hospitality industry. Laboratory assignments are in the operation and maintenance of Henry's, a full-service restaurant modeled after industrial, hotel and restaurant operations. Students are assigned to defined job descriptions in production and service on a rotating basis. (0621-225, 314) Class 3, Credit 6

0621-334 Integrated Service Management
Students will develop management, marketing and customer service skills appropriate for current and future hospitality industry environments. Laboratory assignments are designed to develop front of the house operation and management skills, including the adaptation of new technologies to food service businesses. Henry's, a full-service restaurant modeled after industrial, hotel and restaurant operations, is the laboratory setting. Students will be asked to define roles needed to operate and market Henry's Restaurant and to create individual professional goals and objectives that they will meet during the quarter. Class 4, Credit 4

0621-410 Food Processing and Quality Assurance
An introduction to traditional and contemporary food processing methods with emphasis on applications to foodservice operations. The effect of these technologies on the storage life and sensory qualities of the products is examined along with common modes of quality loss in foods. Students are introduced to industry-standard quality assurance measures. Class 4, Credit 4

0621-416 Product Development
Students will explore their creativity through instructor and student-planned experiments involving sensory and objective evaluation of food quality, recipe development, problem-solving, experimental design, written and oral communication of research. Individual research projects focus on assessing new ingredients or technologies, creating new products and/or evaluating the marketability of new products. (0621-225) Class 2, Credit 4, Lab 4

0621-424 Food and Labor Cost Control
Deals with industry-related problems. Combines classroom study of the fundamental principles of costs and controls as applied by management, with on-location application of financial practices and specialized methods and techniques utilized in solving cost and management problems in the hotel/motel and foodservice industries. Class 4, Credit 4

0621-499 Cooperative Education
Career-related work experience. Employment within the hospitality and service management industry monitored by the office of cooperative education and career services and the hospitality and service management program. Designed for the student to experience progressive training on the job as related to the academic option. Freshmen begin co-op the summer following their first-year studies. Graduation requirement. Credit 0

0621-501 Wines of the World
An introduction to wines: history, points of origin, production, handling techniques, flavor characteristics and commercial value. Includes guest speakers and sampling of products. Lab fee required. Class 2, Credit 2

0621-502 Decorative Techniques
Introduction to techniques of food decoration with emphasis on elementary and advanced pastry-bag work, design and color in the creation of special-occasion cakes, molding of gum paste, marzipan, and pulled-sugar decorative items, and the art of molded and piped chocolate pieces. Students design and create four projects representing these skills. Lab 4, Credit 2

0621-504 Wines of the World II
A further exploration into wines: history, places of origin, production, handling techniques, flavor, characteristics, and commercial value. Includes guest speakers and sampling of products. Lab fee required. (Wines of the World I) Class 2, Credit 2

0621-506 Wine Connoisseur
The technical aspects of wine production and marketing are presented by a variety of experts in their field. Topics include: the annual crop cycle in the vineyard, Terroir—the effects of environmental factors on the grapes and wine, a comparison of European and American wine production techniques, blending and aging of wine—including oak barrels vs. stainless steel vats, the wine business, wine trends and wine futures. Lab fee required. (Wines of the World II) Class 2, Credit 2

0621-508 Beers of the World
An introduction to Beers: History, the brewing process, distribution systems, production, flavor characteristics, partnering with foods, handling and serving techniques. Beers produced from the major beer brewing centers of the world will be tasted and compared with similar beers from different countries. The way alcohol is processed in the human body is considered as well as the economic impact of brewing and distributing beer will be explored. A lab fee is required. Class 2, Credit 2

0621-509 Foods of the World
This course is an introduction to many different cuisines from around the world. An exploration of indigenous ingredients, dishes, growing conditions. Customs and special food techniques of various cultures will be addressed. A lab fee is required. Class 2, Credit 2

0621-512 Design and Layout of Food Service Operations
Evaluation of different foodservice facilities with regard to design and layout. Review of layouts in operating full-service facilities and suggestions for innovative ways to utilize the space to its fullest potential. (0621-331 or permission of instructor) Class 2, Credit 2

0621-513 Wine and Food Pairing I
This course is an introduction of food and wine pairing. Students will experience “What Grows together, goes together,” and discover how regional wines and food pairings have a natural affinity for one another. Students will design their own four course menu. This course experience includes sampling of food and wine, cooking demonstrations and guest speakers. Lab fee required. Class 2, Credit 2

0621-525 Restaurant Management
Students develop entry-level management competence through the operation of a full-service restaurant with beverage operations. Students rotate through various management positions for exposure to four major areas: planning, organization, leadership, and control. Use of the school’s computer lab in planning is an integral part of the course. Class 2, Credit 6

0621-554 Senior Career Seminar
A variety of courses are offered under this course number. Titles will appear in the course listings each quarter. The course may be taken more than once as the topics change. Contact the department for a course description of a specific title. Credit 1–4
Hotel and Resort Management

0622-200 Hotel Operations
Introduction to the distinctive nature of hotel operations through identifying the standard functions that interrelate to produce the whole hotel service. The hotel's principal product, the guest room, is given detailed study as well as the various forms of business organization that comprise the accommodation sector of the hospitality industry. Class 4, Credit 4

0622-205 Hospitality Industry Real Estate
Provides the student with insight into the development of hospitality real estate and the elements that contribute to decisions on construction, development and expansion of properties. Attention is given to site selection and development processes as they relate to the commercial hotel, resort, food-service and travel locations. Contributing elements of market conditions, financial feasibility, construction needs and property sizing are explored. Class 4, Credit 4

0622-210 Hotel Marketing and Sales Management
Introduces the student to the application of the marketing concepts in hotel operations and the visitor industry. Included are conventions and visitors bureaus, hotels, and convention centers. This is accomplished by defining the marketing function, situation analysis, marketing organization, sales office work flow, customer contact methods and servicing procedures generally practiced in the hotel industry. Class 4, Credit 4

0622-310 Resort Development and Management
Gives the student an understanding of how resort and hotel properties are developed as tourist and business destinations. Focus is on the planning, development, operation, design, and special needs of recreational surfaces and financing of such properties. As part of this study, students select a specific type of property and analyze the methods used to develop it. Class 4, Credit 4

0622-315 Facility and Property Management
Provides the student with information on the maintenance and engineering discipline in hotel and resort facilities. Management and administrative practices, life safety concepts, energy monitoring, computer applications and budgeting in the realm of hotel maintenance are studied. Class 4, Credit 4

0622-355 Financial Management for Hotels
Presents hospitality and service management students with accounting and finance concepts that are essential in hospitality management. Hotel accounting principles, income statement analysis, industry-accepted ratio analysis, operational forecasting and budgeting strategies are examined. (0101-301 or permission of instructor) Class 4, Credit 4

0622-420 Hospitality Law
This course introduces the student to contract, tort and agency law as they relate to the hospitality industry. The course covers the legal rights and responsibilities of patrons and owners as they relate to public accommodations, providers of transportation and livery and common law. The course focus is on civil rather than criminal law. A considerable amount of case work is anticipated in this course and this should enable students to develop a preventative attitude toward liability and assumption of responsibilities. Class 4, Credit 4

0622-510 Convention Management
Provides the student an opportunity to explore the function of conventions from the point of view of the convention center manager. Consideration is given to various methods used to sell a location to a planner and the servicing of large groups. Also included are the identification of vocabulary and the role of the meeting planner as a force in the marketing of conventions. Trade shows, floor layouts and local codes affecting conventions also are reviewed. Class 4, Credit 4

0622-534 Space Tourism Development
This course extends the boundaries of the traditional hospitality and tourism planning and management. Students will explore the unusual and often unique factors of hospitality and tourism management in an earth orbit habitat (like the International Space Station) or other celestial bodies (like moon or an asteroid). Students will investigate market demand for tourism and business and compare them with the plans and objectives of organizations already developing space tourism. Students will make recommendations for the future development in one or more areas in the earth terrestrial habitation and tourism. Class 2, Credit 2

0622-540 Risk Management
An examination of the environment in which the hospitality manager functions. Focus is on the management of risk as part of operations. The implications of tort and contract law specifically relating to the industry are under-taken, and an explanation of how persons may avoid exposure to risk is made. This includes forms of insurance, hold-harmless clauses and management decisions on the importance of coverage given different degrees of risk. Class 4, Credit 4

0622-550 Casino Management I
This course gives students an advanced introduction to the casino environment. After satisfactorily completing this course, students will have a strong working knowledge of casino operations and the interrelationship of the casino with other major departments (lodging, food, beverage, entertainment, etc.). Topics include the history of gaming in America, recent trends that impact growth and acceptance rates of legalized gaming, the rules and protection of table games, the various types of "slots," the role of computerized information systems, layout and design within a casino operation, surveillance in a casino environment, casino accounting and back office procedures, consumer behavior, casino marketing strategies, gaming regulations, and economic impact issues. Class 4, Credit 4

0622-552 Casino Management II
This course gives students an advanced introduction to the casino environment. After satisfactorily completing this course, students will have a strong working knowledge of casino operations and the interrelationship of the casino with other major departments (lodging, food, beverage, entertainment, etc.). Topics include casino marketing strategies, gaming regulations, and economic impact issues. Class 4, Credit 4

Travel and Tourism Management

0623-206 Distribution Systems
A functional approach is used to describe the market distribution channels for service industry inputs and products/services. The role of retail and business travel agents, tour wholesalers and operators, and specialty channelers such as meeting planners, convention bureaus and corporate travel buyers, food processors, producers, distributors and transportation suppliers are discussed. Various economic models are examined in order to analyze the pricing structure associated with the selling and distribution of service industry inputs and outputs. The service philosophy and its application to distribution in the travel/tourism and foodservice industries are explored. Class 4, Credit 4

0623-375 Travel Destinations
Geographers are concerned with the physical, political and cultural composition of the world. Geography is a field in which the concerns of both the social and physical sciences converge in the study of specific places. Touristic geography applies these themes to the travel, tourism and transportation industries. It is also concerned with the social, cultural and economic environmental aspects of places. The identification of major touristic locations as attractors of people's leisure time, energies and interests is the basis of this course. Class 4, Credit 4

0623-410 Meeting and Exposition Management
Introduces the student to the field of meeting management. We take the point of view of a corporate or independent meeting planner in examining the various phases of meeting planning. Students also examine the formulation of goals and how meetings may be evaluated from both a return on investment perspective and the satisfaction of the attendees. Computer programs are investigated and tested, and a variety of budget strategies are examined. Class 4, Credit 4

0623-418 Corporate Travel Planning Marketing
This course focuses on the specific goals and objectives required to develop control and evaluate guidelines established by corporate travel departments and how to market these programs to the organization. Three major orientations of corporate travel are examined: purchasing travel services, the corporate travel communications process and the evaluation and acceptance of globalized corporate travel service. Emphasis will be placed on the forging of partnerships within these relationships. Class 4, Credit 4

0623-438 Tourism Planning and Development
Examines the processes involved in planning and developing a tourist destination, including the required infrastructure. A major focus is on benefits and impacts associated with tourism development, as well as the strategies for maximizing benefits and minimizing adverse effects. Class 4, Credit 4
0626-332 Negotiation and Conflict Management
Examines the negotiation process within the hospitality/tourism industry by exploring the nature and sources of interpersonal conflict and its dynamics. Collaborative versus competitive approaches to managing conflict are discussed. Role-play situations are used to differentiate and reinforce negotiation strategies. Class 2, Credit 2

Human Resource Management

0626-234 Interviewing Techniques
A practical approach to interviewing techniques with emphasis on role plays and case studies. Coverage includes employment, disciplinary, counseling, and performance appraisal interviews. Class 4, Credit 4

0626-239 Human Resources Administration
An introduction to human resource administration including an overview and discussion of employment, equal employment opportunity, job evaluation, training, performance appraisal, compensation, benefits, personnel planning, labor relations, and other related topics. Class 4, Credit 4

0626-333 Compensation Administration
The course is designed to acquaint the student with the practical problems of employee compensation. Topics covered include compensation issues and theory, compensation as a motivator, wage and salary levels and structures, individual wage determination, and indirect compensation. (0626-239) Class 4, Credit 4

0626-390 Compensation and Benefits Administration
An examination of the general structure of an organization and the rewards employees seek in exchange for the efforts and contributions they provide. Topics will include: rewards and motivation; government and market influence; job content analysis, description, and evaluation; developing pay structures and administering them; pay for performance; the range of benefit programs; choosing benefit programs for your organization and how to administer them; the relationship between compensation and benefits; employee expectations; costing of benefit programs. Credit 4

0626-427 Employment Law
Employment Law provides knowledge of legislation relevant to Human Resources, including the Fair Labor Standards Act, Equal Pay Act, Title VII of the Civil Rights Act of 1994, Age Discrimination in Employment Act, Occupational Safety and Health Act, Americans with Disabilities Act, Family Medical and Leave Act and legislation relevant to labor relations, including the Wagner and Taft-Hartley Acts. Students learn the legal status, their application in an employment context, ramifications of not complying with the law, and how the courts have interpreted the laws. (Human Resource Management 0619-480). Class 4, Credit 4

0626-428 Training Design and Delivery
The new workplace requires new solutions. In this environment, training that is well planned, presented, and meets organization needs takes on a critical strategic role. This course is aimed at managers, team leaders, HR specialists, and those involved in the continuous, self-directed, formal and informal learning needed to help their organizations improve their business success. Core topics include design and delivery of training, the needs assessment process, job and core competencies analysis, targeting learner needs, training program design and program development issues. Credit 4

0626-433 Benefits Administration
A study of the theory, design, and practical administration of employee benefit plans including paid excused time, health care, capital accumulation plans, life insurance, retirement, Social Security, and other related benefits. Government regulations as well as issues and trends will also be covered. (0626-239) Class 4, Credit 4

0626-434 Advanced Human Resources Administration
Study of application of advanced principles and techniques of personnel administration to particular firms and special personnel problems. Extensive use of both individual and group projects as well as case studies. (0626-239 or equivalent) Class 4, Credit 4

Environmental Management and Safety

0630-200 Environmental Health and Safety Seminar
This course will present the key principles of environmental health focusing on human life and the support of human existence. Since most of what we do in the environmental arena can be reduced to basic human needs and desires, and all of what we do in the occupational health and safety arena is concerned with the human condition, this will provide an appropriate basis upon which to introduce students to these vital disciplines. Class 2, Credit 1

0630-201 Principles of ESHS
This course presents an overview of the sciences, technologies, and strategies used to reduce threats to the environment and to human health and safety resulting from the use and discharge of hazardous substances and pollutants to the air, water, and land and suggests new approaches that can lead toward more sustainable solutions. Class 4, Credit 4

0630-350 Solid and Hazardous Waste Management
An examination of strategies and technologies to move an organization toward environmental sustainability, including: resource use reduction, material substitution, process and product modification, and waste minimization; and for handling and managing wastes including: treatment, storage, transport, and disposal storing solid and hazardous waste. Associated environmental impacts, regulatory concerns, technical feasibility and costs are considered. (0630-201, 1011-202, 1017-212) Class 4, Credit 4

0630-352 Industrial Wastewater Management
Investigates characteristics and sources of industrial wastewaters, related environmental impacts, regulatory implications, and technical considerations of current treatment and disposal methodologies. Students learn to identify appropriate methods, technologies and sequences for source reduction, treatment and pretreatment, direct discharge and management of associated industrial wastewater treatment plant sludges. (0630-201, 1011-211) Class 4, Credit 4

0630-354 Air Emissions Management
This course will present an overview of industrial air pollution management; its sources, methods of reduction, control and management. Students will become familiar with the history of air pollution, the chemistry and effects of pollutants, regulations and standards, and control technologies, as well as developing analytical and quantitative skills necessary in air emissions management decision making. (0630-201, 1011-202, 1017-212) Class 4, Credit 4

0630-360 Environmental Monitoring and Measurement
An in-depth view of environmental monitoring and measurements, giving the student the knowledge to plan, execute and interpret a sampling project. Covers techniques for sampling air, soil, surface water, and groundwater with an emphasis on remedial investigations and contaminated sites. Students learn to plan sampling events, collect quality assurance/quality control samples, determine correct sampling technique and specify analysis. (1011-211, 213, 1001-201; 0630-380, 382) Class 4, Credit 4

0630-370 Environmental Geology
This course covers many subtopics within the broad field of geology. Students will learn the theoretical background, and practical applications of the science. Topics include internal earth forces, geological materials and resources, surface processes, and geologic waste disposal. Geology has important applications to environmental management, and these applications will be highlighted in the class. Geology is a descriptive science so students will learn a great deal of new vocabulary, and will come to understand the mechanisms and results of continuous change to our planet. Class 5, Credit 3

0630-372 Environmental Geology Lab
Laboratory to accompany 0630-370. Environmental Geology. Lab includes field trips to significant local geologic features and mines. (Credit or coregistration in 0630-370) Class 2, Lab 3, Credit 1

0630-380 Introduction to Hydrology
This course will cover most subdisciplines within the broad field of hydrology. Students will learn the theoretical background, and practical applications of selected aspects of the science including the hydrologic cycle, surface water calculations, vadose zone flow, groundwater hydraulics, groundwater monitoring, water chemistry and groundwater contaminant transport. The class culminates in an investigation of a mock contaminated site in which the students apply aspects of all of the above mentioned topics. Hydrology has important applications for environmental managers, and these applications will be highlighted in the class. (0630-370, 372) Class 3, Credit 3

Environmental Management and Safety

Class 4, Credit 4

Class 2, Credit 2

Class 4, Credit 4

Class 2, Lab 3, Credit 1

Class 4, Credit 4
0630-382 Introduction to Hydrology Lab
Laboratory to accompany 0630-380, Introduction to Hydrology. The lab focuses on field and computational techniques. Field activities include stream gauging in Oakta Creek and well installation. (Credit for or coregistration in 0630-380) Lab 3, Credit 1

0630-440 Environmental Permitting
This course will provide a practical knowledge of Federal and State environmental permitting processes and procedures. Regulatory requirements will be reviewed with emphasis placed on the major programs in New York State, including Water, Air and Solid and Hazardous Waste. Students will become familiar with the environmental review and audit as a part of the application process. Discussion will introduce the environmental permit as a management tool for the environmental professional. The use of facility audits, development of proper information for permit applications and negotiation of permit terms and conditions will be explored as means to assure compliance with State and Federal statutes. The course will also explore the consequences of non-compliance with regulations by presenting enforcement options available to government agencies. (Open only to fourth-year environmental management majors with department approval.) Class 4, Credit 4

0630-444 Remedial Investigation/Corrective Action
Delineates and describes the sequence of events required in remedial investigations (RI), feasibility studies and corrective actions at hazardous waste sites. Explains the process flow logistics, concepts and rationale behind each RI action. Investigates the strategies, technologies and methodologies commonly in use for site investigation and characterization and corrective action. Explores current issues of “how clean is clean?” and “Superfund” liability. Students learn to develop conceptual site characterization plans; effective solicitations for RI proposals; review and evaluate work plans, procedures and operations plans, and contingency plans. (Open only to fourth-year environmental management majors or with departmental approval.) Class 4, Credit 4

0630-450 Occupational Health
This course will provide students with an overview of the fundamentals of industrial hygiene. Emphasis will be placed on the toxicological effects of various industrial substances on the body; monitoring and personal sampling for these substances and personal protection against such substances. (1011-211, 1001-201, 1017-211) Class 4, Credit 4

0630-451 Occupational Health Lab
Hands-on practical hazardous material response. Must be taken in conjunction with 0630-450 or with permission of the instructor. Credit 1

0630-454 Occupational Safety
This course is an overview of the safety management tools utilized in today’s industry. Students are expected to have a foundational knowledge of safety management techniques upon completion of this course. Topics examined include recordability and safety indices; incident investigation; guarding, electrical and material handling; welding, fire prevention, excavation; medical surveillance and worker’s compensation; inspection techniques and auditing; committee’s incentives and voluntary programs. Class 4, Credit 4

0630-461 Principles of EHS Accident Causation and Prevention
Historical and modern accident and incident causation models and theories will be covered. Students will learn how to identify and prevent unsafe acts and conditions that can lead to accidents and incidents. The application of management system controls, including operational controls to prevent accidents and incidents will be reviewed. In addition, students will learn how to investigate accidents and incidents and how develop accident and incident investigation written programs.

0630-463 Social Responsibility and Environmental Sustainability
This course will introduce social responsibility concepts and approaches presented in key documents like the ISO 26000 Social Responsibility Standard and the Universal Bill of Human Rights, and will explore the web of relationships in which an organization or a community exists, with the objective of providing the foundational knowledge necessary to plan a strategy for closing the gap between the activities, products and services of the organization or community and the ecosystem within which it exists. (Fourth-year status in ESHH or permission of instructor) Class 4, Credit 4

0630-465 Product Stewardship
This course examines the principles of product stewardship. The ethical, legal, liability and economic issues which product manufacturers face will be covered. In addition students will be exposed to the methods used to identify and manage product environmental, health and safety (EHS) issues in today’s world. The concept of sustainability will be covered and students will learn the principles of product life cycle assessment. Students will also learn and use specific EHS analysis techniques. Case studies will also be reviewed. This course is open to 4th and 5th year engineering technology, packaging science, safety technology and environmental management and technology students who have completed at least one co-op or with permission of the instructor. Class 4, Credit 4

0630-480 EHS Law
An overview of environmental, health and safety (EHS) related law with an emphasis on legislative law. Topics include a review of the historical and modern sources for EHS law, the emergence of administrative law and the responsibilities of the separate branches of government. Major EHS related legislation will be covered. Open only to fourth-year or fifth-year students. Class 4, Credit 4

0630-490 Project Management
This course has been designed to give the student an overview of the fundamental concepts of modern project management. Areas of focus include: the Project Life Cycle (PLC), the Project Management Body of Knowledge (PMBOK), Review Technique (PERT), Critical Path Method (CPM) and various budgeting and resource allocation techniques. Discussion of project management organizations, negotiation and conflict resolution and project termination will be included, along with an introduction to Project Management Institute (PMI) and Microsoft Project for Windows. (Open only to upper-division students.) Class 4, Credit 4

0630-500 Environmental Study Elective
Special topics are courses offered periodically. Watch for the titles in the course listing each quarter. Examples include alternative energy, contaminate hydrology and wetland delineation. Class 4, Credit 4

0630-505 Resource Reduction
This course will focus on strategies for reducing the use of material and environmental resources. It builds upon environmental management and technology courses for controlling air emissions, wastewater and solid and hazardous waste and moves upstream into the production process to reduce or eliminate waste by not producing it in the first place. Students learn how to conduct resource reduction assessments and identify opportunities to reduce or conserve resources. This course will take you beyond end-of-the-pipe controls and look at life cycle assessment as an environmental management tool. (0630-350, 352, 354) Class 4, Credit 4

0630-515 Corporate EHS Management
Presents the fundamentals of how companies manage their environmental issues. Explores regulatory and environmental motivations and strategies for corporate environmental management. Identifies organizational considerations in managing corporate environmental programs. Introduces concepts of total quality management and its applications to corporate environmental problem solving. The course focuses on elements of environmental management systems including: environmental policies, codes of conduct, setting objectives and targets, implementing programs, and evaluating and auditing environmental performance. The course also addresses the environmental manager’s role in training and corporate environmental reporting. (Open only to fifth-year environmental management majors.) Class 4, Credit 4

0630-521 Environmental Health/Safety Engineering Technology
Today’s professional engineers and technologists face ethical, legal and economic responsibilities to incorporate environmental protection, health and safety (EHS) elements into the design of products, activities and services of the organizations they serve. This course will provide engineering technology and other technology students with an overview of key EHS issues. This course will also provide students with an awareness of the role of EHS professionals, and of the integrated role engineers and technologies play in recognizing and controlling EHS issues. Students will also be provided with an overview of the legal and liability concerns associated with EHS, the principles of incident causation and prevention, the role of perceptions and behaviors (i.e., the human element) in EHS, the identification and control of EHS issues. Class 4, Credit 4
0630-570  Environmental Risk Management and Communication
This course focuses on an overview of risk management systems, risk management systems, risk management and risk reduction strategies, implementation of risk management and risk reduction strategies, and discussion of the principles of risk perception and risk communication. Leading-edge topics such as product stewardship, sustainability, and life cycle analysis are covered in detail including interesting case studies embodying real-life decisions in a corporate environment. Additional discussions on risk analysis, technological risk, cost benefit analysis and decision-making under uncertainty are brought to bear on these techniques where appropriate. Class 4, Credit 4

0630-590  ESHS Capstone Proposal
This is the first of a two-course, faculty-designed capstone team project course for ESHS seniors. It presents students with one or more identified EHS need(s) and challenges them to work together to plan and schedule a project to design and develop socially responsible and environmentally sustainable solutions. The project may vary from offering to offering reflecting current trends and developments. (Fifth-year status, 0630-463) Class 4, Credit 4

0630-591  ESHS Capstone Project
This is the second of a two-course, faculty-designed capstone team project course for ESHS seniors. It presents students with a defined EHS need and challenges them to work together to design and develop a socially responsible and environmentally sustainable solution. The project may vary from offering to offering reflecting current trends and developments. (Fifth-year status, 0630-530, 0630-590) Class 4, Credit 4

Safety Technology

0633-401  Fire Protection
Introduces fundamental concepts in protection of industrial workers and property from fire and explosion. Fire chemistry, control of ignition sources in industry, and properties of combustible materials are discussed. Fire detection and extinguishment are covered along with building construction for fire prevention, life safety, fire codes and related topics. (Engineering technology and safety technology students only or permission of department; 0630-454) Class 4, Credit 4

0633-505  Construction Safety
The course is designed to cover construction health and safety hazards and study OSHA regulations in depth. Students get to handle and investigate construction safety issues. The topics covered will allow the students to receive an OSHA 30 hour construction outreach training card. The OSHA standards addressing trench excavation, scaffolding, temporary electric circuits, fall protection, HAZCOM, and underground construction are studied. Must be taken concurrently with 0608-506: Class 3, Credit 3

0633-526  Exposure and Analysis
Covers exposure measurement, control processes, sampling strategies, envir. hthl. engin appl., and inspection/audit protocol skill building for different process types. Cumulates in a one-week block of emerging issues in occupa- tional/public health. The laboratory portion features actual field sampling using a wide range of industrial hygiene instruments and statistical sampling analysis. Laboratory reporting requires professional written and oral communica- tion of results. (0630-450) Class 4, Credit 4

0633-530  Mechanical and Electrical Controls and Standards
Discussion of machinery safety with emphasis on hazard analysis, risk esti- mation, safeguarding techniques and electrical considerations. Particular attention will be paid to applicable OSHA regulations, ANSI, NFPA, NFPA, and EN standards as they relate to wood, metal, films and automation. A portion of the course will change regularly to reflect emerging issues in industry. (Engineering technology and safety technology students only or permission of the department; 0630-454) Class 4, Credit 4

0633-540  System Safety/Incident Investigation
Focuses on the evaluation of systems designs using detailed system analysis techniques. Topics covered include system definition, economics of system safety, systems safety methodology, ergonomic approaches, mathematics of system analysis, including statistical methods, Boolean algebra and reliability, preliminary hazard analysis, application of fault tree analysis, and incident investigation. Class 4, Credit 4

0633-545  Safety and Health Program Management
This course presents an in-depth examination of the concepts, methods, and techniques involved in safety and health program management. The strengths and weaknesses of existing safety programs, performance management tech- niques, behavior-based safety, design safety, legal aspects of safety and health management and emerging trends in safety and health management are covered. This course expands on concepts presented in introductory topics. Case studies are utilized in order to foster application of management techniques and involve the resolution in an ethical manner. (Fourth- or fifth-year status in Safety Technology) Class 4, Credit 4

Emergency Management

0634-311  Earth Science
This is the first course in the Emergency and Management Disaster Certificate. Students gain a theoretical understanding of the causes of extreme geological and meteorological events such as earthquakes, volcanoes, landslides, floods, hurricanes, and tornados. Students also research the likely effects these disas- ter have on populations, infrastructure, and the environment. Significant emphasis is placed on emergency response and the role of the emergency manager in each type of extreme event. Class 4, Credit 4

0634-321  Man-made Hazards
This course introduces the fundamental aspects of chemistry using man- made hazards as the vehicle. The course covers the chemistry of hazardous materials, including toxics, caustics, flammables, and their effects on humans. Additionally, the physics of radiation, the design of commercial power reactors, and reactor disaster scenarios is covered in the course. The course uses current events in man-made hazards to facilitate the learning of the chemistry principles behind the events. (Minimum: high school chemistry. Recommend college-level chemistry) Class 4, Credit 4

0634-401  Emergency Preparedness Law
Principle statutes, regulations, and court cases governing emergency preparedness (0634-311 or 321) Class 4, Credit 4

0634-471  Emergency Planning and Methodology
Comprehensive emergency planning and methods of risk and hazard analysis. Also, turf problems with multi-agency plans, command structures, and the role of new technologies in disaster response. Preparation of hazard analyses and sections of plans for actual communities. (0634-311 or 321 and 401) Credit 4

0634-475  Counter Terrorism for the First Responder
This advanced course in the emergency and disaster management certificate program uses a technical approach. The course examines the issues of terror- ism as they relate to the planners and responders at the local level. The history and patterns of terrorism are examined by reviewing specific incidents. The technical aspects of terrorism are presented for the participants. Concepts of planning for a terrorist incident are presented with emphasis on integrating emergency operation plans. The course will also discuss preparations and guidelines for terrorist attacks focusing on planning problems, countermea- sures, response actions and the roles of local, state, and federal government agencies. Policy development related to the media and critical incident stress will be presented. Significant emphasis will be placed on examining incident management tools such as the incident command system. (0634-321 or sub- stantial field experience) Class 4, Credit 4

0634-481  Emergency Operations
Roles of fire, police, EMS and volunteer agencies like the Red Cross on disaster sites. Also, command posts and off-site operations centers, the incident command system, and how to critique incidents. (0634-311 or 321 and 401) Class 4, Credit 4

Health Systems Administration

0635-310  Survey of Health Care Systems
An overview of the development, structure, and current forces transforming the health care system. Topics include the status of the national and regional populations, physician practice and payment, private and government health insurance, the impact of medical technology, manpower issues, hospital services and reimbursement systems, ambulatory care and alternative delivery systems, and mental health and long-term care. Offered on campus and online. (Previous experience or course work in health care and permission of chair) Class 4, Credit 4
0635-320 Health Systems Administration
A survey of administration in health care facilities focusing on the application of general management principles in the unique health care environment. Issues such as organizational structures, planning and performance monitoring, personnel management, finance and the respective roles of medical professional and administrator in managing the facility are discussed. (0635-310, previous experience, course work in health care and permission of chair) Class 4, Credit 4

0635-351 Health Care Economics and Finance
An introduction to the efficiency, effectiveness and equity of the new economics of health care; a conceptual and practical knowledge of health care finance, including sources of funding, accounting and reporting; and the influence of third-party payers. No previous work in economics is assumed. (0635-310 or 320) Class 4, Credit 4

0635-421 Legal Aspects of Health Care Administration
An overview of statute and regulation as they apply to the health care field. Topics include an overview of the American legal system, licensure of institutions, licensure and discipline of practitioners, physician-patient relationship, reproductive issues, the right to die, organ donations, medical records, legal liability, malpractice and labor law. (0635-310 or 320) Class 4, Credit 4

0635-431 Health Care Quality Assurance
An introduction to quality assurance in health care. Course explores past and current definitions of quality and competing concepts of quality assurance; reviews existing quality assurance requirements and accrediting organizations, federal and state agencies, and third-party payers; describes and explains quality assurance methods and tools and their application in various settings. (0635-310 or 320) Class 4, Credit 4

0635-441 Health Planning and Program Development
A review of the methodology of planning effectively for health care services. The use of data systems, forecasting, and identifying and analyzing problems are explored, along with the process of strategic planning, setting priorities, developing projects and allocating resources. Students prepare actual applications for new programs to regulatory agencies. (0635-310 or 320) Class 4, Credit 4

0635-510 Complementary Medicine for the Millennium
As the use of alternative and complementary medical treatments grows rapidly among the public and is increasingly found among the therapeutic services offered in conventional medical settings, it is important that the professional health systems administrator and also the lay consumer of medical services have a basic understanding of these alternate treatments and treatment systems. This course will not teach the application of particular techniques or therapies. This course is a descriptive and analytic survey and comparison of different approaches to health and healing, the research bearing their effectiveness and to what extent, clinically and administratively, they can be integrated into conventional medical practice and settings. Credit 4

Reserve Officer Training Corps—Army

0640-201 Introduction to Military Science/Personal Development
Introduces students to the personal challenges and competencies that are critical for effective leadership. You will learn how the personal development of life skills such as goal setting, time management, physical fitness, and stress management relate to leadership, officership, and the Army profession. Provides a practical introduction to the basic military organization and rank structure; the historical basis for customs and traditions found in the military and current discussions on the military and its impact upon society. Enrollment must be approved by the Professor of Military Science. Class 2, Lab 2, Credit 2

0640-202 Introduction to Military Leadership
The purpose of MS 202, Intro to Military Leadership is to develop basic knowledge and comprehension of Army leadership dimensions while gaining a big picture understanding of the ROTC program, its purpose in the Army and its advantages for the students. Topics of primary interest include the organization of the U.S. Army, the National Guard, the Army Reserve, career branches, and the role of an officer. Students will explore the many facets of the demanding world of an effective Army Officer. Enrollment must be approved by the Professor of Military Science. Class 2, Lab 2, Credit 2

0640-203 Introduction to Tactical Leadership
Overviews leadership fundamentals such as setting direction, problem solving, listening, presenting briefs, providing feedback, and using effective writing skills. You will explore dimensions of leadership values, attributes, skills, and actions in the context of practical, hands-on, and interactive exercises. Other topics of interest are military writing, map reading, orienteering, introduction to tactics, and weapons and marksmanship training. Enrollment must be approved by the Professor of Military Science. Class 2, Lab 2, Credit 2

0640-301 Military Geography
A study of military land navigation with special emphasis given to navigation using a map and compass. Geographic concepts and realities are studied as they apply to the solution of military problems. Major topics for discussion include identification of terrain features, use of grid coordinates, polar coordinates, military correspondence and first aid tasks. Stresses practical application rather than theory; leadership lab. Enrollment must be approved by the Professor of Military Science. Class 2, Lab 2, Credit 2

0640-302 Military Operations
A continuation of military skills training with emphasis on military intelligence/security; operations at the small-unit level; staff functions and leadership laboratory; field training exercise. Students must register for lab under the department of physical education. Enrollment must be approved by the Professor of Military Science. Class 2, Lab 2, Credit 3

0640-401 Military Communications
Provides knowledge and training of basic military skills essential for junior officer; an introduction to military communication equipment and techniques; the leadership communication process. Laboratory. Enrollment must be approved by the Professor of Military Science. Class 2, Lab 2, Credit 3

0640-402 Military Tactics
Stresses practical exercises on basic map-reading skills and provides working knowledge of fundamentals and principles of combat operation as planned for and executed at light infantry squad and platoon level; leadership laboratory. Enrollment must be approved by the Professor of Military Science. Class 2, Lab 2, Credit 3

0640-403 Military Administration and Logistics
Includes discussions and seminars on the Army training management system, military justice, supply and property accountability, maintenance management, officer-enlisted personnel management; leadership laboratory. Enrollment must be approved by the Professor of Military Science. Class 2, Lab 2, Credit 3
0640-503 Military Ethics
Examines the ideas and issues that define the role of the military in our larger society. Emphasis is on the professional and ethical standards required of the military officer. Other topics include planning and conducting meetings, teaching and counseling, active duty orientation, preparations for commissioning; leadership laboratory and a field training exercise. Enrollment must be approved by the Professor of Military Science. Class 2, Lab 2, Credit 3

0640-520 Survey of American Military History
A study of American military history from the 1700s to the present day. Discussions will show how military actions affected U.S. history; how developing technologies impacted U.S. military doctrine, tactics and strategy; and the change of the U.S. military from a part time civilian volunteer militia to a professional full time force. Enrollment must be approved by the Professor of Military Science. Class 2, Lab 2, Credit 3

Reserve Officer Training Corps—Air Force
0650-210 The Air Force Today I
A three-course series designed to introduce students to the United States Air Force and Air Force Reserve Officer Training Corps. Featured topics include mission and organization of the Air Force, officerhood and professionalism, military customs and courtesies, Air Force officer opportunities, and an introduction to communication skills. Credit 1 (per quarter)

0650-211 The Air Force Today II
A three-course series designed to introduce students to the United States Air Force and Air Force Reserve Officer Training Corps. Featured topics include mission and organization of the Air Force, officerhood and professionalism, military customs and courtesies, Air Force officer opportunities, and an introduction to communication skills. Credit 1 (per quarter)

0650-212 The Air Force Today III
A three-course series designed to introduce students to the United States Air Force and Air Force Reserve Officer Training Corps. Featured topics include mission and organization of the Air Force, officerhood and professionalism, military customs and courtesies, Air Force officer opportunities, and an introduction to communication skills. Credit 1 (per quarter)

Electrical Mechanical Engineering Technology
0660-222 Principles of Manufacturing Processes
This course will focus on the understanding and application of basic manufacturing processes. Students will be challenged to discover and learn how typical industrial piece parts and assemblies are constructed. Topics include material properties, casting processes, forming processes, material removal processes, and joining processes. This course is for online students in Electrical/Mechanical Engineering Technology and Safety Technology. Credit may not be given for this course if credit has been given for 0617-220. Credit 4

0660-401 Thermal Fluid Science I
First course in Thermal Sciences sequence. Properties of pure substances, gas laws, first and second laws of thermodynamics are studied and applied. Thermal-Fluid Science I, II, and III are a sequence offered exclusively in DL or blended format. The course is required for Electrical/Mechanical majors and may be an elective for other majors. This course is not for MET majors. (1016-231 or equivalent) Credit 3

0660-402 Thermal Fluid Science II
Continuation of Thermal-Fluid Science sequence covering fluid statics, fluid kinematics and fluid dynamics. The course has an emphasis on those elements of fluid mechanics with particular relevance to conduit flow, head loss and future heat transfer applications. The Thermal-Fluid Science I, II, and III courses are a sequence offered exclusively as distance or blended learning. The course is required for Electrical/Mechanical students and may be an elective for other majors. This course is not for MET majors. (Thermal Fluid Science I or equivalent) Credit 3

0660-403 Thermal Fluid Science III
Third course in the thermal-fluid science sequence. Thermal-Fluid Science III focuses on heat transfer mechanisms and heat exchanger performance and selection. Thermal-Fluid Science I, II, and III are a sequence offered exclusively for distance and/or blended learning. This course is not for MET majors. (Thermal Fluid Science II or equivalent) Credit 3

0660-405 Laboratory Practicum for Electrical / Mechanical Engineering Technology
This course will provide a single on-campus laboratory experience for online learning Electrical/Mechanical Engineering Technology students. The course focuses on testing of engineering materials. Components of electrical and manufacturing labs are also included. Cannot also receive credit for 0610-304 and 409. (One week on-campus, prerequisites: 0610-211, 0610-416, 0617-220, 0609-337, 0609-411) Credit 2

0660-419 Experimental Methods Problem Solving in Electrical-Mechanical Engineering Technology
This is a course in experimental and laboratory techniques and the preparation of laboratory reports. Experiments utilize (but are not limited to) principles of statics, strength of materials, dynamics, electronics and controls. Students will be given problem statements and will develop and perform experiments to solve, or gain insight to possible solutions. Students work independently to prepare formal and informal reports and an oral presentation. Cannot also receive credit for 0610-407. (0610-303/0610-408, 0610-405/0610-410, 0610-432, 0535-403) Class 2, Lab 2 Credit 3

Accounting and Business Systems
0680-201 Financial Accounting
Emphasis is placed on analyzing and recording business transactions and understanding the results of these transactions. Preparation of basic financial statements required by any business are included. Credit 4

0680-203 Managerial Accounting
The functions and uses of accounting information are presented. Emphasis is placed on the preparation and operation of dynamic budgets and the use of accounting data for control and profit planning. (0680-201) Credit 4

0680-224 Personal Financial Management
Manage your personal finances more effectively; personal budgeting, protection of personal assets, consumer credit, investments, and estate planning are presented. Credit 4

0680-308 Intermediate Accounting
Designed to broaden the understanding of accounting practices and improve skills in gathering, analyzing reporting, and evaluating accounting theory and concepts as they relate to business problems. (0680-203) Credit 4

0680-309 Intermediate Accounting II
A continuation of Intermediate Accounting (0680-308) with advanced study of accounting theory and concepts as they relate to business problems. Credit 4

0680-311 Business Law I
Introductory course in business law including basic legal principles and procedures, criminal law, torts, contracts, sales, and real property. Credit 4

0680-312 Business Law II
Continuation of 0680-311 includes law agency, partnerships, corporations, insurance, and bankruptcy. Also presents survey of commercial paper, secured transactions and bank deposits. Credit 4

0680-315 Legal Environment of Business
Foundation course, which introduces the function of law in society, the fundamentals of the federal and state court systems, contract formation (offer, acceptance, consideration, and capacity) and related ethical issues, and the emergence of the federal regulatory agencies and practical impact of these agencies on the American business community. Credit 4

0680-341 Information Resources/ Network Tool
An overview of the evolution and structure of the computing environment and information networks. Topics include the evolution of the computer; personal computers, workstations and local area networks; tools for managing information; systems design and analysis tools; electronic mail; and using the Internet. Labs explore information resources and data communication tools available on the RIT computer network and the Internet. Credit 4

0680-353 Management Science
Foundation course, which introduces mathematical model building and the use of management science in the decision-making process. Mathematical techniques include linear programming, the assignment model, the transportation model, inventory control models, critical-path models (PERT/CPM) and computer simulation. Homework assignments include running “CANNED” computer application programs. Credit 4

22 | College of Applied Science and Technology
0681-200 Management Process
A comprehensive three-quarter course in effective supervision and management for supervisors and potential supervisors. Approximately 50 topics of current importance to supervisors are presented, as well as essential management principles, business communication and practical supervision techniques. Specific supervisory problems of course participants are discussed in informal sessions and through projects conducted outside the classroom. Instruction is usually guided by a team of management specialists. Lecture discussion, panel presentations, audiovisual presentation, simulation exercises and case studies. (Course sequence extends over three consecutive quarters and should be taken in sequence when possible.) A management certificate is awarded for successful completion of the three-course sequence. Credit 4 (12 credits total)

0681-201 Management Process II
A comprehensive three-quarter course in effective supervision and management for supervisors and potential supervisors. Approximately 50 topics of current importance to supervisors are presented, as well as essential management principles, business communication and practical supervision techniques. Specific supervisory problems of course participants are discussed in informal sessions and through projects conducted outside the classroom. Instruction is usually guided by a team of management specialists. Lecture discussion, panel presentations, audiovisual presentation, simulation exercises and case studies. (Course sequence extends over three consecutive quarters and should be taken in sequence). A management certificate is awarded for successful completion of the courses. Credit 4 (12 credits total)

0681-202 Management Process III
A comprehensive three-quarter course in effective supervision and management for supervisors and potential supervisors. Approximately 50 topics of current importance to supervisors are presented, as well as essential management principles, business communication and practical supervision techniques. Specific supervisory problems of course participants are discussed in informal sessions and through projects conducted outside the classroom. Instruction is usually guided by a team of management specialists. Lecture discussion, panel presentations, audiovisual presentation, simulation exercises and case studies. (Course extends over three consecutive quarters and should be taken in sequence). A management certificate is awarded for successful completion of the course. Credit 4 (12 credits total)

0681-205 Organization and Management
A general introduction to the major management functions and the organization of business. Topics include business and personal planning, organizing, staffing, implementing, directing, control, time management, appraisal, compensation, organization theories, decision making, problem solving, influences on managerial decision making, communication, management styles and motivation. Extensive use is made of learning groups in which students work together to discuss and apply concepts. Some out-of-class time is required to prepare for a learning group presentation. Credit 4

0681-221 New Venture Development
Course presents factors to be considered by those interested in the ownership and management of small business enterprises. Includes who should be an entrepreneur, guidelines for starting a new business, basic legal consideration, and approaches for obtaining capital and credit. Credit 4

0681-222 Small Business Management
The functions required to successfully manage and finance a small business are presented. A variety of topics include staffing a small business, purchasing and supplier relations, consumer credit policies, and the financial and administrative controls necessary to minimize business risk. Credit 4

0681-223 Small Business Marketing and Planning
Presents various successful planning and marketing approaches (including market determination, distribution and pricing strategies). The regulatory environment facing small business is included along with techniques for planning growth. Credit 4

0681-241 Production Management
The organization of production functions with emphasis on management responsibilities. All levels of factory operation are discussed, and relationships between various aspects of production are presented. Credit 4

0681-261 Effective Selling
Investigates the importance of the sales function within the overall marketing organization and the necessary general characteristics of a successful sales person. The various steps of the sales process and the practical applications of effective sales presentation are discussed. Credit 4

0681-263 Advertising Principles
Social, economic, and mass communication aspects of advertising with special emphasis on the role of advertising in the marketing mix. Special topics include agency/client relationship, radio and TV ratings, history of advertising, the creative process and psycho-graphics. Guest lecturers discuss corporate campaigns. Credit 4

0681-264 Advertising Evaluation and Techniques
Course presents basic approaches used in planning, preparation and evaluation of advertising and sales promotional materials. A number of projects involving writing/layout/production for print, broadcast and specialized media advertising are incorporated. Credit 4

0681-341 Fundamentals of Industrial Engineering
An overview of industrial engineering problems and techniques is presented, including facilities selection and layout, methods analysis, work measurements, operations planning and control, materials handling and an introduction to operations research. Credit 4

0681-342 Industrial Engineering Economy
The economic factors required for rational decisions are presented. Emphasis is placed on analytical tools used in a manufacturing environment, including evaluation of capital spending alternatives, depreciation methods, decision making under risk conditions and value analysis methods. Credit 4

0681-345 International Standards
As the marketplace becomes increasingly oriented toward the international exchange of goods and services, the International Organization of Standards continues to develop a set of quality standards assuring that goods and services produced by a supplier are capable of meeting the requirements of customers around the globe. The emerging developments of international standards in terminology and quality standards are addressed. Manufacturing standardization in such industries as telecommunications and electronics is considered. Elective for the international business and culture certificate. Credit 2

0681-361 Marketing
An introductory course in marketing that provides a better awareness of the function of marketing and how marketing relates to other areas of business. Topics include the marketing concept, developing a product strategy, behavioral aspects of consumer marketing, the marketing mix, segmentation and current marketing issues. Credit 4

0681-398 Special Topics
Special topics are experimental courses offered quarterly. Watch for titles in the course listing each quarter. Credit variable

0681-409 Core Concepts of Project Management
This course addresses project management from a “technological” or skill-based aspect rather than focus on theoretical or historical aspects of project management. Includes substantial demonstration and use of project management application software, spreadsheets, and businesses diagramming packages. Course is organized around the project life cycle and draws techniques from the Project Management Body of Knowledge (PMBOK). Includes topics such as project definition, staffing, planning, budgeting, scheduling, resource allocating, and terminating. Particular emphasis on the human side of project management: negotiation and conflict resolution. Course not intended for those students planning to take advanced course work in project management and may not be substituted for 0681-410 Introduction to Project Management. Credit 4

0681-410 Project Management
Addresses project management from a multidisciplinary perspective, covering the fundamental nature of managing all types of projects—public, business, engineering, and information systems—as well as specific techniques required to manage projects. Topics include project environment, planning, conflict and negotiation, budgeting, scheduling, resource allocation, monitoring and controlling, and project termination. Addresses the unique and demanding role of the project manager, the challenges of cross-cultural projects, and the behavioral and quantitative facets of project management. Introduces the major areas of the Project Management Body of Knowledge (PMBOK) as defined by the Project Management Institute. (Introductory course(s) in management, 0692-211, and 0680-341, or equivalent experience) Credit 4

Credit 4

Credit 4
0681-411 Advanced Project Management
Course covers the Advanced Project Management topics necessary for implementation of and excellence in project management. It deals with turning the principles and theory of project management into practice. Addresses the best practices for project management in the world; project portfolio management; the project office; project risk management; multinational cultures and cultural failures; integrated project teams; and virtual project teams. Incorporates aspects of the Project Management Body of Knowledge (PMBOK). (Introduction to Project Management 0681-410; or equivalent experience; or permission of the instructor) Credit 4

0681-412 International Project Management
With the increasing frequency of globalization, mergers, and acquisitions, international projects are becoming more prevalent and approaching the norm for many organizations. This course addresses a wide range of international projects-based in different industries and multiple countries. It deals with cultural and social differences within firms; cultural and social differences among countries and within countries; languages and dialect variations; different management practices and structures; religious practices; legal, regulatory, and reporting requirements; technology differences in different areas; and time zone differences. Incorporates aspects of the Project Management Body of Knowledge (PMBOK). (Introduction to Project Management 0681-410, and Advanced Project Management 0681-411; or equivalent experience; or permission of the instructor) Credit 4

0681-451 Introduction to Logistics and Transportation
Review of the logistics and transportation industry as part of the growing emphasis on distribution technologies. Introduces basic understandings of the function areas of logistics management and their interrelationships and how transportation and distribution plays a significant role in the success of a business. Class 4, Credit 4

0681-525 Strategic Logistics Management
Introduces the role of the government in the transportation industry. The evolution of past and current regulatory and promotional policies is explored. The determination and utilization of freight rates are examined. Various methods to forecast and control transportation costs also are discussed. Credit 4

0681-526 Logistic Law and Economics
Introduces the basic skills required to move materials in support of the logistics function internationally. Includes discussions of duties, customs regulations and the various instruments used to facilitate international trade. Class 4, Credit 4

Quality Management

0684-227 New Service Economy
Provides an overview of the emerging national and regional service economies. Defines the service sector, both consumer and producer of services, using a variety of local examples drawn from health care, information and communication, hospitality, financial and personnel services. Economic and labor force implications of the service economy are analyzed along with the structure of service organizations, service delivery systems and levels of service. Class 2, Credit 2

0684-310 Introduction to Quality
An introduction to the fundamental concepts of total quality management. Includes an overview of the competitive environment, the cost of non-quality, and the history of quality; a systematic examination of the leading definitions of quality and models of quality management; and an exploration of the implications of quality management concepts for organizational structure and roles, decision making and interpersonal relations. Class 4, Credit 4

0684-340 Quality Data Analysis
An introductory course in statistics and probability that provides students with techniques to analyze and interpret quality control data. Topics include problem solving techniques such as the fishbone and flowcharting; descriptive statistics (statistical tables and graphs, measures of central tendency and dispersion), a brief overview of the normal distribution, and one-way ANOVA. (0684-310, Introduction to Quality) Offered online only. Credit 4

0684-350 Customer Service Technology
An overview and analysis of technological systems for handling goods and information quickly and cost effectively to maximize customer satisfaction. Class 4, Credit 4

0684-362 Marketing Practices for Service Economy
Focuses on applications of traditional marketing concepts and techniques to the service sector (e.g., banking, health care, transportation, and services within organizations) to optimize quality, customer satisfaction and sales/revenues/profits. Includes a brief review of the increased role of service in the economy. Class 2, Credit 2

0684-370 Reliability I
Reliability I introduces the students to the concepts embodied in maintenance strategies mainly reactive maintenance, preventive maintenance, predictive maintenance and proactive maintenance and in reliability based maintenance. These strategies will be defined and their goals set forth. Reliability concepts and tools will be introduced that will form the foundation of a reliability-based maintenance program. Class 4, Credit 4

0684-375 Problem Investigation, Isolation and Analysis
An introduction to problem-solving methodologies and tools used in Reliability Based Maintenance. Topics include: root cause analysis, fault tree analysis, FMEA, FRACAS, mechanical system failure processes, diagnostic systems/devices, RCM, and multi-vari analysis. (0692-211 or permission of department chair and 0684-370) Class 4, Credit 4

0684-376 Reliability II
This course examines the underlying probability distributions and statistical tests that are used in reliability based/centered maintenance. Included are: the exponential distribution, curve fitting techniques, the normal distribution, the lognormal distribution, extreme value statistics, the Weibull distribution, and reliability analysis of repairable systems. Graphical techniques will be emphasized along with data analysis using the statistical package MINITAB and reliability software programs provided by the instructor. (0609-221 or equivalent and 0684-370, 375) Class 4, Credit 4

0684-377 Reliability III
Continuation of Reliability II focusing on theoretical and practical applications of reliability, availability, and maintainability. Topics include parts selection and control, reliability analysis, reliability test and evaluation, equipment production and usage, spare parts forecasting, reliability/maintainability trade-offs and improvement techniques. (0692-212 or equivalent; 0684-370, 0684-375, 0684-376) Class 4, Credit 4

0684-378 Reliability IV
Continuation of theoretical and practical applications in Reliability III focusing on reliability test and evaluation, equipment production and usage, spare parts forecasting, reliability/maintainability trade-offs and improvements. Reliability software is used extensively to illustrate analytical procedures and for assignments and term paper. Class 4, Credit 4

0684-410 Introduction to Lean Six Sigma
Six Sigma techniques, introduced to industry in the late 1980’s, use data-driven decisions to reduce defects, drive down costs and increase efficiency. This methodology focuses on minimizing process variation, thereby enabling the process to operate more smoothly and efficiently. Lean is a process that focuses on eliminating waste and streamlining operations. Lean Six Sigma, a more recent technique, combines the two processes. Data-driven decisions are still present, but the emphasis on speed for the process improvement is key. Combining these two methods into Lean Six Sigma provides a powerful tool to make improvements in any process or business. In this course, students learn the history, context, and tools of Lean/Six Sigma through lectures and case studies, and begin to apply the process in a course project. (0684-310, Introduction to Quality; 0684-340, Quality Data Analysis) Offered online only. Credit 4

0684-420 Statistical Quality Tools
An introductory course in Statistical Quality Control techniques used in determining operating quality levels and recognizing degrees of process control and capability in a service industry or a manufacturing process. Topics include tools for diagnosing sources of variation; construction and interpretation of charts for variables and attributes; tolerances, specifications and process capability. Product quality (i.e., high yield) and product reliability also are addressed. (High school algebra or equivalent) Class 4, Credit 4

24 | College of Applied Science and Technology
Management for Quality
Successful companies integrate quality techniques and concepts throughout their operations. This course addresses issues in developing and managing an effective organization, including defining a quality philosophy, delighting the customer, the role of strategic planning, enhancing employee involvement, and sustaining quality initiatives. Additional topics include understanding quality standards and systems, benchmarking, and vendor and supplier assurance. (0684-310, Introduction to Quality; 0684-340, Quality Data Analysis) Offered online only. Credit 4

Introduction to Asset Reliability
Unscheduled downtime costs businesses millions of dollars each year, but reliability and maintenance is often the last area to attract the attention of managers trying to lower costs. Usually thought of as non-value-added, maintenance and reliability policies can have significant impact on a company’s profit. This course introduces the student to methods in preventive maintenance and reliability, including repairable systems, non-repairable systems, and ways to optimize maintenance schedules for each type. Students are provided with software packages that allow them to apply concepts and understand results. Co-listed with 0684.740. Note that students may not receive credit for both 0684-440 and 0684-740. Online course. Credit 4

Introduction to Asset Management
Unscheduled downtime costs businesses millions of dollars each year, but asset management and maintenance is often the last area to attract the attention of managers trying to lower costs. Usually thought of as non-value-added, maintenance and asset management policies can have significant impact on a company’s profit. This course introduces the student to the wide range of policies and practices, including capital budget issues related to asset acquisition, cost of ownership, and depreciation; inventory/procurement; maintenance policies such as run-to-failure, preventive maintenance, and reliability centered maintenance; training issues; and developing performance indicators for management programs. Co-listed with 0684-780. Note: Students may not receive credit for both 0684-480 and 0684-780. This is an online course. Credit 4

Warehouse and Inventory Management
In the world of ever-evolving supply chain technologies, inventory control is now a part of the process. Distribution managers and buyers now need skilled individuals who possess a thorough knowledge of the product supply chain; with an in depth understanding of inventory practices, storage techniques, emerging technology and inventory management strategies. Co-listed with 0684.701. Note that students may not receive credit for both 0684-501 and 0684-701. Online course. Credit 4

Humanities and Social Sciences

Special Topics: Humanities
Experimental lower-division courses are offered under this number; titles appear in each quarter’s course listing. Credit Variable

Psychology: Behavior in Industry
Industry presents one environment for understanding human behavior. This course applies psychological and social concepts to the industrial setting. Topics covered are motivation, performance, assessment quality of work life, group behavior, leadership, organizational structure, communication, and decision-making. (0514-210 recommended) Credit 4

Psychology of Stress and Adjustment
Physiological, psychological, and social stress can have serious consequences on one’s daily life. This course familiarizes students with basic concepts, the positive and negative ramifications of stress and strategies for stress management. (0514-210 or equivalent) Credit 4

Psychology of Persuasion
This course examines important research on persuasive communication, covering: What causes people to respond to persuasive communication in different ways? How can the communicator predict group responses to a given persuasive message? Projects require students to use theory in designing effective strategies for various purposes and audiences. Required for the Public Relations Communications Certificate. Credit 2

Contemporary Moral Problems
A one-quarter course that presents moral issues that arise in the professions and other vocations of technical expertise. These problems in applied ethics are studied through contemporary literature by moral philosophers (e.g., Habermas, Singer) as well as key classical texts (e.g., Plato, Locke, Hume, etc.) Credit 4
0688-321 Discussion Skills and Leadership
Students study the theory of leadership in small groups and the dynamics of group behavior. The major exercises of the course are leading and participat-
ing as members in conferences that stimulate those of civic, business and industrial settings. Peer critiquing and videotaping allow students to apply theory as they learn to recognize the elements of successful conferences. Class 4, Credit 4

0688-322 Interpersonal Communication for Customer Service
The course helps participants define interpersonal communication for cus-
tomer service and show professionalism in customer service. Participants will learn how to listen effectively, apply assertiveness appropriately, and apply telephone skills, conflict resolution skills, and problem solving methods. Participants will learn how to educate the customer on new or changed prod-
ucts and services, and contribute to building customer satisfaction and loyalty through quality customer service. Credit 4

0688-325 Communicating in Business
Focuses on the development of those communication skills essential to func-
tioning effectively in the business world. Students learn the process of analyz-
ing communication situations and responding to them appropriately. Topics include reports, memos, letters, oral presentations and interpersonal skills. (0688-220 or equivalent) Class 4, Credit 4

0688-327 Environmental Communication
Communication of environmental information and issues is critical for aware-
ess, information, and action. Students develop skill in reporting and convey-
ing environmental and scientific information as well as an understanding of the role of the media and public relations in the environmental communica-
tion process. Writing and speaking skills are sharpened for successful business and media communication. (0502-227 or equivalent) Class 4, Credit 4

0688-330 Technical Report Writing
Students learn to prepare reports of the sort required by practicing engineers and managers in industry and business. Focus is on developing the ability to analyze audiences and purposes, state problems, design reports, and write and edit them. Assigned reports are discussed and critiqued by peers and instructor. (0688-220 or equivalent) Credit 4

0688-331 Report Writing
Principles of organizing information into clear, concise reports. Techniques for oral reports, formal reports, and informal letter and memo reports. Also includes proposals, project status, and progress reports. Credit 2

0688-333 Technical Writing and Editing
Focuses on the writing skills required for preparing technical documents. Adapting material and language for audience and purpose and conventions of technical writing style are emphasized. Strategies for evaluating technical dis-
course are studied and applied. Prior to enrolling in this course, students must demonstrate command of standard written English prose. (for students in Basic Technical Communication program. Others, contact program chair) Credit 4

0688-347 Promotional Writing
Focuses on practical guidelines for preparing marketing materials including brochures, data sheets, trade press articles, press kits and advertising copy. (0502-227 or equivalent) Credit 2

0688-348 Managing the Project
Principles of project management are studied and applied in cases and exam-
oples taken from the fields of technical and public relations communication. Major topics include planning, organizing, scheduling, budgeting, controlling, monitoring and reporting. Conflict resolution, team building and motivation are also covered. Use of project management software is introduced. Credit 2

0688-350 Introduction to Public Relations
An overview of the public relations function, covering tasks, responsibilities and roles of the PR practitioner as researcher, image developer, designer, edi-
tor, coordinator, marketer and advertiser; as adviser to management; and as spokesperson, media manager and services purchaser and provider. Credit 2

0688-352 Writing for the Organization
Introduction to public relations writing at the corporate level, including planning, writing and producing documents and publications in-
tended to interpret the organization both internally and externally. Provides practice in writing a variety of news and feature copy, including crisis communication, covering meetings, adapting interviews for print and statements for various media. Credit 2

0688-353 Scripting and AV Video Presentations
Introduces writing and production techniques for audiovisual and video pre-
sentations. Scripting prepares students to write a specialized form of commu-
nication-dialogue that is to be spoken and heard. Instruction on enhancing the verbal message with visuals is presented. Dimensions of wording, voice char-
acterization, sound, motion and color are explored. Includes story-boarding and an introduction to traditional and emerging production methods. Class 2, Credit 2

0688-354 Speechwriting
Introduces principles of speechwriting, a highly specialized form of profes-
sional communications. Speechwriting covers techniques for preparing a speech in the “voice” of another. Writing for the “ear” and adapting the message, wording, body language and tone to the speaker are included. Techniques for enhancing message retention are studied. (0688-220 or equivalent) Credit 2

0688-355 Coordinating Publication Production
A survey course for professional communicators. Provides an overview of major phases of print production and general understanding of the factors that must be considered in purchasing print production services: estimates, schedules, paper and binding options, colorization, print trade customs and illustrations; and guidelines for coordinating the stages of production. Credit 2

0688-356 Strategic Communications
This is a survey of strategic reactions to organizational communication prob-
lems. Case studies are used to analyze how communications research, plan-
ing, implementation, and evaluation are used to contribute to organizational goals and respond to needs and crises. Students study real cases where organi-
izations have developed strategies for communication with consumers, employ-
ees, investors, government bodies, communities, and other publics. Credit 2

0688-357 Media Relations
Designed for writers whose positions frequently require preparation of public relations correspondence as well as copy for inbound and outbound company publications. Emphasis is on developing clarity, precise use of language, and style in writing media letters and news release, reporting information and cre-
ating feature articles. Credit 2

0688-361 Research Techniques
This course offers exposure to and experience with electronic and traditional resources for information generation. Student assignments simulate workplace fact-finding assignments and culminate in an extended feasibility project of the student’s choice. Students work in teams and use problem-solving strategies, assess project requirements, collect data, report periodically on their progress, and formally present their results. A variety of research methodolo-
gies are introduced, including interviewing skills, developing and using ques-
tionnaires, testing procedures, review and use of literature, and blueprint and specification reading. Credit 4

0688-363 Technical Document Design
This course presents an overview of the principles and contemporary tech-
niques involved in document design and provides the student with an opportunity to exercise them in the preparation of a technical manual. Topics include the basic principles of graphic design and visual communication, use of computer graphics and page layout programs, typography and its role in document design and reproduction and distribution methods. Students will plan, research, design, write, format, edit and produce a finished technical manual. Class 4, Credit 4

0688-367 Writing Software User Doc
An introduction to the creation of end-user documentation for software prod-
ucts. This course defines the audiences, content, structures, and language of major phases of print production and general understanding of the factors that must be considered in purchasing print production services: estimates, schedules, paper and binding options, colorization, print trade customs and illustrations; and guidelines for coordinating the stages of production. Credit 2

0688-371 Designing with Computers I
An introduction to the computer as a design tool. This course, the first of a two-course sequence, was created for people just beginning to apply their design skills to a computer. In a hands-on lab the software application FreeHand (vector-based program) for illustrative techniques is introduced. Discussions on a variety of related topics, such as design concepts, other software, computer needs and misconceptions. Previous design experience is recommended. (0688-271 or equivalent) Class 3, Credit 3
Designing with Computers II
A hands-on lab setting, page and document layout techniques are introduced using the graphic design software application InDesign. Discussions on a variety of related topics, such as design concepts, other software, computer needs and misconceptions. (0688-271 or equivalent) Credit 3

Electronic Presentation Design
This course introduces basic techniques for the creation of electronic presentations using computer software. Students learn to design individual slides and transparencies and dynamic and effective assembled presentations. The software application PowerPoint is used. Class 3, Credit 3

Designing with CorelDRAW
The second course of a two-course sequence, this provides a foundation in raster and vector-based computer graphics. Students design text and graphics for press and Internet using the CorelDRAW suite. Skills and information gained will carry into other software applications. (0688-271 or permission from instructor) Credit 3

Photo Imaging with Computer I
An introduction to the computer as a photographic tool for people just beginning to apply their photography or photo-design skills to a computer. Adobe Photoshop is presented in a hands-on, two-quarter lab sequence. In the first quarter lab, students explore traditional photographic techniques using a computer with an electronic camera; second quarter, photographic manipulation using a computer with a flatbed scanner. Credit 3

Photo Imaging with Computer II
Adobe Photoshop is presented in a hands-on, two-quarter lab sequence. In the second-quarter lab, students explore photographic manipulation using a computer with a flatbed scanner. Credit 3

Introduction to Internet Design
This course introduces basic techniques for the creation and design of electronic sites and pages for the Internet and the World Wide Web. Students learn the graphic techniques and tools to construct a well-designed and effective homepage and site. Credit 3

Designing with QuarkXPress
In-class lecture, instructor demonstration and guided practice are used to familiarize students with the techniques of using QuarkXPress a sophisticated desktop publishing program. Students are instructed in basic document design principles, including such topics as layout and typography, and using Quark to implement them. Credit 3

Advanced Internet Design
This course concentrates on building web design skills beyond basic HTML while exploring current topics in web development. Students focus on learning Flash interaction and animation through exercises and projects to produce web sites that apply effective information architecture and usability concepts. Students are introduced to the Flash Action Script programming language. An emphasis is placed on learning how to keep abreast of current Internet technologies through an overview of related technologies such as JavaScript, XML, PHP and Cold Fusion. Credit 4

Advanced Photoshop Techniques
This course will offer a strategic view of the Photoshop/digital imaging work environment. It will focus on broader techniques with an emphasis on preparing high-quality images for print publication. Topics such as masking, color models, image correction and file formats will be discussed in detail. This course has a graduate section that is co-listed with 0688-712. Students taking 0688-412 may not receive credit for 0688-712. (0688-382) Credit 3

On Camera! On Mike!
Focuses on preparation and delivery skills for effective radio and TV appearances by non-professionals serving as spokespersons for their organizations. Audio and video tapings of simulated interviews, press conferences and panel presentations provide opportunities for student practice and for instructor and peer critiques. Also, a framework for understanding the perspectives and functions of the broadcast media as well as guidelines for effective use of broadcast formats to achieve public relations or marketing goals. Credit 4

Writing Software User Documentation
Defines and provides examples of end-user documentation for software products; defines the conventional audience, content, structure and language of software user manuals; identifies typical problems in user manuals; explores types of online user information; and defines usability testing. Practice in writing step-by-step procedures, defining system and software concepts, and describing functional processes. Credit 2

Instructional Design Principles
This course presents an overview of the process of designing instructional packages from need and task analysis through identifying goals and objectives, media selection, program development and validation testing. Class 4, Credit 4

Managing Media Presentations
An introduction to design principles and software applications for creating and organizing media presentations on technical topics. Includes principles of Web page design, the development of computer based illustrations and electronic presentations. Covers the use of PowerPoint and other software applications. Project management skills are introduced. Credit 4

Communications Elective
This course covers special communication topics and subject areas and is offered on demand. Variable credit

Technical Proposals
Intensive practice in the creation of content for online and multimedia documents with emphasis on the presentation of technical and scientific concepts, products and processes. A survey of graphic methods for the display of complex technical relationships and processes. Students will also be introduced to contemporary topics and applications in technical information design. Credit 4

Documentation Usability
This class presents concepts, tools, and techniques used to increase the usability of printed and online documentations, including multi-media interfaces, through usability evaluation and usability testing. It discusses ways to incorporate usability testing into the design process, saving time and money by eliminating design and functionality problems early in the design process. (0688-333 or equivalent) Credit 4

Writing Procedures and Online Help
The development of task-oriented procedural documentation. Procedures for complex physical and mental tasks including time-constrained activities, emergencies, diagnostics and troubleshooting, and multiple-path processes. Formats for print, electronic, and multimedia instructions. An introduction to applications used for the creation of online help, including web-delivered and HTML help. The course will also cover the principles of designing and writing online help, regardless of the help authoring tool used to create it. Practice will be given in writing procedures of various formats, as well as writing online delivery, particularly via online help. Credit 4

Technical Proposals
The elements of proposal writing, including responsiveness, establishing credibility, and technical clarity. The proposal process as practiced in government and industry, including an understanding of RFPs, RFIs, and the decision process. Specialized proposals including NDAs, on-line and multimedia proposals and technical marketing presentations. Credit 4

International Communication
This course provides students with an overview of the techniques and problems encountered in communication that crosses cultural and national boundaries. During this course students will examine strategies and methodologies for effective global communication and determine the best ways to convey their messages despite barriers imposed by differences in language, culture and time zone, as well as global distance and administrative considerations. A variety of cases in marketing, government, entertainment, and publishing will be studied to provide a working context for the theoretical considerations. Credit 2

Writing for the Sciences
Course introduces students to the writing requirements for describing scientific and technological subject matter for presentation to general audiences. Students will learn to write and edit material for professional, in-house, trade, and popular publications that cover developments in the scientific and technical areas. The editing of scientific writing is also introduced. Credit 4
Math and Science

0692-201 Math Thought and Processes
An examination of mathematical thought and processes through a study of elementary mathematical concepts. This course will acquaint the student with the "mathematical way of thinking." Topics include sets, number systems, number theory, real numbers and function systems. Credit 4

0692-202 Modern Math Methods
A continuation of 0692-201 with an examination of selected modern mathematical methods used in today's society. This examination includes a study of equations, inequalities, problem solving, graphs and functions, probability, statistics and the usefulness of these methods in today's society. Credit 4

0692-211 College Math for Business
An introduction to mathematical concepts and quantitative methods required in business management. Included are sets and real number system; linear, nonlinear and exponential functions; and system of equations and inequalities. Differential and integrated calculus is introduced, as well as some special topics in quantitative analysis such as linear programming and simulation. Credit 4

0692-212 College Math for Business II
An introduction to mathematical concepts and quantitative methods required in business management. Included are sets and real number; linear, non-linear and exponential functions; and system of equations and inequalities. Differential and integrated calculus is introduced, as well as some special topics in quantitative analysis such as linear programming and simulation. Credit 4

0692-221 Technical Math
A two-quarter sequence introducing college algebra and trigonometry, covering basic algebraic concepts and operations, algebraic and transcendental (trigonometric, logarithmic, and exponential) functions. (Three years high school math or equivalent; requires pretest) Credit 4

0692-222 Technical Math II
A two-quarter sequence introducing college algebra and trigonometry, covering basic algebraic concepts and operations, algebraic and transcendental (trigonometric, logarithmic, and exponential) functions. (Three years high school math or equivalent; requires pretest) Credit 4

0692-223 Technical Calculus
An elementary applied calculus course covering the basic differential and integral calculus of algebraic and transcendental functions with applications. (0692-222 or equivalent) Credit 4

0692-231 Contemporary Science-Biology
An introduction to the fundamental principles of biology for non-science majors and the application of these concepts to areas of interest in our contemporary technological society. Topics discussed include the cell as a biological unit, the biogenesis-abiogenesis controversy, genetic coding and introduction to plant and animal biology. The course is presented in a lecture-demonstration format. (0692-221 or 0692-222 or 0692-223 or 0692-223 or equivalent) Credit 4

0692-232 Contemporary Science-Chemistry
An introduction to the fundamental principles of chemistry for non-science majors and the application of those concepts to areas of interest and concern in our contemporary technological society. Topics discussed include the atomic theory, chemical compounds, chemical reactions, organic chemistry, biological chemistry and macromolecular chemistry. The course is presented in lecture demonstration format. (0692-221 or 0692-222 or 0692-223 or equivalent) Credit 4

0692-233 Contemporary Science-Physics
An introduction to the fundamental principles of physics for non-science majors, and the application of these concepts to areas of interest and concern in our contemporary technological society. The conceptual basis for the phenomena of heat, light, sound, mechanics, electricity and magnetism is discussed and related to such topics as astronomy, space exploration, lasers and environmental concerns. The course is presented in a lecture-demonstration format. (0692-221 or 0692-222 or 0692-223 or equivalent) Credit 4

0692-234 Oceanus
An introduction to the fundamental principles of oceanography for non-science majors, and the application of those concepts to areas of interest and concern in our contemporary technological society. The marine environment is investigated in terms of basic scientific concepts, and topics discussed include plate tectonics and earthquake prediction, the impact of ocean pollutants, climate fluctuations, cetacean intelligence and resources from the sea. Distance learning offering. (High school algebra) Credit 4

0692-236 Contemporary Science-Astronomy
An introduction to the fundamentals of astronomy for non-science majors. After learning to locate and identify visible objects in the night sky, students are introduced to the scientific instruments and techniques used to investigate celestial phenomena. Subsequent discussions show how observational data reveals the physical nature and evolution of planets, stars, and galaxies. Requires proficiency in algebra and familiarity with simple trigonometric relationships. This is a distance-learning offering. Credit 4

0692-250 Introduction Computer Program
Basic concepts and overview of computer science. The topics include historical development, algorithms, flowcharting and programming in BASIC. Exposure to hardware concepts, software concepts, binary and hex numbers and logic. Application of the computer to various disciplines. Not for Computer Science majors. This is a distance-learning offering. (High school intermediate algebra) Credit 4

0692-310 The History and Manufacture Siege Weapons
In this course, students will learn the history of the development of siege weapons throughout the ages, from early Sumeria to the mid-1900s. Students will then use this historical knowledge to construct prototypes and design their own siege weapons. Credit 2

0692-311 Statistics
An introduction to the basic tools of statistical analysis used in business, including charts, frequency distribution, averages, dispersion, probability theory, sampling. Logical procedures for making business decisions under conditions of uncertainty are emphasized. Hypothesis testing including one, two and k-sample test means, proportions, regression and correlation analysis are also included. (0692-212) Credit 4

0692-312 Statistics II
An introduction to the basic tools of statistical analysis used in business, including charts, frequency distribution, averages, dispersion, probability theory, sampling. Logical procedures for making business decisions under conditions of uncertainty are emphasized. Hypothesis testing including one, two and k-sample test means, proportions, regression and correlation analysis are also included. (0692-212) Credit 4

0692-599 Independent Study
This course number should be used by students who plan to study a math topic on an independent study basis. The student must obtain permission of the appropriate faculty member before registering for the course.

Geographic Information Systems

0693-401 Introduction to Geographical Information Systems
This course will introduce students to the world of Geographic Information Systems (GIS). Course readings, lectures, and labs cover a mix of practical and technical GIS topics including: fundamental GIS concepts, ArcGIS software competency, spatial data, spatial data analysis fundamentals, and cartography. This course is co-listed with 0693-703. Students who have taken this 0693-401 may not subsequently register for 0693-701 for graduate level credit. Credit 4

0693-402 Geospatial Science
This course will introduce the theoretical and practical aspects of Geospatial Science and Technology. The lecture portion of the course will present a survey of Geospatial Science and will provide theoretical basis for Geographic Information Systems applications. A laboratory section will develop advanced geoprocessing skills. This course is co-listed with 0693-702. Students who have taken 0693-402 may not register for 0693-702 for graduate level credit. (Introduction to GIS, 0693-401) Credit 4

0693-403 Geospatial Data Analysis
This course is an introduction to the theory and techniques used for spatial analysis of complex, geographically referenced data. This course will incorporate advanced statistical and GIS data analysis techniques for a variety of problem types that span a broad spectrum of disciplines. In-class and out-of-class assignments will develop spatial data analysis skills. This course is co-listed with 0693-703. Students who have taken 0693-403 may not register for 0693-703 for graduate level credit. (Geospatial Science, 0693-402) Credit 4
A 'Geodatabase' is a geographically referenced database that stores geographic data and represents real-world features. This 4-credit course will cover the following topics: (1) fundamental concepts of databases and geodatabases; (2) design, development, management, and analysis of geospatial data sets; (3) spatial queries; (4) introduction to SQL and ArcObjects; (5) Enterprise GIS and Enterprise workflows; and (6) Internet mapping. This course is co-listed with 0693-704. Students who have taken 0693-404 may not register for 0693-704 for graduate level credit. (Introduction to GIS, 0693-401) Credit 4

0697-240 Methods of Learning
This course provides students with analytical thinking skills and strategies that are effective across academic disciplines. The process of "learning to learn" considers an individual's natural learning skills and how to apply them to academic work. The importance of questioning in the active learning process is established through guided instruction. The application of skills to current academic course work is reinforced through small group sessions and carefully monitored independent student self-assessment. Class 2, Credit 2

0697-300 The Leader in You
This course introduces students to the concept of personal leadership. Students will identify and evaluate frameworks for successful leadership and learn critical skills and strategies that will enable them to achieve success in their personal and professional lives no matter what their discipline. Focus areas include: personal goal setting through the creation of mission and vision statements, self-analysis of values and decision making, emotional intelligence, and interpersonal communication techniques. Coursework will include readings enhanced by experiential activities, cases studies, written reports and reflections. This course is suitable for all students desiring to develop and learn about their leadership potential or by permission of instructor. Credit 2

0697-301 Leading Others
In this course, students will learn the most effective strategies and skills needed to be successful at leading others and projects. Through a variety of experiential exercises, field work and an in depth look at a variety of leader- ship styles and theories, students will evaluate their strengths and weaknesses as a leader and develop a plan of action to improve skills. Areas of focus include: leadership theories and styles, teamwork and group dynamics, cultural communication and influence, and ethical decision-making. This course is suitable for students with previous leadership experience or by permission of instructor and can be used to meet one of the free elective requirements in the new curriculum. Credit 2

0697-305 Experiential Leadership
This blended learning course is designed for students who are interested in applying critical leadership concepts to a current leadership experience. By integrating course concepts of leadership styles and theories with a leadership field experience, students will be able to assess their skills as a leader and create a plan for growth and development for future success. Each student will be required to create a leadership learning agenda and development plan at the beginning of the quarter based on their current leadership experience. The learning agenda will identify goals for achievement and strategies for assessing and improving upon their effectiveness as a leader. This course will be highly experiential and may require some weekend meetings scheduled by the faculty member and/or the student. (0697-302, The Leader in You, or by permission of the instructor) Credit 2

0697-430 Survey of Organizational Change
This course will facilitate a student's understanding of factors that impact and influence behavior in contemporary organizations. In addition, students will develop skills that can be used to effectively function in the workplace. The course focuses on individual behavior, teams, motivation, decision-making, and creativity. Leadership, power, and politics in organizations are also addressed. Other topics include culture and change including the need for continuous learning and attention to the learning organization, ethics and values, organizational structure and conflict. The importance of effective communication is stressed throughout the course. Credit 4

0697-431 Understanding Corporate Culture
An introduction to the concepts of organizational/corporate culture and the methods of analyzing it. Focuses on the development of skills required to assess corporate culture in terms of such constitute parts as ritual, symbol, structure, language and identity. Also included are a history of the study of corporate culture, an analysis of leadership styles and communication patterns in the workplace, an overview of strategies for managing corporate and organizational change and an orientation to leadership styles appropriate to the successful manipulation of cultural elements. Emphasis is both on individual and interactive learning processes. (0510-210 and either 0514-210 or 0515-210) Credit 4

0697-432 Managing Organizational Change
At a time when America is learning that change, and not stability, is at the heart of business and organizational vitality, this course offers students insight into theories of organizational dynamics and change as well as an introduction to skills for managing change and negotiating. The strategies covered include, but are not limited to, community building, managing corporate and individual change, and identifying resistance conflict. Credit 4

0697-433 Teams and Team Development
Meets the increasing need to understand and participate in teams in the workplace. Students establish a strong framework of group theory through topics that include current group and team theory research, individual functions in a team and team leadership, mission and global development, evaluating team effectiveness, negotiating persuasion and conflict resolution. This course is highly interactive, with projects that require the student to use the theory in constructing and observing cross functional work teams, self directed teams and integrated work teams. Learning takes place through lectures, case studies, simulations and group projects that develop strong team skills and reinforce team theory. Credit 4

0693-405 Mobile GIS
This credit course will introduce students to concepts in Mobile GIS technology, GPS theory, and the integration of GIS and GPS data. Students will learn how to use hand-held GPS units, hand held personal computers, and ArcPad, GPS Analyst, and Trimble GIS software. Additionally, this source will provide students with the opportunity to plan and implement field surveys in a team environment, as well as perform laboratory-based geospatial data analysis on information collected in the field. The course will emphasize the integration of geospatial technologies for field surveys. This course is co-listed with 0693-705. Students who have taken 0693-405 may not register for 0693-705 for graduate level credit. (Introduction to GIS, 0693-401) Credit 4

0693-406 Spatial Modeling and Visualization
This course explores the spatial modeling of geographic data for the characterization of natural phenomena, land use scenarios, and economic variables. This course focuses on three and four dimensional spatial analysis, network analysis, and predictive modeling. Students will use GIS software to analyze and visualize time-series data and spatial patterns. This course is co-listed with 0693-706. Students who have taken 0693-406 may not register for 0693-706 for graduate level credit. (Geospatial Data Analysis, 0693-403) Credit 4

0693-404 Geodatabase Development and Implementation
This course will cover the following topics: (1) fundamental concepts of databases and geodatabases; (2) design, development, management, and analysis of geospatial data sets; (3) spatial queries; (4) introduction to SQL and ArcObjects; (5) Enterprise GIS and Enterprise workflows; and (6) Internet mapping. This course is co-listed with 0693-704. Students who have taken 0693-404 may not register for 0693-704 for graduate level credit. (Introduction to GIS, 0693-401) Credit 4
0697-434  Change and Leadership Project
This course integrates the knowledge gained in the courses that make up the Organizational Change and Leadership Certificate and, therefore, cannot be taken until all the courses in the certificate have been completed. Students will be expected to identify an area within their studies of change and leadership that is of most interest to them. Once they have identified their area of interest, they will discuss this with the faculty member assigned to the course and begin the process of developing a proposal of the work to be accomplished. Well-planned and fully thought-out proposals lead to the best projects and the ones that are most easily executed and completed. Upon acceptance of the proposal, the student will complete the project and write a paper reflecting their area of choice, integrating the knowledge gained from the courses in the certificate. Credit 4

0697-435  Global Forces and Trends
Dealing with unpredictable futures is an on-going challenge for every leader, manager, and individual. Whether you are making personal or organizational decisions, your success depends on your ability to envision the future with a proactive, strategic approach. The ability to analyze, adjust to, and take advantage of emerging opportunities, trends, and forces, and to integrate and connect information patterns, determines the success or failure of your decisions. In this course, methodologies and approaches such as scenario-based strategy, visual thinking, mind-mapping, mental models, strategic thinking theory, and challenging prevailing ideas are introduced and used to examine the technical, social, economic, and demographic trends and forces affecting people, organizations, and the choices they need to make. Credit 4

0697-441  Creative Critical Thinking and Problem Solving
An interdisciplinary approach to the generation and evaluation of ideas and solutions. Includes analysis of the conditions limiting creativity and the development of a “toolkit” of strategies and techniques for discovering, inventing and assessing new, unique and useful ideas, applications and solutions. Applicable to a range of life and work situations, from complex environmental concerns to competitive business challenges to family disputes. Credit 4

0697-442  Learning Organization
This interdisciplinary course combines management thought, control theory psychology and systems thinking. It focuses on theory and techniques for building and sustaining an efficient, creative organization that promotes problem solving and collaborative learning. Learning organization principles of systems thinking, personal mastery, mental models, shared vision, team learning. Provides an introduction to control theory psychology with applications for improved personal interaction and a noncoercive approach for lead managing. Includes analysis of the conditions limiting an organization’s capacity to learn and remediation of organizational “learning disabilities.” Credit 4

0697-444  Self-directed Learning in the Workplace
This multidisciplinary course provides a practical overview of self-directed learning: theory, design, development, and implementation. Students examine self-directed learning from personal and organizational perspectives that include individual learning differences. Student projects focus on identifying learning objectives and utilizing a systematic approach for promoting active learning in the workplace. Credit 4

0697-448  Managing Learning and Knowledge
The new workplace requires new solutions. In this environment, training that is well-planned, presented, and meets organization needs takes on a critical strategic role. This course is aimed at managers, team leaders, HR specialists, and those involved in the continuous, self-directed, formal and informal learning needed to help their organizations improve their business success. Core topics include: design and delivery of training, the needs assessment process, job and core competencies analysis, targeting learner populations and learner needs, training program design, and program development issues. Class 4, Credit 4

0697-451  Preparing for the 21st Century
An interactive seminar for advanced students that focuses on interdisciplinary issues of wide interest and application. Course theme and content change periodically, ranging from “Negotiation and Conflict Resolution” to “Microeconomic Battle Plans” and “Organizational Culture.” Limited to qualified applied arts and science BS degree students. (Approval of adviser) Credit 4

0697-452  Special Topics
This course provides an overview of urban issues and how to develop action plans that address some of a city’s most critical challenges. Student teams will address issues of economic development, education, public safety, the quality of life and metropolitan solutions. Credit 4

0697-462  Empowered Leadership
This multidisciplinary course has a three-tier structure: a fundamental look at the theories and practices of leadership; a study of leadership styles and their impact on the work environment; and a reflection and self-analysis by the students of their leadership styles. Course work will include extensive readings, case studies, written reports and reflections. Much of the course will operate in a team manner. Credit 4

0697-510  Multidisciplinary Life
This is a required undergraduate capstone course for the applied arts and science bachelor’s program. Students should consult their adviser before registering. Credit 4
Course numbering: RIT courses are generally referred to by their seven-digit registration number. The first two digits refer to the college offering the course. The third and fourth digits identify the discipline within the college. The final three digits are unique to each course and identify whether the course is noncredit (less than 099), lower division (100–399), upper division (400–699), or graduate level (700 and above).

Unless otherwise noted, the following courses are offered annually. Specific times and dates can be found in each quarter’s schedule of courses, published by the Office of the Registrar. Prerequisites/corequisites are noted in parentheses near the end of the course description.

### Accounting

#### 0101-301 Management Accounting
An introduction to the way in which corporations report their financial performance to interested stakeholders like investors and creditors. Coverage of the accounting cycle, generally accepted accounting principles, and analytical tools help students become informed users of financial statements. Credit 4

#### 0101-302 Management Accounting
Introduction to the use of accounting information by managers within a business. Explores the value of accounting information for the planning and controlling of operations, assessing the cost of a product/service, evaluating the performance of managers, and strategic decision making. Designed for non-accounting majors. (0101-301) Credit 4

#### 0101-345 Accounting Information Systems
Emphasis is on developing a conceptual understanding of accounting information systems. Combines information systems concepts, computer technology, and accounting issues. Topics include computer security, information privacy, accounting cycles, specialized journals, systems development, computer crime, database applications, e-commerce, and other information systems issues. Includes discussion of current literature and use of a computerized accounting system. Students analyze accounting information systems topics through problem solving, essays, presentations, exams, and case studies. (0101-301) Credit 4

#### 0101-408 Financial Reporting and Analysis I
Extensive exposure to the accounting cycle with full integration of the data flow in an accounting information system. Accounting theory developed by accounting standard-setting bodies is covered in depth. Generally accepted accounting principles are discussed as they apply to the preparation of financial statements and the recognition and measurement of financial statement elements (0101-301 and 0101-302; junior status) Credit 4

#### 0101-409 Financial Reporting and Analysis II
In-depth consideration of generally accepted accounting principles and theory as they apply to the recognition and measurement of noncurrent assets, liabilities, and owner equities, including partnership accounting. Issues related to convertible securities and the computation of earnings per share are discussed. (0101-408, 0104-350; junior status) Credit 4

#### 0101-431 Cost Accounting
Development and use of cost data for external reporting and internal planning and control. Topics include cost estimation and prediction, job costing, process costing, joint product and by-product costing, service department cost allocation, standard costing, activity-based costing, and transfer pricing. Development of relevant cost information for special purposes is also considered. (0101-302, 0104-350, 1016-319) Credit 4

#### 0101-494 Cost Accounting in Technical Organization
A first course in accounting for students in technical disciplines. Topics include the distinction between external and internal accounting, cost behavior, product costing, profitability analysis, performance evaluation, capital budgeting, and transfer pricing. Emphasis is on issues encountered in technology intensive manufacturing organizations. (This course is not intended for Saunders College of Business students; junior status) Credit 4

#### 0101-522 Personal and Small Business Taxation
A basic introductory course in federal income taxation. Emphasis is on taxation of individuals and sole proprietors. Topics include income measurement and deductibility of personal and business expenses. (0101-301; junior status) Credit 4

#### 0101-523 Advanced Taxation
A continuation of Personal and Small Business Taxation. Emphasis is on tax treatment of property transactions and taxation of business entities. Also covers the use of technology to prepare complex returns and to research tax issues. (0101-522) Credit 4

#### 0101-530 Auditing
A study of the legal, ethical, and technical environment in which the auditor works. Current auditing theory, standards, procedures, and techniques are studied. The audit process is studied to ascertain how it leads to the development of an audit opinion (0101-409) Credit 4

#### 0101-540 Advanced Accounting
This course investigates the application of generally accepted accounting principles to corporations with investments in subsidiaries. Issues involving consolidation of financial statements, including international topics, are considered. Also examined are objectives for not-for-profit and governmental entities, and how these objectives affect their financial accounting and reporting. (0101-409; junior status) Credit 4

#### 0101-550 Financial Accounting and Reporting Issues
A study of complex issues facing preparers and users of financial statements and how these issues are resolved. Topics include revenue recognition, accounting changes, deferred taxes, pensions, and post-employment benefits, leasing, cash flow statements, interim reporting, and segment disclosures. (0101-409) Credit 4

#### 0101-554 Seminar In Accounting
Advanced study of accounting topics reflecting contemporary issues and/or current technological advancements impacting the development, implementation, and management of accounting systems in organizations. Seminar topics have ranged from ethics to computerized accounting systems. Topics for a specific quarter will be announced prior to the course offering. (0101-301; junior status) Credit 4

### Management

#### 0102-250 The World of Business
Designed for first-year business students, this course provides an overview of the functions and processes of business organizations. Topics include the role and responsibility of the manager, the processes and functions of business, the impact of technology, delivering quality products and services, doing business in global environments, and career exploration. Credit 4

#### 0102-260 Business 1: Ideas and Creativity
This is the first of a three-course sequence in which students learn to take a business idea from inception to launch. In Business 1 students will conceive new business ideas that will be developed through the remainder of the sequence. The course provides students with a solid grounding in the different functional area of business. Credit 4

#### 0102-265 Business 2: Business Plan Development
This is the second of a three-course sequence in which students learn to take a business idea from conception to launch. In Business 2, students will develop a detailed business plan for the ideas generated in Business 1. At the end of the quarter groups will finalize and present their business plans to a review board. (0102-260) Credit 2

#### 0102-305 Careers in Business
This course consists of a series of workshops designed to introduce business students to the skills needed to be successful in job and co-op searches and applications to graduate schools. Students will establish their career goals, create material needed to achieve these goals (e.g., resume, cover letter), and become successful interviewers. (Sophomore status) SCB students only. Credit 1
Air Force Management and Leadership I
Integrated management and leadership courses emphasize the concepts and skills required of the successful young officer, manager, and leader. The first course includes applied written and oral communication techniques, coordination, and history of management theory. Analytic methods of decision-making, strategic and tactical planning, various leadership theories, and followership. The second course stresses organizing, staffing, controlling, counseling, human motivation and group dynamics, ethics, managerial power and politics, managing change, career development, and performance appraisal. Actual Air Force case studies are used to enhance the learning process. (ROTC) Credit 5

Air Force Management and Leadership II
Integrated management and leadership courses emphasize the concepts and skills required of the successful young officer, manager, and leader. The first course includes applied written and oral communication techniques, coordination, and history of management theory. Analytic methods of decision-making, strategic and tactical planning, various leadership theories, and followership. The second course stresses organizing, staffing, controlling, counseling, human motivation and group dynamics, ethics, managerial power and politics, managing change, career development, and performance appraisal. Actual Air Force case studies are used to enhance the learning process. Note: Other Air Force ROTC course listings can be found under the College of Applied Science and Technology. Credit 5

Organizational Behavior
As an introductory course in managing and leading organizations, this course provides an overview of human behavior in organizations at the individual, group, and organizational level with an emphasis on enhancing organizational effectiveness. Topics include: individual differences, work teams, motivation, communication, leadership, conflict resolution, organizational culture, and organizational change. (Sophomore standing) Credit 4

Digital Entrepreneurship
Digital Entrepreneurship brings together state-of-the-art knowledge in digital business practices with basic instruction in entrepreneurship and business planning. This highly interactive, applied experience will allow students to develop business ideas, discover RIT resources that support new ventures, network with and learn from industry experts, and complete a professional plan to communicate and advance a digital business venture. Student work for this course will involve research and analysis of electronic marketplaces and, ultimately, the design and development of competitive digital startups. (Junior status) Credit 4

Design Thinking and Concept Development
Design thinking is a process that aids collaboration among designers, technologists, and business professionals. The process provides a structured creative process for discovering and developing products and services for profit and non-profit applications. Students will apply a wide range of design tools in a hands-on project. Topics include problem-framing, end-user research, visualization, methods for creative idea generation, and rapid prototyping. (Junior status) Credit 4

Business Ethics
Awareness of core principles of ethical business behavior is an essential component for effective participation in business organizations. This course develops an understanding of ethical reasoning and how it is applied to current business issues. An important focus of the course is the development of ethical leaders. Students are exposed to several ethical and moral dilemmas, which are used to guide debate and discussion of issues such as: advertising, affirmative action, human resource decisions, product liability, etc. (0102-320) Credit 4

Professional Skills Development
This course provides the opportunity to develop individual and interpersonal skills that enhance individual, team, and managerial performance in today's high-performance organization. Skills will be identified, modeled, practiced, and developed using video and other formative feedback, as well as individual and group coaching. Industry experts will provide relevant insights on course topics, which include communication, interviewing, interpersonal interaction, business networking, teamwork, and management styles. (0102-320) Credit 4

Human Resources Management
An overview of the human resource function in both large and small organizations. This course emphasizes how managers can utilize human resources to achieve organizational goals. Major topics studied include employee selection, compensation, training and development, performance evaluation, and managing diversity. (0102-320) Credit 4

Leadership in Organizations
Modern organizations are in search of effective leaders who can guide organizational members toward the attainment of organizational goals. This course will explore the character, personal attributes, and behaviors of effective leaders in modern organizations. The course includes an overview of leadership research, theory, and practice. (0102-320) Credit 4

Entrepreneurship
This course studies the process of creating new ventures with an emphasis on understanding the role of the entrepreneur in identifying opportunities, seeking capital and other resources, and managing the formation and growth of a new venture. It addresses the role of entrepreneurship in the economy and how entrepreneurial ventures are managed for growth. (Junior status) Credit 4

Business, Government and Society
This course illuminates the role of ethics, social ideology and government policy and regulation in guiding business decisions and in enhancing business competitiveness. Special attention is given to the role of business in assessing technological opportunity and risk, managing product liability and victim compensation, directing the corporations in a manner consistent with public policy on the natural environment and developing policies that assure fair treatment of diverse individuals in the workplace. (Senior status) Credit 4

Managing Innovation and Technology
This course focuses on commercializing technology, and gives students the chance to work on real business projects involving new technology. Topics covered include the drivers of innovation, technology-driven entrepreneurship, managing different types of innovation, and the construction of technology strategy for a firm or business unit. Students learn how to understand both technology and business perspectives as well as how to formulate a profitable technology strategy. Projects focus on current situation in real companies, including, on occasion, student-owned startup companies. (Junior or senior standing, or permission of instructor) Credit 4

Applied Entrepreneurship and Commercialization
This course enables students to gain course credit, in association with the RIT Student Development Lab, for advancing a business concept, working on a multidisciplinary product commercialization team, or working with an entrepreneurial venture. Students must apply for admission into this program and follow the guidelines provided by the RIT Entrepreneurship Program. (Instructor permission) Credit 4

Field Experience in Business Consulting
Students nearing the completion of their program work in consulting teams to assist startup ventures and/or small businesses. Problems are isolated and solutions then developed. Affiliated course projects may focus on a number of areas. For example, they may seek to develop commercialization plans for specific technologies, products or services; focus on unique problems associated with small businesses and develop growth strategies. (0102-490; junior status or permission of instructor) Credit 4

Strategy
A capstone course drawing upon all the business functions, including accounting, finance, marketing, operations management, and organizational theory. The course provides an integrated perspective of business organizations toward the achievement of enhanced profitability and a sustainable competitive advantage. Topics include the analysis of business environments, industry attractiveness, competition, and the value chain. Students learn how to formulate and implement effective business-level and corporate-level strategies. (0102-320, 0105-363, 0104-350, 0106-401; senior status) Credit 4

Seminar in Management
Special-topics seminars offer an in-depth examination of current events, issues, and problems unique to management. Specific topics will vary depending upon student and faculty interest and on recent events in the business world. Seminar topics for a specific quarter will be announced prior to the course offering. These seminars may be repeated for credit since topics normally vary from quarter to quarter. (Depends on topic) Credit 4
Finance

0104-220 Personal Financial Management
Examines financial decisions people must make in their personal lives. Covers personal taxation, housing and mortgages, consumer credit, insurance (including life, health, property, and casualty) and retirement and estate planning. Also reviews the common financial investments made by individuals, including stocks, bonds, money market instruments, and mutual funds. This class involves extensive use of the Internet for access to information. (Finance majors may use this course only as a free elective, not as a course creditable toward the major.) Credit 4

0104-350 Corporate Finance
Basic course in financial management. Covers business organization, time value of money, valuation of securities, capital budgeting decision rules, risk-return relation, Capital Asset Pricing Model, financial ratios, global finance, and working capital management. (0111-402, 1016-319, 0101-301, and in second quarter of sophomore year or higher) Credit 4

0104-359 Financing New Ventures
Financing New Ventures focuses on financial issues affecting an entrepreneur. The course emphasizes, identifies and follows the wealth creation cycle. The wealth creation cycle begins with an idea for a good, product or service, progresses to an initial company startup, passes through successive stages of growth, considers alternative approaches to resource financing, and ends with the harvesting the wealth created through an initial public offering, merger or sale. Identification and valuation of business opportunities, how and from whom entrepreneurs raise funds, how financial contracts are structured to both manage risk and align incentives and, alternative approaches by which entrepreneurs identify exit strategies are reviewed. Credit 4

0104-361 Financial Institutions and Markets
This course provides a comprehensive survey of the major financial markets and institutions in the U.S. and abroad. This course analyzes the important structural features of the major markets and notes the interaction of the financial markets with the decisions of financial institutions, corporations, and the government. (0104-350) Credit 4

0104-452 Managing Corporate Assets and Liabilities
Advanced course in financial management. Covers project cash-flow analysis, issuance of securities, cost of capital, debt policy, dividend policy, and marketing efficiency. (0104-350) Credit 4

0104-453 Intermediate Investments
Focuses on the financial investment problems faced by individuals and institutions. Theoretical topics include asset pricing, hedging, and arbitrage. Application topics include risk management in bond and stock portfolio context. A discussion of options, futures, and swaps also is included. (0104-350) Credit 4

0104-460 Financial Analysis and Modeling
In this course, students learn to obtain and organize financial data and conduct financial analysis such as discounted cash flow analysis, risk analysis and financial forecasting. Sources of data include Web-based sources and proprietary databases. Excel will be the main software tool. (0104-452) Credit 4

0104-504 Finance in a Global Environment
Discusses problems posed by the international financial environment in which corporations operate. In particular, students learn to quantify and manage risks arising from shifting exchange rates. Other topics include exchange rate systems, international trade finance, international capital budgeting, country risk analysis and long-term international financing. (0104-350; junior status) Credit 4

0104-505 Advanced Corporate Financial Planning
This course focuses on strategic financial management of the corporation. It employs pedagogies that emphasize analysis and evaluation of applied financial problems. Topics include working capital management, financial statement analysis, valuation, capital budgeting decisions, and risk management. (0104-452) Credit 4

0104-520 Introduction to Options and Futures
This course explores risk management from the viewpoint of a finance professional. The primary tools used are derivative instruments such as options, futures and swaps. Students learn about the basic features of derivative instruments: how to value them, how they are traded, and how to use them to mitigate various types of financial risk. (0104-350; junior status) Credit 4

0104-554 Seminar in Finance
Special topic seminars offer an in-depth examination of current events, issues and problems unique to finance. Specific topics will vary depending upon student and faculty interests and on recent events in the business world. Seminar topics for a specific quarter will be announced prior to the course offering. These seminars may be repeated for credit since topics will normally vary from quarter to quarter. (Instructor determined) Credit 4

Marketing

0105-363 Principles of Marketing
An introduction to the field of marketing, stressing its role in the organization and society. Emphasis is on determining customer needs and wants and how the marketer can satisfy those needs through the controllable marketing variables of product, price, promotion, and distribution. (Sophomore status) Credit 4

0105-410 Product and Service Commercialization
The objective of this course is to introduce the students to the tools, skills, and knowledge required to minimize the inherent risks in commercialization of new products and services. This course will focus on marketing management techniques and processes that are common to commercialization, such as scanning external environment, defining product concept, capturing voice of the customer, and creating marketing plans. (0105-363) Credit 4

0105-440 Internet Marketing
Internet marketing is critical to an organization’s overall strategy. This course focuses on tactics and strategies that enable marketers to fully leverage the Internet. Topics include the overall Internet marketing landscape, technologies, customer segmenting and targeting, search, analytics, and emerging Internet marketing platforms. (0105-363) Credit 4

0105-442 Search Engine Marketing and Analytics
An examination of search engine marketing strategies to maximize site traffic, lower customer acquisition costs and boost conversion rates. Marketing frameworks provide the basis for the hands-on examination of search engine marketing and Web analytics. (0105-440) Credit 4

0105-505 Buyer Behavior
A study of the determinants of consumer and business buying behaviors. Emphasis is on identifying customer needs, understanding the buying decision process, and maintaining customer satisfaction. (0105-363) Credit 4

0105-520 Advanced Internet Marketing
An advanced course that gives students an in-depth knowledge of Internet theories, marketing problems, and processes. The course will enable students to critically evaluate the Internet marketing planning process. It integrates the core principles, tools and tactics necessary to succeed online. (0105-440, 0105-442) Credit 4

0105-550 Marketing Management
Marketing Management is a capstone course that gives the student an in-depth knowledge of middle- and upper-management-level marketing problems and processes. Topics include tools used by marketing managers in the development, implementation and control of marketing plans. (0105-363, prior or concurrent registration in 0105-351, at least one co-op, senior status) Credit 4

0105-551 Marketing Metrics and Research
A study of research methods used to understand the changing needs of customers in order to guide the decision making of marketing managers. Emphasizes the data driven elements of marketing by integrating key marketing metrics with marketing research. Topics include problem formulation, sources of marketing data, research design, data collection, selection and calculation of metrics and statistical analysis. (0105-363, 1016-320) Credit 4

0105-554 Seminar in Marketing
Current issues in marketing are the focus of the course. Topics have included direct and database marketing, pricing, advanced marketing research and other current issues in marketing, based on student and faculty interest. (0105-363; junior status) Credit 4

0105-559 Professional Selling
Selling concepts, tools, strategies and tactics are discussed as they apply to both external and internal customers. Students learn and experience some of the problems faced and rewards earned by those in professional sales. Customer relationship management/partnering with customers and truly seeking to meet their requirements are discussed as key to long-term success. (0105-363; junior status) Credit 4
0105-560 Advertising and Promotion Management
An in-depth view of tools of promotion management: advertising, sales promotion, public relations, personal selling, direct marketing, and Internet marketing as well as new and alternative media. Basic concepts of how to use print, broadcast, Internet and out-of-home media are studied. Planning, budgeting, creative strategy, and the roles of advertising agencies are also covered. (0105-363) Credit 4

Decision Sciences

0106-401 Operations and Supply Chain Management
A survey of operations and supply chain management that relates to both service and manufacturing organizations. Topics include operations and supply chain strategies, ethical behavior, forecasting, product and service design, including innovation and sustainability, capacity and inventory management, lean operations, managing projects, quality assurance, global supply chains, and the impacts of technology. (A basic course in statistics.) Credit 4

0106-554 Seminar in Decision Science
Special topics seminars offer an in-depth examination of current events, issues and problems unique to Decision Science. Specific topics will vary depending upon student and faculty interests and on recent events in the business world. Seminar topics for a specific quarter will be announced prior to the course offering. These seminars may be repeated for credit since topics will normally vary from quarter to quarter. (Instructor determined) Credit 4

Business Legal Studies

0110-305 Legal and Ethical Issues in Technology-Intensive Environments
The course introduces RIT students to a variety of important legal issues, such as intellectual property and privacy, including statutory and case law, the regulatory environment, and ethical issues that arise in technologically oriented areas, such as information technology and the life sciences. This is important, as individuals are likely to encounter such issues throughout their lives and their careers. Along with technical knowledge, the ability to effectively deal with legal and ethical issues shapes professional successes and failures. (Sophomore status) Credit 4

0110-319 Legal Environment of Business
An introduction to legal principles and their relationship to business organizations. Emphasis is placed on the laws and regulations which govern business. Explores the background and origin of the U.S. legal system, its law enforcement agencies and the legal procedures used by the government to enforce its law. Credit 4

0110-320 Commercial Law
Explores the impact of the Uniform Commercial Code on business operations. Emphasis on topics included on the certified public accounting exam. Topics covered include sales, commercial paper, corporations, partnerships, joint ventures, sole proprietorships, bailment, and agency. Topical cases and examples are used to help the student grasp the business implications of the law and its nomenclature. A research project on legal issues is an important aspect of this course. (0110-319) Credit 4

0110-554 Seminar in Business Legal Studies
Advanced study of business and legal topics reflecting contemporary issues and/or current technological advancements impacting the understanding of taxation, business, and legal issues in organizations. Seminar topics may range from international intellectual property rights to interactivity between technology, business, and legal issues in organizations. Seminar topics will vary depending upon student and faculty interests and on recent events in the business world. Seminar topics for a specific quarter will be announced prior to the course offering. (Junior status or instructor's approval) Credit 4

Management Information Systems

0112-270 Business Software Applications
This course provides students with hands-on experience with the analytical software tools and techniques that are used in today’s businesses. Emphasis will be placed on the application of spreadsheet models for supporting management decision-making. A variety of spreadsheet-based cases in market research, financial analysis, accounting applications and other business domains will be utilized to show how to effectively analyze and solve business problems using the spreadsheet tool. Credit 2

0112-285 Business 3: Commercialization
This is the third in a three-course sequence in which students learn to take a business idea from inception to launch. In this course students prepare to commercialize their new product or service with the aid of a more detailed business plan, a student-created website, and an in-depth understanding of key business processes and cutting-edge technologies. (0102-265, 0112-270) Credit 2

0112-300 Business Computer Applications
The primary focus of the course is to provide students with hands-on skills in using computers as productivity tools in the workplace. Students will be exposed to a combination of advanced productivity software including word processors, presentations and computer applications. Hands-on exercises and assignments will help to develop computer proficiency and problem-solving skills. Credit 4

0112-312 Building A Web Business
This course gives students both a conceptual and hands-on understanding of the launching of Web businesses. Students will study the full process of Web business creation, including domain name registration, frameworks for application creation, hosting of Web applications and search engine optimization. Students will apply their knowledge by designing and building a business Web application. Credit 4

0112-315 Business Information Systems Processes
Managers, professionals, and business technologists manage, maintain, or participate in business processes. This course is an introduction to the basic business processes involved in organizations and the information systems that support them. Students examine the relationship between business processes and information systems and the qualities of good information. Students observe how these concepts are applied through hands-on exposure to an Enterprise Resource Planning (ERP) system, such as SAP R/3. Credit 4

0112-325 Applying Business Technology
In this course, students learn to take a business idea from inception to launch. It covers the major steps involved in commercializing a new product or service with the help of in-depth understanding of key business processes and cutting-edge e-business technologies. Topics covered include idea generation, basic business plan development, computer-based market analysis, preparation for business idea implementation, and e-commerce website development. (Not for students who have completed the 0102-260, 0102-265, 0112-285 sequence. For transfer students only) (Prior business and spreadsheet course work) Credit 4

0112-331 Developing Business Applications
Development of business applications is transforming from programming to integration of software components using application development environments. Students learn the fundamentals of computer programming and applications development through a set of programming exercises that focus on visual development environments and component integration. These exercises expand into a project where students apply concepts of typical development and project methodologies to complete a comprehensive programming assignment. Credit 4

0112-340 Database Management Systems
Transforming data into information is critical for making business decisions. This course introduces students to the concepts of data, information and the business database management systems (DBMS) used by modern organizations. Exercises and hands-on projects are used to model the information needs of an organization and implement and query databases using applications such as Microsoft Access and SQL. Credit 4

0112-370 Systems Analysis and Design
Successful organizations utilize a systematic approach to solve real-world business problems through the use of digital technologies. Students who complete this course will be able to design and model business processes. They will learn how to conduct interviews; approach the design or redesign of business processes; model system functions; effectively communicate systems designs to various levels of management; work in a project-based environment and approach the implementation of a new system. Credit 4

0112-390 Emerging Business Technologies
This course stresses a business-oriented approach to evaluating, selecting, and leveraging emerging information technologies to support an organization’s business processes. Students gain hands-on knowledge to design effective and secure networked IT infrastructure systems for business operations. Students also explore management issues such as defining an IT strategy, establishing IT standards, managing IT operations, and outsourcing IT services. Credit 4
0112-410 Advanced Systems Analysis and Design
Object-oriented analysis and design concepts and techniques are covered. Computer-aided software engineering (CASE) software and software quality metrics are introduced. Students that successfully complete this course and the prerequisite Systems Analysis and Design will have acquired knowledge of the full range of analysis and design concepts currently used in systems development. (0112-370; junior status) Credit 4

0112-430 Web Systems Development
Students in this class will analyze business problems and develop data-driven Web applications to solve them. An industry-level application server will provide the framework for integrating and deploying a set of client and server technologies to create these applications. Development skills will include presenting and receiving information through a website, validating entered information, and storing entered information in text files or databases. Students will design solutions using HyperText Markup Language, client scripting, and server programs for database and file access. (0112-331, 0112-340) Credit 4

0112-440 Database Systems Development
This course builds upon the basic concepts from Database Management Systems (0112-340). Students work in a real-world business database development environment and gain hands-on experience in advanced database querying language. Students learn to analyze business processes and, using tools such as Oracle, develop fully functioning database prototype systems to support them. (0112-340 or equivalent) Credit 4

0112-450 Enterprise Systems
This course explores the role of enterprise resource planning (ERP) systems in organizations. Students analyze cross-functional business processes and ERP systems commonly used to support these processes. Students engage in a hands-on project using a current ERP system, such as SAP R/3, to demonstrate, analyze and design system structures, key data elements and process configurations that support cross-functional business processes, including accounting, sales, material management, production, and distribution. (0112-370) Credit 4

0112-525 MIS Capstone
This capstone course for MIS majors applies the concepts of project management and techniques for estimating, planning, and controlling of resources to accomplish specific project goals. Students complete a team project requiring them to develop an innovative information system while utilizing project management techniques. Students analyze real business situations and develop IT-based innovative solutions for problems encountered. (Completion of all other MIS courses required for the major; senior status) Credit 4

0112-554 Seminar in MIS
Advanced study of MIS topics reflecting contemporary issues and/or current technological advancements impacting the development, implementation and management of information systems in organizations. Seminar topics have ranged from new technological developments to management security issues in MIS systems. Topics for a specific quarter will be announced prior to the course offering. Credit 4

International Business

0113-310 Global Business: An Intro
Broad consideration of global business issues and strategies. Subject areas include the macro issues related to the economic, political, and human environments of global business, i.e., how governments intervene in markets, business, etc. In addition the functional operations of a global firm will be examined. Credit 4

0113-400 Managing in the Global Environment
This course explores the key implementation issues facing global businesses and those firms wishing to expand into the global arena. An emphasis is placed on issues related to the topic of culture. The course examines its impact on management, individuals, groups and how it affects organizational performance. Leadership styles, in the cross-cultural context, will be deconstructed, as will communication, negotiation, risk tolerance, and motivation. (0113-310; 0102-320; junior status) Credit 4

0113-430 Global Business: Special Issues
This course covers a variety of contemporary special interest topics in the context of global business. Sample topics may include foreign direct investment strategies, regions of the world such as Asia, Europe, etc., evolving institutional factors, or trade disputes. (0113-310; junior status) Credit 4

0113-450 Marketing in the Global Environment
A study of the management challenges of marketing in foreign countries. Topics include the assessment of foreign markets, foreign customer requirements, entry strategies, foreign channel management, promoting internationally, transfer pricing, and world-class quality. (0105-363; junior status) Credit 4

0113-500 Strategy in the Global Environment
This course explores the strategic challenges faced by businesses operating in a global environment. It emphasizes the development and formulation of effective corporate strategies within specific global environments. It also addresses the unique characteristics, opportunities, challenges, institutions, and approaches associated with corporate global strategy. (0113-310; senior status) Credit 4
Course numbering: RIT courses are generally referred to by their seven-digit registration number. The first two digits refer to the college offering the course. The third and fourth digits identify the discipline within the college. The final three digits are unique to each course and identify whether the course is noncredit (less than 099), lower division (100–399), upper division (400–699), or graduate level (700 and above).

Unless otherwise noted, the following courses are offered annually. Specific times and dates can be found in each quarter’s schedule of courses, published by the Office of the Registrar. Prerequisites/corequisites are noted in parentheses near the end of the course description.

**Information Technology**

**4002-102 Honors Seminar**
This course provides an introduction to the Honors program for all freshman GCCIS Honors students. The course provides an overview of GCCIS, its program and the requirements for the Honors program at the institute, college and program level. Honors students will hear discussions of the professional and research interests for faculty members from all five departments. Class 2, Credit 0

**4002-201 Freshman Seminar in Information Technology**
An orientation seminar taken by first-year students in Information Technology. Topics covered include a curriculum overview, co-op and career alternatives in information technology, and orientation to RIT and college life. Class 1, Credit 1

**4002-206 Web Foundations**
An introduction to Internet and Web foundations including basic HTML (Hypertext Markup Language) and CSS (Cascading Stylesheets), Web page design fundamentals, basic digital image manipulation, and website implementation and maintenance. Class 4, Credit 4

**4002-208 Introduction to Programming**
A first course in programming using C++. Topics include elementary data types, arithmetic, and logical operators, input/output, control structures, functions with and without parameters, arrays, and an introduction to object-oriented program design and implementation. Emphasis is placed on the development of problem-solving skills. Programming projects are required. (Computer literacy) Class 3, Lab 2, Credit 4

**4002-210 Programming with Classes**
A second course in programming with emphasis on object-oriented programming. Students will first use and then build classes. Topics on classes include information hiding through classes, construction of classes, standard class methods, operator overloading, friend functions, inheritance and polymorphism. Additional topics include files, exception handling, and developing programs with a GUI front-end. Programming projects are required. (4002-208) Class 3, Lab 2, Credit 4

**4002-217 Programming for Information Technology I**
This is the first course in the introductory programming sequence required for all Information Technology students. Topics include elementary data types, arithmetic and logical operations, control structures and error handling, methods and functions, and an introduction to object-oriented programming design and implementation. Emphasis is placed on the development of problem solving skills. Programming projects are required. (Computer literacy) Class 6, Credit 4

**4002-218 Programming for Information Technology II**
This is the second course in the introductory programming sequence required for all students majoring in Information Technology. Topics include further exploration of classes and objects, programming through composition and inheritance, reusability, input/output, and object-oriented design. Emphasis is placed on the development of problem-solving skills. Moderately large programming assignments are required. (4002-217) Class 6, Credit 4

**4002-219 Programming for Information Technology III**
This is the third course in the introductory programming sequence required for all students majoring in Information Technology. Topics include advanced interface concepts, traditional programming data structures, programming utilities and reusability, introductory project design and management concepts and other concepts as time permits. Emphasis is placed on the development of problem-solving skills. Large programming assignments are required. (4002-218 or 4002-221) Class 6, Credit 4

**4002-250 Introduction to Informatics**
This course introduces students to the world of Informatics and provides them with tools to begin working as an informatician. Students learn the breadth of informatics and the roles informaticians play. Tools for working with XML and building new applications from existing ones (e.g., mashups) are presented. The course utilizes extensive hands-on computing, including a domain specific project, but no programming experience is necessary. (Computer literacy)

**4002-306 Digital Image Acquisition and Editing**
This course explores the creation and manipulation of digital images intended for use on the Web. Topics include basic digital photography, acquisition of images via scanning, and intermediate image manipulation. (4002-206 or 4002-320) Class 4, Credit 4

**4002-331 Interactive Programming**
This course teaches students how to program interactive components to create user interfaces and information visualization systems. Students will work with data, information, animation, and digital media to create interactive applications. Students will be introduced to visual layout and design concepts. Programming is required. (4002-219, 4002-320)

**4002-320 Introduction to Multimedia; The Internet and the Web**
This class provides an introduction to key Internet, Web, and multimedia technologies, as well as familiarity with the Macintosh computer platform. Topics covered include social communication, basic Internet applications such as SSH, SFTP, and the World Wide Web, basic digital image techniques, and Web page development and publishing. (Computer literacy) Class 4, Credit 4

**4002-335 Introduction to Structured Markup**
This course builds on the basic aspects of the Hypertext Markup Language (HTML) and scripting to provide an overview of markup practices and techniques. Markup language development and creation, including standards like the Extensible Markup Language (XML), form the basis for work in transforming documents to other formats like text and/or HTML and to changing the document tree and manipulating node fragments. (4002-320 and 4080-330 or 4080-230) Class 4, Credit 4

**4002-360 Introduction to Database and Data Model**
A presentation of the fundamental concepts used in data modeling and database implementation. The data modeling process, basic relational concepts, and the process of normalization, relational algebra, SQL, and guidelines for mapping a data model into a relational database will be covered. Programming assignments involving the use of a relational database management system will be required. (4002-218 or equivalent and 1016-206) Class 4, Credit 4
4002-406 Rapid Online Presence Development

Although large-scale websites still require considerable development effort, there are today several options for establishing a Web presence using tools designed for non-programmers. This course gives students understanding and experience with installing and customizing websites using tools such as Blogs, Wikis, Content Management Systems, and Web Site Toolkits. (4002-206 or 4002-320) Class 4, Credit 4

4002-409 Web Site Design and Implementation

This course builds on the basic aspects of Web page development that are presented in 4002-320 and extends that knowledge to focus on theories, issues, and technologies related to the design and development of websites. An overview of Web design concepts, including usability, accessibility, information architecture, and graphic design in the context of the Web will be covered. Introduction to website technologies, including HTTP, JavaScript, DHTML, PHP, and database dynamic page generation will also be explored. (4002-320, 4002-360 and a two-course programming sequence; corequisite: 4002-360) Class 4, Credit 4

4002-414 Java for Programmers

An intensive survey of the Java programming language for experienced programmers. This course covers the creation of application programs. Topics include basic language concepts (declaring and evaluation of data, statements, expressions, control flow, and input/output), object-oriented fundamentals, GUI interfaces, exception handling, debugging, threads, and the client/server environment. Programming projects will be required. (A two-course object-oriented programming sequence in a language other than Java) Class 6, Credit 4

4002-415 Ethics in Information Technology

Ethics in Information Technology is intended to be an introductory course to the various ethical issues which may present themselves in our concentration areas: Human Factors, Database, Networking, Multimedia, Gaming, Systems Administration, and Programming. The class will start with a historical examination of ethics and, through research, presentations and discussions, will provide opportunity to learn why it is essential to understand the ethical implications of our professional activities. Topics include global implications of technology, 1st Amendment, 4th Amendment, security, intellectual property law, privacy and personal responsibility. (Second-year standing) Class 4, Credit 4

4002-416 Access and Accessibility

This course will examine the increasingly important problem of accessibility as it relates to the field of computing. Issues to be covered include: accessibility for disabled people, assistive technologies, the effect of poverty on accessibility (the "digital divide"), restrictions on the use of public machines, and the moral, legal, and ethical issues associated with accessibility. (Third-year standing) Class 4, Credit 4

4002-425 HCI1: Human Factors

Human Computer Interaction (HCI) is a multidisciplinary field of study concerned with how humans interact with software and hardware interfaces. This course will focus on theories of human information processing, human behavior and their implications for user-centered design of interfaces. Topics include: HCI history, cognitive psychology, user analysis, task analysis, and requirements analysis in the usability engineering process. (Second-year standing) Class 4, Credit 4

4002-426 HCI2: Interaction Design

The design of usable interfaces is based on the principles and theories of Human Computer Interaction. This project-based course is focused on the application of the usability engineering process, including analysis, design, prototyping and testing. Additional topics include: what is usability, heuristic evaluation, usability goal setting, interaction design and styles, assessment methods and international user interfaces. Team projects are required. (4002-425 or 2009-323 and 4080-330 or 4080-230 and preferably a co-op) Class 4, Credit 4

4002-455 Needs Assessment

Complex problems in modern organizations require an information technologist to systematically analyze problem areas to determine the most effective and cost-efficient solutions. This course builds student skills in two different yet interacting areas: needs assessment (requirements analysis) and group problem solving. Students use interviewing and problem-solving techniques to uncover the constraints that surround problem areas. Students learn the questions to ask during needs assessment, along with developing the interpersonal skills to conduct these meetings. Emphasis is on the steps in creative problem solving, the basics of meeting planning to maximize group effectiveness and helping a client to focus concerns into a clearly defined problem. (Third-year standing and co-op experience) Class 4, Credit 4

4002-460 Technology Transfer

Technology transfer is an umbrella term that refers to the creation, adoption and consequences of new technologies in a variety of settings. This course looks at how a new idea becomes implemented in a system (an organization or society) and the factors that influence the adoption of a new idea. The course also looks at the influence of individuals and groups within the change process and how they affect the acceptance of new technologies. (Third-year standing and co-op experience) Class 4, Credit 4

4002-461 Fundamentals of Data Modeling

Students will survey and master several contemporary graphic techniques used in data modeling and data requirements collection and analysis. Conceptual, logical, and physical modeling will be compared and contrasted. Business rule formation and domain identification will be studied. Advanced functional dependency and higher-order normal forms will be examined in the context of requirements analysis. Object-oriented DBMS concepts and design issues will be surveyed. (4002-360) Class 4, Credit 4

4002-462 Introduction to Bioinformatics Computing

This course will provide a theoretical and practical (lab-based) study of computational genomics. Techniques will be studied for quickly and effectively commandeering computing resources to the solution of problems raised in the realm of biology. Prior experience in programming and a basic understanding of molecular biology (Central Dogma) are required. Course topics include an express tour of some bioinformatics resources, exact and approximate pattern matching, sequence alignment, gene prediction, fragment assembly, multiple alignment, statistical and machine learning approaches. (A three-course object-oriented programming sequence and 1016-265) Class 2, Lab 5, Credit 4

4002-484 Fundamentals of Database Client/Servers Connectivity

Students will investigate strategies for client-server and server-server communication against single or multiple database servers. Specifically, students will configure, test, and demonstrate successful communication between multiple database servers and multiple clients. Similarities and differences between commercially available connectivity packages, and issues impacting performance will be explored. Programming exercises are required. (4002-360 and 4002-219 or equivalent) Class 4, Credit 4

4002-485 Fundamentals of DBMS Architecture and Implementation

Students will be introduced to issues in client-server database implementation and administration. Topics such as schema implementation, storage allocation and management, user creation and access security, data backup and recovery, and performance measurement and enhancement will be presented and investigated. Students will configure and demonstrate successful management of a database server for client access. (4002-360) Class 6, Credit 4

4002-486 Implementation of Three-Tier DBMS Application

Students will implement a three-tier DBMS application. Using a standard DBMS product, students will design and implement a database backend. Students will construct a Web server and implement client/Web server connectivity. Tools to monitor and measure such an implementation will be developed. Client-side, database server-side, and Web server issues associated with such a three-tier implementation will be investigated. Programming assignments are required. (4002-461, 4002-484, and 4002-485) Class 4, Credit 4

4002-489 Data Warehousing

This course covers the purpose, scope, capabilities, and processes used in data warehousing technologies for the management and analysis of data. Students will be introduced to the theory of data warehousing, dimensional data modeling, the extract/transform/load process, warehouse implementation, and summary-data management. The basics of data mining, and importance of data security will also be discussed. Hands-on exercises include implementing a small-scale data warehouse. (4002-485) Class 4, Credit 4
A cooperative educational experience is available for those students who participate in order to gain industrial experience. This course enables the student to be able to plan, organize, and systematically develop instructional materials. The course uses an Instructional Systems Design (ISD) model to analyze, design, deliver, and evaluate instruction. (Third-year standing) Class 4, Credit 4

Interactive Courseware
Computer software that teaches is referred to as courseware. This course was designed to help you make the transition from “general” Instructional Design (4002-722/510) into the actual application of these principles in a computer-based environment. Although the basic principles of instructional design hold true in all media environments, using these teaching and learning principles are somewhat different when developing instruction that will be delivered by computer. This course teaches procedures that have already been successful in the design and development of courseware. (4002-510 and a two-course programming sequence) Class 4, Credit 4

Performance Support Systems Design
This course provides an introduction to non-instructional methods of human performance improvement. Electronic Performance Support Systems (EPSS) are software technologies designed to give each user what he or she needs when he or she needs it. It is designed to enable skilled performance without training. Knowledge management systems use a variety of means to capture, encode, store, and retrieve knowledge. This course examines emergent literature supporting EPSS and knowledge management and provides students with opportunities to design and develop several different components of these. systems. (A two-course programming sequence and third-year standing) Class 4, Credit 4

Introduction to VR
This course will focus on basic and advanced concepts of 3D environment creation and implementation within the Virtual Reality Markup Language (VRML) implemented on the World Wide Web. Students will work individually and in groups to create VRML environments on their own home pages and in a larger scale group environment. (4002-409, 4002-454) Class 4, Credit 4

Network-Based Multimedia
This course presents the foundational concepts underlying the design and implementation of multimedia on the Internet. Each concept is explored along with the underlying technology that supports it using hands-on projects. As the technology of interactive multimedia on the Internet changes, this course presents the current practices in preparing multimedia for cross-platform delivery to the massive audience of Internet users. Using the capabilities of current web browser client and http server technology, students will implement interactive multimedia for a variety of applications, including streaming audio and video. (4002-409 or 4002-406) Class 4, Credit 4

Web Client-Side Programming
This course will explore the possibilities and purpose of client side scripting over the Internet. Students will learn to use both native and plug-in technologies to build interactive interfaces that are both usable and effective. Key features that will be addressed are browser compatibility, object reusability (bandwidth issues), and different scripting environments. Programming is required. (4002-409) Class 4, Credit 4

Web Server-Side Programming
This course focuses on the server-side aspects of Web application development. Topics covered include the underlying protocols and technologies of the WWW, dynamic generation of Web pages, accessing database content, Web services, online content management, and security. By the end of the course, students will be able to architect and develop multi-tiered dynamically generated web sites and services that incorporate server-side programming and a database back-end. (4002-409 and a two-course programming sequence) Class 4, Credit 4

Native Application Development for Mobile Devices I
This course is an introduction to creating native applications for small form factor mobile devices, such as smartphones. These devices include unique sets of hardware and communications capabilities, incorporate novel interfaces, are location aware, and provide persistent connectivity. Topics covered include user interaction patterns, connectivity, interface design, software design patterns, and application architectures. Programming projects are required. (Completion of the required programming sequence in student’s degree program or permission of instructor. Third-year standing) Class 4, Credit 4

Web Client Server Programming
When building sophisticated Web applications, Client and Server technologies are used together to create the best possible Web-based applications. This course will explore the creation of such integrated applications, exploring topics such as dynamic creation of Web technology-based applications in a client-server environment. Programming projects are required. (4002-536 and 4002-539) Class 4, Credit 4

Usability Testing
This project-based course will focus on the formal evaluation of user interfaces. Topics include: usability test goal setting, recruitment of appropriate users, design of test tasks, design of the test environment, test plan development and implementation, analysis and interpretation of the results, and documentation and presentation of results and recommendations. (4002-426 and 1016-319) Class 5, Credit 4

Functional and Translational Bioinformatics Computing
This course will provide an in-depth exposure to advanced techniques in computational genomics with an emphasis on functional and translational bioinformatics. Topics may include: Gene Finding, Genetic algorithms, Hidden Markov models, Neural networks, Gene Expression Analysis, Clustering algorithms, Gene Mapping in Simple and Complex Diseases, SNP analysis, Pharmacogenetics/Pharmacogenomics, Molecular Network Analysis, Probabilistic framework for modeling and inference, Systems Biology. (A three-course object-oriented programming sequence, 1016-265, and 1016-319) Class 5, Credit 4

Application Programming
This course will illustrate advanced programming topics using an object-oriented language. It will build on the material covered in the introductory programming courses. Topics include the use of common programming tools, working with component models, simple graphics programming, application development spanning multiple languages, and security models. Emphasis will be on the development of problem-solving skills. Programming assignments will be required. (Third-year standing and either 4002-219 or 4002-414) Class 4, Credit 4

Distributed Application Programming
This course will expose students to advanced programming topics using an object-oriented language. It will build on the material covered in the introductory programming courses. Topics include distributed programming using various APIs and the development of server side applications. Emphasis will be on the development of problem-solving skills. Programming assignments will be required. (Third-year standing and either 4002-219 or 4002-414) Class 4, Credit 4

Local Data Integration
In this course, students will learn how to utilize state-of-the-art techniques such as XML to address the issues of data integration between computer programs of disparate language platforms. Programming projects will be required. (Third-year standing and either 4002-219 or 4002-414) Class 4, Credit 4

Remote Data Integration
Exchange of information between programs running on disparate software and hardware platforms across domains can be a significant problem. In this course, students will learn how to leverage the loose coupling of service-oriented architectures to address the issues of data integration between these types of computer programs when executing across domains. Programming projects will be required. (Third-year standing and either 4002-219 or 4002-414) Class 4, Credit 4

Seminar in Information Sciences and Technologies
Current topics and advances in applications of computer technology for undergraduate students. (Permission of instructor and third-year standing) Class 4, Credit 4
**Computer Science**

4003-102  **Honors Seminar**
This course provides an introduction to the Honors Program for all freshman GCCIS Honors students. The course provides an overview of GCCIS, its program and the requirements for the Honors program at the institute, college and program level. Honors students will hear discussions of the professional and research interests for faculty members from all five departments. (Restricted to Computer Science Honors Program students in their first year of study at RIT).

4003-203  **Advanced Placement in C++**
This course is only used for the purpose of transferring in Advanced Placement (AP) credit. Amount of credit (either 4 or 8 credit hours) will depend upon the student’s score in the AP exam. Transfer credit of 4 credit hours will be granted for scores representing mastery of the principles of programming. Topics include variables, expressions and assignment, control structures (sequencing, selection and repetition), objects, procedures and functions, parameter mechanisms, recursion, one and two-dimensional arrays. Transfer credit of 8 credit hours will be granted for scores representing mastery of the above principles and basic data structures. These topics would include arrays, records, pointers, dynamic storage allocation, linked lists, stacks, queues, and trees. May not be taken for credit. Credit 4–8

4003-204  **AP Java**
This course is only used for the purpose of transferring in (AP) credit. Amount of credit (either 4 or 8 credit hours) and placement will depend both on which version of the AP exam is taken and what score is achieved. Transfer credit will be granted for scores representing mastery of basic programming methodology, general problem solving strategies, common data structures and algorithm development. Topics include: variables, expressions, operators and assignment, control structures, primitive reference types, conversions between types, objects, classes and interfaces (including instance and static static variables and methods, constructors, parameter passing and returning values), inheritance (polymorphism, overloading and overriding methods), basic exceptions, strings, one- and two-dimensional arrays, standard data structures and standard implementations using classes and interfaces found in the collections framework may not be taken for credit.

4003-212  **Principles of Computer Science**
This course is designed to introduce students to the central ideas of computer science. Students will engage in activities that show how computing changes the world and impacts daily lives. Students will develop step-by-step written solutions to basic programming problems and will be taught to implement these solutions on a computer using a programming language. Assignments will be completed both individually and in small teams. Students will be required to demonstrate oral and written communication skills. Computer Science majors may take this course only with departmental approval. Class 4, Credit 4

4003-241  **Problem-based Introduction to Computer Science**
This course serves as an introduction to computer programming using a problem-centered approach. Specific topics covered include problem solving approaches including brute force search; expression of algorithms in pseudo-code and a programming language; functional and imperative programming techniques; control structures; problem solving using recursion; basic searching and sorting; elementary data structures such as lists, trees, and graphs; and correctness, testing and debugging. Assignments (both in class and for homework), requiring a pseudocode solution, a programming implementation, or both, are an integral part of the course. Credit 4

4003-242  **Data Structures for Problem Solving**
An introduction to data structures and their use in representing and solving problems. Specific topics include: algorithm design and analysis (including divide-and-conquer and dynamic programming), data structures (stacks, queues, maps, trees and graphs), and advanced searching and sorting. In and out-of-class problems requiring solutions expressed using pseudocode or computer programs are an integral part of the course, including a quarter-long project in which students work on a challenging, open-ended problem within a group. (4003-241, Problem-Based Introduction to Computer Science) Credit 4 (W, S)

4003-243  **Object Oriented Programming**
This course is an introduction to object-oriented programming. Key topics include classes vs. objects, inheritance, interfaces, object-oriented collection class libraries for abstract data types (e.g., stacks, queues, maps, and trees), and static vs. dynamic data types, input and output streams, graphical user interfaces and exception handling. Students will also be introduced to a modern integrated software development environment (IDE). Programming projects will be required. (4003-242, Data Structures for Problem Solving) Credit 4

4003-263  **Computer Science for Transfers**
This course introduces the student to the object-oriented paradigm, the computer science workstation environment, and the Java language. Topics include class design and implementation, inheritance, exceptions, files, threads, Swing, and network programming. Students work individually and in small groups on programming assignments, which are an integral part of the course. This course is intended for students with previous programming experience and a background in data structures. Open only to transfer students. Not to be taken as a Computer Science elective. (Departmental approval required) Class 4, Lab 2, Credit 5

4003-309  **C for C++ Programmers**
A study of low-level programming techniques in the C language. Pointer techniques and the use of pointers are emphasized. The course covers C operators, native arrays, strings, unions, and the C library. Techniques for implementing polymorphism and generic data types are covered. Programming projects will be required. (This course may not be taken for credit simultaneously with 4003-406. Students who receive credit for 4003-406 may not later take 4003-309 for credit.) (4003-334) Class 2, Credit 2

4003-334  **Computer Science 4**
A course on design techniques and advanced programming. Topics include the software development life cycle, analysis and design techniques, programming in C++, and implementation strategies for external data structures. Students will work individually and in small groups on programming assignments, which will be an integral part of the course. The Unified Modeling Language (UML) and the C++ programming language will be used. (C or better in 4003-233, 263 OR 236) Class 3, Credit 4

4003-341  **Professional Communications**
An introduction to the types of communication that are part of the life of a computing professional. Topics include analysis of purpose of a document or report and writing effectively for the expertise and interests of the intended audience. Writing assignments will cover reports, specifications and user documentation. Oral reports and presentation skills also are emphasized. Small and large group activities will be used to simulate a wide range of work and communications environments. (4003-233 or 4003-263 as a corequisite) Class 4, Credit 4

4003-345  **Computer Organization**
An introduction to computer architecture and assembly language programming concepts and techniques. Topics include boolean algebra, combinational and sequential circuit design, storage mechanisms and their organization, the instruction cycle in a simple CPU, assembly language programming, programming at the device level, and the role of assembly language in understanding the hardware/software interface. Digital logic and software projects will be required. (4003-334 and 1016-265) Class 4, Credit 4

4003-380  **Introduction to Computer Science Theory**
This course provides an introduction to the theory of computation, including Formal Languages, grammars, automata theory, computability, and complexity. (1016-265 and 1016-366) Class 4, Credit 4

4003-385  **Concepts of Data Management**
This course provides a broad introduction to the theory and practice of modern data management, with an emphasis on the relational database model. Topics in relational database systems include data modeling; the relational model; relational algebra; Structured Query Language (SQL); and data quality, transactions, integrity and security. Students will also learn approaches to building relational database application programs. Additional topics include object-oriented programming, object-oriented databases; semi-structured databases (such as XML); data warehousing; data cleaning and preparation; and data mining. A database programming project is required. (1016-265 Discrete Mathematics I and 4003-243 Object Oriented Programming, or permission of instructor) Credit 4
4003-406 Systems Programming I
This course is an introduction to systems programming concepts and techniques. Topics include: the Intel system architecture, its assembly language, the C language, and how to use these tools to interact with the low level hardware and the Unix operating system. (Students who receive credit for this course may not later take 4003-309 for credit.) (4003-334 and 4003-345) Class 4, Credit 4

4003-410 Introduction to Computer Science Research
This course introduces students to current research topics in Computer Science. It explores writing, reading, presenting, and evaluating research in the computer science discipline. Problem-solving skills in the context of research projects will be emphasized. Students will be provided with an opportunity to attend seminars and presentations by individuals conducting research in computer science. (CS Honors students with third-level standing in Computer Science or permission of instructor) Credit 2

4003-420 Data Communication and Networks I
This course is an introduction to the concepts and principles of computer networks. Students will design and implement projects using application protocols, and will study transport, network, and data link protocols and algorithms. The course also includes an introduction to local area networks, data transmission fundamentals, and network security. Programming projects will be required. (4003-334 and 1016-265) Class 4, Credit 4

4003-440 Operating Systems I
A general survey of operating system concepts. Topics include process synchronization, interprocess communication, deadlock, multiprogramming and multiprocessing, processor scheduling and resource management, memory management, overlays, static and dynamic relocation, virtual memory, file systems, logical and physical I/O, device allocation, I/O processor scheduling, process and resource protection. Programming projects will be required. (4003-334 and 4003-345) Class 4, Credit 4

4003-450 Programming Language Concepts
A study of the syntax and semantics of a diverse set of high-level programming languages. The languages chosen are compared and contrasted in order to demonstrate general principles of programming language design. This course emphasizes the concepts underpinning modern languages rather than the mastery of particular language details. Programming projects will be required. (4003-334 and 1016-265; or permission of instructor) Class 4, Credit 4

4003-451 XML-Architecture, Tools and Techniques
This course is a critical review of the XML standard and its major applications for data description, transformation, storage, and transport, and in its role as a meta language for little languages used within software development and network communication. XML as a tool for language design is compared to a parser-generator based approach. The implementation of XML parsing is compared to other forms of language recognition. Students are expected to complete programming assignments, some involving Java, and give a team presentation about an XML-based technology available from the internet. (4003-233 or 4003-236 or 4003-263 or permission of instructor) Class 4, Credit 4

4003-455 Artificial Intelligence
An introduction to the field of artificial intelligence, including both theory and applications. A programming language that allows effective symbolic manipulation (Prolog) is used to demonstrate the capabilities and limitations of the material presented in class. Topics include search strategies and their implementation, logic, networks, frames and scripts, productions, symbolic manipulation and list processing, problem-solving methods, expert systems, natural language understanding, and selections from vision, robotics, planning and learning. Programming assignments are integral part of the course. (4003-430) Class 4, Credit 4

4003-457 Introduction to Computer Vision
An introduction to the underlying concepts of computer vision and image understanding. The course will consider fundamental topics, including image formation, edge detection, texture analysis, color segmentation, shape analysis, detection of objects in images and high level image representation. Depending on the interest of the class, more advanced topics will be covered, such as image database retrieval or robotic vision. Programming assignments are an integral part of the course. (Third-year standing in Computer Science) Class 4, Credit 4

4003-471 Privacy and Security
This course provides students with an introduction to the issues surrounding security of computer systems and privacy concerns in an increasingly information-based society. The class will consider numerous social issues in computing, including risks and liability involved in using information as well as ethical concerns. Case studies will be used to illustrate both common and historic problems in computer security. Group and individual programming projects will be used to improve understanding of security issues. Students will research a specific area of interest. (4003-420 and 4003-440) Credit 4

4003-480 Formal Languages
Formal language theory and principles. Topics include regular, context free and context-sensitive grammars, finite automata, pushdown automata and Turing machines, and an introduction to unsolvability and computability. (4003-380) Class 4, Credit 4

4003-481 Complexity and Computability
This course provides an introduction to the theories of complexity and computability, degrees of undecidability, time and space complexity, reductions, and completeness. (4003-380) Class 4, Credit 4

4003-482 Cryptography
This course provides an introduction to cryptology and its relation to security. It covers classical cryptosystems, private-key cryptosystems (including DES and AES), and public-key cryptosystems (including RSA). The course also provides an introduction to integrity and authentication. (4003-334 and 1016-265) Class 4, Credit 4

4003-485 Database Concepts
A broad introduction to database management systems (DBMS) and the design, implementation and applications of databases. Topics include an overview of DBMS architectures, concepts and implementation of the relational model, SQL, database design and modeling techniques, and issues such as recovery, concurrency, physical implementation concerns and performance and management aspects. Optional topics include: alternative approaches to designing database systems (for example, object-oriented or extended relational systems), distributed databases, database machines, and database interfaces and languages. A database programming project is required. (4003-334) Class 4, Credit 4

4003-486 Database System Implementation
This course covers data structures and algorithms used to implement database management systems. Topics include physical data organizations, indexing and hashing, query processing and optimization, database recovery techniques, transaction management, concurrency control and database performance evaluation. Programming projects will be required. (4003-485) Class 4, Credit 4

4003-487 Principles of Data Mining
This course provides an introduction to the major concepts and techniques used in data mining of large databases. Topics include the knowledge discovery process, data exploration and cleaning; data mining algorithms, and the ethical issues underlying data preparation and mining. Computing projects, presentations, and a term paper are required. (Equivalent of one year experience using an Object Oriented programming language and a statistics course, or permission of the instructor) Class 4, Credit 4

4003-499 Computer Science Co-op
Computer Science co-op work block. One quarter of appropriate paid work experience in industry. Four quarters of co-op experience is required. Credit 0

4003-506 Systems Programming II
Application of operating system concepts to the design of hardware interfaces for a multiprogramming environment. Laboratory work includes the development of multiprogramming (optionally, multiprocessing) kernel with system call and interrupt handling facilities, and the building of device drivers for a variety of peripheral devices. This course provides extensive experience with those aspects of systems programming that deal directly with the hardware interface. A significant team programming project is a major component of the course. (4010-361; 4003-406; and 4003-440) Class 4, Credit 4

4003-515 Analysis of Algorithms
This course provides an introduction to the design and analysis of algorithms. It covers a large number of classical algorithms and their complexity and will equip students with the intellectual tools to design, analyze, implement, and evaluate their own algorithms. (4003-334 and 1016-366) Class 4, Credit 4
Computer Architecture

Computer Architecture is the study of the design of both modern and classic hardware. Topics include: a review of classical computer architectures; the design of operation codes and addressing modes, data formats, and their implementation; internal and external bus structures; architectural features to support virtual storage and page replacement policies, high-level language features, and operating systems. Students will write programs that simulate the organization of several different processor architectures to help further their understanding of design choices. (4003-440) Class 4, Credit 4

Fundamentals of Discrete Simulation

An introduction to discrete simulation modeling. Methods for the design of discrete simulation models are examined, and simulation models are designed and implemented using a general purpose discrete simulation language. Related topics such as the validity and appropriateness of general statistics for the model are covered. Both the theoretical and statistical aspects of modeling are examined. Programming projects are required. (0106-352; third-year standing in computer science) Class 4, Credit 4

Parallel Computing I

Parallel Computing is the study of the hardware and software issues in parallel computing. Topics include an introduction to the basic concepts, parallel architectures and network topologies, parallel algorithms, parallel metrics, parallel languages, granularity, applications, parallel programming design and debugging. Students will become familiar with various types of parallel architectures and programming environments. (4003-440 or permission of the instructor) Class 4, Credit 4

Parallel Computing II

Parallel Computing II is a collaborative learning course. Students will agree on the topics for the course, will prepare and present one of the agreed-upon topics, and will lead a discussion session for another lecture. In addition, parallelism will be applied to real-world interdisciplinary projects. (4003-531) Class 4, Credit 4

Data Communications and Networks II

This course continues the study of computer networks begun in 4003-420 Data Communications and Networks I, emphasizing design principles and theoretical aspects of networks. Topics include the nature of communications media and signaling methods, analog and digital transmission, data link protocols, protocol proof techniques, routing, broadcasting, multicasting, connection, disconnection and crash recovery protocols, internetworking and security, and network analysis and design using graph theory and queuing theory. (4003-420) Class 4, Credit 4

Data Communications and Networks III

This course will build on topics developed in 4003-420. Data Communications and Networks I, and 4003-541, Data Communications and Networks II, in a lab setting. Students will be required to design and implement a small computer network addressing issues such as routing strategies, virtual circuits vs. datagram's, data link protocols, and user (presentation) level services. (4003-406 and 4003-541) Class 4, Credit 4

Ad-hoc Networks

This course explores serverless ad-hoc networks. Topics include authentication, confidentiality, routing, service discovery, middleware and key generation and key distribution. Programming projects are required. (4003-233 and 4003-420)

Operating Systems II

This course is a more in-depth look at the concepts in Operating Systems I (4003-440). Laboratory work includes implementing components of a pedagogical operating system as a team project through the entire term. Each team will design and implement the software for thread synchronization abstractions, loadable user processes, virtual memory and a file system. An emphasis will be placed on the software engineering of each component as it is added to the overall operating system. (4010-361 and 4003-440) Class 4, Credit 4

Security Measurement and Testing

Regulatory, financial, and organizational reasons drive the requirement to measure computer systems' security performance. A number of laws site computer and system security performance measurement as a requirement. The course will introduce students into the current methods and practical tools applied for system testing in order to evaluate its security. It will combine a theoretical study of the methods and models currently applied for company security evaluation and a practical investigation of computer security through implementation of penetrating testing. The course will review different application areas such as intrusion detection and monitoring systems, access control and biological authentication, increasing system and information survivability, network attacks and defense, user’s practice survey. (4003-420, 4003-440) Class 4, Credit 4

Biologically Inspired Intelligent Systems

This course examines contemporary topics in artificial intelligence in neuroscience, cognitive science and physiology. Students will focus on developing computer models that are biologically inspired and leverage current knowledge in these areas with the goal to develop systems that understand their environment. A programming project will be required. A background in biology is not required. (Computer Science third-year standing or higher, or instructor permission) Credit 4

Advanced Computer Vision

This course examines advanced topics of current research interest in computer vision including motion analysis, video processing and model based object recognition. The topics will be studied with reference to specific applications, for example video interpretation, robot control, road traffic monitoring, and industrial inspection. A programming project will be required. (4003-457) Credit 4

Programming Skills

The goal of this course is to introduce the students to a programming paradigm and an appropriate programming language chosen from those that are currently important in industry or that show high promise of becoming important. A significant portion of the learning curve occurs through programming assignments with exemplary solutions discussed later in class. The instructor will post specifics prior to registration. With the approval of the program coordinator, the course can be taken for credit more than once, provided each instance deals with a different paradigm and language. (4003-233 or 4003-236 or 4003-263 or permission of instructor) Credit 4

Computer Graphics I

Computer Graphics I is a study of the hardware and software principles of interactive raster graphics. Topics include an introduction to the basic concepts, 2-D and 3-D modeling and transformations, viewing transformations, projections, rendering techniques, graphical software packages, and graphic systems. Students will use a standard computer graphics API to reinforce concepts and study fundamental computer graphics algorithms. (Third-year standing in Computer Science or permission of the instructor). Class 4, Credit 4

Computer Graphics II

This course will investigate the theory of computer synthesis. Seminal computer graphics papers will be used to describe the various components of the image synthesis pipeline and explain just as in photography, how the path of light in a virtual scene can be simulated and used to create photorealistic imagery. This course will emphasize the theory behind various rendering tools and libraries available for image synthesis. The student will put theory into practice via a programming assignment and a capstone project. Topics will include light and color, three-dimensional scene specification, camera models, surface materials and textures, rendering (local, ray tracing, radiosity), procedural shading and modeling, tone reproduction, and advanced rendering techniques. (4003-570 or 4002-502)

Computer Animation- Algorithms and Techniques

This course takes a look at computer animation from a programmer’s perspective. It will investigate the theory, algorithms and techniques for describing and programming motion for virtual 3D worlds. Approaches that will be explored include keyframing systems; kinematics, motion of articulated figures, procedural and behavioral systems, and the use of motion capture data. This course is a programming-oriented course with major deliverables including the implementation of techniques presented in lecture as well as a final project concentrating on an area of a student’s choice. Students enrolling in this course are expected to have proficiency in the use of at least one 3D API (e.g., OpenGL, DirectX, Java3D). (4003-570 or 4002-501 or permission of instructor) Class 4, Credit 4
4003-573  Procedural Shading
This course will present the theory and algorithms behind procedural shading in Computer Graphics, as well as techniques for using shaders effectively in creating stunning visual effects. The course will compare and contrast real-time vs. non-real-time shader architectures and students will gain expertise in both environments. The format of the course delivery will be part lecture, part studio style, with weekly lab assignments based upon the techniques presented in class. During the latter half of the course, students will be assembled into teams to implement, describe, and document a programming solution for a particular special effect based on a written specification. This final team-based project will serve as the final exam for the course. Students enrolling in this course are expected to have proficiency in either OpenGL or DirectX. (4003-571: Computer Graphics II or 4002-502, Foundations of 3D Graphics Programming or permission of instructor)

4003-580  Language Processors
This course introduces students to issues in the design of language processors and translators. Topics include lexical, syntactic, and semantic descriptions, analysis tools and programming techniques, as well as environment-, stack-, and heap-based interpreters and at least the principles of code generation for typical computer architectures. Teams of students will be required to design and implement a small programming language. (4003-450) Class 4, Credit 4

4003-590  Seminar in Computer Science
Current advances in Computer Science. (Bridge course; set by instructor)

4003-598  Honors Project
The honors project enables upper-level computer science honors program students to gain further depth in an area of their choice under the supervision of a computer science faculty member. Deliverables of the project include a scientific paper and a presentation open to the community. (4003-590) Credit 2

4003-599  Independent Study
A supervised investigation of selected topics within Computer Science. Consent of the sponsor and departmental approval are required. Credit 1-4

4006-230  Computers in Medicine
This is an introduction to computer technology and its use in the medical field. About half of the course is devoted to the study of computers, their basic components and peripheral devices, the storage and retrieval of data, electronic communications and the internet. The other half of the course deals with medical data and major applications of computers in medicine, including Hospital Information Systems (HIS), medical imaging, surgery, telemedicine, and pharmacy. Through demonstration and computer laboratory assignments, students are exposed to personal productivity software such as word processors, spreadsheet and database systems, presentation software and electronic communications. Class 4, Credit 4

4006-240  Introduction to Medical Informatics
This is an introduction to informatics as applied to the medical field. It is a study of the nature of medical information and its use in clinical practice as well as in medical research and education. It is also an examination of the Electronic Medical Record (EMR) and its impact on health care delivery. The internet and mobile computing are presented as sources of medical information. The Health Care Information Systems are discussed, as well as their development, selection and implementation. The important roles of the computing or informatics specialists in medicine are stressed. The course also includes a thorough discussion of privacy, confidentiality and information security including health care regulatory and accreditation issues and the Health Insurance Portability And Accountability Act (HIPAA). (4006-230) Class 4, Credit 4

4006-310  Developing Medical Informatics
An in-depth study of the M programming language and its database capabilities. Direct mode, local/global/special variables, commands, arguments, operators, writing and executing routines, M editors, screen/printer formatting, string manipulation, pattern matching, concatenation, arrays and trees, multilevel and string subscripts, input/output using devices, cross-reference files, indirection. Programming projects are required and are taken from the health care field. (4006-230 or permission of instructor) Class 4, Credit 4

4006-345  Medical Informatics Seminar
This is an introduction to the use of computers in medical practice, education and research. Every week a different speaker from the medical field gives a presentation. Students also receive information concerning career opportunities and cooperative education. Class 1, Credit 1

4006-410  Electronic Health Record
This is an in-depth study of the acquisition, storage, and use of information in the Electronic Medical Record (EMR). Students will learn about the types of information used in clinical care: text, structured data, images, and sounds. Other topics covered include: clinical vocabularies (existing schemes and their limitations); how clinical information is generated and utilized; methods of information storage and retrieval; departmental systems (laboratory, radiology, and hospital information systems); organizational systems (including scheduling, registration and financial systems); and the legal, social, and regulatory problems of EMRs including security and confidentiality. In addition, students will work with the CACHE post-relational database management system. Programming assignments will be required. (4006-310 and 4002-360) Class 4, Credit 4

4006-420  Medical Database Architectures
This is an in-depth study of database architecture used in the medical field. Students will learn about the different types of database architectures in support of medical education, clinical research and clinical applications. Database design and programming assignments will be required. (4006-410) Class 4, Credit 4

4006-430  Medical Application Integration
This course will provide students with a understanding of application integration in healthcare. Java programming assignments will be required. Students will also learn medical business processes and how they impact data integration within a hospital. Middleware message brokers will be examined along with the use of the HL7 messaging standard. Web services and other forms of data integration will be studied. (4006-410, 4003-233 or 4002-219) Class 4, Credit 4

4010-101  Software Engineering Seminar
Provides first-year students with the skills necessary to succeed at RIT and in the software engineering program. Small group sessions are used to help new students make friends, create a stronger bond with RIT and their program, and become acquainted with the campus and its facilities. In addition, students are introduced to the profession of software engineering and to ethical issues they will face at RIT and throughout their careers. Credit 1, Class 0, Lab 2

4010-102  Honors Seminar
This course provides an introduction to the honors program for all freshman GCCIS honors students. The course provides an overview of GCCIS, the programs within the college and the requirements for the honors program at the institute, college and program level. Honors students will hear discussions of professional research interests from faculty members from all three departments. Class 2, Credit 0

4010-350  Personal Software Engineering
This is a project-based course to enhance individual, technical engineering knowledge and skills as preparation for upper-division team-based coursework. Topics include adapting to new languages, tools and technologies; developing and analyzing models as a prelude to implementation; software construction concepts (proper documentation, implementing to standards, etc.); unit and integration testing; component-level estimation; and software engineering professionalism. (4010-361) Credit 4, Lab 4

4010-361  Software Engineering
An introductory course in software engineering, emphasizing the organizational aspects of software development and software design and implementation for individuals and small teams within a process/product framework. Topics include the software life cycle, software design, user interface issues, specification and implementation of components, assessing design quality, design reviews and code inspections, software testing, basic support tools, technical communication and system documentation, and team-based development. A term-long team-based project done in a studio format is used to reinforce concepts presented in class. (4003-233 or 4003-243) Class 4, Credit 4

4010-362  Engineering of Software Subsystems
An introduction to the principles of the foundations of contemporary software design. Topics include software subsystem modeling, design patterns, design tradeoffs, and component-based software development, with a focus on application of these concepts to concrete design problems. The relationship between design and related process issues such as testing, estimation, and maintenance are also discussed. (4010-361 and either 4010-350 or 4003-334) Class 4, Credit 4
4010-420 Methods of Specification and Design
Introduction to the development of mathematical models of software systems, and the application of such models to the analysis of system properties and verification of design and implementation decisions. Topics include a brief review of logic and set theory, the use of formalism such as Z or VDM, the development of models using the formalism and analysis via simulation or proof of a model’s properties. The application of other formalisms, such as state machines and regular expressions, is also surveyed. (1016-366, 4010-362) Class 4, Credit 4

4010-441 Principles of Concurrent Software System
Issues and structures common in the construction of concurrent software systems. Emphasis is on fundamentals repeated in the design and development of systems with closely coupled systems concurrently executing components. Topics include modeling, synchronization, and coordination techniques and common architectures for concurrent software systems. Other issues include problem decomposition and analysis of deadlock safety, and liveness. (4010-362) Class 4, Credit 4

4010-442 Principles of Distributed Software Systems
Issues and structures common in the construction of distributed software systems. Emphasis is on fundamentals found in systems of this type. Topics include remote object invocation, middle ware technologies, and common architectural and design patterns. Quality factors will be discussed, including responsiveness, throughput, and extensibility. Team projects are done in a studio format to reinforce concepts presented in class. (4010-362) Class 4, Credit 4

4010-443 Principles of Information Systems Design
Issues and structures common in the construction of information systems. Emphasis is on fundamentals repeated in most systems of this type. Topics include historical review of methods of organizing and accessing information, high-level modeling techniques, performance and security concerns, implications of storing new data types (e.g., sound, pictures) and new dimensions (e.g., time) on information systems architectures. Team projects are required. (4010-362) Class 4, Credit 4

4010-444 Engineering Methods for Software Usability
This course introduces quantitative models and techniques of human computer interface analysis, design and evaluation, which are relevant to the Software Engineering approach of software development. Contemporary Human Computer Interaction (HCI) techniques are surveyed, with a focus on when and where they are applicable in the software development process. Students will deliver usable software systems derived from an engineering approach to usability evaluation planning, methods of evaluation, data analysis, social and ethical impacts of usability, economic justification, prototyping and tools. (4010-362, 1016-351 or 1016-314) Class 4, Credit 4

4010-450 Software Process and Product Quality
This course covers advanced topics in software engineering relating to software quality, with processes and metrics being viewed as a means of achieving quality. Quality is interpreted broadly to include all project and organizational objectives, including business objectives. Software metrics help a software organization on two main fronts: quality assessments of its process and products, and assessment of its progress toward its main goal, the production of software artifacts. (4010-456, 1016-314 or equivalent, one quarter co-op) Class 4, Credit 4

4010-452 Software Testing
Concepts and techniques for testing software and assuring its quality. Topics cover software testing at the unit and system levels: Static vs. dynamic analysis; functional testing; inspections and reliability assessment. (4010-361) Class 4, Credit 4

4010-456 Software Process and Project Management
An introductory course to software process and related software project management issues. Emphasis is on the study, use, evaluation, and improvement of the software development process. Topics include software development methodologies, software project planning and tracking, change control, software quality assurance, risk management, and software process assessment and improvement. (4010-561) Class 4, Credit 4

4010-461 Real Time and Embedded Systems
This course provides a general introduction to real-time and embedded systems. It will introduce a representative family of micro controllers and require students to program on these devices. Fundamental material on real-time operating systems, such as requirements specification, design patterns, scheduling algorithms and priority inversion avoidance will be presented. The features of a commercial real-time operating system will be discussed and used for course assignments. (4010-441 or 4004-440) Class 4, Credit 4

4010-462 Modeling Real-Time Systems
This course introduces the modeling of real-time software systems. It takes an engineering approach to the design of these systems by analyzing system models before beginning implementation. UML will be the primary modeling methodology. Non-UML technologies will also be discussed. Implementations of real-time systems will be developed manually from the models and using automated tools to generate the code. (4010-441 or 4004-440) Class 4, Credit 4

4010-463 Performance Engineering of Real-Time and Embedded Systems
This course discusses issues of performance in real-time and embedded systems. Techniques for profiling the resource usage of a system and for measuring the effect of increasing system requirements will be covered. The control of physical systems will motivate the need for performance tuning of a real-time system. Students will write programs running under a real-time operating system that can maintain control of a physical system. The course will discuss and experiment with performance trade-offs that can be made using hardware-software co-design. (4010-441 or 4003-440) Class 4, Credit 4

4010-499 Software Engineering Co-op
Software Engineering co-op work block. One quarter of appropriate paid work experience in industry. four quarters of co-op experience are required. (4010-362, 0535-351) Credit 0

4010-510 Principles of Software Architecture
Examination of the fundamental building blocks and patterns for construction of software systems in the context of a sound design process. The course emphasizes the study and development of software systems that can best be understood in terms of sequential software architectures and their architectural and non-architectural quality attributes. Class lectures are reinforced by laboratory exercises and projects. (One term of co-op and one of the following courses: 4010-441, 4010-444, or a design elective) Class 4, Credit 4

4010-511 Seminar in Software Engineering Design
Emerging topics of relevance in software engineering design. (4010-362) Credit 1–4

4010-555 Software Requirements Engineering
In-depth coverage of the early activities of the software development life cycle commonly called software requirements engineering. Topics include requirement elicitation and definition: requirements modeling and analysis: requirements specification: requirements validation: and requirements management. Team projects are emphasized. (4010-420, 4010-444, 4010-456, and one term of co-op) Class 4, Credit 4

4010-556 Agile Software Development
This course is an in-depth exploration of agile software development methodologies. Popular agile methodologies include Extreme Programming, scrum, Dynamic Systems Development Method (DSDM) and Crystal. Students work in teams on an end-to-end software project using common agile methods and techniques: users stories, iterative release planning, test driven design, agile modeling, pair programming and refactoring. (4010-456 and 4010-362) Class 4, Credit 4

4010-559 Seminar in Software Engineering Process
Emerging topics of relevance in software engineering process. (4010-456) Credit 1–4

4010-561 Software Engineering Project I
The first course in a two-course, senior-level, capstone project experience. Students work as part of a team to develop solutions to problems posed by either internal or external customers. Problems may require considerable software development or evolution and maintenance of existing software products. Culminates with the completion and presentation of the first major increment of the project solution. (Fifth-year standing in software engineering, four quarters of co-op, 4010-555, and 4010-540).
4010-562 Software Engineering Project II
This is the second course in a two-course, senior-level capstone project experience. Students submit one or more additional increments that build upon the solution submitted at the end of the first course. Students make major presentations for both customers as well as technical-oriented audiences, turn over a complete portfolio of project-related artifacts and offer an evaluation of the project and team experience. (4010-561) Class 4, Credit 4

4010-590 Software Engineering Seminar
Emerging topics of relevance to the software engineering field. Class 1–4, Credit 1–4 (set by instructor)

4010-598 Honors Independent Study
The honors student will work independently under the supervision of a faculty advisor on a topic not covered in other courses. (4010-362, 1 term co-op) Class 2, Credit 2

4010-599 Independent Study
The student will work independently under the supervision of a faculty advisor on a topic not covered in other courses (proposal signed by a faculty member) Class 1–4, Credit 1–4 (set by instructor)

Networking, Security, and Systems Administration

4050-102 Honors Seminar
This course provides an introduction to the Honors program for all freshman GCCIS Honors students. The course provides an overview of GCCIS, its programs and the requirements for the Honors program at the institute, college and program level. Honors students will hear discussions of the professional and research interests from faculty members from all of the departments in the college. Class 2, Credit 2

4050-201 Freshman Seminar
This course is a small group seminar for first year students in the Department of Networking, Security, and Systems Administration. Students are exposed to the skills necessary to be successful at RIT and in the Applied Networking and Systems Administration program. These small group sessions are used to help new students form peer relationships as well as create a bond with the faculty, their program and with RIT. Through the use of guest speakers and topical discussions of current issues, students will be introduced to the ethical issues they will face at RIT and throughout their career. Students will also gain a better understanding of the resources and facilities available to them at RIT, the Golisano College, and the Department of Networking, Security and Systems Administration. Class 2, Credit 2

4050-210 Soho Networking
This course will teach students how to determine what computer and network equipment is appropriate for use in a home or small office network. Students will learn the basic configurations for a home/small office network and explore in a lab environment the different hardware and software tools and configurations required to establish a personal local area network. Class 3, Credit 4, Lab 2

4050-211 C++ for Programmers in Networking and Sec
Introductory application programming with a network-centric nature will be explored. Topics covered include C++ syntax, pointers, file handling, memory management, the standard template library, and object-oriented programming. An emphasis is placed on the development of problem-solving skills. Moderately sized programming assignments are required. Prior programming experience is required. (Successful completion of 4002-218 or 4002-414 or 4003-232, or demonstrated equivalent programming experience) Class 3, Lab 2, Credit 4

4050-212 Platform-independent Client Server Program
Advanced application programming with a network-centric nature will be explored. Topics covered will include; threads, simple thread synchronization, TCP-based client-server programming, and file access and sharing. The use of pointers and pointer manipulation will be addressed throughout. Programming projects will be required. (4002-210 Programming with Classes; corequisite 4050-351 Networking Fundamentals) Credit 4

4050-220 Cyber Self-Defense
This course will teach students how to recognize a potential cyber attacker and identify their own vulnerabilities so that they can defend themselves, their information and their identity. Students will be introduced to the tools and techniques to defend against, react to and recover from a cyber attack. (Corequisite 4050-220) Class 4, Credit 4

4050-302 Scripting in Perl
An introduction to scripting in the PERL language. The course will cover basic control structures, data structures, and objects in the language. Examples will include basic graphical programming, GUI programming, and interfacing to an underlying operating system. For much of the course, that system will be Unix or some variant thereof. PERL on Windows will be taught as a short topic. At the end of the course, the elementary scripting concepts of PERL will be mapped to those for BASH shell scripting so that students will have a reading understanding of shell scripts. (4002-218 or 4002-210 or equivalent)

4050-350 Computer System Fundamentals
This course is organized around goals and activities involving computer technology familiar to most students. The examples used to illustrate topics build progressively on each other and bring the student from the basics of the PC's physical construction through the complexities of the operating system. Class 3, Lab 2, Credit 4

4050-351 Network Fundamentals
Network technologies and standards are discussed with in-depth coverage of layers 1, 2, and 3. Topics include, but are not limited to, access control, framing, operation of layer 2 protocols including wired and wireless technologies, network protocols (IPV4, IPV6 and IPX), transport protocols (TCP, UDP, and SPX), network security, subnetting, and network hardware. (4050-350, 1016-201) Class 3, Lab 2, Credit 4

4050-360 Information Security Policies
With the increased use of computer and network systems comes the increased potential for security violations. Organizations need to be prepared to handle these violations and employees need to be informed of acceptable use, both through preparation and incident response. In this course, students will study the need for information security policies, procedures, and standards. Students will write security policies. Other topics include, but are not limited to, trust models, security policy design, and incident response. (4050-220) Class 4, Credit 4

4050-365 Cryptography and Authentication
As more users access remote systems, the job of identifying and authenticating those users at a distance becomes increasingly difficult. The growing impact of attackers on identification and authentication systems puts additional strain on our ability to insure that only authorized users obtain access to controlled or critical resources. This course introduces encryption techniques and their application to contemporary authentication methods. (4050-220 Cyber Self-Defense and 1016-206 Discrete Math II) Class 4, Credit 4

4050-402 OS Scripting
This course is a survey of tools and techniques used to script common tasks in operating system environments. It will focus on Unix shell script programming. Students will gain experience in writing scripts for Unix and will be challenged to bend traditional programming paradigms to the writing of effective scripts in the OS environment. Programming projects will be required. (4002-218 or equivalent and 1016-206) Class 5, Credit 4

4050-403 Concept Wireless Networks
This course is designed to provide the student with an understanding of the principles and concepts of radio and optical communication as they apply to wireless data networking for local area networks and peripherals. Included in the course will be an examination of the modulation techniques, measurement standards, nomenclature, equipment and theory behind transmissions in this portion of the electromagnetic spectrum. (4050-413) Class 4, Credit 4

4050-405 Emerging Network Applications
This course replaced with 4050-550.

4050-413 Applications of Wireless Data Networks
This course explores wireless data networking technologies and equipment. As its basis it uses the fundamental concepts and technologies learned in 342 and 403, and expands upon them to include other contemporary and emerging technologies. In this course we will discuss topics such as wireless local area networks (WLANs), wireless network operation, network integration, construction and network design. (4050-351) Class 3, Lab 2, Credit 4
4050-421 Systems Administration I
This course is designed to provide students with essential knowledge and skills in system administration. Basic operating system concepts, such as file systems, processes and threads, memory management, and input/output are covered to provide students with an understanding of the fundamentals of a computer system. Services including Remote Procedure Call (RPC), Network File System (NFS), Network Information Service (NIS), Server Message Block (SMB), and Services for Unix (SFU) are introduced. (4050-402 or 4050-521, 4050-350, 4050 351) Class 3, Lab 2, Credit 4

4050-422 Systems Administration II
System administration topics focused on platform integration, the active directory, authentication, and user support services are explored. Topics will include security issues, user and group administration, directory services, electronic system update and maintenance, backup and restoration strategies and techniques, integrated mass storage technologies and alternative client technologies. (4050-421 and 4050-316; co-requisite: 4050-422 Lab) Class 3, Lab 2, Credit 4

4050-423 Systems Administration III
The provision and management of information technology services in an enterprise environment involves a high degree of complexity due to issues of scale and heterogeneity. This course is designed to enhance students understanding of these issues by building an enterprise context around selected technologies. Students will explore the technologies available to provision computing services in enterprise-scale environments, including virtualization of services, computing grids, and clusters. Students will also discuss issues related to the role of information technology in large organizations and the facilitation of that role by system administrators through the use of policies and procedures, project planning, budgeting and financial analysis, disaster planning, and incident response. (4050 422; corequisite: 4050-423 Lab) Class 3, Lab 2, Credit 4

4050-460 Introduction to Computer Malware
Computer malware is a computer program with malicious intent. In this course, students will study the history of computer malware, categorizations of malware such as computer viruses, worms, Trojan horses, spyware, etc. Other topics include, but are not limited to, basic structures and functions of malware, malware delivery mechanism, propagation models, anti-malware software, its methods and applications. Students will write an anti-virus program. (4050-220, 4002-218 or 4002-221, 4050-351) Class 4, Credit 4

4050-495 Honors Capstone Project
The student will work independently under the supervision of a faculty adviser on a topic not covered in other coursework. (Completion of all Institute Honors Academic Requirements). Credit 4 (May be split across two consecutive quarters)

4050-499 Co-op in NSSA
Students will gain experience and a better understanding of the application of technologies discussed in classes by working in the field of networking, security, or system administration. Students will be evaluated by their employer. (Third-year status in the program. If a transfer student, one quarter in residence must be completed at RIT carrying a full academic load.)

4050-515 Introduction to Routing and Switching
This course is a laboratory-based course that focuses on the standards and technologies used to establish inter-network structures that will support a TCP/IP data stream for higher level services to operate over. It is primarily concerned with the network layer and below. Although the course focuses on the TCP/IP protocol suite and the Ethernet LAN protocol, other protocols may be studied. Students will use their knowledge of how to connect computers (PCs) in a LAN and learn how to connect separate networks together to form an Internet. Bridging and switching concepts are investigated (such as the resolution of bridging loops through the appropriate algorithms). Routed and routing protocols and algorithms are studied and implemented. (4050-351) Class 3, Lab 2, Credit 4

4050-516 Network Services
An investigation of the tasks of selecting, configuring and administering services in an internetworking environment. Topics include the TCP/IP protocol suite, service administration including DHCP, DNS, SSH, and Kerberos. Students completing this course will have experience in administering an internetwork of computers with a variety of these services as well as an understanding of the similarities and differences between protocols in the TCP/IP suite (TCP and UDP). (4050-402 and 4050-351) Class 5, Credit 4

4050-517 Network Forensics and Security
This course investigates the many facets of network security and forensics. Students will examine the areas of intrusion detection, evidence collection, network auditing, network security policy design and implementation as well as preparation for and defense against attacks. The issues and facilities available to both the intruder and data network administrator will be examined and evaluated with appropriate laboratory exercises to illustrate their effect. (4050-515, 4050-516 and (4050-507 or equivalent; corequisite: 4050-517 Lab) Class 3, Lab 2, Credit 4

4050-519 Network Troubleshooting
Network administration involves many aspects other than building, configuring, and managing networks. The ability to quickly diagnose and solve network problems is essential to any functional network as is the ability to employ the proper diagnostic tools to predict possible problem areas before network interruptions can disrupt critical transactions. As organizational dependency on network data transactions continues to grow, networks have expanded to meet this need. The complexity of networks tends to grow exponentially with the size of the networks. The ability to cope with this complexity requires keen problem solving skills as well as the ability to utilize available tools. This course is designed to teach problem solving skills, the employment of the available tools, and teamwork. (4050-413 and 4050-515; corequisite 4050-519 Lab) Class 3, Lab 2, Credit 4

4050-521 Perl for System Administration
This course will provide students with an introduction to the Perl programming language, with examples and problems drawn from the system administration arena. After covering the essentials of the language, students will be taught how to create Perl Objects, and inst all modules, for use on a computing system. Application areas for Perl scripts will include file system walking programs, user account creation and manipulation, and the processing of log files. (Two-course object oriented programming sequence) Class 5, Credit 4

4050-523 Security Wireless Networking
This course is designed to provide the student with an understanding of the principles and concepts of wireless data network security. Students will perform a series of laboratory experiments in order to explore various mechanisms for securing wireless data networks, including physical layer mechanisms, filters, applications, and encryption. Students will engage in attack/ defend scenarios to test their deployments against other teams. (4050-413) Class 3, Lab 2, Credit 4

4050-540 Network Design and Performance
This capstone course will examine the design and performance of networks. Students will learn to design networks based on identified needs and analyze the performance of that network. The designs include site, campus, and enterprise. WAN technologies will be combined with LAN technologies in the design of enterprise networks. Students will learn to assess the business goals and their application to the network goals. Students will learn to evaluate the security goals of the network and to integrate these goals in the design. (4050-421, 4002-455, 4050-515, 4050-516) Class 4, Credit 4

4050-545 Advanced Routing and Switching
Advanced Routing and Switching is a course in advanced networking topics. Technologies available to large enterprises to build a large intranet infrastructure are explored in depth. The topology of the Internet is discussed, along with current and emerging technologies for the implementation of that backbone. Topics include: core routers and routing protocols, queuing, multicast routing and the MBONE, variable length subnet masking, IP address deellelination and network address translation, enterprise-wide backbone routers, and emerging protocols. (4050-515) Class 3, Lab 2, Credit 4

4050-550 Emerging Network Applications
This course will discuss the changing nature of communication, the requirements of emerging applications, the effect on network design and the security concerns associated with them. The focus is on the evolution of multimedia services (such as voice and video) and Internetworking technologies in support convergence. While examining upcoming technologies and future trends that will impact the direction of IP and broadband technology development, of primary concern will be standards, protocols, deployment, and emerging technologies involved in the Voice over IP and Video over IP systems. (4050-530; corequisite: 4050-405 lab) Class 3, Lab 2, Credit 4
4050-580 Computer System Security
This course proposes to increase the understanding of the student in the areas of liability, exposure, opportunity, ability, and function of various weaknesses and forms of attack, and the detection and defense of the same. The issues and facilities available to both the intruder and administrator will be examined and evaluated with appropriate laboratory exercises to illustrate their effect. (4050-422 and 0501-507/707 or equivalent) Class 3, Lab 2, Credit 4

4050-581 Computer System Forensics
An investigation of the tasks of incident response and computer system forensics. Students will learn the basic procedure of incident response as well as tools needed to uncover activities of computer users (deleted and hidden files, cryptographic steganography, illegal software, etc.). Students will also learn to employ the activities needed to gather and preserve this evidence to ensure admissibility in court. (4050-421) Class 3, Lab 2, Credit 4

4050-582 Wireless Ad-Hoc/Sensor Networks
This course will introduce students to the diverse literature on ad-hoc/sensor networks, and expose them to the fundamental issues in designing and analyzing ad-hoc/sensor network systems. Students will study related technologies and standards ranging from networking, OS support and algorithms, to security. Of primary concern will be protocol design, communication and computational challenges posed by these systems. Students will construct ad-hoc/sensor networks, program on the sensor hardware, and study the performance of various protocols. (4050-351, 4002-219, or consent of instructor) Class 3, Lab 2, Credit 4

4050-585 Network and Systems Security Audit
This course will provide students with an introduction to the processes and procedures for performing a technical security audit of systems and networks. Students will explore available auditing techniques and apply appropriate tools to audit hosts, servers and network infrastructure components. In addition, students will write and present their audit reports on vulnerability analysis. (4050-421 and 4050-515) Class 3, Lab 2, Credit 4

4050-590 Seminar in Advanced Lab Topics
Current topics and advances in applications of computer technology for undergraduate students. (Permission of instructor and third-year standing) Class 4, Lab 0, Credit 4

4050-599 Independent Study in NSSA
Students will work with a supervising faculty member on a project of mutual interest. Project design and evaluation will be determined through discussion with the supervising faculty member and documented through completion of an independent study form to be filed with the Department of NSSA. Credit 1-6 variable

Interactive Games and Media

4080-102 Freshman Honors Seminar
This course provides an introduction to the Honors program for all freshman GCCIS Honors students. The course provides an overview of GCCIS, its programs, and the requirements for the Honors program at the university, college, and program level. Honors students will hear discussions of the professional and research interests of the faculty members from all departments within the college. (Honors standing) Class 2, Credit 1 (F)

4080-201 Freshman Seminar in Game Design and Development
This course provides first year Game Design and Development students with an appropriate orientation for their program. Students will explore the academic, research, and industry connections within their field of choice. Class 1, Credit 1 (F)

4080-221 Game Software Development I
The goal of this course is to introduce students within the domain of game design and development to computing. Students will begin mastering fundamental problem solving skills and learn about the basic elements of game software development, including problem decomposition, the design and implementation of games, and testing/debugging. Programming assignments are an integral part of the course. Class 6, Credit 4 (F, W)

4080-222 Game Software Development II
This course furthers the development of fundamental problem solving skills introduced in Game Software Development I. Topics such as graphical user interfaces (GUIs), exception handling, files/streams, linear data structures, threads, and event-driven programming will be covered with an emphasis on their use in game development. Games will be developed through using existing components and appropriate software design patterns will be used. Programming projects are and integral part of the course. (4080-221) Class 6, Credit 4 (F, W, S)

4080-223 Game Software Development III
This course builds upon the fundamental problem solving skills presented in Game Software Development II. Students will learn the more advanced data structures and algorithms commonly used in game development. In order to demonstrate knowledge of such techniques within the realm of game development, students will work in teams on a quarter long game development project. (4080-222) Class 6, Credit 4 (F, W, S)

4080-229 Foundations of New Media Interactive Development
This course provides an introduction to the development of time-based and interactive media, using an authoring environment such as Adobe Flash. Students will learn to plan, design, and implement short animated and interactive multimedia projects. They will begin with short exercises that provide hands-on practice, culminating in larger projects that develop their design and development skills and offer an opportunity for self-expression. The course will also serve to orient students to the New Media Interactive Development degree program and provide a background on the industry. Class 4, Credit 4 (F)

4080-230 Introduction to Programming for New Media
This course provides the students of New Media an introduction to object oriented programming through the creation of event driven, media intensive applications. Students will write classes that employ the fundamental structures of computer programming such as conditionals, loops, variables, data types, functions, and parameters. There is an early emphasis on OOP concepts and design. Programming exercises are required. (4080-229, 2009-411 or 4080-346) Class 4, Credit 4 (F, W)

4080-231 Programming II for New Media
As the second course in programming for New Media students, this course continues an object-oriented approach to programming for creative practice. Topics will include reusability, data structures, rich media types, event-driven programming, loaders, XML, object design and inheritance. Emphasis is placed on the development of problem-solving skills as students develop moderately complex applications. Programming projects are required. (4080-230, Class 4, Credit 4 (W, S)

4080-295 Introduction to Interactive Media
This course provides an overview of media in historical, current and future contexts. Emphasizing discussion and hands on work with written and visual media assets, students examine the role of written and visual media from both a contextual and practical perspective. (none) Class 4, Credit 4 (F, W, S)

4080-309 Introduction to Web Development
This course provides an introduction to Web development tools and technologies, such as X/HTML, CSS, and DHTML, AJAX, Web platforms and environments, and server-side programming methods. (One programming course and 4080-295) Class 4, Credit 4 (F, W, S)

4080-310 Digital Video for the Web
Web-deployed video is an increasingly important medium. It is used for illustration, instruction, entertainment and marketing. Students working with video for the Web require an understanding of its inherent qualities, limitations and how it may be implemented. This course will focus on video and specifically how to create and implement quality work suitable for Web delivery. Class 4, Credit 4 (F, S)

4080-323 Design of Graphical User Interface
This course examines the user-centered and interactive design approaches to user interface development for rich media and interactive applications. Lectures, readings from texts and handouts, as well as research will aid in the investigation of both the human factors and visual concepts that lead to good screen design. (2009-213 and 4080-309) Class 4, Credit 4 (S)
Interactive Digital Media
This course introduces an event-driven scripting environment to enable the development of highly interactive user experiences. Students learn to manage and edit a wide variety of digital media types, e.g., still- and motion-graphics, text, audio, and video. Students write code to allow users to access, control, and manipulate each of these media types. Students gain foundational skills in media asset creation and in prototyping for applications and interface development. This course requires object-oriented programming. (4080-295 and 4080-223) Class 4, Credit 4 (F, W, S)

Programming III for New Media
This course is the third course in the New Media Programming sequence. It expands the emphasis on using programming to develop interactive experiences through the introduction of more advanced concepts in a second programming language. Topics include interfaces, file I/O, exceptions, events, design patterns and GUI components. Programming assignments are an integral part of the course. (4080-231) Class 4, Credit 4 (F)

Programming IV for New Media
This course is a fourth course in New Media Programming. It will expand the emphasis on using programming in order to design interactive experiences through the use of more advanced programming concepts. Topics such as networking, animation, and basic graphics will be taught. Programming assignments are an integral part of the course. (4080-333) Class 4, Credit 4 (W)

2D Animation for Interactive Media
This course provides a theoretical framework covering the principles of animation and its use in game design to affect user experience. Emphasis will be placed upon principles that support character development and animations that show cause and effect. Students will apply these principles to create animations that reflect movement and character appropriate for different uses and environments. (Second-year standing) Class 4, Credit 4 (F, S)

3D Modeling and Animation for Interactive Media
This course covers 3D modeling techniques to create environments and character animation. Basic ideas learned within the 2D animation course, such as narrative and movement, are revisited within the 3D environs. Discussion of modeling will include not only how to create models and character animation, but also a study of 3D forms within the domains of sculpture, architecture, animation and games. While students will be taught how they may simulate reality in both modeling and animation, they will also study examples of simplifications, abstractions and hyper-realities in the service of narrative and game development. (4080-346) Class 4, Credit 4 (W)

Fundamentals of Game Design and Development I
This course addresses the history of video games as well as the analysis of games as a medium. Topics include the identification and assessment of types and genres within video games as well as how content shapes and is shaped by play in an interactive medium. Activities will include the creation of design documents and the development of playable prototypes. Some projects may require working in groups. (4080-330 or 4080-231) Class 4, Credit 4 (W)

Fundamentals of Game Design and Development II
This course builds upon design documents and game assets created in the prerequisite course. The course focuses upon the creation and development of an industry-standard design document and playable levels in a game prototype. Key concepts in game design and development such as game world design, level design, level balancing, and game character development will be addressed. In addition, this course explores issues involving the development of online game communities. Some projects may require working in groups. (4080-380) Class 4, Credit 4 (S)

Data Structures and Algorithms for Game Programmers I
This course focuses upon the application of data structures, algorithms, and physics to the development of video game applications, simulations, and entertainment software titles. Topics include trigonometric functions in game systems, 2D coordinate systems, 3D coordinate systems, geometric primitives, geometric tests, vectors, matrices, principles of transformation, and inclusion tests. In addition, traditional data structures and manipulation techniques will be applied to game systems and simulations. Furthermore, Newtonian principles such as speed, acceleration, force, work, momentum, and motion will be examined in the context of developing game and entertainment software. Programming assignments are a required part of this course. (4080-330, 1016-206, 1017-211, 4080-223, or equivalent) Class 4, Credit 4

Data Structures and Algorithms for Game Programmers II
This course covers the basics of C++ development in the Windows environment. Topics covered include the use of an integrated development environment, basic C++ syntax, pointers, and Windows specific programming techniques. Emphasis is placed on the development of problem-solving skills. Large programming assignments are required. Prior programming experience is required. (4080-223 or equivalent) Class 4, Credit 4 (F, S)

New Media Web Technologies I
New Media has become increasingly synonymous with Web-based media and Rich Media Internet Applications (RMIA). This course builds on the prerequisite skills of object-oriented programming in the context of a New Media development environment such as Flash and current Web development and design practices to teach students fundamental skills required to build Web-based interactive applications supported by server-side technologies such as PHP and mySQL. The course uses a working knowledge of HTTP and server technologies like database servers in conjunction with client-side technologies like Flash. Programming projects are required and a basic set of concepts and skill for making RMIA are developed. (4080-309 and 4080-333 or equivalent) Class 4, Credit 4 (W)

Introduction to Physical Computing
As shown by gestural touch screens, weight reactive surfaces, and wearable digital devices, there is a huge demand for well-integrated devices and services that seamlessly couple people and environments. The designers who create such products are able to interface computers with real-world inputs and outputs and give people new ways of controlling and experiencing their devices and information. This course will provide a rapid and simple technical introduction to basic electronics (components, circuits, microcontrollers, etc.). Emphasis is placed on applying HCI design concepts to physically interactive product development. Projects that blend electronics, programming, and design are required. (Third-year standing in CIAS or GCCIS and any programming course) Class 4, Credit 4 (S)

Programming for Digital Media
In this course, students will create object-oriented interactive applications in domains such as simulation, gaming, instruction and artificial life. They will build data structures, and classes to create virtual worlds in 2 or 3 dimensions, populated by autonomous agents. Programs will often extend modules created by previous classes or the instructors. Some projects may require working in groups. (4080-330 or 4080-231) Class 4, Credit 4 (F, S)

Data Structures and Algorithms for Game Programmers II
This course continues the investigation into the application of data structures, algorithms, and fundamental Newtonian physics required for the development of video game applications, simulations, and entertainment software titles. Topics covered include techniques for 3D orientation, angular displacement, Euler angles, quaternions representations and operations, barycentric coordinates, classifiers, recursion, clipping, culling, and advanced partitioning techniques. In addition, advanced data structures such as trees and graphs will be investigated from the context of game application and entertainment software development. Furthermore, the course will examine advanced Newtonian principles used in games and simulations. Programming assignments are a requirement for this course. (4080-387 and 4080-417) Class 4, Credit 4 (W)

Honors Capstone Project
The student will work independently under the supervision of a faculty adviser on a topic not covered in other course work. (Completion of Institute Honors Academic requirements) Class 4, Credit 1-4 total (may be split across two consecutive quarters) (F, W, S)

IGM Undergraduate Co-op
A cooperative educational experience is available for those students who participate in order to gain industrial experience. (Department permission) Class 0, Credit 0 (F, W, S)
<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>4080-501</td>
<td>Foundations of 2D Graphics Programming</td>
<td>Students will explore use of an advanced graphics API to access hardware-accelerated graphics. The course will involve discussion of scene graphs, optimizations, and integration with the API object structure. Students will also explore the advanced use of the API calls in production code, to construct environments capable of real-time performance. (4080-434 or 4003-570) Class 4, Credit 4 (W)</td>
</tr>
<tr>
<td>4080-502</td>
<td>Foundations of 3D Graphics Programming</td>
<td>Students will explore use of a graphics API to access hardware-accelerated graphics. The course will involve discussion of the API scene graph, 3D optimizations, and integration between the 2D graphics mode and a 3D immediate mode implementation. This course builds upon students' previous work and extends it in the construction of a fully functional 3D Engine, with library construction for game development. (4080-501) Class 4, Credit 4 (S)</td>
</tr>
<tr>
<td>4080-527</td>
<td>Introduction to Digital Audio Production</td>
<td>Technologies and techniques for producing and manipulating digital audio are explored. Topics include digital representations of sound, digital audio recording and production, MIDI, synthesis techniques, real-time performance issues, and the application of digital audio to multimedia and Web production. (Third-year standing and 4002-409) Class 4, Credit 4 (W)</td>
</tr>
<tr>
<td>4080-528</td>
<td>Writing for Interactive Media</td>
<td>As more of our media and communications are delivered on interactive, non-linear platforms, the information should be developed in ways that take advantage of these technologies. This course will focus on the creation of a variety of different hypermedia and multimedia such as: blogs, digital storytelling, interactive fiction, and video games. (4080-309) Class 4, Credit 4 (S)</td>
</tr>
<tr>
<td>4080-535</td>
<td>Interactive and Game Audio</td>
<td>This course provides students with exposure to the design, creation and production of audio in interactive applications and computer games. Students will become familiar with the use of sound libraries, recording sounds in the studio and in the field, generating sound with synthesizers, and effects processing. Students will create sound designs for interactive media, integrating music, dialog, ambient sound, sound effects and interface sounds within interactive programs. (Third-year standing and 4080-527) Class 4, Credit 4 (S)</td>
</tr>
<tr>
<td>4080-538</td>
<td>Multi-users Media Spaces</td>
<td>This course will focus on the development of interactive applications that allow multiple users to interact with each other in real-time in an on-line 3D environment. The course will integrate a variety of technologies dealing with 3D Programming concepts, connectivity, data persistence, and object-oriented programming. Important human computer interaction issues will be raised around design and processing of messages and the traffic patterns generated by multi user messaging. (4080-434) Class 4, Credit 4 (F, S)</td>
</tr>
<tr>
<td>4080-541</td>
<td>Data Driven Time-based Media Programming</td>
<td>This course focuses upon the construction of time-based multimedia software that is data driven. Topics include the storage and retrieval of multimedia content such as text, image, audio, and video. In addition, the course will focus upon how media content can be managed both locally and remotely through flat files and database systems. The course emphasizes various server technologies and communication protocols that are appropriate to the delivery of data to multimedia applications. Furthermore, the course examines how to transform media types at various points along a data pathway in a variety of forms. Large-scale programming projects are required for this course. (4080-231 or 4080-330, 4002-360, and 4002-539) Class 4, Credit 4 (W)</td>
</tr>
<tr>
<td>4080-555</td>
<td>Innovation and Invention</td>
<td>In this course, students explore the process and products of innovation and invention. Each term we conceive and develop a different “outside the box” project in a multidisciplinary “tinkerer’s lab.” Readings, lectures, student presentations, and discussions deal with the interplay of technology, human nature, and a human environment in which emerging technologies and new modes of interaction are pervasive and ubiquitous. Students from multiple disciplines are guided through a series of collaborative experiences inventing, designing, implementing and studying emerging technologies and their educational and artistic potential. Presentations, projects and individual research papers are required. (Third-year standing) Class 6, Credit 4 (F, W, S)</td>
</tr>
<tr>
<td>4080-560</td>
<td>New Media Team Project I</td>
<td>The first course in a two-quarter sequence designed to engage the New Media major in a capstone production experience. The instructor will form interdisciplinary student teams that will design, plan and prototype new media projects. (Fourth-year standing) Class 6, Credit 4 (F)</td>
</tr>
<tr>
<td>4080-565</td>
<td>New Media Team Project II</td>
<td>The second course in a two-quarter sequence designed to engage the New Media major in a capstone production experience. Students continue to work to completion of their new media group production project. Each group is required to test their product with users and provide written feedback and analysis. (4080-560) Class 6, Credit 4 (W)</td>
</tr>
<tr>
<td>4080-590</td>
<td>Undergraduate Seminar in IGM</td>
<td>This is intended to allow for special one-time offerings of undergraduate topics or to allow faculty to pilot new undergraduate offerings. Specific course details (such as the course topics, format, resource needs, and credit hours) will be determined by the faculty member(s) who propose a given special-topics offering. (Permission of instructor and third-year standing) Class 4, Credit 2-8 (F, W, S)</td>
</tr>
<tr>
<td>4080-599</td>
<td>Independent Study</td>
<td>The student will work independently under the supervision of a faculty adviser on a topic not covered in other courses. (Proposal signed by a faculty member) Class 4, Credit 1-8 (F, W, S)</td>
</tr>
</tbody>
</table>
### Electrical Engineering

**0301-205 Electrical Engineering Freshman Practicum**
Introduction to the practice of electrical engineering including understanding laboratory practice, identifying electronic components, operating generic electronic instruments, building an electronic circuit (Wein Bridge oscillator), measuring and capturing an electronic waveform, schematic entry, modeling and simulation of an electronic circuit (SPICE or equivalent), analyzing a waveform using a commercial software package (MATLAB), and emulating an electronic instrument in software (C programming). This studio lab course emphasizes a learn-by-doing approach to introduce the student to electrical engineering design practices and tools used throughout the undergraduate program. Each student will prototype and build a functioning electronic circuit. **Class 3, Credit 3 (F, W, S)**

**0301-240 Digital Systems**
This course introduces students to the basic components used in digital systems and is usually the student’s first exposure to engineering design. The laboratory component consists of small design projects that must be constructed and validated by the student. The projects run from traditional combinational logic usingSSI chips to small subsystem implementation in a programmable device. **Class 3, Lab 2, Credit 4 (F, W, S)**

**0301-344 MATLAB and C for Electrical Engineers**
An introduction to computer programming using both MATLAB and the C programming language is covered in this course. Basic electrical engineering based numerical methods, problem solving techniques, and algorithm development are covered. Specific items such as data types, variables, operators, expressions, and standard C and MATLAB control structures are covered. Also pointers, arrays, structures and memory allocation features are introduced for both MATLAB & C. The majority of the programming exercises are related to the field of electrical engineering. Classical algorithms for the solution of numerical problems encountered in science and electrical engineering are used to demonstrate the development of algorithms and their implementation. **Class 3, Credit 3 (F, W, S)**

**0301-346 Advanced Programming for Engineers**
This course teaches students to master C++ programming in solving engineering problems and introduces students to basic concepts of object-oriented programming. Advanced skills of applying pointers will be emphasized throughout the course so as to improve the portability and efficiency of the programs. Advanced skills of preprocessors, generic functions, linked list and the use of Standard Template Library will be developed. **Class 4, Credit 4 (F)**

**0303-347 Computer Architecture**
The purpose of this course is to expose students to both the hardware and the software components of a digital computer system. It focuses on the boundary between hardware and software operations. Students will learn about a computer system from various abstraction levels from the digital logic gates to software applications. This course will also provide a solid foundation in computer systems architecture. The first half of the course should deal with the major hardware components such as the central processing unit, the system memory and I/O modules. The second half focuses on instruction set architectures. The lab sessions cover hardware description language (VHDL) implementations of the hardware functional blocks presented in lectures. **Class 3, Lab 2, Credit 4 (F, W, S)**

**0301-360 Introduction to Semiconductor Devices**
An introductory course on the fundamentals of semiconductor physics and principles of operation of basic devices for beginning electrical engineering students. Topics include semiconductor fundamentals (statistical physics of carrier concentration, motion in crystals, energy band models, drift and diffusion currents) as well as the operation of p-n junction diodes, bipolar junction transistors (BJT), metal-oxide-semiconductor (MOS) capacitors and MOS-field-effect transistors (MOSFET). **Class 4, Credit 4 (W, S)**

**0301-365 Microcomputer Systems**
Initial course in microprocessor-based systems. After a review of computer arithmetic, logic operations, number systems and codes, the elements of microcomputer architecture are presented, including a detailed discussion of the memory, input-output, the central processing unit (CPU) and the buses over which they communicate. Assembly-language-level programming is introduced with an emphasis on enabling manipulation of elements of a microcomputer system. Efficient methods for designing and developing assembly language programs are presented. Concepts of program controlled input and output are studied in detail and reinforced with extensive hands-on lab exercises involving both software and hardware. **Class 3, Lab 3, Credit 4 (S)**

**0301-370 Nano-science Engineering and Technology**
In this course fundamentals of nano-science and engineering are covered. Distinct physical and chemical phenomena at the nano-scale are examined. These phenomena can be uniquely utilized in nano-scale devices and systems. This course emphasizes molecular electronics, nano-electronics and nanobiosystems. Organic and inorganic nanomaterials, as well as nano-fabrication technologies, are studied. Computational nano-technology and nano-CAD are covered in order to perform heterogeneous simulation and data-intensive analysis. This course introduces ethics, social issues, economic impact, leadership, and entrepreneurship topics. The proposed course integrates vital components of nano-scale science and engineering in a unified inter-disciplinary nano-technology setting. **Class 4, Lab 3, Credit 4 (S)**

**0301-381 Circuits I with Lab**
Covers the basics of DC circuit analysis starting with the definition of voltage, current, resistance, power and energy. Linearity and superposition, Kirchhoff’s laws, are applied to analysis of circuits having series, parallel and other combinations of circuit elements. Thévenin, Norton, and maximum power transfer theorems are proved and applied. Inductance and capacitance are introduced and the transient response of RL, RC, and RLC circuits to step inputs is established. Practical aspects of the properties of passive devices and batteries are discussed, and characteristics associated with battery-powered circuitry. The laboratory incorporates use of computer and manually controlled instrumentation including power supplies, signal generators, and oscilloscopes to reinforce concepts discussed in class as well as circuit design and simulation software. **Class 3, Lab 3, Credit 4 (W, S, Su)**

**0301-382 Circuits II**
Covers the fundamentals of AC circuit analysis starting with the study of sinusoidal steady-state solutions for circuits in the time domain. The complex plane is introduced along with the concepts of complex exponential functions, phasors, impedances, and admittances. Nodal, loop, and mesh methods of analysis as well as Thévenin and related theorems are applied to the complex plane. The concept of complex power is developed. Two-port network theory is developed and applied circuits and interconnections. The analysis of mutual induction as applied to coupled coils, linear ideal and non-ideal transformers is introduced. Complex frequency analysis is introduced to enable discussion of transfer functions, frequency dependent behavior, magnitude vs. frequency and phase angle vs. frequency plots, resonance phenomenon and simple filter circuits. **Class 4, Credit 4 (F, W, S, Su)**
Electromagnetic Fields I
Study of electrostatic, magnetostatic, and quasi-static fields. Topics: vector algebra, vector calculus and orthogonal coordinate systems - Cartesian, cylindrical, and spherical coordinates, electrostatic fields; Coulomb's law, Gauss's law, the electrical potential, conductors and dielectrics in static electric fields, polarization, electric flux density and dielectric constant, boundary conditions, capacitance, electrostatic energy forces; solution of electrostatic problems, Poisson's and Laplace's equations, methods of images, steady electric currents, conduction current density and resistance, static magnetic fields Ampere's law, vector magnetic potential, Biot-Savart law, the magnetic dipole, magnetization, magnetic field intensity, permeability, boundary conditions, self and mutual inductance, magnetic energy and forces, Faraday's law. (1016-328, 1017-313) Class 4, Credit 4 (F, W)

Electromagnetic Fields II
Study of propagation, reflection, and transmissions of electromagnetic waves in unbounded regions and in guiding structures. Topics: time varying fields, Maxwell's equations, wave equations, uniform plane waves in conductive regions, polarization, the Poynting theorem and power, reflection and transmission at normal incidence from plane boundaries (multiple dielectric interfaces), oblique incidence at plane dielectric boundaries, two-conductor transmission lines (transmission line equations, transients on transmission lines, pulse and step excitations, reflection diagrams, sinusoidal steady state solutions, standing waves, the Smith Chart and impedance matching techniques), TE and TM waves in rectangular waveguides (propagation dispersion characteristics). A few experiments illustrating fundamental wave propagation and reflection concepts are conducted. (0301-473) Class 4, Lab 2, Credit 5 (S, Su)

Electronics I with Lab
This is the first course in a two-course sequence in analog electronic circuit design. The course covers the following topics: (1) basic MOSFET current-voltage characteristics; (2) DC biasing of MOS circuits, including integrated-circuit current sources/mirrors; (3) small-signal analysis of single-stage MOS amplifiers; (4) multistage MOS amplifiers, such as differential amplifiers, cascode amplifiers, and operational amplifiers; (5) frequency response of MOS-based single and multistage amplifiers; (6) diode circuits, including rectifying and clamping circuits, as well as Zener diode-based voltage regulation; (7) ideal and non-ideal operational amplifier (op amp) circuits in non-inverting and inverting configurations. (0301-381) Class 4, Lab 3, Credit 4 (F, W, S, Su)

Electronics II with Lab
This is the second course in a two-course sequence in analog electronic circuit design. The course covers the following topics: (1) DC and small-signal analysis and design of bipolar junction transistor (BJT) devices and circuits, including single-transistor BJT amplifier configurations; (2) BJT DC biasing circuits, such as basic current sources and current mirrors, the Widlar current source and the Wilson current source; (3) two-transistor BJT amplifier stages, such as differential amplifiers, cascade amplifiers, and operational amplifiers; (4) analysis and design of BJT multistage amplifiers and op amps; (5) frequency response of BJT-based single and multistage amplifiers; (6) feedback and stability in BJT and MOSFET amplifiers. (0301-481) Class 3, Lab 3, Credit 4 (F, W, S, Su)

Individual Design Experience
This course is a precursor for the multidisciplinary Electrical Engineering Senior Design Projects course. IDE is focused on individual experiential learning and follows the engineering design cycle including specification, analysis and design, build, test, improve, and documentation. The student selects one of several technology platforms upon which to base their project design. These technology platforms represent popular areas of interest and prepare the student with specific skill sets they can apply in Senior Design. An individual design project demonstration and report are due at the end of the course. (Fourth-year status required) Class 2, Lab 3, Credit 3 (F, W, S)

Linear Systems I
Linear Systems I provides the foundations of continuous and discrete signal and system analysis including signal and system description and modeling. Topics include a description of continuous linear systems via differential equations, a description of discrete systems via difference equations, input-output relationship of continuous and discrete linear systems, the continuous time convolution integral; the discrete time convolution sum; application of convolution principles to system response calculations; exponential and trigonometric forms of Fourier series and their properties; Fourier transforms including energy spectrum and energy spectral density. (0301-382, 1016-528, 420) Class 4, Credit 4 (F, W)

Linear Systems II
First course in the design of feedback control systems. Conventional design techniques, root locus and Bode plots, are used to design both continuous and discrete controllers. Topics include transfer function models of physical systems, second order system response and transient specifications, its relationship to complex poles in S and Z planes (Laplace and Z transforms), effect of additional poles and zeros, steady state error, error, error constants. Root locus analysis, design of lag, lead and PID controllers (continuous and discrete). Design using frequency response techniques, review of Bode plots, W transform and Bode plots for discrete systems, specifications in digital controllers using Bode plots. Comparison of continuous and discrete controllers. Practical aspects in controller implementations. MATLAB used in class assignments and lab. (0301-453, 554) Class 4, Lab 3, Credit 5 (S, Su)

Control Systems Design
Fundamental principles of electric machines are covered. Sensors and actuators are studied. The primary actuators discussed are high-performance electromechanical motion devices such as permanent-magnet DC, synchronous and stepper motors. Topics in power electronics and control of electromechanical systems are studied. High-performance MATLAB environment is used to simulate, analyze and control mechatronic systems. Application of digital signal processors and microcontrollers in mechatronics are introduced. Case studies are covered. (0301-554, 474) Class 3, Lab 1, Credit 4 (F, W, S)

Mechatronics
This introductory course provides the basics of the formation, transmission, and reception of information over communication channels, spectral density and correlation descriptions for deterministic and stationary random signals, amplitude and angle modulation methods (e.g., AM and FM) for continuous signals, carrier detection and synchronization, phase-locked loop and its application. Introduction to digital communication, binary ASK, FSK, and PSK. Noise effects, optimum detection, matched filters, maximum-likelihood reception, computer simulation. (1016-314, 0301-453) Class 4, Credit 4 (S, Su)

Communication Systems
This course covers the essential concepts and applications of digital electronics circuits, including NMOS, CMOS and BICMOS technology. After a basic review of MOSFET devices, NMOS and CMOS inverters are studied from both static and dynamic points of view. Design of combinational and sequential logic networks using NMOS and CMOS technologies is discussed. Dynamic CMOS logic networks, including precharge-evaluate, domino and transmission gate techniques are studied. The discussion of TTL NAND and ECL gates is included for historical reasons. Several special topics are studied as extensions of the foregoing topics, including static and dynamic MOS memory, low power logic, and BICMOS inverters and logic. (0301-240, 481, 482) Class 3, Lab 3, Credit 4 (F, W)

Linear Systems II
Linear Systems II covers advanced topics in both continuous and discrete time linear systems, including the sampling of continuous time signals and the sampling theorem. A comprehensive study of the Laplace transform and its inverse, the solution of differential equations and circuit analysis problems using Laplace transforms, transfer functions of physical systems, block diagram algebra and transfer function realization is also covered. A comprehensive study of the z transform and its inverse, which includes system transfer function concepts, system frequency response and its interpretation, and the relationship of the z transform to the Fourier and Laplace transform is also covered. An introduction to the design of digital filters, which includes filter block diagrams for Finite Impulse Response (FIR) and Infinite Impulse Response (IIR) filters. (0301-453) Class 4, Credit 4 (S, Su)

Robotic Systems
This course will cover basic electrical and mechanical engineering topics related to Robotics, including but not limited to: basic electrical and electronics components (resistors, capacitors, inductors, diodes, transistors, op-amps, timers) and concepts (sensors, signal conditioning, oscillators) and basic mechanical components (chains, gears, ratchets and pawl belt and chain drives, bearing) and concepts (motion, dynamics equations, and force and torque analysis). In addition, robotics system modeling, control, and applications will be explored. Students will design electronic interfaces and controllers for mechanical devices. Finally, sensor and actuator selection, installation, and application strategies will be explored. (0301-346, 453, 481) Class 4, Lab 2 Credit 4

0301-453  Linear Systems I
0301-474  Electromagnetic Fields I
0301-481  Electronics I with Lab
0301-482  Electronics II with Lab
0301-497  Individual Design Experience
0301-514  Control Systems Design
0301-531  Mechatronics
0301-534  Communication Systems
0301-545  Digital Electronics
0301-554  Linear Systems II
0301-585  Robotic Systems

Class 4, Credit 4 (F, W, S, Su)
Class 3, Lab 3, Credit 4 (F, W, S, Su)
Class 4, Lab 2 Credit 4
0301-590 Thesis
A research or development project to be carried out under the general supervision of a faculty member. The project need not be of the state-of-the-art type, but a reasonable problem of theoretical and/or experimental investigation. To be arranged with an individual faculty member. Credit 4

0301-599 Independent Study
A supervised investigation within an electrical engineering area of student interest. (Permission of instructor) Class variable, Credit variable 1–4

0301-610 Analog Electronic Design
Enhances the student’s skills in designing analog circuits. Subjects covered include nonideal characteristics of op-amps, op-amp applications, A/D and D/A conversion, multipliers and modulators, phase-locked loop, frequency synthesis and audio power amplifiers. Students meet in the classroom three hours each week and three hours in the laboratory. The laboratory time is used to discuss and troubleshoot circuits. Students are expected to work on design projects at their own pace outside of class hours. (0301-481, 482) Class 3, Lab 3, Credit 4

0301-612 Advanced Semiconductor Devices
Continuation of an undergraduate professional elective sequence in semiconductor device physics. Coverage of four major topics: (1) bipolar junction transistor (BJT) fundamentals, including carrier injection, current gain, modes of operation, Ebers-Moll model; (2) BJT advanced topics, including Early effect, high-level injection, Kirchhoff effect, control-charge model, and small-signal models; (3) MOSFET transistor fundamentals, including charge-control analysis, current-voltage characteristics, threshold voltage, and CMOS; (4) MOSFET advanced topics, including channel-length modulation, sub threshold current, velocity saturation, scaled MOS devices, drain induced barrier lowering (DIBL), hot carrier effects and scaling issues. (0301-560) Class 4, Credit 4 (W)

0301-615 State Space Control
In this course students are introduced to MIMO systems and their designs using state space techniques. Linear algebra: Vectors, linear independent of vectors, vector space and null space, rank of a matrix eigen values and eigen vectors, transformation of matrices, functions of matrices, matrix polynomials, Cayley Hamilton theorem state space formulations, canonical forms, controllability and observability, relations between state space and transfer function models, solution of state equations, state space design (pole placement), comparison with conventional design, and introduction to other forms of state space designs. (0301-514) Class 4, Credit 4

0301-621 Microwave Engineering
Studies the theory and design of microwave components and circuits. Reviews basic EM theory, TEM waves in transmission lines, TE and TM waves in rectangular waveguides, microstripes and striplines, TE and TM waves in cylindrical waveguides, the scattering matrix description of multitport microwave circuits, waveguide tees, directional couplers and phase shifters, microwave integrated circuit components—branchline couplers, power dividers, hybrid ring couplers and phase shifters, rectangular, cylindrical and coaxial cavity resonators, waveguide and coaxial line filters and waveguide frequency meters, microwave integrated circuit high pass and band pass filters, ferrite components. Laboratory illustrates various microwave component design and measurement techniques. Class 3, Lab 3, Credit 4 (W)

0301-630 Biomedical Instrumentation
Study of fundamental principles of electronic instrumentation and design consideration associated with biomedical measurements and monitoring. Topics to be covered include biomedical signals and transducer principles, instrumentation system fundamentals and electrical safety considerations, amplifier circuits and design for analog signal processing and conditioning of physiological voltages and currents as well as basic data conversion and processing technology. Laboratory experiments involving instrumentation circuit design and test will be conducted. (0301-382, 482, 554) Class 4, Lab 3, Credit 4 (W)

0301-631 Biomedical Sensors and Transducers
Biological entities probably represent one of the most difficult environments in which to obtain or generate accurate and reliable signals. This course will discuss the techniques, mechanisms and methods necessary to transfer accurate and reliable information or signals with a biological target. Various biomedical sensor and transducer types including their characteristics, advantages, disadvantages and fabrication will be covered. Discussions will include the challenges associated with providing a reliable and reproducible interface to a biological entity, the nature and characteristics of the associated signals, the types of applicable sensors and transducers and the circuitry necessary to drive them. (0301-382, 482) Class 4, Lab 3, Credit 4

0301-632 Fundamentals of Electrophysiology
Investigation and study of the concepts and underlying mechanisms associated with electrical signals in mammalian biology and physiology with a significant emphasis on methods, techniques and understanding of electrical potential distribution and current flow derived from circuit analysis. Intended to provide engineers with insight into the relationship between the study of electricity and its applicability to a wide variety of physiological mechanisms ranging from intracellular communication and control to cognitive function and bodily movement. Successful completion of the course will require generation of a significantly in-depth analysis report on some electrophysiological phenomenon or mechanism. (0301-581, 1026) Class 4, Lab 3, Credit 4 (F)

0301-633 Biomedical Signal Processing
Discussion and study of the methods and techniques that may be optimally employed for the fixed and adaptive processing of information with biological and physiological origin. The challenges and unique features of these technologies will be discussed and application of known signal processing techniques that accommodate linear, non-linear, and stochastic signals for the purpose of analysis, detection and estimation, monitoring and control will be studied. Successful participation in the course will entail completion of at least one project involving incorporation of these techniques in a biomedical application. (Permission of instructor or graduate standing) Class 4, Lab 2, Credit 4

0301-636 Biorobotics/Cybernetics
Cybernetics refers to the science of communication and control theory that is concerned especially with the comparative study of automatic control systems as in the nervous system and brain and mechanical-electrical communications systems. This course will present material related to the study of cybernetics as well as the aspects of robotics and controls associated with applications of a biological nature. Topics will also include the study of various paradigms and computational methods that can be utilized to achieve the successful integration of robotic mechanisms in a biological setting. Successful participation in the course will entail completion of at least one project involving incorporation of these techniques in a biomedical application. (Permission of instructor or graduate standing) Class 4, Lab 2, Credit 4

0301-646 Power Electronics
The study of a variety of semiconductor devices generally used for purposes other than signal processing, including thyristors, unijunction transistors, opto-couplers, power MOS and IGBTs. Applications stressed are concerned with the use of electrical power for control of lighting, motion and heat. Particular attention is given to calculating power dissipation, heat sinks and thermal management. (0301-543) Class 3, Lab 3, Credit 4

0301-647 Artificial Intelligence Exploration
The course will start with the history of artificial intelligence and its development over the years. This course will explore a variety of artificial intelligence techniques, and their applications and limitations. Some of the AI techniques to be covered in this course are intelligent agents, problem-solving, knowledge and reasoning, uncertainty, decision making, learning (Neural networks and Bayesian networks), reinforcement learning, swarm intelligence, Genetic algorithms, particle swarm optimization, applications in robotics, controls, and communications. Students are expected to have any of the following programming skills: C/C++, MATLAB, Java, or any other high level programming language. Class 4, Credit 4

0301-650 Design of Digital Systems
Deals with the design of both synchronous and asynchronous digital systems. The accent is on design methodologies for final implementation on programmable logic devices. Design techniques are based on top-down design using ASM charts and bubble diagrams along with microprogramming implementations. Students will also learn how to rapidly develop digital systems with VHDL. Design strategies for testability are discussed along with their impact on performance. The practical aspects of component interconnection (crosstalk, noise, transmission line effects) with effects on performance are also surveyed. The laboratory portion consists of four distinct projects proposed, designed, simulated (two projects require actual hardware implementation), and tested by the student. The design laboratory is supported by the ALTERA MAX-PLUS II VHDL design tools and EPLD/FPGA programmers. (0301-240, 365) Class 4, Lab 3, Credit 4
A technical elective that introduces students to the fundamental principles of Application Specific I.C. (ASIC) design. Both circuit design and system design are covered. The student also is introduced to CAD tools for schematic capture, placement and routing of standard cells. The projects are designed and simulated using commercial CAD tools. Top-down design using a hardware description language (VHDL) is included.

Microcomputer Software I

Discussion of the use of the C Programming language in generating software specifically for microprocessor based systems. The tools and procedures necessary for the organized and efficient development of high-level code for a target microprocessor including compilers, linkers, object code libraries, and symbolic debugging as well as monitor programs and real-time multi-tasking kernel principles will be presented. Programming projects with emphasis on the applications in electrical engineering will be assigned.

Neural Networks

Artificial Neural Networks (ANN) is the name given to a broad class of processing algorithms that are loosely based on how the brain processes information. The term “artificial” distinguishes the silicon-based systems from the biological systems (such as ourselves). ANNs are used in numerous applications from manufacturing controls to handwriting recognition to optical visual processing, or in any application that can handle some “fuzziness” in the output. ANNs also form the foundation for artificial intelligence (AI) systems. This course begins with a discussion of what ANNs are and what features define them, then examines a number of the most common neural algorithms and techniques such as backward error propagation (“Back-prop”). Software implementations of the algorithms (requiring C programming skills) as well as hardware implementations (requiring PSpice simulations) will be discussed.

Embedded Microcomputer Systems

Given the student’s detailed knowledge of the hardware and software organization of 8-bit microcontroller systems with an emphasis on design. Peripheral interfacing, serial and parallel I/O, including interrupts, are considered. Special attention is given to interfacing microcontroller with the analog world, including the use of A/D and D/A converters. Software organization as well as design tools are discussed. Design case studies of typical microcomputer-embedded systems are examined.

Digital Filters and Signal Processing

A continuation of the topics studied in 0301-554. Topics include study of the design methods for digital IIR filters via s-plane transformations, study of design methods for digital FIR filters, including emphasis on the question of linear phase response, a review of the discrete Fourier transform (DFT) and an in-depth study of fast algorithms (FFTs) for implementing the DFT, including linear phase response, and a review of the discrete Fourier transform (DFT) and an in-depth study of fast algorithms (FFTs) for implementing the DFT.

Analog Filter Design

A study of the various techniques for the design of filters to meet given specifications. Approximations to the ideal filter characteristic through Butterworth, Chebyshev and other polynomials are discussed in detail. The emphasis is on active network realizations using op amp stages. Topics include review of analysis of op amp circuits and transfer function of networks, magnitude and frequency scaling, ideal filter characteristics, Butterworth, Chebyshev and Bessel-Thompson approximations to the ideal filters, determination of transfer functions to meet given specifications, high-pass to low-pass and band-pass to low-pass transformations, standard op amp circuits for filter realizations, negative impedance converters, generalized impedance converters, and switched capacitor filters.

Principles of Robotics

An introduction to a wide range of robotics-related topics including but not limited to sensors, interface design, robot devices, control, intelligent navigation, task planning, coordinate systems and positioning, image processing, digital signal processing applications on robots, and control algorithm circuitry design. Prerequisite for the class is a basic understanding of signals and systems, matrix theory, and computer programming. Software assignments will be given to the students in robotic applications. Students will prepare a project, in which they will complete software or hardware design of an industrial or mobile robot. There will be a two-hour lab additional to the lectures.

MEMS Design

Microelectromechanical systems (MEMS) are widely used in aerospace, automotive, biotechnology, instrumentation, robotics, manufacturing, and other applications. They are a critical need to synthesize and design high performance MEMS which satisfy the requirements and specifications imposed. Integrated approaches must be applied to design and optimized MEMS, which integrate microelectromechanical motion devices, ICs, and microsensors. This course covers synthesis, design, modeling, simulation, analysis, control and fabrication of MEMS. Synthesis, design and analysis of MEMS will be covered including CAD. (Fourth- or fifth-year standing for undergraduates, or graduate standing)
0302-232 Reverse Engineering
This is a KGCOE honors course. Topics included are reverse engineering, design for manufacturing and assembly, and design for safety. Student teams will address these concepts using a toy currently sold on the market. Class 2, Credit 1 (W)

0302-233 The Design Process
This is a KGCOE honors course. Students will learn the steps used in the design process. Topics include teambuilding, brainstorming, problem definition, creativity, identifying constraints, and establishing design specifications. A weekly portfolio will be completed to document the design process. Students will be assigned to small teams and will be required to solve an open-ended design problem. Teams test their design in a competition that is held at the end of the quarter. Class 2, Credit 1 (S)

0302-234 Manufacturing and Globalization
This is a KGCOE honors course. This course looks at the effects globalization has on U.S. manufacturing. Topics included are supply chain management and logistics, lean manufacturing, outsourcing, corporations and profitability, and the impact of government policies and monetary issues on globalization. Class 2, Credit 1 (F)

0302-235 Preparation for Honors Domestic Trip
This course is for KGCOE students planning to participate on the domestic trip. Student teams will research the companies they will visit and report back to the class on their findings. Class 1, Credit 0 (W)

0302-236 Leadership, Ethics and Sustainability
This is a KGCOE Honors course. A series of presentations by guest speakers will address the topics of leadership, ethics, and sustainability. Class 2, Credit 1 (S)

0302-500 Study Abroad: INSA Rennes
College of Engineering students take classes at National Institute of Applied Sciences in Rennes, France, as part of an exchange program with the Kate Gleason College of Engineering. Department approval required; contact KGCOE Student Services at 585-475-7994 or mgaen@rit.edu. Credit variable 1-20

Industrial Engineering

0303-051 Discovery Industrial Engineering
Gives first-year students an overview of industrial engineering and helps integrate the incoming students into the RIT ISE community. Topics include student success (e.g., transition to the college experience, awareness of campus resources, academic and personal success strategies, information literacy, personal development, and responsible decision making), career options in engineering, plant tours, design projects, and engineering ethics. Also gives the student an opportunity to interact with ISE faculty, upper-division students, and other first-year ISE students. Fulfills the university requirement for FYE. Credit 1 (F)

0303-201 Fundamentals of Industrial Engineering
An introductory course in industrial engineering for first- and second-year students. Describes engineering in an overall sense and industrial engineering in particular. Includes an overview of some contemporary engineering topics, and charting and analysis tools used in industrial engineering within the context of the product and process development cycle. The laboratory portion covers hands-on applications relating to topics covered in lectures and group exercises in problem solving within the context of engineering design and analysis. Class 3, Lab 1, Credit 4 (F)

0303-204 Computer Tools for Increased Productivity
Builds a basic computer competence. Students learn about various computer software programs including computer-aided design (e.g., AutoCAD) and database (e.g., Access) programs. Class 2, Credit 2 (S)

0303-302 Computing for Engineers
A first course in computer programming for engineers. Involves development of programming skills required in the engineering disciplines. "C++" is the current language of choice. Class 4, Credit 4 (F, S)

0303-320 Production Systems Practicum
The activities of this course will be largely centered in the Toyota Production Systems Lab. The purpose of this course is to introduce students to the elements of "lean manufacturing" in the context of a manufacturing or assembly systems environment. Key concepts such as manufacturing processes, cells and their layout, operating efficiencies, just-in-time, and the information flows needed to sustain productive manufacturing will be covered. (Permission of instructor) Lab 2, Credit 1 (S)

0303-343 Materials Processing
A study of the application of machine tools and fabrication processes to engineering materials in the manufacture of products. Processes covered include cutting, molding, casting, forming, powder metallurgy, and welding. Students make a project in the lab portion of the course. Class 3, Lab 2, Credit 3 (W)

0303-401 Operation Research
An introduction to optimization through mathematical programming techniques including linear programming and transportation and assignment algorithms, and their application on problems in manufacturing, health care, financial systems, supply chain, and other engineering disciplines. Special attention is placed on sensitivity analysis and the need of optimization in decision-making. The course is delivered through lectures and a weekly laboratory where students learn to use state of the art software packages for modeling large discrete optimization problems. (1016-351 or permission of instructor) Class 3, Lab 2, Credit 4 (F)

0303-402 Production Control
A first course in mathematical modeling of production-inventory systems. Topics include forecasting, aggregate planning, inventory control models, and scheduling. (0303-401, 1016-351 or equivalent, or permission of instructor) Class 4, Credit 4 (S)

0303-415 Ergonomics
Physiological and biomechanical aspects of human performance. Principles of physical work and human anthropology are studied to enable the student to systematically design work places, processes, and systems that are consistent with human capabilities and limitations. Topics include repetitive motion disorders, manual materials handling, hand tool design and selection, and job analysis. (0307-361 or 1016-351 or permission of instructor) Class 3, Lab 1, Credit 4 (W)

0303-422 Systems and Facilities Planning
A basic course in quantitative models on layout, material handling and warehousing. Topics include product/process analysis, flow of materials, material handling systems, warehousing, and layout design. A computer-aided layout design package is used. (0303-401 or permission of instructor) Class 3, Lab 1, Credit 4 (W)

0303-481 Engineering Management
Development of the fundamental engineering management principles of industrial enterprise, including an introduction to project management. Internal organization as well as general economic conditions are considered. Business and project planning is also performed. Class 4, Credit 4 (W, S)

0303-483 Advanced Production Control
A design course in production control. Each student is asked to design, test, and implement a complete production control system for an operating plant. Professional elective. (0303-402) Class 4, Credit 4

0303-503 Simulation
Queueing theory will be introduced. Modeling and computer simulation of stochastic and dynamic manufacturing and service systems are emphasized. A high-level simulation language (e.g., ARENA) will be used to model and examine system performance. (0303-302, 401; corequisite 0307-362 or equivalent) Class 3, Lab 2, Credit 4 (F)

0303-510 Applied Statistical Quality Control
An applied approach to statistical quality control utilizing theoretical tools acquired in other math and statistics courses. Heavy emphasis on understanding and applying statistical analysis methods in real-world quality control situations in engineering. Topics include hypothesis testing and control charts. Contemporary topics such as six-sigma are included within the context of the course. (1016-351, 352 or 0307-361, 362) Class 4, Credit 4 (F)

0303-511 Applied Linear Regression Analysis
An applied approach to linear regression analysis utilizing theoretical tools acquired in other math and statistics courses. Heavy emphasis on understanding and applying statistical analysis methods in real-world situations in engineering. Topics include analysis of variance and regression. (1016-331, 0307-361, 362 or 1016-351, 352 or equivalent) Class 4, Credit 4 (S)
0303-516 Human Factors
Psychological and cognitive aspects of human performance. The human information processing capabilities are studied to enable students to design work places, procedures, products, and processes that are consistent with human capabilities and limitations. Topics include the human sensory, memory, attention, and cognitive processes; display and control design principles; as well as human computer interface design. (0307-362 or 1016-352 or permission of instructor) Class 3, Lab 1, Credit 4 (S)

0303-520 Engineering Economy
Time value of money, methods of comparing alternatives, depreciation and depletion, income tax consideration and capital budgeting. Course provides a foundation for engineers to effectively analyze engineering projects with respect to financial considerations. Class 4, Credit 4 (F, W, S)

0303-526 Design and Analysis of Production Systems
This course will provide an introduction to concepts and techniques in the design and analysis of manufacturing and service systems. At the end of the quarter, the student will be able to assess and analyze the performance of a given system as well as to provide a framework for system redesign and improvement. Modern aspects such as lean manufacturing are included within the context of the course. (0303-401, 402, or permission of instructor) Class 3, Lab 1, Credit 4 (S)

0303-560 Multidisciplinary Senior Design I
First course in two-course design sequence oriented to the solution of real-world engineering problems. Multidisciplinary student teams attempt to define, analyze, design, and implement solutions to unstructured, open-ended, multidisciplinary engineering problems. (Fifth-year standing) Class 4, Credit 4 (F, W)

0303-561 Multidisciplinary Senior Design II
Second course in a two-course design sequence oriented to the solution of real-world engineering problems. Multidisciplinary student teams attempt to define, analyze, design, and implement solutions to unstructured, open-ended, multidisciplinary engineering problems. (0303-560) Class 4, Credit 4 (W, S)

0303-599 Independent Study
A supervised investigation within an industrial engineering area of student interest. Professional elective. (Permission of instructor) Class variable, Credit variable

0303-620 Engineering Economy
Time value of money, methods of comparing alternatives, depreciation and depletion, income tax consideration, replacement, retirement and obsolescence, and capital budgeting. Course provides a foundation for engineers to effectively analyze engineering projects with respect to financial considerations. Applied project is required. Cannot be used as a professional elective for ESE majors. Class 4, Credit 4 (F, W, S)

0303-626 Contemporary Production Systems I
The focus of this course is lean. Lean is about doing more with less: less human effort, less equipment, less time, less space. In other words, lean is about the application of industrial engineering principles and tools to the entire supply chain or value stream. The focus of this course will be learning and applying the principles and tools of lean such as value, value stream mapping, kaizen, flow, pull, kaizen, standard work, line design, and others, all in the context of continuous process improvement. By the end of the course, students will possess the essential tools and skills to apply lean in their production system from either a line (supervisor or manager) or staff role. (Theoretical or experiential background in manufacturing processes and production systems is recommended, or permission of instructor) Class 4, Credit 4 (F)

0303-630 Advanced Systems Integration
Basic concepts and techniques needed to specify, design, and implement systems that are computer controlled. Real-time data, process control as related to computer-integrated manufacturing. Information systems topics will be introduced within the context of systems integration. (0303-302 or permission of instructor) Class 3, Lab 1, Credit 4 (W)

0304-051 Discovery Mechanical Engineering
Gives the entering first-year student an overview of mechanical engineering and helps integrate the incoming student into the RIT community. Topics discussed include the program of study, the cooperative work experience, and course advising. In addition, this course gives the student an opportunity to interact with the faculty, upper-division students, and other first-year students in a project-oriented environment. Fulfills the university requirement for one credit of FYE. Credit 1 (F)

0304-214 Engineering Design Graphics
This course is an introduction to graphical communication as a tool in documenting the results of an engineering design. Emphasis is placed on the use of Computer-Aided Drafting and 3-D Solid Modeling systems to prepare working drawings packages of basic components and assemblies. Students combine the practice of sketching along with computer-based solid modeling to produce a parametric design. At the conclusion of the course, students will be able to prepare working drawings, with appropriate views, dimensions, title blocks, and bill of materials. Lab 4, Credit 2

0304-220 Fundamentals of Micromachining I
A hands-on laboratory course designed to give students an introduction to clean room operations and micromachining technologies. Students will fabricate a variety of simple microscopic devices and investigate their mechanical behavior. Topics covered include clean rooms, optical lithography, thin film materials, chemical and plasma etching, and metrology. (This class is not intended for the microelectronics major or minor). Lab 2, Credit 1

0304-261 Cornerstone Design Project Lab
This course gives students an opportunity to apply foundation courses in mechanical engineering to the solution of an open-ended design problem. Students will learn about project definition, concept development, feasibility assessment, managing design parameter tradeoffs using engineering analysis, and developing a preliminary design drawing package. Teams of students will develop their concept through the stage of working drawing. The course is intended to prepare students for future ME and multi-disciplinary design courses. (0304-213, 347, 415, and at least one co-op block) Lab 4, Credit 2

0304-280 Measurement, Instrumentation, Controls I
This course is designed to introduce students to fundamental laboratory techniques and familiarize them with hardware and software tools. Students learn how to obtain and interpret measurements of physical properties such as temperature, pressure, and flow rate. Students learn how to interface a computer to physical devices using analog and digital input/output schemes. The primary vehicle for exploring these concepts is LabVIEW from National Instruments, which is an integrated, graphical programming environment. Classroom demonstrations, hands-on examples, in-class and project exercises provide students with an appreciation for engineering applications. Lab 4, Credit 2

0304-314 Topics in Geometric Dimensioning and Tolerancing
This course reviews basic dimensioning and tolerancing. Dimensioning mechanical drawings is expanded through form and feature controls to clearly define parts. Based on the ASME Y14.5M-1994 Standard, include geometric tolerancing symbols and terms, rules of geometric dimensioning and tolerancing, datums, material condition symbols, tolerances of form and profile, tolerances of orientation and runout, location tolerances and virtual condition. Tolerances will be applied to CAD parts and drawings. This course may be used towards free elective credit. (0304-214) Lab 2, Credit 1

0304-320 Production Systems Practicum
The activities of this course will be largely centered in the Toyota Production Systems Lab. The purpose of this course is to introduce students to the elements of Lean manufacturing in the context of a manufacturing or assembly systems environment. Key concepts such as manufacturing processes, cells and their layout, operating efficiencies, just-in-time, and the information flows needed to sustain productive manufacturing will be covered. (Permission of instructor) Lab 2, Credit 1 (F)

0304-331 Mechanics I
For students majoring in industrial and systems engineering. Statics: equilibrium, the principle of transmissibility of forces, couples, centroids, trusses, frames, machines and friction. Introduction to strength of materials: axial stresses and strains, statically indeterminate problems, torsion and bending. (1017-311) Class 3, Credit 3
0304-332  Mechanics II
For students majoring in industrial and systems engineering. Topics include dynamics of particles and rigid bodies with an introduction to kinematics and kinetics of particles and rigid bodies, work, energy, impulse momentum and mechanical vibrations. Emphasis is on problem solving. (0304-331) Class 3, Credit 3

0304-336  Statics
This basic course treats the equilibrium of particles and rigid bodies under the action of forces. It integrates the mathematical subjects of calculus, vector algebra and simultaneous algebraic equations with the physical concepts of equilibrium in two and three dimensions. Topics include concepts of force and moment, trusses, frames, machines, friction, centroids and moments of inertia. (1016-282 or 1016-273, 1017-311) Class 4, Credit 4

0304-342  Problem Solving with Computers
Introduces students to personal computers for solving science and engineering problems. Students also learn to interpret and analyze their results and document their solutions. The course covers principles and techniques of computer programming to analyze and solve problems and to document both numerically and graphically the results of the analysis. Programming and analysis of problems are implemented using MS Excel, and the scripting languages Visual Basic for Applications (VBA) and MATLAB. (Corequisite: 1016-271 or 1016-281) Class 2, Lab 2, Credit 3

0304-343  Materials Processing
A study of the application of machine tools and fabrication processes to engineering materials in the manufacture of products. Processes covered include cutting, molding, casting, forming, powder metallurgy and welding. Students do a project in the lab portion of the course. Class 2, Lab 2, Credit 4

0304-344  Materials Science
The structure and properties of metallic, polymeric, composite and ceramic materials as related to structural imperfections, atom movements and phase changes. Develops a basic understanding of the structure/properties relationship in materials and their behavior in service environments. (1011-208) Class 3, Lab 2, Credit 4

0304-347  Mechanics of Materials
A basic course in the fundamental principles of the mechanics of deformable media, including stress, strain, deflections and the relationships among them. The basic loadings of tension, compression, shear, torsion and bending are also included. Materials of Mechanics Lab (0304-348) is to be taken concurrently with this course. (0304-336; corequisite: 0304-348) Class 4, Credit 4

0304-348  Mechanics of Materials Lab
A required laboratory course taken concurrently with 0304-347. Illustrates the mechanical behavior of metallic materials. Students investigate a material’s response to axial, torsional and bending loads. In addition students are introduced to reduced analysis of data, basic experimental techniques, and effective report writing. (0304-336; corequisite: 0304-347) Lab 2, Credit 1

0304-350  Intermediate Machining Lab
This hands-on laboratory course introduces students to the proper use and application of basic machine tools. Students will learn about machine capabilities and capacities, verification and setup procedures, and the system of operations necessary to achieve the required part specifications. Students will also be introduced to CNC machine tools and their applications. This course may be used towards free elective credit. (0304-343) Lab 2, Credit 1

0304-360  Model Aircraft Fabrication Laboratory
This hands-on laboratory course introduces students to Radio Control model airplane construction. Students learn how to construct their own airplanes from balsa and birch ply, how to install control hardware, and how cover these airplanes using heat-shrink covering materials. Each student may be able to fly with an RC “flight instructor” at the end of the course (weather permitting). Students are required to purchase a kit-of-parts to cover material costs, which will allow them to keep their constructed airframe at the end of the course. Radio control hardware will be provided to students for use during the course, and students will have the option to purchase their own RC hardware to turn their airframe into a fully functional RC model airplane. Lab 2, Credit 1

0304-359  Dynamics
A basic course in the kinematics and kinetics of particles and rigid bodies. Newton’s Laws and the theorems of work-energy and impulse momentum are applied to a variety of particle problems. Systems of particles are employed to transition to the analysis of rigid body problems. Absolute and relative motion are used to investigate the kinematics and kinetics of systems of rigid bodies. Newton’s Laws and the theorems of work-energy and impulse momentum are also applied to a variety of rigid body problems. (0304-336) Class 5, Credit 5

0304-413  Thermodynamics
A basic course introducing the classical theory of thermodynamics. Applications of the first law of thermodynamics are used to introduce the student to thermodynamic processes for closed and open systems. The Clausius and Kelvin-Planck statements of the second law are then correlated with the concept of entropy and enthalpy to investigate both real and reversible processes and the thermodynamic properties of pure substances. (1016-282 OR 1016-273, 1017-311) Class 4, Credit 4

0304-415  Fluid Mechanics
Includes the physical characteristics of a fluid: density, stress, pressure, viscosity, temperature, vapor pressure, compressibility. Descriptions of flows: Lagrangian and Eulerian; stream lines, path lines, streak lines. Classification of flows. Fluid statics: hydrostatic pressure at a point, pressure field in a static fluid, manometry, forces on submerged surfaces, buoyancy, standard and adiabatic atmospheres. Flow fields and fundamental laws: systems and control volumes, Reynolds Transport theorem, integral control volume analysis of basic equations for stationary and moving control volumes. Inviscid Bernoulli and the Engineering Bernoulli equation, some applications. Incompressible flow in pipes: laminar and turbulent flows, separation phenomenon. Dimensional analysis: Buckingham’s pi-theorem, similitude, model studies. (0304-413; corequisite: 0304-359) Class 4, Credit 4

0304-416  Thermal Fluids Lab 1
This laboratory course pertains to topics covered in Thermodynamics (0304-413) and Fluid Mechanics (0304-415). Each laboratory experiment is designed to quantify the differences between real and ideal systems through rigorous system analysis. Students will work in teams to evaluate various thermo-fluid systems. Extensive analysis is used to calculate system characteristics and to graph and predict system behavior. (0304-413; corequisite: 0304-415) Lab 2, Credit 1

0304-437  Design of Machine Elements
The analysis and theory of machine design in the context of failure theories. Particular emphasis is placed on the design and analysis of machine elements and fatigue. A discussion of engineering professionalism and ethics is also included. (0304-347) Class 4, Credit 4

0304-440  Numerical Methods
The study of numerical methods as utilized to model and solve engineering problems on a computing device. Students learn to analyze and interpret the numerical solutions obtained. Topics include roots of algebraic and transcendental equations, linear systems, curve fitting, numerical differentiation and integration, and ordinary differential equations. Applications are taken from student’s background in engineering, science and mathematics courses. Matlab programming language is taught and utilized for computer implementation. (0304-342, 347, 1016-318) Class 4, Credit 4

0304-460  Contemporary Issues/ Energy and Environment
This course lays the foundation for studies in energy and the environment. Topics include an introduction to energy intensive systems and how they interact with the environment. Specific attention is focused on current events both domestically and internationally, and how these events will shape our future energy production and utilization. This course may be used only as a free elective. (Third-year standing in an engineering discipline) Class 4, Credit 4

0304-461  Contemporary Issues in Bioengineering
This course lays the foundation for studies in bioengineering. Topics include the principles of living systems, fundamentals of biomolecular and cellular engineering, engineering applications, and medical engineering. This course may be used only as a free elective. (Third-year standing in an engineering discipline) Class 4, Credit 4

0304-500  Study Abroad
01 - Mechanical Engineering Independent Study, Credit 1–8
02 - Mechanical Engineering Free Elective, Credit 1–8
03 - Mechanical Engineering Technical Elective - Design, Credit 1–8
0304-514 Heat Transfer
A basic course in the fundamentals of heat transfer by conduction, convection and radiation, together with applications to typical engineering systems. Topics may 347, include one-dimensional steady state and transient heat conduction, radiation between black bodies and gray bodies, correlations for the Nusselt number in forced and natural convection, and an introduction to heat exchanger design by LMTD and NTU methods. (0304-413, 415) Class 4, Credit 4

0304-518 Advanced Computational Techniques
This extension of Numerical Methods, 0304-440, covers finite element and finite difference techniques and their applications in mechanical engineering (structural analysis, heat transfer, fluid mechanics). (0304-440, 1016-318) Class 3, Lab 2, Credit 4

0304-540 Introduction to Auto Design and Manufacturing
An introduction to the design and manufacturing practices employed in typical automotive industries. Design practices that are currently being implemented in industry will be emphasized including the use of computer-aided engineering, software, and statistical analysis. The regularly scheduled lecture periods will include guest lecturers from automotive manufacturers to introduce students to current manufacturing technologies. This course may be used only as a free elective. (Third-year standing in ME program; registration preference given to students enrolled in the automotive option) Class 4 Credit 4

0304-543 System Dynamics
This required course introduces the student to lumped parameter system modeling, analysis, simulation, and experimentation. The determination and solution of differential equations that model system behavior is a vital aspect of the course. System response phenomena are characterized in both time and frequency domains and evaluated based on performance criteria. Laboratory exercises enhance student proficiency with model simulation, basic instrumentation, data acquisition, data analysis, and model validation. (0304-280, 0304-359, 0304-440, 1016-306; corequisite: 0301-381) Studio Class 6, Credit 5

0304-550 Transport Phenomena
A second course in fluid mechanics, integrating concepts of heat and mass transfer. Use of the differential form of the fundamental equations of the conservation of mass, momentum and energy is derived and used throughout. Topics include potential flow, viscous internal plane and pipe flows, external boundary layers, and the convective transport of heat and mass. (1016-318, 0304-415; corequisite: 0304-514) Class 4, Credit 4

0304-551 Thermal Fluids Lab II
A laboratory course based on the materials covered in Heat Transfer I, 0304-514, and Transfer Phenomena, 0304-550. Students perform various experiments of contemporary interest to the fields of heat transfer and transport. Each lab is preceded by a lecture covering an in-depth analysis of the lab experiment. Students are required to work on an assignment related to the experiment using the textbooks and reference material available in the library. After performing the experiments, students perform the required analysis, including error analysis and comments on identifying the sources of error and how to reduce them. Students submit a detailed lab report that is graded on the technical content as well as writing skills. (0304-514; corequisite: 0304-550) Lab 2, Credit 1

0304-560 Introduction to Aerospace Engineering
Lays the foundation for studies in aerospace engineering. Topics include the history of aviation, basic aerodynamics, airfoils, wings and other aerodynamic shapes, airplane performance, stability and control, propulsion and aircraft structures. This course may be used only as a free elective. (0304-359, 415; third-year standing in ME program; registration preference given to students enrolled in the aero option) Class 4, Credit 4

0304-575 Aerodynamics
This course presents the essentials of aerodynamic theory. This course is used in place of Transport Phenomena for students enrolled in the aero option. Topics include differential equations of fluid mechanics, airfoil theory, wings of finite span, inviscid potential flows, laminar and turbulent boundary layer, Airfoil design is explored through software. A design project is required. (0304-349, 415, 560; registration preference given to students enrolled in the aero option) Class 4, Credit 4

0304-599 Independent Study
A student project course encompassing both analytical and experimental work. (Fourth- or fifth-year standing) Credit variable

0304-604 Design for Manufacture
The student learns how to design parts for economical manufacture and how to design assemblies with the optimum number of parts. This project-based course includes lectures on the creative process. The student uses both manual and software techniques to calculate assembly design efficiencies and software techniques to determine part and part tooling costs. (0304-344) Class 4, Credit 4

0304-610 Topics in Mechanical Engineering Design
In response to student and/or faculty interest, special courses of current interest and/or logical continuation of regular courses are presented. A design project is required. Class 4, Credit 4

0304-615 Robotics
An applied course in the fundamentals and applications of industrial robots. Emphasis is placed on the use of microcontrollers to construct mobile robots. Topics include microcontroller programming, industrial robot fundamentals, DC servo and stepper motors, encoders, sensors, programming, gripper design, and safety. A major emphasis is placed in a design project involving the design, build, and test of a mobile robot for an application. (Fourth- and fifth-year standing) Class 3, Lab 2, Credit 4

0304-618 Computer-aided Engineering
Introduces the mechanical engineering student to the procedures and techniques used to integrate the computer into the engineering and design cycle. The student is exposed to commercial software used in industry. Topics include solids modeling, finite elements, stress analysis, static and dynamic structural analyses, and heat transfer. A real-world design project is selected from one or more of the topics covered. (0304-437, 518) Class 3, Lab 2, Credit 4

0304-620 Introduction to Optimal Design
This course is an introduction to basic optimization techniques for engineering design synthesis. Topics covered include: basic concepts, the general problem statement, necessary conditions of optimization, numerical techniques for unconstrained optimization, constrained optimization through unconstrained optimization, and direct methods. Numerical solutions are obtained using MATLAB software. A design project is required. (0304-437, 440) Class 4, Credit 4

0304-622 High Performance Vehicle Engineering
This course explores the engineering aspects of high performance vehicle design. Topics include product design specification, systems design, component and systems optimization, manufacturing and assembly, testing, and safety. Case studies will be used to introduce students to various aspects of the process. Students will participate in hands-on activities surrounding the design, manufacture, assembly, and testing of high performance vehicle components. (Fifth-year standing or permission of instructor) Class 4, Credit 4 (W)

0304-623 Powertrain Systems and Design
This course will introduce the transmission’s primary function of coupling the engine to the driveline at appropriate torque ratios. Subsequent topics include modern transmission design, efficient engine operation through transmission adaptation; and a discussion of the future of the automatic transmission. The course will review manual transmissions, automatic control, and hydro-mechanic decision theory and implementation. Modern designs, such as Continuously Variable Transmissions (CVT), are reviewed to demonstrate a fundamental shift in the way power is transmitted from the primary source (such as the internal combustion engine) to the remainder of the driveline such as the propeller shaft or axle. Class 4, Credit 4

0304-624 Vehicle Dynamics
Deals with the fundamentals of ground vehicle stability and control. The contribution of tire lateral force, stiffness, and aligning torque to vehicle stability is discussed. Bicycle and four-wheel vehicle models are analyzed for neutral, under and oversteer characteristics. The effects of suspension geometry, chassis stiffness and roll stiffness on stability and handling are analyzed. (0304-543; registration preference given to students enrolled in the automotive option) Class 4, Credit 4

0304-629 Renewable Energy Systems
This course provides an overview of renewable energy system design. Energy resource assessment, system components, and feasibility analysis will be covered. Possible topics to be covered include photovoltaics, wind turbines, solar thermal, and hydropower. Students will be responsible for a final design project. (Fourth- or fifth-year standing or instructor permission) Class 4, Credit 4
0304-630  Senior Design I
The first of a two-course capstone design sequence. Students work in multidisciplinary design teams in an environment approximating an industrial setting. Emphasis is placed on teamwork and on developing good oral, written and interpersonal communication skills. In this course, student teams develop their proposed final design of a mechanical system after identifying potential alternative concepts. The final design must be supported by sound engineering analyses and by engineering drawings necessary to build a prototype. This course is intended to be taken as a capstone design experience near the conclusion of the student’s program of study. Students must have fifth-year standing, completed three co-op blocks and have consent of the department. Students must submit a departmentally approved plan of study for degree completion. (0304-280, 514, 518, 543, 550) Department approval required. Class 4, Credit 4

0304-631  Senior Design II
The second of the two-course capstone design sequence. The same student teams from Senior Design I return to build and test a working prototype of their previously developed final design. Continued emphasis is placed on teamwork and on developing good oral, written, and interpersonal communication skills. (0304-630) Class 4, Credit 4

0304-633  Sustainable Energy Management
This course, Sustainable Energy Management and the Built Environment, provides an overview of mechanical and associated control systems within buildings with an emphasis on sub-systems that possess the most visible energy signature in terms of energy usage, energy inefficiency, and societal/global impact. Fundamentals of system operation are explored as well as energy management techniques. Using domestic and international case studies that highlight energy management within the built environment, students will explore methods by which engineers have achieved solutions aligned with sustainability. (0304-643, 660) Class 4, Credit 4

0304-635  Heat Transfer II
Consists of the numerical solution of heat transfer problems. One- and two-dimensional steady-state as well as transient conduction cases are analyzed. A detailed study of single-phase forced and natural convective heat transfer is presented. Heat transfer during pool boiling, flow boiling, and condensation is studied. Design aspects of heat transfer equipment are introduced. The students undertake a major design project. (0304-440, 514) Class 4, Credit 4

0304-638  Design of Machine Systems
This is an applied course in the selection of components and integration of those components into electro-pneumatic-mechanical devices and systems. Topics involve all aspects of machine design, including drive components and systems, motion generation and control, and electrical control hardware and strategy. (0304-359, 437; 0301-381) Class 4, Credit 4

0304-639  Alternative Fuels and Energy Efficiency
This course, Alternative Fuels and Energy Efficiency for Transportation, provides an overview of the potential alternative fuels and energy efficiency technologies for powering current and future vehicles. Alternative fuel production technologies and utilization of fuels such as biodiesel, ethanol, and hydrogen will be covered. The primary technical and environmental issues associated with these alternative fuels will be discussed. Approaches to improving vehicle efficiency will also be explored. Students will be responsible for a final design or research project. (0304-640) Class 4, Credit 4

0304-640  Internal Combustion Engines
An introduction to the operation and design of internal combustion engines. Topics include engine types and cycles, fuels, intake and exhaust processes, emissions and emission control systems, heat transfer and lubrication. (0304-514; prerequisite: 550; registration preference given to students enrolled in the automotive option) Class 4, Credit 4

0304-643  Control Systems
Introduces the student to the study of linear control systems, their behavior and their design and use in augmenting engineering system performance. Topics include control system behavior characterization in time and frequency domain, stability, error and design. This is accomplished through classical feedback control methods that employ the use of Laplace transforms, block diagrams, root locus, and Bode diagrams. An integrated laboratory will provide students with significant hands-on analysis and design-build-test experience. (0304-543) Class 3, Studio 3, Credit 4

0304-644  Introduction to Composite Materials
This course is an applied course in the fundamentals and applications of composite materials. Topics covered include constituents of composite materials, fabrication techniques, micromechanical analysis, macromechanical analysis, and the use of composites in design. Some laboratory work will be done, and a major design project is required. (0304-344, 347, 518) Class 4, Credit 4

0304-645  Introduction to Biomaterials
This course provides an overview of materials used in biomedical applications. Topics covered include structure and properties of hard and soft biomaterials, material selection for medical applications, material performance and degradation in hostile environments, and typical and abnormal physiological responses to biomaterials. Some experiments will be performed in class and a major project is required. (0304-344, 550, 518) Class 4, Credit 4

0304-646  Biomedical Device Engineering
This course is an introduction to the design of medical devices and issues that are unique to these devices. Course content includes some historical background, an overview of existing devices and trends, material selection, interfaces of medical devices with biological tissues, product testing, reliability, and regulations specific to the design and validation of medical devices. A substantial part of the course is a project, in which students will be required to work in teams to complete a preliminary design of a novel device, including appropriate analysis and documentation. Analysis methods learned from prior course work in the students discipline will be applied to this component of the course. The course is open to all engineering majors with at least fourth- or fifth-year status. (Registration preference is given to students enrolled in the bioengineering option.) Class 4, Credit 4

0304-652  Fluid Mechanics of Turbomachinery
Examines the basic principles applicable to all turbomachinery as well as the consideration of the operating and design characteristics of several basic classes of turbomachinery. Includes a major design project. (0304-415) Class 4, Credit 4

0304-658  Engineering Vibrations
The theory of mechanical vibrations with an emphasis on design applications and instrumentation. Fourier analysis techniques, numerical and experimental analysis and design methods are presented in addition to theoretical concepts. Vibrations of single-degree of freedom systems are covered, including free-damped and undamped motion; and harmonic and transient-forced motion, such as support motion, machinery imbalance and rotation. Modal analysis of multidegree of freedom systems is introduced. In addition to laboratory exercises on vibration instrumentation, an independent design project is assigned. (0304-543) Class 3, Lab 2, Credit 4 (E, W)

0304-660  Refrigeration and Air Conditioning
A basic course in the principles and applications of refrigeration and air conditioning involving mechanical vapor compression and absorption refrigeration cycles, associated hardware, psychrometrics, heat transmission in buildings and thermodynamic design of air conditioning systems. Students are expected to do a design project. (0304-514; registration preference given to students enrolled in the energy and environment option) Class 4, Credit 4

0304-671  Aerostructures
The principles of deformable bodies as applied to the analysis and design of aircraft and space vehicle structures. Topics include the study of bending and torsion of thin-walled, multi-cell beams and columns; wing and fuselage stress and strain; stability, error and design. This is accomplished through classical feedback control methods that employ the use of Laplace transforms, block diagrams, root locus, and Bode diagrams. An integrated laboratory will provide students with significant hands-on analysis and design-build-test experience. (0304-543) Class 3, Studio 3, Credit 4

0304-672  Dynamics of Machinery
An introduction to the fundamentals and applications of machinery design. Basic concepts such as linkage classification, mobility and motion characteristics are introduced. The kinematic and dynamic analyses of planar lower-pair linkages are carried out using analytical vector methods, and graphical methods. The design and analysis of cams are treated by graphical and analytical methods. Major emphasis is placed on a term project in which a mechanism for specific application is kinematically and dynamically analyzed. (0304-545) Class 4, Credit 4

0304-678  Propulsion
The fundamentals of propulsion including the basic operating principles and design methods for flight vehicle propulsion systems. Topics include air-breathing engines (turbojets, ramjets, turboprops, and turbolots) as well as liquid and solid propellant chemical rockets. (0304-514 and 0304-550 or 0304-575; registration preference given to students enrolled in the aero option) Class 4, Credit 4
0304-680  Advanced Thermodynamics
Advanced design and analysis of gas and vapor power cycles, including cogeneration and combined cycles, using concepts of energy based on the 2nd Law of Thermodynamics and the field of thermo-economics. Emphasis is also placed on determining entropy generation and irreversibility within fuel cells and fossil fuel combustion processes using chemical energy as well as developing equations of state. (0304-413; registration preference given to students enrolled in the energy and environment option) Class 4, Credit 4

0304-682  Flight Dynamics
This course deals with the three-dimensional dynamics of aircraft, including general aircraft performance, stability and control, and handling qualities. Topics include mathematical development of equations-of-motion describing full range of aircraft motion; aerodynamic forming term coefficient development, quaternion alternative; linearization of nonlinear aircraft models; determination of range, endurance and rate of climb; simulation of aircraft trajectory; static and dynamic stability; aircraft control; and aircraft handling qualities introduction. (0304-543, 560; registration preference given to students enrolled in the aero option) Class 4, Credit 4

0304-683  Orbital Mechanics-Mission to Mars
This course introduces orbital mechanics and space flight dynamics theory with application for Earth, lunar, and planetary orbiting spacecraft. Content includes historical background and equations of motion, two-body orbital mechanics, orbit determination, orbit prediction, orbital maneuvers, lunar and interplanetary trajectories, orbital rendezvous and space navigation (time permitting). The two body orbital mechanics problem, first approximation to all exploration orbits or trajectories, is covered with an introduction to the three body problem. Students develop computer based simulations of orbital mechanics problems including a final mission project simulation from Earth to Mars and home again requiring a number of orbit phases and transfers between these phases. (Registration preference is given to students enrolled in the aero space option.) Class 4, Credit 4

0304-698  Independent Study Design Project
A design-oriented independent study requiring a major design project. (Senior standing) Credit 4

0304-699  Special Topics
In response to student and/or faculty interest, special courses that are of current interest and/or logical continuation of regular courses will be presented. (Permission of the supervising faculty member and the department head is required.) See instructor for more details. Class 4, Credit 4

Microelectronic Engineering

0305-201  Introduction to Microelectronics
An overview of semiconductor technology history and future trends is presented. The course introduces the fabrication and operation of silicon-based integrated circuit devices including resistors, diodes, transistors and their current-voltage (I-V) characteristics. Laboratory teaches the basic principles of IC fabrication and I-V measurements. A five-week project provides experience in digital circuit design, schematic capture, simulation, bread-boarding, layout design, IC processing, and testing. Class 3, Lab 3, Credit 4 (F)

0305-221  Introduction to Micro/Nanolithography
An introduction to the fundamentals of micro/nanolithography. Topics include IC masking, sensismetry, radiometry, resolution, contact lithography, projection lithography, photore sist materials and processing. Laboratories include mask making, source characterization, resist characterization, and stepper operation. (1011-208) Class 3, Lab 3, Credit 4 (S)

0305-320  Design of Experiments
An introduction to experimental design concepts for engineering applications. Topics covered include statistics, SPC, Process Capability Analysis, experimental design, analysis of variance, regression and response surface methodology, and design robustness. Students will utilize statistical software (MIP IN) to analyze case studies and design efficient experiments. (1016-315 or equivalent) Class 3, Lab 3, Credit 4 (W)

0305-350  IC Technology
An introduction to the basics of integrated circuit fabrication. The electronic properties of semiconductor materials and basic device structures are discussed, along with fabrication topics including photolithography diffusion and oxidation, ion implantation, and metallization. The laboratory uses a four-mask metal gate PMOS process to fabricate an IC chip and provide experience in device design and layout (CAD), process design, in-process characterization, and device testing. Students will understand the basic interaction between process design, device design, and device layout. (0305-201) Class 3, Lab 3, Credit 4 (F, S)

0305-360  Introduction to Semiconductor Devices
An introductory course on the fundamentals of semiconductor physics and principles of operation of basic devices for beginning electrical engineering students. Topics include semiconductor fundamentals (statistical physics of carrier concentration, motion in crystals, energy band models, drift and diffusion currents) as well as the operation of p-n junction diodes, bipolar junction transistors (BJT), metal-oxide-semiconductor (MOS) capacitors, and MOS-field-effect-transistors (MOSFET). Laboratory demonstrations and SPICE models are introduced. (1017-314) Class 4, Credit 4

0305-460  Semiconductor Devices I
An introduction to the fundamentals of semiconductor materials and the effects of variations in the material properties of the resulting current-voltage characteristics for two terminal devices (namely resistors and diodes). Topics include electron energies in solids, the statistical physics of carrier concentration and motion in crystals, energy band models, drift and diffusion currents, recombination generation of carriers, continuity equations, and the p-n junction under equilibrium and bias conditions, and metal-semiconductor Schottky and ohmic contacts. Non-idealities associated with real diodes are introduced. Design of integrated two terminal devices and electrical test demonstrations are required. (1017-314) Class 4, Credit 4 (F, S)

0305-482  CMOS Electronic Circuit Design
Learn about analog and digital CMOS IC design. Extract SPICE parameters from knowledge of CMOS fabrication process. Test CMOS devices and integrated circuits. Extract SPICE parameters from test measurements. Study integrated circuit design of CMOS Op Amps, Operational Trans-conductance Amplifiers, Bi-quad Filters, Comparators, RC Oscillators, Voltage Controlled Oscillators, DRAM Sense Amplifiers, Analog Switches, Basic Digital Gates, Flip-Flops, Counters, two phase non-overlapping clock, A to D and D to A converters. (0301-481, 0305-560) Class 3, Lab 3, Credit 4 (S, Su)

0305-515  Principles of Electromagnetic Fields
An introduction to the fundamentals of electrostatic, magnetostatic and time varying fields that culminate with the Maxwell's equations, continuity and Lorentz force that govern the EM phenomena. Important of Laplace's and Poisson's equations in semiconductor applications is described. Electromagnetic properties of material media are discussed with emphasis on boundary conditions. Plane wave solution of Maxwell's equations is derived and discussed in loss-less and lossy media. Applications in optics include reflection/refraction and polarization of light. An introduction to transmission line theory that applies to inter-connects is provided through PSPICE simulation. A strong knowledge of vector calculus is desired. (1016-528, 1017-513) Class 4, Credit 4 (S, Su)

0305-520  VLSI Design
Introduction to the design of CMOS very large scale integrated (VLSI) circuits. The course makes extensive use of Mentor Graphics software in a networked workstation environment, including homework and design project. Topics include logic design and state machines, schematic capture, electrical simulation, geometrical layout, design and electrical rule checking. Standard cell libraries are used for selected assignments. Emphasis is placed on a further understanding of the fabrication process by discussion of mask layers, rule checks, and circuit simulation. (0301-240, 482; 0305-350, 560) Class 3, Lab 3, Credit 4 (S, Su)

0305-525  Optics for Microelectronic Engineering
An introduction to the principles of optics in which reflection, refraction, and transmission are explained as a result of interference between the excitation field and the atomic oscillations that result in the emission of spherical waves (Huygens Principle). Topics include Fresnel Coefficients, imagery due to refraction at a single surface, simple lenses, ray tracing techniques, apertures, mirrors and thick lenses. Both the paraxial case (ideal imagery) and aberrations in spherical lenses are covered. An introduction to physical optics and the topics of diffraction and interferometry is provided. These topics set the stage for understanding ellipsometers, steppers, microscopes, and other optical instrumentation utilized in IC manufacturing. Lab required. (1017-313) Class 3, Lab 3, Credit 4 (F, W)

0305-560  Semiconductor Devices II
An introduction to the physical mechanisms that govern the operation of metal-oxide semiconductor (MOS) capacitors, MOS field-effect transistors, and related devices. Special emphasis is given to the relation between the structural parameters of these devices and their electrical characteristics. Modern structures and small dimension effects are discussed. Device design and SPICE models for these devices are investigated. BJTs are covered after a thorough investigation of MOSFETs. (0305-460) Class 4, Credit 4 (F, W)
A course covering the physical aspects of lithography. Image formation in optical projection, optical proximity, and high-energy systems (DUV/VUV, e-beam/SCALPEL, x-ray, and EUV) are studied. Fresnel diffraction, Fraunhofer diffraction, and Fourier optics are utilized to understand diffraction-limited imaging processes. Topics include illumination, lens parameters, image assessment (resolution, alignment, and overlay), phase-shift masking, and resist interactions. Lithographic systems are designed and optimized through use of modeling and simulation packages. Current status of the practical implementation of advanced technologies in industry as well as future requirements will be presented. (0305-221, 320, 350) Class 3, Lab 0, Credit 3 (S, Su)

Microolithography Systems Lab
Laboratory to be taken concurrently with 0305-364. Topics emphasize optical microolithography modeling, illumination systems, reticle enhancement techniques, alignment, and optimization of image capture related to focus, exposure and substrate reflectivity. Class 0, Lab 3, Credit 1 (S, Su)

Independent Study
A supervised investigation within a microelectronic area of student interest. Proposals for the independent study must be approved by the faculty member and department head and submitted prior to registration. Class variable, Credit variable 1–4

Silicon Processes
The fundamental silicon based processing steps introduced in 0305-350 are expanded upon to cover state-of-the-art issues such as thin oxide growth, atomic diffusion mechanisms, advanced ion implantation and rapid thermal processing (RTP). Physical vapor deposition (PVD) to form conductive and insulating films is introduced. MOS capacitance voltage measurement and surface change analysis are studied. These topics are essential for understanding the fabrication of modern ICs. Computer simulation tools (i.e., SUPREM) are used to model processes, build device structures, and predict electrical characteristics, which are compared to actual devices that are fabricated in the associated laboratory. (0305-350, 560) Class 3, Lab 3, Credit 4 (F, W)

Thin Film Processes
This course focuses on the deposition and etching of thin films of conductive and insulating materials for IC fabrication. A thorough overview of vacuum technology is presented to familiarize the student with the challenges of creating and operating in a controlled environment. Chemical Vapor Deposition (CVD) and electroplating technologies are discussed as methods of film deposition. Plasma etching and Chemical Mechanical Planarization (CMP) are studied as methods for selective removal of materials. Applications of these fundamental thin film processes to IC manufacturing are presented. (0305-320, 350) Class 3, Lab 3, Credit 4 (S, Su)

CMOS Processing Lab
A laboratory course in which students manufacture and test CMOS integrated circuits. Topics include design of individual process operations and their integration into a complete manufacturing sequence. Students are introduced to work in process tracking, ion implantation, oxidation, diffusion, plasma etch, LPCVD, and photolithography. Analog and Digital CMOS devices are made and tested. This course is organized around multidisciplinary teams that address the management, engineering, and operation of the student-run CMOS factory. (0305-632) Class 2, Lab 6, Credit 4 (F, W)

Micro lithography Materials and Processes
The course covers the chemical aspect of microolithography and resist processes. The chemistry of positive (novolac-based) and chemically amplified resist systems will be studied. Topics include the principles of photo polymerization, including synthesis, photo absorption and emission, processing technologies and methods of process optimization. Also, advanced lithographic techniques and materials, including multi-player techniques for BARC, TARC, and silylation are applied to optical lithography. (0305-221, 320, 350) Class 3, Lab 0, Credit 3 (F, W)

Micro lithography Materials and Processes Lab
Laboratory will be taken concurrently with 0305-666. Materials characterizations and process optimizations will utilize both experimental and computer techniques. Processes to be studied include development rate monitoring, DUV resists, BARC, resist silylation and SEM evaluation of imaged resists and etched structures. Class 0, Lab 3, Credit 1 (F, W)

A capstone design experience for microelectronic engineering senior students. Students propose a 10-week project related to microelectronic process, device, computer, or system, to meet desired specifications within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability. The students plan a timetable and write a formal proposal. The proposal is evaluated on the basis of intellectual merit, sound technical/research plan, and feasibility. The proposed work is carried through in the sequel course, Senior Design Project II (0305-691). Each student is required to make a presentation of the proposal. (0305-520, 574, 632, 643) Class 2, Lab 6, Credit 4 (W, F)

MEMS System Evaluation
This course focuses on evaluation of MEMS, micro-systems and micro-electromechanical motion devices utilizing MEMS testing and characterization. Evaluations are performed using performance evaluation matrices, comprehensive performance analysis and functionality. Applications of advanced software and hardware in MEMS evaluation will be covered. (Senior-standing required) Class 4, Credit 4

Senior Design Project II
A capstone design experience for microelectronic engineering senior students. In this 10-week course, students conduct a hands-on implementation of the projects proposed in the previous course, Senior Design Project I. Technical presentations of the results, including a talk and a poster, are required at the annual conference on microelectronic engineering organized by the department in May. A written paper in IEEE format is required and is included in the conference journal. (0305-681) Class 1, Lab 3, Credit 2 (S)

Computer Engineering

Introduction to Computer Engineering
Briefly describes the field of computer engineering and provides a frame of reference for the sequences of computer engineering, computer science and electrical engineering courses that appear in the computer engineering curriculum. Topics include an introduction to computers and computing, basic concepts, nomenclature, historical background, and some elements of data representation. Teamwork, communication skills, and contemporary issues are addressed. Class 1, Credit 1 (F)

Freshman Seminar
Introduces various topics of interest to computer engineering majors, including teamwork, laboratory exercises and aspects of engineering design. (0306-200) Class 2, Credit 1 (W)

Assembly Language Programming
An introduction to the fundamental computer organization, assembly language programming and instruction set architecture, microprocessor systems. Covers addressing methods, machine instructions assembler directives, macro definitions, subroutine linkage, data-structures, I/O programming and interrupts. The assembly language program design techniques necessary to write efficient, maintainable device drivers are considered. An introduction to basic digital computer organization concepts also is provided. The Freescale HCS12 microcontroller and Code Warrior Development Environment family of devices are used in most class examples and all required programming projects. (4003-232 and 0306-341) Class 4, Lab 2, Credit 4 (F, W)

Introduction to Digital Systems
Covers the specification, analysis and design of digital systems. This includes the study of combinational and sequential systems using standard modules such as decoders, multiplexers, shifters, registers, and counters. The laboratory provides more insight into the physical and circuit aspects of the design and implementation of digital systems using MSI, LSI components as well as CAD tools. (0306-200 or department permission) Class 3, Lab 2, Credit 4 (S, F)

Hardware Description Languages
This course presents modern approaches to the design, modeling and testing of digital system. Topics covered are: VHDL and Verilog HDLs as hardware description languages, simulation techniques, design synthesis, and verification methods. The theory is exemplified by practical examples and utilizes industry-standard simulation and synthesis tools. Laboratory projects that enable students gain hands-on experience are required. The projects include complete design flow: design of the system, modeling using HDLs, simulation, synthesis, and verification. (0306-341 and 4003-232) Class 3, Lab 2, Credit 4 (W, S)
An introduction to classical algorithms used in the solution of numerical problems encountered in science and engineering. The C language will be introduced as a tool for implementing these algorithms. Topics include an introduction to C, computer number representation and roundoff error, algorithms for finding roots of nonlinear equations, interpolation, numerical differentiation and integration, function approximation and data fitting solutions to systems of linear equations, and general matrix manipulation. (4003-334 and 1016-306) Class 4, Credit 4 (F, W)

This course introduces basic elements of discrete time signals and systems and fundamental signal processing techniques, such as FIR and IIR Filtering, the z transform and the Discrete Fourier transform. Theory is strengthened through Matlab based projects and exercises. (1016-306, 331, and 0306-381) Class 4, Credit 4 (F, W)

This course presents an introduction to electronics and covers basic principles of small-signal analysis of circuits with semiconductor devices, such as diodes, BJTs and MOSFETs. The p-n junction is introduced, followed by a study of bipolar junction transistor function. Includes: rectification and power supply filtering and the basic operation and biasing of bipolar junction transistors; basic MOSFET current-voltage characteristics; DC biasing of MOS circuits; including integrated-circuit current sources/mirrors; small-signal analysis of single-stage MOS amplifiers; frequency response of BJT and MOS amplifiers; feedback and stability in amplifiers; ideal operational amplifiers in inverting, non-inverting and integrator configurations. Emphasis is placed on developing skills required for circuit analysis. Lab deals with basic experiments in electronics. (0301-382) Class 4, Credit 4

Provides an understanding of the information transfer and transformations that occur in a computer, with emphasis on the relations between computer architecture and organization. Topics include design levels and their respective primitives, modules and descriptive media, register transfer and micro-operations, basic computer organization and design, central processing unit, memory organization, input output organization, computer architecture-defining the hardware/software interface, and from architecture to organization. (0308-250) Class 4, Credit 4 (S, Su)

The course covers various aspects of advanced uniprocessor computer architecture design. Instruction set architecture design alternatives are discussed with emphasis on the Reduced Instruction Set Computer (RISC) architecture. Techniques to enhance CPU performance such as pipelined execution optimizations, conditional branch handling techniques, exploitation of instruction-level parallelism, multiple-instruction issue and dynamic scheduling are studied. Cache and memory hierarchy design and performance issues are presented. The design aspects of efficient and reliable input/output systems are covered. The course concludes with an introduction to concepts of multi-processor systems design. (0306-550) Class 4, Credit 4 (F, W)

Concentrates on the analysis, simulation and design of control systems using root locus, frequency response and state variable representation. It also deals with implementation of digital filters for control applications. (0306-451) Class 4, Credit 4 (S)

Introduction to some common transducers, transformations from raw measured quantity to transducer output. Signal conditioning circuits include: Wheatstone bridge, instrumentation amplifiers, active filters, and sample and hold circuits. The course also covers analog-to-digital and digital-to-analog conversions process, logic families including BJT, TTL, CMOS, BiCMOS and their interfaces to each other. Mentor Graphics design tools or PSpice are used to simulate and design active filters. Freescale Semiconductor microcontroller HCS12, CodeWarrior and C code programming are used to design and develop a data acquisition system. The course emphasizes both hardware and software design in a data acquisition systems. (0301-481) Class 3, Lab 3, Credit 4

Covers the specification, analysis, design and implementation of digital systems. The hierarchical and structured design methodology is introduced. Both synchronous and asynchronous sequential machines are studied. Student designs incorporate MSI/LSI modules, PALs, EPROMs, FPGA/s and elements of VHDL. Design for testability is emphasized. (0306-341, 351) Class 3, Lab 3, Credit 4 (S, Su)

This course covers fundamental techniques in design and operation of first, second, and third generation wireless networks: cellular systems, medium access techniques, radio propagation models, error control techniques, handoff, power control, common air protocols (AMPS, IS-95, IS-136, GSM, GPRS, EDGE, WCDMA, cdma2000, etc.), radio resource and network management. As an example for the third generation air interfaces, wireless Internet and sensor networks are discussed in detail since it is expected to have a large impact on future wireless networks. (0306-694) Class 4, Credit 4

This course deals with the design automation of digital systems from modeling and modern logic synthesis methods to fast prototyping of complex systems using FPGAs and VHDL. Topics covered are: VHDL modeling of combinational and sequential logic for synthesis and efficient hardware implementation, modern FPGA devices, methodologies for hardware/software co-design. Laboratory projects in which students acquire a solid capability of Xilinx design tools and FPGA devices are required. (0306-561) Class 3, Lab 3, Credit 4 (F, W)

This course is an in-depth study of state-of-the-art high performance computer architectures. The primary objective of the course is to understand the architectural features used in modern processors and the corresponding impact on performance. The course material will be derived from current and recent architecture research publications. (0306-551) Class 4, Credit 4

This course will cover the basic theory and techniques of Very Large Scale Integration (VLSI) design in CMOS technology. Topics include CMOS transistor theory and operation, design and implementation of CMOS circuits, fabrication process, layout and physical design, RC and Linear delay model, static and dynamic logic families, Arithmetic sub blocks, testing and verification, and basics of memory. Laboratory assignments and projects, designed using Mentor Graphics EDA tools, facilitate learning circuit-level design and simulation, layout and parasitic extractions, pre- and post-layout validation, and SPICE level simulations. (0306-561 and 0301-481 or equivalent) Class 4, Lab 2 Credit 4 (F, W, S, Su)

This course covers the theory and practical aspects of low-power integrated circuit design in CMOS technology. Topics include: estimation and modeling power dissipation in CMOS circuits at different design abstractions, power optimization techniques with emphasis on transistor and system level, energy efficient SRAM cells and cache designs, low power design methodology, effect of device scaling, process variations and their impact on power optimization, and post-CMOS logic gates. Assignments and projects focus on designing low-power circuits using Synopsys CAD tools. Presentations and term papers based on recent energy efficient research articles are required. (0306-630, 351) Class 4, Lab 2 Credit 4 (S)

This course covers the theory and practical aspects of low-power integrated circuit design in CMOS technology. Topics include: estimation and modeling power dissipation in CMOS circuits at different design abstractions, power optimization techniques with emphasis on transistor and system level, energy efficient SRAM cells and cache designs, low power design methodology, effect of device scaling, process variations and their impact on power optimization, and post-CMOS logic gates. Assignments and projects focus on designing low-power circuits using Synopsys CAD tools. Presentations and term papers based on recent energy efficient research articles are required. (0306-630, 351) Class 4, Credit 4
Computer Engineering Design Projects I

The first of a two-course undergraduate capstone design sequence. Lecture materials include design process methodologies, team dynamics, engineering ethics, communication skills, current topics, real-time programming techniques, formulating independent project proposals, and an introduction to the laboratory tools available. Students undertake an initial independent design experience, formulate a proposal for the design of multidisciplinary team project to be completed during the concluding course, and investigate important components of that multidisciplinary design project. (0306-560 and fourth-year standing in computer engineering) Class 4, Credit 4 (W, S, Su)

Computer Engineering Multidisciplinary Senior Design Project I

This is the first of a two-course capstone design sequence and is taught in an environment that simulates an industrial setting. Students work in multidisciplinary design teams and generate design concepts and prototype solutions to real-world engineering problems. Emphasis is placed on engineering analysis, design and testing methodologies, teamwork and communication skills. Fifth-year standing and department approval are required. Class 4, Credit 4

Computer Engineering Design Projects II

The conclusion of a capstone undergraduate design projects course in computer engineering. Students will have prepared for the major course project during the previous course and will have done some detailed project analysis over the intervening co-op work period. This course begins with project design reviews presented to the class and selected faculty members. Project performance analysis and reliability will be major metrics. (0306-654) Class 4, Credit 4 (F, W, S)

Computer Engineering Multidisciplinary Senior Design Project II

This is the second of a two-course capstone design sequence and is taught in an environment that simulates an industrial setting. Students work in multidisciplinary design teams and generate design concepts and prototype solutions to real-world engineering problems. Emphasis is placed on engineering analysis, design and testing methodologies, teamwork, and communication skills. (0306-656) Class 4, Credit 4 (W, S)

Engineering Design of Software

An advanced course moving the student beyond computer programming to the engineering of complex software systems. At the end of this class, students will learn how to make the right selection of design methodologies or architectures, produce executable structure models that can be verified by computer, formulate a design that meets all functional and performance requirements, and perform trade-off analyses that enhance decision making. Students work in teams on large-scaled software projects. (4010-361) Class 4, Credit 4

Concurrent and Embedded Software Design

This course introduces methods for developing and designing concurrent software and embedded software. Formal logical formulas are used to characterize sets of states and sets of program behaviors. The software is then analyzed by manipulating these logical formulas. Several classical concurrent programming problems such as critical sections, producers and consumers, and resource allocation are examined. Practical examples and exercises are used to illustrate points and evaluate design tradeoffs. (0306-661 or permission of instructor) Class 4, Credit 4

Embedded and Real-time Systems

Conducted in a studio class/lab format with lecture material interspersed with lab work, this course presents a general road map of real time and embedded systems. Microcontrollers used as external, in dependent performance monitors of more complex real-time systems. Much of the material focuses on a commercial real-time operating system, using it for programming projects on development systems and embedded target systems. Fundamental material on real-time operating systems are presented, including scheduling algorithms, priority inversion, and hardware-software co-design. (4010-361 and 0306-250 or equivalent) Class 4, Credit 4

Modeling of Real-time Systems

This course introduces the modeling of real-time software systems. It takes an engineering approach to the design of these systems by analyzing a model of the system before beginning implementation. UML will be the primary modeling methodology. Non-UML methodologies will also be discussed. Implementations of real-time systems will be developed manually from the models and using automated tools to generate the code. (0306-663) Class 4, Credit 4

Special Topics in Computer Engineering

Topics and subject areas that are not among the courses listed here are frequently offered under the special topics title. Under the same title also may be found experimental courses that may be offered for the first time. Such courses are offered in a formal format; that is, regularly scheduled class sessions with an instructor. The level of complexity is commensurate with a senior-level undergraduate/first year graduate technical course. Class 4, Credit 4

Robots

This course deals with mobile robotics. The development of the field and an overview of different approaches to mobile robot guidance navigation, vision, machine learning and control will be given. The emphasis of the course will be on algorithms and implementation techniques. Relevant projects and programming assignments will be required. (0306-451) Class 4, Credit 4

Robust Control

One of the most useful qualities of a properly designed feedback control system is robustness, i.e., the ability of the closed-loop control system to continue to perform satisfactorily despite large variations in the (open-loop) plant dynamics and the environment. This new approach has been successfully applied to high performance servo drive systems, unmanned aerial vehicles, visual feedback systems and mobile robots among others. This course will provide an introduction to state-of-the-art techniques for analysis and design of robust feedback systems. Matlab will be used extensively for analysis, design and simulation. (0306-553 or equivalent, 1016-331 or equivalent is recommended) Class 4, Credit 4

Digital Image Processing Algorithms

This is a first course in digital image processing that emphasizes both theory and implementation. Two-dimensional sampling, transforms, and filtering are introduced and used for image enhancement, compression, restoration, segmentation, and applications in color and video processing. Project assignments involve Matlab implementation of algorithms and paper reviews. (0306-451) Class 4, Credit 4

Computer Vision

This course covers both fundamental concepts and the more advanced topics in Computer Vision. Topics include image formation, color, texture and shape analysis, linear filtering, edge detection and segmentation. In addition, students are introduced to more advanced topics, such as model based vision, object recognition, digital image libraries and applications. Homework, literature reviews, and programming projects are integrated with lectures to provide a comprehensive learning experience. (0306-451 or permission of instructor) Class 4, Credit 4

Data and Computer Communication

Provides a unified view of the broad field of data and computer communications and networks. Emphasis is on the basic principles underlying the technology of data and computer networks. Critical issues on data communication networks as well as the current and evolving standards in computer communications architecture are discussed. The topology, access control and performance of various types of networks are studied in detail. A comprehensive student project is required. (1016-351 and at least fourth-year standing or permission of instructor) Class 4, Credit 4 (F, W)

Networking Security

This course covers a set of advanced topics in wireless and wired network security design. It targets deep-level network security protocols design. The topics include applied cryptography fundamentals, Internet security (IPSec, Kerberos, e-mail security, etc.), wireless LAN security, sensor network and security, and ad-hoc network security. Class projects include Java/C-based RC4/Hash design, Miltinx-based TCP security experiments and Wireless security research. (0306-694 or equivalent) Class 4, Credit 4

Independent Study

Allows upper-level graduate students an opportunity to independently investigate, under faculty supervision, aspects of the field of computer engineering that are not sufficiently covered in existing courses. Proposals for independent study activities are subject to approval by both the faculty member supervising the independent study and the department head. (Permission of the supervising faculty member and the department head is required.) Credit variable 1–4
0307-315 Applied Statistics
Statistics for Engineers
Descriptive statistics; probability; measurement techniques; normal distribution and central limit theorem applied to confidence intervals and statistical inference; control charts. Topics will be related to engineering through real-world examples. (Grade of C or better in 1016-283 or grade of C or better in 1016-282 and coregistration in 1016-283) Credit 4 (F)

0307-361 Probability and Statistics for Engineers I
Statistics in engineering; enumerative and analytic studies; descriptive statistics and statistical control; sample spaces and events; axioms of probability; counting techniques; conditional probability and independence; distributions of discrete and continuous random variables; joint distributions; central limit theorem. (1016-283 or 1016-274) Credit 4 (F)

0307-362 Probability and Statistics for Engineers II
Point estimation; hypothesis testing and confidence intervals; one- and two-sample inference; introduction to analysis of variance, experimental design, control charts and measurement studies. (0307-361) Credit 4 (W)

0307-420 Design of Experiments for Biomedical Engineers
Topics covered include: observational versus experimental studies, fundamentals of good design, including randomization, replication, blocking, and blinding; one-factor designs: completely randomized, randomized complete block, and Latin-Square designs; fixed and random effects; analysis of residuals; two-factor and factorial designs; repeated measures designs; two-level factorial and fractional factorial designs. Lectures and assignments incorporate real-world examples and critiques of studies in the literature. Students use Minitab software. (0307-361, 0307-362) Class 4, Credit 4 (F)

0307-442 Statistical Computing
This course focuses on the programming language used in SAS statistical software to read in raw data, create and manipulate SAS data sets, and create SAS macros. This course covers the material for "SAS Base Programmer" certification. Students seeking employment in statistical professions are encouraged to attain this certification. Corresponding Minitab commands and macro programming will also be covered. (1016-352 or equivalent) (Cross-listed with 0307-742) Credit 4 (F)

0308-601 Lasers
This course introduces students to the design, operation and applications of lasers (Light Amplification by Stimulated Emission of Radiation). Topics: ray tracing, Gaussian beams, optical cavities, atomic radiation, laser oscillation and amplification, mode locking and Q switching, and applications of lasers. (0301-482) Class 4, Credit 4

0308-612 Nonlinear Optics
This course introduces nonlinear concepts applied to the field of optics. Students learn how materials respond to high intensity electric fields and how the materials response: enables the generation of other frequencies, can focus light to the point of breakdown or create waves that do not disperse in time or space (solitons), and how atoms can be cooled to absolute zero using a laser. Students will be exposed to many applications of nonlinear concepts and to some current research subjects, especially at the nanoscale. Students will also observe several nonlinear-optical experiments in a state-of-the-art photonics laboratory. (0301-482) Class 4, Credit 4

0308-631 Integrated Optical Devices and Systems
This course discusses basic goals, principles and techniques of integrated optical devices and systems, and explains how the various optoelectronic devices of an integrated optical system operate and how they are integrated into a system. Topics include optical waveguides, optical couplers, micro-optical resonators, plasmonics, photonic crystals, modulators, introduction to semiconductor lasers and optical detectors, optical signal processing systems, design tools, fabrication techniques, and the applications of optical integrated circuits. Some of the current state-of-the-art devices and systems will be investigated by reference to journal articles. (0301-473, 482) Class 4, Credit 4

0308-671 Optoelectronics
This course provides an introduction to the operating principles of optoelectronic devices used in various digital transmission and information processing systems. Emphasis is on the generation (via lasers) and detection of optical signals. Topics covered: (1) geometrical optics, interferometry, and polarization; (2) photons in semiconductors, semiconductor photon sources (light-emitting diode and laser diode), semiconductor photon detectors, and modulators; (3) optoelectronic systems and related engineering applications. (0301-482) Class 4, Credit 4

Chemical Engineering

0309-051 Discovery Chemical Engineering
Gives first-year students an overview of chemical engineering and helps integrate the incoming students into the RIT Chemical Engineering community. Topics include student success (e.g., transition to the college experience, awareness of campus resources, academic and personal success strategies, information literacy, personal development, and responsible decision making), career options in engineering, plant tours, design projects and engineering ethics. Also gives the student an opportunity to interact with Chem E faculty, upper-division students, and other first-year Chem E students. Fullfills the university requirement for FYE. Class 1, Credit 1 (F)

0309-181 Chemical Engineering Insights I
This course is intended to provide the foundation for success in the chemical engineering program at RIT and the field of chemical engineering. This course provides an overview of the traditional, contemporary, and future issues facing chemical engineers, the methodology chemical engineers use to solve problems, engineering ethics, and career options in chemical engineering. Class 2, Credit 1 (F)

0309-182 Chemical Engineering Insights II
Case studies involving modern problems that are amena ble to chemical engineering analysis are proposed and discussed to illustrate the problem solving strategies used in the profession as well as the constraints on design due to product specifications, environmental issues, economics, and engineering ethics. The nature of the analyses will be both qualitative and quantitative. Assignments will involve team settings with results presented to the class, and discussion and debate between teams. Class 2, Credit 1 (W)

0309-183 Chemical Engineering Insights III
This course continues the case study approach used in Chemical Engineering Insights II, and focuses on quantitative analysis skills appropriate for first-year students. The spreadsheet environment will be introduced as a means of organizing and designing experiments and solving physically-motivated mathematical problems. The course is intended to provide students with essential skills that will aid them in their technical course work. Class 2, Credit 1 (S)

0309-230 Chemical Process Analysis
A first course for chemical engineers, introducing units, dimensions and dimensional analysis, simple material and energy balances for batch and continuous systems in steady and unsteady states with/without chemical reaction, and elementary phase equilibrium in multi-component systems. (1011-216 or equivalent; 1016-283 or equivalent may be taken as prerequisites or as corequisites) Class 4, Credit 4 (F)

0309-301 Math Techniques for Chemical Engineering I
Mathematical and statistical techniques necessary for engineering analysis are introduced that augment training from core mathematics courses. The spreadsheet environment is used to implement mathematical procedures and examine data results. The tremendous power, functionality, and user-friendliness inherent in spreadsheets is examined and applied to chemical engineering problems. VBA programming is taught for more complex spreadsheet and mathematical operations. (1016-352; 1016-305 may be taken as pre- or corequisites) Class 3, Credit 3

0309-302 Math Techniques for Chemical Engineering II
This course introduces the student to more advanced mathematical and numerical methods necessary for engineering analysis. Topics examined include roots of equations, curve fitting, statistics, Fourier analysis, solution of systems of algebraic equations, optimization, numerical differentiation and integration, and the solution of ordinary and partial differential equations. The MATLAB programming environment is utilized to facilitate computation. Techniques are applied to mathematical problems naturally arising in chemical engineering. (0309-301) Class 2, Credit 2
0309-310 Thermodynamics I: Single Component Systems
A course in single phase thermodynamics, continuing with concepts developed in earlier curriculum (Chemical Process Analysis). The first and second laws of thermodynamics and concepts of entropy and equilibrium are examined in open and closed control volume systems. Energy, work, and heat requirements of various unit operations are examined. Equations of states and properties of fluids are explored. The thermodynamic origins of phase transition, as well as the physics of processes incorporating single-component phase equilibrium, are examined. (0309-230) Class 4, Credit 4

0309-320 Fluid Mechanics I
Force and mass balances on control volumes are considered in both static and dynamic situations. Hydrostatic effects in manometers and static forces on submerged objects are calculated. The relationship between energy balances and force balances on flowing systems is examined primarily under isothermal conditions. Forces on solids due to flowing fluids are determined. Head losses and pumping requirements are considered in piping systems. The art of engineering approximation is examined through estimates of forces due to flow on solids, as well as various limiting cases involving internal pipe flows with friction factors. Friction factors for external flows are also studied and utilized in force balances on solids. (0309-230) Class 4, Credit 4

0309-330 Mass Transfer Operations
This course covers the analysis and design of chemical processes for the separation and purification of mixtures. The course will include an introduction to the fundamentals of diffusion and the analogies between heat and mass transfer, leading up to mass transfer coefficients and their use in solving a variety of engineering problems. Design methodologies will be examined for equilibrium-based processes (such as absorption, distillation, extraction, and crystallization) and rate-governing separations (such as dialysis and reverse osmosis). Fixed bed processes such as adsorption and ion exchange will also be introduced. (0309-230, 1016-306 or equivalent; 1016-305 recommended) Class 4, Credit 4

0309-340 Reaction Engineering I
The course provides the fundamental principles of chemical kinetics in single phase systems and their mathematical formalization from a continuum, micro-scale viewpoint. Topics include mass action kinetics and absolute rate theory, series and parallel reaction systems, and the mathematical modeling of various reactor configurations under idealized conditions. Well-mixed and continuous, plug flow reactor systems are analyzed for both single and multiple reaction systems. Continuously versus batch operation under isothermal and adiabatic conditions are examined. (0309-230, 1016-306; 1016-305 recommended) Class 4, Credit 4

0309-381 Chemical Engineering Systems Analysis Paper
This written paper is a requirement for students enrolled in the minor for chemical engineering systems analysis. The topic area is chosen by the student with faculty adviser approval, and must be amenable to analysis using chemical engineering systems methodology and principles (Concurrent with completion of course work of the minor) Class 0, Credit 0

0309-391 Chemical Engineering Principles Lab I
This laboratory course reinforces topics covered in Thermodynamics and Fluid Mechanics. Students are introduced to basic equipment and methodologies for designing laboratory experiments, identifying lab equipment, and assembling simple apparatus to achieve specific experimental goals. (0309-410, 420 or may be taken as corequisites) Lab 6, Credit 2

0309-392 Chemical Engineering Processes Lab II
This course extends the laboratory experience from the previous Chemical Engineering Principles Lab, and focuses on unit operations common to engineering practice. Students work in teams to design experimental procedures on existing equipment, and to in some cases, manipulate experimental apparatus to achieve specific experimental goals. (0309-330, 440) Lab 6, Credit 2

0309-401 System Dynamics and Control
The dynamic behavior of chemical process components is examined. The mathematics of Laplace transforms are examined extensively as a fundamental underpinning of control theory. Block diagrams, feedback control systems, and stability analysis are introduced. (0309-302) Class 4, Credit 4

0309-410 Thermodynamics II-Multiple-Component Systems
Thermodynamics of mixtures and phase equilibrium over control volumes augment single phase knowledge of thermo. Multiple component phase equilibrium is considered, as well as solution thermodynamics and chemical reaction. Concepts are imbedded in more sophisticated examples of applications of the first and second law to chemical engineering processes. (0309-310, 1016-306) Class 4, Credit 4

0309-420 Fluid Mechanics II
Fundamentals of fluid flow are examined predominantly on a differential scale. Local differential equations governing fluid flow are derived from corresponding integrals, and linkages to earlier integral control volume balances in Fluid Mechanics I are made. Exact solutions of differential equations are considered under both steady state and transient conditions, as are typical approximations to those equations such as creeping, potential, and boundary layer flows. Forces on surfaces are determined by introducing local solutions into appropriate integrals. This linkage also shows the theoretical basis for friction factors, drag coefficients, and head losses used in coarser scale macroscopic balances. (0309-320, 1016-306; 0309-301 may be taken as pre- or corequisite) Class 4, Credit 4

0309-421 Heat Transfer
Fundamentals of heat transfer are introduced from a point-wise yet continuous perspective involving conduction, convection, and radiation. General local differential equations and boundary conditions describing heat transfer are derived and solved in a variety of configurations. Simplifying approximations of conduction, convection, and radiation dominated heat transfer are introduced, and combined modes of transfer are analyzed. The performance of heat exchangers is analyzed for a variety of common configurations. (0309-310, 420) Class 4, Credit 4

0309-440 Reaction Engineering II
The fundamentals of chemical kinetics with the concepts of mass and energy conservation are examined and integrated, from both a macroscopic and microscopic perspective, to develop models that describe the performance of chemical reactors. Homogeneous, heterogeneous, and catalytic systems will be discussed. The conceptual framework and tools are developed to understand and design chemical reactor processes and to interpret experimental data obtained on a laboratory scale to design pilot scale and full scale manufacturing processes. Both continuous flow and batch reactor systems are examined, with a major focus on process techniques for the manufacture of specialty chemicals. (0309-340, 410, 421; (0309-330 may be taken as a corequisite) Class 4, Credit 4

0309-450 Micro-Scale Phenomena
This course introduces the scientific and engineering principles governing phenomena occurring on the smallest continuum scales. Topics include surface tension and related interfacial phenomena, Vander Waals and electrostatic phenomena, colloidal suspensions and their stability, self-assembly in thin films and on solid surfaces, quantum wells and dots, molecular biology, and non-equilibrium solidification phenomena. Conventional chemical engineering analyses topics, such as transport processes and reaction chemistry, are adjusted and extended to the micro-scale. (1013-432 and fourth-year standing or permission of instructor) Class 4, Credit 4

0309-550 Analysis of Multi-Scale Processes
This course examines the use of larger scale chemical engineering processes to control and manipulate micro-scale phenomena. In an introductory topic, human physiology is examined as a prototypical multi-scale process, and biometric principles are discussed. Langmuir-Blodgett film generation, thin-film breakup and draining, chemical vapor deposition, emulsion-based reaction processes to create nano-particles, flow systems involving colloids, porous media flows and membrane separations, and controlled patterning via molecular self-assembly are among processes examined. (0309-421, 440, 450) Class 4, Credit 4

0309-590 Design with Constraint
This course examines typical constraints on design and their integration with technology. Economics, environmental considerations, ethics, and globalization and supply chain management ideas are among the concepts introduced. Modern examples that integrate knowledge of unit operations and processes with design constraints are examined. (May be taken with 0309-591 or 592) Class 4, Credit 4

63 | Kate Gleason College of Engineering
Multidisciplinary Senior Design I
The first of a two-course capstone design sequence. Students work in design teams in an environment approximating an industrial setting. Emphasis is placed on teamwork and on developing good oral, written, and interpersonal communication skills. In this course, student teams develop their proposed final design of a mechanical system after identifying possible alternative concepts. The final design must be supported by sound engineering analyses and by engineering drawings necessary to build a prototype. This course is intended to be taken as a capstone design experience near the conclusion of the student's program of study. Students must have fifth-year standing, completed three co-op blocks and have consent of the department. Students must submit a departmentally approved plan of study for degree completion. (0309-590 pre- or corequisite; department approval required) Class 4, Credit 4

Multidisciplinary Senior Design II
The second of the two-course capstone design sequence. The same student teams from Senior Design I return to build and test a working prototype of their previously developed final design. Non-working prototypes are not acceptable, and some redesign work may be required to make the system work. Continued emphasis is placed on teamwork and on developing good oral, written, and interpersonal communication skills. (0309-590 pre- or corequisite; 0309-591) Class 4, Credit 4

Independent Study
A student project course encompassing both analytical and experimental work. (Fourth- or fifth-year standing) Credit variable 1–6

Biomedical Engineering

Discovery Biomedical Engineering
Gives first-year students an overview of biomedical engineering and helps integrate the incoming students into the RIT Biomedical Engineering community. Topics include student success (e.g., transition to the college experience, awareness of campus resources, academic and personal success strategies, information literacy, personal development, and responsible decision making), career options in engineering, plant tours, design projects, and engineering ethics. Also gives the student an opportunity to interact with BME faculty, upper-division students, and other first-year BME students. Fulfills the university requirement for FYE. Class 1, Credit 1 (F)

Biomedical Engineering Seminar
This weekly seminar provides an overview of the discipline including an introduction to relevant literature, organizations, examples of successes, ongoing challenges, and possible new opportunities. The students also have an opportunity to interact with their curricular adviser and obtain a clear understanding of the program and the possible curricular options. Class 1, Credit 0 (F)

Introduction to Biomedical Engineering I
Introduction to field of biomedical engineering with the following components: engineering methodology applicable to biomedical problems; statement, research, solution proposal and summary report and presentation of results, team dynamics, organization, and interpersonal communication associated with working with a multidisciplinary team, computing tools and methods for data acquisition and processing using application software (e.g., single purpose data acquisition tools, spreadsheets), and programming tools (Matlab, Labview, or equivalent). The concept of signal and environmental noise as an undesirable yet unavoidable measurement artifact, and techniques are taught to minimize or eliminate these artifacts in biomedical systems. Lecture 1, Lab 3, Credit 2 (W)

Introduction to Biomedical Engineering II
Builds on Introduction to BME I with the following additional components: programming as an organized problem solving method (Matlab or Labview or equivalent), programming to remove artifacts from measured signals and analysis of relevant statistics. Biomedical engineering related problems are considered that require multi-person team and necessitates a problem statement, research, solution proposal, data acquisition and processing, data analysis, a summary report, and presentation of results. (0310-182) Lab 3, Credit 1 (S)

Functional Anatomy
Introduction to the structures and components of the human body as well as their basic functionality. Essential elements of human anatomy and histology will be presented. Students will be encouraged to correlate anatomical structure and function with non-human structures and devices that might be considered as replacements or improvements. Fundamental concepts in biomechanics will be introduced and integrated with relevant topics covered in University Physics I and II. The concepts of normal and exceptional ranges of values are applied to populations, and the resulting variability of dimensions in biomedical devices is examined. Labs focus on the identification, manipulation, and relevant measurements of gross anatomical samples. (1017-311, corequisite 1017-312 or equivalent, 1016-283) Class 3, Lab 3, Credit 4

Engineering Analysis I
Integrates the basics sciences with the fundamental tools and methods associated with engineering to enable problem solving. The course provides a formal introduction to the basic analytical and problem solving methods associated with the practice of engineering, and draws on challenging and realistic examples found in biomedical applications. The course also introduces appropriate software tools (e.g., spreadsheets, Matlab) and stresses program and algorithm development. (1016-283, 1017-312 or equivalent; corequisites: 1004-240, 0310-200) Class 4, Credit 4 (F)

Mechanics of Biological Systems
This course is an introduction to the mechanical characteristics associated with the structures and components of the human body ranging from molecular to macroscopic dimensions. The response to static and dynamic forces over these length scales is examined. Content also includes expected physical limits of structures and systems in the human body, and potential failure modes and hazards. Labs examine the responses of representative biological structures and systems to a variety of stimuli and applied forces. (0310-200) Lecture 3, Lab 3, Credit 4 (W)

Electricity and Magnetism in Biological Systems
This course builds on the analytical foundations and methods presented in both calculus-based physics and mathematics, and focuses on the fundamental aspects of electrical charge manipulation and magnetic phenomenon associated with biological systems at a variety of scales. Topics include electrostatics, Gauss’ law, electric field and potential, capacitance, resistance, constant and transient current circuits, magnetic fields, Ampere’s law, and inductance; all topics are presented in the context of biological structures and mechanisms. Lab experiments involve both measurement and generation of biologically relevant electric and magnetic signals and fields. (1017-312, corequisite: 1016-283, 1004-242) Class 3, Lab 3, Credit 4 (S)

Introduction to Biomaterials Science
This course focuses on the desirable properties and selection of materials used in medical applications. Topics include metals, ceramics, polymers, composites, fundamental composition of biological tissues, the basic processes associated with wound healing, and principles governing the interaction of biological tissues and artificial materials. (1011-217; 0309-310, 0310-320, 1004-242) Class 3, Lab 2, Credit 4 (S)

System Physiology I
The fundamental aspects of electrophysiology, electrically excitable cells and tissue, the operation of the nervous system, and the special senses are examined. The relationship between speed, specificity and sensitivity of signaling mechanisms of the nervous system and the endocrine system will be discussed. Laboratory experiments elucidate the fundamental electrophysiological phenomena as well as the variability inherent in biologically generated electrical signals. Signal processing methods will be applied to physiological signals measured in the lab. (0309-310, 0310-320, 0310-330; corequisites: 0310-440) Lecture 3, Lab 3, Credit 4 (F)

System Physiology II
This course focuses on fluid and gas transport mechanisms associated with the cardiovascular and respiratory systems, as well as their regulation by the human body. The contribution to fluid volume and pressure as well as its fundamental material exchange properties of the kidney is examined. Open-ended problems that clarify the interrelationship between these two systems are analyzed, and suitable compensatory mechanisms to address or eliminate pathological problems are proposed. Laboratory experiments investigate pressure, volume and flow relationships of the cardiovascular and respiratory systems including the inherent variability and dynamic response to perturbations. Signal processing methods are to be utilized to address ubiquitous artifacts found in measured physiological signals. (0310-410, 0309-320; corequisite: 0310-450) Class 3, Lab 3, Credit 4 (W)
This course focuses on the interaction between organ systems involved in homeostasis. In particular, attention will be paid to physiological mechanisms that involve electrical and chemical feedback and control systems. The interactions between the nervous, muscular, digestive, endocrine, immune, cardiovascular, renal and respiratory systems are examined. The impact of these interactions on growth and metabolism, movement, fluid and electrolyte balance, material exchange and disease are discussed. Labs invoke statistics associated with population-based variations, and utilize analysis techniques from Engineering Analysis II. (0310-411, 0307-361) Class 3, Lab 3, Credit 4 (F)

Biomedical Signals and Analysis
This course introduces signal processing techniques, and shows how they are applied to evaluate and manipulate continuous and discrete time signals in the human body. Signals examined are either linear or non-linear, time invariant or varying, and random or deterministic in nature. Laboratory experiments are conducted to obtain, characterize, and process signals from physiological systems. A multi-week project is assigned that consists of acquisition, processing and analysis of atypical biomedical signal. The goal is to provide a robust and consistent evaluation of the signal based on methods discussed both in class and reported on in the literature. (0310-250, pre- or corequisites: 1016-305, 0307-361, 0310-410) Class 3, Lab 3, Project 1, Credit 5 (F)

Engineering Analysis II
This is a continuation of Engineering Analysis, and examines engineering problems requiring advanced techniques and their optimal application. These techniques provide a solid foundation for quantitative and critical evaluation of material to be presented in upper level engineering courses. A systems engineering approach is taught, which involves examining the specific operation of various physiological components in the human body, and examining the interactions between these components. (0310-250) Class 4, Credit 4 (W, S)

Dynamics and Control of Biomedical Systems
Engineering analysis, modeling, problem solving and design skills are used to characterize and manipulate the operation of biomedical systems for the purpose of remediating, supplanting, replacing, or enhancing the function of physiological processes. The lab component of the course includes the observation and characterization of typical physiological processes and systems and the generation of models that predicts the operation of that process or system. (0310-412, 0310-450) Class 3, Lab 3, Project 1, Credit 5 (W)

Multidisciplinary Senior Design Project I
First half of a two-course sequence that teams up students from various engineering disciplines to solve a specific design problem. The design process emphasizes group problem-solving skills, oral and written communication skills, and interpersonal skills. With faculty guidance, teams develop creative and innovative design concepts, then study the feasibility of each concept to arrive at prototype design. A report and oral review before peers and faculty are required. (Fifth-year standing) Class 4, Open Lab, Credit 4 (F)

Multidisciplinary Senior Design Project II
This is the second course in the two-course sequence. A prototype based on the design created in Multidisciplinary Senior Design I (0310-591) must be constructed, debugged, evaluated and demonstrated to meet target specifications. Any hardware and software must be integrated to produce a complete working prototype or solution. Design teams communicate the final design through written and oral presentation, and the prototype’s functionality is demonstrated. The design experience is augmented with lectures focusing on professional aspects of engineering and special topics related to design and performance of a prototype. (0310-591) Class 4, Open Lab, Credit 4 (S)

Independent Study
Allows upper-level undergraduate students the opportunity to investigate aspects of biomedical engineering not covered in existing course work. (Permission of supervising faculty and department head is required.) Credit variable 1-6

Course numbering: RIT courses are generally referred to by their seven-digit registration number. The first two digits refer to the college offering the course. The third and fourth digits identify the discipline within the college. The final three digits are unique to each course and identify whether the course is noncredit (less than 099), lower division (100–399), upper division (400–699), or graduate level (700 and above).

Unless otherwise noted, the following courses are offered annually. Specific times and dates can be found in each quarter’s schedule of courses, published by the Office of the Registrar. Prerequisites/corequisites are noted in parentheses near the end of the course description.

Interdisciplinary Imaging Arts

2001-555 E.S.P.R.I.T. Production

Students produce a special-interest publication(s), E.S.P.R.I.T., via print and/or electronic methods. They are required to design and build the publication(s) by working beyond normally scheduled class hours. Lectures and hands-on activities enable each student to discover the applications of electronic imaging; interactive publishing; electronic publishing (CD-ROM or Internet); desktop publishing via print, page and screen design; as well as the procedures necessary to provide quality results. Lecturers include faculty from the schools of Photographic Arts and Sciences, Printing Management and Sciences, Art, Design, School for American Crafts and other Institute disciplines as deemed appropriate. (Matriculated senior- or graduate-level status and instructor’s approval based on student's experience and production team’s needs) Credit 4

Extended Studies: Art, Design

2012-201 Basic Design I

Study of basic elements in design: line, form and shape, focusing upon their application to design principles. Assignments address problem solving that produces two- and three-dimensional design solutions. Credit 2 per quarter

2012-202 Basic Design II

Study of basic elements in design: texture, color, space and their incorporation in design principles as applied to two- and three-dimensional design problems. (2012-201) Credit 2 per quarter

2012-203 Basic Design III

Study of basic elements in design: primarily color. Rhythm, repetition, movement, and spatial concerns are explored in color design problems that produce effective two- and three-dimensional solutions. (2012-201 and 2012-202) Credit 2 per quarter

2012-204 Basic Drawing Media I

An in-depth study of the fundamentals of drawing using an assortment of appropriate media. Drawings focus on the application and understanding of line, shape, and value, from simple objects to more complex compositions. A variety of black-and-white media will be explored. Emphasis is placed on problems confronting the student who has had little or no drawing experience. Credit 2 per quarter

2012-205 Basic Drawing Media II

Intermediate in-depth study of drawing that emphasizes an exploration of color media for visual problem solving. Projects range from simple still-life studies to complex compositions. Effective composition is addressed through critique and discussion. These exercises in academic and creative drawing approaches are designed for the student who has had little or no drawing experience. (2012-211) Credit 2 per quarter

2012-206 Basic Drawing Media III

Advanced in-depth study of drawing fundamentals emphasizes an exploration of both wet and dry media (pencil, charcoal, conte crayon, pastels, watercolor). Projects include portrait studies and drawing from the human figure. Class assignments emphasize skill building for the student who has had little or no drawing experience. (2012-211 and 2012-212) Credit 2 per quarter

2012-207 Basic Figure Drawing

Introductory study of the structural elements needed to visualize human form. Life models and still-life props provide the studio setting for creating drawing compositions that are both concept-based as well as expressive. (2012-211, 2012-212 and 2012-213 or equivalent) Credit 2 per quarter

2012-208 Color Theory in Art

Opportunity to develop awareness and sensitivity to a range of color conditions that emphasizes the visual impact of color when applied to traditional and digital art problem-solving. (2012-201, 2012-202, and 2012-203 or equivalent) Credit 2 per quarter

2012-209 Advanced Drawing

Contemporary drawing course that introduces drawing concepts, alternative media and unconventional tools for creating expressive drawings. Creative drawing approaches include collaged content, textured surfaces, and dimensional compositions. May be elected more than once for credit. (2012-201, 2012-202, 2012-203 and 2012-211, 2012-212, 2012-213 or equivalent) Credit 2 per quarter

2012-210 Figure Drawing

Continued study of figurative drawing that builds on learning acquired in a basic figure-drawing course. Nude and costumed models, as well as skeletons provide students the opportunity to strengthen their basic drawing skills. Varied drawing approaches, techniques, media, and concepts will be introduced. Maybe elected more than once for credit. (2012-213) Credit 2 per quarter

2012-211 Portfolio Preparation Workshop

A college-level experience for students seeking portfolio for entry acceptance into professional art and design schools. Students will build expressive portfolios, strengthen an existing portfolio, and produce portfolio submissions that reflect a personal direction. Using a wide range of media and technology a creative competence will be evidenced through expressive solutions. Concept building, presentation, documentation, and finished artwork are class dialogues that accompany the studio imaging assignments. Maybe elected more than once for credit. Credit 2 per quarter

2012-212 Illustration

Research the fundamentals of visualization and pictorial organization in advertising and editorial illustration. Contemporary graphics procedures, including digital techniques and adaptations, will be presented through discussion and studio projects. (2012-215) Credit 2 per quarter

66 | College of Imaging Arts and Sciences
2012-276 Calligraphy
The foundational or italic form of lettering will be used to guide students in an exploration of the history, theory, and techniques that have shaped letterforms as we know them today. Emphasis is on developing skills and knowledge by studying historic and contemporary forms as well as through the use of a variety of tools and materials. Areas of study include majuscules, rhythm, spacing, techniques, media, color, design, page layout, and either the mechanics of bookbinding or camera-ready art. Credit 2 per quarter

2012-277 Cartooning
Various cartooning styles are examined in order to identify and discuss the factors that make cartoons appealing and effective. The focus of the course is the study and practice of cartoon illustration principles. The importance of obtaining good reference materials and maintaining a file of other cartoon art are stressed. Students complete weekly drawing assignments that cover elements of cartooning and building complexity in the work, culminating in the completion of several finished cartoon pieces. (2012-201, 2012-202, 2012-203 and 2012-211, 2012-212, 2012-213) Credit 2 per quarter

2012-278 Interpretive Landscape Drawing
Students will sketch directly from nature on location during field trips. In subsequent studio sessions, compositions translating first impressions using various methods are then developed. Special attention is given to individual approaches and expression. Credit 2 per quarter

2012-279 Human Anatomy for Artists
Students learn to identify and define the bones and muscles that affect the surface of the human anatomy. The instructor demonstrates how to draw these structures in simplified shapes and forms. The students then apply this information to figure drawing in the studio. Credit 2 per quarter

2012-284 Airbrush Techniques
Beginners develop the basic skills and techniques of painting with an airbrush, while experienced airbrushers concentrate on enhancing their skills. Graphic artists, illustrators and photographers can benefit from this exposure to airbrush techniques and applications through demonstration and experiential learning. Class is limited to 10 students. (2012-201, 2012-202, 2012-203 and 2012-211, 2012-212, 2012-213) Credit 3 per quarter

2012-286 Introduction to Painting
Study of the materials and techniques of painting through use of still life and nature forms. The basic skill development acquired in this class will become the foundation for more advanced painting options. (2012-201, 2012-202, 2012-203 and 2012-211, 2012-212, 2012-213, or equivalent) Credit 2 per quarter

2012-288 Painting
Painting with opportunities for gifted or advanced students to explore media, seek new skills, and develop a new style of expression. The instructor will work individually with each student so that a personal direction can be identified and built. Models are available on an infrequent basis. Still life and sketches are used for inspiration and reference. This course may be elected more than once for credit. (2012-286 or equivalent) Credit 2 per quarter

2012-291 Figure Painting
Students will paint from costumed and nude models. Achieving a clear understanding of the various media and how they may be used is a primary focus. Artistic concepts will be investigated and selected for appropriate expressive search. Action, structure, gesture, composition, and the development of experimental techniques will be explored. (2012-225 or equivalent) Credit 2 per quarter

2012-292 Portrait Painting
Attention to developing anatomical description will be balanced by encouragement to produce expressive work reflective of individual artistic direction. Emphasis is placed on understanding various aesthetic and traditions. Portraiture painting skills will be gained through studio painting, problem solving, demonstrations, discussions and critiques. This course may be elected more than once for credit. (2012-215 or equivalent) Credit 2 per quarter

2012-293 Watercolor Painting
Students will receive individual and group instruction in basic watercolor methods, media and tools. The painting sessions will emphasize composition, color, and personal expression as they relate to watercolor, gouache and casein media. This course may be elected more than once for credit. (2012-211, 2012-212, 2012-213 or equivalent) Credit 2 per quarter

2012-296 Introduction to Non-toxic Printmaking
Investigate the methods, materials, tools, and techniques used by contemporary printmakers. Print processes introduced will include woodcut, etching, engraving, stencils/line-cut, paper cutting, collographs, carbonbordium, monotype, letterpress, intaglio and image-on-image intaglio types. Students are required to pull an edition of prints in one medium. (2012-211, 2012-212 and 2012-213 or equivalent) Credit 2 per quarter

2012-376 Calligraphy Workshop
Students will continue to study the methods and techniques of calligraphy. Studying a variety of styles and letterforms enriches the artwork assignments produced by the advanced level calligrapher. Personal direction and special project work are encouraged. (2012-276) Credit 2 per quarter

2012-377 Advanced Cartooning
This course builds upon the foundation established in Cartooning. The value of gesture drawing is stressed, and an exploration of the many cartoon elements is researched. Freelancing pros and cons, along with client-vendor relationships, are ongoing discussions. Specific assignments are more comprehensive in content for the advanced sessions. Color, media options, composition, layout, and attention to detail are key considerations in producing the final artwork. (2012-277) Credit 2 per quarter

2012-396 Printmaking Studio
Further study of methods and techniques of contemporary printmaking provide an in-depth appreciation of etching, lithography, relief printing and intaglio type processes. Students may concentrate in one print medium. This course may be elected more than once for credit. (2012-296) Credit 2 per quarter

Foundation Courses

2013-211 Drawing I
An introduction to the visualization of form, thought and expression through the drawing process, and the study of line and value as they relate to drawing. Gesture, contour, plane, and the motive qualities of line are studied using linear applications of a variety of black and white drawing media. Line is also used to organize and structure drawings, and to create value and texture. One, two, and three point perspective is included in the study of line. The study of value includes ways to create value and how it can be used to describe volume, texture, plane change, weight, and space. Subjects include human figure, skeletal anatomy, manmade and nature forms, and perspective. Media will include charcoal, conte, graphite, and ink. Class assignments focus on concept development and critiques of work help students to better evaluate their own work and the work of others while learning a vocabulary related to drawing. Credit 3

2013-212 Drawing II
More advanced study of line and value introduced in 2013-211 and an introduction to color. Subjects include human figure and portrait, manmade and nature forms, and perspective. Media will include charcoal, conte, graphite, ink, pastel, and color pencil. Class assignments focus on concept development and critiques of work help students to better evaluate their own work and the work of others while learning a vocabulary related to drawing. Credit 3

2013-213 Drawing III
The study of color as it relates to drawing using both linear and broad color media. This will include an analysis of the qualities of color, temperature, intensity, and value, and the study of various color schemes. Color will be used to depict volume, space, and weight, and in symbolic and expressive ways. Subjects will include human figure, manmade and nature forms, and landscape. Media will include pastel, color pencil, and paint. Class assignments focus on concept development and critiques of work help students to better evaluate their own work and the work of others while learning a vocabulary related to drawing. Credit 3

2013-215 Vector Imaging
This course is an introduction to Adobe Illustrator. It provides the necessary skills and vocabulary to further develop the technical skills associated with vector imaging. Numerous exercises of a basic nature will be given with personal critiques following the completion of each exercise. Credit 1

2013-216 Raster Imaging
This course is an introduction to Adobe Photoshop. It provides necessary skills and vocabulary to further develop the technical skills associated with raster imaging. Numerous exercises of a basic nature will be given with personal critiques following the completion of each exercise. (Portfolio acceptance) Credit 1
2013-231  2-D Design I
The two-dimensional design course is a structured, cumulative introduction to the basic elements of design. Organized to create a broad introductory experience, the course focuses on the development of both visual and verbal vocabulary as a means of exploring, developing and understanding two-dimensional compositions; visual comprehension and the ability to organize perceptions are key foundational components to the development of problem solving skills. The fall quarter of two-Dimensional Design is an introduction to the analysis of visual imagery and the basics of pictorial construction. The principles of organization and relationship are explored through dialogue, experimentation and the use of a variety of achromatic media. Concepts are introduced through lectures, discussions, demonstrations, research, assigned projects and critiques. Credit 3

2013-232  2-D Design II
The winter quarter of two-dimensional design is a continued exploration of the elements and principles of design. This quarter focuses on color theory and application and increasingly complex methods of pictorial organization. Concepts are introduced through lectures, discussions, demonstrations, research, assigned projects and critiques. Credit 3

2013-233  2-D Design III
The spring quarter of two-dimensional design focuses on the application of the elements, principles and methods of organization explored during the previous two quarters. Historical, cultural and content driven issues and themes are explored through a variety of media. Concepts are introduced through lectures, discussions, demonstrations, research, assigned projects and critiques. Credit 3

2013-241  3-D Design I
This course presents a progressive study over three-quarters in the history, visual principles, exploration, concept generation, process, and techniques of three-dimensional design. Using hands-on problem solving, student will develop an informed understanding of the three-dimensional form with an emphasis on the elements and principles of visual design and their function as the building blocks and guidelines for ordering a three-dimensional composition. A heightened awareness of form and space will be developed through lecture, assigned projects and critiques. Students will also develop a personal awareness of problem solving, experimentation and critical analysis. Credit 3

2013-242  3-D Design II
This is the second-quarter of a yearlong sequential course. The winter term focuses on composing three-dimenstional form and its relationship to space. Students will build on their prior term experiences, which include the introduction to three-dimensional principles, materials and building processes. Credit 3

2013-243  3-D Design III
This is the third-quarter of a yearlong sequential course. Students develop the sophisticated skill of conceptualization. More advanced problems will be assigned and students will have the opportunity to explore a wide range of material and process possibilities for their resolution. Throughout the year work will emphasize where an idea comes from and the skills necessary to develop these ideas. Credit 3

2039-250, 251, 252, 253  Special Topics
A focused, in-depth study and analysis of a selected advanced topic in Foundation courses. Specific topics vary according to faculty assigned. Credit variable 1-6

Art History
2039-225, 226, 227  Survey of Western Art and Architecture I, II, III
A sequential series of courses focusing on the history of Western art and architecture, from Prehistoric times to circa 1950. We will examine the form, style, function and meaning of important monuments of the past, and consider these in their historical and cultural context. We will approach these objects in chronological order, for students first need to learn when, where and by whom (whether a person, or a known individual) a given object was produced before they can attempt to determine why the object was made, what it meant in its time and place (as opposed to what it may mean to us today), and the purpose it served. Once we know how to classify visual information, we may be able to make historical sense of the surviving evidence. Credit 3

2039-300  History of Design
Explores the historical precedents of two- and three-dimensional design, including fine arts, industrial, graphic and environmental design. The course provides a foundation for individual decisions on planning and design to complement and enhance present and future environments. Credit 3

2039-306  Architecture, Interiors and Furniture History I
This course surveys architecture, interiors, and furniture design from the ancient world through the end of the Renaissance. The course will also discuss the social and technological contexts in which different architectural, interior and furniture styles developed. (2039-225, 2039-226, and 2039-227) Credit 3

2039-307  Architecture, Interiors and Furniture History II
This course surveys architecture, interiors and furniture design from Baroque Italy through the end of the nineteenth century. The course will also discuss the social and technological contexts in which different architectural, interior and furniture styles developed. (2039-225, 2039-226, and 2039-227) Credit 3

2039-308  Architecture, Interiors and Furniture History III
This course surveys architecture, interiors and furniture design from the late 19th century to the present day. The course will also discuss the social and technological contexts in which different architectural, interior and furniture styles developed. (2039-225, 2039-226, and 2039-227) Credit 3

2039-310  History of Crafts
Explores creative thinking and designing in the area of crafts through the ages with special emphasis on clay, fibers, glass, metal and wood. The course highlights the artistic achievements of the craftsmen of the past to enable present students to view their own time in its historical perspective and thereby understand more thoroughly their own creative heritage and the efforts of contemporary craftspeople. Credit 3

2039-315  Pre-Columbian Art
This is a survey course to examine the development of principle styles of Ancient American architecture, sculpture, painting and ceramics up to the sixteenth century when the Spanish conquistadores defeated the Aztec Empire in Mexico and the Inca Empire in Peru and imposed colonial rule. Credit 3

2039-316  Art and Architecture in Florence and Rome 1400–1470
This course will cover significant commissions for painting, sculpture and architecture in Florence and Rome from 1400-1470. Artists from the early renaissance period to the end of a major period of artistic patronage will be studied. Artists we will study include Filippo Brunelleschi, Lorenzo Ghiberti, Donatello, Luca della Robbia, Michelozzo, Leon Battista Alberti, Masaccio, Fra Angelico, Fra Filippo Lippi and Paolo Uccello. Questions for considerations will include: the nature and meaning of the Early Renaissance, developments in artistic theory and practice, the importance of Antique and Medieval precedents, the increasing attention to the effects of nature, the role of the patron, and the relevance of documents, literary sources and visual precedents for our interpretation of images. (2039-225 and 2039-226) Credit 3

2039-317  Art and Architecture in Florence and Rome 1470–1520
Commissions for painting, sculpture and architecture in Florence and Rome from 1470-1520 will be studied. Artists from the beginning of the unofficial rule of Lorenzo the Magnificent (de’ Medici) to the death of Raphael, a highly influential artist. Artists will include Sandro Botticelli, Antonio and Piero del Pollaiuolo, Leonardo da Vinci, Domenico del Ghirlandaio, Bernardo Pinturicchio, Bramante, Michelangelo and patrons Lorenzo the Magnificent, the Florentine Republic, Popes Sixtus IV, Alexander VI, Julius II and Leo X. Questions for considerations will include: the nature and meaning of the Early Renaissance, developments in artistic theory and practice, the importance of Antique and Medieval precedents, the increasing attention to the effects of nature, the role of the patron, and the relevane of documents, literary sources and visual precedents for interpretation of images. (2039-225 and 2039-226) Credit 3

2039-318  Art and Architecture in Florence and Rome 1520–1590
Significant commissions for painting, sculpture and architecture in Florence and Rome from 1520-1590 will be studied; from the ending of the High Renaissance to the Baroque era. Artists will include Michelangelo, Jacopo Sansovino, Jacopo Pontormo, Agnolo Bronzino, Baccio Bandinelli, Benvenuto Cellini, Giorgio Vasari, Bartolomeo Ammanati and Giambologna; patrons will include Grand-Dukes Cosimo and Francesco de’ Medici of Florence, Popes Clements VII, Paul III, Julius III and Sixtus V. Questions for consideration will include: the nature and meaning of Mannerism and the Late Renaissance in Italy, developments in artistic theory and practice, the importance of Antique, Medieval, Early Renaissance and High Renaissance precedents, the rising status of the artist, role of the patron, and relevance of documents, literary sources and visual precedents for interpretation of images. (2039-225 and 2039-226) Credit 3
2039-320 History of Art Criticism
Art criticism from the Renaissance to the present day. A study of what makes art “good” (philosophical theories of art and the aesthetic experience) and what art criticism is and does (types and principles of art criticism). Lectures, reading assignments and research papers. Credit 3

2039-325 Art and Architecture in Venice and the Veneto
The subject of this course is 15th century painting, sculpture and architecture in Venice and the Veneto. We will examine paintings, sculptures and architecture works, such as: the altarpiece, the private devotional image the portrait, the narrative scene or cycle, the tomb, the palace, the town-hall, the villa, the confraternity building, the chapel, the church and the square. Questions for consideration will also include: the myth of Venice, the importance of Antique Byzantine, Islamic and western Medieval precedents for developments in Venetian art and architecture, the introduction of Florentine Gothic and Renaissance art and ideas into Venice, the impact Venice had upon the art and architecture of the Veneto, and vice versa, and the cultural exchange between Venice and the north. (2039-225 and 2039-226) Credit 3

2039-330 Philosophy in Art
Traces the interactions between philosophic thought and artistic styles throughout history. Explores art as a reflection of human values. Lectures, reading assignments and research papers. Credit 3

2039-340 Symbols and Symbol Making
A concentrated study of the nature of sign and symbol as visual metaphor paralleling legend, myth, folklore and fairy tale as verbal metaphor; analysis of Freudian and Jungian theories about symbolic/metaphoric communication; and application of the theories to contemporary examples. Designed to help the artist, designer and craftsperson produce more effective visual communication. Credit 3

2039-355 Latin American Art
This is a survey course of the historical development of art from colonial times to the present. Included will be a consideration of painting, sculpture, architecture, graphic, and photographic arts. Potential themes to be addressed include the dependence on the European neo-classical academic model; indigenism, nationalism, and the resurgence of ‘popular’ art; the role of the visual arts in the construction of history; the conflicts and tensions involved in the search for a cultural identity. Credit 3

2039-360 18th and 19th Century Art
The development of the arts in these two centuries in the areas of Western painting, printmaking, sculpture, architecture, and the crafts from 1700 to 1900. Lectures, reading assignments, and research papers. Credit 3

2039-365 20th Century Art (1900-1950)
A critical study of the art and visual culture of the first five decades of the twentieth century. Major stylistic movements in Europe and America will be examined with special attention to innovations in materials, subject, matter, and philosophy. Central themes include: abstraction vs. figuration; primitivism and the search for origins; reactions to modernity and the rise of technology; the tension between the avant-garde and popular culture; the institutional critique, and the special role of art and artists in modern society. (2039-225, 2039-226 and 2039-227 or permission of instructor) Credit 3

2039-368 Scandinavian Modernism
This course examines the decorative arts and visual culture of modern Scandinavia from 1860 to present, with special emphasis on the social, economic, and political impulses that have shaped them. Scandinavian modern design plays a significant role in the postwar epoch; it is equated with such leading brands as Volvo, Saab, Ericsson, Nokia, H&M, Electrolux, Orrefors, Georg Jensen, ARTEK, and IKEA. The myths and realities of its success will be examined, as well as its impact on contemporary design. (2039-225, 2039-226 and 2039-227 or permission of instructor) Credit 3

2039-375 20th Century Art Since 1950
A critical study of the art and visual culture of the second-half of the twentieth century. Major stylistic movements in Europe and America will be examined with special attention to innovations in materials, subject matter, and philosophy. Central themes include: Abstract Expressionism, Pop Art, Nouveau Realism, and Arte Povera, Earthworks, Site Specificity, ATELIER, Conceptualism, Minimalism, Feminism, Performance, and New Media. (2039-225, 2039-226 and 2039-227 or permission of instructor) Credit 3

2039-376 Renaissance Painting in Flanders
The history of Renaissance painting in the Southern Netherlands from the beginning of the 15th century to the end of the 16th century. We will consider the meaning of the Renaissance in Flanders, the observation and recording of natural appearances, “hidden symbolism” and sacramental themes in Early Netherlandish painting, the connections between Flemish, German, and Italian art, the development of new genres in the 16th century, “originality” and “artistic progress.” Lectures, reading assignments, and research papers. Credit 3

2039-385 Installation Art
This course will introduce students to historic, contemporary, and critical issues surrounding installation art. There will be an introduction to the development of installation art as a genre. We will examine the changes, which have developed over the past three decades object sculpture to non-object. There will be an emphasis on the development of the concept of an installation project and its relationship to site and/or audience. Both public and gallery spaces will be discussed. (2039-225, 2039-226, 2039-227 and 2039-365) Credit 3

2039-390 Native American Art and Culture
Survey of Native American visual arts within the context of Native American cultures and within a historical and anthropological framework. Native American arts, their roots, traditional expression, changes with European contact and contemporary expressions are examined by culture area. Consideration also is given to materials used, techniques of construction, individual and tribal styles, as well as to the meaning and function of various art forms within Native American societies. Credit 3

2039-395 Theory and Criticism of 20th Century Art
A critical study of theoretical and philosophical texts which ground twentieth century art as well as their own art historical and critical approaches. Major issues include: the theory of autonomy and self-reflexivity; the structuralist paradigm, poststructuralist and Marxist critiques of modernism, Feminist approaches to spectacle, spectatorship, and commodity fetishism, and the relation of vision to constructions of identity and power. Key authors to be discussed include: Lessing, Kant, Foucault, Barthes, Benjamin, Saussure, Pierce, Levi-Strauss, Lacan, Bataille, Lyotard, and Baudrillard. (2039-225, 2039-226, 2039-227 and 2039-365 or 2039-375 or permission of instructor) Credit 3

2039-410 The Art of Art History
This course will trace the history of how we look, talk and write about those things that western culture calls “art.” The course will concentrate, in a loosely chronological manner, on the development of art history and criticism from its roots in 19th century Germany to a multiplicity of viewpoints of the late 20th century. This inquiry will examine the people behind a tradition within the literature of the visual arts that not only re-examined the same issues, but also challenged, expanded and elaborated on one another’s work. The course will show art history and our conception of art as something that is always under revision and is always in flux. (2039-225, 2039-226, 2039-227 and a non-20th Century Art History elective) Credit 3

2039-415 Thinking About Making: The Practice of Art in a Global Society
A discussion based art history elective for upper level undergraduates. The course seeks to bridge the gap between studio practice and contemporary art history. The course will explore very current work and ask questions about what is art, who is the audience, what is “our” art making practice and how does that fit within the larger context of the current state of the global art world. How do we measure success and artistic failure? The course emphasizes observation, critical analysis, and written interpretation. (2039-225, 2039-226, 2039-227 or instructor permission) Credit 3

2039-425 Public Art Public Space
This course will introduce students to the contemporary and critical issues surrounding Public Art. There will be an introduction to the history of Public Art. We will examine the changes from public art as monument to public art as place. There will be an emphasis on the new genre of public art, which involves community and historical referencing of site. The debate over public funding for public art will also be discussed; as the question of “whose art is it” has become a pivotal issue in defining public art for public places. (2039-225, 2039-226, 2039-227 and 2039-365) Credit 3

2039-430 Dada and Surrealism
Explores the Dada and Surrealist movements in Europe and the United States from 1916 through 1968. Emphasis is on identifying the major works of artists involved in these aesthetic developments. Ideology and formal ideas are analyzed in lectures, reading assignments, and research papers. Credit 3
2039-433 What is Postmodernism?
“What is Postmodernism?” will cover the art, politics, culture, and the critical texts that formed the discourses, and their resulting debates, about contempo-
rary society after World War II and especially so after the social unrest of 1968.
The course, “What is Postmodernism?” features the question itself. How and
why, and by whom, are questions asked and answered? What if the question
were to be asked from within the discourse of architecture or music or biology?
Would the answers be the same? Would the questions be the same? Credit 3

2039-435 Art of the Last Decade
A critical study of the art and visual culture of the last decade with a strong
emphasis on the current American and international scene. The primary
focus will be on living artists and artists who remain crucial to contempo-
rary debates with special attention paid to recent, current, and forthcoming
exhibitions, their methodological frameworks and historical context, as well
as the key critics and curators who are shaping the visual culture of the present.
(2039-225, 2039-226, 2039-227 and 2039-365 or 2039-375 or permission of
instructor) Credit 3

2039-438 Body in Art
This course is an inquiry into the artistic investigation of the literal human
body and the texts that give them meaning. The class will focus on the history,
theory and problems of performance art in the latter part of the 20th century.
(2039-225, 2039-226, and 2039-227) Credit 3

2039-440 Conceptual Art
This course examines the widely influential mid-1960s art movement which
questioned the fundamental nature of art itself by renunciating the material
art object as well as the phenomenon of art-making. The definition of art as
well as its institutional framework was thereby expanded, and the idea, con-
cept, or intellectual dimension of the work was underscored. Students will be
acquainted with the philosophical foundations and critical implications of this
global movement across a wide spectrum of works and practices (paintings,
performance, installations, books and texts, photography, film, and video) and
its relevance to contemporary concerns. Credit 3

2039-443 Art and Technology:
From the Machine Aesthetic to the Cyborg Age
This course explores the links between art and technology in 20th century
visual culture with special focus on historical, theoretical, and ideological
implications. Examples from film (Modern Times, Metropolis, Man with the
Movie Camera, Blade Runner) and literature (Frankenstein) will be discussed,
as well as a wide range of artists and philosophers. Topics include the indus-
trial revolution, utopian, dystopian, and fascist appropriations of the machine,
the machine aesthetic (of Leger and Le Corbusier), engendering the body and
machine-eroticism, the principles of scientific management, mass produc-
tion and the art factory, the technological sublime, Rauschenberg and E.A.T.,
cyborgs, cyperpunk, and the posthuman. (2039-225, 2039-226, 2039-227, or
permission of instructor) Credit 3

2039-452 Art and Activism
This course will focus on artists using their work for the purpose of chang-
ing society. Students will consider work by both individual artists and artists
working in groups that cause critics, art historians, other artists and the view-
ing public to ask if what they are doing is art. Although there will be forays
back to the 19th and early 20th centuries, most of the time will be dedicated
to artists of the last three decades. We will examine texts that propose art to be a
form of activism and persuade artists to be responsible for the way they repre-
sent the world and maybe even determine if the goal of art is not to represent
it in the first place. The artists we discuss are concerned with problems in our
society that affect gender, race, sexuality, poverty, labor issues, and the envi-
ronment. (2039-225, 2039-226, 2039-227) Credit 3

2039-459 Art and Architecture in Central Italy 1250 - 1400
The subject of this course is painting, sculpture, and architecture in Central
Italy from the middle of the 13th century to the end of the 14th century. We
will approach this material in more or less chronological order as we focus
upon different types and media, including the altarpiece, the private devo-
tional image, the pulpit, the tomb, the chapel, the monastic church, the cathe-
dral, the town hall, the private palace, and the urban setting. Questions for
consideration will include: Franciscan devotion, the rivalry between Sienna
and Florence, early humanist thinking about the arts. Giotto as the paradig-
matic Florentine painter, the nature and meaning of the Italian proto-Rena-
sance, and the impact of the Black Death upon the arts. (2039-225, 2039-226,
and 2039-227) Credit 3

2039-469 Baroque Rome
This course will focus upon Italian artists working in Rome from circa 1590 to
circa 1660. Although we will explore painting, sculpture, and architecture in
this sequence and more or less chronologically, we will often have the chance
to consider how these different media coalesce to create an overwhelming
visual experience. We will pay particular attention to major commissions
given to Annibale Carracci, Michelangelo da Caravaggio, Gianlorenzo Bernini,
and Francesco Borromini, as we seek to define the nature and meaning of the
Roman Baroque. (2039-225, 2039-226 and 2039-227) Credit 3

2039-550, 551, 552, 553 Special Topics
A focused, in-depth study and analysis of a selected advanced topic in Art
History. Specific topics vary according to faculty assigned. Credit variable 3-6

School of Art

Illustration

2019-301 Illustration I
Illustration core for illustration majors and medical illustration majors in their
 sophomore year. The students approach major elements of technique, applica-
tion, and theory in relation to becoming illustrators. Studio sessions involve basic
anatomy, design and typography for illustrator, figurative expression, photo-
graphic tools, and illustrative technique. Class structure allows demonstrations of
process and experimentation and critique with illustrative media. Credit 3

2019-304 Anatomical Figure Drawing
Helps students correlate underlying osseous and muscular anatomy with
surface form and structure. Instruction also emphasizes gesture, proportion
and balance. Course work requires students to use their figure drawing skills
while solving illustration assignments. Credit 3

2019-311 Digital Illustration I
Provides students with methods of conceptualizing, organizing, and executing
illustrations using the computer. Projects will expose students to various types of
digital techniques using vector and raster-based software applications, as
well as a variety of input and output devices for the creation of professional
level assignments. The course will emphasize conceptual problem-solving
methodology and the language of visualization while providing a consistent
foundation for digital illustration as it relates to professional illustration pro-
duction. Color systems, digital terminology and pre-press file formats also will
be covered. Credit 3

2019-323 Zoological and Botanical Art and Illustration
This course utilizes resources found in the natural world as subjects for applied
art and design. Students work at accurately portraying animal and plant
images, which may be used descriptively in print or electronic media. (Foundations) Credit 3 (S)

2019-342 Digital Narrative I
Instructs students in the use of digital medium for the purpose of visual story-
telling. Importance will be placed on the creation of visual narratives with
reference to style, content and interpretation. Assignments will involve vec-
tor and raster-based software applications and a variety of input and output
deVICES. Conceptual strategies, production methodologies, narrative composi-
tion, and color systems also will be covered. (2019-311) Credit 3

2019-345 Illustration Techniques I
This course will address the wide array of dry media production techniques.
Stress will be placed on developing and enhancing drawing skills, appropri-
ate use of media, artist, created photographic reference materials, and use of a
structured illustration working process. Further emphasis will be placed on
creative thinking, a preliminary view of professional practices and improve-
ment of student portfolios. (Art and design foundation courses) Credit 3

2019-361 Dimensional Illustration I
Introduces students to an alternative, three- dimensional style of illustration.
Emphasis will be placed on planning, preparation, compositional elements in
two- dimensional sculptural form and creative problem solving. Students
will be encouraged to explore a variety of materials and techniques to com-
plete projects. (Art and design foundation courses) Credit 3
2019-423 Digital Mixed Media I
Provides students with the opportunity to explore the creative potential presented through the imaginative combination of both traditional and digital media. Students will be expected to utilize and combine skills learned in traditional and digital illustration courses to provide exciting and fresh illustrations unrestricted by a singular medium. (Art and Design foundation courses) Credit 3

2019-373 Character Illustration I
Instructs students in the conceptualization and production of illustrated characters. Assignments will challenge students to create characters for a variety of purposes and media. Anatomy, design, and style will take final form as frontal, rear, profile and 3/4 view representations of characters. Conceptual strategies will be stressed as they relate to character appearance and function. Assignments will involve production methodologies, character diagramming and color systems. (2019-301 or 2019-311) Credit 3

Prerequisite for all 400-level illustration courses: sophomore illustration core or equivalent

2019-406 Illustrative Design I
The goal of this course is to familiarize students with professional illustration assignments and the integration of typography, symbols, and other forms of graphic visuals. Assignments will include book and magazine covers, advertisements, and posters; i.e. visuals that, although produced by illustrators, effectively function as total design solutions. The ability to interpret typographic and other non-illustrative components in an illustrative context has become a key to potential employment in our profession. In today’s market many career tracks demand that illustrators know how to develop these total solution assignments. Credit 3

2019-409 Symbols in Editorial Illustration
An in-depth introduction to the field of editorial illustration. Emphasis is placed on brainstorming and concepts. Cultural images and symbols are examined and utilized to express ideas. Students are encouraged to expand in a personal direction while effectively communicating specific information from a given article or story. Efficient and effective time and energy priorities are established. Credit 3

2019-422 Digital Illustration II
Provides students with advanced methods of conceptualizing, organizing, and executing illustrations using the computer. Through the use of methodology worksheets, the course will emphasize problem solving methods while building on a consistent foundation for digital illustration preparation and production. Projects will allow students to explore advanced digital illustration techniques using vector and raster-based software applications, as well as a variety of input and output devices. Alternative color systems, output paper surfaces, and pre-press file formats also will be covered. Credit 3

2019-423 Digital Editorial I
This course emphasizes effectively communicating information in a given article or story, from political themes and news stories to plays and poetry. Students explore the computer’s ability to make many variations and subtle changes to the images quickly. Credit 3

2019-427 Pop-up Books I
This course will deal with constructing and illustrating pop-up and mechanical books. Students will study painting, engineering, and illustration for production of pop-ups. The course will be divided into a preliminary section of learning the basic mechanism of pop-up books and a second section that allows students to apply knowledge learned in the first section to the illustration and production of their own book. Credit 3

2019-432 Digital Editorial II
Expands on the principles learned in Digital Editorial I. Importance will be placed on the advanced conceptual interpretation of editorial subject matter, organization of the composition, and the intersection of humorous, serious, ironic, and other interpretations. Students will apply approaches to creative illustration while closely following reproduction specifications. Students may use vector and raster-based software applications and a variety of input and output devices. Stylistic issues, conceptual strategies, production restrictions, and color systems also will be covered. (2019-423) Credit 3

2019-436 Illustrative Design II
Applies the principles and methods practiced in Illustrative Design I in more advanced projects. Students will conceptualize, organize, and execute illustrations within a design context and explore basic headline writing, with an emphasis on the use of complex graphic elements in conjunction with various styles of illustrations. Illustration production methods and terminology will be included. Projects will expose students to various real-world print media assignments that will demand the use of traditional illustration methods as well as computer-based production media. Assignments will stress solutions that are typically managed by art directors and designers. (2019-406) Credit 3

2019-442 Digital Narrative II
Expands on the tradition of verbal concepts to pictorial narrative introduced in Digital Narrative I. Particular emphasis will be placed on illustration sequences, including story-line illustration and thematic series pictorials. Importance will be placed on the digital representation of narrative story telling with reference to style, content and interpretation. Assignments will involve vector and raster-based software applications and a variety of input and output devices. Conceptual strategies, production methodologies, narrative composition, and color systems also will be covered. (2019-342) Credit 3

2019-445 Illustration Techniques II
This course will address the wide array of wet media, production techniques. Stress will be placed on enhancing drawing skills, appropriate use of wet media, artist, created photographic reference materials and refining a structured illustration working process. Further emphasis will be placed on creative concept development, verbal communication, professional practices, and improvement of student portfolios. (2019-345) Credit 3

2019-461 Dimensional Illustration II
This course will offer students the option to continue an exploration of three-dimensional illustration. Emphasis is placed on drawing skills, planning, preparation, compositional elements of three-dimensional sculptural form, and creative problem solving. Students are encouraged to explore a singular medium to complete projects in a series to be presented in a consistent style. (2019-361) Credit 3

Prerequisite for all 500-level illustration courses: junior illustration core or equivalent

2019-504 Illustration as a Journalist I
Illustration problems that require the student to visually report and record a specific happening or event. These projects will be of longer duration and will consist of several major paintings, many drawings, sketches, notes, and photo-references. This journalistic approach to illustration demands that the students attend the event and select those images that will best communicate the atmosphere of the event. Students are encouraged to sharpen their observations in order to clarify or embellish what might be commonplace to the non-visual observer. Credit 3

2019-505 Contemporary History Illustration
Students are introduced to a sequence of historical events that have had the most lasting effect on 20th century illustration. These events affect the look of illustration and provide a place to begin discussion. The effects on surrealism, on the one hand, and social realism, on the other represent a swing of the pendulum of narrative and representational art. Studio work incorporates ideas embodied in these and other contemporary art trends. Lectures and illustrated talks compare contemporary art and illustration history. Credit 3

2019-507 Illustration for Books
Explores the basic principles in developing illustrations for books. Composition, conceptualization and storyboard development are covered, as well as finishing art preparation. Emphasis not only on creativity of expression, but also on conceptual and technical experimentation. Work is geared toward books for a variety of age groups and functions. Credit 3

2019-510 Personal Focus I
A series of illustration projects in which students are encouraged to investigate topical subjects of their choice. Each student’s own creativity, self-expression and visual communication skills are stressed. Emphasis is on clarity of concepts and developmental procedures necessary to work as an illustrator. Credit 3

2019-513 Marketing and Business Practices for Illustration
This course will address the professional practices and issues involved in conducting the business of illustration as related to both freelance and staff positions. Students will consider setting up a business/studio, marketing their work, self-promotion, finding work, pricing, record keeping, legal rights, taxation, and representation. (Junior illustration core) Credit 3
2019-516 Animate Digital Illustration
An introduction to illustrating for multimedia projects by creating computer-generated animations and presentations. Macromedia Director, in combination with other imaging software, will be used to develop these "movies." The Director movies will investigate not only illustrated animation, but also sound, music, color, and special effects. Credit 3

2019-517 The Interactive Illustration
Projects will highlight the integration of interactive interfaces into illustrated Macromedia movies, thus allowing responses to choices made by the user. Using scripting and branching, in combination with buttons and menu choices, projects will be programmed to allow some control over a movie and navigation through animations and presentations. Credit 3

2019-518 Time-based Illustration and Design
Illustration and design students will be trained together to develop multimedia projects, i.e., CD-ROMs, animated advertisements, and kiosk displays. The teams will begin with short problems, culminating in final full-scale electronic projects, that utilize their respective illustrative and design skills to develop strong, unified solutions. Projects will include both passive and interactive projects, which reinforce the students' knowledge of time-based authoring tools, such as Macromedia Director, QuickTime Movies, and Adobe Premiere. Credit 3

2019-527 Pop-up Books II
This course will be a continuation of Pop-Up Books I and will deal with constructing and illustrating pop-up and mechanical books. Students will select a singular topic and produce pop-ups and other mechanical devices relevant to telling the story. Emphasis will be placed on creating multiple devices relying on a single source of energy per page for performance. Emphasis will also be placed on visual continuity throughout the story. (2019-427) Credit 3

2019-563 Illustration Portfolio Preparation
Illustration Portfolio Preparation is the final preparatory course for the illustration major. Its purpose is to provide students with information, strategies, and guided instruction to organize and create their final portfolio. The course will include individual critique and analysis of work created in prior studio classes and progress to the definition of a career agenda. Projects will be individually assigned based on the quality of each student's body of work and his or her career intentions. Presentation methods, formatting, and stylization will also be addressed. The final culminating project will be a finished portfolio document. Students will be instructed in job seeking strategies, including interviewing dynamics, resume writing, and correspondence. Credit 3

Medical Illustration
2020-215 Foundation - Illustration/Medical Illustration
This course provides an introduction to the fields of illustration and medical illustration and the role of these disciplines in the design process. Students develop conceptual skill, experiment with different media, and learn the importance of research, reference materials, models, and props in the illustration process. Career options, self-promotion, and the professional practice of illustration will also be discussed. Credit 2

Prerequisite for all 400-level medical illustration courses: sophomore medical illustration core or equivalent

2020-406 Anatomic Drawing I
Students are assigned projects to reinforce their knowledge of anatomy while collaborating on dissection and illustration from the cadaver. Problems include oncology from cross sections and X-rays in preparation for surgical and medical/legal art. Mixed media is encouraged. Credit 3

2020-407 Anatomical Illustration: Wet Media Application
Development of range and mastery of medical wet media illustration techniques. Course work emphasizes transition of anatomical drawing done from dissected cadavers into "instructional anatomical illustrations" designed to be published using halftone and four-color reproduction techniques. Credit 3

2020-408 Computer Applications for Anatomical Illustration
Advanced application of computer hardware and software to create illustrations in support of anatomical instruction. Course work emphasizes translating on-site drawings from student dissections into digital illustrations. Credit 3

2020-409 Introduction to Interactive Animation
Building on experience gained in Anatomic Drawing I, students are assigned projects to reinforce their knowledge of anatomy while collaborating on dissection and illustration from the cadaver. Problems include oncology from cross sections and X-rays in preparation for surgical and medical/legal art. Mixed media is encouraged. Credit 3

2020-410 Anatomical Illustration Mixed Media
Development of range and mastery of airbrush and mixed media illustration techniques. Course work emphasizes creating illustrations aimed at a variety of medical illustration markets, including medical/legal, editorial, and advertising. Credit 3

2020-431 Human Gross Anatomy I
Dissection and the study of the human body are presented with topics such as developmental, comparative, and applied anatomy. Emphasis is directed toward osteology and radiographic anatomy. Credit 4

2020-432 Human Gross Anatomy II
The second half of a two-quarter sequence devoted to the study of the human body. Detailed dissection of a human cadaver is supplemented with lectures on the structure and function of the major organ systems. The second quarter begins with a detailed dissection of the head and neck and moves on to the pelvis, perineum, and a lower limb. (2020-431) Credit 4

2020-461 3-D Modeling and Animation: Biomedical and Organic Forms I
Course explores modeling and animating three-dimensional forms to provide visual support for allied health instruction. Assignments focus initially on modeling geometric forms to create biomedical subjects (i.e., human cells, bacteria, viruses, etc.) Fundamentals of animation and its use as an instructional media are then presented. Additional modeling techniques and expanded lighting and rendering procedures are explored. Students create animation explaining cellular events or depicting the anatomy of a human organ for their final assignment. Credit 3

2020-462 3-D Modeling and Animation: Biomedical and Organic Forms II
Course employs three-dimensional modeling and animation as a means of providing visual support for biomedical instruction. Assignments focus on constructing models that accurately portray a member of the phylum anthropoda (crustaceans, insects, arachnids). Fundamentals of animation and its use as an instructional media are reviewed. Models are then attached to "skelton" in order to animate some characteristic action of the chosen species. Forward kinetics, inverse kinetics, and inverse kinetics using a spline handle are compared as means for controlling animation. Credit 3

2020-463 Advanced 3-D Modeling and Animation: Biomedical and Organic Forms
Course for students who have taken either three-dimensional modeling and Animation of Biomedical and Organic Forms I or II, to develop animations designed to provide health information as a public service displayed on the Web. Course material focuses on advance modeling and animation procedures. In addition to technical animation and modeling skills, student projects are expected to demonstrate independent research methodologies. Credit 3

2020-468 Medical Legal Illustration
This course deals with the preparation of support materials for medical litigation—personal injury, medical malpractice, and product liability cases. Students learn to read and interpret medical records including operative reports, discharge summaries, radiographs, pathology, and autopsy reports. From these records, students propose effective visual aids to best depict the facts of the case, create preliminary sketches of the proposed exhibits, and then complete the exhibits in a format appropriate for presentation to a jury or arbitrator. Credit 3

2020-478 Molecular Illustration
Accurate representations of molecular structures are essential to illustrate recent advances in biotechnology, medical genetics, and pharmacology. This course provides a basic overview of molecular biology and introduces the principles of molecular illustration. Students will locate three-dimensional molecular model files on the Internet and manipulate these models to create two-dimensional, three-dimensional and animated representations of molecules and biochemical processes. Credit 3

Prerequisite for all 500-level medical illustration courses: junior medical illustration core or equivalent

2020-501 Advanced Medical Illustration
Advanced medical illustration techniques. Graphic design related to illustrative and photographic practice. Lab sessions to be scheduled in operating room facilities. Jointly sponsored by RIT and the University of Rochester. Credit 3
This course provides students with the unique opportunity of drawing while observing surgery in local operating suites. Surgical sketches are further developed into final illustrations designed to support instruction. Illustrations created in this course will be produced using traditional and electronic media. Credit 3

This course provides students with the unique opportunity of drawing while observing surgery in local operating suites. Surgical sketches are further developed into final illustrations designed to support instruction, editorialize, advertise, and support courtroom presentation. Illustrations created in this course will be produced using traditional and electronic media. Credit 3

Advanced study of hardware and software applications to support medical instruction. Course introduces students to creating two-dimensional computer animations as support for biomedical instruction. Credit 3

Course work prepares students for entry into the medical illustration profession. Topics include writing and designing resumes, cover letters, and self-presentation. Additional classroom lectures and demonstrations cover professional ethics, copyrights, contracts and client/illustrator negotiations. Credit 3

Students receive individual assessments of their current portfolio from faculty. Course work supports construction of “exit” portfolios reflecting each student’s strengths and interests. Traditional two-dimensional and electronic portfolios are constructed. Credit 3

A course designed to introduce students to the fundamentals of text document production, and to provide the students with the terminology necessary to communicate with a client or originator and the manufacturer of the document. Credit 3

This course introduces the student to visual communication and the graphic design profession. Through formal studies and perceptual understanding, including aesthetics, graphic form, and structure, concept development, and visual organization methods, students will design solutions to communication problems. Assignments exploring aspects of graphic imagery, typography, and production, will be included. (New media majors or permission of instructor) Credit 3

An introductory course in visualization that extends previous experience and skills to include the third dimension. The course will provide fundamentals for more advanced studies in three-dimensional animation, virtual spaces, and multidimensional navigation spaces. Manual and digital tools will be used for problem solving. Students will be expected to show evidence of growth in three-dimensional understanding from simple objects to more complex environmental spaces. (New media majors or permission of instructor) Credit 3

Course introduces students to the fundamentals of text document creation, and to provide the students with the terminology necessary to communicate with a client or originator and the manufacturer of the document. (2009-213 and new media majors or permission of instructor) Credit 3
2009-312 Information Design for New Media
Information design for the Web and interactive multimedia integrate content with visual indicators. Legibility, and clear communication of information and direction are important to the success of graphical user interface design. This course integrates imagery, type, icons, buttons, color, visual hierarchy, and site architecture to design friendly and functional user interfaces. (New media core or permission of instructor) Credit 3

2009-313 Introduction to Computer Imaging
An introduction to the computer as an illustrative tool. Emphasis will be on the application of visual organization methods in the context of electronic media. Exploration of raster and/or vector graphic software programs will serve as the basis in the development of illustrative assignments. (New media core or permission of instructor) Credit 3

2009-322 Designing Graphical User Interface
An introduction to designing the interface, both visually and technically, for New Media projects and applications. Good interface design allows the user to accomplish a variety of tasks. It should not force a user to look all over for information and buttons. It should allow the user to operate intuitively, with ease of navigation, and be entertained at the same time, regardless of the information being communicated. Team-taught lectures, presentations, and demonstrations will investigate both the programming and visual communication aspects of developing good interface design. (New media core or permission of instructor) Credit 3

2009-328 Introduction to Digital Animation
An introduction to the techniques and practice of graphic and animated film production, this course provides training and practical experience in producing two-dimensional animated sequences using off the shelf multimedia software. Students produce a number of short exercises incorporating original computer generated and non-digital artwork. Topics include key frame and ‘tweening, cycling, acceleration, squash and stretch, backgrounds, inking, rotoscoping, sound, masking, multiplayer effects, and space-to-time. Screensharing of professionally made films will illustrate and provide historical perspective. Proficiency in drawing is not required, but strongly recommended. (Required for New Media Design and Imaging and New Media II second year majors) Credit 4

2009-401 Advanced Design Networking
This course extends previous networking experience and skills to emphasize advanced visual Web design layout skill and the incorporation of time-based vector graphics. The emphasis of this course will be away from programming toward the application of software tools and design concepts related to more visual Web page development with interactive, dynamic interfaces. Typical software tools such as, but not limited to, Flash and Dreamweaver will be used. (Completion of new media design sophomore core or permission of instructor) Credit 3

2009-402 Emerging Multimedia Design and Imaging Tools
This course will explore and integrate a number of related software packages including, but not limited to, Adobe After Effects, Peak, QuickTime and three-dimensional applications, as well as conceptual development and production. (Completion of new media design sophomore core) Credit 3

2009-403 Dynamic Information Design
A study of the application of Information Design theory and practice to the developing area of new media. Cartography and iconography will be viewed in the context of Web and kiosk use. The delivery of consumer information, using interactive, and dynamic media as the vehicle, will be investigated. (Completion of new media design sophomore core or permission of instructor) Credit 3

2009-411 Time-based Imaging for New Media
New media students will develop short animated and interactive multimedia projects, while learning the basics of the time-based authoring software, Macromedia Director and Flash. The students will begin with short exercises, culminating in final larger electronic projects that develop their design and programming skills. Projects will include both passive and interactive components that will support the learning process. (New media freshman core or permission of instructor) Credit 4

2009-412 Dynamic Typography
This course will deal with design concepts related to moving type. The impact of type as it moves, rotates, explodes, scales and fades will be considered. Legibility of the message will be studied in relation to this movement. Students will learn how both two- and three-dimensional type can be manipulated in a time-based manner. (Completion of new media design sophomore core or permission of instructor) Credit 3

2009-413 Advanced 3-D Techniques
This course extends previous three-dimensional experience and skills to include advanced three-dimensional effects such as particles, volumetric textures such as fog, and the movement of three-dimensional objects using both fixed cameras and moving cameras. Gravity, wind, and inverse kinematics will also be considered. (Completion of new media design and imaging sophomore core or permission of instructor) Credit 3

2009-501 Dynamic Persuasion Design
An incorporation of commercial practices such as advertising, editorial design and editorial illustration with dynamic media. Dynamic media refers to the inclusion of any audio, video, and animation clips that are used in a project. Dynamic media greatly adds to the impact of the message being communicated. The point of message delivery will include the Web, CDs, kiosks, and video teasers and trailers. (Fourth-year new media design and imaging majors or permission of instructor) Credit 3

2009-502 Virtual Entertainment
A course dealing with design and gaming concepts, delivery systems and software for the entertainment industry. Working with two- and three-dimensional visual concepts, virtual reality, interactivity, and sound, the student will develop media for the entertainment industry. Environments, characters, gaming strategies, role-playing concepts, navigation and feedback will be part of the information presented within the course. (Fourth-year new media design and imaging majors or permission of instructor) Credit 3

2009-511 QTVR and Multimedia Design
This course extends previous multimedia and three-dimensional experience and skills to emphasize advanced multimedia applications using QTVR as a design tool to interactively explore and examine photo-realistic three-dimensional virtual worlds. Attention will be given not only to the mechanics of creating the movies but also to their design, relationship to the other visual elements, and visual communication effectiveness of the movies. (Fourth-year new media design and imaging major or permission of instructor) Credit 3

2009-516 Career Skills in New Media
This course is divided into two segments. The first centers on resume development, cover letters, interviewing practices, and portfolio options. The emphasis is on using your present level of experience to enter the job market. The second segment centers on the business and practice of design. This will encompass an overview of the designer/client relationship, design management, marketing, rights, and ethics. (Completion of new media design and imaging junior core) Credit 3

2009-522 Experimental New Media
The course will provide for an experimental approach to integrating content with new-media techniques and processes. Students will be encouraged to approach the computer as a medium of creativity to explore issues of narrative, identity, and place, loss of the original and visual reality. Students will also develop planning and organizational skills for experimental interactivity and imaging projects. (Completion of new media design and imaging junior core) Credit 3

2009-542 New Media Team Project I
The first course in a two-quarter sequence designed to engage the new media major in a capstone production experience. The instructor will form student teams that will design and complete new media projects sponsored by clients external to the class. (2009-511) Credit 4

2009-543 New Media Team Project II
The second course in a two-quarter sequence designed to engage the new media major in a “cap stone” production experience. Students continue to work on their new media group project until completion. Each group is required to test their product with a focus group and provide written feedback and analysis. (2009-542) Credit 4

2009-550, 551, 552, 553 Special Topics
Topics of current or special interest designed to broaden and intensify the students’ ability to use art and design as a mean of communication and expression. Credit variable 1–9

2010-211 Graphic Design
An introduction to basic computer software skills, terminology, and technology as they relate to raster-based computer-imaging software (such as Photoshop). This course provides the skills necessary to use drawing software relative to the design curriculum. The areas of file formats, software tools, image creation, and file output are covered. Credit 2

2010-212 Computer Skills: Raster Imaging
An introduction to basic computer software skills, terminology, and technology as they relate to raster-based computer-imaging software (such as Photoshop). This course provides the skills necessary to use drawing software relative to the design curriculum. The areas of file formats, software tools, image creation, and file output are covered. Credit 2

74 | College of Imaging Arts and Sciences
2010-216 Computer Skills: Vector Imaging
An introduction to basic computer software skills, terminology, and technology as they relate to vector-based computer drawing software (such as Freehand and Illustrator). This course provides the skills necessary to use drawing software relative to the design curriculum. The areas of file formats, software tools, image creation, and file output are covered. Credit 2

Prerequisite for all 300-level graphic design: foundation program or equivalent

2010-301 Elements of Graphic Design
Introduction to basic visual communication in the field of graphic design. Lectures will cover graphic design topics and information ranging from typographic terminology and design principles to methods of visual organization. Lectures will often be related to assignments that will be undertaken in the studio where hands on introduction to graphic design studio skills and practices will occur. Through formal studies and perceptual understanding, including aesthetics, graphic form and structure, concept development, and visual organization, students will design solutions to communication problems. Assignments will explore aspects of graphic imagery, typography, and layout. Students will refine their computer skills through applications requiring a digital format. Credit 3

2010-302 Typography I
Introduction to typography in visual communication. Lectures will cover typographic topics and information ranging from communication principles to methods of visual organization. During studio time students will design solutions to assigned communication problems, which will explore aspects of typography and layout as well as concept development and historical research. Students will refine their computer skills through applications requiring a digital format. Credit 3

2010-313 Typographic Design
This course introduces students to the fundamental principles of time-based graphic design, including forms of narrative, organizational methods, sequencing, composition, visual and motion variables, and the application of these principles to the solution of specific graphic design problems. Projects will include typographic components, storyboard planning and computer-based applications as they apply to graphic design problem solving. (2010-301, 2010-302, 2010-303) Credit 3

2010-363 Women Pioneers in Graphic Design
This course will center on the contributions made by key women designers to the history of graphic design. Emphasis will be placed on their design works, their design process, and the nature of their largely unheralded pioneering efforts. Course will involve lectures, video interviews, assignments, projects, and participatory classroom involvements. Students will utilize digital archival resources for research and study developed in conjunction with Wallace Library. Credit 3

2010-372 20th Century Editorial Design
This course will center on the development of editorial design in the 20th century with a focus on the time period from 1930 to 1950. Content will focus on the creators (artists, designers, photographers) and products (magazines, journals) in both a micro and macro view. The genre will include fashion, consumer, entertainment and business, and contemporary magazines. Course will involve lectures, video interviews, assignments, projects, and participatory involvements. Students will utilize digital archival resources for research and study developed in conjunction with Wallace Library. Credit 3

Prerequisite for all 400-level graphic design: sophomore graphic design courses or their equivalent, or permission of the instructor

2010-401 Typography II
Students expand their understanding of basic typographic principles through advanced applied problems focused on typography as the visual representation of language, typographic hierarchy, formal values (syntax) of letterforms, and the typographic grid as a principle organizing systems for providing meaningful structure. (2010-302, 2010-402) Credit 3

2010-402 Imagery in Design
Creative problem-solving experiences focus on the selection, generation, and use of imagery in graphic design. Design process skills are enhanced as students learn how to explore the dynamics of image content and meaning, composition, color, scale, cropping, manipulation, and the integration of imagery with typography. (2010-302) Credit 3

2010-403 Symbols and Icon Design
The focus of this course is on the principles, theory, and terminology of symbols (primarily pictographic, nonverbal graphic communication) symbol systems, marks of identity, and icon design for computer applications. Also emphasized are the inherent benefits and shortcomings of symbols, the application and use of symbols, and the evaluation or field-testing of graphic symbols to substantiate effectiveness. (Completion of sophomore graphic design core or equivalent) Credit 3

2010-404 Design for Publication
Students explore the underlying principles of grid theory, text and display typography, sequence, page layout, and type and image integration as they relate to a range of publication design applications such as instructional materials, brochures, magazines, books, etc. (Completion of sophomore graphic design core or equivalent) Credit 3

2010-405 Information Design
Information design is an area of graphic design concerned with understanding reader and user responses to written and visually presented information. These are highly utilitarian problems in which the functional requirements of design are critical in making data and information understandable and accessible to the user. Principles of language, structure, emphasis, diagrammatic interpretation and the visual display of information are explored in the context of applied problems. (Completion of sophomore graphic design core or permission of instructor) Credit 3

2010-410 Environmental Design
Challenging, applied problems introduce students to the basic functions of environmental graphic design: to assist users in negotiating or “wayfinding” through a space or environment; to identify, direct, and inform; to visually enhance the environment; and to protect the safety of the public. (Completion of sophomore graphic design core or permission of instructor) Credit 3

2010-412 Packaging Design
This course will focus on packaging design as an area of professional study within graphic design. Students will gain an understanding of meeting marketing objectives and creating promotional opportunities, as well as educating consumers in the protection, presentation and inventory management of products. Through hands-on projects, students will engage in field research, the construction of models, graphic solutions, and the execution of final prototypes. (Completion of junior graphic design core or equivalent) Credit 3

2010-471 History of Graphic Design
This course will be a thematic approach to graphic design history and provide a necessary historical basis for students in this major. The course will involve lectures on design history, pioneering designers, design from other cultures and countries, graphic design artifacts, and the historical context for this design. In addition to lectures, the course will involve guest speakers, videos, participatory exercises, discussion, and essay writing, which will build critical thinking skills. (Completion of sophomore graphic design major courses) Credit 3

Prerequisite for all 500-level graphic design: junior graphic design courses or their equivalent, or permission of the instructor

2010-501 Career Skills and Professional Practices
In this course, students will prepare resumes, cover letters; learn about interviewing techniques, and strategies to focus on their areas of interest as they prepare to enter the job market. Emphasis will be placed on learning about the various types of positions available to designers, the designer/client relationship, and professional ethics and expectations. Information about cooperative experiences and internships will be provided. (Completion of junior graphic design core or permission of instructor) Credit 2

2010-502 Corporate Design
This course provides an overview of corporate design as an integrated study within the field of graphic design. Past and present corporate design models will give students historical background as well as provide current and future trends. Corporate design analysis, as well as development, application, and implementation of identity-based projects will be explored. (Completion of junior graphic design core or permission of instructor) Credit 3
2010-503 Design History
To discover the fundamental ideas, form and design principles governing style in design and art movements. Required is the design of a prototype guidebook on style in a design or art movement. Each student will select one movement from the list provided and develop a work plan for the guidebook, which will involve a proposal and outline. Information gathering and research will be followed by copywriting and the collection of illustrations from the selected style. Copy and visuals will be integrated in a dummy sketch, which then will be developed and refined into a high quality comp for the book. The course will also include lectures, weekly presentations, and critiques. **Credit 3**

2010-504 Design Systems
Advanced problems in corporation research and development of concepts that lead to applied projects as related to visual design systems. Packaging systems, advertising, and promotional campaigns are some of the areas investigated. Human factors as related to consumer preferences and audience response are also integrated. Teamwork on projects is expected. (Completion of junior graphic design core or permission of instructor) **Credit 3**

2010-505 Advertising Design
Advanced creative problem-solving experiences relating to advertising design and developing a selling tool. Course content and projects include advertising assignments, ethics, research methodology, and production. Concept development and the use of imagery in advertising are stressed. (Completion of junior graphic design core or permission of instructor) **Credit 3**

2010-506 Concept and Symbolism
Advanced creative problem-solving experiences emphasize development of effective visual concepts and implementation. The focus is on innovation and application of creative concepts using visual symbolism for communicating specific messages to an audience/user. Areas such as promotion, advertising, and marketing are integrated into the projects. (Completion of junior graphic design core or permission of instructor) **Credit 3**

2010-507 Design for Marketing
This course deals with the relationship between marketing and graphic design. It is not a marketing course to teach professional marketing skills and practices but is directed at teaching the graphic designer basic skills and terminology. The goal is to bring into play marketing concepts with design practice, focusing on short and long term marketing and design projects. When possible, specific firms are contacted and engaged as clients/consultants. (Completion of junior graphic design core or permission of instructor) **Credit 3**

2010-511 Advanced Information Design
Advanced problems to further extend students’ knowledge and experience with complex information design issues. Problems include legal documents, business forms, diagrams, transportation maps, statistical information, charts, graphs and tables, instructional materials, way finding systems, and computerized information systems. (Completion of junior graphic design core or equivalent) **Credit 3**

2010-512 Introduction to Interactive Media Design
Students are introduced to the ideas, concepts, uses, and general principles of interactive media on the computer. Several forms of logic and how they can be used in this design process are explored. Included are several projects to develop the students’ understanding of software, logic, and aesthetic considerations in this field. Students are expected to complete assigned readings and projects. (Completion of sophomore graphic design core or permission of instructor) **Credit 3**

2010-513 Senior Projects
Advanced creative problem-solving experiences relating to visual communica-
tion imagery in the form of a self-designed project. This is based on a strong emphasis of formal design values and their utilization for the communication of ideas and information. The faculty mentor will review the project, and modifications may be made based on consultation with the student. The project may be thought of as a senior thesis project. (Completion of junior graphic design core) **Credit 3**

2010-514 Editorial Design
Explores the role of the graphic designer in developing an appropriate communicative editorial design. Students interpret and develop concepts for the author’s text and point of view for each assigned editorial article. Content includes the relationship and use of typography, imagery, and layout for editorial impact. Some sections of this course will work with the Editorial Photo class on assigned projects to experience the working relationship between the photographer and the designer, particularly in regard to editorial design. (Completion of junior graphic design core or permission of instructor) **Credit 3**

2010-518 Public and Social Service Design
Gives the graphic design senior professional experience developing and creating visual communications for nonprofit organizations. Through various community service agencies and in cooperation with the United Way Internship Program, students create design projects requiring skill and the ability to develop concepts through production, with emphasis on message content in relation to its audience. With guidance from the instructor, and by closely working with the organizations, students understand and experience client-designer relationships, budget limitations, and time and project management. (Graphic design senior or permission of instructor) **Credit 3**

2010-523 Senior Internship
This course exposes students to the professional environment through outside job opportunities in graphic design studios, advertising agencies, corporate communications departments and other acceptable organizations. Students will be working under the guidance of art directors, creative directors, senior graphic designers or marketing communication managers and performing creative work that is educational and meaningful for their short-term academic goals as well as their long-range career preparation. (Completion of junior graphic design core) **Credit 3**

2010-524 Portfolio Development and Presentation
The objective of this course will be to assist the student in developing a professional portfolio and learning how to best present the work contained therein. Evaluation of current work and assessment of strengths and weaknesses will determine the specific actions, revisions, or generation of new work that needs to be undertaken as part of this course. High presentation standards will be expected, as well as objective selection of work for meeting specific career expectations. (Completion of junior graphic design core) **Credit 3**

2010-527 Advanced Advertising Design
This course will explore the role of the graphic designer/art director in developing a comprehensive communication plan. All phases of marketing will be explored. Emphasis will be placed on effective communication of the client’s message and concept development. Advertising will be addressed in a broad context and the content of the course will include branding, positioning, and the execution of concepts. The course will also address the relationship and use of typography, photographic imagery, and layout for advertising impact. (Completion of junior graphic design major courses and 2010-505) **Credit 3**

2010-561 Introduction to Web Design
Students are introduced to the planning, design, and production of interactive projects that are Web-based. Web design concepts and methods in site design, page design, and graphic-user interface design will be explored. The course will include instruction in producing Web pages and creating interactivity with HTML and Web production software. (Completion of sophomore graphic design core and 2010-512) **Credit 3**

2010-562 Advanced Web Design
Students expand their understanding of Web design concepts and processes through advanced Web design projects, and continue to develop planning, design, and production skills for the Web. Advanced and dynamic methods in merging content and interactivity design are introduced. (Completion of junior graphic design core) **Credit 3**

2010-563 Creative Career Search
In this advanced course in career preparation, students will actively participate in projects, exercises and experiences aimed at identifying and interacting with potential employers including advertising agencies, design studios, publications and publishers, and corporations. Research methods, best practices in professional communications, negotiating compensation packages, and creative marketing will be investigated and utilized. Through hands-on studio projects and industry interaction, students will gain an intense and real-world introduction to the job search process within a creative industry. (2010-501, 2010-524) **Credit 3**

2010-567 Advanced Interactive Media
Students expand their understanding of interactive media design concepts and processes through advanced projects. Projects will include advanced concepts and techniques in interactivity design and interface design, and scriptwriting methods will be introduced. (Completion of junior graphic design core) **Credit 3**
Computer Graphics Design

2014-221 Introduction to 3DDG Modeling
This course is an introduction to the representation of form through modeling in three-dimensional software. The course focuses on the development of visual and verbal vocabulary as a means of exploring, developing, and understanding composition with digital geometry and in virtual spaces. Topics include the basics of lines, planes, contour, transforming lines into form, composing images with a software camera, interaction of light and surface color, perspective, resolution of geometry, and rendering. Perception and visual thinking are emphasized in the development of projects. Projects will include modeling organic and inorganic forms, composition with multiples, level of detail in the models, and creation of spaces. Structured assignments develop skills in concept generation, basic form making, and craftsmanship. (Corequisite 2014-231) Credit 4

2014-222 Introduction to 3DDG Materials
This course is an introduction to the development of surface materials in three-dimensional software, using basic concepts covered in Intro to 3DDG Modeling. Principles of additive and subtractive color are developed as they relate to the interpretation of physical phenomena within a virtual world. The vocabulary expands to include surface relief, specularity, transparency, and layering as they effect interaction with the quality, color and position lights on surfaces. Projects focus on using color, value and texture to enhance the representation of form. Concepts are introduced through lectures, discussions, demonstrations, research, assigned projects, and critiques. Assignments develop skills in surface design, development and craftsmanship. (2014-221; corequisite 2009-313) Credit 4

2014-223 Introduction to 3DDG Motion
Third quarter sequence course introduces students to the use of motion for a variety of applications. Projects include the use of motion to create models, creating motion cycles for games, mechanical motions, motion paths, motions driven by other parameters, developing motion graphics, procedural motion, creating visualization and simulations and developing of virtual worlds. Emphasis is placed on perception and visual thinking as well as composition images in motion. Students will work on a group project with an outside client, which may be a team of students writing a game engine or on a visualization or motion graphics project. Concepts are introduced through lectures, discussions, demonstrations, research, assigned projects, and critiques. Assignments develop skills in the use of motion and implied motion. (2014-221; corequisite 2014-233) Credit 4

2014-231 Technical Drawing
This companion course to the Introduction of 3DDG Modeling focuses on developing orthogonal and perspective drawings of organic and inorganic forms. Students learn 1, 2 and 3-point perspective drawing techniques as well as methods to develop plans, elevations and sections for objects and spaces. The projects in this course are coordinated with the projects in the Modeling course; students are developing ideas that they will implement in the Modeling course. Simultaneously they will develop a good sense of what is possible within the software and how they might adapt their design for successful completion. Concepts are introduced through lectures, discussions, demonstrations, research, assigned projects, and critiques. Structured assignments develop skills in concept generation, basic technical drawing, and craftsmanship. (Corequisite 2014-221) Credit 2

2014-233 Drawing Motion
Students learn methods for representing the motion of machine parts; Human and animal bodies are studied providing a solid understanding of bones, muscles and skin and how they move. Students learn to develop sequential images for texture maps. Methods of representing the motion of a camera within a frame are also included. The content of the course provides a foundation for many other courses within the curriculum and a general understanding of issues related to motion. Concepts are introduced through lectures, discussions, demonstrations, research, assigned projects, and critiques. Assignments develop skills and knowledge in the use of motion. (2014-223; corequisite 2083-206) Credit 3

2014-343 Flowcharts and Storyboards
This course helps students develop ideas about building sequences of images or motion. Students plan projects using flowcharts for the interaction and storyboards for short sequential elements like walk cycles for games. (2014-233, 2009-213) Credit 2

2014-356 3DDG Modeling
This course contrasts and compares various methods of creating geometry for use in three-dimensional environments including polygons, NURBS, patches, and subdivision surfaces for various purposes. Skills learned can be applied to creating elements for computer and video games, creating virtual environments or in visualization. Students have the opportunity to work on group projects and real world applications. Some models are designed and adapted for input into a game engine or VR software. (Sophomore standing and minimum 3.0 GPA) Credit 4

2014-361 3DDG Poly and Subdivision Modeling
This course provides extensive coverage of methods for modeling with polygons and subdivision surfaces. In addition students extend their knowledge of methods for laying out UVs for placing materials on polygonal shapes. With these techniques students create complex models of organic and inorganic forms using polygons and subdivision surfaces. (2014-356) Credit 4

2014-362 3DDG Shading
The course focuses on advanced techniques using shading networks to incorporate groups of two-dimensional and three-dimensional textures into realistic and non-photorealistic materials. Students learn to use texture maps instead of detail in models to increase interaction speeds. Textures are also used in order to incorporate simple models into complex scenes. Displacement textures are used to create detail in models. Use of elements in shading networks to control other attributes is covered. Use textures to simulate non-dynamic lights and shadows. Planning for the economical use of textures and for the replacement of models with texture maps in level of detail (LOD) situations will be addressed as well. (2014-356) Credit 4

2014-363 Digital Video: Multimedia
Students learn basic digital video shooting and editing along with supporting concepts including compression, resolution, integration of three-dimensional digital graphical elements and use of video within the three-dimensional environment. Credit 4

2014-366 3DDG Character Design
This course covers first the design of characters and then the creation of them using three-dimensional software, inverse kinematics, parent and rigid binding, and bone deformers. Students create interpretant matrices, model sheets, sketches, and maquettes of characters followed by development of the character in software. Characters are designed to be incorporated into motion graphics, games, or visualization. (2014-356) Credit 4

2014-367 3DDG Interactive Motion
This course covers the use of motion in interactive environments including motion graphics, games, visualization, and virtual reality. Students create motion using key frames, paths, deformation, forward, and inverse kinematics. Cyclical motion is created for integration into games and virtual environments. (2014-356) Credit 4

2014-368 3DDG Scripting
This course covers the use of scripts to control various aspects of three-dimensional environments, models, textures, production workflow and more. Students develop scripts to control particles, models, textures, motion, and interaction with the environment. (2014-356, 4009-210) Credit 4

2014-371 3DDG Lighting
Students apply standard lighting methods to lighting three-dimensional models and spaces. The interaction of light and pigment, use of light in painting, photography, film, and computer graphics are used as examples. Students apply problem-solving techniques to arrive at a lighting solution for various problems. Examine methods of integrating lighting into shaders for non-dynamic lighting. Methods of planning a lighting scheme for a larger project are addressed as well. (2014-356) Credit 4

2014-388 3DDG Rendering
This course covers a contrast and comparison of various methods and resolutions of rendering and outputting information from three-dimensional software for motion graphics, games, and visualization. Primary emphasis is placed on the use of radiosity and advanced rendering options as well as planning for the impact of production choices on rendering times and interactivity. (2014-356 or 2014-362) Credit 4

77 | College of Imaging Arts and Sciences
2014-396
3DDG Character Rigging
This course covers the design of characters and then the creation of them using three-dimensional software, inverse kinematics, parent and rigid binding, bone deformers, and modeling techniques for correct deformations. Students create interpretant matrices, model sheets, sketches, and maquettes of characters followed by development of the character in software. (2014-366) Credit 4

2014-411
Project Planning
The course builds on elements from a number of other courses. Students develop design documents, timelines, budgets, marketing plans and supporting material for potential projects. The projects designed may be used in the Intro to Production Pipeline course or as a Senior Thesis project, but that is not required. (Junior standing in digital studio) Credit 4

2014-432
Senior Thesis Assist
The course focuses on playing a supportive role in the development of a three-dimensional digital graphics project from the planning stage, through completion and presentation. Emphasis is placed in working as a team effectively and providing leadership in the individual role of the supportive teammate. (Junior standing in digital studio) Credit 4

2014-462
Level and Virtual World Design
In this course, students design levels for games or virtual worlds for a variety of applications. Once the design is complete, the design will be implemented using high-end three-dimensional software. In most cases the projects will be large and will be executed by teams of students. Versioning systems will be used to keep track of the most recently developed assets. (2014-356) Credit 4

2014-463
Introduction to Production Pipeline
This course focuses on implementing a three-dimensional digital graphics project in motion graphics, games or visualization from the planning stage through completion and presentation. (Junior standing and 2014-356) Credit 4

2014-468
3DDG Scripting
This course covers the use of scripts to control various aspects of three-dimensional environments, models, textures, production workflow and more. Students develop scripts to control particles, models, textures, motion, and interaction with the environment. (2014-356 and introduction to graphics programming experience) Credit 4

2014-469
Experimental Digital Workshop
The course focuses on implementing, advanced, newly developing ideas in three-dimensional computer graphics. The specific topic varies and is determined by the instructor. A specific course outline is provided each time the course is taught. Potential topics include the creation of interactive installations, game asset design, digital performances, cyber fashion, network art, locative media, scientific visualization, information visualization, or a focus on a particular designer. (2014-356 plus others as appropriate) Credit 4

2014-471
Motion Capture
This course covers the capture and use of motion capture data to control motion in computer graphics. Students create geometry designed to work in real time applications with the data collected or use characters that they have created in other courses. Students also use libraries of motion capture data and adapt it to their specific needs. (2014-356, 2014-468) Credit 2

2014-472
3DDG Curve and Patch Modeling
This course covers modeling techniques construction curves to generate NURBS patches. Techniques will include the construction of organic and inorganic forms using these techniques. Methods for controlling tangency between patches will be developed. Emphasis will be placed on developing sound topology for static and moving models. Additionally methods of using shading networks to control variations in the placement nodes, dirt maps and other material elements will be developed specifically for the special needs of patches. (2014-356) Credit 4

2014-473
Digital Design Seminar
A study of current issues relevant to digital graphics design and related media, how they relate to broader historical and cultural issues, and how they might suggest future directions. The central topic of the course will vary as defined by the instructor and will focus on a different issue, designer or development in the discipline. Topics will focus on work in the field, which might predict future directions or opportunities. A course outline will be provided each time the course is taught. Credit 2

2014-476
3DDG Motion Graphics
Students apply methods such as advanced lighting techniques, and perspective matching used for integrating three-dimensional graphics elements into photographic images, both still and moving. In most cases the project will involve the incorporation of three-dimensional typographical elements as well. (2014-356 and compositing experience) Credit 4

2014-478
3DDG Character Rigging
This course covers advanced rigging techniques using a variety of binding techniques, deformers, and animation controllers in addition to realistic rigging. Other types of rig, like toon rigs, will be implemented. (2014-356) Credit 4

2014-481
3DDG Autonomous Figures
This course covers the creation of autonomous figures with embedded artificial intelligence to be used in virtual worlds and simulations. (2014-366) Credit 4

2014-486
History of Computer Graphics
As a historical overview of computer graphics, this course will cover the development of digitally based graphics and imagery from its pre history to the present. It will touch on related technology and the growth of the computer industry. Major pioneers and their contributions will be reviewed. The course will trace the use of the digital technology in the creation of graphics for design, interactive media, animation, visualization and other applications. Credit 3

2014-511
3DDG Senior Thesis I
The course focuses on implementing a three-dimensional computer graphics project from the planning stage, through completion and presentation at the Senior Thesis level. (Senior standing in Digital Studio) Credit 6

2014-512
3DDG Senior Thesis II
The course focuses on the completion of a major three-dimensional computer graphics project from the planning stage, through completion and presentation. (Senior standing in Digital Studio) Credit 6

2014-513
Portfolio Development
The course focuses on implementing a three-dimensional computer graphics project from the planning stage, through completion and presentation at the Senior Thesis level. (Senior standing in Digital Studio) Credit 2

2015-215
Interior Design Freshmen Elective
Students will be given an overview of the field of interior design and an understanding of the educational requirements and expectations of the interior design major. The career options, required skills, and the creative process as they apply to the field of interior design will be presented through lectures, class discussions, design projects, and periodic interaction with professional designers. Credit 2

2015-222
Design Survey
Provides freshmen with an increased exposure to the fields of graphic design, industrial design, interior design, and new media. The class will provide students with an in-depth awareness of the role of design in society, and a designer’s ethical and social responsibilities. The course also describes how the design professions are related to one another, yet presents their distinct and differentiated aspects. Objectives include exposing students to a common vocabulary, increasing their awareness of the individual disciplines, and providing exposure to related contexts, philosophies, and issues. Credit 2

Prerequisites for 300-level interior design courses: foundation program or equivalent

2015-305
Architectural Drawing
An introduction to interior design through architectural drafting. Credit 3

2015-306
Perspective Rendering
An introduction to residential interior design and perspective rendering. Credit 3

2015-307
Introduction to Interior Design
An introduction to interior design with emphasis on basic processes, spatial relationships, and design conceptualization and development. Credit 3

2015-308
CADD Application
An introduction to the use of the computer as a tool in the interior design process. Use of the computer is required. Credit 3
2015-311 Model Building and Human Dimension
Introduction to design conceptualization through model building as well as exploration of the impact of human dimensions on interior space and the requirements of a diverse population of users. Credit 3

Prerequisites for 400-level interior design courses: sophomore interior design core or their equivalent, or permission of instructor

2015-404 Hospitality Design
The applications of design methods and skills to the design of interior space for hospitality use. (Completion of sophomore interior design core) Credit 3

2015-405 Applications of Color and Light
Introduction to color and light for spatial development. (Completion of sophomore interior design core) Credit 3

2015-406 Retail Design
Introduction to designing interior space for retail use. (Completion of sophomore interior design core) Credit 3

2015-407 Building Construction Systems
Introduction of building construction systems for interior design. (Completion of sophomore interior design core) Credit 3

2015-408 Office Design and Planning
Introduction to interior design and planning for office use. (Completion of sophomore interior design core) Credit 3

2015-409 Interior Design Specifications
Introduction to specifications with emphasis on planning, construction documents, finishes, fire safety and flammability, testing standards, and liability. In addition, the course introduces the use of sustainable materials and shows how materials affect the health and safety of building occupants. (Completion of sophomore interior design core) Credit 3

2015-411 Interior Design Elective
An elective offering basic instruction and involvement in design application projects. Each quarter concentrates on a specific topic of design study. Credit 3

Prerequisites for 500-level interior design courses: junior interior design courses or their equivalent, or permission of instructor

2015-504 Multiutility/purpose Design
The application of design methods and skills to professional-level projects in interior design. (Completion of junior interior design core) Credit 4

2015-505 Building Codes and Regulations
Application projects concerned with building codes, regulations, fire safety, public safety and health, barrier-free design, and the American with Disabilities Act. (Completion of junior interior design core) Credit 3

2015-506 Environmental Control Applications
Application projects involving plumbing, heating, ventilation, electrical, vertical transportation, and acoustic concerns. (Completion of junior interior design core) Credit 3

2015-507 Health Care Design
An introduction to designing interior space for health care use. The application of design methods and skills to professional-level projects focusing on health-care facilities. (Completion of junior interior design core) Credit 3

2015-508 Interior Design Business Practice
An introduction to professional practices with emphasis on business formation: design marketing, legal and ethical responsibilities. (Completion of junior interior design core) Credit 3

2015-509 Career Planning
Development of a resume and portfolio, as well as job-search techniques with a focus on career planning. (Completion of junior interior design core) Credit 2

2015-510 Working Drawings
Professional interior design projects with an emphasis on the construction sequence and construction documentation. (Completion of junior interior design core) Credit 4

2015-511 Special Projects
Special projects in interior design emphasizing communication skills, theory, and methods for the professional. (Completion of junior interior design core) Credit 3

Industrial Design

2035-215 Industrial Design Freshman Elective
Students will be given an overview of the field of industrial design and an understanding of the educational requirements and expectations of the industrial design major. Career options, required skills, and the creative process as they apply to the development of products, packaging, and systems within the field of industrial design will be presented through lecture, class discussions, design projects, and periodic interaction with professionals in the field. Credit 2

Prerequisites for 300-level industrial design courses: foundation program or equivalent

2035-306 Technical Drawing
An introduction to drafting in the field of industrial design. Emphasis is on the basic skills of orthographic drawing and dimensioning; and their application to accurate communication of designs. Credit 2

2035-307 Graphic Visualization
Sketching and rendering techniques are developed through exercises that also promote abilities to visualize three-dimensional forms in two-dimensional representations. Credit 3

2035-311 Modelmaking
An introduction to modelmaking in the field of industrial design. Course work emphasizes skills necessary for accurate, detailed three-dimensional design and development. Credit 2

2035-321 Graphic Visualization I
First of three sequential classes that develop the students’ ability to effectively generate, communicate, and present ideas graphically. This is accomplished through concept sketching, detailed perspective, storyboarding, layouts, and hybrid drawing using computer generated enhancements. Credit 2

2035-322 Graphic Visualization II
The second of three sequential classes that develop the students’ ability to effectively generate, communicate, and present ideas graphically. This is accomplished through concept sketching, detailed perspective, storyboarding, layouts, and hybrid drawing using computer generated enhancements. (2035-321) Credit 2

2035-323 Graphic Visualization III
The third of three sequential classes that develop the students’ ability to effectively generate, communicate, and present ideas graphically. This is accomplished through concept sketching, detailed perspective, storyboarding, layouts, and hybrid drawing using computer generated enhancements. (2035-321 and 2035-322) Credit 2

2035-331 Form I
The first of two classes that develop and utilize students’ ability to understand and organize design elements, form and space to meet specific human sensory responses through the creation and analysis of abstract relationships. Credit 2

2035-332 Form II
The second course of two that develop and utilize students ability to understand and organize design elements, form and space to meet specific human sensory responses through the creation and analysis of abstract relationships. (2035-331) Credit 2

2035-348 Sophomore Design Core
Introduction to design methodologies, processes, and research techniques. Credit 4

Prerequisites for 400-level industrial design courses: sophomore industrial design core or their equivalent, or permission of instructor

2035-405 Materials and Processes Applications
The acquisition of a technical and theoretical base in industrial design through a formal introduction to materials and processes. Credit 3

2035-406 Consumer Product Design I
The acquisition of a technical and theoretical base in industrial design. Application of communicative and problem-solving skills to comprehensive design projects involving form, processes, and materials. Design development of small products through sketches, quick study mock-ups, and finished form studies. (Completion of industrial design sophomore core) Credit 3
The study of style, fashion and graphics as they apply to product form, storage, through assigned exercises and creative projects. (2035-310 or permission of instructor)

Advanced computer modeling and rendering applications for the industrial designer. Emphasis on advanced skills and techniques necessary for accurate, detailed, three-dimensional design models and development of tools and equipment through sketches, mock-ups, and technical drawings to finished form studies. (2035-406) Credit 3

The application of communication and problem-solving skills to comprehensive design projects involving form, style, function, safety, processes and materials. Project emphasis on the consideration of style and fashion in determination of product form. (2035-406 and 2035-408) Credit 3

Advanced computer modeling and rendering applications for the industrial designer. The emphasis in this course is learning software tools competency through assigned exercises and creative projects. (2035-310 or permission of instructor) Credit 3

A study of the industrial design profession, designers, and designs from 1920 to the present. Students will analyze designs in terms of style, materials, production technology, ergonomics, and context. (2039-225, 2039-226, 2039-227 or permission of instructor) Credit 3

Advanced computer modeling and rendering applications for the industrial designer. The emphasis in this course is learning software tools competency through assigned exercises and creative projects. (2035-310 or permission of instructor) Credit 3

A study of modern furniture design and its most significant designers. Factors of style, materials, construction, and ergonomics are examined in the context of time, place, and purpose. (2039-225, 2039-226, 2039-227 or permission of instructor) Credit 3

A seminar in freehand sketching techniques using a combination of orthogonal, perspective and computer enhancement as a means of developing and communicating design concepts. (2035-321, 2035-322, 2035-323) Credit 2

A basic course for Industrial Design students in the application of graphic design methods, skills and terminology as related to product design and presentation. Utilizing graphic design principles and problem solving methods, students will gain practice in effective visual communication, and an understanding of the presentation skills and practices appropriate to product design. Credit 3

Advanced computer modeling and rendering applications for the designer. The emphasis in this course is learning higher software competency techniques for modeling complex, and difficult shapes through assigned exercises and creative projects. The objective is an understanding of the most efficient use of professionally preferred tools for electronic surface modeling in degree and higher B-spline curves and surfaces. (Alias Wavefront surface modeling at level or permission of instructor) Credit 3

Advanced model making emphasizes advanced skills and techniques necessary for accurate, detailed, three-dimensional design models and development. (2035-311, 2035-306, or permission of instructor) Credit 3

Advanced product development in conjunction with a corporate design program providing technical information, marketing concerns, and outside review of students' work. (Completion of junior industrial design core) Credit 3

Experience in the design of furniture for a defined market is acquired through a project exercise involving industry collaboration. (Completion of junior industrial design core) Credit 3

A review, and study of design practices, including contracts, agreements, billings, and business procedures. Resume, portfolio development and employment possibilities also are explored. (Completion of junior industrial design core) Credit 3

A special student-interest project in industrial design, usually focused on the areas of sports/recreation products or toys. (Completion of junior industrial design core) Credit 3

The application of design methods and skills to professional-level projects in industrial design. Emphasis is on techniques and competencies common to or expected in the commercial world. (Completion of junior industrial design core) Credit 3

Resume and portfolio completion with informational interviewing and employment advising. (Completion of junior industrial design core) Credit 3

Design of a toy or juvenile product in collaboration with industry representatives. Provides technical information, marketing opinions and professional review of work. (Completion of junior industrial design core) Credit 3

Design of packaging for the protection and marketing of goods. Aspects of visual, structural, ergonomic and environmental issues are considered in the design of rigid and flexible containers. (Completion of junior industrial design core) Credit 3

Design of trade show and similar exhibits involving structure, graphics, lighting, and layout of space. Students will develop concepts into a scale model for presentation. (Completion of junior industrial design core) Credit 3

School for American Crafts

Ceramics

Freshmen: Introduction to Ceramics
An introduction course with an overview of historical perspective, hands on projects and demonstrations, slide talks, introduction to vocabulary and terminology, and discussion of career opportunities. Credit 2

Ceramics Elective
An elementary course in design and techniques in ceramics. Each quarter different techniques are taught, including wheel, handbuilding glaze, and decorating. Materials fee required. Credit 3

Prerequisite for all 300-level courses: successful completion of foundation program or equivalent, or permission of instructor

Materials and Process of Ceramics Sophomore I
A course with concentration on the fundamentals of pottery making. The student will design and make utilitarian pottery, with emphasis on form, function and surface decoration. The student will primarily focus on high firing techniques. The students will also study clay materials and chemistry. Credit 6

Materials and Process of Ceramics Sophomore II
This course continues to focus on the fundamentals of working with ceramics. The emphasis is working within the vessel format. Primarily students will be working with handbuilding techniques. The students will work at a mid range firing temperature. In the course the student will also learn glaze calculation. (2040-301) Credit 6

Materials and Process of Ceramics Sophomore III
This course investigates the issues involved in ceramic sculpture. Students will primarily investigate issues of form and scale. The primary focus of firings will be low fire and raku techniques. In this course the student will also learn the fundamentals of kiln building and firing techniques. (2040-302) Credit 6
Aesthetics, personal voice and idea. There will be a strong emphasis on developing the student's own presentation. Materials fee required. (2040-402) Credit 6

Materials and Process of Ceramics Junior II
A course with continuing concentration of working with the vessel. Students will investigate their own methodologies of making and developing their ideas through using the vessel. There will be an emphasis on historical context and personal expression. (2040-401) Credit 6

Materials and Process of Ceramics Junior III
A course with continuing concentration of developing ceramic sculpture. Working on both large and small scale, and addressing the concepts of presentation. There will be a strong emphasis on developing the student's own aesthetics, personal voice and idea. (2040-401) Credit 6

Materials and Process of Ceramics Senior I
A course to begin to develop a senior thesis, this is a cohesive body of work centering on a singular theme agreed to by the student and his or her adviser. Students are required to develop their own clays, glazes, and firing methodology and will begin to research information for their written thesis. (2040-403) Credit 6

Materials and Process of Ceramics Senior II
Students will continue to develop their senior thesis studio work. There will be an emphasis on contemporary and historical context for this work, as well as personal glaze and firing development. Students will begin to address the written element of their thesis and developing a body of work for their senior thesis exhibition. (2040-501) Credit 6

Materials and Process of Ceramics Senior III
A course where the seniors' final written thesis exhibition is the culmination of their years work. (2040-502) Credit 6

Glass Elective
A survey course emphasizing cold, warm, and hot glass working processes as a means of personal expression and appreciation. A portion of the course is a basic investigation of the history, chemistry, techniques, and technical aspects of glass. Materials fee required. Credit 3

Prerequisite for all 300-level courses: successful completion of all sophomore level courses in ceramics

Materials and Process of Ceramics Junior I
A course with concentration on utilitarian ceramics, the fundamentals of pottery making. There will be a focus on the students developing their own aesthetic ideas and independent firing methodology. A continuation of technique development in ceramic making and firing. The students will also work on the connections of their work and ceramics art history. (2040-303) Credit 6 (F)

Materials and Process of Ceramics Junior II
A course with continuing concentration of working with the vessel. Students will investigate their own methodologies of making and developing their ideas through using the vessel. There will be an emphasis on historical context and personal expression. (2040-401) Credit 6

Materials and Process of Ceramics Junior III
A course with continuing concentration of developing ceramic sculpture. Working on both large and small scale, and addressing the concepts of presentation. There will be a strong emphasis on developing the student's own aesthetics, personal voice and idea. (2040-401) Credit 6

Materials and Process of Ceramics Senior I
A course to begin to develop a senior thesis, this is a cohesive body of work centering on a singular theme agreed to by the student and his or her adviser. Students are required to develop their own clays, glazes, and firing methodology and will begin to research information for their written thesis. (2040-403) Credit 6

Materials and Process of Ceramics Senior II
Students will continue to develop their senior thesis studio work. There will be an emphasis on contemporary and historical context for this work, as well as personal glaze and firing development. Students will begin to address the written element of their thesis and developing a body of work for their senior thesis exhibition. (2040-501) Credit 6

Materials and Process of Ceramics Senior III
A course where the seniors' final written thesis exhibition is the culmination of their years work. (2040-502) Credit 6

Glass Elective
A survey course emphasizing cold, warm, and hot glass working processes as a means of personal expression and appreciation. A portion of the course is a basic investigation of the history, chemistry, techniques, and technical aspects of glass. Materials fee required. Credit 3

Prerequisite for all 300-level courses: successful completion of foundation program or equivalent or permission of instructor

Materials and Processes of Glass: Sophomore I
This class will introduce the student to grinding, polishing, lamination, and adhesives. Basic solid and blown hot forming will be covered. The student will acquire practical experience with the operation and maintenance of all cold and hot working equipment in the shops. Materials fee required. Credit 6

Materials and Processes of Glass: Sophomore II
This class will continue exploring hot and cold glass techniques. Basic color and bit application in molten glass working will be covered. Sand carving and step blasting will be part of this class as students create works for the final presentation. Materials fee required. (2041-301) Credit 6

Materials and Processes of Glass: Sophomore III
The class will introduce the student to techniques of painting and reverse painting on solid, blown, and plate glass. Paradise paints, enamels, and polymers will be used as painting mediums for artistic exploration and decorative purposes. Construction and use of plaster molds for blown glass will be introduced as a way to create sculptural elements for a final project. Materials fee required. (2041-302) Credit 6

Materials and Processes of Glass: Junior II
Utilizing the Corning Museum of Glass study collection and the museum's Rakow Research Library; students will develop a body of work that reflects their specific interests with glass. Students may select a concept from the following or develop an alternative topic: glass equipment construction, building a studio, public commissions, developing a production series, industrial design for glass, colored glass chemistry, creative resource for a sculpture, art education, and the gallery. The student will make a formal presentation related to the selected research topic. Materials fee required. (2041-401) Credit 6

Materials and Processes of Glass: Junior III
Utilizing The Corning Museum of Glass study collection and the museum's Rakow Research Library; students will develop a body of work that reflects their specific interests with glass. Students may select a concept from the following or develop an alternative topic: glass equipment construction, building a studio, public commissions, developing a production series, industrial design for glass, colored glass chemistry, creative resource for a sculpture, art education, and the gallery. The student will make a formal presentation related to the selected research topic. Materials fee required. (2041-402) Credit 6

Prerequisite for all 500-level courses: successful completion of all junior level courses in glass

Materials and Process of Glass: Sophomore I
Independent work produced during this quarter will be of an exploratory nature. Working with the instructor, students will identify concepts for senior-level research based on individual interests and visual exploration. Preparation for graduation, including a written thesis, portfolio presentation, artist's statement, and senior exhibition will be a part of this course. Materials fee required. (2041-403) Credit 6

Materials and Process of Glass: Sophomore II
Information developed during the previous course will serve as a foundation for in-depth research to be developed during this quarter. A statement describing the nature and intent of the thesis is required before week two of this term. Students will refine and develop a body of work for the senior exhibition and will submit initial draft of the thesis at the end of this quarter. Materials fee required. (2041-501) Credit 6

Materials and Process of Glass: Sophomore III
Students will conclude their senior year with a solo exhibition of their creative work. The specifics of the exhibition including location, installation, opening, invitation announcement, and mailing list will be developed by the senior student. Written thesis, 20-slide portfolio, artist's statement and resume will be presented to the department head before graduation. Alternative or additional prerequisites may be required depending on the individual's thesis. Materials fee required. (2041-502) Credit 6

Materials and Process of Glass: Junior I
The class will introduce the student to sand casting, pate de verre, lost wax casting, billet casting, and gravity casting. Alternative forms of model building, mold making with clay, and wax for casting glass are part of this course. Annealing cycles and the use of the oven controls will be utilized as the student develops solutions to casting problems. Students will explore the history of glass. In Glassblowing, Copal pick-up, and other techniques involving pre formed blanks or elements will be taught. There will be an emphasis on teamwork and experimentation with new techniques. Options for problem solving include mixed media sculpture and the vessel. Materials fee required. (2041-303) Credit 6

Materials and Process of Glass: Junior II
Utilizing the Corning Museum of Glass study collection and the museum's Rakow Research Library; students will develop a body of work that reflects their specific interests with glass. Students may select a concept from the following or develop an alternative topic: glass equipment construction, building a studio, public commissions, developing a production series, industrial design for glass, colored glass chemistry, creative resource for a sculpture, art education, and the gallery. The student will make a formal presentation related to the selected research topic. Materials fee required. (2041-402) Credit 6

Prerequisite for all 400-level courses: successful completion of all sophomore level courses in glass
Metals

2042-215 Freshmen: Introduction to Metals/Jewelry
This is an introductory course designed to expose the beginning student to the basics and fundamentals of metals/jewelry field as a career path in the field of contemporary crafts. Slide lectures, technical demonstrations, field trips, hands-on experience, and critiques will be used. Credit 2

2042-251, 252, 253, 254 Metals Elective
An elective course providing an opportunity for introductory study in metals in the area of either holloware or jewelry. Materials fee required. Credit 3

Prerequisite for all 300-level courses:
successful completion of foundation program or equivalent or permission of instructor

2042-301 Materials and Processes of Metals: Sophomore I
This class will introduce the student to basic jewelry hand tools. Ferrous and non-ferrous metals, their composition and working priorities will serve as the primary topics covered. Materials fee required. Credit 6

2042-302 Materials and Processes of Metals: Sophomore II
This class will introduce the student to basic machine skills, silver soldering, and gem setting. Materials fee required. (2042-301) Credit 6

2042-303 Materials and Process of Metals: Sophomore III
This class will introduce the student to basic forming skills for holloware, flatware, and jewelry. Materials fee required. (2042-302) Credit 6

Prerequisite for all 400-level courses:
successful completion of all sophomore level courses in metals

2042-401 Materials and Processes of Metals: Junior
This class will introduce the student to advanced properties of gold as a material, as well as advanced casting and mold-making techniques. Materials fee required. (2042-303) Credit 6

2042-402 Materials and Processes of Metals: Junior
This course introduces jewelry and holloware rendering, chasing and repoussé, and tool making. Materials fee required. (2042-401) Credit 6

2042-403 Materials and Processes of Metals: Junior
This course introduces jewelry and holloware design and production through the use of kumboo overlay technique and acid etching. Materials fee required. (2042-402) Credit 6

Prerequisite for all 500-level courses:
successful completion of all junior level courses in metals

2042-501 Materials and Processes of Metals: Senior I
This course concentrates on holloware design and production through introducing spinning, advanced holloware techniques, and rendering. The design and compiling of a professional resume is also a requirement. Materials fee required. Materials fee required. (2042-403) Credit 6

2042-502 Materials and Processed of Metals: Senior II
This course introduces advanced gem setting and identification, gemstone anatomy, and jewelry mechanisms. Students also begin to pursue the issue of career opportunities by involving themselves in contacting potential employers in a “job search” seminar. Materials fee required. (2042-501) Credit 6

2042-503 Materials and Processes of Metals: Senior III
This course provides the student with individual research in technique and design. The third quarter senior level students are encouraged to assemble a group show of their four year’s work; complete a job search, and a professional portfolio including resume, photography, and renderings. Materials fee required. (2042-502) Credit 6

Textiles

2043-251, 252, 253, 254 Textile Elective
A basic course in design and techniques in textiles. Each quarter a different area of study is undertaken in quilt making, natural basketry, crochet, soft sculpture or other non-loom textile processes. Materials fee required. Credit 3

Wood

2044-215 Freshmen: Introduction to Woodworking and Furniture Design
This course is designed to introduce the beginning student to the field of woodworking and furniture design. There will be hands-on involvement with the material as well as a look at career opportunities for a contemporary woodcrafter. Slide talks, technical demonstrations, field trips, design and design review will be some of the ways we experience this area first-hand. Due to safety reasons, no students may, for any reason, miss the first class. Credit 2

2044-251, 252, 253, 254 Wood Elective
A non-sequential, elementary course in designing and building wooden projects such as a tray, small box, or small table. More choice of projects is afforded students who take the course for a second or third quarter. Materials fee required. Due to safety reasons, no student may, for any reason, miss the first class. Credit 3

Prerequisite for all 300-level courses:
successful completion of foundation program or equivalent or permission of instructor

2044-301 Materials and Processes of Wood: Sophomore I
This is the first of a three-quarter sequential class covering the fundamental techniques and aesthetics of woodworking. Topics covered include the care and use of hand tools, wood as a material, its basic properties, basic joinery, fundamental techniques of wood fabrication, and finishing. The course includes a machine maintenance program. Materials fee required. Credit 6

2044-302 Materials and Processes of Wood: Sophomore II
This is the second of a three-quarter sequential class covering the fundamental techniques and aesthetics of woodworking. Topics covered include the continued care and use of hand tools, and the introduction of power equipment. Basic joinery and fundamental techniques of wood fabrication are continued using both hand and power equipment, and additional finishing techniques are studied. The course includes a machine maintenance program. Materials fee required. (2044-301) Credit 6

2044-303 Materials and Processes of Wood: Sophomore III
This is the third of a three-quarter sequential class covering the fundamental techniques and aesthetics of woodworking. Topics covered include the continued care and use of hand tools, and the further introduction of power equipment. Basic joinery and fundamental techniques of wood fabrication are continued using both hand and power equipment, and additional finishing techniques are studied. The course includes a machine maintenance program. Materials fee required. (2044-302) Credit 6

2044-321 Wood Carving Elective
This is a non-sequential, elementary course in designing and building wooden projects such as a tray, small box, or small table. More choice of projects is afforded students who take the course for a second or third quarter. Materials fee may be required. Credit 2

Prerequisite for all 400-level courses:
successful completion of all sophomore level courses in wood

2044-401 Materials and Processes of Wood: Junior I
This is the first of a three-quarter sequential class covering the intermediate techniques and aesthetics of woodworking. This course addresses issues surrounding the design and construction of a chair with regards to aesthetics, ergonomics, structure (geometry, triangulation), materials, etc. The course includes a machine maintenance program. Materials fee required. (2044-303) Credit 6

2044-402 Materials and Processes of Wood: Junior II
This is the second of a three-quarter sequential class covering the intermediate techniques and aesthetics of woodworking. This course addresses the issues of source material used for inspiration in the design process. It requires the investigation and selection of specific source material to be used to design a specific piece of furniture. Additional techniques are also included. The course includes a machine maintenance program. Materials fee required. (2044-401) Credit 6

2044-403 Materials and Processes of Wood: Junior III
This is the third of a three-quarter sequential class covering the intermediate techniques and aesthetics of woodworking. This course addresses the issues of large, solid, wood carcass construction, as well as multiple drawer construction, through the design and construction of a chest of drawers. Additional techniques are also included. The course includes a machine maintenance program. Materials fee required. (2044-402) Credit 6
2045-501 Introduction to Film Production
This introductory ceramics course combines wheel throwing and handbuilding techniques with clay. Through a variety of forming methods, students will learn about making all kinds of ceramic objects. Slide lectures will support and introduce projects. Materials fee required. May be taken more than once for credit. Credit 2 per quarter

2045-502 Digital Video for Multimedia
Digital video technology democratizes creative moving image editing and manipulation. Broadly, the goal of this course is to teach the basic craft of filmmaking using the most current available digital software/hardware tools. Students will be expected to complete several shooting and editing exercises as well as produce two finished productions.

2045-503 Operating a Business in the Crafts
This course combines technical information in motion picture exposure and editing with a theoretical and practical approach to motion picture continuity. Production is in 16mm (non-sync) format. Students furnish film, tape and processing. Equipment is furnished by SOFA school.

2045-504 Story and Structure
A discipline specific introductory course designed to introduce first year students to the meaning of “story”; the components of a story, approaches to film structure, and the variety of expressions that a film can take.

2045-505 Film Language
A screenings, readings, and writing course designed to give students the opportunity to trace the development of the techniques and forms of communication in what now constitutes the classic cinema.

2045-501 Materials and Processes of Wood: Senior I
This is the first of a three-quarter sequential course covering the advanced techniques and aesthetics of woodworking. This course addresses aspects of woodworking. Students may wish to pursue after graduation. Students select from a menu of topics: jigs and fixtures (shaper, router, etc.), industry-related series production, outdoor, site specific, multiple seating, multimedia, and sculpture. They then develop a proposal for a body of work that may span more than one quarter. Students may select more than one topic. The course includes a machine maintenance program. Materials fee required. (2044-403) Credit 6

2045-502 Materials and Processes of Wood: Senior II
This is the second of a three-quarter sequential course covering the advanced techniques and aesthetics of woodworking. This course addresses aspects of woodworking students may wish to pursue after graduation. Students select from a menu of topics: jigs and fixtures (shaper, router, etc.), industry-related series production, outdoor, site specific, multiple seating, multimedia, and sculpture. They then develop a proposal for a body of work that may span more than one quarter. Students may select more than one topic. The course includes a machine maintenance program. Materials fee required. (2044-501) Credit 6

2045-503 Materials and Processes of Wood: Senior III
This is the last of a three-quarter sequential course covering advanced techniques and aesthetics of woodworking. This course addresses aspects of woodworking students may wish to pursue after graduation. Students select from a menu of topics: jigs and fixtures (shaper, router, etc.), industry-related series production, outdoor, site specific, multiple seating, multimedia, and sculpture. This represents a continuation of the body of work begun in a previous quarter. Students may select more than one topic. The course includes a machine maintenance program. Materials fee required. (2044-502) Credit 6

General Crafts Studies

2045-311 Concept Drawing
Freehand concept sketching technique for the crafts major. Credit 3

2045-312 Crafts Technical Drawing
Course covers basic drafting technique as it is used for both design and presentation. Topics covered include use of instruments, lettering, standard conventions, dimensioning, basic layout techniques and formats, orthographic projection, sectioning, auxiliary views, axonometric drawings, measured perspective, comprehensive working drawings, and presentation techniques. Credit 3

2045-313 Crafts Drawing-CADD
Course covering introduction to basic computer assisted drafting and design (CADD) technique as it is used for both design and presentation. Topics covered include introduction to the computer, basic CADD issues, two-dimensional drafting, the three-dimensional environment, associative views, generating working drawings, printing, and plotting. Credit 3

2045-311 Planning a Career in the Crafts
One of three courses covering topics commonly associated with the operation of a small business in fields related to the fine and applied arts. This course covers career assessment, qualitative and quantitative evaluation and assessment of potential career paths through the development of a comprehensive business plan, and employment options. The course includes lectures, group discussions, independent study, studio and business visits, homework, papers and reports, and oral presentations. Credit 3

2045-312 Crafts Promotional Package
One of three courses covering topics commonly associated with the operation of a small business in fields related to the fine and applied arts. This course addresses promotional issues including portfolio, photography, resume writing, business cards and stationery, marketing, and client relations. Students will create their own comprehensive promotional package. The course includes lectures, group discussions, independent study, studio and business visits, homework, papers and reports, and oral presentations. Credit 3

2045-313 Operating a Business in the Crafts
One of three courses covering topics commonly associated with the operation of a small business in fields related to the fine and applied arts. This course addresses day-to-day business operations including; marketing, contracts and other legal issues, record keeping, banking, insurance, taxes, employees, and location and layout of a business. The course includes lectures, group discussions, independent study, studio and business visits, homework, papers and reports, and oral presentation. This course is required for all School of American Crafts BFA seniors. Credit 3

School of Film and Animation

2065-201 Introduction to Film Production
A fundamental course in 16mm non-synchronous film production. Filmmaking is presented as a means of interpretation and expression. This course combines technical information in motion picture exposure and editing with a theoretical and practical approach to motion picture continuity. Production is in 16mm (non-sync) format. Students furnish film, tape and processing. Equipment is furnished by SOFA school.

2065-202 Digital Production I
A foundation course in editing theory and practice for motion pictures. Emphasis is on identification and concerns of a variety of approaches to the edited image. The student edits S-Digital format projects designed to address specific editorial concerns. Students provide materials; equipment is furnished by the school SOFA.

2065-203 Digital Production II
This is the third course of three for freshmen film/video students. It introduces the nature and importance of the sound component in creating cinematic works. Students are exposed to a variety of possible treatments of sound using historical and contemporary examples in cinema. Students engage in the creation of soundtracks that are rich, complex, and meaningful. They learn the processes, equipment, and techniques, as well as creative and efficient strategies for multi-track soundtrack creation for both film and video. This course is essential for students of the film/video curriculum who must be able to create not only images but also mature and appropriate soundtracks for their film and video works. Also essential for students who wish to pursue sound-related careers in film and video. (2065-201 and 2065-202) Credit 4

2065-206 Story and Structure
A discipline specific introductory course designed to introduce first year students to the meaning of “story”; the components of a story, approaches to film structure, and the variety of expressions that a film can take. Credit 2

Ceramics
2045-201 Ceramics
This introductory ceramics course combines wheel throwing and handbuilding techniques with clay. Through a variety of forming methods, students will learn about making all kinds of ceramic objects. Slide lectures will support and introduce projects. Materials fee required. May be taken more than once for credit. Credit 2 per quarter

2045-206 Metals/jewelry
Emphasis on basic jewelry-making techniques involving sawing, filing, soldering, hand and machine-finishing, simple stone setting, and more. Design is stressed throughout the course. Materials fee required. May be elected more than once for credit. Credit 2 per quarter

School of Film and Animation

2065-201 Introduction to Film Production
A fundamental course in 16mm non-synchronous film production. Filmmaking is presented as a means of interpretation and expression. This course combines technical information in motion picture exposure and editing with a theoretical and practical approach to motion picture continuity. Production is in 16mm (non-sync) format. Students furnish film, tape and processing. Equipment is furnished by SOFA school. Credit 4

2065-202 Digital Production I
A foundation course in editing theory and practice for motion pictures. Emphasis is on identification and concerns of a variety of approaches to the edited image. The student edits S-Digital format projects designed to address specific editorial concerns. Students provide materials; equipment is furnished by the school SOFA. (2065-201) Credit 4

2065-203 Digital Production II
This is the third course of three for freshmen film/video students. It introduces the nature and importance of the sound component in creating cinematic works. Students are exposed to a variety of possible treatments of sound using historical and contemporary examples in cinema. Students engage in the creation of soundtracks that are rich, complex, and meaningful. They learn the processes, equipment, and techniques, as well as creative and efficient strategies for multi-track soundtrack creation for both film and video. This course is essential for students of the film/video curriculum who must be able to create not only images but also mature and appropriate soundtracks for their film and video works. Also essential for students who wish to pursue sound-related careers in film and video. (2065-201 and 2065-202) Credit 4

2065-206 Story and Structure
A discipline specific introductory course designed to introduce first year students to the meaning of “story”; the components of a story, approaches to film structure, and the variety of expressions that a film can take. Credit 2

2065-216 Fundamentals of Computer and Imaging
This course will give students basic knowledge in the theory and practice of computer hardware and software. Operating systems including Mac, Windows, and Unix will be described. Networking for e-mail, file transfer, and Web will be studied. Basic theory of imaging and compression technology for pictures, movies, and sound will be covered. File formats and disk formats for internal and removable media will be examined. Credit 3

2065-217 Digital Video for Multimedia
Digital video technology democratizes creative moving image editing and manipulation. Broadly, the goal of this course is to teach the basic craft of filmmaking using the most current available digital software/hardware tools. Students will be expected to complete several shooting and editing exercises as well as produce two finished productions. Credit 4

2065-221 Materials and Processes of the Moving Image
Familiarizes students with the basic technical concepts of film and video making. Students gain an understanding of the technical theory required to work in these media. (2065-216) Credit 2

2065-222 Film Language
A screenings, readings, and writing course designed to give students the opportunity to trace the development of the techniques and forms of communication in what now constitutes the classic cinema. Credit 4
2065-231 Film and Video Materials and Technology
This course provides a fundamental treatment of photographic processes beginning with the nature of light and light sensitive materials (silver halide film, CCD/CMOS) that are used in motion imaging. Chemical concepts of equilibrium, reactivity, and kinetics within photographic systems will be examined. Exposure and color balance control will be explored. Fundamental technological principles in camera and projection systems will be discussed. Light-sensitive emulsion chemistry and formulation, latent image theory and the associated dynamic processes, as well as development to form color images will be treated. Fundamentals of solid state and digital imaging processes such as telecine and digital projection systems will be explored. A laboratory section will emphasize the application of concepts covered in lectures. Credit 4

2065-263 Single-Frame Motion
This class is intended to give students a thorough, intuitive understanding of animation motion. Emphasis will move towards hands on exercises without the demands of finished production. Image capture and playback technologies will be immediate so students will see the results of their efforts quickly. The assignments will direct students to shoot pixillation, animation of real objects, cutouts, and pre-made puppets. Credit 2

2065-316 Production Processes
An introduction to all aspects of professional narrative production. Students produce short projects while learning basic shooting and crewing procedures and protocol, equipment handling, and maintenance. (2065-202) Credit 5

2065-319 Production Workshop: Documentary
Students produce short documentary projects in either 16mm film or video, depending on their prerequisites. Or with consent of instructor, students may work in any medium appropriate to their experience and resources. Students are encouraged to experiment with individual style and while producing their own work also serve as a part of a production planning team and production crew for all other projects. Students complete projects for presentation at SoFA public screenings. (2065-203, 2065-316) Credit 4

2065-322 Lighting for Movement
This workshop is designed to explore creative and technical ways to use lighting to bring a scene ‘to life’ in the two-dimensional medium of film or video. Proper utilization of a set requires the actors to move within that space, yet the placement of the lighting instruments along with the quality of light is a very complex task. This course will introduce and enhance these skills. (2065-466) Credit 4

2065-324 Live-Action Pre-production
Students will learn the basic pre-production techniques for narrative fiction, experimental, and documentary filmmaking. Students will also prepare a pre-production binder in a genre of their choice to be used in an actual production. Course requires a prepared script or proposal. (2065-205) Credit 3

2065-327 Advanced Production Workshop: Experimental I
Students produce short projects as experiments in concept, style, or technology and are encouraged to take risks, break “rules” and explore their own unique creative potential without fear of grade punishment for being different. Students may work in either film or video, depending on their pre-requisites. Or with consent of the instructor, students may work in any medium appropriate to their experience and resources, such as still photo, painting, animation, comic strip, performance, radio or multimedia. While producing their own work students also serve as part of a production planning team and production crew for all other projects. Students complete projects for presentation at SoFA public school screenings. (2065-203 or 2065-217329 or 2065-319 or 2065-339 or permission of instructor) Credit 4

2065-328 Advanced Production Workshop: Experimental II
Students produce short projects as experiments in concept, style, or technology and are encouraged to take risks, break “rules” and explore their own unique creative potential without fear of grade punishment for being different. Students may work in either film or video, depending on their pre-requisites. Or with consent of the instructor, students may work in any medium appropriate to their experience and resources, such as still photo, painting, animation, comic strip, performance, radio, or multimedia. While producing their own work students also serve as part of a production planning team and production crew for all other projects. Students complete projects for presentation at SoFA public school screenings. (2065-327) Credit 4

2065-329 Production Workshop: Experimental
Students produce short projects as experiments in concept, style, or technology and are encouraged to take risks, break “rules” and explore their own unique creative potential without fear of grade punishment for being different. Students may work in either 16mm film or video, depending on their pre-requisites. Or with consent of instructor students may work in any medium appropriate to their experience and resources such as: still photo, painting, animation, comic strip, performance, radio, or multi-media. While producing their own work, students serve as production planning team and production crew for all other projects. Students complete projects for presentation at SoFA public school screenings. (2065-316 and permission of instructor) Credit 4

2065-331 Introduction to Animation I
This class is a survey of basic techniques and aesthetics of animation and provides training and practical experience in a wide variety of approaches to single-frame motion picture production. Emphasis will be placed on developing timing skills. Students produce a number of short film exercises utilizing cutout, paint and draw animation as well as direct animation. Extensive film screenings illustrate each technique and related aesthetics. (JPHQ or JPHF major or consent of instructor) Credit 4

2065-332 Advanced Animation Tools
This course in animation techniques and tools provides the student with the training and practical experience necessary for independent operation of animation equipment and the independent production of animated film. A variety of traditional and experimental techniques are explored in depth. These techniques include animation stand as well as three-dimensional animation execution. Students work independently and in group situations, and participate in all phases of animated film production. Students have the opportunity to explore mixed technique approaches, as well as utilize their experiences in photography, graphic arts, painting, sculpture, and other backgrounds and skills. Screenings of films illustrate a variety of different techniques, styles, and production concerns and practices. Proficiency in drawing is not required. (2065-331, course not offered every year) Credit 4

2065-333 Animation Production
This workshop provides practice in all phases of single-frame film production. Students conceive and produce a short film with sound. Weekly meetings will discuss and critique the progress and merits of then work in progress and the final work. Students will rely only on techniques learned in previous classes. Final film must be screened for the school community. (2065-352) Credit 4

2065-339 Production Workshop: Fiction
In this course students will produce short fiction projects in either 16mm film or video or HD, depending on their pre-requisites, or with consent of instructor. Students may work in any medium appropriate to their experience and resources such as: still photo, painting, animation, comic strips, performance, radio, or multi-media. Students are encouraged to experiment with individual style and while producing their own work also serve as part of a production planning team and production crew for all other projects. Students complete projects for presentation at the SoFA public screenings. (2065-316) Credit 4

2065-342 Scriptwriting I
This course is the first in a series of courses on the writing of scripts for theatrical and nontheatrical films and television. This course introduces students to the forms and techniques of writing for dramatic media, including a brief introduction to writing for experimental and documentary films. Throughout the course, students keep a creative journal of ideas and characters to be used in story development. Students are responsible for writing a short film or television script of their own choosing and for completing several brief written exercises in areas such as personal storytelling, character development, dialogue, and plot. (2065-206) Credit 3

2065-343 Scriptwriting II
This course is the second in a series of courses on the writing of scripts for theatrical and nontheatrical films and television. The class focuses on the scene as the basis of dramatic structure and offers students the opportunity to hone the skills developed in the previous class. Students are responsible for writing a film or television script on a subject of their own choosing and for completing several brief written exercises in areas such as character, dialogue, suspense, subtext, and plot. Class discussion is based on assigned readings, in-class exercises, and in-class reading of student work. (2065-342) Credit 3
2065-344 Post-Production Process
This course is designed to teach students the professional workflow of handling digital film and video files through the complex post production process. Areas of study include learning a cinema file database, media management, color correction, HD compositing, visual and time base effects, sound processing and tracking building, and titling and graphics. (2065-316) Credit 4

2065-345 Acting for Film and Video
A course in basic acting, technique with emphasis on the special problems peculiar to film and video production. The class is taught in conjunction with Directing the Actor (2065-347). Class meetings are organized around the presentation of scenes prepared by student actors and directors. (Film and Animation majors; requires permission of the instructor) Credit 3

2065-347 Directing the Actor
A course in basic directorial techniques with emphasis on the special problems peculiar to film and video production. Class meetings are organized around the presentation of scenes prepared by student directors. (Film and Animation majors; requires permission of the instructor) Credit 3

2065-350 Figure Drawing: Animation
A studio figure drawing class suited specifically to the needs of character animators. (Film and Animation majors; requires permission of the instructor) Credit 3

2065-351 Underwater Cinematography
This course is designed to prepare students to professionally complete cinematography assignments in an underwater environment. To accomplish this, the student will complete basic scuba diving training and achieve scuba diving certification. The student will become familiar with underwater video camera housings and accessories and basic underwater shooting techniques. A facility fee covers all equipment, off campus facility use, texts and insurance. (2065-316) Credit 4

2065-352 Animation Pre-Production
Students collect and produce short film ideas and learn to express them in a variety of methods. Short film scripts will be written in a workshop setting and shared with class in critiques. Students will learn how to create digital sound tracks and read digital sound. Students will make animation Bar Sheets for sound/image relationships and timings and Exposure Sheet design. Students will also work with storyboards scanned into the computer and manipulated in time with sound as Animatics as another tool for initializing animation production. (2065-331) Credit 4

2065-353 Camera Choreography
This workshop is designed to explore creative ways to bring a scene ‘to life’ in the two-dimensional film medium. Composition, perspective, camera operation and movement will be studied. These skills will be appropriate for all students studying directing, cinematography, editing and animation. (2065-316) Credit 4

2065-354 Business of Film and Video
Examines the business aspects of designing, developing, and producing film/video projects. Emphasis is on development of production projects with interactive problem-solving experiences, in which the instructor and students work as a production team. Special attention is given to script development techniques, estimation and management of production costs, location productions, live broadcasts and the cost/quality considerations of film/video production. Specific issues and situations are used as exercises for student problem-solving activities. (Film and Animation or Digital Camera second-year majors) Credit 3

2065-355 History and Aesthetics of the Moving Image: Fiction
An exploration of the history and aesthetics of film. Emphasis is on determining the unique characteristics of the medium, how those characteristics are used as a means of interpretation and expression, and their relevance to other kinds of nonverbal image making. (Film and Animation or Digital Camera second-year majors) Credit 3

2065-356 History and Aesthetics of the Moving Image: Animation
An exploration of the history and aesthetics of animated film. Emphasis is on tracing the major developments in international animation production and determining the unique characteristics of the medium, how those characteristics are used as a means of interpretation and expression, and their relevance to other kinds of nonverbal image making. Film and Animation or Digital Camera second-year majors) Credit 3

2065-357 History and Aesthetics of the Moving Image: Documentary
An exploration of the history and aesthetics of film. Emphasis is on determining the unique characteristics of the medium, how those characteristics are used as a means of interpretation and expression, and their relevance to other kinds of nonverbal image making. (Film and Animation or Digital Camera second-year majors) Credit 3

2065-358 History and Aesthetics of the Moving Image: Animation
An exploration of the history and aesthetics of animated film. Emphasis is on tracing the major developments in international animation production and determining the unique characteristics of the medium, how those characteristics are used as a means of interpretation and expression, and their relevance to other kinds of nonverbal image making. Film and Animation or Digital Camera second-year majors) Credit 3

2065-359 Introduction to 3-D Computer Animation
An introduction to three-dimensional computer animation. The basic principles of animation will be addressed within the context of producing three-dimensional computer animation. Students will produce a series of short three-dimensional computer animations part of the learning process, and then a final short three-dimensional computer animation of their own design. Students will become familiar with a variety of three-dimensional computer animation techniques and applications. (2065-331 or permission of instructor) Credit 4

2065-360 Animation Bar Sheets
This course will give character animation students an opportunity to explore a visual language of acting and posing that will help their storytelling abilities. Acting, timing, and pacing are critical elements to any successful character animated film. Identifying and building a library of expressions, poses, and movement for emotional and visual expression is the goal for each student. Students will study reference material from successful silent and animated films. They will also create their own reference material through acting and filming themselves and other students. The class will include demonstrations by practicing actors and animators. (2065-331 or permission of instructor) Credit 3

2065-361 Scriptwriting for Animation
Introduction to Scriptwriting for Animation is a writing seminar designed to provide intensive practice in developing premises, stories and characters in the particular idiom of animation. Readings, in-class exercises, and outside writing assignments emphasize mining one’s creative resources, developing fluency in the essential elements of storytelling for animation. (2065-342) Credit 3

2065-362 Visual Effects: Cinematography
This course is designed to enhance students’ awareness of the creative possibilities inherent to the motion picture camera by giving them “real world” work experience, concentrating on group dynamics within a problem-solving environment. The object is to produce a 16mm motion picture visual effects sequence by students. Students work cooperatively with each other within production units, and with each production unit works cooperatively with the others. Students share their projects during weekly production meetings chaired by the instructor. Working with models and miniatures are involved. Course not offered every year (2065-316) Credit 4

2065-363 Advanced Production Immersion
This workshop will provide students with the opportunity to learn more about a particular area of production—editing, cinematography, lighting, sound, etc.—with an industry professional. (2065-316) Credit 1–4

2065-364 Film and Video in Paris, Summer
Provides students with the opportunity to creatively explore and experience film and video production for four weeks in Paris, France. Students study the rich history and prehistory of French (and European) cinema. Study includes weekly screenings of many historical and contemporary film works from the film archives at the National Museum of Modern Art in Paris, meetings with French/European filmmakers and historians, museum visits, special film programs at the Cinematheque Francaise and the Videothèque of Paris, and library research. Both traditional and experimental French cinema are examined. Equipment is provided. Students produce works in 16mm film or HD formats. Open to undergraduates and graduates, majors and non-majors, with or without production experience. (Course not offered every year) Credit 6

2065-365 Miniature Sets and Props
This course gives students hands-on experience in all stages of designing and building miniature sets. Common set construction materials will be introduced and proper techniques explained. Students will design and build basic structures with a variety of surface finishes using organic and artificial forms. Students will evaluate the aesthetic merits of their designs. Examples from architecture and movies will be provided. Realistic sets with a cultural heritage will be considered, as well as fantasy environments. Final sets will be completed by the class to be used in subsequent classes. (Instructor permission required) Credit 3

85 | College of Imaging Arts and Sciences
2065-372 Introduction to Stop Motion Animation
Explore techniques for producing stop motion animation. Gain familiarity with the use of a variety of materials that may include clay, puppet, foam, and latex. Develop techniques for making armatures and skeletons and creating joints. Learn how to measure movement from frame to frame. Research and write about a stop motion technique or animator. (2065-331) Credit 4

2065-374 Seminar in International Film History
Examines selected, varying film topics in a wider socio-historical context. Seminar themes change each year and may include topics such as post-war German films, films of the Holocaust, Japanese film, surrealist and magic realist film, Soviet film, Native Americans on film, etc. Students are expected to participate actively in the course via class presentations and discussions. (SoFA second-year student or above) Credit 3

2065-376 Dramatic Structure in Film and Television
This course explores the theories of dramatic structure from Aristotle to the present and applies these theories to current and classic dramatic works. The class also explores writing for film and television, including feature film genres, one-hour drama, mini series, soap opera, and sitcom. A segment on the business of writing covers writer’s reports, adaptation of material from other media, and acquisition of rights. (2065-343) Credit 4

2065-378 Writing the One-hour Television Drama
A special workshop in writing the one-hour TV drama. Students study the format and structure of current one-hour dramatic programs, then propose and write an episode for an existing program. (2065-343) Credit 4

2065-381 Particle Effects
This course gives students the skills to insert three-dimensional computer special effects into animation and live action footage. Students explore three-dimensional computer particle animation and dynamic simulation using Maya software. In addition students will create short animations using particle effects, soft bodies and rigid bodies to simulate nature effects like fire, rain, and water and physics based dynamic and collision events. MEL scripting is an integral part of this course. (2065-361) Credit 4

2065-383 Writing Comedy and Situation Comedy
A special workshop in writing the situation comedy. Using improv and stand-up comedy techniques, students study the rules of comedy and joke structure. Students also study the format and structure of current situation comedies, then propose and write an episode for an existing program. (2065-343 or permission of instructor) Credit 4

2065-384 DVD Authoring
This course is designed to introduce the design and practices of the DVD development with emphasis on rethinking a completed film project. The student develops a specific DVD based on a film they have completed. Class discussion and presentation is oriented towards new directions for the film story with interactivity and sequencing considerations. The student will acquire development tools to include: menu development, subtitles, audio streams, encoding principals, hybrid DVD creation, web linking (DVR@cess), and basic scripting. (2065-202) Credit 4

2065-386 Film Sound Theory: Effects
A critical analysis of film sound theory through the study of texts and the viewing/listening of select films. A conceptual understanding of different elements of sound design will be obtained with close examination and focused group discussion. Lectures on the theory and practice of sound will be derived from the readings. (2065-203 or permission of instructor) Credit 4

2065-387 Writing the Short Film
A workshop in writing a short film script. The course focuses on story, proposal and script treatment as well as writing and rewriting a short script. (2065-343) Credit 4

2065-391 Programming for Artists and Animators I
This programming course is designed specifically for artists and animators with little or no programming experience. It is designed so that students are able to produce visual results from writing a program within the first two weeks of the quarter. All of the assignments and examples in class are graphics related. Credit 4

2065-392 Programming for Artists and Animators II
This second course in a two-course sequence gives students the ability to design custom tools and features in Maya by continuing to learn MEL. The course concentrates on algorithm development, leading to the development of MEL code useful for doing creative work in Maya. (2065-391) Credit 4

2065-393 Film Sound Theory: Music
This course is one of three in the study of film sound theory. Through readings, focused group discussion, and the viewing/listening of select films, the course promotes critical analysis of the varied and profound uses of music in sound design. Addressed is the history of music from the silent era to the modern score. The concepts studied include the modal changes in point-of-audition, and positioning across diegesis. Newer topics like audio-visualisation and ventriloquism theory are also addressed. Each student gives a presentation on a chosen concept. Credit 4

2065-396 Puppets for Stop Motion
Students will progress from simple to advanced puppet design through the class. At each stage, students will see a completed puppet, design and build one of similar design, and test animate the puppet. Students will use a variety of materials. Students will solve the problems of facial expressions, foot and rig attachment, and clothing. Reparability and usability will be stressed as well as artistic and expressive considerations. (2065-263 and 2065-331) Credit 3

2065-397 Methods in Motion
This course will give animation students an opportunity to explore a visual language of acting, timing, posing and animation principles that will help strengthen their animation abilities. Every animator needs to build a library and understanding of animated movements and timing that they can draw on for all of their future animated films. (2065-263) Credit 3

2065-398 Film and Video Community Service
Allows the student to take film or video production experience to the community. With the assistance of a faculty community service coordinator, community organizations and groups make contact with film and video majors for work toward the production of media necessary to the group’s outreach, educational, or promotional efforts. A final written report, screening of the community project and meeting with the faculty coordinator help the student evaluate the production and the experience. (Permission of instructor) Credit 4

2065-411 Image Capture and Production Technology
This course offers a full investigation of image capture technologies used in contemporary motion picture production. Historical image generation techniques will be provided as an introduction to modern media and equipment. Fundamental characteristics of silver halide photochemical imaging systems will be explored with emphasis on typical metrology and imaging properties. Electronic image capture will also be presented in the context of fundamental imaging properties. Standard film and video workspaces and workflows will be examined as a direct introduction to post-production technologies to be presented in subsequent Digital Cinema courses. (2065-231, 1051-320, 1051-330 and 1051-370) Credit 4

2065-413 Senior Project Seminar
A required course for third-year SOFA majors and the prerequisite for Senior Project I (2065-507). Students discuss and generate a written plan for their senior film/video projects and select an adviser from among the film/video faculty. Credit 1

2065-418 Advanced Storyboard and Layout
This course involves creation of in-depth storyboard, layout design and art direction for various media. Students will work on pre-designed characters and scripts or scripts from their own projects. Differing styles of layout, narrative structure, subtext, boarding, and workbook will be explained. (2065-352) Credit 4

2065-424 Directing a 30-Second Commercial
Students learn how to direct and produce television commercials beginning with developing the creative idea, experiencing all facets of pre-production including talent casting, selecting crew, and location scouting followed by commercial film or video production through editorial. Students will meet with advertising agency personnel and established industry professionals in order to learn more about the process. (2065-316) Credit 4

2065-427 2-D Computer Animation I
This class is intended to give students competency in the prevalent two-dimensional software with specific regard to their animation capabilities. Students will gain knowledge in character based animation, software integration, the paradigm of specific software designs, and issues inherent in common production pipelines. Students will learn specific tools oriented operations common in various animation approaches. (2065-331) Credit 4
2065-428 2-D Computer Animation II
This class is intended to extend student competency in two-dimensional computer animation software. Object-oriented software will be supplemented with plug-in and paint animation software. A variety of source media, including live-action video and three-dimensional files will be used. (2065-427) Credit 4

2065-437 Advanced Animation Workshop I
Students are given the opportunity to produce, either singly or in small groups, a motion picture with sound using an animation technique or combination of techniques of their own choosing. Students may elect to take this course for one quarter or for two quarters, depending upon the dimensions of the project. (2065-333) Credit 4

2065-438 Advanced Animation Workshop II
Students are given the opportunity to produce, either singly or in small groups, a motion picture with sound using an animation technique or combination of techniques of their own choosing. Students may elect to take this course for one-quarter or for two-quarters, depending upon the dimensions of the project. This course is the second course in a two-quarter animation workshop experience. (2065-437) Credit 4

2065-441 Drawing Animation: Dynamics
Three different courses in drawing for animation are offered. Each course provides a different focus and assumes considerable drawing skills. This course focuses on the dynamics of drawn animation. Students will go through and analyze each step required in traditional animation from thumbnails to clean up. One short sequence will be animated with careful consideration to character performance, staging and appeal. (2065-471 or permission of instructor) Credit 3

2065-442 Drawing Animation: Sequences
Three different courses in drawing for animation are offered. Each course provides a different focus and assumes considerable drawing skills. This course consists of three intensive exercises based on timing, sound and weight. Students will apply gesture and performance techniques to short animated exercises (2065-441 or permission of instructor) Credit 3

2065-443 Drawing Animation: Characters
Three different courses in drawing for animation are offered. Each course provides a different focus and assumes considerable drawing skill. This course focuses on character development for animation of all kinds. Students produce character sheets, turnarounds, and finished style sheets. Students will study anatomical construction and the influences of sommon character designs as they relate to story. (2065-471 or permission of instructor) Credit 3

2065-444 Acting II for Film and Video
An intermediate level acting class working in depth with techniques and approaches introduced in the basic acting class with the additional focus of using external observation to determine appropriate behavior. Class meetings are organized around the presentation of scenes prepared by student actors and directors. The class is taught in conjunction with Directing the Actor II. (2065-345) Credit 3

2065-446 Directing the Actor II
This class offers in-depth study of techniques introduced in the basic directing class, with an additional focus on using external observation to determine appropriate behavior. This course emphasizes the special problems peculiar to Film and Video production. Class meetings are organized around the presentation of scenes prepared by student directors using the acting students in the class. Meets in conjunction with Acting II for Film and Video. (2065-347) Credit 3

2065-447 Experimental Animation Workshop
Directed toward experimentation and exploration with single-frame motion image making. Students engage in creative conceptual and experimental investigation and processes to discover new expressions and techniques. This activity is not limited to film, video or computer and digital formats, and may include hybrid practices across different art media; performance, installation, fine arts, photographic processes, innovative sound presentation, live action, and more. Students examine past experimental animated works and learn the distinctions and applications for the experimental approach; the connections and relationships of experimental works to art, and the role of the experimentalist as discoverer and interpreter of new meaning and animated practice. (Permission of instructor) Credit 4

2065-451 Avid Advanced Narrative Editing
Students will receive basic training in working with the Avid Media Composer Editing System including editing workflow, starting a project, preparing an edit, editing a sequence, and outputting a sequence, with special emphasis on narrative and television commercial editing. (2065-344) Credit 3

2065-452 Sound Recording
Specialized information and work in sound to give information and lab work beyond the regular course and to encourage the beginning of vocational-level work in sound. Each student prepares a mixed soundtrack to professional quality standards. (2065-202) Credit 3

2065-454 Writing the Feature I
A production workshop in developing and writing the outline for a feature length film script or episodic TV series. Can also be taken by students who want to rewrite an existing feature length screenplay. This course focuses on proposing a script and writing the outline for a feature film or TV series. Students work at their own level within the class and discussions provide feedback and incentive. The project can be continued in Writing the Feature II. (2065-343) Credit 4

2065-455 Writing the Feature II
The second-quarter of a scriptwriting workshop. Students complete and revise the script begun in the first quarter. Required as the second part of a two-quarter production class for students in the scriptwriting track. (2065-454) Credit 4

2065-457 3-D Computer Animation I: Modeling
Beginning modeling for animation in three-dimensional software. Students learn modeling techniques and technologies that can be used in the three-dimensional animation course as well as the techniques of digital cinematography that are used to create and light a three-dimensional environment. (2065-331) Credit 4

2065-461 Alternative Frame-by-Frame
This course will give all students a chance to experience three different approaches to stop-motion animation. The class will study and experiment with pixilation, relief animation with a “down-shooter”, and cutout animation utilizing a composite approach. These techniques will expand the student’s knowledge of traditional or character animation and present an alternative means of expression. Students can explore character or experimental approaches to animation with these traditional-alternative approaches. The class will study existing work with these techniques, analyze and discuss them with the instructor and then produce one thirty second example of their own for each approach. (2065-263) Credit 3

2065-462 Advanced Sound Recording
Continuing the work in Sound Recording (2065-452) to include the decision level in the employment of various sound equipment, more complex work in multi-track recording and mixing, (2065-452) Credit 3

2065-464 Business of Animation
This class is intended to give students an understanding of studio production and freelance animation. Students will learn the basics of running a business. Production issues, particularly related to animation, will be studied. Methods of examining costs and projecting work timelines will be practiced. Students will draw up contracts and negotiate terms. Copyright law as it applies to distribution and contracts will be studied. A business plan will be developed by each student. (SoFA junior or senior status) Credit 2

2065-466 Lighting for Film and Video
This course will present the fundamental principles of lighting for film and video production. Current methods and practices of lighting used in the motion picture industry will be explored through demonstration, lectures, and hands-on lab assignments. (2065-202) Credit 3

2065-467 Digital Effects and Compositing
This course offers a hands-on experience in manipulating live action video and applying digital effects. There is an emphasis on digital compositing using alpha channels and transparency. Composites may be accomplished through green screen shooting, transfer modes, masks, and/or traveling mattes. (2065-316 or 2065-352) Credit 4
2065-471 Gesture Drawing for Animators
This course will consist of intensive anatomy and quick-sketch workshops using live models and visualization techniques. Live models will be scheduled for a portion of each class. Students will study kinesiology, the effect of movement on muscle and bone, and sequential movement. Students will learn how to draw and apply basic animation principles. As a final project students will create original imaginary characters based on their class assignments. Most of the course work will be in class drawing sessions. (2063-211) Credit 3

2065-472 Advanced Stop Motion Animation
Explore advanced techniques for producing stop motion animation. Gain familiarity with the use of a variety of materials, which may include clay, rubber, aluminum, and more. Develop techniques for making armatures using wire and steel joints. Learn character performance in gesture and expression. Practice methods of miniature lighting and photography as well as digital effects. (2063-372) Credit 3

2065-473 Women's Stories, Women's Films
This course provides an introduction to women’s films. Through screening films and class discussion, the course examines the themes and issues of women’s narratives and how they function in the medium of film. The hero’s journey and traditional narrative structure are contrasted with the heroine’s journey and the more personal feminine storytelling style. The course also considers differences in films made by women and films made by men about women. Students will have opportunity to explore their own creativity. Credit 4

2065-478 3-D Computer Animation II: Character
An introduction to three-dimensional digital character animation. The basic principles of character animation and development will be addressed within the context of producing three-dimensional digital character animation. Students will produce a series of short three-dimensional computer animations of digital characters using inverse kinematics as part of the learning process. Then they will produce a final short three-dimensional digital character animation of their own design. Students will become familiar with a variety of three-dimensional digital character animation techniques and applications. (2063-361 and 2063-457) Credit 4

2065-484 3-D Lighting
Students will learn to use lighting in digital three-dimensional software. The process for developing projects in class will be critique based. Projects may include modeling and lighting simple objects or spaces, matching a three- dimension object or space to a scanned photographic or video image in lighting, quality and perspective. Elements of the renderer software that relate to lighting will be discussed fully. (2063-457) Credit 4

2065-498 Film and Video Internship
Provides the students with on-the-job experience in the field of film/video. The student seeks and acquires a school-approved internship position in a business or industry. The working environment provides the forum for learning more about the student’s chosen career. A final interview with the internship coordinator assists the student in evaluating the experience. The coordinator should be the faculty member most familiar with the student’s internship field. (Permission of internship coordinator) Credit 1-6 per quarter

2065-507 Senior Project I
In this course students in their final year begin work on a major project. Students work on projects, including narrative fiction, documentary, experimental, animation, screenwriting or craft that were proposed and approved in the spring quarter of the previous year. Students are in charge of their own work, but they work directly with an adviser to track their progress on the project. At the end of this quarter, students should have completed the tasks laid out in their project schedules. The first course in a three-part sequence. (2063-413 and permission of instructor) Credit 4-6

2065-508 Senior Project II
Work on the senior project continues. The student will meet at least once a week with his/her faculty adviser. At the end of the quarter, students screen their work for faculty and peer feedback. The second course in a three-part sequence. (2065-507) Credit 4-6

2065-509 Senior Project III
Students complete work on their senior project, creating appropriate distribution media or other appropriate publishable material. Craft students complete their contributions to projects, and prepare and give a presentation to the public. Scriptwriters rewrite their scripts and give a formal script-reading for the public. Experimentalists refine and complete experimental projects and prepare for final exhibition/performance and distribution. Rationale: Variable credits allow students to match credits to the workload for this quarter. The third course in a three-part sequence. (2065-508) Credit 2-4

2065-512 Senior Forum
This course is intended to accompany and complement the SoFA Senior Project II course. Students in this course will meet as a group to screen edited works in progress, discuss postproduction problems, and plan jointly for the use of SoFA production resources. (2065-507) Credit 2

2065-513 Career Preparation
Career Preparation offers practical advice and assistance in job seeking and life after RIT. The course aids students in preparing their thesis projects for festival entry and distribution. Material produced by the student includes a resume, portfolio, and work reel. (SoFA junior or senior status) Credit 2

2065-550, 551, 552, 553 Special Topics
A seminar approach offered on demand when adequate numbers of students and faculty desire to investigate specialized topics not normally offered in the regular curriculum. Available to upper-level students. Credit variable 1-9

2065-563 The Business of Hollywood
In this interactive role-playing course, students become studio executives, producers, or agents. Participants learn the techniques of identifying movie concepts and selling ideas, the specifics of talent compensation, and the structure of the Hollywood studio system. Perhaps most importantly, students learn methods of negotiation in the film industry and gain an understanding of what it takes to succeed in this business. (Online course) Credit 3

2065-599 Independent Study
A student-proposed advanced project sponsored by an instructor. Approval of the proposal by a faculty sponsor and the administrative chairperson of the school. Available to upper-level students with a GPA of 3.0 or greater. Credit variable

2065-611 Graduate Production
A fundamental course in 16mm non-synchronous film and basic digital video production. Filmmaking is presented as a means of interpretation and expression. This course combines technical information, camera technique and editing with a theoretical and practical approach to motion picture continuity. Production is divided into two learning experiences: 16mm (non-sync) format and digital video format. Students furnish film, tape and processing with equipment furnished by SOFA. Credit 4

School of Photographic Arts

Biomedical Photography

2061-201 Biomedical Photography I
The first of a three-quarter sequence of study in the fundamentals of photography, with emphasis on the development of strong photographic skills as they relate to the principles of camera optics, choosing and using perspective, lighting, and related aspects of digital photography. Principles of creativity, craftsmanship, applied photographic theory and visual communication and presentation will be used to support the foundation theme of using cameras as a tool used in problem solving for technical and visual communications. Credit 6

2061-202 Biomedical Photography II
The second course of a three-quarter sequence in the fundamentals of photography, with emphasis on the development of strong artificial lighting skills as they relate to working in the studio. Principles of creativity, craftsmanship, applied photographic theory and visual communication and presentation will be used to support the foundation theme of using 4x5 cameras. (2061-201) Credit 6

2061-203 Biomedical Photography III
The third course of a three-quarter sequence of study in the fundamentals of scientific photography, with emphasis on the development of enhanced skills as they relate to working as a scientific photographer. Principles of creativity, craftsmanship, and applied photographic theory as used in the presentation of subject matter relevant to the life sciences industry will be incorporated as part of the foundation for future biomedical photography experiences, where appropriate. (2061-202) Credit 6

2061-213 Survey of Biomedical Photo
Following graduation, there are a variety of career directions a BPC graduate might consider as a consequence of the diverse curriculum that has been completed. Survey of Biomedical Photography is one of the program’s original courses dating back to 1969. Alumni from various industries are invited to campus and share their careers through an interactive lecture class required for all Biomed majors. Credit 1
2061-276 Fundamentals of Science Photography I
This is a basic photography course for non-photography majors that places emphasis on theory, craftsmanship, and visual communication based in technical photography. Forensic, medical, biological, and other relevant subject matter will be incorporated into this foundation course. Students will explore camera operation and lens selection, depth of field relationships, exposure meters, choosing and using image processing, as well as the use of supplementary artificial light sources. (A strong interest in learning and applying technical approaches to making photographic images for science, forensics and other technical disciplines.) Credit 4

2061-301 Applications of Scientific Photo I
The first of a three-course sequence that emphasizes the photographic skills necessary in close-up photography that are used in scientific photo-documentation. Laboratory subjects such as contact lenses, rice grains and other small, challenging, almost invisible objects will be explored. Students will investigate lighting required to create new ways to reveal a subject’s characteristics. Subjects will be photographed using polarized light and fluorescence techniques demonstrating what cannot easily be observed without photography. The course will also explore appropriate subject management strategies, as well as develop scientific methods to be used as imaging standards during the 10-week class. Credit 4

2061-302 Applications of Scientific Photo II
The second course in a series in which students are exposed to illumination and optical considerations required to operate and photograph using a light microscope. Producing Kohler illumination, controlling light in a microscope and following scientific method will be explored as core activities. The final project requires the production of a large educational poster featuring one microscope subject that has been researched and photographed using the microscope. (2061-301) Credit 4

2061-303 Applications of Scientific Photo III
The last course of a three-course sequence students investigate the electronic flash as a light source when applied to various situations found in life sciences community. Students are exposed to ophthalmic photography, surgical photography, dental photography, as well as location and public relations assignments. The class final project is a capstone assignment exploring concepts and techniques required in the design and production of instructional media. (2061-302) Credit 4

2061-311 Preparation of Biomedical Visuals I
The first course delivered over a two-quarter sequence that will study the basic principles required for the generation of effective visual communication specific to life sciences industry. The emphasis will be placed on choosing and using the correct technology for visuals, including aspects of fundamental design required in such a dynamic delivery environment. Assignments have been designed to emphasize the appropriate techniques for producing visuals that exhibit effective design necessary for reproduction using either traditional mechanical or electronic methods. Credit 3

2061-313 Preparation of Biomedical Visuals III
This course will study the basic principles for the generation of effective desktop publishing specific to life sciences industry. The emphasis will be placed on choosing and using the correct technology for visuals, including aspects of fundamental design required for electronic publishing. Students will specifically be exposed to core principles required to produce electronic pieces including effective resumes, posters, brochures, and flyers. Assignments have been designed to emphasize the appropriate techniques for producing these visuals, which exhibit effective typography necessary for reproduction using electronic methods. (2061-311) Credit 3

2061-316 Digital Media in Biomedical Photography I
Electronic media has replaced traditional photography on many fronts in the life sciences industry. Digital Media in Biomedical Photography is a two-course sequence that explores all aspects of digital media from concept development through production of final product. The first course will examine significant issues found in electronic imaging activities driven by budget, hardware, software, and production issues. Students will execute practical assignments in the production of educational support materials found in a variety of digital media areas, including image capture, processing, hard copy output, and color management. Credit 4

2061-318 Digital Media in Biomedical Photography II
This is the continuation of a two-course sequence that explores digital media from concept development through production of final product. The course will examine significant issues found in electronic imaging activities driven by budget, hardware, software and production issues. Students will execute practical assignments in the production of educational support materials found in a wide variety of digital media areas including interactivity, online documents, digital posters, user interface design, web site production, basic two-dimensional animations, and speaker-support materials. Credit 4

2061-354 Basic Ophthalmic Photography
Investigates proper patient management and camera/photographic techniques in ophthalmic photography. Diagnostic evaluation of ocular anatomy and physiology utilizing special cameras is presented. (2061-301, 2061-302, 2061-303 or permission of instructor) Credit 4

2061-357 Principles and Technology of Photomacrogaphy
A condensed course in photomacrogaphy will examine equipment used and the technical considerations necessary in the photography of subjects 1:1 thru 20:1. Lighting, optics, camera technique and other considerations will be evaluated in the theory and practice. Students will be exposed to interesting problems and lighting equipment not found in other types of photographic work. Many assignments will explore using software to improve where DOF (depth of field) is impossible to achieve. (Completion of first year) Credit 4

2061-361 Web Design Using Photography
Photographers have always communicated visually. The accessibility of the World Wide Web creates a potential audience of millions. This course explores the nature of the World Wide Web, web sites and the process of designing, building, and maintaining these sites for business or other applications. Students will explore the use of images and media as they relate to the Web, including bandwidth and quality considerations. Interactivity, design, structure, viability and the successful delivery of ideas will be emphasized. Some quarters, this course is delivered through distance methodology and culminates in individual student websites as the course final project. Credit 4

2061-401 Audio-visual Production I
The field of information delivery has changed significantly. This course is designed to explore concepts and software required for the production of desktop multimedia. Students explore concepts of scriptwriting, and crafting educational objectives as well as the production of multimedia. Credit 4

2061-402 Advanced Photography in Biomedical Communications
Sophisticated and creative applications of photography serving the needs of the scientific community. Students explore a variety of specialized photographic techniques and a variety of philosophies. Assignments are performed that are similar to those encountered in biomedical and research institutes. (2061-303, basic color course) Credit 4

2061-403 Advanced Photography in Biomedical Communications
Sophisticated and creative applications of photography serving the needs of the scientific community. Students explore a variety of specialized photographic techniques and a variety of philosophies. Assignments are performed that are similar to those encountered in biomedical and research institutes. (2061-303, basic color course) Credit 4

2061-454 Intermediate Ophthalmic Photography
Intermediate Ophthalmic Photography goes beyond the shooting of retina fundus photographs or posterior segment photography and concentrates on interpretation of fluorescein angiography films and anterior segment photography. Students investigate external ocular photography, slit-lamp biomicroscopy, and common corneal anatomy and diseases. (2061-354) Credit 4

2061-455 Advanced Application in Ophthalmic Photography
Course provides students with clinical experience in ophthalmic photography. Students work off campus in an ophthalmology clinic performing stereo fundus photography, fluorescein angiography, specular biomicroscopy, slit-lamp biomicroscopy, and gonioscopy. The educational experience is balanced by the needs and tolerance of each patient involved, and represents an important clinical education necessary for diagnostic imaging. Students are responsible for their own transportation to and from the site. (2061-354 and permission of instructor) Credit 4
Photography and the Microscope
This photomicrography course goes beyond the basics of imaging through a microscope. This course investigates optical enhancement techniques, video recording, motion stopping, as well as specimen preparation in various application and sample preparations. (2067-302 or 2076-412 or permission of instructor) Credit 4

Biomedical Photography Co-op
Provides biomedical photographic communications students with on-the job experience. The student seeks and acquires a school-approved co-op position in the health care industry. The working environment provides the forum for learning more about the student’s chosen career. A final interview with the co-op coordinator assists the student in evaluating the experience. Credit 0

Photography Concentration
Investigating, planning, organizing, and producing an audiovisual presentation, a learning package, or an informational program for a biomedical communications client. (Completion of Biomedical Photographic Communications AAS degree requirements, at least one upper-division photo elective in media, permission of instructor) Credit 4

Special Topics
A seminar approach offered on demand when adequate numbers of students and faculty desire to investigate specialized topics not normally offered in the regular curriculum. Available to upper-level students. Credit variable 1–9

Independent Study
A student-proposed advanced project sponsored by an instructor. Approval of the proposal by the department chairperson and the director of the school. Available to upper-level students with a GPA of 3.0 or greater. Credit variable 1–9

Photographic Arts

- **Photo Arts 1**
  The first quarter of the first-year program for the BFA in Photographic Arts presents an introduction to the standards of still imaging in the broad field of documentary, fine art, and photo illustration with a balanced emphasis on practical, technical, aesthetic, and intellectual skills set. The student will gain general experience in digital photography through lectures, demonstrations, assignments, practice, readings, critiques, and research. The curriculum emphasizes craft, photographic vision, and visual problem solving using a digital SLR, light meters and digital darkroom processes for soft digital display. Visual design concepts along with historical and contemporary photographic images will be stressed. A DSLR is required. Credit 5

- **Photo Arts 2**
  This course, the second quarter of the first-year for the BFA degree in Photographic Arts, will introduce students to a non-destructive digital workflow from capture to output. The course will cover digital file formats and the basic principles of imaging software and output. The photographic studio will be used as an environment to create controlled lighting. The curriculum will continue to emphasize both craft and visual problem solving as it applies to photography used as documentary, fine art, and photo illustration. (2067-201; corequisite 2076-212) Credit 5

- **Photo Arts 3**
  The third quarter of the first-year program for the BFA in Photographic Arts will continue to explore digital processes. Students will continue to learn how to control and manipulate color and monochrome photographs using digital technology. Students will organize their images into an archive. Students will produce a final portfolio with attention to aesthetics, concept, and technique. (2067-201, 202; corequisite 2076-213) Credit 5

- **Still Photo I**
  Students become familiar with the 35mm camera, processing, and printing. The work is restricted to black-and-white photography. The aesthetics and basic understanding of photographic practice are covered. This course is available for students who are not majoring in photography. Credit 3

- **Still Photo II**
  A basic studio course for the enthusiast or someone who occasionally uses photography in his or her work. Ideas for portraiture are discussed and explored in a casual (rather than commercial) manner, both of one person and then of two people. The idea of self-portrait is also discussed and explored. (2067-256 or a working knowledge of developing film and making black-and-white enlargements) Credit 3

- **Still Photo III**
  A course in which students determine their own theme of expression using black-and-white photographs. (2067-256, or working knowledge of developing film and making enlargements, and 2067-257, or permission of instructor) Credit 3

- **Studio Light**
  A lighting workshop course that uses visual exercises to teach students how to evaluate light conditions outside, as well as control and reproduce those conditions in the studio. (2067-201, 202) Credit 5

- **Introduction to Photography for Non-Photo Majors**
  An introduction to still photography—principles, methods, theory, and practice for non-photography majors. This course will familiarize the student with the basic skills of still photography. This is a non-darkroom course designed to introduce students to the operation of their camera, flash, and accessories; film selection and exposure variables; light, filters, and basic tone control. Photographic aesthetics/composition, history, contemporary artists, professional applications, and other nontechnical aspects of photography will be addressed through weekly lectures and critiques of photographic shooting assignments. Students are required to have their own adjustable camera and flash unit. Each student will produce his/her own film and processing. Non-photography majors only. Credit 4

- **The Spiritual and Mystical Image**
  Guides the student toward a tangible perception of a higher self that is compatible with our established perceptions of ourselves as artists. Three major areas to be integrated are self, intellect and spirit. Emphasis on realist and contemporary possibilities and self-discovery through imagination. Credit 5

- **Applied Photo II**
  Advanced applied photography in black-and-white and color with emphasis on craftsmanship, problem solving and visual communications. Major technical emphasis and introduction to studio electronic flash and large-format photography. Further emphasis is placed on the development of the student’s ability to apply creative thinking and contemporary techniques in executing meaningful and effective photographs. (2067-202) Credit 5

- **History and Aesthetics of Photography**
  Series of courses that cover the history and aesthetics of photography from 1800 to the present, with special emphasis on the development of photographic seeing and its related effect on other media. A survey of the numerous processes and how their development affected the image making of particular periods, i.e., daguerreotypes, collotypes, ambrotypes, etc. Visual lectures also cover topics from surrealism and documentary to conceptual art and post-modernism. Credit 3

- **The Zone System and Fine Print**
  A one-quarter introduction to the fundamentals of the Zone System and fine print, using black-and-white photography. Purpose, technique, and aesthetics of the system and printing are the content of the course. Emphasis is on large format technique. (2067-201, 2067-202) Credit 5

- **Art Direction and Copy I**
  A study of art direction and copywriting with emphasis on conceptual thinking as it applies to the photographic image. Some emphasis is placed on basic hand skills, i.e. layout, type rendering and paste up. Marketing principles and career possibilities are covered. (Photo student or permission of instructor) Credit 5

- **Digital Imaging Artists**
  This course is intended for fine art students and others whose primary interest is in digital picture making within the art historical/contemporary art context. Lectures and hands-on activities will permit each student to improve their skills and develop their idenation as digital artists/image makers. Demonstrations will facilitate learning software techniques and systems of art making. Labs will provide one-on-one assistance with technical problems. Visual lectures will introduce contemporary and historic work by artists that is relevant to today’s picture makers. Credit 4

- **Avant-garde and Creative Process**
  This course will explore the myth that the artist is a precursor, a seer, and that significant work is art that prepares for the future. Students will study how the major political movements of the 20th century—capitalism, democracy, communism, and fascism—have given rise to the concept of subversive innovation among the avant-garde in Europe and America. The course will explore the role photography plays in such avant-garde movements as dada, surrealism, futurism, photorealism, pop art, conceptual art, and abstract expressionism. Credit 3
2067-376 Digital Diary
A creative exploration of the possibilities of digital imaging in making a visual account of personal experience. Assignments will focus on a variety of ways to photograph, record, document, and illustrate everyday life. Strategies for editing, sequencing, reproducing, and displaying digital images will be examined. Students will considerably expand their knowledge of image manipulation software and employ various methods of soft display and printed output. (Photo Arts 1 through 6) Credit 4

2067-388 Picture Editing and Layout
Image selection, usage and design for the printed page. Using images from sources other than your own photographs, we discuss picture selection relative to context and desired impact and how to effectively design the page(s) upon which the image(s) exist(s). Techniques such as scaling, proportion and sizing are related to page design. Typography and its function with photos, including captions and block text is discussed. Students lay out a number of assignments from single pages to essays of varying length. A variety of picture sources is used. A student need not use his or her photos in this course. (Second-, third-, or fourth-year status) Credit 5

2067-401 Photojournalism I: Photo as a Narrative
This course will explore the use of the photographic image in narrative, documentary and editorial form. Issues of public need and publication will be addressed. The emphasis during the first quarter of photojournalism is a personal one. It is about the act of photographing and the activity of the photojournalist. (2067-302 or equivalent) Credit 5

2067-402 Photojournalism I: Editorial on Location
This course is about photographing editorial assignments on location. The assignments will have special technical controls required to strengthen the student's skills of photographing people on location. Particular emphasis will be placed on the control of color and lighting. The editorial assignments are designed to be appropriate for major mass-market general news and special-interest consumer publications. In addition, it is expected that these assignments would satisfy the requirements of many of the major picture agencies, both in the USA and foreign markets. (2067-302 or equivalent) Credit 5

2067-403 Photojournalism I: Photography for News
This is a course about photojournalism with specific emphasis on photography for a daily metropolitan newspaper. Students will be required to photograph according to newspaper standards and needs on a weekly basis. This photography will include spot news, general news, features, sports, editorial portraits, and photo essays. Aspects of journalism such as story ideas, research and visual execution will be addressed. Students will be required to write captions for all photographs and generate text to support photo essays. The legal and ethical issues of photojournalism will be researched. (2067-402 or equivalent) Credit 5

2067-406, 407, 408 Photo as a Fine Art I
The major emphasis is on the individual's learning to identify and articulate a personal response to his or her environment through the medium of photography. Students design their own projects and work under the guidance of the professor. Digital analog silver mixed media and non-silver photographic techniques may be utilized. Weekly critiques are a focus activity of each course. Credit 4

2067-411, 412, 413 Advertising Photography I
A course in visual problem solving with photography. Studio and other controlled environments are stressed. Advertising and editorial solutions and applications are explored. The skills involved with both product rendering and concept illustration are covered. (Photo Arts 1 through 6) Credit 5

2067-416, 417, 418 Contemporary Issues
Contemporary issues courses vary in content as devised by the instructor. Previous offerings have dealt with many thought provoking/controversial issues in photography, from 1950 to the present, through a series of lectures, readings, and discussions. Topics covered include post-modernism, genderism, pornography, censorship, altered images, and consciousness. The course format allows review and exploration of such themes as the landscape, the nude, portraiture, conceptual art, trompe l'œil, and so on. Students prepare visual work, an oral debate or a written term paper. Credit 4

2067-451 Advertising and the Fine Arts
This course will examine aspects of different traditions, styles and movements of the fine arts: painting, sculpture, dance, and theater. We will look at how these disciplines relate to images created for editorial and advertising art. The class will draw on these art forms for inspiration for the images produced in this class, both photographic and non-photographic in nature. Field trips to local museums, theaters, and concerts will be funded by the individual students. (2067-412) Credit 5

2067-453 On Location Photography
Covers the techniques and equipment necessary to complete an on location assignment for a corporate report, brochure or audiovisual presentation. Students are encouraged to meet professional standards while developing a strong personal point of view. (Photo Arts 1 through 6) Credit 5

2067-457 Propaganda and Photography
"PROP-A-GAN-DA, n. The particular doctrines or principles propagated by an organizational or concerted movement. The dissemination of information from a particular point of view." Course examines photographs and films that have shaped our view of the world and explores the positive and negative effects of such images. The period from the Crimean War to the present is covered. Special emphasis is placed on World War II, where propaganda was used in the extreme for both good and evil. Still photographs, are studied, some of which are "faked" photographs. A larger question examined is "Why were these photographs manipulated?" Included in lectures are the historical and cultural forces behind the work. Credit 4

2067-458 Food
Instruction covers basic means and methods of preparing a food photograph: shopping for the proper ingredients; consultation and working with prop and food stylists/chefs/home economists; how the approach to a food photograph differs from other photographic assignments. Students learn the basic methods of preparing food for photography; as opposed to food for eating. Assignments range from simple raw-ingredient shots to pour shots to building a sandwich to making a salad. (Third- or fourth-year status) Credit 5

2067-461 Editorial Photography
This editorial photography course is an investigation into images that are created to illustrate magazine articles. Students will have the option of working with still life, people, location, documentary, and/or fashion photography. Current events will be discussed for "picture possibilities." The majority of the assignments will be done in collaboration with students in the Graphic Design Department. Historical and contemporary studies of layout and style will be examined. (2067-412) Credit 5

2067-464 Contemporary Portrait Photography
Brings together the skills of the first two years of photographic study and encourages the student to develop a personal approach to portrait photography through a quarter-long, self-directed project. Credit 4

2067-465 XI-Summer Advertising Core
A five-week intensive summer course that allows students to work for extended periods of time in the studio on projects that are self-generated but deal with subjects/topics related to advertising, editorial, and fine-art photography. Students are granted the conditional use of their own personal studio for the duration of this course. Marketing techniques and analyzing student portfolios are integral to the course. (2067-302 or permission of instructor) Credit 6

2067-466 Lighting: Manipulation and Controls
This course deals with the control and manipulation of light. We will light people, locations, and things in ways that will bring out and enhance our photographic intentions, whether for advertising, editorial or problems of personal expression. In-depth studio demonstrations will be a particular feature of this course. (Photo Arts 1 through 6) Credit 5

2067-467 Digital Photo Workshop
This workshop is a creative exploration of the basics of the hybrid technology between traditional film based photography and digital imaging. Students will use film as well as digital cameras for image capture, gain knowledge of proper Color Management techniques, considerably expand their knowledge of image editing software, and employ various methods of soft display and printed output. (Photo Arts 1 through 6) Credit 4

2067-469 Environmental Portraiture
A course involving the selection of various persons as subjects and learning of their skills and specialties. The student interviews subjects, defines what they do and where they do it, and designs a photograph that shows the viewer the subject's job or avocation and the environment in which the subject operates. (Upper-level photography major) Credit 5

91 | College of Imaging Arts and Sciences
2067-477 Advertising and Design Photography
This course teams photographers and graphic designers in the production of advertising layouts/campaigns, posters and brochures. Students have the option of working with still life, people, location, and/or fashion photography. Current advertising campaigns will be discussed and analyzed. Emphasis will be on producing multiple or sequential images. Historical and contemporary studies of layout and style will be examined. (Advertising photography major or permission of instructor) Credit 5

2067-472 Art and Censorship
Students will analyze and debate the art and issues propelling censorship in the arts, beginning with the 1989 cancellation of the Mapplethorpe show by the Corcoran Gallery and continuing through the present debates. Students will view and discuss the artworks of this period as well as historic art, ideas, and events that have generated censorial conflict. Students will investigate censorship in terms of the underlying, opposing social values that define American culture. (Third- or fourth-year status) Credit 4

2067-473 Portfolio Development
Designed for third- and fourth-year students who are ready to present themselves and their work to potential employers. Weekly assignments move students closer to their stated goals. To begin this course, students must be able to answer two career-related questions: What is it they wish to do, and where do they wish to do it? Credit 5

2067-476 Media and Art Principled Position
Students will investigate the development of time-based media art and its evolution from photography, sculpture, dance, performance, and writing. Students will explore work of significant contemporary and historic artists through the Media Café collection. They will research the various strategies artists developed through the '60s to the present as this new perceptual tool helped create significant social change. At the end of the quarter, students will present portions of their research, papers, and selections from the collection in the Media Café during the final week of class. (Third- or fourth-year status) Credit 4

2067-478 Architectural Photography
An image-making course for advanced students with a specific interest in architectural exterior and interior photography. Assignments are designed to emphasize the development and exploration of professional techniques and styles. (Completion of second-year courses or permission of instructor) Credit 4

2067-483 Introduction to Fashion Photography
This course provides advertising students with basic experience in fashion photography. Students will be taught the concepts, aesthetics, and processes of fashion work, casting and directing the model, studio and location shooting, ethics (especially with regard to women’s issues). Digital imaging, including both capture and postproduction, will form an integral part of the course. (2067-302) Credit 5

2067-485 Moving Media I
Students taking this tools course will work with still photographs, electronic images, video footage, and camera recorded sound to create new work that merges the disciplines of photography and video. Students will use media software to produce work that weaves photography and video into electronic canvases. Students will explore nontraditional narratives, conceptual constructions, and performance. They will work with traditional photography processes, electronic media, and projection equipment to create and display their projects. Each student will produce a final project for public presentation in the Media Café during the final week of class. (Photo Arts 1 through 6) Credit 5

2067-486 Moving Media 2
Moving Media 2 follows Moving Media 1. Students work with electronically produced imagery to develop advanced technical skills. Students bring their intellectual studies into practice with a mastery of complex editing techniques and the introduction to sound recording and sound editing techniques. Students work on assignments and self generated projects. Students view contemporary work and they analyze the various strategies artists use to convey their values and ideas. Each student will produce a final project for public presentation in the Media Café during the final week of class. The work of each student will be stored in the Media Café collection at Wallace Library. (2067-485) Credit 5

2067-487 Moving Media 3
Students taking this seminar course will continue their work within still photographs, electronic images, and video footage to create new work that moves across the disciplines of photography and video. The course emphasizes the preparation and manipulation of media to materialize the students’ growing understanding of the significance of electronic art in the information era. Students will design and produce quarter long projects. They will work with installation and non-traditional exhibition environments. Students taking this course will analyze and interpret the work of contemporary artists. They will develop a meaningful practice of critique and evaluation as they develop a body of research and writing that supports their critical, analytical and interpretive skills. (2067-485) Credit 4

2067-488 People Illustration/studio
Advanced study of people photography focusing on the development of the photographic and social skills of the studio photographer. Learning to orchestrate the tangible and emotional studio environments is a major goal of the course. Studio lighting, camera techniques, and the selection and direction of models are the subjects of lectures, demonstrations and assignments. Many of the course assignments are open-ended, which gives the student freedom to generate independent projects. (2067-411, 2067-412 or permission of instructor) Credit 5

2067-493 Problems and Projects/Still Life
The still life as a medium for creative expression and visual experimentation is examined. The tools and techniques particular to the still life photographer are investigated and demonstrated. The special manipulations possible—choice of lighting, perspective, camera angle, surface propping, set rigging, multiple exposure, front projection and other esoteric techniques—are discussed, demonstrated and applied to assignments. Projects are in a practical vein, relating to actual typical problems that are the daily routine of a working studio. Assignments investigate the overlapping relationships of fine art, editorial and commercial still-life photography. Large- and small-format cameras may be used; assignments are produced both in and out of the studio. Credit 5

2067-506 Photo as a Fine Art II
Emphasis is placed on a student setting goals, selecting themes and projects, and expansion of work on their own aesthetic terms. Lectures and experiences are oriented to encourage awareness of shared concepts in the other arts, goals set by working artists, and the relevance of the history of the visual arts to the student’s work. Weekly critiques are a focused activity of each course. (2067-408) Credit 4

2067-512 Visual Media Capstone
Students will submit a proposal for a major project incorporating their visual media focus as well as photography. Faculty from two disciplines will sponsor the research and development of the final project. This activity will be a demonstration of students’ capabilities in their chosen areas of study. The project will be designed, developed and completed during the quarter. Completed projects will constitute a substantial portfolio piece. (12 credits of Visual Media Focus required) Credit 4

2067-550, 551, 552, 553 Special Topics
Advanced topics of current or special interest, varying from quarter to quarter, selected from the varied field of professional photographic instruction. Special topics announced in advance. (Not offered every quarter. Consult coordinator of the professional photographic illustration program.) Credit variable

2067-554 Advanced Digital Photography
This lecture and laboratory course gives the advanced student of electronic photography an in-depth look at the tools and techniques of electronic imaging systems. Students pursue research projects in either the visual communications or technical aspects of electronic photography. Each student’s final project is self-defined. (2067-475 or permission of instructor) Credit 4

2067-555 Gallery Management
A basic, hands-on course in art gallery operation, to include gallery management, lighting, planning, publicity, and aesthetics. Course work is done with actual shows in the SPAS photo gallery and other local galleries where appropriate. Credit 3
Photo Media Workshop

Photo Media Workshop emphasizes visual problem solving utilizing alternative (non-silver) photographic processes. The first quarter features work with emulsions on various surfaces, the second deals with visual books, and the third quarter covers generative systems, including electrostatic, offset printing and other methods of altering images. The series is best when taken in order, but students may join in at any quarter. (Third- or fourth-year status) Credit 4

An introductory course surveying current findings in photographic conservation with an emphasis on acquiring and applying skills for archival processing, presentation, transportation and storage of photographic images. Laboratory sessions include research visits and field trips. Credit 4

Emphasis is on the creative and aesthetic aspects of color photography and other color imaging systems. Students are provided with an opportunity to explore the variety of ways in which color photographs can be produced, reproduced, sequenced, displayed, and preserved. A personal portfolio of work presented as color prints, color transparencies, a digital presentation, and an exhibition, or as an art book, is required for each quarter. (Third-of-fourth-year status) Credit 4

Production Photography is the storytelling side of professional illustration. Assignments for the course will include recreating historical events, inventing futuristic scenes, creating believable period pieces—all with an emphasis on narrative illustrations. The course introduces the skills, concepts, and preparation required to shoot still life and model photography in the studio and on location. Students work as production teams to simulate the professional production environment. (2067-411, 2067-412 or permission of instructor) Credit 5

A student-proposed advanced project sponsored by an instructor. Approval of the proposal by the department chairperson and the director of the school. Available to upper-level students with a GPA of 3.0 or greater. Credit variable 1–10

Imaging and Photographic Technology

Photography I-JPHB/JPHF

An intensive 10-week summer course for students entering the transfer program in biomedical photographic communications and photographic technology. This is the minimum photographic education needed to gain entry to second-year standing and replaces 2067-201, 202, 203 and 2076-201, 202, 203. Since this course is such an intensive offering, previous photographic experience is highly advisable. Credit 12

An intensive three-quarter sequence concentrating on the fundamentals of black-and-white and color photography. The application of digital cameras in various formats is at the core of this course. It includes project based topics such as portrait, architectural and product photography intended for corporate use. Professionally equipped upper-class studios are used all three quarters. Principles of creativity, craftsmanship, visual communication, presentation, repro- duction planning and postproduction analysis are taught. Concepts learned in Materials and Processes of Photography are put to practical application in this class. Credit 4

Materials and Processes of Photography

An intensive 10-week summer course for students entering a transfer program in biomedical photographic communications or imaging and photographic technology. Replaces 2076-211, 212, 213. (Either this course or the 2076-211, 212, 213 sequence is also a requirement in the professional photographic illustration program.) Credit 6

Basic study of the technology of photography, with emphasis on applications to real world photographic problems. Among the topics studied are lenses, image formation and evaluation, perspective, light sources, light-sensitive materials, exposure, film processing, digital systems and post-processing, tone reproduction, digital workflows, color theory, color management, variability, quality control and photographic effects. Credit 3

Photographic Sensitometry

This is a course about quantitative photographic image quality. The photographic imaging system, from light source to output, will be investigated, component-by-component, for the effects each has on system image quality. Students will characterize the image quality of various photographic components, such as exposure, film, paper and processing. Input-output relationships for each component subsystem will be investigated. Component responses will be collectively used to determine system image quality (based on tone reproduction). Related topics, radiometry, photometry and color sainstometry will also be covered. (2076-201, 2076-202, 2076-203) Credit 4

Provides both a fundamental and advanced treatment of the photographic process at the molecular level. Light-sensitive emulsion chemistry and formulation, latent image theory and the associated dynamic processes, as well as developer formulation and mechanisms of chemical action, will be treated. Extension and development of solid state digital imaging processes and materials are investigated. An intensive laboratory component will emphasize application of concepts covered in lectures. (2076-211, 2076-212, 2076-213) Credit 4

Photographic Optics

Provides both fundamental and advanced treatment of the optical processes related to image formation. Particular emphasis is on an understanding of what light is and how it interacts with matter, how lenses form images, discussions of common optical systems, and factors that affect image sharpness. This course also covers wave optics, interference, diffraction, and role that diffraction plays in digital image processing. An intensive laboratory component will emphasize applications of classroom concepts. (2076-211, 2076-212, 2076-213; 1016-204; 1017-211, 2017-212, 2017-271, 2017-272) Credit 4

Color Photo Design

Exploration of color images through the application of visual elements principles and attributes, including the key and quality of light in the making of photographs. Color contrast and rendition, and comparison of rendition with different photo materials. Credit 4

Color Printing Theory

Introduction to color theory and the exploration of color processes utilizing practical laboratory procedures and photographic color reproduction processes. Supports lectures and readings on applied color theory relating to both color photography and its applications. Important topics, in addition to color materials and processes, include color vision, psychological aspects of color, color terminology, and color measurement and specification. Credit 4

Color Measurement

Equipment and methods used for the measurement of color are discussed and demonstrated in the laboratory. Topics covered include light sources, radiometry, spectrophotometry, color order systems, color difference formulas and reproduction of color. Credit 4

Introduction to Photography for Corporate Publications

An introduction to the use of photography in specialized publications in science, industry, business and education. Skill-building assignments to improve competence and an introduction to the problems of the art director, editor, printer, layout person and writer form the basis of the course content. (2076-203 or the permission of instructor) Credit 4

Systems Design for Graphic Presentation

This is a foundation course in photographic imaging systems. The fundamental imaging concepts and technologies surrounding system components such as sensors, cameras, scanners, displays and printers are presented. Image processing pipelines from capture to output are discussed. These components are then collectively presented in the context of an imaging system. Image quality metrics such as ORCF, MTF and color fidelity will be introduced. Presentations and lab reports are required. Students are required to read scientific papers and literature as assigned. Credit 3

Imaging Systems

This course is a foundation course for a three-quarter course sequence. Fundamental language of digital imaging technology will be introduced. The content will focus on the technology and business issues surrounding imaging systems. The workings of cameras, scanners, image processing software, displays and printers are presented. Students will also gain experience in the operations issues associated with an imaging services laboratory. Book layout and design are created and the students will be required to generate a book explaining the workings of the various components of an imaging system. Presentations and lab reports are required. Students are required to read technical literature as assigned. (2076-213) Credit 4
2076-412  Color Management for Photographers
This is an introductory course in color management, presented from a photographer’s perspective. Basic color science concepts are presented. Students will learn about and use color instrumentation such as spectrophotometers, spectro-photometers as well as a variety of color management software. Students will characterize (profile) devices such as cameras, monitors and printers. This course also provides opportunities for the students to study the issues and practice the approaches related to the accurate reproduction of images from “scene” to output. Digital cameras and high end scanning backs as well as output devices such as large-format printers will be characterized in this course and an “optimum color management workflow” will be developed from a photographer’s perspective. A basic knowledge of digital cameras and Adobe Photoshop is assumed in this course. (2076-411 or equivalent) Credit 4

2076-413  Imaging Workflows
This course provides an opportunity for students to study, investigate and propose solutions to problems encountered in various imaging applications. Different scenarios and business models (“case studies”) are used to illustrate the imaging challenges that photographers and printers face when outputting their images. We will observe and analyze the operations of professional labs and by utilizing analytical and problem-solving skills, students will be required to propose optimum solutions to their challenges. Team projects are required. Students work to reproduce image collections in the form of a high quality published book on digital press such as the HP Indigo. (2076-412) Credit 4

2076-454  Holography I
Introduction to holographic and diffractive imaging. Lectures and demonstrations cover the materials, processes and applications of the fundamental types of holograms. Laboratory investigations provide hands-on experience with the construction and playback or transmission, reflection and white-light holograms. (Algebra and physics) Credit 4

2076-461, 462, 463  Photographic Instrumentation Seminar
The student is exposed to a variety of technical, industrial and/or applied photographic experiences in order to gain a fuller understanding of the scope of photography and its applications. Simplified approaches to photographic instrumentation applications are emphasized. Photographic topics that emphasize scientific and technical applications, where photography functions as a tool of measurement and visualization of events that are beyond the range of normal photographic equipment are discussed. Credit 4

2076-470  Summer Nature Photography
Students learn the fundamentals of professional nature photography as exhibited by such magazines as Audubon and National Wildlife. Topics include selection and care of equipment, use of strobes, adapting to adverse weather conditions, sales of photographs, copyright law, free lancing and more. Students are required to spend several hours each week shooting in natural environments. (2076-201, 2076-202, 2076-203 or permission of instructor) Credit 4

2076-471, 472, 473  Nature Photography
Students learn the fundamentals of professional nature photography as exhibited by such magazines as Audubon and National Wildlife. Topics include selection and care of equipment, use of strobes, adapting to adverse weather conditions, sales of photographs, copyright law, free lancing and more. Students are required to spend several hours each week shooting in natural environments. (2076-201, 2076-202, 2076-203 or permission of instructor) Credit 4

2076-487  Special Effects Photography
A course for practicing photographers and students in which photographic effects beyond those encountered in everyday situations in illustrative, commercial and advertising photography are discussed and practiced. Among the topics covered are stroboscopic, peripheral, scanning, high-speed flash, matte box and combination flash/tungsten photographic techniques. (For upper-division SPAS students) Credit 4

2076-491  Introduction to Digital Imaging
Exploration of the technology, theory, and application of digital image processing techniques, particularly in relation to photographic processes. Fundamental image processing algorithms are presented. Applications such as noise removal, histogram manipulations, contrast enhancement, edge sharpening and smoothing are included. Fundamental binary math and complex numbers will be taught. Fourier transforms are introduced and Fourier filtering and image convolution algorithms will be taught. This is a programming course. Students will be required to complete weekly programming assignments in programming languages such as IDL or Matlab which are also taught as part of this course. (2076-213, 2076-401) Credit 4

2076-492  Electronic Sensitometry
This is a course about electronic image quality. The student will work with and characterize the image quality for various electronic I/O devices such as scanners, electronic cameras, printers and other display devices. The electronic imaging system, from light source to output, will be investigated, component-by-component, to discover the effect each component has on total system image quality. Input-output relationships for each component subsystem will be investigated, and the component responses will be collectively used to determine system image quality. (2076-211, 2076-212, 2076-213, 2076-491) Credit 4

2076-499  Imaging and Photographic Technology Co-op
Provides students with on-the-job experience in the field of imaging and photographic technology. The student seeks and acquires a school approved co-op position in business or industry. The working environment provides the forum for learning more about the student’s chosen career. A final interview with the co-op coordinator assists the student in evaluating the experience. Credit 0

2076-501  Introduction to Research
Prepares students for their senior research project. Covers basic research methods, including experimental design, unobtrusive evaluation and selection of an appropriate statistical treatment for the research to be conducted. Chi-square, two-tailed t test, linear regression and nonparametric statistics are taught as pertinent evaluation tools. (Senior status or permission of department chair) Credit 3

2076-503  Non-conventional Imaging Systems
A survey of imaging methods and imaging systems not normally encountered in other technical photography courses, including UV, IR, 3D, holography, electrophotography, X-ray and non-silver applications. (Upper-level photo technology majors or by permission of instructor) Credit 3

2076-511  High-speed/time Lapse
The theory and practice of photographic systems designed to permit analysis of events of very short or extended duration. Included are operational characteristics of time-lapse cameras, sequencing and timing control devices, time magnification relationships. Also, characteristics of intermittent and rotating prism cameras, rotating mirror and drum cameras, synchronization system and timing controls and high-speed flash and spark gap systems. Students gain experience not only in the use of the basic equipment but also in proper planning, setup and data reduction techniques through a series of practical experiments. (Upper-level photo technology majors or by permission of instructor) Credit 3

2076-550, 551, 552, 553  Special Topics
A seminar approach offered on demand when adequate numbers of students and a faculty member agree to study a subject not normally offered. Available to upper-level students. Credit variable 1–9

2076-572  Scanning Electron Microscopy
A proficiency-oriented course designed to train students to operate and take photographs with a scanning electron microscope (SEM). Emphasis is on understanding and optimization of the instrumental and photographic parameters associated with the SEM. (2076-211, 2076-212, 2076-213, and 2076-303 or 2061-403 or permission of instructor) Credit 4

2076-599  Independent Study
A student-proposed advanced project sponsored by a faculty member. Approval of the proposal by the department chairman and the school director required. Available to upper-level students with a GPA of 3.0 or higher. Credit variable

School of Print Media

New Media Publishing

2080-550, 551, 552, 553  Special Topics in Printing
A management, or management-related, course used to present and investigate on a “one-time” basis special topics not normally covered in the curriculum. Guest lecturers, such as industry leaders, as well as regular faculty conduct this course. Subject to be covered is announced in advance. Credit variable 1–4

2080-599  Independent Study
Student selects and develops, with approval from a faculty sponsor, an independent study project of his or her own design. Project and amount of credit assigned must have final approval from the chair of the School of Media. (Generally seniors with qualifying GPA) Credit 1–5
2081-359 Bookbinding
The introduction of digital printing processes has created the need to bind single or small quantities of printed products. This course is an introduction to the many different binding options ranging from saddle-stitched pamphlets to hardcover books, as well as the wide range of materials available. Contemporary procedures of finishing on demand publications are part of this course. Students are encouraged to bring with them some personal projects for binding. No pre-requisites are required; however, good manual dexterity is desired. Credit 3

2081-364 Flexographic Process
A fundamental course based on the principles and practices of the flexographic printing process. Emphasis is placed on the elements of the flexographic technology from artwork, plates, plate making, inks and presswork. Lab offers hands-on work centered on plate mounting, ink formulation and presswork. (2082-371 or 2083-346) Credit 3

2081-367 Lithographic Process I
This course provides detailed fundamentals of the equipment and materials that are used in the lithographic process. Topics include press, the image carrier and its chemistry, inks and paper, and process control. (2082-371 or 2083-346) Credit 3

2081-386 Gravure Process
This course analyzes the infrastructure as well as the print production workflows in the gravure printing industry. Students will comprehend the business of gravure for publication, packaging and special product applications. In addition to learning the gravure process and technology, students will meet and interact with gravure industry professionals during RTI Gravure Day and may take an extensive industry field trip to visit cylinder engravers and gravure printers. (2082-371 or 2083-346) Credit 3

2081-409 Image Processing Workflow
This course concentrates on the image processing variables and techniques required for producing high-quality color reproductions for a variety of output technologies. Emphasis will be placed on optimizing both image quality and workflow efficiencies from digital capture to final output. Topics include file formats, image processing strategies, color conversion, and effective proofing techniques. (2083-206) Credit 3

2081-454 Print Finishing Management
Planning for successful print finishing requires in-depth knowledge of production phases from design through prepress planning, press, bindery and distribution. Emphasizes cost-effective planning and management, based in part on an awareness of the mechanical limitations involved in print production and in a contemporary print finishing environment. Credit 3

2081-458 Ink Chemistry and Formulation
This course is designed to expose the student to the historical, scientific, and technical aspects of ink discovery and formulation. Students will learn how inks were developed dating back to the Middle Eastern/Asian cultures, at the dawn of civilization to the present. Students will also synthesize and formulate those inks and test their properties. Analysis methods for modern inks will also be introduced; and students will conduct experiments using those methods. (2083-346 and 1011-215, 1011-271, or equivalent of general chemistry knowledge) Credit 3

2081-467 Lithographic Process II
This is an advanced course in sheet fed and web offset. There is an emphasis on process color printing and on solving problems involving advanced press and process variables that impact quality and productivity. Lithographic process problem solving skills are developed using multicolor presses. (2081-367) Credit 3

2081-550, 551, 552, 553 Special Topics in Printing
Presents and investigates technological topics that normally are not covered in the regular curriculum on a one-time basis. Guest lecturers as well as regular faculty are used to conduct this course. Topics to be covered are announced in advance. Credit variable 1–4

2081-562 Color Perception and Analysis
This course addresses principles of human color perception and how color is communicated by samples and measured quantitatively. It explores the role of visual perception in art appreciation and subjective quality assessment. Students will learn how to use digital tools to specify color from design to print for printing and publishing applications. (Basic desktop publishing software (Photoshop, QuarkXPress, InDesign, etc.) competency and technical writing literacy) Credit 4

2081-577 Printing Process Control
Test targets are tools used in optimizing and calibrating various components in a color reproduction system. This course will integrate many technical disciplines, e.g., metrology, statistics, process control, to make a color imaging system repeatable and predictable. Emphasis will be placed on selecting test targets in conjunction with color measurement tools for evaluation of device-level and system level performance. Two labs and an individual project are required. (2082-407 or 2083-346 or instructor’s approval) Credit 4

2082-228 Multimedia Publishing
An introductory course in interactive publishing. Students will explore methods and approaches to interactive multimedia design and production for a variety of applications and will develop interactive presentations for mobile, stand alone, and web-based environments. (4002-230) Credit 3

2082-303 Professional and Technical Writing
This course prepares students to engage in a variety of written and oral communications necessary in academic and business environments. Students are expected to produce appropriate audience-centered written materials that achieve a desired purpose based on techniques, organization, format, and style. A formal technical report and presentation are required. Students must pass this course with a grade of B or higher prior to graduation or pass the Writing Competency Test given each quarter. (0502-227) Credit 4

2082-311 Packaging Solutions
This course introduces students to the package printing industry. Topics covered in this class will include flexography, gravure, digital printing, plate making, packaging substrates, color workflows, specialty coatings, and production planning. Students will initiate projects that take a package from creation to final printed product production. (Junior status) Credit 4

2082-337 Digital Asset Management
This course is designed to expose students to all the elements encompassing Digital Asset Management (DAM). It will explore a variety of ways that companies create and utilize a DAM system. A DAM system allows for efficient and easy storage, browsing and quick location of files. Students will learn to identify and access files, which extend to four areas within a company: finding images and data, systematizing the workflow, collaboration, and managing rights. DAM systems consist of software for sorting, searching and retrieving, and hardware for storing, accessing, and distributing. Credit 3

2082-367 Media Industries Analysis
This course provides students with an understanding of the major industries closely allied with the printing industry: advertising, publishing, and packaging. The intent is to give students in-depth knowledge of (1) the structure of each of these industries; (2) channels and methods through which and by which each distributes its products and services; and (3) the major customers/clients of its products and services. Particular attention will be devoted to investigating the business models for the use of print to create value in advertising, publishing, and packaging. (2083-201) Credit 4

2082-371 Principles of Printing
This course offers a survey of the materials and processes used in print reproduction. Students will learn the basic theory of image reproduction embodied in the available analog and digital printing processes and learn to identify the process origins of print samples. Additionally, students will learn the chemical and physical properties associated with the consumables in order to obtain an understanding necessary to make informed decisions about use and application. Credit 4

2082-387 Substrates for Printing
This course covers the science and technology of the many kinds of printing substrates used by various printing processes. Students will learn the basic concepts of the substrate composition, structure, manufacture, optical and appearance properties, and testing of printing substrates, with an emphasis on factors which relate to print quality and press runnability. Students will learn to identify the full range of printing substrates and their applications. (2083-346 and 1011-215, 1011-271, or equivalent) Credit 3
This course provides students with an opportunity to learn the principles and applications of digital printing. It presents the technical aspects of the major digital print engines and compares digital printing to conventional printing processes. The strategic use of digital printing is emphasized from a digital workflow standpoint. Variable data personalization and on-demand printing are studied from both technical and marketing perspectives. Credit 3

2083-427 Color Management Systems
This course addresses the science and technology of color management systems in achieving quality color reproduction and scanner-monitor and proof-print agreement. Students will study the role of color measurement for device calibration, device characterization, and building an ICC-based color management system. Students will also perform color image rendering from digital capture to print, investigate digital proofing, soft and remote proofing, and evaluate color management system performance. Process control tools and analysis of control targets will also be covered. (2083-216 or permission of instructor) Credit 4

2083-413 Operations Management for Graphic Media
A study of the topics/factors affecting the efficiencies and effectiveness of graphic media operations. Includes consideration of both external (i.e., OSHA, environmental, legal) factors and internal factors (i.e. scheduling, plant layout, training) that directly affect operations. Addresses the importance of a quality program as well as emerging workflow systems. Credit 4

2082-417 Database Publishing
This course introduces the fundamental design elements of databases constructed for the activities that support the publishing process. Topics include the process of building databases comprised of information and digital assets needed to compose publications and to create and distribute personalized documents through the web and in print. Credit 4

2082-421 Image Processing and Analysis
This course will provide the foundation required to understand the basic concepts of imaging and its relation to human visual perception. The course presents a formalized view of the underlying imaging science concepts used throughout the workflow of a graphic arts document, from input to output. Topics covered will include various types of filters, mathematical image operations, compression, and screening. (2083-346) Credit 3

2083-010 Co-op Orientation
Lectures will provide the fundamentals of job searching strategies using RIT Job Zone and other tools. Students will have the opportunity to register for and use Job Zone to facilitate online job searching. Students will apply the theory of effective interviewing by the use of mock interviews. Students will apply the theory of effective resume writing by producing an approved resume for consumers and direct client interface via Internet chat sessions. The emphasis will be on development of the right mix of marketing communications techniques to drive both new business and customer retention. (Sophomore status) Credit 4

2083-328 Information Architecture for Publishing
In this course students will research current and emerging publishing information technology trends and apply them to create publishing solutions across a variety of platforms. Projects will emphasize aggregation and reuse of content across multiple distribution channels. (4080-230 or 4002-405 and 2082-417) Credit 4

2083-346 Print Production Workflow
Students will learn industry best practices for print publishing applications. Students will prepare content to be printed across a variety of printing platforms. (2083-217) Credit 4

2083-361 Introduction to Book Design
Introduces history, aesthetics, and technology of book design, with emphasis on typography, digital methods and digital print media. Projects include page design, typographic investigation, and print production. Includes class visits to archival collections and publishing centers. Students will create and print a book as an independent project. Credit 4

2083-368 Advanced Imaging: Retouching and Restoring
This course demystifies the process for digitally enhancing, retouching, and restoring images in the industry standard raster software. This class is designed for image makers who have a solid working knowledge of the current industry standard raster software and are interested in advancing their skills in digital image enhancement, retouching and restoration. This course includes image acquisition and specialized image manipulation techniques used to retouch, reconstruct, restore, and enhance images. (Permission of instructor) Credit 3

2083-402 Media Law
Media law offers an opportunity to investigate the philosophical and constitutional foundations of free expression as it relates to speech, writing, image making and publishing. First Amendment principles will be studied with respect to personal protection boundaries. The course will also provide a survey covering defamation issues. Students will form educated opinions about libel and slander boundaries. Since the publication discipline involves the creation of original work, a study of copyright, patent and trademark law will be provided. Credit 3

2083-412 Digital News System Management
This course surveys the breadth and links of both conventional and digital news outlets but concentrates on magazine, newspaper, and online news services. The lectures focus on the various models, values, skills, and general management systems used in the industry, imparting the fundamental planning knowledge required of all managers in the news business. This course prepares the student for a more advanced co-op experience in a complex digital news organization. Credit 4

2083-416 Media Business Basics
This course introduces business principles, such as accounting, finance, and marketing, that are essential to developing or growing a media venture. Students will develop a business plan and identify potential financial supporters. Credit 4
New Media Publishing Co-op
Provides students with on-the-job experience in the new media publishing industry. The student seeks and acquires a school approved co-op position in business or industry. The working environment provides the forum for learning more about career choices within the industry and gives the student the opportunity to test his or her skills in a competitive environment. A final report on the students’ work experiences must be electronically submitted to the co-op coordinator. Credit 0

New Media Team Project I
The course is designed to engage the new media major in a capstone production experience. The instructor will form student teams that will design and complete a multi-media campaign for organizations selected by the instructors. Credit 4

Course numbering: RIT courses are generally referred to by their seven-digit registration number. The first two digits refer to the course offering the course. The third and fourth digits identify the discipline within the college. The final three digits are unique to each course and identify whether the course is noncredit (less than 999), lower division (100–399), upper division (400–699), or graduate level (700 and above).

Unless otherwise noted, the following courses are offered annually. Specific times and dates can be found in each quarter’s schedule of courses. Prerequisites/corequisites are noted in parentheses near the end of the course description.

Criminal Justice

0501-201 Seminar in Criminal Justice
Covers the principles of the criminal justice system including the relationship between system components, their effectiveness, and theories of operation and reform. Consideration is also given to specific problems within the branches of the criminal justice system. This seminar course involves extensive reading, writing and discussion. It acquaints students with key resources for criminal justice research. Restricted to criminal justice majors. Class 4, Credit 4 (offered annually)

0501-307 Investigative Techniques
This course will familiarize the student with the different types and forms of physical evidence. Students will learn the primary methods used in crime scene, evaluation, search, recording and collection of physical evidence. Basic techniques of crime management, photography, drawing and reporting will be instructed. Finger print and firearms identification as well as serology and trace evidence will be studied. Elective course for criminal justice majors. Class 4, Credit 4 (offered occasionally)

0501-400 Criminology
A survey of the field of criminology with emphasis on major forms of contemporary crime, definition of crimes and criminality, theories of criminality, the extent of crime, criminal typologies and case processing through the criminal justice system. Required course for criminal justice majors. Part of the criminal justice concentration and minor. May also be taken as an elective. Class 4, Credit 4 (offered regularly)

0501-401 Research Methods I
This course is the first of two courses designed to provide students with a foundation in social science research methods. Through lecture, discussion and activities associated with a research proposal, the different methods of conducting research are presented. Stress is on issues of deducting hypotheses from theoretical frame works, variable construction, experimental design, sampling methodology and the techniques and methods of data collection. Students will formulate a written research proposal that details a research question and the research question and the research design appropriate for addressing that question. Restricted to criminal justice majors. Class 4, Credit 4 (offered annually)

0501-403 Field Experience
Internship practicum for all pre-service criminal justice students. Gives the student first-hand experience in the field of criminal justice in an appropriate organization that meets the needs of the student’s career objectives. Students are closely supervised at selected organizations, developing their pre-professional skills while learning the organization’s programs and methods. Restricted to criminal justice majors. (Junior or senior status) Class variable, Credit 8 (offered annually)

0501-405 Major Issues in Criminal Justice System
Focuses on contemporary issues and topics not otherwise distinctly incorporated in established criminal justice courses. Concentrates on student discussion and interaction surrounding required readings on topics such as deviance, crime prevention, and issues in the prosecution/court system. Recent examples include prostitution and vice, cyberlaw; prisoner re-entry, wrongful convictions, criminal analysis; international crime; legal controversies in the law, seminar in sexual violence; stress in the CJ system; substance abuse; terrorism and hostage taking; legal research. Elective course for criminal justice majors. Part of the criminal justice concentration and minor and the legal studies minor. May also be taken as an elective. Class 4, Credit 4 (offered annually)

0501-406 Technology in Criminal Justice
Develops understanding of theories, management processes, organizational capabilities and social implications of criminal justice technologies. Many categories of technology are considered, including tools and techniques used for: communications and records management, transportation and traffic management, apprehension and detention of suspected offenders and criminals, crime scene investigations and laboratory forensics, telephonic and physical surveillance, and weapons, special assault and protection tactics. Students consider the role of industry, government, and user groups in the historical development and legal/ethical use of specific technologies including less-than-lethal. Special attention is given to information technology. Required course for criminal justice majors. Part of the criminal justice concentration and minor. May also be taken as an elective. Class 4, Credit 4 (offered annually)

0501-409 Legal Rights of the Offender
Presents an in-depth study of the substantive and procedural law as it affects convicted offenders. Considerable attention is devoted to the study of constitutional rights and privileges, how they apply to convicted offenders and the methods employed to secure these rights. Conviction and its consequences are explored, as is the sentencing process. The rights of prisoners, probationers and parolees are reviewed. In addition, the various remedies enforced for enforcement of these rights are discussed, including direct appeals, collateral attacks and a variety of postconviction remedies. Elective for criminal justice majors and part of the legal studies minor. Class 4, Credit 4 (offered occasionally)

0501-410 Management in Criminal Justice
This course presents the history and development of the principles of management and organizational theory as they have been applied to the field of criminal justice. This developmental evaluation is followed by a presentation of principles and philosophies of agency administration that have been effective in business, industry and government, with the intention of discussing their applicability throughout the criminal justice system. Restricted to criminal justice majors. (Junior or senior status) Class 4, Credit 4 (offered annually)

0501-415 Domestic Violence
The course examines the problems related to domestic conflict and violence. Included is a study of the dynamics of violence as reflected in child abuse, incest, marital rape, spousal and parental abuse, and violence among siblings. Part of the criminal justice and women and gender studies concentrations and minors. Elective for criminal justice majors. Class 4, Credit 4 (offered occasionally)
0501-440 | Juvenile Justice
This course examines the concepts, theories and environmental influences of juvenile offenders, the impact of the judicial system, control and corrections on juvenile justice. The course also examines the role of forces in the system including police, courts, community resources and treatment. Required course for criminal justice majors. Part of the criminal justice concentration and minor. May also be taken as an elective. Class 4, Credit 4 (offered annually)

0501-441 | Corrections
Introduction to the basic organizations of the correctional system, their functions and performance. Prisons, and jails, as well as probation and parole agencies, are discussed with the context of historical and contemporary philosophy. Attention also is focused on decision-making functions, the role of various personnel within the correctional system and the population of offenders within it. Strategies for rehabilitation and their effectiveness are surveyed. Required course for criminal justice majors. Part of the criminal justice concentration and minor. May also be taken as an elective. Class 4, Credit 4 (offered annually)

0501-443 | Law Enforcement in Society
The social and historical origins of the various police systems; police culture, role and career; police in the legal system; social and legal restraints on police practices; police discretion in practice; police and community; police organization and community control mechanisms. Required course for criminal justice majors. Part of the criminal justice concentration and minor. May also be taken as an elective. Class 4, Credit 4 (offered annually)

0501-444 | Concepts in Criminal Law
Concepts in criminal law deals with the substantive and procedural criminal law. Emphasis will be placed on various concepts of criminal law and practice; how ideas, laws and community perception influence the criminal justice system. Characteristics of crimes against people and property will be examined; including: the nature of criminal conduct, intent, and causation. Required course for criminal justice majors. Part of the criminal justice concentration and minor. May also be taken as an elective. Class 4, Credit 4 (offered annually)

0501-445 | Minority Groups and the Criminal Justice System
This course will investigate the roles played by racial minorities-African Americans, Native Americans, Hispanic Americans, and Asian Americans—at each level of the criminal justice system in the United States of America. The experience of African Americans will be emphasized since this group has been the subject of more extensive research by criminologists and criminal justice practitioners. Professional elective course for criminal justice majors. Part of the criminal justice concentration and minor. May also be taken as an elective. Class 4, Credit 4 (offered annually)

0501-446 | Women and Crime
Deals with women as criminal offenders and as victims of crime, focusing upon theories about women in crime, types of crimes committed, patterns of criminality and the treatment of women offenders. Also examines the role of women as law enforcement officers, judges, lawyers and correctional officers in the criminal justice system. Elective for criminal justice majors. Part of the criminal justice concentration and minor. May also be taken as an elective. Class 4, Credit 4 (offered annually)

0501-456 | Courts
This course provides students with an understanding of the recognized functions of courts in the American criminal justice system. Jurisdiction, policies and procedures of courts in the administration of criminal justice, including trial and appellate courts, will be discussed. Courts will be examined at the local, state and federal levels. Required course for criminal justice majors. Part of the criminal justice concentration and minor and the gender studies concentration and minor. May also be taken as an elective. Class 4, Credit 4 (offered annually)

0501-460 | Current Issues in Criminal Justice
This course involves year long participation in, and written critique of, a designated set of lectures, roundtables and presentations on topics covering current issues in criminal justice. The goal is to engage students in discussion of current issues with their peers and with experts in the field. Students must sign up for the criminal justice office for fall, and register for the course in the spring quarter. May be taken up to four times. Restricted to criminal justice majors as an elective. Class 2, Credit 2 (offered annually)

0501-505 | Corporate and White Collar Crime
An examination of the extent and character of white collar crime with special emphasis upon business and professional deviance. Elective for criminal justice majors. Class 4, Credit 4 (offered occasionally)

0501-506 | Evidence
Provides the student with an awareness of what types of evidence are admissible in a criminal trial. Includes a comprehensive analysis of the most frequently used rules of evidence. There are readings and discussions pertaining to the nature of real, testimonial, hearsay and circumstantial evidence. Examines rules concerning the cross examination of witnesses, exceptions to the exclusion of hearsay evidence, the burden of proof, the provinces of the judge and of the jury, legal presumptions and the exclusion of illegally obtained evidence. Elective for criminal justice majors and part of the legal studies minor. (0501-444) Class 4, Credit 4 (offered occasionally)

0501-507 | Computer Crime
This course provides definitional, theoretical, and operational context for understanding computer-based competition, conflict and crime in the information age. Students study the history, nature and extent of computer-related crime as well as differing types of computer criminals, their motivations and the methods they use to threaten, attack, compromise or damage physical and cyber assets. The course considers legal and regulatory environments and the impact these have on policies and practices related to ethics in the management of information security, data encryption, privacy, and numerous other special topics. Part of the criminal justice concentration and minor. May also be taken as an elective. Class 4, Credit 4 (offered annually)

0501-510 | Interview and Counseling in Criminal Justice
This course instructs the student in the various contemporary dynamics of interviewing and counseling criminal justice and related human service clients. Issues discussed revolve around counseling and supervision strategies and conflicts among agencies, between administrators and staff, and clients. Presents both the practical and theoretical aspects of these issues as well as devotes attention to surveying prospective counseling strategies for accomplishing desired behavioral change. Restricted to criminal justice majors. (Junior or senior status) Class 4, Credit 4 (offered annually)

0501-511 | Alternatives to Incarceration
Analyzes possible sentencing options available to the criminal courts as well as pre-adjudicatory alternatives for both adults and juvenile offenders. The variety of dispositions evaluated include probation, parole, halfway houses, work-release, study-release, prison furloughs, prudtrial release, pre-probation alternatives (fines, suspended sentences, conditional discharge and a variety of diversion programs). Special emphasis is placed on a critical evaluation of the alternatives as they compare to the more traditional methods of handling offenders. Field trips and guest lecturers from nontraditional programs are typically included in the course. Part of the criminal justice concentration and minor. Elective for criminal justice majors. Class 4, Credit 4 (offered occasionally)

0501-517 | Comparative Criminal Justice System
Examines, in a comparative analysis, the criminal system and the penal methods globally. Major emphasis is given to the issues of intent, criminal responsibility, individual and public interests, purposes and modes of prevention, repression and punishment, methods of trial, punishment and pardon. Part of the criminal justice concentration and minor. Elective course for criminal justice majors. Class 4, Credit 4 (offered occasionally)

0501-518 | Crime and Justice in the Community
This course examines crime and justice issues at the level of local community. Theories of community will be considered and emphasis will be placed on community definitions and responses to crime and deviance. Local sanctions, treatment approaches, offender re-entry and the relationship between criminal justice and other responses to behavior problems are explored. Part of the criminal justice concentration and minor. Elective for criminal justice majors. Class 4, Credit 4 (offered occasionally)

0501-522 | Victimless Crime
Victimless crime familiarizes the student with many of the implications and ramifications of efforts to control “victimless” crimes. Discussions concentrate on the illegal activity associated with prostitution, gambling, drug use and pornography. The social, moral, legal and practical consequences of legalizing such activities are examined and evaluated. Part of the criminal justice concentration and minor and the legal studies minor. Elective for criminal justice majors. Class 4, Credit 4 (offered occasionally)
0501-523 Crime and Violence
Focuses on the outbreak and increase of violent crime and criminal trends in the United States as one of the more serious realities in this century. In addition to an historical review, contemporary problems are explored, covering such topics as violence in the streets, terrorism, riots, vigilantism and the role of various criminal justice agencies in attempting to control these problems. Elective for criminal justice majors. Part of the criminal justice concentration and minor. Class 4, Credit 4 (offered occasionally)

0501-526 Seminar in Criminal Justice and Public Policy
This course is a critical analysis of some of the current issues, problems and concerns in criminal justice. Conflicts between theory and practice are examined and analyzed. Restricted to criminal justice majors. (Junior or senior status) Class 4, Credit 4 (offered annually)

0501-527 Seminar in Law
Focuses on the nature, function and limits of the rule of law. This course traces the history and development of the 4th, 5th, 6th and 14th Amendments of the United States Constitution. This will be accomplished by reading and discussing approximately 100 United States Supreme Court decisions from the early 1900s through the present. Students will also be introduced to the concept of briefing a case. Elective for criminal justice majors. Part of the legal studies minor. Class 4 Credit 4 (offered occasionally)

0501-528 Theories of Crime and Criminality
A comprehensive survey of historical and contemporary theories of the causes of crime. Included are theories that derive from biological, psychological, sociological, geographic, economic, and political perspectives. The development of criminological theory is reviewed. Fundamental distinctions between classical and positive theories and between theories of crime and criminality are discussed. Restricted to criminal justice majors. (Junior or senior status) Class 4, Credit 4 (offered annually)

0501-529 Alternative Methods in Criminal Justice Research
This course examines alternative methods in research including qualitative methods, small group research, ethnographic research, focus groups, snowball surveys, participant observation, interviewer techniques with diverse participants, and the use of new technologies such as computer-based surveys, clickers, and on-line surveys. This course will also examine the methods by which both qualitative and quantitative methods may be combined. Elective for criminal justice majors. Class 4, Credit 4 (offered occasionally)

0501-536 Seminar in Security
Focuses on critical issues, problems and concerns in the area of security. Topics include workplace violence, copyright and patent infringement and safety in the workplace. Elective for criminal justice majors. Class 4, Credit 4 (offered occasionally)

0501-541 Research Methods II
This course is the second of two courses designed to provide students with a foundation in social science research methods. Through lecture, discussion and activities associated with a research project, emphasis is placed on the creation of a null hypothesis, identification of the relationships among variables, establishment models, and analysis of data using both parametric and non-parametric statistics. Restricted to criminal justice majors. (0501-401) Class 4, Credit 4 (offered annually)

0501-542 Honors Research
This course is for students interested in research applications beyond basic required course work. Students will undertake individual or group research projects from problem formulation through data collection and analysis. A major research report will be required. Faculty approval is required before course registration. Restricted to criminal justice majors as an elective. Class 4, Credit 4 (offered annually)

0501-100 Basic Writing
This course develops minimal entry-level college writing competencies prerequisite for writing seminar. The credits earned do not comprise part of the student's normal liberal arts general education core curriculum, nor may the course be substituted for writing seminar. May be taken as a general education elective. Class 4, Credit 4 (offered quarterly)

0502-110 Written Communication I
This first course in a two-quarter basic writing course sequence for NDIT supported students develops the writing skills necessary to complete 0502-227 writing seminar successfully. It serves students who need additional time to meet NDIT's freshman writing competency requirements as well as students who need to develop skills prerequisite to Writing Seminar. It focuses on research paper writing using primary and secondary source materials, introduces the conventions of persuasive writing and reinforces the conventions of expository essay writing presented in written communication I. Registration by permission of the Department of Liberal Studies. A grade of "C" or better in this course is required for students to register for written communication II. Class 4, Credit 4 (offered regularly)

0502-111 Written Communication II
This second course in a two-quarter basic writing course sequence for NDIT supported students develops the writing skills necessary to complete 0502-227 writing seminar successfully. It serves students who need additional time to meet NDIT's freshman writing competency requirements as well as students who need to develop skills prerequisite to writing seminar. It focuses on research paper writing using primary and secondary source materials, introduces the conventions of persuasive writing and reinforces the conventions of expository essay writing presented in written communication I. Registration by permission of the Department of liberal studies. Class 4, Credit 4 (offered regularly)

0502-227 Writing Seminar
This is a one-quarter, four-credit seminar limited to 19 students per section designed to develop first-year students' proficiency in analytical writing, critical reading, and critical thinking. Students will read, understand and interpret a variety of texts. Texts, chosen around a particular theme, are designed to challenge students intellectually and to stimulate writing for a variety of contexts and purposes. Attention will be paid to the writing process, including an emphasis on teacher-student conferencing, self-assessment, class discussion, peer review, formal and informal writing, research, and revision. (Liberal Arts Qualifying Exam for students who scored below 560 on verbal portion of SAT, below 6 on SAT essay portion, and below 23 on the ACT) Class 4, Credit 4 (offered quarterly)

0502-325 Honors Writing Seminar
This class is an intensive introduction to college writing. Using texts chosen around a particular theme, students will develop proficiency in analytical writing, critical reading and critical thinking, by writing within a variety of contexts and with a variety of purposes. Students will develop writing strategies they will draw on throughout their academic careers. There will be particular attention to the writing process including an emphasis on teacher-student conferencing, self-assessment, class discussion, peer review, formal and informal writing, research and revision. Class 4, Credit 4 (offered quarterly)

0502-443 Written Argument
All fields and professions require us to present arguments that support formal and informal statements and proposals. In this course students will apply the elements of reasoning to their written argument, and learn how to make claims, provide evidence, explore underlying assumptions, and anticipate and address counter-points. The course also includes reading arguments, assessing effectiveness and recognizing particular means of argumentation. Students will apply principles of argumentation to a documented research project, developing an original argument of their own. Part of the writing studies concentration and minor and may also be taken as an elective. (0502-227 or equivalent) Class 4, Credit 4 (offered quarterly)

0502-444 Technical Writing
Provides knowledge of and practice in technical writing style; audience analysis; organizing, preparing and revising short and long technical documents; designing documents using effective design features and principles, and formatting elements using tables and graphs; conducting research; writing technical definitions, and physical and process descriptions; writing instructions; and individual and group editing. Required course for communication majors and a professional elective for advertising and public relations majors. Part of the writing studies concentration and minor; the communication minor; and may also be taken as an elective. (0502-227 or equivalent) Class 4, Credit 4 (offered quarterly)

0502-445 The Evolving English Language
What makes the English language so difficult? Where do our words come from? Why does Old English look like a foreign language? This course surveys the development of the English language from its beginning to the present to answer such questions as these. Designed for anyone who is curious about the English language or the nature of language change. May be taken as a professional elective for communication majors. Part of the writing studies concentration and minor and may also be taken as an elective. (0502-227 or equivalent) Class 4, Credit 4 (offered annually)
0502-449  Worlds of Writing
In this course students will read, analyze and practice diverse genres of writing, possibly including but not limited to: personal narrative, oral history, documentary, analytical research and literary interpretation. Through its comparison of different types of writing, the course raises questions about how language and writing are shaped by social context; about how language and writing shape our views on reality; and about the politics of these representational practices. Part of the writing studies concentration and minor and the science writing minor. May also be taken as an elective. (0502-227 or equivalent) Class 4, Credit 4 (offered occasionally)

0502-451  Creative Writing: Poetry Workshop
An exploration of the techniques of writing poetry in both open and closed forms. Professional elective for professional technical communication majors. Part of the creative writing minor and may also be taken as an elective. (0502-227 or equivalent) Class 4, Credit 4 (offered quarterly)

0502-452  Creative Writing: Fiction Workshop
An exploration of some of the most important contemporary techniques of prose fiction in the short story form. May be taken as a professional elective for communication majors; part of the creative writing minor; and may also be taken as an elective. (0502-227 or equivalent) Class 4, Credit 4 (offered annually)

0502-453  Advanced Creative Writing Workshop
This course is for students who have completed a creative writing workshop and want to explore in-depth a literary genre or add to their skills as a creative writer whether interested in poetry, fiction, non-fiction or a combination of genres. The focus will be on the creation of a significant piece of writing for a final project. In addition to planning and producing a single, sustained creative work, students will complete other exercises and assignments in order to experiment with other genres. Through reading and discussion they will see their own writing in a larger context. Weekly class critiques will provide the opportunity to give and receive helpful feedback. May be taken as a professional elective for communication majors; part of the creative writing minor; and may also be taken as an elective (0502-227 or equivalent), 0502-451 or 452 or equivalent) Class 4, Credit 4 (offered quarterly)

0502-455  Writing the Self and Others
This course focuses on forms of writing about the self and others, primarily memoir and oral history. Students learn about the relationships between orality and texts, about how we know ourselves through others, and others through ourselves. The course emphasizes the reflective process of memoir writing, moving from short exercises into longer, peer-reviewed papers. There is instruction on the process and techniques of oral history through careful listening, transcribing and editing with an emphasis on the historical awareness necessary to recreate history. Students will read from culturally diverse memoirs and oral histories, study concepts of narration, view photographs and films. Part of the writing studies concentration and minor; and may also be taken as an elective. (0502-227 or equivalent) Class 4, Credit 4 (offered annually)

0502-456  Rhetoric of Science
In this course students will read the writing of some of the most influential scientist-rhetoricians who have had to persuade both professional and public audiences of the validity of their science. We will discuss some history of science, possibly including but not limited to: Royal Society papers and contemporary journal arguments. Other possible course content includes students' own favorite figures and texts in the history of science, ongoing controversies in contemporary scientific debates, and the representation of science in popular culture. Part of the writing studies concentration and minor and the science writing minor. May also be taken as an elective. (0502-227 or equivalent) Class 4, Credit 4 (offered annually)

0502-457  Language, Dialects, and Identity
In this course we will examine varieties of language that result from regional and social factors (gender, race, ethnicity and class). We will also explore the ways in which language is tied to our identity and marks our place in society as a result of such variation. Topics could include but are not limited to: dialects of American English, language and gender, bi/multilingualism, attitudes toward non-standard and standard varieties of English, and language policy (e.g. the movement to declare English the national language; Ebonics). Part of the writing studies concentration and minor and may also be taken as an elective. (0502-227 or equivalent) Class 4, Credit 4 (offered every other year)

0502-459  Creative Nonfiction
This course is an intensive workshop in writing creative non-fiction. Students' ongoing work taken through several drafts will be discussed in weekly clinics which will not only move the work forward, but teach each participant the skills necessary to become a better editor. With a continual practice of writing and reading, students will explore the many possible formats of non-fiction. Part of the writing studies concentration and minor; the creative writing and the science writing minors; and may also be taken as an elective. (0502-227 or equivalent) Class 4, Credit 4 (offered annually)

0502-460  Science Writing
Artificial Intelligence, Chaos Theory, Space Radiation... If science is to successfully move from the lab to the field to the public and popular press, it will need to be delivered by writers who can make challenging information accessible. A good science writer crafts specialized material into compelling stories with graceful - even poetic - prose. This course will not teach you how to write scientific research papers. Instead, students will read various models of science writing, from the science sections of various newspapers, from magazine, as well as from essays in periodicals. You do not need to be a science major, just bring a basic interest in science and its work. Part of the writing studies concentration and minor and the science writing minor. May also be taken as an elective (0502-227 or equivalent) Class 4, Credit 4 (offered annually)

0502-461  Editing the Literary Magazine
This course covers all aspects of creating a literary and art magazine, with emphasis on writing and editing skills. Students will engage in a hands-on practicum focusing on production of the award winning student-designed magazine, SIGNATURES, RIT's oldest continuous literary publication. Part of the creative writing minor and may also be taken as an elective. (0502-227 or equivalent) Class 4, Credit 4 (offered annually)

0502-462  Advanced Science Writing
Elaborating on principles and skills learned in science writing, students will gain more intensive experience with research and revision. Students will learn to use multiple sources to bring a recent scientific development to several different kinds of audiences with varying expertise and with varying stakes in the issue. Students will learn to find, evaluate and analyze sources in several genres, and interpret their information for a different audience than originally intended. Students will undertake a coherent research project supported by specialized scientific knowledge and undergoing several revision stages. Part of the science writing minor and may also be taken as an elective. (0502-227 and 0502-460). Class 4, Credit 4 (offered annually)

0502-463  Language and the Brain
Students will be introduced to topics that illuminate the way language is represented in the human mind: neurolinguistics (where in the brain language is localized), the language "instinct" or innateness of language (how the human brain is biologically programmed for language), psycholinguistics (how language is acquired and processed), language and thought (whether our thoughts are controlled by the particular language we speak), language disorders (aphasic language due to ataxia, autism, etc.), and language evolution (how language first evolved, from sign to speech). Students will read in-depth yet accessible research from the field and will write on these topics in cognitive science. Part of the writing studies concentration and minor, the science writing minor, and may also be taken as an elective. (0502-227 or equivalent) Class 4, Credit 4 (offered annually)

0502-560  Special Topics
A focused, in depth study of a selected topic in writing. Specific topics vary according to faculty assigned. Part of the writing studies concentration and minor, the creative writing minor, and the science writing minor depending on the topic offered. Topics will vary. (0502-227 or equivalent) Class 4, Credit 4 (offered occasionally)

0504-210  Literature

Literary and Cultural Studies
This course will examine literary and cultural texts selected from traditional literature to contemporary media and culture (e.g. literature, film, graphic novels, television, advertising, anime). Students will analyze these texts from a variety of perspectives and become familiar with current debates about literature and/or culture as arenas of human experience. This course will fulfill a humanities core requirement. (0502-227 or equivalent) Class 4, Credit 4 (offered quarterly)
0504-319 Arts of Expression: Writing the Disciplines
This course highlights the processes and practices of writing and research specific to a particular discipline or across disciplines such as film studies, photography and visual cultures, ethnography, literary studies, creative writing, or mythology. It asks how their modes and objects of inquiry—for instance, film, photography, digital media, oral history, or narrative—shape and transform the discipline and its inquiries over time. Students have the opportunity to develop a critical understanding of important conversations within a particular area of study and to write about those topics. (0502-227 or equivalent)
Class 4, Credit 4 (offered quarterly)

0504-327 Honors: Writing the Disciplines
This course is an intensive exploration of themes, movements, authors, and ideas in literary and/or cultural studies that enhances students’ analytical reading skills and develops their familiarity with the tools of critical analysis. Drawing on their expertise and research, professors design specific sections of this course that acquaint students with the field. Topics range from traditional author studies to critical approaches to popular culture. The format of the class will be a seminar with student involvement in discussion. May be taken as honors literature, as a general education elective, and as a literary and cultural studies concentration and minor. (0502-227 or equivalent)
Class 4, Credit 4 (offered twice annually)

0504-400 American Sign Language Literature
In this course students will explore a wide range of literary works representing the various genres of ASL literature. Students will be expected to analyze works in terms of literary conventions/techniques as well as relevant cultural symbols and themes. Attention will be given to historical context, deaf cultural values, and the style/conventions used by individual literary artists. Each student will be required to complete literary analysis papers. In addition, students will be expected to create original ASL literary works and/or retell well-known ASL literary works individually or in collaboration with other students. This course is conducted in ASL and will require considerable reading and viewing of videotaped materials. Part of literary and cultural studies concentration and minor and may be taken as an elective. (Fluency in ASL or approval of instructor required.)
Class 4, Credit 4 (offered annually)

0504-425 Great Authors
The course provides extended study of the works of a specific canonical author (to be listed in the sub-title) as selected by the instructor for each section of the course. Students can take any single section of this course as part of the literary and cultural studies concentration and minor and may also be taken as an elective. Additional sections on different authors can be taken for elective credit.
Class 4, Credit 4 (offered annually)

0504-435 Global Literature
This course will approach literature as a global phenomenon, considering what happens to literary texts as they move across national, linguistic, racial and ethnic, religious, and economic borders. Students will read representative poetry, fiction, drama and non-fiction from the given nation or region and be introduced to its cultural and historical contexts. The course may also be comparative and will likely cover more than one region in the context of globalization and world movements. Students can take any single section of this course as part of the literary and cultural studies concentration and minor, and it may also be taken as an elective. Sections can also be taken for elective credit.
Class 4, Credit 4 (offered annually)

0504-436 The Graphic Novel
This course charts the development of the graphic novel, examines that history in relation to other media (including literary works, comics, film, and video games), and reflects on how images and writing function in relation to one another. Primary readings will be supplemented with secondary works that address socio-historical contexts, interpretive approaches and the cultural politics of the medium, such as representations of class, race, gender and ethnicity. Part of the literary and cultural studies concentration and minor and may also be taken as an elective. (0502-227 or equivalent)
Class 4, Credit 4 (offered occasionally)

0504-440 Drama and Theatre
This course examines drama as a genre and theater as a performing art. Intensive study of at least one major playwright or period complements a general survey of drama/theater from ancient Greece to modern Broadway. Part of the literary and cultural studies concentration and minor and the theatre arts minor. It may also be taken as an elective. (0502-227 or equivalent)
Class 4, Credit 4 (offered annually)

0504-441 The Art of Poetry
Emphasizes the enjoyment and study of poetry with primary attention to major poetry in English. Part of the literary and cultural studies concentration and minor and the creative writing minor. It may also be taken as an elective. (0502-227 or equivalent)
Class 4, Credit 4 (offered annually)

0504-442 The Short Story
This course uses the genre of the contemporary short story to provide material for critical discussion. Topics and cultural understanding. Part of the literary and cultural studies concentration and minor and the creative writing minor. It may also be taken as an elective. (0502-227 or equivalent)
Class 4, Credit 4 (offered occasionally)

0504-443 The Novel
A close reading and analysis of several novels selected to show the range of narrative techniques, methods of characterization and plot construction, and styles representative of the genre. Part of the literary and cultural studies concentration and minor; the creative writing minor; and may also be taken as an elective. (0502-227 or equivalent)
Class 4, Credit 4 (offered annually)

0504-444 Film Studies
This course examines the nature of narrative in both film and literature, the various aspects of adaptation of literature into film and the relationship between social reality and storytelling. In documentary film, utilizing a non-technical approach to the study of film. Part of the literary and cultural studies concentration and minor and may also be taken as an elective. Additional screening time is recommended. (0502-227 or equivalent)
Class 4, Credit 4 (offered annually)

0504-447 Special Topics: Literature
This course title defines a focused, in-depth study and analysis of a selected advanced topic in literature. Specific topics vary according to faculty assigned.
Part of the literary and cultural studies concentration and minor. May also be taken as an elective. (0502-227 or equivalent)
Class 4, Credit 4 (offered occasionally)

0504-448 Biographical Literature
Students develop skills to critically read this consistently best selling genre. The course distinguishes between biographical and autobiographical literature and asks students to examine and critique the social contexts that produce various forms of biography. Selections attempt to explore lives lived within a variety of cultures. Part of the literary and cultural studies concentration and minor and the science writing minor. It may also be taken as an elective. (0502-227 or equivalent)
Class 4, Credit 4 (offered occasionally)

0504-454 Shakespeare: Tragedy/Romance
For almost four hundred years Shakespeare’s work has stood as a monument to the literary imagination. In this course we will study Shakespeare’s tragedies and romances, with a view toward exploring the influence of his work through the ages, as well as addressing questions of canonicity. Through class discussion, interactive activities, and examination of film, students will develop strategies both to investigate the literary and theatrical power of these works as well as to consider their cultural presence in both contemporary American culture and Shakespeare’s England. Particular attention will be devoted to literary theory and the variety of interpretation in order to inform readings of the plays. Part of the literary and cultural studies concentration and minor; the theater arts minor and may be taken as an elective. (0502-227 or equivalent)
Class 4, Credit 4 (offered annually)

0504-455 Shakespeare: Comedy
Shakespeare’s comedies and histories in this course students will read, study, and discuss some of Shakespeare’s comedies and histories in an attempt to determine the nature of his greatness. What political and institutional forces were directed toward Shakespeare? In addition to reading a range of Shakespeare’s comedies and histories, the course will develop deeper understandings of contemporary literary theory and practices that allow various interpretations of these plays. Attention will be paid to issues of gender, historicity, irony, and textual analysis among others. Part of the literary and cultural studies concentration and minor; the theatre arts minor; and as an affiliated course in the women’s and gender studies minor. It may also be taken as an elective. (0502-227 or equivalent)
Class 4, Credit 4 (offered annually)
Modern Poetry
From Walt Whitman’s “barbaric yawp,” to Emily Dickinson’s “letter to the world that never wrote to me,” and Baudelaire’s “breath of wind from the wings of madness,” Modern Poetry is a body of literature characterized by bold changes in voice, form, and subject matter. This course offers a close examination of poetry of the 19th and 20th centuries, with attention to such things as the role played by technological, historical, and political developments; what it means to be “modern” and how other modern arts movements, for instance, visual arts, music, or film, have influenced poetry. Part of the literary and cultural studies concentration and minor; the creative writing minor; and may also be taken as an elective. (0502-227 or equivalent) Class 4, Credit 4 (offered annually)

Literature and Technology
Surveying the rise of computing technologies, information theories, and information economies in the last century, this course considers their impact on literature, culture and knowledge-formation. In particular, we will reflect on topics such as the relations between social and technological transformation, literary print and digital cultures and electronic literature. Part of the science, technology and society minor; the science writing minor; the literary and cultural studies concentration and minor; and may also be taken as an elective. (0502-227 or equivalent) Class 4, Credit 4 (offered annually)

Mythology and Folklore
This course is a scholarly investigation into the cultural, historical, social, psychological, religious and spiritual, literary and performative dimensions of myth. It examines different approaches to the study of myth emerging from disciplines such as anthropology, history, literary studies, and psychology. Special attention will be paid to the effect of these narratives on literature and other kinds of cultural texts, past and present. Part of the literary and cultural studies concentration and minor; and may also be taken as an elective. (0502-227 or equivalent) Class 4, Credit 4 (offered annually)

African-American Literature
In this course students research and discuss major contributions to the African-American legacy of letters. From Phyllis Wheatley, Paul Laurence Dunbar, Ida B. Wells to Toni Morrison, from the Harlem Renaissance, and the Black Arts Movements of the 1960’s to Hip-Hop, this course explores African-American writers who inspired a civil rights and cultural revolution. Part of the minority relations concentration; the literary and cultural studies concentration and minor; as an affiliated course in the women and gender studies minor; and may also be taken as an elective. (0502-227 or equivalent) Class 4, Credit 4 (offered annually)

American Literature
This course explores the contested literary and cultural history of the U.S. Focusing on one or more salient themes and ideas chosen by the instructor, the course examines issues of identity, migration, difference, technology, and work in American literature presented in historical context. The emphasis is on the diversity of traditions and voices including African American, European American, Latina/o, Native, Asian American and/or new immigrant writing in the U.S. This course looks at both the struggle and the possibilities of forging a genuinely democratic literary tradition. Part of the literary and cultural studies concentration and minor and may also be taken as an elective. (0502-227 or equivalent) Class 4, Credit 4 (offered occasionally)

Studies in British Literature
This course examines select British texts and authors, emphasizing foundations and evolution of British literary traditions and changing national British identities, focusing on one or more of the defining periods ranging from the heroic poetry of the Anglo-Saxon period, the Restoration, the 18th century, up to World War I. Part of the literary and cultural studies concentration and minor and may also be taken as an elective. (0502-227 or equivalent) Class 4, Credit 4 (offered occasionally)

Women’s Studies: Language and Literature
This course concentrates on literature by women authors, literary representations of women, and other means by which representational practices and the politics of language are engaged to critically examine gender roles, sexuality and their social consequence in various historical contexts. Part of the literary and cultural studies concentration and minor; and the women and gender studies concentration and minor (0522-481). It may also be taken as an elective. (0502-227 or equivalent) Class 4, Credit 4 (offered annually)

Science Fiction
This course provides a selective survey of science fiction from its antecedents to its foundational texts and through many of its developments in the 20th and even the 21st centuries. With a variety of authors who exhibit varying intentions and effects, the course approaches these texts as literary form, as cultural artifact, as philosophical speculation, and as scientific and technological imaginary. Part of writing studies concentration and minor, the literary and cultural studies minor, and the science writing minor. It may be taken as an elective. (0502-227 or equivalent) Class 4, Credit 4 (offered occasionally)

Maps, Spaces, and Places
This Interdisciplinary course emphasizes visual literacy and spatial thinking through conventional and digital maps, and in diverse novels, poetry, and films. We rethink space as a dynamic context for making history, raising questions about authority and organizing social/communal life. Requirements include an oral presentation, brief online responses and a final community project, such as “Reading RochesterIT as Text,” orienteering, digital or picture map research, or a GIS project. Part of the literary and cultural studies concentration and minor and may also be taken as an elective. (0502-227 or equivalent) Class 4, Credit 4 (offered occasionally)

Deaf American Literature
The major focus of this course is “the image of the deaf” and “the deaf experience” as depicted in literature. The course attempts to define “deafness” and the cultural roles it plays in both texts by deaf authors and texts about deaf persons, as well as to examine particular literary forms related to the deaf experience. Thus, attention is also given to studying poetry that is created in American Sign Language (ASL), a language primarily used by the deaf American community. Part of the ASL language/culture concentration; the literary and cultural studies concentration and minor; the deaf studies concentration and minor; and may also be taken as an elective. (0502-227 or equivalent) Class 4, Credit 4 (offered annually)

Fine Arts
Students develop ability in perceiving worth in objects of art through consideration of fundamental concepts in painting, sculpture and architecture, involving analysis, interpretation and principles of aesthetics. Class 4, Credit 4 (offered quarterly)

An introduction to music as a fine art. Students develop skills in listening, evaluation and analysis through an examination of music’s forms, constituent elements, and stylistic and historical development. Class 4, Credit 4 (offered quarterly)

This course will develop students’ skills in viewing, analyzing, interpreting and evaluating the art of cinema through an examination of film technology, history, aesthetics and style. Class 4, Credit 4 (offered quarterly)

The course will develop students’ skills in viewing, evaluating, and analyzing the art of the theater through an examination of its constituent elements, aesthetics, and stylistic and historical development. Class 4, Credit 4 (offered quarterly)

Students study several of the performing arts (e.g. theatre, music) together, and by doing so develop an understanding of the common and unique aspects of all different performing arts. This understanding is gained through the study of theoretical and aesthetic principles and modes of analysis, as well as practical experiences. Students may elect this course to fulfill a liberal arts humanities core course. Class 4, Credit 4 (offered occasionally)

This is a course in Shakespeare’s drama that emphasizes the plays as potential theatrical productions. While studying five or six plays representative of the different acknowledged types of Shakespearean drama (comedy, tragedy, history, problem comedy, romance), students will gain a broad understanding of the character and range of Shakespeare’s poetic-dramatic art. Experimenting with a variety of such activities as oral interpretation, character presentation, and scene rendering, they acquire a practical appreciation of Shakespearean drama’s theatrical potency, of the original staging conventions, and of how each type of play makes particular generic demands on both performer and spectator. Augmenting the reading and practical expressive activities is a term project. Class 4, Credit 4 (offered annually)
0505-325  Honors: Fine Arts
This course introduces students to the idea, the practice and the evaluation of the visual, the musical and the dramatic arts (music, theater, film, painting, sculpture, and architecture). The course is organized and taught by a team of fine arts faculty, in a format that combines lecture, discussion, and practice. The topic of fine arts is treated in three integrated ways: experimental-analytic, and program-critical. Students will be expected to read, view, listen to, discuss, research, write about, and create works of art.  Class 4, Credit 4 (offered annually)

0505-401  RIT Singers
RIT’s primary choral group performs vocal works dating from the Middle Ages to the present. There is one major performance per quarter and several smaller events throughout the year. Contact instructor for information about participating. Part of the music concentration and minor and may also be taken as an elective.  Class 1, Credit 1 (offered quarterly)

0505-402  RIT Orchestra
The RIT orchestra performs three major concerts per year of standard orchestral repertoire. In addition, students from the orchestra have the opportunity to play in a variety of chamber ensembles. Participation is by audition. Contact instructor for information. Part of the music concentration and minor and may also be taken as an elective.  Class 1, Credit 1 (offered quarterly)

0505-403  RIT Concert Band
The RIT concert band is a large instrumental ensemble which performs a wide body of literature including traditional marches, wind ensemble pieces, musical medleys and orchestral transcriptions. The group rehearses once a week for two hours in the music room (A120) of the student/alumni building. Students participating in the course are eligible for one credit hour applied toward their individual concentration. The group performs at least one formal concert per quarter as well as several special events throughout the academic year. Contact instructor for information. Part of the music concentration and minor and may be taken as an elective.  Class 1, Credit 1 (offered quarterly)

0505-404  RIT World Music Ensemble
A multi-cultural ensemble of instrumentalists, singers, and dancers organized to explore and perform a variety of music and dance from cultures around the world. The cultures to be studied will be dependent on enrollment. Participants native to the represented cultures will be enlisted to assist in the teaching of basic performance practices and concepts. Enrollment is open to all students, faculty, and staff, who are competent instrumentalists, singers and/or dancers from both Western and non-Western traditions. Auditions will be held to assess proper placement. Contact instructor for more information. Part of the music concentration and minor and may also be taken as an elective.  Class 1, Credit 1 (offered quarterly)

0505-405  RIT Jazz Ensemble
This performing ensemble will provide the opportunity for students to become familiar with and perform a variety of musical styles associated with American jazz. These will include swing, blues, fusion, Dixieland, samba, bossa-ova, ballad, be-bop, and ragtime. As an experiential outcome of such study, the group will prepare a significant assortment of musical compositions for public performance. Part of the music concentration and minor and may also be taken as an elective. Contact instructor for more information.  Class 1, Credit 1 (offered quarterly)

0505-420  Applied Music
Students will receive private instrumental or vocal lessons and participate in studio performance opportunities. Part of the music concentration and minor and may also be taken as an elective. PLEASE NOTE: Applied music lessons are made available to student music minors and/or active participants in the music ensembles program.  Class 1, Credit 1 (offered quarterly)

0505-421  Introduction to Museums and Collecting
This course examines the history, theory, ideology, and practice of collecting within the institutional context of the museum. It considers the formation of the modern museum, and focusing on the American context, it investigates various types of museums, ranging from natural history, anthropology, science and technology, history, and art. The course explores the governance and operations of museums in the areas of collections management, collections care, and gallery/museum management. The course focuses on issues of contemporary concern and examines museums and their practices. The course includes field trips to local museums and collections throughout the quarter. Part of the art history concentration and minor and required course for the cultural resource studies program.  Class 4, Credit 4 (offered annually)

0505-422  Art Materials/Photography
This is a lecture-studio/lab course on materials and tools, supports and techniques of works of art on paper and other organic art materials. Topics include the application, development and manufacture of artists’ materials: drawings, watercolors, furniture, textiles, prints and photographs. This course includes studio reconstructions of masterworks, lectures, and library research. Part of the art history concentration and minor. May be taken as an elective.  Class 4, Credit 4 (offered annually)

0505-423  Art Materials/Panell Painting
This is a lecture-studio/lab course on materials and tools, supports and techniques of inorganic art materials. Topics include the application, development and manufacture of artists’ materials: glass ceramics, sculpture, gilding, pigments, patinas. This course includes studio reconstructions of masterworks, lectures, and library research. Required course for the cultural resource studies program. Part of the art history concentration and minor, and may be taken as an elective.  Class 4, Credit 4 (offered annually)
0505-432  Renaissance Painting in Flanders  This is the study of the history of Renaissance painting in the Southern Netherlands from the first half of the 15th century to the end of the 16th century. We will examine such problems as: the meaning of the Renaissance in Flanders, the observation and recording of natural appearances, hidden symbolism and sacramental themes in Early Netherlandish painting, the connections between Flemish, German and Italian art, the development of new genres in the 16th century, originality and artistic progress. The Master of Flemalle, Jan van der Goes, Hans Memling, Gerard David, Quinten Metsys, Hieronymus Bosch, Joachim Patinier, Pieter Aertsen and Pieter Breughel the Elder, are among the artists to be studied. Part of the art history concentration and minor and may also be taken as an elective. Cross-listed with CIAS. Class 4, Credit 4 (offered occasionally)

0505-433  15th Century Art and Architecture Rome  The subject of this course is 15th century painting, sculpture and architecture in Florence and Rome. We will approach this material in a more or less chronological order as we focus upon a series of important commissions. Questions for consideration will include: the nature and meaning of the Italian Renaissance, developments in artistic theory and practice, the importance of Antique and Medieval precedents, the increasing attention to the effects of nature, the rising status of the artist, the role of the patron, and the relevance of documents, literary sources and visual precedents for our interpretation of images. Part of the history concentration and minor; the Italian language/culture concentration and minor; and may also be taken as an elective. Cross-listed with CIAS. Class 4, Credit 4 (offered occasionally)

0505-434  16th Century Art and Architecture Florence  The subject of this course is 16th century painting, sculpture and architecture in Florence and Rome. We will approach this material in a more or less chronological order as we focus upon a series of important commissions. Questions for consideration will include: the nature and meaning of the Italian Renaissance, developments in artistic theory and practice, the importance of Antique and Medieval precedents, the increasing attention to the effects of nature, the rising status of the artist, the role of the patron, and the relevance of documents, literary sources and visual precedents for our interpretation of images. Part of the history concentration and minor; the Italian language/culture concentration and minor; and may also be taken as an elective. Cross-listed with CIAS. Class 4, Credit 4 (offered occasionally)

0505-435  Russian Art from 10th–20th Century  This course will trace the evolution of Russian art from the adoption of Christianity in 988 to the end of the 20th century through the Gorachev’s Penestroika and to the present day. The course will highlight major historical events and artistic schools/works which contributed to creating the unique phenomenon of Russian culture. The course embraces such major art forms as architecture, painting, and sculpture as well as elements of decorative and folk art. Part of the Russian language/culture concentration and minor; the Russian language minor; the art history concentration and minor; and may also be taken as an elective. Cross-listed with CIAS. Class 4, Credit 4 (offered occasionally)

0505-436  Women’s Stories and Women’s Films  This course will provide an introduction to women’s films through an exploration of narrative structure in films made by women. Through film screenings and class discussion, the course will examine the themes and issues of women’s narratives and how they are presented in the medium of film. The hero’s journey and traditional narrative structure will be contrasted with the heroine’s journey and the more personal story telling style of the feminine. The course will also examine differences between films made by women and films made by men about women. The course will introduce the work of feminist film critics and consider the relevance of those theories to women’s roles in current films. It may be taken as an elective. Cross-listed with CIAS, 2065-437; and women and gender studies minor (0522-436). Class 4, Credit 4 (offered occasionally)

0505-437  Forensic Investigation of Art  This course introduces the study and examination of artistic and historic materials within a humanities-oriented forum in which students present and debate published research on several famous case studies including: the Shroud of Turin, the Getty Kouroso, and the Han van Meegeren forgeries of Vermeer paintings. Emphasis will be placed on using resources from the inter-disciplinary fields of art history, art and materials science supported by a virtual lab in which the application of instrumental techniques to the materials is demonstrated. Part of the art history concentration and minor and may be taken as an elective. Class 4, Credit 4 (offered annually)

0505-438  Conservation of Cultural Materials  This course examines the philosophies, ethics, art conservation methods and principles of collection management. An overview of deterioration characteristics and conservation techniques for a variety of materials including: stone, glass, ceramic, wood, paper, new media, metals, textiles, oil paintings and archaeological materials will be presented. Part of the art history concentration and minor and may be taken as an elective. Class 4, Credit 4 (offered annually)

0505-442  Music in the United States  A survey of music in the United States from the time of European colonization to the present. Particular emphasis is placed upon the question of what makes music distinctively “American.” Part of the American artistic experience concentration; the art history concentration and minor; and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0505-443  Images of American Life  Students examine images of American life in the 19th and 20th century in the visual arts, particularly photography, to analyze and evaluate the influences of American political, social and cultural events on imagery and perception. Part of the American artistic experience concentration; the art history concentration and minor; and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0505-444  American Painting  A survey of the style and meaning in American paintings from the colonial limners to contemporary artists. Centers on what distinguishes painting of the colonies and of the United States from its European counterpart. Part of the American artistic experience concentration; the art history concentration and minor; and may also be taken as an elective. Class 4, Credit 4 (offered regularly)

0505-445  Issues in American Art  A comprehensive overview of American attitudes and philosophies as they have shaped and been embodied in our artistic heritage. Emphasis is placed on American art from 1850 to the present. Part of the American artistic experience concentration; the art history concentration and minor; and may also be taken as an elective. Class 4, Credit 4 (offered regularly)

0505-446  American Film in the Studio Era  This course examines the history and aesthetics of the motion picture in the U.S. during the classical Hollywood studio era. Emphasis will be placed on the analysis of both the work of major American film makers and the evolution of major American film genres. Among the filmmakers to be studied are Griffith, Chaplin, Hawks, Ford, Capra, Welles, Hitchcock, Wilder and Kubric. Genres to be covered include the melodrama, silent comedy, screwball comedy, western, thriller, film noir, and the gangster film. The films will be studied within the context of contemporary cultural and political events, and will be discussed from several viewpoints. Part of the American artistic experience concentration; the art history concentration and minor; affiliated elective in the women and gender studies minor; the theatre arts minor; and it may also be taken as an elective. Class 4, Credit 4 (offered annually)

0505-447  American Musical Theatre  Survey of the development of American opera and the American musical theatre, highlighting representative works, composers, librettists and performers of both the “cultivated” and vernacular traditions. Part of the American artistic experience concentration; the music concentration and minor; and the theatre arts minor, it may also be taken as an elective. Class 4, Credit 4 (offered annually)

0505-448  20th Century American Music  Survey of both the cultivated and vernacular traditions of American music in the 20th century taking into account its political, social and historical frameworks. Part of the American artistic experience concentration; the music concentration and minor; and may also be taken as an elective. Class 4, Credit 4 (offered annually)

0505-449  Music Theory I  For the student who has basic musical literacy (ability to read music notation). It introduces students to the study of melody, two-part counterpoint, and four-part harmony. Some attention is given to the analysis of form and style. Part of the music concentration and minor and may also be taken as an elective. Class 4, Credit 4 (offered annually)
0505-450 Music and the Stage
A historical and cultural survey of collaboration between the arts of music and theater, focusing on a selection of significant creative products that combine music and drama. Included are works by Shakespeare, Monteverdi, Moliere, Mozart-DaPointe, John Gay, Beethoven-Goethe, Wagner, Puccini, Brecht-Weill, and Berstein, spanning the genres of Renaissance tragedy and comedy; opera seria, opera buffa, ballad opera, incidental music romantic drama, Italian opera, music drama, epic theater, cabaret, vaudeville, and musical comedy. Part of the music concentration and minor and the theater arts concentration and minor. It may also be taken as an elective. Class 4, Credit 4 (offered annually)

0505-452 Special Topics: American Art
A critical examination of issues and/or artistic developments in American art. The topic may have been briefly covered in another concentration course. Provides a unique opportunity to expose the student to an in-depth analysis of one selected aspect of American art. Examples of likely topics are: American landscape painting; American portraiture; pop art of the '60s; jazz; Robert Venturi and post-modern architecture in America; criticism and theory; or other topics dealing with American painting, sculpture, architecture, music and film. Part of the American artistic experience concentration; the art history concentration and minor; and may also be taken as an elective. Prerequisites, if any, are determined by the instructor. Class 4, Credit 4 (offered annually)

0505-453 Theater in the United States
A broad survey of theater in the United States, designed to acquaint students with the main figures, companies, plays, productions and stylistic currents that have defined the American stage since the Revolution. Emphasizes the native and multi-cultural features of our theater’s development, while taking due note of the influences from Europe. Also introduces students to some of the impulses, both traditional and avant garde, that have characterized the American theater since mid-century. Part of the American artistic experience concentration, the ESL concentration, and the theater arts concentration and minor. It may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0505-454 Orchestral Repertoire and History
A survey of the history and development of the orchestra and its repertoire from the Baroque to the present, focusing on works commonly performed by American orchestras. In conjunction with concert attendance requirements, special attention is given to works performed by area orchestras. In addition, various business, legal, cultural and artistic aspects of the modern American orchestra are addressed. Part of the American artistic experience concentration: the music concentration and minor and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0505-455 Survey of Jazz
This course will survey the development of American jazz music, highlighting representative composers and performers and significant works. Particular attention will be drawn to the multi-racial influences on the creation of jazz music and its relationship to American culture as a whole. Part of the American artistic experience concentration: the music concentration and minor; and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0505-456 Topics in Music History
This course is a study of various aspects of music in different historical environments with emphasis on analogies between music and the other arts. Part of the music concentration and minor. May also be taken as an elective. Students may register for course only with permission of the instructor. Class 4, Credit 4 (offered occasionally)

0505-457 Contemporary Drama, Theater, and Media
This course will examine some recent trends in American drama and theater, focusing largely on the apparent influence of television and other mass media on playwriting and performance conventions from the past two decades. Central to the course will be an examination of how traditional models of playwriting and performance rooted in casually-oriented narrative have been abandoned or at least undermined by a number of contemporary American theater artists. Part of the American artistic experience concentration and the theatre arts concentration and minor. May also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0505-458 Modernist European Theatre
This course will provide an overview of several major movements associated with modern European drama and theater with a survey of various plays associated with these movements. These plays will be situated within appropriate historical contexts to illuminate the significance of the works. Emphasis will be placed on how the various plays and movements, while employing similar devices and conventions, nonetheless, differ from each other in tenor and content, and in the end, toward which they were directed. Part of the theater arts concentration and minor. May be taken as an elective. Class 4, Credit 4 (offered occasionally)

0505-459 Era of Haydn and Mozart
Many of the characteristics of art music, up to the present day, have their beginnings in the late eighteenth century. This course explores the creation and performance of music within the context of European cultural, political and artistic ideals from 1740 to 1800 with particular attention given to the works of Haydn and Mozart. Part of the music concentration and minor; the German language/culture concentration and minor; and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0505-460 World Music I
A course designed to explore selected music cultures of North America, South America, and Africa through an examination of their musical, sociological, philosophical and aesthetic values. The primary goal of the course will be to expand understanding of and perceptions about music both outside and within Western cultural traditions. The methodology will involve using traditional techniques of music analysis and “comparative musicology” along with special techniques for listening to and analyzing non-western music, in an examination of musical elements, music-making processes, instruments, the function/purposes of music in various cultures, and selected readings from allied disciplines. Students will have opportunities for experimental (hands-on) activities depending on size and make-up of the class. Part of the music concentration and minor and may also be taken as an elective. Class 4, Credit 4 (offered annually)

0505-461 World Music II
This course will explore selected music cultures of India, Asia, East Asia, and Central/Southeastern Europe through an examination of their musical, sociological, philosophical, and aesthetic values. The primary goal of the course will be to expand understanding of and perceptions about music both outside and within Western cultural traditions. The methodology will involve using traditional techniques of music analysis and “comparative musicology” along with special techniques for listening to and analyzing non-Western music, in an examination of musical elements, music-making processes, instruments, the function/purposes of music in various cultures, and selected readings from allied disciplines. Students will have opportunities for experimental (hands-on) activities depending on size and make-up of the class. Part of the music concentration and minor. May also be taken as an elective. Class 4, Credit 4

0505-462 World Music III
This course will explore selected music cultures of India, Asia, East Asia, and Central/Southeastern Europe through an examination of their musical, sociological, philosophical, and aesthetic values. The primary goal of the course will be to expand understanding of and perceptions about music both outside and within Western cultural traditions. The methodology will involve using traditional techniques of music analysis and “comparative musicology” along with special techniques for listening to and analyzing non-Western music, in an examination of musical elements, music-making processes, instruments, the function/purposes of music in various cultures, and selected readings from allied disciplines. Students will have opportunities for experimental (hands-on) activities depending on size and make-up of the class. Part of the music concentration and minor. May also be taken as an elective. Class 4, Credit 4

0505-463 Survey of African-American Music
This course is a survey of the history of African-American music through an examination of the major forms of music-making and dance developed among African-Americans in the United States from the early 17th century to the present. A brief introduction to West African cultural characteristics, especially music and dance, as well as discussion of the African diasporas in the New World, will serve as background for this survey. Part of the American artistic experience concentration; the music concentration and minor; and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0505-464 Blues Personal and Social Commentary
A course designed to explore the African-American folk form known as the blues. While tracing the history of this unique form frames the course, particular emphasis is placed on understanding the blues as a window into the personal lives of those who perform it, and viewing the blues as a vehicle for social commentary. Part of the American artistic experience concentration; the music concentration and minor; and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)
0505-466 Sounds of Protest
This course is designed to explore the variety of ways music has served as commentary on and/or symbolic representation of social circumstances and events in America and selected world cultures historically and in the present. Students will research, listen to, analyze, and discuss music representing a variety of genres, styles, and cultures, ranging from selected non-Western music to various forms of European and American folk, popular, and concert music. Students will place this music in context through reading and discussion of writings on the arts, education, sociology, history, ethnomusicology, critical theories, and biography, writers and critical thinkers and topics that include race, gender, sexuality, economics, class, war, and politics, among others. Part of the American artistic experience concentration and music minor. It may be taken as an elective. Class 4, Credit 4 (offered annually)

0505-467 American Film Since the 1960s
This course examines the history and aesthetics of the motion picture industry in the U.S. since the late 1960s, when the classical studio period ended. Emphasis will be placed on the analysis of both the work of major American filmmakers and the evolution of major American film genres. Among the filmmakers to be studied are Altman, Coen, Scorsese, Allen, Coppola, Seidelman, Lee, Tarantino, and Lynch. The course will consider the evolution of the traditional Hollywood genres, the development of new genres, the rise of the blockbuster, the rise of the independents, and the aesthetic changes that have occurred since the 1970s. Part of the American artistic experience concentration; the art history concentration and minor; and the theatre arts minor. May also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0505-468 Art of India and Southeast Asia
A survey outlining the development of art in India and Southeast Asia examining the philosophical circumstances that distinguish eastern artistic traditions. There is opportunity for each student to pursue special interest in depth. Part of the art history concentration and minor. May also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0505-469 Art of China, Korea and Japan
A survey outlining the development of art in China, Korea and Japan examining the philosophical circumstances that distinguish eastern artistic traditions. There is opportunity for each student to pursue special interest in depth. Part of the art history, Chinese language/culture and Japanese language/culture concentrations and minors; the art history concentration and minor; and may also be taken as an elective. Part of the international studies East Asian track. Class 4, Credit 4 (offered annually)

0505-470 American Popular Songs from 1830-1950
This course will survey the American popular song and its composers and performers taking into account the political, social and historical perspectives reflected in this commercial part of the vernacular music tradition. Part of the American artistic experience concentration; the music concentration and minor; and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0505-471 American Popular and Rock Music
This course examines the history and elements of popular and rock music in the US from the end of the 19th century to current times. Emphasis will be placed on the music that was written and performed after World War II. Students will be introduced to various styles of this genre as well as an introduction to those musical elements necessary to define a rudimentary analysis of the music. Among the composers and performers to be studied are early minstrel performers; Louis Armstrong; Scott Joplin; George Gershwin; blues musicians; Benny Goodman; Frank Sinatra; rhythm and blues musicians; country and western; Elvis Presley; Ray Charles; folk; Jimi Hendrix; disco; punk; metal; grunge and pop. Part of the American artistic experience concentration; the music concentration and minor; and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0505-480 Women and the Visual Arts
Examines the image of women in the visual arts and the role of women as image makers. Major topics include the variety of images of women, the evolution and change of these images over time, media images (as differentiated from fine art images) of women, images of women by women and by men, women in images and selected world cultures historically and in the present. Students will research, analyze, and discuss the images made by women, the nude and pornography, history of women artists, selected women artists and their work, relation of their work to the art of the period, current issues and status of women artists. Part of the art history concentration and minor and may also be taken as an elective. Cross-listed with women and gender studies, 0522-480. Class 4, Credit 4 (offered annually)

0505-482 Beethoven
Introduction to the music of Beethoven in the psychological, political and philosophical contexts that gave it shape and force. Using the classical style of Haydn and Mozart as background, the course will focus on the development of the "Dionysian" personality in Beethoven's compositions and the creation of the sublime in music. Part of the German language/culture concentration and minor; the music concentration and minor; and may also be taken as an elective. (0505-459 or equivalent) Class 4, Credit 4 (offered occasionally)

0505-483 Bach and the Baroque
This course provides a study of Johann Sebastian Bach, his life and times, and his music in the context of Baroque styles and aesthetics. Compositions from each of the major periods of his creative life are examined and discussed, particularly as they serve the social and religious purposes for which they were written and as they reveal the psychology of so called "Rhineeland mysticism." Part of the German language/culture concentration and minor; the music concentration and minor; and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0505-484 Romanticism in Music
Survey of the rise of German romanticism from Beethoven to Strauss in the context of the development of 19th century musical styles in general. Part of the German language/culture concentration and minor; the music concentration and minor; and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0505-485 Music Theory II
This course is for the student who has completed music theory I or a comparable program of study. In addition to the continuing study of melodic construction and development, thematic development in two part counterpoint, four-part harmony, and analysis of form and style, emphasis is placed on the development of individual musical skills. Part of the music concentration and minor and may also be taken as an elective. (0505-449 or equivalent) Class 4, Credit 4 (offered annually)

0505-486 German Theatre and Drama
A broad survey of German language plays and theater styles since 1800 (all materials in English translation). Chief focus is on the dramas and theater practice of Bertolt Brecht (Threepenny Opera, Mother Courage and Her Children, Good Person of Szechuan, Life of Galileo, The Caucasian Chalk Circle). Emphasis is given also to developments in German theater through the period of the Berlin Wall (erected 1961, demolished 1989), and in the first decade after Germany's reunification. Class method includes practical experimenting with theatrical presentation. Part of the German language/culture concentration and minor and the theatre arts concentration and minor. It may also be taken as an elective. Class 4, Credit 4 (offered annually)

0505-487 Art of Islam
A survey of artistic traditions (to include architecture, decorative arts, art of the book and painting) from the seventh century onwards in countries from Asia, Africa, and Europe that were influenced by the religion of Islam. There will be an opportunity for each student to pursue special interests in depth. Part of the Arabic language/culture concentration and minor; the art history concentration and minor; and may also be taken as an elective. Part of the international studies Middle East program track. Class 4, Credit 4 (offered occasionally)

0505-488 Theatre Production Seminar and Workshop
Using seminar and workshop approaches, this course involves students in production dramaturgy (research applied to the staging of a play). These activities are then applied to preparing a production of that play. The specific features of both the dramaturgical and production activities will necessarily vary depending on the specific play being produced. As a general rule, dramaturgical research will consist of examining the play in question both as a particular idiosyncratic work with its own unique internal characteristics and as a work situated within larger theatrical and dramatic contexts. This research will commonly include a consideration of the social, political and cultural contexts from which the play emerged. Part of the theatre arts concentration and minor; and may be taken as an elective. Class 4, Credit 4 (offered annually)
African-American Art
This course provides an overview of African-American art, presented in three periods: from slavery to World War I, from the Harlem Renaissance and related movements of the 1920’s to social realism of the 1930’s, and from modernist abstraction following WWII to postmodern representations of Black identity. There will be a particular focus on representations of African-Americans as well as representations by African-Americans in art and film as we move through these periods. African and American/European cultural and visual sources are introduced, where appropriate, to create a comparative context for the art work studied. We will be sensitive to the development of artists’ work. Part of the art history concentration and minor and the American artistic experience concentration. It may also be taken as an elective. Class 4, Credit 4 (offered annually)

Shakespeare: Dramatist
This is a course in Shakespeare’s drama that emphasizes the plays as potential theatre productions. While studying five or six plays representative of the different acknowledged types of Shakespearian drama (comedy, tragedy, history, problem comedy, romance), students will gain a broad understanding of the character and range of Shakespeare’s poetic-dramatic art. Experimenting on selected production activities, they acquire a practical appreciation of Shakespearean drama’s theatrical potency, of the original staging conventions, and how each type of play makes particular generic demands on both the reader and spectator. A term research project will focus on the history of a single play’s staging interpretation. Part of the theatre arts concentration and minor and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

Memory, Memorials and Monuments
In this course we examine the public remembering and memorialization of historic events that lead to memorials and monuments in the fields of architecture, sculpture and film. We begin by examining the nature of memory, and specifically of collective memory, and its relationship to historical events and its subsequent transformation in the process of memorialization. We look at examples of the sculptural monument, a traditional form of memorial, and the evolution of its vocabulary in the second half of the 20th century. We also examine the memorial work undertaken by those museums whose primary function is to engage in remembering historical events, a recent phenomenon in the field of museum building. Part of the art history concentration and minor and the American artistic experience concentration. May also be taken as an elective. Class 4, Credit 4 (offered annually)

Art in the Age of the New Deal
This course will examine the art of the new deal; that is the art and context of the 1920’s and the 1930’s that spawned the works of the federal art projects of the 1930’s. We will examine the role of the Roosevelt administration’s new deal that fostered government sponsorship of the arts, including the visual arts, film, theater, literature, music and dance. We will examine the art produced through this sponsorship in the context of the evolution of 20th century modernism, mostly European, that had just begun to influence American artists and their subsequent work. We will examine the memorial work undertaken by those museums whose primary function is to engage in remembering historical events, a recent phenomenon in the field of museum building. Part of the art history concentration and minor and the American artistic experience concentration. It may also be taken as an elective. Class 4, Credit 4 (offered annually)

Museums of Art and Design
This course addresses the centrality of the museum as an arbiter of taste in the visual arts, in particular, and in matters of taste, generally. We examine the origins of the modern museum, the evolving purposes of the institution, the history of the architecture of museum buildings and its significance, and museum display practices. With the re-opening of MoMa we will study its pivotal role in plotting the course of modern art. We will examine the online presence of museums and the globalization of museum culture. We will also tour local museums and collecting facilities for a first-hand experience of the way in which these institutions function. Part of the art history concentration and minor and the American artistic experience concentration. It may also be taken as an elective. Class 4, Credit 4 (offered annually)

Landscape Transformed
This course is an introduction to the landscape tradition and to the critical discourses which engaged with it. The contours of the landscape as genre and its relation to other pictorial modes are defined, beginning with the establishment of a landscape tradition in the 17th century. The landscape is traced from the French painter in Rome, Claude Lorrain, pursued through the Dutch Golden Age, followed through the English school established by Thomas Gainsborough and Sir Joshua Reynolds, turning to German and English romanticism succeeded by 19th century France and North American schools, and finally examining modernity in France of Cezanne to the landscapes prominently in the work of post-war artists and finds expression in different media. Part of the art history concentration and minor and the American artistic experience concentration. It may be taken as an elective. Class 4, Credit 4 (offered annually)

Senior Thesis in Cultural Resource Studies
The senior thesis in cultural resource studies in the final requirement in the degree program. Students will formulate a research question that will entail some physical interaction with objects. They will conduct the appropriate research to address that question and will present their results in both written and oral formats. The course provides students the opportunity to develop their research and hand skills and to share the results with the department faculty and students. Required course for the cultural resource studies program. (0505-427 or equivalent) Class 4, Credit 4 (offered annually)

Modern American History
This course offers an analysis and interpretation of recent themes in the history of the United States from the Civil War/Reconstruction Era (1865–1877) through contemporary America. Class 4, Credit 4 (offered quarterly)

Modern European History
The course offers analysis of the political, social, economic, cultural and military events that have characterized the history of Europe from the modern period to the 20th century. Emphasis will be given to the ideas, events, movements and developments that have shaped the civilization of Europe and have contributed to the transformation, development and enrichment of other civilizations. One of the major goals of the course is not only to convey factual knowledge about the history of Europe from modern times to the 21st century, but to provide the history co-intellectual framework from which emerges the interconnection between European civilization and the rest of the world. Part of the international studies European track. Class 4, Credit 4 (offered quarterly)

American History: Special Topics
Like the department’s core course, “History: Modern America,” this course will examine the political, social, cultural, and economic development of the American people in the modern period. The difference is that this course will do so by focusing on specific themes or topics to be chosen by the instructor, announced in the subtitle, and developed in the course syllabus. Class 4, Credit 4 (offered quarterly)

Themes in European History
Like the department’s core course, “History: Modern Europe” this course will examine the political, social, cultural, and economic development of the European people in the modern period. The difference is that this course will do so by focusing on a specific theme or topic to be chosen by the instructor, announced in the subtitle, and developed in the course syllabus. Class 4, Credit 4 (offered occasionally)

Honors History
Like the department’s core course, “History: Modern American,” this course will examine the political, social, cultural and economic development of the American people in the modern period, and study the United States in its foreign relations. The difference is that this course will do so by focusing on a specific theme or topic, to be chosen by the instructor, announced in the subtitle, and developed in the course syllabus. Class 4, Credit 4 (offered occasionally)

American Women: Colonies to 1848
This course considers the history of American women from the colonial era to the Seneca Falls convention. We will examine the experience of women of different races and classes across the country, looking at Puritans in Massachusetts and at planter’s daughters in the Carolinas; at female slaves in the deep South and at mill workers in the urban North. We will investigate the impact of the American Revolution upon women, and we will also trace the emergence of the women’s rights movement, culminating in the convention at Seneca Falls. Part of the history concentration; the American history minor; the women and gender concentration and minor; and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)
0507-402 American Women: 1848 to Today
This course considers the history of American women from the Seneca Falls Convention to the present. We will trace the impact of the first women’s rights convention and follow the story of the struggle for the vote. We will also consider the role of women in other important nineteenth-century reform movements, including abolition, temperance, spiritualism, and progressivism. We will also look at the varied experience of women in the 20th Century from birth control to second wave feminism to co-education. Part of the history concentration; the American history minor; the women and gender studies concentration and minor (0522-402) and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0507-410 Terrorism, Intelligence and War
Investigates the historical, political, moral, and legal dimensions of terrorism and intelligence. Uses a case-study approach with themes that include just war theory, terrorism in the colonial and post colonial worlds, domestic terrorism, and mechanisms of intelligence and covert operations. Part of the history concentration and the American history and modern world history minors. It can be taken as an elective. Class 4, Credit 4 (offered annually)

0507-411 Origins of U.S. Foreign Relations
Analyzes the roots of U.S. foreign policy, beginning with the American Revolution and continuing through the Spanish-American War. Examines the development of the US from a small eighteenth-century experiment in democracy into a large nineteenth-century imperial power. Topics include foreign policy powers in the Constitution, economic development, continental and overseas expansion, and Manifest Destiny. Part of the history concentration and the American history and modern world history minors. It can be taken as an elective. Class 4, Credit 4 (offered annually)

0507-412 Modern Japan: History, Fiction, and Film
An introduction to modern Japanese history, highlighting social and aesthetic traditions that have formed the foundation for Japanese literature and cinema. Explores how writers and directors have drawn on this heritage to depict historical experiences. Part of the history concentration and the modern world history minor. It can be taken as an elective. Class 4, Credit 4 (offered annually)

0507-440 United States Social and Intellectual History
Examines main themes in U.S. social history immigration, ethnicity, urbanization and major themes in intellectual history; the question of national character; salient facets of American ideas and institutions and leading historiographical assessments of the American experience. Part of the history and ESL concentrations; the American history minor; and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0507-441 20th Century American Diplomatic History
Examines the late-19th century emergence of the United States as an imperial power and its development into a twentieth-century superpower. Topics include American politics and foreign policy; the influence of racial and cultural ideologies on policy; isolation and intervention, the Cold War; and the Iraq wars. Required course for international studies program. Part of the history and global studies concentrations; the American history minor; and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0507-442 Contemporary Middle East
This course analyzes the making of the contemporary Middle East from the rise of Islam to the present with special emphasis on the patterns of political development in the 20th century. Part of the history, international relations and Arabic language/culture concentrations; the history of the modern world and international relations minors; the political science minor; and may also be taken as an elective. Part of the international studies Middle East track. Class 4, Credit 4 (offered occasionally)

0507-443 European Social and Intellectual History
The course analyzes the major political, social, intellectual and economic events in Europe since 1600. Special emphasis will be placed on the meaning of the scientific revolution: the political and constitutional systems from Locke to contemporary democracies; on the enlightenment and its mentality of reason, freedom, skepticism and tolerance; on church and state relations; on the society, culture and literature ideologies of left, center and right; and on the modern and contemporary sociological and philosophical movements: positivism, realism and modern ethical trends; and present European economic globalization. Part of the history concentration; the European history minor; and may also be taken as an elective. Part of the international studies European track. Class 4, Credit 4 (offered occasionally)

0507-444 Strategy and Diplomacy of Europe
Investigates the origins and outcomes of the two World Wars with special emphasis on the conflicting strategies and secretive diplomacy adopted by the European Great Powers between 1871 and 1945. Part of the history and international relations concentrations; the history of the modern world, European history, political science, and international relations minors; and may also be taken as an elective. Part of the international studies European track. Class 4, Credit 4 (offered occasionally)

0507-445 Modern Latin America
Survey of the historical development of the Hispanic and Portuguese areas of the Americas from independence through the mid-20th century. The movement towards independence, the problems that emerged during the nineteenth century of forming unified nations and the problems of modernization in the twentieth century are all covered. The histories of selected countries are used to illustrate these issues. Part of the history, Spanish language/culture, and Latino/Latina/Latin American concentrations; the Spanish language/culture and history of the modern world minors; and may also be taken as an elective. Part of the international studies Latin American track. Class 4, Credit 4 (offered occasionally)

0507-446 Europe Since 1945 and the European Union
This course analyzes the major changes that have affected Europe since 1945. The focus in this course will be on the political and economic process of European integration from the Organization for European Economic Cooperation to the Treaty of Maastricht; the Single Market to the single currency; the Common Market to the transatlantic cooperation between the European Union and the United States; Detente and Perestroika to the new relations between the European Union and the Eastern European countries; Keynesian neo-capitalism to economic globalization and the new partnership between the European Union and the countries of the Mediterranean, the Middle East, Africa, Latin America and Asia. Part of the global studies and history concentrations; the European history and history of the modern world minors; and may also be taken as an elective. Part of international studies European track. Class 4, Credit 4 (offered occasionally)

0507-447 United States History Since 1945
An analysis of the major themes characterizing post-World War II United States history. It investigates the specific characteristics of America as a modern state. Selected themes include intellectual, cultural, political and military aspects. Part of the history concentration; the American history and history of the modern world minors; and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0507-448 History of Russia to 1917
A journey into Russian history featuring explorations of the role of the tsar in early Russia, the Kievan Era, the Mongol domination, serfdom, Ivan “the Terrible,” Peter “the Great,” Catherine “the Great,” Nicholas II and Alexandra, revolutionary personalities and movements, and the decline and fall of the Tsarist autocracy. Part of the history and Russian language/culture concentrations; the European history and history of the modern world minors; the Russian language/culture minor; and may also be taken as an elective. Part of the international studies European track. Class 4, Credit 4 (offered occasionally)

0507-449 History of Russia Since 1917
This course is an exploration into the Russian past of the late 19th, 20th, and early 21st centuries highlighted by inquiries into the Russian revolutionary leaders and their programs, the causes and courses of the revolutions of 1905 and 1917, Lenin and the formation of the Soviet Union, the Stalinist regime, the Great Fatherland War, postwar recovery, de-Stalinization under Khrushchev, Brezhnev’s regime, Gorbachev’s reforms and the implosion of the Soviet Empire, Yeltsin’s “shock therapy,” and “Managed Democracy” under Putin and Medvedev. Part of the Russian language/culture concentration; the European history and history of the modern world minors; and may also be taken as an elective. Part of the international studies European track. Class 4, Credit 4 (offered occasionally)

0507-450 Stalin, Mussolinii and Hitler
This course is an inquiry into European affairs during the years 1918-1945 demonstrating the political, military, economic, and social consequences of World War I; the origins, nature and significance of the Communist regime under Joseph Stalin in Russia; the Fascist regime under Benito Mussolini in Italy; and the Nazi regime under Adolph Hitler in Germany; the disintegration of the international order in the inter-war years; and the outbreak and course of World War II. Part of the history concentration; the history of the modern world and European history minors; and may also be taken as an elective. Part of the international studies European track. Class 4, Credit 4 (offered occasionally)
History of Rochester
A history of the local community, the history of Rochester, with special focus on its important place in national issues like cutting edge transportation, women’s rights, abolition, and modern business. Part of the history concentration; the American history minor; and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

United States and Latin American History
The emphasis is on analyzing the United States’ relations with Latin America from independence to the present. Part of the history concentration; the Spanish language/culture concentration and minor; and may also be taken as an elective. Part of the international studies Latin American track. Class 4, Credit 4 (offered occasionally)

United States and Third World Revolution
One of the dominant features of the 20th century has been the revolution of rising expectations in the countries of the Third World. Students study the underlying causes of these revolutions and the reaction of the United States government to this revolutionary ferment in Latin America, Asia, and Africa. Part of the history concentration and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

Revolutionary Leaders of Latin America
In this course three movements are studied: the rise of Juan Peron in Argentina in the 1940s, Fidel Castro’s revolution in Cuba and Salvador Allende’s electoral victory in Chile in 1970. By studying these three “revolutionary” movements, the student comes to an understanding of the historical perspective and nature of social discontent in Latin America. Part of the history concentration and may also be taken as an elective. Part of the international studies Latin American track. Class 4, Credit 4 (offered occasionally)

Civil War and Reconstruction
A course which examines the Civil War Era (1850s–1870s) from military, social and political perspectives. Students will consider the causes of the war, its development between 1861 and 1865, and some of its consequences in American society during the Reconstruction era. Part of the history concentration; the American history minor, the history of the modern world minor; and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

American Deaf History
This course explores the history of the deaf community in the United States. It examines the foundation of schools for the deaf, the birth of American Sign Language, and the emergence of deaf culture, all within a 19th century context. 20th century events, such as the rise of oralism, the hearing oppression of the deaf, and the fight for deaf civil rights are also considered. Part of the American Sign Language, and history concentrations; and the deaf studies concentration and minor. Part of the American history minor and may also be taken as an elective. Class 4, Credit 4 (offered annually)

Environmental Disasters American History
Students will study the ways in which environmental disaster has impacted American thought, culture and politics. The course will focus on a range of topics, such as natural disasters, man-made disasters, western expansion, the technological domination of nature, and conservation and environmental politics. Part of the history concentration; the environmental studies concentration and minor; the American history minor; and may also be taken as an elective. Class 4, Credit 4 (offered annually)

Survey of African-American History
This course examines the history of African-Americans from the colonial era through the 20th century. Students will consider a variety of themes: the Middle Passage, the creation of slave cultures, resistance to enslavement and the rise of free blacks, emancipation struggles in the 20th century, and several other topics. Part of the history concentration; the American history minor; and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

American Slavery, American Freedom
This course examines debates over the institution of slavery and the meaning of freedom in antebellum American society. Students will study the history of enslavement in America before the Civil War, including such topics as the creation of slave culture, slave rebellion, and relations between masters and enslaved people. In addition, students will study movements against slavery by abolitionists, politicians and free black activists. Part of the history concentration; the American history minor; the history of the modern world minor; and the legal studies minor. It may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

Disabilities in American History
This course considers the issue of disability in American Life. We will examine a variety of disabilities within different historical contexts, in order to answer the following questions: What is a disability? Who decides? How have perceptions of the disabled body changed over time? Is a disability a biological or a social construction? What can we learn by considering these issues from a disabled point of view? Part of the history concentration; the American history minor; the legal studies minor; and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

The United States and Japan
This course examines the United States-Japanese relationship from the perspectives of diplomacy, economics, and culture. Fluctuating sharply during its 150 years, this relationship has featured gunboat diplomacy, racial conflict, war, and alliance. The course investigates United States-Japanese relations in the contexts of modernization, imperialism, World War II and the Cold War. Part of the history and Japanese language/culture concentrations; and the history of the modern world and Japanese language/culture minors; and may also be taken as an elective. Part of the international studies East Asian track. Class 4, Credit 4 (offered annually)

American Deaf History
Topics will vary, but the course number will remain the same. Be sure not to repeat the same topic. Part of the history concentration, and it may be taken as an elective. (0507-301 or 0507-302 or equivalent) Class 4, Credit 4 (offered occasionally)

European Union and America in 21st Century
The course analyzes the emergence of the 25-nation European Union as an economic superpower and the steady decline of the US as a global power. The unexpected shift in American attitude—from the principles of natural harmony between nations, commitment to peace and condemnation of war as an irrational act of evil to unilateralism, automaticism, military intervention and constant threats of retaliatory actions anywhere and everywhere in the world—has generated a deep divide between the European Union and the United States. Today, America seems less secure, fears the future and resents the economic competition and challenge of the European Union. Part of the history concentration and the modern world history minor. It may be taken as an elective. Part of the international studies European track. Class 4, Credit 4 (offered twice a year)

European Deaf History
This course explores European deaf history, from the eighteenth to the twentieth century. The roots of the deaf educational system, including the so-called war of the methods between manualism and oralism in the Western world, will be explored. The birth of the deaf community and the transformation of physical deafness into cultural deafness across the European continent will receive special attention. The impact of the Holocaust on the European deaf community will also be discussed. Specific national histories that may be considered include England, France, Germany, and Spain. This course may be taken as an elective. Part of the ASL concentration; the European history minor and deaf studies concentration and minor. Class 4, Credit 4 (offered annually)

America’s National Parks
The national parks are some of America’s most treasured and spectacular landscapes, but even these wild places are the product of historical forces. In this class we will explore the history of America’s national parks, and use these spaces to unpack the relationship between Americans, their land, and their history. Part of the American history minor and may also be taken as an elective. Class 4, Credit 4 (offered annually)

Hands-on History
Get hands-on experience researching, interpreting, and writing history. The class will tackle a common historical theme (announced in the sub-title), then do original historical research on a topic of your choice within the overall theme. Our themes do not just rehash old topics with little new information to uncover. Instead, we focus on relatively unexplored areas of the past, where your research can shed new light on unknown topics. You will learn about history by doing it! Part of the American history minor and may also be taken as an elective. Class 4, Credit 4 (offered annually)

Foundations of Asian Civilization
A study of the Confucian/Buddhist world in East Asia, focusing on China and Japan, their origins and cultural characteristics. Part of the history concentration; the Japanese language/culture concentration and minor; the Chinese language/culture concentration and minor; the history of the modern world minor; and may also be taken as an elective. Part of the international studies East Asian track. Class 4, Credit 4 (offered annually)
0507-486  20th Century China and Japan
An examination of social, political, economic and intellectual developments of China and Japan in the 20th century with an analysis of how these two Asian powers have reached their respective significant status in the contemporary world. Part of the history concentration; the Japanese language/culture concentration and minor; the Chinese language/culture concentration and minor; the history of the modern world minor; and may also be taken as an elective. Part of the international studies East Asian track. Class 4, Credit 4 (offered annually)

0507-487  Communist China
An analysis of the main characteristics of Chinese Communism, its native roots, Marxist/Leninist elements and Maoist innovations. It also examines the causes for the rise of communism in modern China, the context and process of its development, as well as contributions and problems communism brought to the Chinese people. In addition, China and the world are examined. Part of the Chinese concentration and minor; the history concentration; the history of the modern world minor; and may also be taken as an elective. Part of the international studies East Asian. (0507-301, 302 or equivalent) Class 4, Credit 4 (offered occasionally)

0507-488  Modern Germany
A study of Germany in the 19th and 20th centuries, beginning with the unification of Germany in 1871 and tracing the political evolution of the nation to the present. Special emphasis is placed on the rise of Nazism. Pertinent social and cultural factors are considered as well. Part of the history, international relations, and German language/culture concentrations; the European history, German language/culture, history of the modern world, international relations and political science minors; and may also be taken as an elective. Part of the international studies European track. Class 4, Credit 4 (offered annually)

0507-489  Japan in the Modern World
An examination of social, economic, political and intellectual developments of Japan in the nineteenth and twentieth centuries with an analysis of how Japan has reached such a significant status in the contemporary world. Part of the history and Japanese language/culture concentrations; the history of the modern world and Japanese language/culture minors; and may also be taken as an elective. Part of the international studies East Asian track. (0507-301, 302 or equivalent) Class 4, Credit 4 (offered annually)

0507-490  History of Mexico
The historical development of Mexico, including the colonial period, independence movement, the liberal-conservative class and the revolution of 1910. Part of the history and Latino/Latina/Latin American concentrations; the Spanish language/culture concentration and minor; the history of the modern world minor; and may also be taken as an elective. Part of the international studies Latin American track. Class 4, Credit 4 (offered occasionally)

0507-496  African History
This course provides an overview of African history and politics in three phases: pre-colonial times, colonialism and the postcolonial era. Part of the history, global studies, and minority relations concentration; the history of the modern world minor; and may also be taken as an elective. Part of the international studies Middle East track. (0507-301, 302 or equivalent) Class 4, Credit 4 (offered occasionally)

0507-497  Biography in/as History
The course will examine the psychological motivations of individuals and groups which have influenced American history. The result will allow for a reinterpretation of the American family, society and politics. However, the psychological motivations will be examined in the context of economic, political, ideological and other social forces. The goal is to show how these elements interrelate to change American society over time. Part of the history concentration, the American history minor, and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0508-211  Science, Technology and Values
This course explores the concepts and effects of science and technology in society, analyzes the relationship between science and technology, examines how each has come to play a major role today, and looks at how science and technology have affected and been affected by our values. This course also considers the environmental aspects of science and technology. Science and technology are often assumed to be value free, yet people, guided by individual, societal and cultural values, develop scientific and technological innovations. In turn, the choices people make among the opportunities provided by science and technology are guided by their individual values. This course fulfills a humanities core requirement. Class 4, Credit 4 (offered quarterly)

0508-212  Introduction to Environmental Studies
This course explores the human condition within an environmental context by emphasizing critical environmental problems facing humans on both a global and regional scale. The approach will be interdisciplinary. The issues, their causes, and their potential solutions will be analyzed with respect to ethical, social, historical, political, scientific, and technological factors. This course fulfills a humanities core requirement. Class 4, Credit 4 (offered quarterly)

0508-325  Honors: Science, Technology and Society
Like science, technology and values this course will explore value issues relating to science and technology. It will also consider the societal and environmental aspects of science and technology. The main difference is that this course will focus on a specific theme or topic that may emphasize science and values, technology and values, or the environmental aspects of science or technology. The theme or topic will be chosen by the instructor, announced in the subtitle, and developed in the course syllabus. This course fulfills a humanities core requirement. Class 4, Credit 4 (offered occasionally)

0508-440  History of Science
This course is an introduction to the historical study of science, emphasizing the origins, character and development of Western science and its social, economic, cultural and religious contexts. The course features the physical sciences, with secondary coverage of the life sciences. Part of the science and technology studies concentration; the historical perspectives on science and technology minor; the science, technology and society minor; and may also be taken as an elective. Class 4, Credit 4 (offered annually)

0508-441  Science and Technology Policy
This course examines how local, state, federal and international policies are developed to influence innovation transfer and industrial productivity in the United States and other selected nations. Required course for the public policy and environmental science degree programs. Part of the science and technology studies concentration; the science, technology, and policy minor; the science, technology and society minor; the public policy concentration and minor; the sustainable product development minor; and may also be taken as an elective. Class 4, Credit 4 (offered annually)

0508-442  History of American Technology
This course is an introduction to the historical study of technology in America. It examines major periods and persons, ideas and inventions, and important events in American technological history. It also examines the cultural context of American technology and its influence on American social, economic, political, and cultural institutions. Part of the science and technology studies concentration; the historical perspectives on science and technology minor; the science, technology and society minor; and may also be taken as an elective. Class 4, Credit 4 (offered annually)

0508-443  Face of the Land
This course is a case study in the relationship of technology and society, involving off-campus field trips and focusing on the interaction of land, people and technology. By considering the natural landforms of the United States and other countries as appropriate, the students see how the nature of land determines its value. As technological innovations are made and introduced, old relationships with the land are altered, sometimes irreversibly. Through this study students have a concrete example of the positive and negative effects of technology on the social structure. Part of the science and technology studies concentration; the science and technology society minor; the environmental studies concentration and minor, the sustainable product development minor; and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0508-444  Social Consequences of Technology
Modern society is increasingly based on technology. With each advance due to technology, unanticipated problems are also introduced. Society must define and solve these problems or their consequences may be diluted or lost. In this course we study several interactions between technology and the world in which we live. We investigate how various technologies developed and compare the expected effects of the new technologies with the actual results. Part of the science and technology studies concentration; the science, technology and society minor; the science, technology, and policy minor; the sustainable product development minor; and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0508-445  Biomedical Issues: Science and Technology
This course is a study of the impact of science and technology on life, our view of life and of the value issues that arise from this impact. Part of the science and technology studies concentration; the science, technology and society minor; the science, technology, and policy minor; and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)
This course approaches the history of science through studying biographies of modern scientists. Modern science is understood to be science from the scientific revolution of the sixteenth and seventeenth centuries to the present. Emphasis will be on recent scholarship devoted to analyzing science in context, i.e., the way it actually develops through the lives of individuals in particular social and political contexts. Part of the science and technology studies concentration; the historical perspectives on science and technology minor; and may also be taken as an elective. Class 4, Credit 4 (offered annually)

Special Topics in Science and Technology
This course allows for examination of a special problem or topical area in the field of science and technology studies. Topics and specific content and methods vary from year to year or term to term. Topics may vary, but the course number remains the same. Part of the science and technology studies concentration; the science, technology, and policy minor; and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

History of Women in Science and Engineering
Using biographical and social-historical approaches, this course examines the history of women's involvement in science and engineering since the birth of modern science in the seventeenth century; the historical roots of gender bias in the Western scientific enterprise; and the influence of women into science and engineering since the mid-to-late twentieth century. Part of the science and technology studies concentration; the historical perspectives on science and technology minor; the women and gender studies concentration and minor (0522-449); and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

History of Chemistry
This course surveys the history of chemistry from antiquity to the present. Emphasis will be placed on developments since the Renaissance; on changing images of how matter is structured and how different substances react (or fail to react); and on the political, social and cultural contexts that influenced the rise of new chemical concepts and practices. Part of the science and technology studies concentration; the historical perspectives on science and technology minor; and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

Cyborg Theory: Rethinking the Human Experience in the 21st Century
The developing cybernetic organism or “cyborg” challenges traditional concepts of what it means to be human. Today medical science and science fiction appear to merge in ways unimagined a century ago. By exploring scientific and cultural theories, science fiction, and public experience, this class examines the history and potential of the cyborg in Western cultures. Part of the science and technology studies concentration; the science, technology and society minor; the science and technology studies concentration; the science, technology and society minor; and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

Gender, Science and Technology
This course explores the importance of gender within Western science and technology. It considers how masculine and feminine identities are socially and culturally shaped, how sex and gender are being significantly transformed, and how rethinking gendered practices may help make science and technology fairer and more responsive. Part of the science and technology studies concentration; the science, technology and society minor; the women and gender studies concentration and minor (0522-450); and may also be taken as an elective. Class 4, Credit 4 (offered annually)

Environment and Society
This course introduces the interdisciplinary foundations of environmental science via an analysis of sustainability. It will consist of one lecture and one lab per week. Labs will emphasize non-classroom based learning activities such as field trips. Initial course for the environmental science degree program. Required course for the public policy degree program. Part of the environmental studies concentration and minor; the science, technology, and society minor; the sustainable product development minor; the environmental modeling minor; the environmental science minor; and may also be taken as an elective. Class 2, Lab 4, Credit 4 (offered twice annually)

Energy and the Environment
This course will examine contemporary energy issues, with particular emphasis placed on the environmental implications associated with energy consumption and production. Students will learn about various energy technologies and fuels (including nuclear, coal, oil, natural gas, solar, biomass, and wind) and the environmental tradeoffs associated with each of these energy systems. Part of the environmental studies concentration and minor; the science, technology, and policy minor; the sustainable product development minor; and may also be taken as an elective. (0508-463) Class 2, Lab 4, Credit 4 (offered annually)

Environmental Values
This course identifies, interprets and traces the values associated with environmental concerns, and the factors that induce change in those values. Part of the environmental studies concentration and minor; the science, technology and society minor; the sustainable product development minor; and may also be taken as an elective. (Prerequisite: 0508-211) Class 4, Credit 4 (offered annually)

Environmental Policy
This course introduces students to the environmental policy-making process. Students identify the consequences of major environmental legislation and regulations and examine the actions of both citizens and the corporate sector as they comply with these laws. They also focus on the economic and social implications and value of environmental regulation and enforcement and identify current developments in the area. Part of the environmental studies concentration and minor; the legal studies minor; the public policy and American politics concentrations and minors; the political science minor; the sustainable product development minor; and may also be taken as an elective. Class 4, Credit 4 (offered annually)

Special Topics in Environmental Studies
This course allows for examination of a special problem or topical area in the field of environmental studies. Topics and specific content and methods vary from year to year or term to term. Part of the environmental studies concentration and minor; the science, technology and policy minor; and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

History of Ecology and Environmentalism
This course explores the history of ecological science, from the eighteenth century to the present, and it features the political use of ecological ideas in environmental debates, from the nineteenth century to the present. We investigate how social and political ideas have influenced ecological science, how ecological concepts have influenced Western politics and society, and how different generations of ecological researchers have viewed their role in society. Part of the environmental studies concentration and minor; the historical perspectives on science and technology minor; and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)
0508-489 History of the Environmental Sciences
This course surveys the history of the environmental sciences from antiquity to the present. The environmental sciences include those sciences that deal with the Earth’s physical and organic environments, ranging from geology and biology to evolutionary theory and ecology. A prominent theme is the influence of social, religious, and political ideas on theories of how the Earth and its plants and animals have evolved. Part of the environmental studies concentration and minor; the historical perspectives on science and technology minor; and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0508-490 Biodiversity and Society
This course explores the problems, issues, and values stemming from the current massive loss of biodiversity. This course also explores why preserving or conserving biodiversity is considered to be important, and what mechanisms have been identified for its maintenance. Part of the environmental studies concentration and minor; the science, technology and society minor; the sustainable product development minor; and may also be taken as an elective. Class 4, Credit 4 (offered bi-annually)

0508-491 Sustainable Communities
This course uses the concept of sustainability to explore the connections between natural and human communities, between nature and culture, and among environmental, economic, and social systems. The course also encourages learning outside the classroom. In the context of neighborhoods in the city of Rochester, students will observe firsthand the contemporary issues associated with urban communities that are seeking to achieve sustainability. Part of the environmental studies concentration and minor; the urban and community studies minor; and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0508-500 Science, Technology and Social Classics
STS Classics are books that involve science or technology and that also have notable social significance. In this course students will read several such books to advance their understanding of how society learns about, explores, and evaluates science and technology. The seminar format for this course will also advance students’ writing, speaking, and research skills. Part of the science and technology studies concentration; the environmental studies concentration and minor; the science, technology and society minor; and may also be taken as an elective. May be taken for arts of expression credit. Class 4, Credit 4 (offered annually)

0508-520 Seminar: Historical Perspectives of Science and Technology
This course is an upper-level undergraduate seminar that explores how recent generations of historians have studied, interpreted, and debated the development and influence of science and technology. Each offering of the seminar will focus on a particular topic or historical era. Students will read pivotal texts with the goal of discussing the quality of the research and trends in historical interpretation. Part of the science and technology studies concentration; the environmental studies concentration and minor; the historical perspectives on science and technology minor; and may also be taken as an elective. (Any two of the designated history of science or technology courses) Class 4, Credit 4 (offered occasionally)

0508-530 Seminar in Science, Technology and the Environment
This course is an upper level undergraduate seminar that explores a specific, in-depth STS issue, problem, or topic from multidisciplinary perspectives. Students will read pivotal texts appropriate to the topic with the goal of formulating feasible and appropriate responses; experiential learning activities such as field trips may also be included. This course will utilize social theory to examine how science, technology, and our understanding of the environment are socially embedded and offer students a reflexive examination in how they can shape the world around them. Part of science and technology studies concentration; the environmental studies concentration and minor; the historical perspectives on science and technology minor; and may also be taken as an elective. (Any two of the designated history of science or technology courses) Class 4, Credit 4 (offered occasionally)

0508-540 Science and Technology Policy Seminar
Students in the course will apply the skills, concepts, and methods they learned in a prerequisite course to a contemporary science and technology policy topic. Topics may vary from year to year or term to term. Elective for public policy degree program. Part of the science and technology studies concentration, the environmental studies concentration and minor; the public policy concentrations and minors; the science, technology and policy minor; and may also be taken as an elective. (0508-441, 484 or 0521-400 or equivalent) Class 4, Credit 4 (offered occasionally)

Philosophy

0509-210 Introduction to Philosophy
An introduction to some of the major problems, methods and insights of philosophy with readings from both classical and contemporary sources. Class 4, Credit 4 (offered quarterly)

0509-211 Introduction to Ethics
This course is an introduction to central questions of ethics. Some of the questions that are examined are these: What are the grounds for moral obligations like keeping promises or obeying the law? Is there a place for moral values in a world of facts? How is human nature related to morality? How do we reason about what to do? Can reason determine how we ought to live? What are moral judgments? Is there an ultimate moral principle? Are there universal goods? What constitutes a morally worthwhile life? Can morality itself be challenged? Class 4, Credit 4 (offered quarterly)

0509-213 Critical Thinking
An introduction to philosophical analysis, especially as it may be applied in contexts other than professional philosophy. Class 4, Credit 4 (offered quarterly)

0509-217 Ethics in the Information Age
Technological advances in creating, storing, sending, and monitoring information have created new ways in which ethical problems can arise. We explore ethical issues such as privacy, the commodification of data, hacking, ownership of images and Web pages, and the status of the Web as a public good or corporate creation. A wide variety of ethical issues is introduced, and students begin to learn how to fashion solutions both for private ethical problems and matters of public interest. Class 4, Credit 4 (offered quarterly)

0509-440 Philosophy of Religion
This course will critically examine definitions, assumptions, and arguments central to religion. Topics may include interpreting the nature of religion, arguments for and against the existence of God, the relation between theology and philosophy, the relation between God and the world, paganism, the problem of evil, and the nature of religious language and experience. Part of the philosophy degree program, the religious studies concentration, the philosophy concentration and minor and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0509-441 Logic
An introduction to the basic principles of logic. The main emphasis is on symbolic or formal logic, but some attention may be paid to informal logic as well. Required course for the philosophy degree program. Part of the philosophy concentration and minor and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0509-442 Philosophy of Art and Aesthetics
Introduces students to thinking philosophically about the nature of art and its relation to other human experiences. Among the topics considered are the aesthetic experience, the relation between morality and art, ugliness in art and truth in art. Part of the philosophy degree program, the philosophy concentration and minor and may also be taken as an elective. (One philosophy course or consent of instructor is strongly encouraged.) Class 4, Credit 4 (offered occasionally)

0509-443 Philosophy of Science
An examination of the nature of the scientific enterprise; possible discussion topics include the presuppositions of science, its logic, its claims to reliability, and its relationships to society and to problems of human values. Part of the philosophy degree program; the science and technology studies concentration; the science, technology and society minor; the philosophy concentration and minor; and may also be taken as an elective. (At lease one prior course in either philosophy or one of the natural sciences: physics, chemistry, biology) Class 4, Credit 4 (offered occasionally)

0509-444 The Great Thinkers
Introduces students to the thought of some of those philosophers who have been most influential in the history of ideas. An attempt is made to cover in some depth the works of one or more of those “Great Thinkers.” Students will begin to recognize the enduring nature of some of our most pressing problems, as well as the intellectual foundation of proposed solutions. Part of the philosophy degree program, the philosophy concentration and minor and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)
A critical examination of issues in some area of philosophy not covered in a student's concentration and minor and may also be taken as an elective. (At least one prior course in philosophy, political science or sociology) Class 4, Credit 4 (offered occasionally)

Philosophy of Law
An introduction to philosophical analysis centering on the nature, extent and justification of law, the nature of legal thought, and the problems and theories of justice. Part of the philosophy degree program, the global justice and peace studies concentration, the philosophy concentration and minor, the legal studies minor and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

Contemporary Moral Problems
This course examines ethical questions that arise in the course of day-to-day individual and social life. While some consideration will be given to ethical theory and its application to such questions, emphasis will be on practical issues. Examples of typical questions to be examined are capital punishment, euthanasia, abortion, the treatment of animals, corporate responsibility, and so forth. Part of the philosophy degree program, the philosophy concentration and minor and may also be taken as an elective. (0509-210, 211, 213 or equivalent) Class 4, Credit 4 (offered occasionally)

Philosophy of Peace
An introduction to some of the philosophical dimensions of the search for world peace, including the elements that would constitute a just and lasting peace, nations as moral entities, justice and national self-interest, force and violence, the morality of the use of force, peace-making and peace-keeping groups. Part of the philosophy degree program, the global justice and peace studies concentration, the philosophy concentration and minor and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

Special Topics
A critical examination of issues in some area of philosophy not covered in other philosophy courses. Part of the philosophy degree program, the philosophy concentration and minor and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

Seminar in Philosophy
Examines some area of philosophy at an advanced undergraduate level. The area examined will vary from year to year. The seminar is designed especially for those whose interest in philosophy goes beyond the requirements of the liberal arts curriculum. Part of the philosophy degree program, the philosophy concentration and minor and may also be taken as an elective. (Two courses in philosophy or permission of the instructor) Class 4, Credit 4 (offered annually)

Professional Ethics
This course critically examines ethical issues that arise in professional life. The course will examine not only the general relationships between ethics and professional life, but the particular consequences of ethical considerations within the student’s own profession and the professions of others with whom the student must live and work. Part of the philosophy degree program, the philosophy concentration and minor and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

Philosophy of Technology
Technology is a ubiquitous and defining force in our world. The course investigates how our conceptions of technology have emerged within philosophy, as well as the role technology plays in shaping how we live and how we reflect upon questions of meaning and value in life. Technological modes of understanding, organizing and transforming the world shape our relationships with others, with ourselves and with nature at fundamental levels. We will explore how these modes have emerged and why they emerged so predominately within a Western social and intellectual context. Part of the philosophy degree program, the public policy degree program, the philosophy concentration and minor and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

Environmental Philosophy
A variety of decision procedures may be and have been used to determine what to do regarding environmental issues. Each alternative can determine what is reasonable and moral, and assessing them presents theoretical problems. We examine each in terms of morality, examine their presuppositions and consequences, determine whether we can assess them, and if so, how. Students begin to learn to be conscious of and assess the decision procedures that are often buried in policy recommendations regarding particular environmental problems. Part of the philosophy degree program; the philosophy concentration and minor, the environmental studies concentration and minor, and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

Feminist Theory
This course explores the nature and effects of categories of sex and gender upon our ways of living, thinking and doing, while also challenging how gendered assumptions might shape our conceptions of identity and inquiry more generally. Different conceptions of sex and gender will be discussed, and the course will investigate how these concepts affect our lives in both concrete and symbolic ways. Special attention will be paid to how gendered assumptions color our understanding of knowledge production, experiences and emotion, public and private activities, and the nature of ethical decision making. Part of the philosophy degree program, the philosophy and the women and gender studies concentration and minors (0522-406) and may also be taken as an elective. (One prior course in philosophy recommended.) Class 4, Credit 4 (offered occasionally)

Theories of Knowledge
Epistemology, or the theory of knowledge, examines how we come to know what we know. This course covers historical and contemporary approaches to the question of what knowledge is, what makes a belief true, and how beliefs are justified. Philosophical skepticism, the position that we actually know nothing at all, will also be discussed, as will possible responses. Other topics may include feminist epistemology, naturalism, the internalism/externalism debate, and the application of epistemology to other fields. Part of the philosophy degree program, the philosophy concentration and minor and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

Ancient Philosophy
This course examines the origin and development of Western philosophy in ancient Greece from Thales in the 6th century down to at least the 4th century BCE., concentrating on the central ideas of the pre-Socratics, the Sophists, Socrates, Plato, and Aristotle. Some attention might also be given to the Hellenistic philosophers (Epicureans, Stoics, and Sceptics). Questions to be considered in this course will include: What are the nature and limits of knowledge? What is the nature of reality? Are minds the same? Why do we have access to reality? How do we know that something is true? What is the origin and nature of the material world? What is the nature of happiness? Part of the philosophy degree program, the philosophy concentration and minor and may also be taken as an elective. Class 4, Credit 4 (offered annually)

Modern Philosophy
This course examines the history of modern philosophy, from Descartes through Kant. This period marked the beginning of modern science, with a rich ferment of ideas, and the philosophy of the period is essential to understanding modern science as well as contemporary problems about consciousness, mind/body interaction, causation and so on. Questions to be considered in this course include the following: What is the scope and what are the limits of our knowledge? What is the nature of reality? Do we have access to reality? How is causal interaction possible, if at all? Does God exist, and if so, how do we know and what relation does God have to the world? Part of the philosophy degree program, the philosophy concentration and minor and may also be taken as an elective. Part of the international studies European track. Class 4, Credit 4 (offered annually)

Philosophy of the Mind
The philosophy of mind is a fairly large category. It includes issues of metaphysics, epistemology, logic, psychology, aesthetics, logic, linguistics, cognitive science, artificial intelligence and biology, to name a few. Here are some typical questions which writers in the philosophy of mind often find interesting: Is there an ontological difference between minds and bodies? Could there be minds without bodies? Can I know that I have a mind? How do I come to know that? Are there other minds in the universe? Can I be conscious of my own consciousness? Can other things have the kinds of experiences which I have? Part of the philosophy degree program, the philosophy concentration and minor and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)
The philosophy degree program, the philosophy concentration and minor and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

**East Asian Philosophy**

This course examines the contributions of American philosophers from the colonial era to the present day. From the New England Transcendentalists of the 19th century to the Pragmatism and Neo-Pragmatism of the 20th and 21st, American philosophy has responded to the demands of a pluralistic, ever-changing society. Because American philosophy is a reflection of American culture, it has also offered a unique perspective on perennial philosophical problems in ways that have differed sharply from dominant forms of European philosophy. Authors may include Ralph Waldo Emerson, Henry David Thoreau, Frederick Douglass, Susan B. Anthony, C.S. Pierce, Jane Addams, William James, Black Elk, John Dewey and Richard Rorty. Part of the philosophy degree program, the philosophy concentration and minor and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

**American Philosophy**

This course examines the contributions of American philosophers from the colonial era to the present day. From the New England Transcendentalists of the 19th century to the Pragmatism and Neo-Pragmatism of the 20th and 21st, American philosophy has responded to the demands of a pluralistic, ever-changing society. Because American philosophy is a reflection of American culture, it has also offered a unique perspective on perennial philosophical problems in ways that have differed sharply from dominant forms of European philosophy. Authors may include Ralph Waldo Emerson, Henry David Thoreau, Frederick Douglass, Susan B. Anthony, C.S. Pierce, Jane Addams, William James, Black Elk, John Dewey and Richard Rorty. Part of the philosophy degree program, the philosophy concentration and minor and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

**Contemporary Philosophy**

This course examines developments in philosophy since 1900. During this time philosophy evolved along with science, politics, and the arts. In some cases philosophy responded to new discoveries and theories while at other times it precipitated movements that had far reaching effects. A range of philosophical approaches may be discussed, including postmodernism, positivism, critical theory, existentialism, feminist theory, neopragnatism, and phenomenology. The connections among different approaches will also be addressed. Part of the philosophy degree program, the philosophy concentration and minor and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

**Philosophy of Action**

This course explores the three central philosophical issues of action theory: what is an action, what is an agent, and what is metaphysical freedom. The first part of the course examines the most significant theories of action and the different ways in which they characterize intentional behavior. The second part of this course explores the nature of agency. The third part of this course focuses on the classical problem of free will. Part of the philosophy degree program, the philosophy concentration and minor and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

**Critical Theory**

Introduces students to models of cultural critique that arose in pre-war Germany and that have burgeoned since. These models combine philosophical, aesthetic, economic and psychoanalytic methods of analysis. Among the topics considered are alienation and reification, hegemony or false consciousness, trauma, fetishism, the authoritarian personality and state, advertising and modern technology, and the relative autonomy of art. Part of the philosophy degree program, the philosophy concentration and minor and may also be taken as an elective. (One previous course in philosophy or consent of instructor is strongly encouraged.) Class 4, Credit 4 (offered occasionally)

**Existentialism**

Existentialism is distinguished by its emphasis on human existence and the way its meaning is created through actions and choices. Existentialism focuses on the concept of individual freedom in an effort to respond authentically to the possibilities which life presents, emphasizing the importance of certain psychological states (e.g., anxiety, anticipation of death, fear, care, responsibility and hope) and extreme situations in bringing us to an awareness of our radical freedom. This course will consider such philosophers and writers as Dostoevski, Kierkegaard, Nietzsche, Bertyaev, Heidegger, Jaspers, Camus, Sartre, Kafka, Beauvoir, Marcel, Buber, Ortega, and Unamuno. Part of the philosophy degree program, the philosophy concentration and minor, may be taken for the religious studies concentration with permission of adviser, and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

**Medieval Philosophy**

This course is an introduction to the philosophical thought during the medieval period (approximately 300 C.E. to 1500 C.E.). It will consider the thought of various major figures from the Christian, Jewish, and Islamic traditions, and will take up this period’s two principal areas of concern: the philosophy of religion and theology, on the one hand, and metaphysics and epistemology, on the other. Part of the philosophy degree program, the religious studies concentration, the philosophy concentration and minor and may also be taken as an elective. (One prior course in philosophy or permission of the instructor) Class 4, Credit 4 (offered occasionally)

**Metaphysics**

Metaphysics is the study of the general features of existence or reality. This course focuses on the fundamental concepts of being as developed in several major philosophers from the Greeks to the present. Discussion will focus on such topics as God, time, space, substance, existence, essence, existence, process, causality, possibility, necessity, chance, and value. Part of the philosophy degree program, the religious studies concentration with permission of the adviser, the philosophy concentration and minor and may also be taken as an elective. (One prior course in philosophy or permission of the instructor) Class 4, Credit 4 (offered occasionally)

**Nineteenth Century Philosophy**

The 19th century marks a radical shift in the history of philosophy and culture and stands in its own right as a distinct period of thought between the modern era and the contemporary era. This course will consider such philosophical positions as idealism, empiricism, existentialistic romanticism, Marxism, evolution, nihilism, positivism, pragmatism, and the role of the arts and aesthetics. Philosophers considered include Schelling, Fichte, Hegel, Schopenhauer, Mill, Marx, Darwin, Kierkegaard, Nietzsche, Comte, Bradley, Green, Feinle and James. Part of the philosophy degree program, the philosophy concentration and minor, may be taken for the religious studies concentration with permission of the adviser and may be taken as an elective. (One prior course in philosophy or permission of the instructor) Class 4, Credit 4 (offered occasionally)

**Philosophy and Literary Theory**

Introduces students to models of literary theory from the mid-twentieth century to the present and familiarizes them with the key works of literature to be analyzed. Prepares students to practice questioning and critiquing texts using the philosophical, aesthetic and psychoanalytic methods of analysis which have come to form the foundation of contemporary literary theory. Among the topics considered are culture and imperialism, performativity, the encounter of modern literature and modern technology, structuralism and semiotics, the role of psychoanalysis, the role of the academy; and the relative autonomy of art. Part of the philosophy degree program, the philosophy concentration and minor and may also be taken as an elective. (One course in philosophy or permission of instructor) Class 4, Credit 4 (offered occasionally)

**Philosophy of Film**

Introduces students to models of film interpretation and critique that arose in pre-war Europe and that have burgeoned since; these models combine philosophical, aesthetic, economic and psychoanalytic methods of analysis. Among the topics considered are the nature of the image, ideology and alienation, trauma, fetishism, magical realism, realism and anti-realism in film. Part of the philosophy degree program, the philosophy concentration and minor and may also be taken as an elective. (One prior course in philosophy or permission of the instructor) Class 4, Credit 4 (offered occasionally)
Present and potential technological developments in artificial intelligence and artificial life pose a variety of challenges to traditional accounts of intelligence, life, and personhood. Is the mind a machine? Can machines think? Could artifacts deserve moral consideration? What would happen if machines evolved into the most intelligent and capable beings on the planet? Is it possible for \textit{life} and \textit{mind} to emerge out of a wholly material evolutionary process? This course will address these issues drawing from resources in the philosophy of mind and the philosophy of technology. Part of the philosophy degree program, the philosophy concentration and minor and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

This course investigates how technological practices and inventions can suggest new ideas for conceptualizing how the body works, what the body is fundamentally, and what the body can (as well as should) become. By critically examining different conceptions of embodiment as well as different technologies that mediate our embodied relation to the world, we will enrich our understanding of the nature and scope of agency and identity. Part of the philosophy degree program, the philosophy concentration and minor and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

This course examines how philosophers and others have understood the nature of language. It explores the classical philosophical contexts in metaphysics, epistemology, aesthetics and rhetoric in which concerns about the nature of language arose. In addition, the course focuses on recent debates, within both contemporary analytic and continental traditions of philosophy. Some likely areas of inquiry will be: theories of reference, description and naming; theories of meaning, metaphor and narrative; functionalist, pragmatist and naturalist accounts; structuralist, post-structuralist, and hermeneutic accounts, among others. Part of the philosophy degree program, the philosophy concentration and minor and may also be taken as an elective. (At least one prior course in philosophy is strongly recommended.) Class 4, Credit 4 (offered occasionally)

This course examines how philosophers and others have understood the nature and primacy of sight. It explores how technologies of seeing and imaging have influenced theories of sight and our most dominant and authoritative practices of seeing and representing in the humanities and the arts, as well as in the natural and social sciences. The course will focus on the impact these theories and practices of seeing and representing - both analogue and digital-have on the nature of knowing, as well as on how they shape and mediate our experiences of personal and social identity and agency more generally. Part of the philosophy degree program, the philosophy concentration and minor and may also be taken as an elective. (At least one prior course in philosophy is strongly recommended.) Class 4, Credit 4 (offered occasionally)

This course examines the theoretical basis of ethics and morality, namely the theoretical commitments that enter into any judgment that a particular action is right or wrong. Possible topics may include: different ways of understanding the concepts of right and wrong; the existence or non-existence of moral facts; different criteria of moral actions; different conceptions of the good life. Part of the philosophy degree program, the philosophy concentration and minor and may also be taken as an elective. Class 4, Credit 4 (offered annually)

A critical examination of issues in some area of philosophy, but specially geared for honor students and others who wish to participate in an honors section. It may be taken as an elective. Class 4, Credit 4 (offered occasionally)

A research seminar that provides students with the opportunity to initiate and complete an original research project. The course guides students through the early decisions necessary to plan and complete the thesis; provides instruction for specific methods of research; provides a guided time line to keep work on schedule; offers instructional feedback for individual sections of the thesis and affords opportunities for peer review. Part of the philosophy degree program. Cannot be taken to fulfill liberal arts requirements. Class 4, Credit 4 (offered quarterly in consultation with faculty adviser)

This course explores how human beings across the globe live and work according to different values and beliefs. Students will develop the tools for acquiring knowledge, awareness, and appreciation of cultural differences, and in turn enhance their abilities to interact across cultures. The course accomplishes these aims by examining the relationship between individuals and their communities, and the dynamics of ritual, religious, political, and social life in different parts of the world. Fulfills a liberal arts core social/behavioral science requirement. Counts as a prerequisite for the sociology/anthropology concentration and minor and the international studies and urban community studies majors as a prerequisite for cultures in globalization. Class 4, Credit 4 (offered quarterly)

The world’s cultural diversity is most vividly and dynamically displayed through ritual, performance, and festival. Ritual is found in all cultures, indicating that it serves universal human needs. Through examination of performances in different cultures, this course explores the roles of ritual in the lives of individuals and the structure of society. Topics include the origins of ritual, ritual symbols, ritual and childhood socialization, ritual and emotions, initiation into adulthood, ritual as social glue, the role of ritual in reinforcing hierarchy, and the potential for social transformation. Films supplement class readings and discussion. Written expression is enhanced through drafting, revision, and peer review. Counts toward the arts of expression requirement or may be taken as an elective. Class 4, Credit 4 (offered annually)

Cultural Anthropology is the study of cultural diversity and cultural change. Anthropologists use techniques of immersion to gain a close, insider’s view of a culture. Anthropological research addresses some of the most prominent and pressing social issues of our time, including international migration, mass media, changing views of gender and sexuality, racism, tourism, religious fundamentalism, ethnic nationalism, war and genocide, hunger and famine, and the globalization of popular culture. This course introduces cultural anthropology and each year it may focus on a different topic. Fulfills a liberal arts core social/behavioral science requirement. Counts as the prerequisite for the sociology/anthropology concentration and minor. Class 4, Credit 4 (offered occasionally)

Change in all subsystems of human culture is the norm on the planet earth as its human inhabitants begin the 21st century and a new millennium. In particular, the stress and strain that accompany change challenge traditional lifeways among both indigenous and peasant societies in the developing world. The change is driven by many factors including global and local population growth and by the expanding world capitalist system through which technology is transferred and the culture of consumption is spread to the most remote corners of the globe. Required course for international studies programs. Part of the sociology/anthropology concentration and minor and may be taken as an elective. (0510-210, 0515-210 or equivalent) Class 4, Credit 4 (offered annually)

This course introduces cultures of Latin America and the Spanish-speaking Caribbean in the context of political and economic forces that have shaped them. We examine Spanish and Portuguese colonialism and its modern-day legacies, including ethnic inequalities, economic vulnerability, and social unrest. We examine how art, music, and literature have engaged critically with the forces of fascism, revolution, socialism, dictatorship, and neo-imperialism. We review religious diversity (from Santeria to Pentecostalism); dynamic relationships between countryside and city; and changing roles of men and women. Part of the international studies program (Latin American track); the sociology/anthropology concentration and minor; the Spanish language/culture concentration and minor; and the Latino/Latina; Latin American studies concentration, and may be taken as an elective. (0510-210, 0515-210 or equivalent) Class 4, Credit 4 (offered annually)
0510-443 Immigrants in the United States
This course examines immigration to the U.S. within the context of globalization. We examine the push and pull-factors that generate immigration, and changing immigration policies and debates. We consider how changes in the American workplace have stimulated the demand for foreign workers in a wide range of occupations, from software engineer to migrant farmworker and nanny. We review the cultural and emotional challenges of adapting within the American cultural landscape; transnationalism and connections with the homeland; the experiences of refugees; and how immigration has changed since 9/11. Part of the Latino/Latina/Latin American concentration; sociology/anthropology concentration and minor; Spanish language/culture concentration and minor; the international studies program, (globalization core elective and Latin American track); the sociology/anthropology concentration and minor; and may also be taken as an elective. (0510-210, 0515-210 or equivalent) Class 4, Credit 4 (offered annually)

0510-444 Social Movements in a Global Economy
Economic globalization has given birth to global, grassroots social movements. This course examines how global economic integration is brought about through multilateral institutions, multinational corporations, outsourcing, trade agreements, international lending, and neoliberal reforms. We consider impacts (cultural, economic, and health) of these trends on employees, farmers, small businesses, consumers, and the environment in the developed and developing worlds. We examine beliefs, alternative visions, and strategies of grassroots movements in response to these challenges. Part of the international studies program, (globalization core elective or Latin American track); the Latino/Latina/Latin American concentration; the sociology/anthropology concentration and minor; the Spanish language/culture concentration and minor; and may also be taken as an elective. (0510-210, 0515-210 or equivalent) Class 4, Credit 4 (offered annually)

0510-445 Global Cities
This course examines the impact of global dynamics on cities from the early twentieth century to the present. By tracing urban formations from metropolis to global city, emphasis will be placed on the making of identities, communities, and citizens in the architectural spaces, cultural places, ethnic zones, and media traces of urban life in the context of globalization. This is a required core course for urban and community studies program. Part of the sociology/anthropology concentration and minor and the international studies Latin American track. May also be taken as an elective. Restricted to students in their second year and above. (0510-210, 0515-210 or equivalent) Class 4, Credit 4 (offered annually)

0510-446 Native North Americans
The resilience of Native North Americans continues to amaze anthropologists and those who once proclaimed them certain for extinction. What can now be acclaimed as a remarkable revival of dead Indians, these cultures are rich and thriving. They maintain their world views but in a drastically changed and contemporary setting. Many tribes own casinos, hotels, resorts, and other successful businesses. Not only are the values and their heritage alive and well, they are quite successful in reviving the formerly outlawed traditions of the past such as potlatch, medicine lodge, and ghost dance. This course is taught from a Native American perspective and addresses both past and current issues that affect their culture, heritage, and tribal sovereignty. Part of the religious studies concentration and the sociology/anthropology concentration and minor. May also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0510-447 Anthropology of Mass Media
This course examines the cultural importance of mass media in different societies. By analyzing the flow of media images across national borders, emphasis is given to the local impact of media culture in different parts of the world. How, for example, do mass media represent and shape the cultural values and beliefs in developing societies? What is the role of mass media in forging national and ethnic identities, body images, sexuality and gender, and the experience of war and violence in western and non-western societies? Part of the sociology/anthropology concentration and minor. May also be taken as an elective. (0510-210, 0515-210 or equivalent) Class 4, Credit 4 (offered occasionally)

0510-448 Native North Americans in Film
From visions of romantic fantasy to imagery of the barbaric and horrific, Native Americans have been misrepresented in film since the invention of motion pictures. Tonto, Pocahontas, Hiawatha, and how the west was won - how do you know what is real and what is imagined? This course examines the genre of Native American films and intends to critically analyze stereotypes, false imagery, and how these have infatuated even the most educated of viewers. While anthropologists studied diligently among Native Americans, they too fed Hollywood the embellished images that dominate the big screen. We will identify the roles anthropologists have played in the emergence and correction of these Native American stereotypes. Part of the sociology concentration. Cross-listed with 0531-448. May also be taken as an elective. (0510-210, 0515-210 or equivalent) Class 4, Credit 4 (offered occasionally)

0510-449 Sustainable Development
The international economic system (capitalist) has demonstrated extra ordinary power in distributing goods to the farthest reaches of the globe. At the same time there is an increase in inequality and in the numbers of poor and hungry, often associated with environmental degradation. These changes are especially obvious in cities, but not limited to them. Since 1987, building on the work of the Brundtland Commission, there has been a concerted effort by the United Nations, by non-governmental organizations, by individuals, and by some nation states to explore paths of more sustainable development. This course explores varied strategies now employed to achieve sustainable development, with particular attention to less developed countries. Part of the sociology/anthropology concentration and minor; the environmental studies minor; and may also be taken as an elective. Class 4, Credit 4 (offered annually)

0510-450 Resource Management Historical Preservation
This course will introduce students to the objectives of CRM and historic preservation, the methods of designing research in the CRM/historic preservation context that will make contributions to our knowledge of the past. We will address the myriad considerations modern archaeologist and preservationists confront in their efforts to carry out archaeological research and historic preservation within a complex legal and ethical framework. (0510-210 or 0515-210) Part of the sociology/anthropology concentration and minor; and may be taken as an elective. Class 4, Credit 4 (offered annually)

0510-451 Global Sexualities
This course explores issues of gender and sexuality in a global context. Students will be introduced to anthropological perspectives on the experience of men and women, as gendered subjects, in different societies and historical contexts, such as colonialism, nationalism, and global capitalism. In turn, we will explore how cultural constructions of masculinity and femininity are configured by race, class, ethnicity, and sexual orientation. Course materials are drawn from an array of sources, reflecting various theoretical perspectives and ethnographic views from different parts of the world. Part of the sociology/anthropology concentration and minor; the women and gender studies concentration and minor; (0522-451) and may be taken as an elective. (0510-210 or 0515-210) Class 4, Credit 4 (offered occasionally)

0510-452 Bodies and Culture
The body in culture, society, and history. Comparative approaches to the cultural construction of bodies, and the impact of ethnic, gender, racial differences on body practices (i.e. surgical alteration, mutilation, beautification, surrogacy, erotica). The formation of normative discourses of the body (regarding sexuality, AIDS/illness, reproduction, fat/food) in medical science, consumer culture, and the mass media. The course will be discussion and project oriented, encouraging students to acquire a range of analytic skills through a combination of text interpretation and research. Part of the sociology/anthropology concentration and minor and may be taken as an elective. (0510-210 or 0515-210) Cross-listed with women and gender studies concentration and minor (0522-452). Class 4, Credit 4 (offered occasionally)

0510-453 Culture and Expression
The world’s cultural diversity is most vividly and dynamically displayed through ritual, music, dance, and festival. Through examination of performances in different cultures, this course examines performance as an expression of cultural beliefs, values, and identity. Films and first-hand observations complement assigned readings. Topics include the relationship between the individual artist and culture, the transformative power of ritual, debates about tradition and authenticity, the politics of cultural performance, and its impacts. Written expression is enhanced through drafting, revision, peer review, and conferences with the instructor, while oral or signed expression is enhanced through in-class presentations. No prerequisite. May be used for arts of expression credit. May be used as an elective. Class 4, Credit 4 (offered annually)
0510-454 Visual Anthropology
We see others as we imagine them to be, in terms of our values, not as they see themselves. This course examines ways in which we can understand and represent the reality of others through visual media, across the boundaries of culture, gender, and race. It considers how and why visual media can be used to represent or to distort the world around us. Part of the anthropology/sociology concentration and minor. May be taken as an elective. Restricted to second-year students and above. Class 4, Credit 4 (offered annually)

0510-457 Divided Europe
As Europe strives for political and economic unity, we see a concurrent push toward inequality, exclusion, and marginalization: minorities, immigrants, refugees, Blacks, Muslims, Jews, gypsies, and women struggle against discrimination. Not only the legacy of colonialism but the revitalization of nationalism shape contemporary European cultural politics. Based on an anthropological perspective, this course examines ways in which we can understand a divided Europe through the intersections of race, ethnicity, class, gender, and religion. Part of the sociology/anthropology concentration and minor and may be taken as an elective. Part of the international studies European track. Class 4, Credit 4 (offered annually)

0510-459 Cultural Images of War and Terror
This course critically examines the optical regimes of war and terror in a global world from an anthropological perspective. Representations of violence are endlessly transmitted on television, internet, print media, cinema, and recreational games to become part of our everyday visual culture. Whether disseminated as news, documentary truth, or entertainment, the ubiquitous encounters with violence require a new form of visual literacy that not only highlights the intersection of the local and the global, but also recognizes the ways in which visual technologies, cultural politics of representation in history, media practices and national ideologies intervene in the formation of a visual culture of war and terror. Part of the international studies degree program; sociology concentration/minor; global justice/peace studies; concentration; and may be taken as an elective. (0510-210 or 0513-210) Class 4, Credit 4 (occasionally)

0510-460 Genocide/Conflict/Justice
The destruction and survival of societies often hinges upon ideas of tribe, ethnicity, religion, nation, sovereignty and belonging. When ideas fail to incorporate people, essentialist categories of identity, historical memory, and accounts of extreme violence become interrelated, potent sources of destruction. Slavery and exclusive ownership of resources leave people starving or living in perilously polluted environments. We will take critical, anthropological approaches to studies of genocide. Students will assess the destruction and survival of societies, from the 19th century slaughter of Native Americans and Amazonian Indians to more recent genocides in Cambodia, Bosnia, Rwanda, and the Sudan. Part of the international studies and urban and community studies majors; part of the sociology/anthropology concentration and minor; and may be taken as an elective. (0510-210) Class 4, Credit 4 (offered annually)

0510-463 Anthropology of Religion
Religious expression, from the spiritualism of vodoun to the mono-theism of Judaism and Islam, is the subject of this course. The course explores four religious dimensions—sacred speech, sacred acts, sacred beings and sacred places—through a broad cross-cultural samples including, among others, contemporary Haiti; the Cibecue Apache and Hopi of Native North America; Pygmy, San, and Azande of Africa; Bali in Indonesia; and Jewish and Islamic fundamentalism in Southwest Asia. Religious practice is explored in holistic cultural content. Insights into religious practice are developed from the point of view of the practitioners and the outsider observer looking in. Part of the sociology/anthropology and religious studies concentrations. May also be taken as an elective. Class 4, Credit 4 (offered annually)

0510-483 Islamic Culture and the Middle East
This course focuses on introducing the fundamentals of the Middle East, with an emphasis on Islam, to students with little or no prior background in the region or the culture. The four themes to be addressed include: (1) foundations of Islam; (2) Islamic law and Islamic sects; (3) material and performance culture in Islam; and (4) Islamic culture and the West. The rationale for this course is to help students recognize and interpret fundamental concepts of other cultures, to encourage students' independent thinking about topical events within their historical perspective, and to inspire students to examine how their own cultures change and adapt to various students. May be taken as a general education requirement and is part of the sociology concentration. Part of the international studies Middle East program track. Class 4, Credit 4 (offered annually)

0510-485 Exploring Ancient Technology
While it is a common practice to describe the present era as one dominated by technology, humans have been critically dependent on technology for as long as we have existed as a species. Some of today’s key technologies were invented before the dawn of recorded history. We will explore these ancient technologies; how they came to be invented, how they evolved, and how they were integrated into the social and economic life of ancient and modern peoples. Key concepts and themes will be explored in a series of hands-on labs in which students will seek to replicate and understand a variety of ancient technologies. The course concludes with either an individual project or a class project. Part of the sociology/anthropology concentration and minor. May be taken as an elective. Cross-listed with 0531-510. Class 4, Credit 4 (offered annually)

0510-486 African Cultural Histories
This course introduces students to the people and cultures of Africa through the dynamism of African social life, economics, politics, religion, witchcraft, science, arts, literature, aesthetics, sex, and gender to foster an awareness of the diversity and complexity of African cultures, their geographies, and their histories. Students will critically evaluate the legacies of slavery, early missionary activities and colonialism in contemporary struggles to define identity and belonging, citizenship and access to resources in postcolonial Africa. Part of the sociology/anthropology concentration and minor; the international studies program, Africa track, and may be taken as an elective. Class 4, Credit 4 (offered annually)

0510-487 African Popular Cultures
For many Africans, participating in popular cultures may be the best or only way to express political concern about critical issues such as oppression, human rights, immorality, communal trauma and economic security. We will assess anthropological perspectives on colonial and postcolonial Africa, developing critical, historical analyses of African expressive forms such as novels, plays, music, spirit possession rituals, dance, film, videos and cartoons. Through the popular cultures of diverse African communities, we will consider African popular and political cultures, the politicization of identity, and the relations of African communities to emerging ethnic, national, religious and global networks. Part of the international studies and urban and community studies majors; part of the sociology/anthropology concentration and minor; and may be taken as an elective. (0510-210) Class 4, Credit 4 (offered annually)

0510-501 Anthropology Research Methods
Exposes students from a variety of backgrounds to an alternative means of understanding human behavior through the methods of the cultural anthropologist and demonstrates that variations in cultural patterning exist in our presumably homogeneous society. The primary emphasis is involvement of students in the actual observation of human behavior and collection of data in a subculture of their own selection in the Rochester area. Class 4, Credit 4 (offered occasionally)

0510-502 Archaeology and the Human Past
Archaeology is the study of the human past, from the origin of our species through the development of modern, industrial states. In studying the past, archaeology seeks to explain how we, as modern humans, came to be. This course discusses how archaeologists study the past and explain how human society has changed over time and presents an overview of world prehistory. Specific topics will include the evolution of modern humans, the peopling of the world, the development of agriculture, the rise of states and the development of urban society. Case studies will be used throughout to demonstrate how archaeological research is conducted and how archaeologists use their research to formulate explanations of the past that have relevance for the present. Part of the sociology/anthropology concentration and minor. May also be taken as an elective. Class 4, Credit 4 (offered annually)

0510-506 Great Discoveries in Archaeology
Archaeology conjures a romantic image in the minds of many people and almost everyone is at least familiar with some of the greatest discoveries made by archaeologists. Finds such as King Tut’s tomb, the ancient city of Troy, the jungle cities of the Maya, and Otzi the Ice Man, excite almost anyone who hears of them. But what is it, aside from fabulous wealth, romantic locale, or incredible preservation that makes them great? Although great discoveries are always exciting, archaeology is not only about finding things; it is also about using these findings to explain the human past. This course helps us understand how and why human society has changed over time. It explores some of the great discoveries of archaeology, many of which will be familiar to students. Part of the sociology concentration and may also be taken as an elective. Class 4, Credit 4 (offered annually)
Archaeology is one of the few social sciences that lends itself well to the application of analytical techniques from the physical sciences. This is largely due to the fact that archaeology relies primarily on physical evidence. This course examines the growing field of archaeological science. The course covers a number of archaeological questions including the age and origin of materials; how things are made; what people ate; their daily activities; their state of health; and how archaeological scientists are able to answer these questions using techniques from biology, chemistry, and physics. The course includes in-class labs in which students apply some of these techniques and a final research project in which the student picks their own archaeological question and methodology to answer it. Part of the sociology concentration and may be taken as an elective. Cross-listed with 0531-507. Class 4, Credit 4 (offered occasionally)

Survey of Metallurgy
This course introduces students to the anthropological study of metallurgy. The course begins with the survey of the earliest uses of metals and examines some of the early metallurgical treatises. Using archaeologically-derived and modern data, we will explore ancient and current mining and extraction techniques. We will also explore the meanings of metallurgical processes as presented in ethnographic accounts. Using information and data derived from scientific inquiry, archaeological excavations, and ethnographies, we will examine basic metal refining and working techniques. Students will also learn to interpret phase diagrams and study microstructures of metal samples. Part of the archaeology concentration and minor. May be taken as an elective. Cross-listed with 0531-444. Class 4, Credit 4 (offered annually)

Field Methods in Archaeology
This course introduces students to the methods of archaeological field work. The course begins with the student’s development of a research question and design. We then explore the feasibility of this research through the examination of sampling techniques, site survey, and excavation. Field methods of recording, photography and artifact conservation will also be discussed. Students will be able to analyze the usefulness of the field techniques in light of the archaeological scientific methods for dating, and organic inorganic analyses. Students should emerge from the course understanding the values of the techniques necessary for proper archaeological excavation towards the reconstruction of the past and the development of an understanding of our present. Part of the archaeology concentration and minor. May be taken as an elective. Cross-listed with 0531-445. Class 4, Credit 4 (offered annually)

Garbage Archaeology
This course introduces students to the study of archaeological methods with a focus on garbage (also known in colloquial speaking as rubbish, waste and refuse). By studying garbage, we can study human behaviors in both the present and past. This course’s hands-on component enables students to learn about their immediate environment of Rochester through the collection, sorting, and processing of garbage in their neighborhoods. We also learn and employ the techniques of ethnoarchaeology in order to understand the differences between what people do and what people say they do. Through weekly readings we will consider how such topics as migration and settlement, disease vectors, ethnicity and identity, and public policy are seen and interpreted through something that every human produces on a daily basis. Part of archaeology concentration and minor. Cross-listed with 0531-509. Class 4, Credit 4 (offered annually)

Economics

0511-200 Foundational Seminar in Economics
This course is designed to introduce new students in the economics program (freshmen and external and internal transfers) to the applications of economic analysis to academic, business, government and the not-for-profit sector. Students will be exposed to the research and consulting activities undertaken by academic economists as well as a discussion of the career outcomes of the alumni of the RIT economics program. Class 1, Credit 1 (offered annually)

0511-211 Principles of Microeconomics
Microeconomics studies the workings of individual markets. That is, it examines the interaction of the demanders of goods and services with the suppliers of those goods and services. It explores how the behavior of consumers (demanders), the behavior of producers (suppliers), and the level of market competition influence market outcomes. Prerequisite for economics concentration and minor; prerequisite for economic and international studies programs; and a social science core course. Class 4, Credit 4 (offered quarterly)

0511-325 Honors Economics
This course introduces the student to some of the central concepts of economics. Potential topics include the division of labor, the marginal principle, utilitarianism, equilibrium determination, survey of market structures, welfare analysis, private and public goods, the role of government in the economy, opportunity cost and path dependency. The course concludes with a discussion of modern economic practice and the future of the profession. Class 4, Credit 4 (offered occasionally)

0511-402 Principles of Macroeconomics
Macroeconomics studies aggregate economic behavior. The course begins by presenting the production possibilities model. This is followed by a discussion of basic macroeconomic concepts including inflation, unemployment and economic growth and fluctuations. The next topic is national income accounting which is the measurement of macroeconomic variables. Following this the aggregate supply-aggregate demand framework is presented. The latter part of the course focuses on the development of one or more macroeconomic models, a discussion of the role of money in the macroeconomy, and other topics the individual instructor may choose. (0511-211 or 0511-325 or equivalent) Class 4, Credit 4 (offered quarterly)

0511-441 Economics of Human Resources
The microeconomic study of human resources encompasses aspects of human involvement in the production and distribution of goods and services. Potential topics are labor force participation, economics of employment discrimination, primary and secondary education, higher education, distribution of income and wealth, poverty and income maintenance, manpower planning, and microeconomic analysis of the work/leisure decision. Part of the economics concentration and minor. May also be taken as an elective. (0511-211 or 0511-325) Class 4, Credit 4 (offered occasionally)

0511-442 Contemporary International. Economic Problems
Prepares the student to deal with foreign exchange market, international trade decisions, the macroeconomic effects of trade on domestic economics, and the effects of domestic business fluctuations on international trade and finance of each country. Though basically a theory course in economics, emphasizes the applied aspects of international trade and finance. Part of the economics concentration and minor. May also be taken as an elective. (0511-211 or 0511-325, and 0511-402) Class 4, Credit 4 (offered occasionally)

0511-443 Current American Macroeconomic Problems
An in-depth analysis of selected macroeconomic problems such as economic growth, inflation and business cycles. The primary focus is consideration of current macroeconomic theory and policy application in the context of the U.S. economic problems, e.g., tax-based incomes policies, wage-price controls. Part of the economics concentration and minor. May also be taken as an elective. (0511-211 or 0511-325, and 0511-402) Class 4, Credit 4 (offered occasionally)

0511-444 Public Finance
A study of the economics of the public sector. Topics include, but are not limited to: taxation and public expenditures and their effect on the allocation of resources; distribution of income and employment; market failure; public goods; the economics of public choice; and the application of public finance principles and normative questions to public economics issues. Part of the economics concentration and minor. May also be taken as an elective. (0511-211 or 0511-325) Class 4, Credit 4 (offered occasionally)
0511-445 Survey of Economic Thought
A survey of the various schools of thought that have developed in economics from the late eighteenth century up to the present. Representative economists from each of the major schools (Classical, Marxian, New-Classical, Keynesian, Monetarist, etc.) are studied. Part of the economics concentration and minor. May also be taken as an elective. (0511-211 or 0511-325, and 0511-402) Class 4, Credit 4 (offered occasionally)

0511-448 Economics of Lesser Developed Countries
Introduction to the economic problems of less developed countries (LDC). Students study the historical causes of underdevelopment gap between developed and underdeveloped countries and the theories and the policies aimed at accelerating the rate of growth in LDC. In addition, the role of international organizations in the economic development of LDC is discussed. Part of the global studies concentration; the economics concentration and minor; and may also be taken as an elective. (0511-211 or 0511-325, and 0511-402) Class 4, Credit 4 (offered occasionally)

0511-450 Benefit Cost Analysis
Explores the use and abuse of benefit-cost and related analytical techniques commonly encountered in economic policy making. Many expenditure and regulatory programs of governmental agencies now are routinely evaluated in a benefit-cost or cost-effectiveness framework, and debate about policy decisions increasingly draws upon benefit-cost findings. Yet, application of benefit-cost analysis often attracts much controversy, in part because of disagreements about how to conduct such analysis and about the role that economic efficiency should play in societal decisions. The mechanics, power and limitations of this form of analysis form the primary elements of the course. Required course for economics majors; part of the economics concentration and minor; and may also be taken as an elective. (0511-211 or 0511-325) Class 4, Credit 4 (offered annually)

0511-452 Monetary Analysis and Policy
The study of monetary behavior and the role of monetary institutions in the modern economy. Includes consideration of monetary theory, the development and current characteristics of monetary institutions in the American economy and the use of the tools of monetary analysis to evaluate alternative monetary policies. Concludes with an evaluation of the neo-Keynesian and Monetarist positions. Required course for economics majors; part of the economics concentration and minor; and may also be taken as an elective. (0511-211 or 0511-325, and 0511-402) Class 4, Credit 4 (offered annually)

0511-453 Intermediate Microeconomic Theory
Helps develop the tools of analysis utilized in contemporary economics to study the process of price formulation in a capitalist society. Topics covered include the theories of consumer behavior, cost and production, alternative market structures and the pricing of factors of production. Required course for economics majors; part of the economics concentration and minor; and may also be taken as an elective. (0511-211 or 0511-325) Class 4, Credit 4 (offered annually)

0511-454 International Trade and Finance
Introduces the students to the theory and practical issues of the export/import markets, the international flow of capital and international investment decisions. In addition, students study the foreign-exchange and the Euro-dollar markets and the investment opportunities in them. The role of multi-national corporations in international trade and finance also is discussed. Required course for economics and international studies programs; part of the economics concentration and minor; and may also be taken as an elective. (0511-211 or 0511-325) Class 4, Credit 4 (offered annually)

0511-455 Intermediate Macroeconomic Theory
The central question of macroeconomics is the determination of output, employment, and prices. This course develops models that incorporate behavioral assumptions concerning consumption, investment, and the role of money and their relationship to macroeconomic variables. Required course for economics majors; part of the economics concentration and minor; and may also be taken as an elective. (0511-211 or 0511-325 is required, and 0511-402 is recommended) Class 4, Credit 4 (offered annually)

0511-456 Industrial Organization
The study of the structure, conduct and performance of contemporary American industry. Involves the application of the tools of microeconomic analysis and empirical evidence to aid in understanding the behavior of modern industry. In addition, the course considers the historical determinants of contemporary market structure and the public policy measures designed to preserve a competitive market structure. Required course for economics majors; part of the economics concentration and minor; and may also be taken as an elective. (0511-211 or 0511-325) Class 4, Credit 4 (offered annually)

0511-457 Applied Econometrics
Provides students in the economics program with an opportunity to develop their skills in applied regression analysis. Covers the various regression models, estimation techniques, data preparation and transformation, and the interpretation of regression results. Particular emphasis on the dangers of misuse of regression techniques. Required course for economics majors. Part of the economics concentration and minor. May also be taken as an elective. (0511-211 or 0511-325, 1016-226 or equivalent, 1016-319) Class 4, Credit 4 (offered occasionally)

0511-458 Economic Forecasting
Introduction to one of the major functions contemporary economists perform economic forecasting. Students are exposed to alternative theories and the manner in which economists in both the private and public sectors use these frameworks of analysis, data and quantitative methods to generate economic forecasts. Required course for economics majors. Part of the economics concentration and minor; May also be taken as an elective. (0511-211 or 0511-325, and 0511-402, 1016-319, and 1016-226 or equivalent) Class 4, Credit 4 (offered occasionally)

0511-459 Managerial Economics
A further elaboration of the elementary principles of economic analysis in microeconomics and macroeconomics. Particular emphasis is on the application of these principles to the decision-making process of the firm. Required course for economics majors; part of the economics concentration and minor; and may also be taken as an elective. (0511-211 or 0511-325) Class 4, Credit 4 (offered annually)

0511-460 Mathematical Methods: Economics
Develops the mathematical tools used by the applied economist in computer-based research. Exercises and research projects for the course are chosen to illustrate the kind of problems actually dealt with by the contemporary applied economist. Required course for economics majors: part of the economics concentration and minor; and may also be taken as an elective. (0511-211 or 0511-325, and 1016-226 or equivalent) Class 4, Credit 4 (offered annually)

0511-461 Seminar in Applied Economics
A senior-level course emphasizing applications of economic analysis and quantitative methods to economic decision-making. Cases are drawn from both private and public sectors of the economy. Required course for economics majors; part of the economics concentration and minor; and may also be taken as an elective. (0511-211 or 0511-325 and 0511-402) Class 4, Credit 4 (offered occasionally)

0511-462 Honors: Independent Research
This course is designed to allow economics students who are in the honors program to conduct their own independent research under the guidance of a faculty mentor. Prior to enrollment in this course, the student must submit a research proposal and the name of the proposed faculty mentor to the economics department for approval. Once approved the faculty mentor in consultation with the student will determine the number of credit hours (1-4) which will be assigned for the course. The completed research project will be presented at the annual liberal arts undergraduate research conference. Class 4, Credit 4 (offered occasionally)

0511-463 Directed Research in Economics
This course is designed to allow economics students to pursue research under the direction of an economics faculty member. Prior to enrollment in this course, the student must submit a research proposal to the proposed faculty sponsor and the economics department for approval. Once approved the faculty sponsor in consultation with the student will determine the number of credit hours (1-4) that will be assigned for the course. The completed research project will be presented at the annual liberal arts undergraduate research conference. Class 4, Credit 4 (offered occasionally)

0511-464 Game Theory with Economic Applications
Game theory uses a mathematical approach to study situations with two or more players in which each player’s decision influences payoffs of other players. We will start with a short introduction on single person decision theory, and then study how to formulate multi-person decisions problems as game theoretic models; how to predict behavior (through the use of various equilibrium concepts—Nash equilibrium, sub-game perfect equilibrium, etc.) of the parties involved and/or identify guidelines for appropriate behavior. Game theoretic methodology is widely used in economics, and hence the skills learned in this course will be very useful to both those who want to study further and those who plan to look for consulting jobs. Part of the economics concentration and minor. May also be taken as an elective. (0511-211 or 0511-325) Class 4, Credit 4 (offered annually)
0511-466 Health Care Economics
This course examines the economics of health care, the organization of its delivery and financing, and analyzes access to care issues, the role of insurance, the regulation of hospitals, physicians, and the drug industry, the role of technology, and limits on health care spending. Part of the economics concentration and minor. May be used as an elective. (0511-211 or 0511-325) Class 4, Credit 4 (offered annually)

0511-480 Economic Role of Women
Examines the economic role of women in today’s society. Includes the economic role of women in the labor force, as owners of other factors of production and in business decision-making process. The impact of the changing role of women on GNP, labor market and other economic variables is elaborated. Through the analysis of some economic models and their application to real world situations, it is shown that the social, political and individual equality of women depends, to a great extent, on their economic role in family and society. (0511-211 or 0511-325) Class 4, Credit 4 (offered occasionally)

0511-481 Environmental Economics
Examines the relationship and apparent conflict between economic growth and environmental quality, the economics of environmental issues and policy, the environment as a resource and a public good, and the ability and lack of ability of free markets and the government to deal adequately with pollution and other environmental problems. Part of the environmental studies concentration and minor; the economics concentration and minor; and may also be taken as an elective. (0511-211 or 0511-325) Class 4, Credit 4 (offered occasionally)

0511-484 Natural Resource Economics
This course develops an economic perspective on one of the most important and challenging issues facing global society—the allocation, use and preservation of natural resources. The course presents and discusses the methodology economists use to inform natural resource managers and policy makers. Economic thought and analysis are used to evaluate a variety of issues in this area. The course concludes with a brief discussion of the interdisciplinary aspects of natural resource management. Part of the economics concentration and minor; the environmental studies minor; and may also be taken as an elective. (0511-211 or 0511-325) Class 4, Credit 4 (offered occasionally)

0511-571 Honors: Seminar in Economics
This course begins by introducing students to economics research methodologies and their constituent elements. Such elements include reviewing peer-reviewed research literature, developing economic models, using economic research questions, deriving testable hypotheses, cultivating empirical evidence appropriate for testing the hypotheses, and writing the argument and results within the economics research paradigm. Students will present their research-in-progress during the seminar and will conclude the course by submitting a final paper. This course is open to honors students with economics minors or concentrations and selected economic majors. (0511-211 or 0511-325) Class 4, Credit 4 (offered annually)

Political Science

0513-211 American Politics
This course examines the basic principles, themes and institutions of American politics. We will approach the study of American politics from four interrelated topics: 1) American political values and constitutional foundations; 2) mass politics and political socialization; 3) political institutions; and 4) public policy. Current events will be discussed throughout the course in an effort to promote responsible citizenship. In addition to providing a basic overview of American politics, this course seeks to develop critical thinking, group dynamic and communication skills that are transferable outside the classroom. Class 4, Credit 4 (offered quarterly)

0513-214 Introduction to International Relations
The purpose of this course is to provide basic knowledge of the field of international relations. Among the topics to be addressed are key theoretical concepts, themes and controversies in the field such as: important state and non-state actors in international politics, security, economic relations between states, levels of analysis, and schools of thought. Required course for international studies program. Class 4, Credit 4 (offered quarterly)

0513-215 Political Ideologies
This course explores how political ideas and theories have shaped political practice, for good or bad. In particular, the course will concentrate on the most influential political ideologies that have shaped and influenced world politics. Topics to be considered include: democracy and modern liberalism, American liberalism, socialism and communism, fascism, liberation, ideologies and the politics of identity Islamism and Zionism. Class 4, Credit 4 (offered occasionally)

0513-310 Principles of American Politics
This course examines the fundamental principles of American politics with a view to capturing the distinctive characteristics of what Alexander Hamilton called, “an experiment in self-government.” This investigation will include core ideas and aspirations as found in primary historical documents, constitutional debates, and the evolution of American political institutions over time. Principles of American Politics will also examine foreign policy and globalization issues that impact an increasingly interdependent world. Restricted to the political science degree program only. Class 4, Credit 4 (offered annually)

0513-311 Fundamentals of International Politics
This course seeks to provide the student with a deep understanding of the fundamental theoretical perspectives used in the analysis and study of international politics, as well as some central empirical policy and political themes in contemporary international relations. Restricted to political science degree program only. Class 4, Credit 4 (offered annually)

0513-325 Honors: Political Science
This course explores the founding principles of the American political order and their contemporary relevance. In addition, the course will examine the extent to which the three political institutions of American government (legislature, executive and judiciary) have either adhered to or departed from the founding principles. Emphasis will be placed upon reading and analyzing primary sources from the founding era and some of the more influential perspectives on American government drawn from the 20th century. Class 4, Credit 4 (offered occasionally)

0513-401 National Security Forces I
This course will examine the American national security policy by analysis of the evolution of the American defense strategy and policy. Topics include methods for managing conflict, international terrorism, alliances and regional security, an analysis of arms control and the threat of war, and the formulation of American defense policy and strategy, air force doctrine, and civilian control of the military. (Requires approval of the Aerospace Studies Department-Air Force ROTC) Strictly for ROTC students. Class 4, Credit 4 (offered annually)

0513-402 National Security Forces II
This course will examine the sociology aspects of officership and the military criminal justice system. Topics of interest focus on the military as a profession, officership, air force core values, and a comparison of the military/civilian justice system. (Requires approval of the Aerospace Studies Department-Air Force ROTC) Strictly for ROTC students. Class 4, Credit 4 (offered annually)

0513-425 Politics and the Life Sciences
This course examines the intersection between politics and the life sciences. The course will examine the biological approach to human behavior, paying special attention to the implications of biological explanations of behavior for political systems. Topics to be covered may include the biological approach to morality, law, and international conflict, as well as the political and policy implications of new research in the biological sciences including biotechnology. Part of the political science degree program; the political science minor; and may be taken as an elective. (0513-211 or equivalent) Class 4, Credit 4 (offered annually)

0513-426 Cyberpolitics
Innovations in digital communication technologies have the potential to affect many aspects of politics and government. Beyond specific elements such as elections and delivery of government services, these developments have the potential to expand and redefine the nature of political participation and civic engagement, and to alter the structure of political power. This course examines the potential and promise of digital democracy, and attempts to separate hype from a realistic examination of actual impacts. Part of the political science degree; the political science minor; and may be taken as an elective. (0513-211, 0513-214 or equivalent) Class 4, Credit 4 (offered annually)

0513-427 Evolutionary International Relations
This course examines the biological explanations of international conflict. Topics will include the evolutionary approach to human behavior, international conflict, and the relevance for evolutionary explanations as an alternative or supplement to current paradigms of international relations like realism and rational choice. Finally, the course will look at what an evolutionary understanding of politics means for peace-keeping missions, global governance and the stability of international cooperation. Part of the political science degree and the political science minor. May be taken as an elective. (0513-211, 214, or equivalent) Class 4, Credit 4 (offered annually)
0513-428 Evolution and the Law
This course examines the evolutionary approach to law. The course will consider the relevance of evolutionary theory to the analysis of law, the roots of rule of law, the relationship between natural law and common law, as well as the strengths and limitations of the evolutionary approach to specific themes within law, such as property law and family law. Part of the political science degree and the political science minor. May be taken as an elective. (0513-211, 214 or equivalent) Class 4, Credit 4 (offered annually)

0513-429 Primate Politics
This course examines the biological approach to the study of primate behavior. Students will learn about the basic political structures of the great apes, how they differ, and how an understanding of these primate social structures can help us understand human political behavior. Specific topics might include the biological explanations of patriarchy and matriarchy, the biology of dominance structures, and the biology of leadership choice. Part of the political science degree program and the political science minor. May be taken as an elective. (0513-211, 214 or equivalent) Class 4, Credit 4 (offered annually)

0513-441 Politics in China
This course examines the following aspects of People’s Republic of China. Confucianism as traditional state ideology, political history of modern China, communist party, formal governmental structures, informal governmental structures, economic, modernization, political economy, and foreign policies. Part of the international relations concentration and minor; the Chinese language/culture concentration and minors; the political science minor; and may also be taken as an elective. Part of the international studies East Asian track. (0513-211, 214 or equivalent) Class 4, Credit 4 (offered occasionally)

0513-443 Politics of Russia
An examination of Russian domestic and international politics, with particular emphasis on the “Big Bear” s’ regional power status in the areas of the former Soviet Union. Political, economic, social and military influences on the development of surrounding countries will also be explored. Topics include democratization, organized crime, civil war, ethnic diaspora populations, and the struggle to establish stable states. Part of the international relations concentration and minor; the Russian language/culture concentration and minor; the political science minor; and may also be taken as an elective. Part of the international studies European track. (0513 211, 214 or equivalent) Class 4, Credit 4 (offered occasionally)

0513-446 Politics in Developing Countries
This course uses comparative theoretical perspectives to explore the ways in which the historical, cultural, economic and political context of the societies of Africa, Asia and Latin America determines the patterns of their political processes. Focus is directed to such factors as history, religion, economic underdevelopment, and culture and their impact on the efforts to promote the values of liberalization and democratization, economic and social modernization and political and social stability. Part of the international relations concentration and minor and the political science minor. It may also be taken as an elective. Part of the international studies East Asian and Latin American tracks. (0513-211, 214 or equivalent) Class 4, Credit 4 (offered occasionally)

0513-447 Human Rights and Global Perspectives
This course explores the theoretical meaning, both domestically and internationally, and the institutional and political aspects of human rights. Issues covered include the definition of human rights; the relationship between civil and political rights and economic, social and cultural rights; the meaning and impact of humanitarian and international human rights law; the impact of cultural relativism in the definition and assessment of the promotion and protection of human rights; the significance of different religious perspectives; the question of the legitimacy of humanitarian interventions and the effects of globalization on human rights perceptions and practices. Part of the international relations concentration and minor; the political science minor; and may also be taken as an elective. (0513-211, 214 or equivalent) Class 4, Credit 4 (offered occasionally)

0513-449 Special Topics in Political Science
Special topics will examine a political theme, issue or problem at an advanced undergraduate level. The subject matter examined will vary from year to year according to the availability of faculty and the interest of students. The course is designed especially for those whose interest in politics goes beyond the requirements of the liberal arts curriculum. The course may be taken as part of the American politics or international relations concentrations and minors, the political science minor, and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0513-450 State and Local Politics
This course is a study of politics and government on the state and local levels, and the relationships between these levels and the federal government. The course’s major objective is to give the student a sophisticated understanding of these aspects of the political process. The first focus is on the federal system of government, including the interdependence of the three levels. The course continues by examining the state level followed by a focus on local government. A final topic is policy-making, including revenues and expenditures, which again illustrate the interrelationship of the three levels. Part of the American politics concentration and minor, the political science minor, and may also be taken as an elective. (0513-211, 214 or equivalent) Class 4, Credit 4 (offered annually)

0513-451 The Congress
Examines the role of the legislature in the U.S. political process. The primary emphasis is the study of the U.S. Congress, but some attention also is directed to state legislatures. Topics studied include elections, party organization, committees, interest-group activities and executive-legislative relations. Part of the American politics concentration and minor, the political science minor; and may also be taken as an elective. (0513-211, 214 or equivalent) Class 4, Credit 4 (offered annually)

0513-452 The American Presidency
A study of the role of the presidency in the American political system. Among the topics considered are the nomination and election process, evolution, expansion and limitation of presidential powers, factors in decision-making and the various leadership functions performed by the American presidency. Part of the American politics concentration and minor; the political science minor; and may also be taken as an elective. (0513-211, 214 or equivalent) Class 4, Credit 4 (offered annually)

0513-453 American Foreign Policy
A study of the formulation and execution of American foreign policy, including the examination of the instruments, procedures and philosophies shaping the development and implementation of foreign policy. Part of the international relations, American politics, global studies, and global justice and peace studies concentrations; the international relations, political science, American politics, American history and European history minors; and may also be taken as an elective. (0513-211, 214 or equivalent) Class 4, Credit 4 (offered annually)

0513-454 Political Parties and Voting
Political parties are a crucial part of the democratic process, as are elections. Parties and elections serve as a critical link between citizens and their government, as parties and candidates promote policies favored by voters. This course studies parties, their history, their future and their role in the democratic process. A further emphasis is on how parties, or their candidates, use the internet to communicate with citizens. Part of the American politics concentration and minor; the political science minor; and may also be taken as an elective. (0513-211, 214 or equivalent) Class 4, Credit 4 (offered annually)

0513-455 Politics and Public Policy
A study of the politics of the policy process covering these basic questions: How do public problems get to the agenda of government? How does government formulate policy alternatives? How does government legitimate public policy? How does government implement public policy? How does government evaluate public policy? Part of the American politics and public policy concentrations and minors; the political science minor; and may also be taken as an elective. (0513-211, 214 or equivalent) Class 4, Credit 4 (offered occasionally)

0513-456 The Judicial Process
This course is the intersection between law and politics. We focus on the structure and functions of the Supreme Court of the U.S. within the federal courts system. Attention is devoted to justices as personalities, how they are recruited, how they influence each other, political forces that influence what they do, the manner in which they fulfill institutional roles and the social impact of judicial decisions. Attention will be given to the emergence of the institutional identity of the court, the political struggles between the Supreme Court, lower courts, other governmental bodies and the full range of political interests in the country. Part of the American politics concentration and minor, the legal studies minor, and political science minor. It may also be taken as an elective. (0513-211, 214 or equivalent) Class 4, Credit 4 (offered occasionally)
0513-457  Constitutional Law
This course provides an introduction to Constitutional Law by examining the
Supreme Court's attempt to resolve constitutional disputes between the federal
government and the states (federalism); and between the different branches of
government (the separation of powers). The course will study carefully the text
of the Constitution, the intention of the founders, and the interpretation of the
court in landmark cases that have defined American constitutional law. These
cases will be studied both chronologically and thematically. Students will learn how
to prepare a Langdellian brief in order to analyze the court's legal reasoning.
Part of the American politics concentration and minor; the legal studies
minor; the political science minor; and may also be taken as an elective. (0513-
211, 214 or equivalent) Class 4, Credit 4 (offered annually)

0513-458  American Political Thought
Provides a general overview of the political ideas, concepts, issues and prin-
ciples which have been considered as the key to understanding American politi-
cal thought. Particular attention will be paid to the First Amendment as the corner-
stone of a free society guaranteeing religious liberty and the right to free speech.
The course will also examine how the court has balanced constitutional rights and liberties in the first,
fourth, fifth and sixth amendments against the need for enhanced national
security. Part of the American politics concentration and minor; the legal stud-
ies minor, the political science minor; and may also be taken as an elective.
(0513-211, 214 or equivalent) Class 4, Credit 4 (offered occasionally)

0513-460  Constitutional Rights and Liberties
This course provides an introduction to the Supreme Court's legal and politi-
cal reasoning on civil rights and liberties that is, the fundamental individual
rights of a free society contained in the Bill of Rights. Particular emphasis will
be placed on the First Amendment as the cornerstone of a free society guaran-
teeding religious liberty and the right to free speech. The course will also exam-
ine how the court has balanced constitutional rights and liberties in the first,
fourth, fifth and sixth amendments against the need for enhanced national
security. Part of the American politics concentration and minor; the legal stud-
ies minor, the political science minor; and may also be taken as an elective.
(0513-211, 214 or equivalent) Class 4, Credit 4 (offered annually)

0513-461  Comparative Politics
The course provides a mode of analysis for the study of political systems.
Basic concepts of political science are utilized to present a descriptive and
analytical examination of various political systems that can be classified as
liberal democracies, post-communist, newly industrializing countries (NIC's),
and Third World. Particular attention is paid to the governmental structure,
current leadership and major issues of public policy of those selected politi-
cal systems under review. Part of the global studies concentration and the
political science minor; and may also be taken as an elective. Class 4, Credit 4
(offered occasionally)

0513-462  Abraham Lincoln and American Democracy
This course critically examines Lincoln's political thought and leadership as
it has profoundly shaped, for better or worse, the character and development
of American democracy. It will be structured thematically to discuss a discus-
sion of core aspects of Lincoln's thought and legacy on such issues as equality,
slavery, race, the Union, leadership, ambition, constitutionalism, ambition, and
religion. The course will provide an overview to some of the major controver-
sies concerning Lincoln's political thought, leadership, and legacy. Part of the
American Politics concentration and minor; the political science minor; and this
course may also be taken as an elective. Class 4, Credit 4 (offered annually)

0513-463  First Amendment, Liberty and Democracy
This course will focus exclusively on the First Amendment and its relation to
self-government. Special attention will be paid to the theory and practice of
the principles of free speech, religious liberty, the free press, and the freedom
to association. A major effort throughout the course will be made to consider
the nature of liberty and constitutional government. Part of the American
politics concentration and minor; the political science minor; and may also be
used as an elective. Class 4, Credit 4 (offered annually)

0513-464  Law and Society
This course provides students with a fundamental literacy about law as an
immensely and ubiquitous presence in society. It focuses on the relationships
between law and other social institutions, and examines the values and inter-
ests that are expressed in law and shaped by legal structures and processes.
Consensus and conflict perspectives on the law are compared and contrasted,
and applied to understanding the law's impact on everyday life. This course
takes an explicit interdisciplinary approach to understanding law. This course
is offered for those interested in critical inquiry of law within a framework of
a broad liberal arts education. Part of the legal studies minor; and may also be
taken as an elective. Class 4, Credit 4 (offered occasionally)

0513-465  Modern Constitutionalism, Liberty and Equality
This course examines the founding principles of modern constitutionalism
and the modern state. Special attention will be paid to the theory and practice
of the principles of equality, liberty, consent and popular sovereignty. A major
effort throughout the course will be made to consider the assessments and
prescriptions for modern constitutionalism offered by American and continen-
tal political thinkers. Part of the American politics concentration and minor;
the legal studies minor; the political science minor; and may also be used as an
elective. Class 4, Credit 4 (offered annually)

0513-466  Political Leadership
The most fundamental proposition of this course is that political leadership
makes a crucial difference in the life of a nation. It will examine such leader-
ship that may serve as either a constructive or destructive force in the pursuit
of some shared, national goal or purpose. The course will consider a diverse
range of leaders and their respective style and type of leadership, and their
common traits. The course may include five archetypes of political leadership
and respective figures that embody these types. As a representative of a partic-
ular kind of political leadership, each leader will be studied in terms of his or
her historical context, the principles for which he or she stood, and the means
and ends each employed in the pursuit of political goals. Part of the American
politics concentration and minor; the political science minor; and may be used
as an elective. Class 4, Credit 4 (offered occasionally)

0513-467  Modern Korea: History, Politics, Security
This course examines the political background of Korean politics, its institu-
tional foundation, political leadership, political processes, government struc-
tures, and foreign and security policies of both the South and North Korea,
the balance of power in the East Asia, and the relationship between the United
States and Korea. Part of the political science minor; the international relation-
minor and concentration and may be taken as an elective in the international
studies program. It may also be taken as an elective. Credit 4, Class 4 (offered
annually)

0513-468  Women in Politics
A study of feminist thought as it applies to the political, economic and social
status of women and how it has been expressed through the women's politi-
cal movement. Students study a number of public policies as they apply to
and affect women and examine the opportunities for women to participate in
the political process. Part of the American politics concentration and minor;
the political science minor; the women and gender studies concentration and
minor (0522-484) and may also be taken as an elective. (0513-211, 214 or equiva-
 lent) Class 4, Credit 4 (offered occasionally)

0513-484  Government and Politics of Africa
The course examines the influence of historical, cultural, economic and social
factors on the pattern of politics in Sub-Saharan Africa. Focus is directed to
the challenges of economic modernization and development; national integra-
tion; the promotion of a vibrant and liberal civil society; democratization and stabili-
ty. Part of the international relations concentration and minor; the political
science minor; and may also be taken as an elective. Part of the international
studies Middle East track. Class 4, Credit 4 (offered occasionally)

0513-485  Politics Through Fiction
This course explores contemporary issues facing the American and global
political order through the lens of fiction. Particular attention will be paid to
the grounds of sound political deliberation, the limitations of prudence and the
theory and practice of American political principles both home and abroad.
Part of the American politics concentration and minor; the political science
minor; and may also be taken as an elective. (0513-213, 214 or equivalent)
Class 4, Credit 4 (offered occasionally)

0513-486  Comparative Politics in Latin America
This course examines domestic and international challenges to the establish-
ment of stable democracies in Latin America. The decades-long battle against
narco-terrorism in Columbia, Marxist Revin Peru, widespread corruption at
most levels of government throughout the region, and legacies of dictatorial
military regimes all make Latin America a difficult place for democracy to take
root. Compounding these problems are increasing environmental degradation
in connection with rising global trade, and massive economic debt to inter-
national lenders. Part of the Latino/Latina/Latin American concentration;
the Spanish language/culture and international relations concentrations and
minors; the political science minor; and may also be taken as an elective. Part of
the international studies Latin American track. (0513 211, 214 or equivalent)
Class 4, Credit 4 (offered occasionally)

123 | College of Liberal Arts
0513-487 International Political Economy
The study of international law and organizations is the study of international cooperation and governance. We cover a variety of theoretical and substantive topics including the theories of international law and organizations, the historical development of international organizations, how these organizations work in practice, and whether they are effective. We concentrate on the United Nations and the role and usefulness of nongovernmental organizations. Several of the substantive issues discussed are interstate violence and attempts to address humanitarian concerns, globalization, and the environment. Part of the international relations concentration and minor; the legal studies minor; the political science minor; and may also be taken as an elective. (0513-211, 214 or equivalent) Class 4, Credit 4 (offered occasionally)

0513-488 War and the State
Explores the enduring reality of war through an analysis of regional and global conflicts since the establishment of the modern international system. Key concepts include deterrence, appeasement, offensive-defensive military strategies, and international balances of power. These will be applied to several historical cases to explain why wars occur and how they might be avoided. Part of the international relations concentration and minor, the political science minor; and the global justice and peace studies concentration. It may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0513-489 Terrorism and Political Violence
This course examines the causes, methods, and responses of non-state groups attempting to establish new political orders. The combined use of violence with the tactic of terror distinguishes these groups from others seeking political change. Special attention will be given to national and international efforts attempting to resolve such conflicts. Part of the international relations concentration and minor; the political science minor and may also be taken as an elective. (0513-211, 214 or equivalent) Class 4, Credit 4 (offered occasionally)

0513-490 International Political Economy
Examines the interplay between states and markets, and the interaction of the world economy and international politics. We study the nature of political economy, the major ideologies and approaches, and specific topics include trade, investment, debt, and financial markets and the impact of globalization on the human condition and the environment. Part of the international relations concentration and minor; the political science minor; and may also be taken as an elective. (0513-211, 214 or equivalent) Class 4, Credit 4 (offered occasionally)

0513-491 Politics of the Middle East
A study of the main approaches to conflict resolution through a focus on the Arab-Israeli peace process. The discussion will include theories of conflict and conflict resolution, peace studies, negotiation, the role of external powers, and mediation. The course will explore the theoretical topics through a critical examination of the Israeli-Palestinian conflict, beginning with Jewish settlement in Ottoman Palestine in the 1880s to the present peace process. Part of the global justice and peace studies concentration; the international relations concentration and minor; the political science minor and may also be taken as an elective. Part of the international studies Middle East track. (0513-211, 214 or equivalent) Class 4, Credit 4 (offered occasionally)

0513-492 Religion and International Politics
Religion has been a common element in global politics. This course will address fundamental beliefs of various religions, the use of religion to explain or justify foreign policies, the role of evolving interpretations of texts to justify war or promote peace, and how religious leaders attempt to mitigate conflict and support justice. The course will analyze the historical and contemporary roles of religious beliefs and organizations with respect to war and peace, civil conflict, national identities, the legitimacy of governments, human rights, democracy, conflict management, and conceptions of world order. Part of the international relations concentration and minor; the political science minor, and may also be taken as an elective. (0513-214 or equivalent) Class 4, Credit 4 (offered occasionally)

0513-493 Global Politics and the Environment
Considers the relationship between political systems and the development of global environmentalism. International trade, colonial legacies, poverty, and population growth will be examined in the context of national decision-making and transnational influences. The course examines established democracies in the West and Japan, post-communist transitional countries in Eastern Europe, and developing countries in Asia and Africa. Topics include oil dependence, nuclear energy, alternative fuels, stratospheric ozone depletion, climate change, deforestation, and species loss. Part of the international relations concentration and minor; the political science minor; and may also be taken as an elective. (0513-211, 214 or equivalent) Class 4, Credit 4 (offered occasionally)

0513-494 Comparative Public Policy
As modernization theorists predict, industrial and post-industrial societies tend to face similar public policy issues in such areas as public education, healthcare, public transportation, public housing, and the protection and preservation of the environment. However, the political responses to these challenges have varied in significant ways in different states. Many states have developed extensive welfare state systems while some have put more emphasis on market-based solutions. The course seeks to explore and analyze the factors that explain these differences and assess the extent to which the different approaches succeed in meeting these policy challenges. Part of the international relations concentration and minor; the political science minor; and may also be taken as an elective. (0513-211, 214 or equivalent) Class 4, Credit 4 (offered occasionally)

0513-496 Government and Politics in East Asia
This course examines the East Asian countries using the following comparative criteria as the organizing guidelines: modern political history of the country, political economy and development, governance and policy-making, representation and participation, major domestic and foreign policy issues. Prospect of the countries in the 21st century are analyzed and discussed. Part of the Chinese language/culture concentration and minor; the Japanese language/culture concentration and minor; the international relations concentration and minor; the political science minor; and may also be taken as an elective. Part of the international studies East Asian track. (0513-211, 214 or equivalent) Class 4, Credit 4 (offered occasionally)

0513-499 Experiential Learning: Political Science
The purpose of the Experiential Learning: Political Science option is to give students a first-hand experience in an appropriate organization or study abroad program that meets the needs of the student’s career objectives. Students are closely supervised at the host organization, developing their pre-professional skills while learning the organization’s programs, agenda and methods. Restricted to political science degree program. (Students must have junior status.) Credit 0 (offered as needed)

0513-500 Political Science Capstone
This seminar provides an opportunity to examine in depth any theme, problem or work within the discipline of political science, for example: the foundations of self-government, foreign policy, international law and organizations, and the fundamental problems of international relations. Course content will be determined in consultation with the instructor. Teams of students will write a substantial paper on a topic related to the general themes of the seminar. Students will also present their findings electronically by way of a website or wiki. Restricted to political science degree program only. (Students must have senior status.) Class 4, Credit 4 (offered annually)

0513-514 Political Theory
This course will examine the human quest for personal and political order. It will provide a critical introduction to some of the most influential and epic political thinkers who have shaped our world, and whose profound legacy continues to do so today. The continuity and divergence between these political philosophers and their respective traditions will be examined throughout the course. Each political philosopher will be examined in terms of the enduring questions of cosmology, human nature, justice, the good society, politics, the state, democracy and legacy. In each case, students will be asked to consider what standard each thinker offers to judge and guide political life. Part of the American politics concentration and minor; the legal studies and political science minor, and may also be taken as an elective. (0513-211, 214 or equivalent) Class 4, Credit 4 (offered annually)

0513-599 Independent Study
A student may register for an independent study project subject to the approval of the faculty sponsor, student’s department, the academic committee of the college of liberal arts and the dean of the college of liberal arts and providing that she or he has a minimum GPA of 2.7 at time of application. An independent study project is not a substitute for a course. It enables the interested student and his or her faculty sponsor to coordinate their efforts on subjects and topics that range beyond the normal sequence of course selection. Credit variable (offered occasionally)

Psychology
0514-201 Freshman Seminar
Acquaints students with research in psychology at RIT, career opportunities available to psychology majors, assists in exploration of individual career goals and aids students in planning a curriculum strategy that will match their goals. Required course for freshman psychology majors. Class 1, Credit 1 (offered annually)
**0514-210 Introduction to Psychology**

Introduction to the scope of topics and methodology of psychology. Topics include aims, methods, neuroscience, sensation, perception, learning, memory, intelligence, motivation, normal and abnormal personality, and social psychology. Required course for psychology majors. Class 4, Credit 4 (offered quarterly)

**0514-315 Scientific Writing**

This is a course on how to write scientific articles. Basic grammar and style; structure of an empirical, theoretical, or review article; and citation format will all be covered. Students will learn by writing papers, by critiquing the papers of their peers, and by taking exams. Required course for psychology degree program. Cannot be taken for liberal arts credit. (0514-210 or equivalent) Class 4, Credit 4 (offered occasionally)

**0514-325 Honors: Psychology**

A state-of-the-art survey of major subfields in psychology, the scientific study of behavior and mental processes. Topics include the biological basis of behavior, perception, learning, memory, intelligence, emotions, social relations, personality and psycho-pathology. Besides textbook reading, students will read and discuss current publications on each topic we explore. Class 4, Credit 4 (offered occasionally)

**0514-350 Psychological Statistics**

This course will cover descriptive and inferential statistics. Special attention will be given to psychological applications, conceptualization, and interpretation of statistics, computer-assisted data analysis and reporting of results. This course must be taken prior to higher-level psychology courses, especially experimental psychology and track courses. Required course for psychology majors. (0510-210 or equivalent) Class 4, Credit 4 (offered regularly)

**0514-400 Experimental Psychology**

An introduction to the logic of experimental research and application of the scientific methods to the study of behavior. Emphasis on stating empirically testable hypotheses, designing and conducting experiments, and writing research papers in APA style. Required course for psychology majors. (0514-210, 350) Class 4, Credit 4 (offered regularly)

**0514-402 Research Methods**

An introduction to the logic of various research methods and the application of scientific methods to the study of behavior. Emphasis will be on a wide range of research designs and techniques including surveys, correlational designs, quasi-experimental designs, as well as true experimental designs. Students will learn to write research papers in APA style. Required course for the psychology minor. (0514-210 or equivalent) Class 4, Credit 4 (offered regularly)

**0514-440 Childhood and Adolescence**

This course explores human development from conception through adolescence. The developmental approach provides the opportunity to integrate many areas of psychological research such as cognition, personality, perception, social interaction and moral development as they apply to human development. Required course for psychology majors. Part of the psychology concentration and minor and may also be taken as an elective. (0514-210 or equivalent) Class 4, Credit 4 (offered regularly)

**0514-441 Humanistic Psychology**

This course examines the major assumptions, theories and implications of "growth" or humanistic psychology. Students study human beings as dynamic, complex creatures who shape themselves and their world through the choices they make each day and whose best hope for realizing their individual and collective potential is an accurate understanding of what human persons need to grow psychologically and what societal conditions seem to foster such growth. Institute elective for psychology majors. Part of the psychology concentration and minor, and may also be taken as an elective. (0514-210 or equivalent) Class 4, Credit 4 (offered regularly)

**0514-442 Adulthood and Aging**

This course encompasses the psychology of the span of life from young adulthood through the middle years. The developmental approach, presented in an interdisciplinary framework, provides a systematic orientation to the study of the individual during early adulthood. Institute elective for psychology majors. Part of the psychology concentration and minor, and may also be taken as an elective. (0514-210 or equivalent) Class 4, Credit 4 (offered regularly)

**0514-443 Cognitive Psychology**

This course examines how people perceive, learn, represent, remember and use information. Contemporary theory and research are surveyed in such areas as attention, pattern and object recognition, memory, knowledge representation, language acquisition and use, reasoning, decision-making, problem solving, creativity, and intelligence. Applications in artificial intelligence and human/technology interaction may also be treated. Required course for psychology majors. Part of the psychology concentration and minor and may also be taken as an elective. (0514-210 or equivalent) Class 4, Credit 4 (offered regularly)

**0514-444 Social Psychology**

This course gives a general overview of those areas of social psychology currently under the most intensive investigation and likely to be of most interest to the student, including nonverbal communication, attraction aggression and group effects. Required course for psychology majors. Part of the psychology concentration and minor and may also be taken as an elective. (0514-210 or equivalent) Class 4, Credit 4 (offered regularly)

**0514-445 Psychology of Perception**

This course covers topics of all sense modalities with emphasis on visual perception. It traces what happens to the physical stimulus as our sensory systems analyze it to produce complicated perceptions of the world around us. Many complex perceptual phenomena draw upon explanations at the physiological, psychological and cognitive levels. Required course for psychology majors in the visual perception track. Part of the psychology concentration and minor and may also be taken as an elective. (0514-210 or equivalent) Class 4, Credit 4 (offered regularly)

**0514-446 Psychology of Personality**

This course examines the strengths and weaknesses of the major psychological theories of personality. Methods of assessing personality, research and applications of theory to real-life situations are included in the evaluation of each theory. Required course for psychology majors. Part of the psychology concentration and minor and may also be taken as an elective. (0514-210 or equivalent) Class 4, Credit 4 (offered regularly)

**0514-447 Abnormal Psychology**

This course examines the major categories of mental disorder not only from the descriptive point of view, but also in terms of the major theoretical explanations of the causes of disorder. The major treatment modalities are covered. Required course for psychology majors. Part of the psychology concentration and minor and may also be taken as an elective. (0514-210 or equivalent) Class 4, Credit 4 (offered regularly)

**0514-448 Industrial and Organizational Psychology**

I/O psychology provides consideration of principles as well as application of current research in industrial psychology, with particular reference to personnel selection, training, motivation, morale, performance appraisal, leadership and communication. Required course for psychology majors. Part of the psychology concentration and minor and may also be taken as an elective. (0514-210 or equivalent) Class 4, Credit 4 (offered regularly)

**0514-449 Behavior Modification**

Students learn the skills of changing their behavior by controlling their environment and the consequences of their behavior. Elective for psychology majors. Part of the psychology concentration and minor and may also be taken as an elective. (0514-210 or equivalent) Class 4, Credit 4 (offered regularly)

**0514-451 Psychology of Motivation**

Surveys basic motivational concepts and provides a fair representation of many different areas of motivational research, relating these to each other where possible. Institute elective for psychology majors. Part of the psychology concentration and minor and may also be taken as an elective. (0514-210 or equivalent) Class 4, Credit 4 (offered occasionally)

**0514-453 Death and Dying**

This course will view death from a social-psychological perspective. After dealing with topics such as the leading causes of death, attitudes toward death, suicide, and American funeral practices, it will focus on such questions as how people can live better with their own mortality and that of loved ones, and how people can help others face death, and help themselves and others during periods of bereavement. Part of the psychology concentration and may also be taken as an elective. (0514-210 or equivalent) Class 4, Credit 4 (offered occasionally)
0514-480 Psychology of Women
Examines the relevance and applicability of present psychological theory and research to the understanding of the development and behavior of women. Major topics include psychological and biological sex differences, psychological theories of women’s development, the relationship between female personality development and various sociocultural factors, women’s place in society, women and their bodies, and women and mental health. May be taken as an elective. Cross-listed with women and gender studies. (0514-210 or equivalent) Class 4, Credit 4 (offered occasionally)

0514-483 Social Psychology of Religion
This course examines religions as cultures that, like other “ways of life,” face the task of attracting or creating new members, maintaining their loyalty, providing them with a coherent world view and satisfying their basic needs. Suggests how psychological processes such as identity information, attribution, self-actualization, brainwashing, conflict, denial, projection and repression may be applied and misapplied in efforts to understand religious belief and behavior. Part of the religious studies concentration, the psychology concentration and minor and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0514-526 Current Topics in Psychology
The course focuses on contemporary issues and topics not otherwise distinctly incorporated in established psychology courses. Concentrates on student discussion surrounding required readings on such topics as persuasion, stereotypes, evolutionary psychology, forensic psychology, cognition, perception, clinical techniques, the neuron, drugs and behaviors, rumor psychology, intelligence, sexuality, morality, or health psychology. Part of the psychology concentration and minor. May be taken as an elective. (0514-210, 0514-350, 0514-400 or equivalents) Class 4, Credit 4 (offered quarterly)

0514-530 Attention and Spatial Vision
This is a course examining two specialized topics in psychology. We will cover various topics under the grand heading of spatial vision, including linear systems analysis (visually based), visual physiology, receptive field structure and responses, and perception of static patterns. We will also examine current psychological, physiological and neuropsychological research on attention. We will learn about a variety of topics related to current thinking about attention, our capacity for information processing, and how these relate to brain function. Research based on psychophysical studies, experimental psychology techniques, and advance brain imaging methods will be covered. Required course for psychology majors in the visual perception and information processing tracks. Students may take this course for liberal arts or institute elective credit. (0514-210, 350, 400) Class 4, Credit 4 (offered regularly)

0514-531 Language and Problem Solving
Perhaps the most significant cognitive capacity of human beings is their use and understanding of language. This course examines the structure of language and its relationship to thought, and surveys contemporary theory and research on the comprehension and production of spoken and written language. Applications such as artificial speech recognition are discussed. The course also surveys the psychological literature on reasoning and problem-solving and examines attempts in artificial intelligence to simulate human performance in these areas. Required information processing track course for psychology majors. Students may take this course for liberal arts or institute elective credit. (0514-210, 350, 400) Class 4, Credit 4 (offered regularly)

0514-532 Judgment and Decision-making
Explores judgment and decision-making processes and focuses on the social and cognitive aspects of complex information processing. Topics include selective perception, memory and hindsight biases, framing effects, heuristics and biases, social influences, group processes and common errors. Required course for psychology majors in the visual perception and information processing tracks. Students may take this course for liberal arts or institute elective credit. (0514-210, 350, 400) Class 4, Credit 4 (offered regularly)

0514-533 Learning and Memory
This course reviews current memory research within a larger historical perspective. It presents the multistore or modal model of memory with an in-depth examination of the evidence used to support the model. It also includes topics such as memory structures, levels of processing, implicit and explicit memory, schemas, signal detection theory and global memory models. Theories of learning are clearly meaningful for the study of memory. With the new developments in connectionist models of learning, theories of learning again assume importance in scientific study. Required information processing tracking course for psychology majors. Students may take this course for liberal arts or institute elective credit. (0514-210, 400, 550) Class 4, Credit 4 (offered regularly)

0514-540 Visual System
As the basis to study visual perception, this course introduces electromagnetic waves as visual stimuli, structure of the eye, and visual pathways in humans, vertebrates, and some invertebrates. The materials cover span basic optics, biology, physiology, and psycho-physics. The functional and behavioral consequences of the visual system, such as uneven distribution of photoreceptors in the retina, receptive field of cells, and neural plasticity are also considered. Required for psychology majors in the visual perception track. Students may take this course for liberal arts or institute elective credit. (0514-210, 350, 400) Class 4, Credit 4 (offered occasionally)

0514-541 Color Perception
This course explores human color perception from the psychophysical perspective with coverage of relevant optics, neurophysiology, and vision science. Among the topics covered are theories of color vision, congenital and acquired color vision deficiencies, and evolution of color vision. Required for psychology majors in the visual perception track. Students may take this course for liberal arts or institute elective credit. (0514-210, 350, 400, 445) Class 4, Credit 4 (offered regularly)

0514-542 Spatial Vision and Pattern Perception
Traditional psychological views of organization of spatial vision such as Gestalt psychology and optical array are elaborated and connected to recent development of studies in spatial vision and pattern recognition. Techniques include electrophysiology, psychophysics, and brain imaging. Required for psychology majors in the visual perception track. Students may take this course for liberal arts or institute elective credit. (0514-210, 350, 400, 445) Class 4, Credit 4 (offered occasionally)

0514-543 Depth and Motion Perception
This course surveys such topics as monocular and binocular depth cues, size and shape constancy, stereopsis, direction perception, apparent motion, structure-from-motion, heading perception, and self-motion. Gibsonian approaches to perception are contrasted with more traditional perception approaches. The physiological bases of depth and motion perception are covered, as are practical applications of work in the area. Required visual perception track course for psychology majors. Students may take this course for liberal arts or institute elective credit. (0514-210, 350, 400, 445) Class 4, Credit 4 (offered occasionally)

0514-544 History and Systems
The course provides background to the development of current psychological perspectives. It examines beliefs, practices, achievements and limitations of various systems of psychology from Greek times to the late 20th century. Part of the psychology concentration and minor. Students may take this course as liberal arts or institute elective credit. (0514-210 or equivalent) Class 4, Credit 4 (offered occasionally)

0514-545 Brain and Behavior
This course is an introduction to the neurobiological basis of cognition and behavior. Topics include hemispheric specialization, localization of function, brain injury, neuro-psychological testing, and functional neuro-imaging. Emphasis is on higher brain functions such as language, memory, and visuo-spatial processing, with an evolutionary perspective. Laboratory work focuses on EEG correlates of attention and cognition. Part of the biopsychology track for the psychology degree program. This course is open to qualified non-majors as a liberal arts or institute elective. (0514-210 or equivalent) Class 4, Credit 4 (offered occasionally)

0514-546 Right Brain Left Brain
A comprehensive introduction to hemispheric specialization, including clinical and scientific relevance of brain asymmetry. Topics include localization of function, split-brain procedures, neuropsychological testing, interhemispheric interactions, and functional neuro-imaging. Emphasis is on higher brain functions such as language, memory, and visuo-spatial processing in an evolutionary context. Laboratory work focuses on lateralized tachistoscopic designs to investigate normal language function. Part of the biopsychology track for the psychology degree program. This course is open to qualified non-majors as a liberal arts or institute elective. (0514-210, 350, 400) Class 4, Credit 4 (offered occasionally)
0514-547 Brainwaves and Behavior
This course is an introduction to the study of human EEG, also known as brainwaves. EEG analysis is the original functional neuro-imaging technique for visualizing brain activity in healthy and patient populations during cognitive tasks. Advances in functional neuro-imaging have triggered a revolution in research on the biological bases of cognition, emotion, and psychiatric disorders. This course provides a forum in which students can learn about recent EEG findings and applications. Methods for evoking brain activity and how to analyze EEG data as well as the limitations of neuro-imaging results will be explored. Part of the biopsychology track for the psychology degree program. This course is open to qualified non-majors as a liberal arts or institute elective. (0514-214, 350, 400 or equivalent) Class 4, Credit 4 (offered regularly)

0514-548 Biological Bases of Mental Disorders
A comprehensive introduction to the biological foundations of schizophrenia, depression, autism, bipolar disorder, Tourette's syndrome, and other mental disorders. Topics include neuropsychological testing, etiology, and structural and functional neuro-imaging. Part of the biopsychology and clinical psychology tracks for the psychology degree program. This course is open to qualified non-majors as a liberal arts or institute elective. (0514-210, 350, 400) Class 4, Credit 4 (offered regularly)

0514-549 Introduction to Clinical Psychology
The purpose of this course is to provide an overview of the field of clinical psychology. The course is designed for upper-level undergraduate students interested in learning more about this specific field. Students will learn about the primary tasks of a clinical psychologist, including fundamentals of assessment, clinical research, conceptualizing problems, and psychotherapy. In addition, students will learn about the educational and professional behavior, and controversial issues within the field. Part of the clinical psychology track for the psychology degree program. This course is open to qualified non-majors as a liberal arts or institute elective. (0514-210, 350, 400) Class 4, Credit 4 (offered regularly)

0514-550 Psychological Testing
This course will explore the theories, methods, and applications of psychological testing. The advantages and drawbacks of psychological testing in general, and selected tests in particular, will be emphasized. The use of tests in clinical and other applied areas of psychology is based on several assumptions. First, assessment is apt to be more useful if based upon reliable and valid information. Second, one's knowledge of tests will help students gather meaningful information about people and environments. Third, it is desirable to design intervention plans based on accurate assessment data, and to use data to evaluate intervention outcomes. Part of the clinical psychology track for the degree program. This course is open to qualified non-majors as a liberal arts or institute elective. (0514-210, 350, 400) Class 4, Credit 4 (offered regularly)

0514-551 Research in Clinical Psychology
This course will explore the theory and methods used to evaluate interventions in the field of clinical psychology and related human services. Topics to be covered will include within subjects/single experiments, between-subjects experiments/clinical trials, and general program evaluation. Two primary objectives are to help students develop an appreciation for the importance of scientific evaluations of psychotherapy and other interventions and to develop skills for evaluating the efficacy of clinical interventions. Part of the clinical psychology track for the degree program. This course is open to qualified non-majors as a liberal arts or institute elective. (0514-210, 350, 400) Class 4, Credit 4 (offered regularly)

0514-553 Psychopharmacology
A comprehensive introduction to psychoactive drugs. Topics include pharmacokinetics, pharmacodynamics, synaptic transmission, drugs of abuse and drugs used in the treatment of mental disorders. Part of the biopsychology and clinical psychology tracks for the psychology degree program. (0514-210, 350, 400, 447) Class 4, Credit 4 (offered regularly)

0514-554 Psychophysiology
This course provides a comprehensive introduction to psychophysiology. Students will learn about various psychophysiological measures and their use in the study of topics such as attention and emotion. Topics may include mind-body interaction, somatic and autonomic nervous system function, central and peripheral physiological measures (e.g. EKG, EMG, cardiac reactivity, skin conductance responses), psychophysiological research methods, and applied psychophysiology. Part of the biopsychology track for the psychology degree program. (0514-210, 350, 400) Class 4, Credit 4 (offered regularly)

0514-571 Honors: Special Topics in Psychology
This course focuses on contemporary issues and topics that are not covered in-depth in other psychology courses. It concentrates on student discussion of primary source readings on topics such as persuasion, stereotypes, evolutionary psychology, forensic psychology, cognition, perception, clinical techniques, the neuron, drugs and behavior, rumor psychology, intelligence, sexuality, morality, or health psychology. May be taken as an elective. (0514-210 or 0514-325) Class 4, Credit 4 (offered regularly)

0514-596 Senior Project in Psychology I
This course is intended for students in the psychology major to demonstrate independent, experimental research expertise. Students are guided by faculty advisers in conducting experimental research on an issue of their choice. This course will culminate in an approved APA style introduction and methods sections for the student's senior project. Students will be supervised by the instructor as they conduct their senior project literature review, write the introduction, develop the research question or hypothesis, develop the study methodology and materials, construct all necessary IRB materials, and write a methods section. (0514-210, 350, 400) Class 4, Credit 4 (W)

0514-597 Senior Project in Psychology II
This course is intended for students in the psychology major to demonstrate independent, experimental research expertise. Students design the method, run subjects, and analyze the results of their study. Students write up the project in APA format. Passing this write-up qualifies the students for the writing requirement in psychology. Because senior project is the culmination of a student's scientific research learning experience in the psychology major, it is expected that the project will be somewhat novel and will extend the theoretical understanding of their previous work. Each student will be supervised by the instructor as they collect data, analyze those data, write the results, discussion, and abstract sections of their project and present the study. Grades will be based upon entire manuscript (including introduction and methods section), (0514-596) Class 4, Credit 4 (S)

Sociology

0515-210 Foundations of Sociology
An introduction to the way sociologists interpret social reality, including the elementary terms, foundational ideas, major insights, and research discoveries in the discipline. Included are topics such as statuses and roles, socialization, cultural variation, deviance, social stratification, social institutions, and social change. Fulfills a liberal arts core social/behavioral science requirement. Counts as a prerequisite for the sociology/anthropology concentration and minor, the international studies and urban communities studies majors and as a prerequisite for the required cultures in globalization. Class 4, Credit 4 (offered quarterly)

0515-325 Honors: Sociology
This course is designed to equip students with a sociological imagination, a new way of interpreting the structure of the world around them and the way humans interact with the socially constructed universe. Although covering much of the same material of the standard course, this course will differ in three important ways. First, it will be more seminar style. Each student will be expected to contribute to each class. In addition, each student will be responsible for organizing one twenty minute presentation and leading the class in a guided exploration of common readings. Finally, the course will emphasize writing, and the midterm and final essay exams will complement the required eight page summary/revision paper. Fulfills a liberal arts core social/behavioral science requirement. Counts as a prerequisite for the sociology/anthropology concentration. Class 4, Credit 4 (offered occasionally)

0515-406 Qualitative Methods
This is a course in the practical aspects of doing theoretically informed qualitative social research. Special attention will be given to the processes by which research problems are formulated, research designs selected, data gathered and interpreted, and influences and conclusions drawn. Through example, illustration, and application, specific research skills will be simulated using case studies. Part of the sociology concentration and may also be taken as an elective. Cross-listed with public policy. 0521-406: Class 4, Credit 4 (offered occasionally)
0515-413 Urban Planning and Policy
This course analyzes social and spatial characteristics of cities and considers reasons for urban development, ecological factors, types and networks of settlements, and urbanism as a way of life. It also examines the issues of neighborhoods, subareas, ghettos, metropolitan regions, urban social and political structures, planning and urban policy. Part of the sociology/anthropology concentration and minor and may also be taken as an elective. Cross-listed with 0526-445. Class 4, Credit 4 (offered occasionally)

0515-441 The Changing Family
This course examines the essential concepts and theories fundamental to the social science of family studies. It analyzes family systems with reference to gender role, participation in the workplace, marital relationships and communication between parents and children. The course also focuses on ways in which changes in the economy and technology have influenced the form of the family, and men’s and women’s work. Part of the sociology/anthropology concentration and minor. May also be taken as an elective. (0510-210, 0515-210 or equivalent) Class 4, Credit 4 (offered annually)

0515-442 The Urban Experience
This sociology course analyzes social and spatial characteristics of cities and considers reasons for urban development, ecological factors, types and networks of settlements, and urbanism as a way of life. Also examines the issues of neighborhoods, subareas, ghetto enclaves, metropolitan regions, urban social and political structures, problems, services and planning. Part of the sociology/anthropology concentration and minor. May also be taken as an elective. (0510-210, 0515-210 or equivalent) Class 4, Credit 4 (offered annually)

0515-443 Sociology of Work
This course analyzes continuity and change in the way work is organized, performed and experienced within national and global contexts. Major sociological perspectives on work are examined and applied to areas such as workplace and occupational culture, the experience of work as satisfying and alienating, occupational change, unions and union busting, health and safety, labor law, and social stratification at work. Interrelations between work and other social institutions, such as family, economy, polity, leisure and education, are examined. Part of the sociology/anthropology concentration and minor. May also be taken as an elective. (0510-210, 0515-210 or equivalent) Class 4, Credit 4 (offered annually)

0515-444 Social Change
This course describes and applies competing explanations for major transitions in a variety of institutions, including the economy, work, politics, family and education. These transitions are seen within historical and global contexts, but the interplay of these changing social structures with individual experience is explored as well. Topics include economic, racial and gender stratification, culture, labor-management relations, and the source and consequences of technological change. As future professionals in technical fields, students will learn to understand, assess, and manage social change rather than to simply react to it. Part of the sociology/anthropology concentration and minor; and may also be taken as an elective. (0510-210, 0515-210 or equivalent) Class 4, Credit 4 (offered annually)

0515-446 Sociology of Health
A survey of the sociological aspects of health and illness. Some areas of study will be the definition, causes (etiology) and cure of disease in various societies and social groups. Also included is a discussion of the epidemiology of disease, access to and delivery of health care in contemporary U.S. society, problems of patient care, and the study of mental illness and death and/or dying. Part of the sociology/anthropology concentration and minor. May also be taken as an elective. (0510-210, 0515-210 or equivalent) Class 4, Credit 4 (offered annually)

0515-447 Women, Work and Culture
Broad sociological issues affecting women, work and culture are a result of the emerging global economy and technological revolution. The course will consider how the process of gender socialization is complicated by the way in which gender intersects with racial, class, ethnic, sexual, and other identities. This course will present the major theoretical perspectives employed in sociology and women’s studies and consider how they relate to the study of women, work and culture. Part of the sociology/anthropology concentration and minor. May also be taken as an elective. (0510-210, 0515-210 or equivalent) Cross-listed with women and gender studies, 0522-447. Class 4, Credit 4 (offered annually)

0515-448 Minority Group Relations
This course is designed to enable the student to understand the principles and processes that shape the patterns of relations between racial, ethnic, and other groups. The primary emphasis will be on the relationships between majority and minority groups in contemporary U.S. society. Multiple and contradictory social relations of domination, subordination, resistance and empowerment are examined. We will explore how power, knowledge, meaning and cultural representation are organized. Through theoretical texts, fictional works, film and popular media students will consider how culture is lived differently and how politics of understanding and misunderstanding minority relations work. Part of the sociology/anthropology concentration and minor; and may also be taken as an elective. (0510-210, 0515-210 or equivalent) Class 4, Credit 4 (offered annually)

0515-449 Population and Society
This course introduces population studies with an examination of systematic theories of population dynamics. We will explore the multiple influences of demographic issues for social, political, economic and environmental conditions, both within the U.S. and around the world. We will discuss global current events on television, in newspapers and other media in order to apply demographic concepts to real life events. We will also analyze demographic data compiled by various sources, including the U.S. Census Bureau and international organizations such as the United Nations, the World Bank and the World Health Organization. Part of the sociology/anthropology concentration and minor; the environmental studies minor; and may also be taken as an elective. (0510-210, 0515-210 or equivalent) Class 4, Credit 4 (offered occasionally)

0515-451 Transfer Technology and Globalization
This course provides an understanding of theoretical perspectives, directions, processes and consequences of transfer of technology from modern to developing societies. It also examines the diffusion of technologies, that is, the process through which they spread from their initial sources into various national and international organizations (e.g., multinational firms, factories, communities, and homes). The course also analyzes the consequences of conventional technological transfers and the need for appropriate technology for developing countries. Part of the science and technology studies concentration; the science, technology and society minor; the sociology/anthropology concentration and minor; and the public policy concentration and minor and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0515-452 Special Topics in Sociology
This course focuses on issues and topics not otherwise covered in established sociology courses. The courses will concentrate on student discussion and interaction surrounding required readings. This course may be taken as an elective. (0510-210 or 0515-210) Class 4, Credit 4 (offered occasionally)

0515-453 Global Exiles of War and Terror
Daily we watch, seemingly helplessly, as people are displaced from their communities, homelands, and countries and subsequently seek asylum around the world, sometimes within our own local communities. Causes of displacement include war, violence, persecution, and modes of terror that increasingly affect the lives of women and children. In addition to the loss of human life and potential, the ensuing consequences of violent displacement include poverty, disease, physical and psychological trauma, hopelessness, and vulnerability to human rights abuse. We will explore how the rights and dignity of refugees can be protected; examine resettlement processes; and how trauma of displacement can be minimized. Part of the urban and community studies and international studies degree programs, and the sociology/anthropology concentration and minor. May also be taken as an elective. (0510-210 or 0515-210) Class 4, Credit 4 (offered occasionally)

0515-456 African American Culture
Analyzes past, present and future social policies, programs and practices from their actual and predictable effects on black people. These analyses and solutions include particular emphasis on how the black community has been forced to develop mechanisms for coping with the debilitating effects of poverty, environmental deprivation and institutional racism. Presents a systematic means of facilitating change in people’s attitudes and behaviors. Part of the sociology and minority relations concentration. May also be taken as an elective. Class 4, Credit 4 (offered occasionally)
0515-483 Hispanic American Culture
The study of the social experiences and conditions of Hispanic Americans and the degree to which they have been assimilated into the mainstream dominant culture. Various Hispanic groups are studied with the goal of defining and outlining their differences and similarities. The Puerto Ricans in the Northeast and the Mexican Americans in the Southwest are specifically selected for analysis. Helps students to better understand the problems faced by Hispanic Americans by looking at specific socio-economic indicators such as their access to health care, job opportunities, educational institutions and the degree to which Hispanics have "progressed" in the U.S. Part of the sociology, minority relations, and Latino/Latina/Latin American concentrations. May also be taken as an elective. Part of international studies Latin American track. Class 4, Credit 4 (offered occasionally)

0515-485 Diversity in the City
This course examines the city as an amalgamation of diverse communities, with people engaged in interpreting and responding to urban life. It examines changes in the structure of urban neighborhoods, and how these neighborhoods are impacted by social, economic and political conditions. Issues such as urban poverty, unemployment, crime and homelessness will be investigated. Part of the sociology/anthropology concentration and minor. May also be taken as an elective. Class 4, Credit 4 (offered annually)

0515-506 Social Inequality
A survey course that examines different dimensions of stratification in the U.S. and elsewhere. Explanations for the existence of inequality are addressed at individual, group and institutional levels. Part of the sociology concentration and may also be taken as an elective. (0510-210, 0515-210 or equivalent) Class 4, Credit 4 (offered occasionally)

0515-507 Complex Organizations
Analyzes the structure and dynamics of a wide variety of social organizations (government bureaucracies, corporations and voluntary groups). Topics include theories of organization, organizational processes, technological impact, and organizational change and development. An examination of the internal operation of large organizations includes sources of power and authority, modes of communication and division of labor, as well as tension, stress and strain. Part of the sociology concentration and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0515-508 Aging and Society
Considers concepts, issues and research techniques in the behavioral and biological aspects of aging. Examines the interaction of group processes in the family and community that influence society’s attitudes toward the aging process. Further examines the cultural, environmental and institutional changes as they relate to an increasing population of older people. May be taken as an elective. Class 4, Credit 4 (offered occasionally)

0515-509 Social Policy
An examination of social policy formulation in a variety of contexts from local government to national government. Special attention is given to the strategies, choices and priorities in the formulation of social policy. Deals with historical development of social policies, including the issues of health, aging, poverty, family and children. Also examines the question of how social values and economy influence policy development. Part of the sociology concentration; the legal studies minor; and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0515-515 Social Policy and Aging
Course work is organized around culture and values as context for policy formulation. Special attention is given to the process of policy analysis and implementation. Several specific policy areas are examined: social security and income maintenance; health and long term care; work and retirement; social services and the aging network; housing and living arrangements for the elderly; and the role of the family and the elderly. Part of the sociology concentration and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0515-524 Applied Sociology
Provides the student with useful sociological knowledge applicable to solutions of practical problems. The inventory of problems is not fixed beforehand, and the specific course content reflects the problems either already encountered by students or very likely to represent a significant portion of their anticipated professional concern upon graduation. Part of the sociology concentration and may also be taken as an elective. (Permission of instructor) Class 4, Credit 4 (offered occasionally)

0515-529 Deaf Culture in America
An introductory survey of culture among various groups of deaf people in the United States. Students study the scholarly literature dealing with these groups and have contact with members of this community. Familiarizes students with the characteristics of deaf culture as well as general perceptions of deafness and the deaf community within the dominant hearing society. Students should come to recognize and appreciate this segment of American cultural diversity. Part of the sociology and ASL language/culture concentrations; the deaf studies concentration and minor. May also be taken as an elective. (0502-227, 0510-210, 0515-210 or equivalent) Class 4, Credit 4 (offered annually)

0515-569 Human Sexuality
This course is sex positive in its approach to the study of human sexual behavior. It focuses upon basic physiology, sexual awareness, sexual development throughout the life cycle, sex roles, sexual myths, legal and social issues, pre-marital and marital sexual behavior, and alternative sexual choices. Frequently these issues raise questions of sexual attitude and value, and these are examined and clarified. Part of the sociology concentration and may also be taken as an elective. Class 4, Credit 4

Interdisciplinary—Aerospace

0519-201 History of Airpower I
This course is the first in a three course sequence that examines air and space power through a historical perspective. The course traces the evolution of air and space power from the first balloons and dirigibles to the space age global positioning systems used in recent conflicts. The first course covers early flight, World War I, interwar years, and World War II. It examines the impact of air and space power on military and non-military operations in support of U.S. foreign and domestic policy and its role in future warfare. Required for second year ROTC students. Class 1, Credit 1 (offered annually)

0519-202 History of Airpower II
The second of a three course sequence that examines air and space power through a historical perspective. The second course covers the formation of an independent U.S. Air Force, the Berlin Airlift, Cold War deterrence policy, and the Vietnam conflict. It examines the impact of air and space power on military and non-military operations in support of U.S. foreign and domestic policy and its role in 20th century warfare. Required for second year ROTC students. Class 2, Credit 2 (offered annually)

0519-203 History of Airpower III
The third of a three course sequence that examines air and space power through a historical perspective. The final course covers the post Vietnam reorganization, the Persian Gulf Wars, Kosovo, war on terror, and the future of air and space power. It examines the impact of air and space power on military and non-military operations in support of U.S. foreign and domestic policy and its role in future warfare. Required for second year ROTC students. Class 4, Credit 4 (offered annually)

Interdisciplinary—Liberal Arts

0520-201 Career Exploration Seminar
This seminar is designed to introduce students to the process by which they can make informed decisions in selecting career options and identifying an educational program which will lead to that goal. Students begin the quarter by assessing their interests, values, skills and personal traits in a small group setting with the assistance of facilitators familiar with careers and RIT programs. Students will be introduced to online and print resources used for researching occupational information and will participate in class discussion about their discoveries and goals. Students will research academic programs that lead to the careers they have identified. This includes interviewing faculty and administrators in campus programs as well as professionals working in the fields. This seminar is required for students in the university studies and liberal arts exploration programs. Class 1, Credit 1 (offered quarterly)
Public Policy

0521-210 Introduction to Public Policy
This course provides students with an introduction to the interdisciplinary field of public policy. The course will introduce students to the fundamental theories, concepts, and models of public policymaking, with an emphasis on policy formation, adoption, implementation and evaluation. Policy issues will be discussed in a range of contexts, including: health policy, environmental policy, defense policy, energy policy, and technology policy, among others. May be taken as an additional general education course. Class 4, Credit 4 (offered annually)

0521-400 Foundations of Public Policy
This interdisciplinary course will introduce the student to the concept of public policy, the policymaking process, the role of stakeholders and interest groups, and the basic dimensions of quantitative and qualitative policy analysis. A range of public policy issues, such as environmental policy, science and technology policy, and information and communications policy will be explored. Required course for the undergraduate public policy curriculum. Part of the public policy concentration and minor; the science, technology and policy minor; and may also be taken as an elective. Class 4, Credit 4 (offered annually)

0521-401 Values and Public Policy
This course focuses on the connections and interplay between personal and social values and public policy. It explores how values and norms influence public policies and how the resulting expressions of values within public policy impact the implementation and effectiveness of policy choices. The course also considers how new developments in science and technology influence the interplay between values and policy. In addition, this course explores how to formulate values-based explanations of certain public policy preferences. A required course in the public policy undergraduate curriculum; part of the public policy concentration and minor; and may also be taken as an elective. (0521-400) Class 4, Credit 4 (offered biannually)

0521-402 Policy Analysis I
This course is the first in a three-course sequence (Policy Analysis I–III) that normally will be taken in the third year of the public policy degree program. The purpose of the three-course sequence is to introduce the student to both qualitative and quantitative policy analyses and to progressively integrate qualitative and quantitative dimensions of analysis into a systematic whole. Students will learn to apply a suite of analytical tools to better understand and evaluate public policy. Part of the public policy concentration and minor and may also be taken as an elective. (0521-400, 0521-406, 0511-401 and 1016-319 or equivalent; 0511-450 or departmental approval) Class 4, Credit 4 (offered annually)

0521-403 Policy Analysis II
This course is the second in a three-course sequence (Policy Analysis I–III) that normally will be taken in the third year of the public policy degree program. This course will assist the student in integrating both quantitative and qualitative policy analyses and to progressively integrate qualitative and quantitative dimensions of analysis into a systematic whole. Students will learn to apply a suite of analytical tools to better understand and evaluate public policy. Part of the public policy concentration and minor and may also be taken as an elective. (0521-400, 0521-406, 0511-457 or 1016-320 or equivalent) Class 4, Credit 4 (offered annually)

0521-404 Policy Analysis III
This course is the third in a three-course sequence (Policy Analysis I–III) that normally will be taken in the third year of the public policy degree program. This course will provide students an opportunity to develop an analysis and proposal of a particular policy issue. The course continues to build upon the tools of Policy Analysis I and II using a case study and project-based approach. Part of the public policy concentration and minor; and may also be taken as an elective. (0521-403) Class 4, Credit 4 (offered annually)

0521-405 Senior Project I
This is the culminating educational experience for public policy students. The principal focus is an independent study project, centered on a major policy issue drawn from the student’s chosen specialization. In Senior Project I students conduct research and produce their project report under the guidance of a faculty adviser on their senior project. An approved project proposal and permission of the department is required to register for this course. (0521-404) Class 4, Credit 4 (offered annually)

0521-406 Introduction to Qualitative Policy Analysis
This is a course in the practical aspects of doing theoretically informed qualitative social research. Special attention will be given to the processes by which research problems are formulated, research designs selected, data gathered and interpreted, and inferences and conclusions drawn. Through example, illustration, and application, specific research skills will be simulated using case studies. Required course for the public policy undergraduate curriculum. Part of the public policy concentration and minor; and may also be taken as an elective. (0521-400) Class 4, Credit 4 (offered annually)

0521-407 Senior Project II
This is the culminating educational experience for public policy students. The principal focus is an independent study project centered on a major policy issue drawn from the student’s chosen specialization. In Senior Project II students conduct research and produce their project report under the guidance of a faculty adviser on their senior project. Permission of department is required to register for this course. (0521-404) Class 4, Credit 4 (offered annually)

0521-408 Technological Innovation and Public Policy
Technological innovation, the incremental and revolutionary improvements in technology, has been a major causal factor for economic growth and social and political change. This course will introduce generic models of innovation that span multiple sectors including: energy, environment, bio- and information technologies. The course will then analyze how governments choose policies to spur innovation. Required course for public policy undergraduate curriculum. Part of the public policy concentration and minor; the science, technology, and policy minor; and may also be taken as an elective. (0521-400 or permission of the department) Class 4, Credit 4 (offered annually)

0521-410 Information and Communications Policy
This course examines how federal and international policies are developed to influence innovation of information and computer technology. In particular, the course will examine such topics as privacy, freedom of speech, intellectual property rights, access to information technology, and regulation of the Internet. Part of the public policy concentration and minor; the science, technology, and policy minor; and may also be taken as an elective. (0521-400) Class 4, Credit 4 (offered annually)

0521-411 Technological Innovation and Public Policy
Technological innovation, the incremental and revolutionary improvements in technology, has been a major causal factor for economic growth and social and political change. This course will introduce generic models of innovation that span multiple sectors including: energy, environment, bio- and information technologies. The course will then analyze how governments choose policies to spur innovation. Required course for public policy undergraduate curriculum. Part of the public policy concentration and minor; the science, technology, and policy minor; and may also be taken as an elective. (0521-400 or permission of the department) Class 4, Credit 4 (offered annually)

0521-449 Special Topics in Public Policy
This course will examine current topics in public policy and may be used with consent of adviser as a policy core elective or track elective for the public policy BS degree. Part of the public policy concentration and minor and the science, technology, and policy minor. May also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0521-451 Energy Policy
This course provides an overview of energy resources, technologies, and policies designed to ensure clean, stable supplies of energy for the future. The course evaluates the impacts of fossil fuel, renewable energy, and hydrogen technologies on society and how public policies can be used to influence their development. The development of U.S. energy policy is of particular concern, although a global perspective will be integrated throughout the course. Part of the public policy concentration and minor; the environmental studies concentration and minor; the science and technology studies concentration; the science, technology and society minor; the science technology and policy minor; and the sustainable product development minor. Class 4, Credit 4 (offered biannually)

0521-460 Public Policy Capstone for Minors
The overall objective of the course is to tie together the theories and applied skills learned in other public policy minor courses within a common analytical and theoretical framework of public policy formation and implementation. Students will apply their knowledge to a contemporary problem or issue related to science, technology, and policy. Readings, lecture, case studies, and projects will be used to highlight commonalities and dissimilarities among different policy regimes. Students must have department approval to register. Part of the public policy minor. Cannot be used as an elective. Class 4, Credit 4 (offered occasionally)
Women and Gender Studies

0522-400 Foundations of Women and Gender Studies
This course will use an interdisciplinary perspective to provide an introduction to women’s studies. The course will focus on the rise of feminist consciousness in the western world from the middle ages to the late 20th century. It will consider the concept of patriarchy, its dominance for the past four millennia, and the multitude of efforts by women and men to conceptualize an alternative world view. The course will consider key historical patriarchal and feminist texts, study the rise of feminist thought, and consider the history of women’s activism and the women’s rights movement from the late 18th century through the second half of the 20th century. The course will also consider feminist theory and the rise of feminism. Part of the women and gender studies concentration and minor. May also be taken as an elective. Class 4, Credit 4 (offered annually)

0522-401 American Women: Colonies to 1848
This course considers the history of American women from the colonial era to Seneca Falls convention. We will examine the experiences of women of different races and classes across the country, looking at Puritans in Massachusetts and at planters’ daughters in the Carolinas; at female slaves in the deep South and at mill workers in the urban North. We will investigate the impact of the American Revolution movement, culminating in the convention at Seneca Falls. Part of the women and gender studies concentration and minor. May also be taken as an elective. Cross-listed with history. 0507-401. Class 4, Credit 4 (offered annually)

0522-402 American Women: 1848 to Now
This course considers the history of American women from the Seneca Falls convention to the present. We will trace the impact of the first women’s rights convention and follow the story of the struggle for the vote. We will also consider the role of women in other important nineteenth century reform movements, including abolition, temperance, spiritualism, and progressivism. We will also look at the varied experience of women in the twentieth century from birth control to second wave feminism to co-education. Part of the women and gender studies concentration and minor. May also be taken as an elective. Cross-listed with history. 0507-402. Class 4, Credit 4 (offered annually)

0522-405 Women and Science
This interdisciplinary women’s studies course links science, feminist theory, history, and biography in recognizing the importance of gender to the study and practice of science. The course focuses on four critical concerns: recognition of women pioneers in the sciences, analysis of the barriers women scientists have faced historically and presently, awareness of the historical roots and exclusions of women in science, and examination of how the practice of science particularly affects women. This course is relevant to non-science majors as well as those majoring in the field. Part of the women and gender studies concentration and minor and the science writing minor. May also be taken as an elective. Cross-listed with science and technology studies. 0508-381. Class 4, Credit 4 (offered occasionally)

0522-406 Feminist Theory
This course will introduce students to the foundations of feminism in political theory, and it will critically explore how feminist concepts can be expanded to take account of class, race, and sexuality. We will examine the differences between the categories of sex and gender and the ways in which feminist understandings of human experience have modified traditional philosophical accounts of reality, knowledge, morality, and justice. Part of the women and gender studies concentration and minor. May also be taken as an elective. Cross-listed with philosophy 0509-454. Class 4, Credit 4 (offered occasionally)

0522-407 Seminar on Sexual Violence
The course is intended to familiarize students with sexual crimes and violence as they interface with each phase of the criminal justice system including enforcement, adjudication, treatment and prevention. Discussion will include laws related to sex offenses, types of sex crime, child sexual abuse, the psychology and treatment of sex offenders, prevention and victim aftercare. Part of the women and gender studies concentration and minor. May also be taken as an elective. Cross-listed with criminal justice, major issues: seminar in sexual violence, 0501-405. Class 4, Credit 4 (offered occasionally)

0522-408 American Film in the Studio Era
This course examines the history and aesthetics of the motion picture in the U.S. during the classical Hollywood studio period. Emphasis will be placed on the analysis of both the work of major American film makers and the evolution of major American film genres. Among the filmmakers to be studied are Griffith, Chaplin, Hawks, Ford, Capra, Welles, Hitchcock, Wilder and Kubrick. Genres to be covered include the melodrama, silent comedy, screwball comedy, western, thriller, film noir, and the gangster film. The films will be studied within the context of contemporary cultural and political events, and will be discussed from several viewpoints, including aesthetic, technical, social and economic. Part of the women and gender studies minor only as an affiliated course. May also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0522-410 Introduction to GLBT Studies
This introductory course examines a broad range of gay, lesbian, bisexual and transgender issues within the historical, psychological, racial, theological, cultural and legal contexts in which we live. Students will learn the historical and theoretical foundations of GLBT studies as well as the contemporary implications for family, work, religion and law for GLBT people and the mainstream society. Students will have the opportunity to compare the regulation of sexual orientation across different gender, race and socioeconomic communities. Part of the women and gender studies concentration and minor. May be taken as an elective. Class 4, Credit 4 (offered annually)

0522-415 Domestic Violence
The course will cover the history of domestic violence as a social problem, its dynamics, prevalence, outcomes, theories, research issues, and contemporary domestic violence policy. Special emphasis will be placed upon the cycle of violence, the effects of childre’s exposure to family violence, and the intersectionality of race, gender, class and sexuality. It will include readings from the social sciences as well as literary texts. Part of the women and gender studies concentration and minor may be taken as an elective. Class 4, Credit 4 (offered annually)

0522-436 Women’s Stories, Women’s Films
This course will provide an introduction to women’s films through an exploration of narrative structure in films made by women. Through film screenings and class discussion, the course will examine the themes and issues of women’s narratives and how they are presented in the medium of film. The hero’s journey and traditional narrative structure will be contrasted with the heroine’s journey and the more personal story telling style of the feminine. The course will also examine differences between films made by women and films made by men about women. The course will introduce the work of feminist film critics and consider the relevance of those theories to women’s roles in current films. The course will view women’s storytelling in a context of feminine mythology and psychology. Part of the women and gender studies concentration and minor. Cross-listed with CIAS 2063-553 and fine arts 0505-439. Class 4, Credit 4 (offered annually)

0522-446 Women and Crime
Deals with women as criminal offenders and as victims of crime, focusing upon theories about women in crime, types of crimes committed patterns of criminality and the treatment of women offenders. Also examines the role of women as law enforcement officers, judges, lawyers and correctional officers in the criminal justice system. Part of the women and gender studies concentration and minor. May also be taken as an elective. Cross-listed with criminal justice. 0501-046. Class 4, Credit 4 (offered occasionally)

0522-447 Women, Work and Culture
Broad sociological issues affecting women, work and culture are a result of the emerging global economy and technological revolution. The course will consider how the process of gender socialization is complicated by the way in which gender intersects with racial, class ethnic, sexual, and other identities. This course will present the major theoretical perspectives employed in sociology and women’s studies and consider how they relate to the study of women, work and culture. Part of the women and gender studies concentration and minor. May also be taken as an elective. (0510-210, 0515-210 or equivalent) Cross-listed with sociology. 0515-447. Class 4, Credit 4 (offered annually)
0522-449  History of Women in Science and Engineering
This course will explore the gendered nature of Western science and technology. We will focus on three areas: the history of women's participation in science and engineering since the birth of modern science in the seventeenth century; the historical roots of gender bias in the scientific enterprise; and current debates over whether women have changed science and engineering since the 1970's. Special attention will be paid to the experience of women in engineering, one of the most male-dominated professions. The course will focus on minority and non-minority women in Western Europe and the United States and will occasionally employ cross-cultural contexts. Part of the women and gender studies concentration and minor. May also be taken as an elective. Cross-listed with science and technology studies, 0508-449. Class 4, Credit 4 (offered occasionally)

0522-450  Gender, Science and Technology
This course explores feminist critiques of Western science and technology by investigating the ways in which gender, power and politics shape the content and context of science and technology. Particular attention is placed upon social and cultural dimensions of scientific and technological practices including the development of theory, method and application. Part of the women and gender studies concentration and minor. May also be taken as an elective. Cross-listed with science and technology studies, 0508-452. Class 4, Credit 4 (offered occasionally)

0522-451  Global Sexualities
This course explores issues of gender and sexuality in a global context. Students will be introduced to anthropological perspectives on the experience of men and women, as gendered subjects, in, such as colonialism, nationalism, and global capitalism. In turn, we will explore how cultural constructions of masculinity and femininity are configured by race, class, ethnicity, and sexual orientation. Course materials are drawn from an array of sources, reflecting various theoretical perspectives and ethnographic views from different parts of the world. Part of the sociology/anthropology concentration and minor; the women and gender studies concentration and minor; and may be taken as an elective. (0510-210 or 0515-210) Class 4, Credit 4 (offered occasionally)

0522-452  Bodies and Culture
The body in culture, society, and history. Comparative approaches to the cultural construction of bodies, and the impact of ethnic, gender, racial differences on body practices (i.e. surgical alteration, mutilation, beautification, surrogacy, etocia). The formation of normative discourses of the body (regarding sexuality, AIDS/illness, reproduction, fat/food) in medical science, consumer culture, and the mass media. The course will be discussion and project-oriented, encouraging students to acquire a range of analytic skills through a combination of text interpretation and research. Part of the women and gender studies concentration and minor; and may be taken as an elective. (0510-210 or 0515-210) Cross-listed with anthropology, 0510-452. Class 4, Credit 4 (offered annually)

0522-453  Economic Role of Women
This course applies economic theory to explain choices faced and selected by women concerning marriage, fertility and labor market participation, alongside government policies targeting those decisions. Empirical research will be presented that describes the changing demographic profile of families, poverty and the labor force. Students in this course will gain experience evaluating how economic theory and practice fits into the larger social sciences goal of describing human behavior by focusing on the changing economic role of women. Part of the women and gender studies concentration and minor. May be taken as an elective. Cross-listed with economics, 0511-480. Class 4, Credit 4 (offered occasionally)

0522-459  Toni Morrison
Through reading and discussion of Toni Morrison's novels and feminist and African-American critical theory, this course will allow students to follow the development of Morrison's art and to approach her work from alternative critical perspectives. Particular attention will be paid to the role of narrative in African-American culture and to Morrison's understanding of its literary, historical, and political functions. Part of the women and gender studies concentration and minor. May also be taken as an elective. (0502-227 or equivalent). Cross-listed with literature, 0504-459. Class 4, Credit 4 (offered occasionally)

0522-480  Women and the Visual Arts
Examines the image of women in the visual arts and the role of women image makers. Major topics include the variety of images of women, the evolution and change of these images over time, media images (as differentiated from fine art images) of women, images of women by women and by men, women's images and the issues of their relationship to the images made by men, the nude and pornography, history of women artists, selected women artists and their work, relation of their work to the art of the period, current issues and status of women artists. Part of the women and gender studies concentration and minor. May also be taken as an elective. Cross-listed with fine arts, 0505-480. Class 4, Credit 4 (offered annually)

0522-481  Women's Studies in Language and Literature
Concentrates on literature by women about women, primarily from the early 19th century to the present. Considers the aspirations, frustrations and achievements of women as documented by themselves, as well as the perceptions and representations of women in literature by male writers. Works are examined for their literary value as well as their documentation of broader feminist issues. Part of the women and gender studies concentration and minor. May also be taken as an elective. (0502-227 or equivalent) Cross-listed with and literature, 0504-480. Class 4, Credit 4 (offered occasionally)

0522-482  Women in Politics
A study of feminist thought as it applies to the political, economic and social status of women and how it has been expressed through the women's political movement. Students study a number of public policies as they apply to and affect women and examine the opportunities for women to participate in the political process. Part of the women and gender studies concentration and minor. May also be taken as an elective. (0513-211, 214 or equivalent) Cross-listed with political science, 0513-481. Class 4, Credit 4 (offered occasionally)

0522-483  Psychology of Gender
Examines the relevance and applicability of present psychological theory and research to the understanding of the development and behavior of women. Major topics covered include psychological and biological sex differences, psychological theories of women's development, the relationship between female personality development and various sociocultural factors, women's place in society, women and their bodies, and women and mental health. Part of the women and gender studies concentration and minor. May also be taken as an elective. Cross-listed with psychology, 0514-480. Class 4, Credit 4 (offered occasionally)

0522-484  Auto/Biography
According to poet James Merrill, we live in the age of “me-moir,” at least in American culture. But what happens to the quarrel between truth and fiction, to the altogether autonomous “I”, as we move outside of England and America? What “outlaw” forms of language and representation do a street fighter from Morocco, a Soweto social worker or an AIDS diarist use to write the self? How do international sex workers, a New Zealand filmmaker, and the author of “The English Patient” negotiate the charged relationships of family, nation, class, and gender? Expect to encounter visual and biographies from art, photography and film, as well as projects in the classroom and out in the community in this course. Part of the women and gender studies concentration and minor. May also be taken as an elective. (0502-227 or equivalent) Cross-listed with literature, 0504-490. Class 4, Credit 4 (offered occasionally)

0522-492  Native American Women's Experience
This course examines the unique status of Native American women in tribal and Euro-American societies. Given the gender complementary construction of many tribal communities, Native women long enjoyed a status and power not found in Europe, but this equality has been altered in many tribes as a result of colonialism. We will study how Native women have responded to assaults on the "feminine principle, " as Paula Gunn Allen terms it, and how they have sought to rebuild tribal communities along the lines of traditional values. We will examine the following themes in native women's lives: tribal gender roles, nation, community, family, class, work, race, sexuality, disability, culture-bearing, environment, land, health and representation. Part of the women and gender studies concentration and minor. May also be taken as an elective. (0502-227 or equivalent) Cross-listed with literature, 0504-492. Class 4, Credit 4 (offered annually)
American Studies 0523-400 American Studies
American Studies invites students to make connections. It is a crossroads space where students encounter American culture and history from multiple perspectives. It offers a glimpse into a big picture of America through literary, historical, and cultural “snapshots” of American life. What did it mean, for example, to be an American in 1953 and how is it different from today? How are the ideals of America as the land of liberty and freedom perceived at home and in the world? How do national politics shape literary formations? We begin by investigating key words and selective foundational texts. Through literature, film, photographs, and other forms of cultural expression, we explore questions about democratic culture. Part of the literary and cultural studies concentration and minor; honors literature (0504-325); and a general education elective. Class 4, Credit 4 (offered regularly)

International Studies 0524-210 Introduction to International Studies
This lower division course is one of five obligatory courses constituting the third or core requirement of the proposed international studies degree program. It is expected that students will enroll in this course either in their first or in their second year of study. The purpose of this course is to provide an interdisciplinary introduction to international studies by exposing students to current thinking on national and transnational civil society. Class 4, Credit 4 (offered occasionally)

0524-501 Capstone Seminar in International Studies
This upper division course constitutes the fifth and final requirement of the international studies degree program. It is expected that students will enroll in this course at some point in their final year of study. This course will further develop and sharpen the student’s understanding of international ideas and institutions. As well, the course will use a problem-solving focus to provide a detailed analysis of one or more contemporary issues in the field of international studies. (Introduction to IS and permission of instructor) Required course in the IS degree program. May be taken as a professional elective within any Liberal Arts degree program. Class 4, Credit 4 (offered twice annually)

0525-390 Beginning American Sign Language I
This is the first in a three-course sequence at the beginning level. The sequence provides students without prior knowledge of the language with a sound basis for learning ASL as it is used today among deaf people in North America. The goal of the sequence is beginning proficiency in communication skill with an emphasis on comprehension of the visual language. Students become acquainted with linguistic structure of the language. (Students must take the placement test if you have prior study of the language.) Class 4, Credit 4 (offered regularly)

0525-391 Beginning American Sign Language II
This is the second in a three-course sequence at the beginning level. This course continues with the introduction of ASL as it is used today among deaf people in North America with the goal of developing beginning expressive and comprehensive proficiency. Students become further acquainted with contemporary culture and life of the deaf community in the United States. Students also continue to study the linguistic structure of the language. Part of the ASL language/culture concentration; the deaf cultural studies concentration and minor; and may also be taken as an elective. (0525-390 or equivalent; students must take the placement test if you have prior study of the language.) Class 4, Credit 4 (offered regularly)

0525-392 Beginning American Sign Language III
This is the third in a three-course sequence at the beginning level. This course continues with the study of ASL as it is used today among deaf people in North America with the goal of developing further expressive and comprehensive proficiency. Students become further acquainted with contemporary culture and life of the deaf community in the United States. Students also continue to study the linguistic structure of the language. Part of the ASL language/culture concentration; the deaf cultural studies concentration and minor; and may be taken as an elective. (0525-391 or equivalent; students must take the placement test if you have prior study of the language.) Class 4, Credit 4 (offered regularly)

0525-400 Beginning Arabic I
Beginning Arabic I introduces students with no prior knowledge of the language both to Gulf area Arabic and to modern standard Arabic. Beginning Arabic I builds the foundation skills in speaking, listening, reading, writing, and culture, including intensive work on learning the writing system. Topics include the alphabet, greetings, dialects, forms of address, coffee, numbers, handwriting styles, calligraphy, masculine and feminine, definite article, Nisba adjective, questions, names, pronouns, plural, and non-verbal sentences. Beginning Arabic I is a prerequisite for the Arabic language/culture concentration and minors. It may also be taken as an elective or for arts of expression credit. Part of the international studies program, Middle East track. (Students must take the placement test if you have prior study of the language.) Class 4, Credit 4 (F)

0525-401 Beginning Arabic II
Beginning Arabic II focuses on the development of functional competence in speaking, listening, reading, writing, and culture. Topics include non-human plural agreement, telling time, object pronouns, verb chart review, quantifiers, subjective, future, future negation, subject-verb agreement, definite and indefinite, reading and culture. Part of the Arabic language/culture concentration and minor; and may also be taken as an elective. Part of the international studies program, Middle East track. (0525-400 or equivalent; students must take the placement test if this is your first RIT Arabic class.) Class 4, Credit 4 (W)

0525-402 Beginning Arabic III
Beginning Arabic III works on further development of functional skills in speaking, listening, reading, writing, and culture. Topics include non-human plural agreement, telling time, object pronouns, verb chart review, quantifiers, subjective, future, future negation, subject-verb agreement, definite and indefinite, reading and culture. Part of the Arabic language/culture concentration and minor; and may also be taken as an elective. Part of the international studies program, Middle East track. (0525-401 or equivalent; students must take the placement test if this is your first RIT Arabic class.) Class 4, Credit 4 (S)

0525-403 Intermediate Arabic I
Intermediate Arabic I continues at the intermediate level the development of functional skills in speaking, listening, reading, writing, and culture. Topics include the comparative, case markings, colors, reading dates, grammar, reading, writing, listening, culture. Part of the Arabic language/culture concentration and minor; and may also be taken as an elective. Part of the international studies program, Middle East track. (0525-402 or equivalent; students must take the placement test if this is their first RIT Arabic class.) Class 4, Credit 4 (F)

0525-404 Intermediate Arabic II
Intermediate Arabic II continues more intermediate level work in all skills, including conversation, with increased work in reading and writing. Topics include Ibn-Batota: The longest trip in history, history of Islam, verbs, time, festivals and celebrations, Ramadan, verbal nouns, Christian holidays, Arab journalism, modern Arab history, actions with unknown subjects. Part of the Arabic language/culture concentration and minor; and may also be taken as an elective. Part of the international studies program, Middle East track. (0525-403 or equivalent; students must take the placement test if this is their first RIT Arabic class.) Class 4, Credit 4 (W)

0525-405 Intermediate Arabic III
Intermediate Arabic III does advanced-intermediate work in all skills, including conversation, with increased work in reading and writing. Topics include university tasks, Arabic literature and philosophy, place names, words that don’t conjugate, broken plurals, history of the Arab Peninsula, literature, artificial addition, superlatives, patron of Falla, discrimination, languages of “dhad”, Arabic women’s movements, political and social images, sign names, relative plural religion and citizenship, non-complete noun, famous people. Part of the Arabic language/culture concentration and minor; and may also be taken as an elective. Part of the international studies program, Middle East track. (0525-404 or equivalent; students must take the placement test if this is their first RIT Arabic class.) Class 4, Credit 4 (S)

0525-406 Advanced Arabic I
This course is the first of the advanced (third year) work in all skills (speaking, listening, reading, writing, culture) including conversation, with increased work in reading and writing. Topics include grammar, vocabulary; readings in political, social, religious, and literary themes, and study of the continuity of the language throughout its history. Part of the Arabic concentration and minor and may be taken as an elective. Part of the international studies program, Middle East track. (0525-405 or equivalent; students must take the placement test if this is their first RIT Arabic class.) Class 4, Credit 4 (offered regularly)
0525-407 Advanced Arabic II
This is the second course of the advanced (third year) sequence. It continues study in the advanced year textbook and does advanced work in all skills (speaking, listening, reading, writing, culture) including conversation, with increased work in reading and writing. Topics include grammar and readings in political, social, religious, and literary themes. Part of the Arabic language/culture concentration and minor and may be taken as an elective. Part of the international studies program, Middle East. (0525-406 or equivalent; students must take the placement test if this is their first RIT Arabic class.) Class 4, Credit 4 (offered regularly)

0525-408 Advanced Arabic III
This is the final course of the advanced (third year) sequence. It continues study in the advanced year textbook and does advanced work in all skills (speaking, listening, reading, writing, culture), including conversation, with increased work in reading and writing. Topics include grammar and readings in political, social, religious, and literary themes. Part of the Arabic language/culture concentration and minor, and may be taken as an elective. Part of the international studies program, Middle East track. (0525-407 or equivalent; students must take the placement test if this is their first RIT Arabic class.) Class 4, Credit 4 (offered regularly)

0525-420 Beginning Chinese I
This course is designed for beginners, with no prior study of Chinese. The course introduces students to the sounds, basic sentence structures, and the writing system of Mandarin Chinese. Pinyin, the Romanization (phonetic transliteration) of Mandarin Chinese, is taught and required throughout the course. Students also learn to read and write Chinese characters. Emphasis is on developing listening and speaking skills, as well as building a vocabulary based on the ideographic Chinese characters. Beginning Chinese I is a prerequisite for the Chinese language/culture concentration and minor; and may also be taken as an elective or for Arts of Expression credit. Part of the international studies program, East Asian track. (Students must take the placement test if you have prior study of Mandarin Chinese or already know Hanzi.) Class 4, Credit 4 (offered regularly)

0525-421 Beginning Chinese II
This course follows Beginning Chinese I. Knowledge of Pinyin is required. The focus continues to be on developing listening and speaking skills, with an increasing emphasis on reading and writing in Chinese ideographic characters. Part of the Chinese language/culture concentration and minor; and may also be taken as an elective. Part of the international studies program, East Asian track. (0525-420 or equivalent; students must take the placement test if this is your first RIT Chinese class.) Class 4, Credit 4 (offered regularly)

0525-422 Beginning Chinese III
This course completes first-year level Chinese, continuing work in listening and speaking, and increasing work in reading and writing Chinese characters. Pinyin is also used. By the end of the first year of coursework, students will have studied approximately 700 Chinese characters. Part of the Chinese language/culture concentration and minor; and may also be taken as an elective. Part of the international studies program, East Asian track. (0525-421 or equivalent; students must take the placement test if this is your first RIT Chinese class.) Class 4, Credit 4 (offered regularly)

0525-423 Intermediate Chinese I
This is the first course of a three-course sequence at the intermediate level. Knowledge of the Pinyin system is required for the purpose of pronunciation. Grammar structures learned in the first year will be reviewed with the introduction of more complex ones. This course continues to focus on developing communication skills with an emphasis on reading and writing in ideographic characters and expanding vocabulary. Part of the Chinese language/culture concentration and minor; and may also be taken as an elective. Part of the international studies program, East Asian track. (0525-422 or equivalent; students must take the placement test if this is your first RIT Chinese class.) Class 4, Credit 4 (offered annually)

0525-424 Intermediate Chinese II
This course continues the second-year level study of Chinese. Communication skills are the focus. Special emphasis will be given to expanding vocabulary and reading/writing characters at some length. This course continues Pinyin study for the pronunciation practice and grammar review. Culture study will also be included. Part of the Chinese language/culture concentration and minor; and may also be taken as an elective. Part of the international studies program, East Asian track. (0525-423 or equivalent; students must take the placement test if this is your first RIT Chinese class.) Class 4, Credit 4 (offered annually)

0525-425 Intermediate Chinese III
Following Intermediate Chinese II, this course continues the grammar review, the focus on communication skills, expansion of vocabulary, and more lengthy reading and writing of characters. Pinyin study for pronunciation practice continues. Culture study will also be included. By the end of the second year of coursework, students will have studied 1800 characters. Part of the Chinese language/culture concentration and minor; and may also be taken as an elective. Part of the international studies program, East Asian track. (0525-424 or equivalent; students must take the placement test if this is your first RIT Chinese class.) Class 4, Credit 4 (offered annually)

0525-426 Advanced Chinese I
This is the first course of a three-course sequence at the advanced level. The sequence is designed to further develop competence in the four language skills of listening, speaking, reading, and writing. More complex language forms and functions required for communication in a variety of settings are introduced through text, video, and authentic materials. These materials also form the basis for study of Chinese culture and society. Classroom discussion and writing practice are important parts of the course. Students will use both the traditional and/or simplified forms of Chinese characters in reading and writing, with Pinyin as an aid. Part of the Chinese language/culture concentration and minor; and may also be taken as an elective. Part of the international studies program, East Asian track. (0525-425 or equivalent) Class 4, Credit 4 (offered annually)

0525-427 Advanced Chinese II
This is the second course of a three-course sequence at the advanced level. The sequence is designed to further develop competence in the four language skills of listening, speaking, reading, and writing. More complex language forms and functions required for communication in a variety of settings are introduced through text, video, and authentic materials. These materials also form the basis for study of Chinese culture and society. Classroom discussion and writing practice are important parts of the course. Students will use both the traditional and/or simplified forms of Chinese characters in reading and writing, with Pinyin as an aid. Part of the Chinese language/culture concentration and minor; and may also be taken as an elective. Part of the international studies program, East Asian track. (0525-426 or equivalent) Class 4, Credit 4 (offered annually)

0525-428 Advanced Chinese III
This is the third course of a three-course sequence at the advanced level. The sequence is designed to further develop competence in the four language skills of listening, speaking, reading, and writing. More complex language forms and functions required for communication in a variety of settings are introduced through text, video, and authentic materials. These materials also form the basis for study of Chinese culture and society. Classroom discussion and writing practice are important parts of the course. Students will use both the traditional and/or simplified forms of Chinese characters in reading and writing, with Pinyin as an aid. Part of the Chinese language/culture concentration and minor; and may also be taken as an elective. Part of the international studies program, East Asian track. (0525-427 or equivalent) Class 4, Credit 4 (offered annually)

0525-440 Beginning French I
Beginning French I is the first course in a three-course sequence. The sequence provides students without prior knowledge of the language with a sound basis for learning French as it is used today in its spoken and written forms. The goal of the sequence is proficiency in communication skills, with an emphasis on oral proficiency. The sequence also acquaints students with contemporary culture and life in French-speaking countries. The course may be taken as the prerequisite for the French language/culture concentration and minor; and may also be taken as an elective or for arts of expression credit. Part of the International studies program, European/Middle East/African tracks. (Students must take the placement test if this is your first RIT French class and have some prior study of French.) Class 4, Credit 4 (offered regularly)

0525-441 Beginning French II
Beginning French II is the second course in a three-course sequence. The sequence provides students without prior knowledge of the language with a sound basis for learning French as it is used today in its spoken and written forms. The goal of the sequence is proficiency in communication skills with an emphasis on oral proficiency. Students study contemporary culture and life in French speaking countries. Part of the French language/culture concentration and minor; and may also be taken as an elective. Part of the international studies program, European/Middle East/African tracks. (0525-440 or equivalent; students must take the placement test if this is your first RIT French class.) Class 4, Credit 4 (offered regularly)
0525-442  
Beginning French III  
Beginning French III is the third course in a three-course sequence. The course provides students without prior knowledge of the language with a sound basis for learning French as it is used today in its spoken and written forms. The goal of the sequence is proficiency in communication skills with an emphasis on oral proficiency. Students also study contemporary life and culture in French-speaking countries. Part of the French language/culture concentration and minor; and may also be taken as an elective. Part of the international studies program, European/Middle East/African tracks. (0525-441 or equivalent; students must take the placement test if this is your first RIT French class.) Class 4, Credit 4 (offered regularly)

0525-443  
Intermediate French I  
Intermediate French I is the first course of a three-course sequence at the intermediate level. This sequence provides students with the tools necessary to increase their ability to function in French. Communicative activities, contemporary texts, vocabulary study, and grammar are used to expand all communication skills, especially oral proficiency. Part of the French language/culture concentration and minor; and may also be taken as an elective. Part of the international studies program, European/Middle East/African tracks. (0525-443 or equivalent; students must take the placement test if this is your first RIT French class.) Class 4, Credit 4 (offered annually)

0525-444  
Intermediate French II  
Intermediate French II is the second course of a three-course sequence at the intermediate level. This sequence provides students with the tools necessary to increase their ability to function in French. Communicative activities, contemporary texts, vocabulary study, and grammar are used to expand all communication skills, especially oral proficiency. Part of the French language/culture concentration and minor; and may also be taken as an elective. Part of the international studies program, European/Middle East/African tracks. (0525-444 or equivalent; students must take the placement test if this is your first RIT French class.) Class 4, Credit 4 (offered annually)

0525-445  
Intermediate French III  
Intermediate French III is the final course of a three-course sequence at the intermediate level. This sequence provides students with the tools necessary to increase their ability to function in French. Communicative activities, contemporary texts, vocabulary study, and grammar are used to expand all communication skills, especially oral proficiency. Part of the French language/culture concentration and minor; and may also be taken as an elective. Part of the international studies program, European/Middle East/African tracks. (0525-444 or equivalent; students must take the placement test if this is your first RIT French class.) Class 4, Credit 4 (offered annually)

0525-446  
Advanced French I  
This is the first course of a three-course sequence at the advanced level. This course emphasizes active spoken language use. Other skills will also be used, such as reading, writing, and listening but primarily as help for developing conversational ability. Attention will also be given to grammatical accuracy in conversation. By the end of this course, with consistent effort and attendance, the student should be able to communicate about topics routinely encountered in Francophone cultures. Part of the French language/culture concentration and minor; and may also be taken as an elective. Part of the international studies program, European/Middle East/African tracks. (0525-445 or equivalent; students must take the placement test if this is your first RIT French class.) Class 4, Credit 4 (offered annually)

0525-447  
Advanced French II  
This is the second course of a three-course sequence at the advanced level. This course emphasizes active spoken language used. Other skills will also be used, such as reading, writing and listening, but primarily as an aid for developing conversational ability. Attention will also be given to grammatical accuracy in conversation. By the end of this course, with consistent effort and attendance, the student should be able to communicate about topics routinely encountered in Francophone cultures. Part of the French language/culture concentration and minor; and may also be taken as an elective. Part of the international studies program, European/Middle East/African tracks. (0525-446 or equivalent; students must take the placement test if this is your first RIT French class.) Class 4, Credit 4 (offered annually)

0525-448  
Advanced French III  
This is the third course of a three-course sequence at the advanced level. This course emphasizes active spoken language use. Other skills will also be used such as reading, writing and listening, but primarily as help for developing conversational ability. Attention will also be given to grammatical accuracy in conversation. By the end of this course with consistent effort and attendance, the student should be able to communicate about topics routinely encountered in Francophone cultures. Part of the French language/culture concentration and minor; and may also be taken as an elective. Part of the international studies program, European/Middle East/African tracks. (0525-447 or equivalent; students must take the placement test if this is your first RIT French class.) Class 4, Credit 4 (offered annually)

0525-458  
French Films and Hollywood  
A comparative study of French films and their American remakes from the 1930’s to the 21st century to determine what these films reveal about the cultural and cinematic contexts from which they emerge. Devotes particular attention to the (re)construction of race, space, gender, and national histories. Conducted in English. Part of the French concentration and minor and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0525-459  
Special Topic: French Foreign Language  
Study of a topic or area in one of the foreign languages or cultures not normally offered in any other concentration or minor course. May be part of a French foreign language/culture concentration and minor; and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0525-460  
Beginning German I  
Beginning German I is the first course in a three-course sequence at the beginning level. The course provides students without prior exposure to the language with a sound basis for learning German as it is used today in its spoken and written forms. The goal of the sequence is proficiency in communication skills, with an emphasis on oral proficiency. The sequence also acquaints students with contemporary culture and life in the German-speaking countries. This course may be taken as the prerequisite for the German language/culture concentration and minors and may also be taken as an elective or for arts of expansion credit. Part of the international studies program, European track. (Students must take the placement test if this is their first RIT German class and have some prior study of German.) Class 4, Credit 4 (offered regularly)

0525-461  
Beginning German II  
Beginning German II is the second course in a three-course sequence at the beginning level. The sequence provides students without prior exposure to the language with a sound basis for learning German as it is used today in its spoken and written forms. The goal of the sequence is proficiency in communication skills with an emphasis on oral proficiency. The sequence also acquaints students with contemporary culture and life in the German-speaking countries. Part of the German language/culture concentration and minors and may also be taken as an elective. Part of the international studies program, European track. (0525-460 or equivalent; students must take the placement test if this is their first RIT German class.) Class 4, Credit 4 (offered regularly)

0525-462  
Beginning German III  
Beginning German III is the third course in a three-course sequence at the beginning level. The sequence provides students without prior exposure to the language with a sound basis for learning German as it is used today in its spoken and written forms. The goal of the sequence is proficiency in communication skills with an emphasis on oral proficiency. The sequence also acquaints students with contemporary culture and life in the German-speaking countries. Part of the German language/culture concentration and minors and may also be taken as an elective. Part of the international studies program, European track. (0525-461 or equivalent; students must take the placement test if this is their first RIT German class.) Class 4, Credit 4 (offered regularly)

0525-458  
Advanced French III  
This is the third course of a three-course sequence at the advanced level. This course emphasizes active spoken language use. Other skills will also be used such as reading, writing and listening, but primarily as help for developing conversational ability. Attention will also be given to grammatical accuracy in conversation. By the end of this course with consistent effort and attendance, the student should be able to communicate about topics routinely encountered in Francophone cultures. Part of the French language/culture concentration and minor; and may also be taken as an elective. Part of the international studies program, European/Middle East/African tracks. (0525-447 or equivalent; students must take the placement test if this is your first RIT French class.) Class 4, Credit 4 (offered annually)

0525-459  
Special Topic: French Foreign Language  
Study of a topic or area in one of the foreign languages or cultures not normally offered in any other concentration or minor course. May be part of a French foreign language/culture concentration and minor; and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0525-460  
Beginning German I  
Beginning German I is the first course in a three-course sequence at the beginning level. The sequence provides students without prior exposure to the language with a sound basis for learning German as it is used today in its spoken and written forms. The goal of the sequence is proficiency in communication skills, with an emphasis on oral proficiency. The sequence also acquaints students with contemporary culture and life in the German-speaking countries. This course may be taken as the prerequisite for the German language/culture concentration and minors and may also be taken as an elective or for arts of expansion credit. Part of the international studies program, European track. (Students must take the placement test if this is their first RIT German class and have some prior study of German.) Class 4, Credit 4 (offered regularly)

0525-461  
Beginning German II  
Beginning German II is the second course in a three-course sequence at the beginning level. The sequence provides students without prior exposure to the language with a sound basis for learning German as it is used today in its spoken and written forms. The goal of the sequence is proficiency in communication skills with an emphasis on oral proficiency. The sequence also acquaints students with contemporary culture and life in the German-speaking countries. Part of the German language/culture concentration and minors and may also be taken as an elective. Part of the international studies program, European track. (0525-460 or equivalent; students must take the placement test if this is their first RIT German class.) Class 4, Credit 4 (offered regularly)

0525-462  
Beginning German III  
Beginning German III is the third course in a three-course sequence at the beginning level. The sequence provides students without prior exposure to the language with a sound basis for learning German as it is used today in its spoken and written forms. The goal of the sequence is proficiency in communication skills with an emphasis on oral proficiency. The sequence also acquaints students with contemporary culture and life in the German-speaking countries. Part of the German language/culture concentration and minors and may also be taken as an elective. Part of the international studies program, European track. (0525-461 or equivalent; students must take the placement test if this is their first RIT German class.) Class 4, Credit 4 (offered regularly)

0525-463  
Intermediate German I  
Intermediate German I is the first course of a three-course sequence at the intermediate level. This sequence provides students with the tools necessary to increase their ability to function in German. Communicative activities, contemporary texts, vocabulary study, and grammar are used to expand all communication skills, especially oral proficiency. A study of contemporary German life and culture is part of the course. Part of the German language/culture concentration and minors and may also be taken as an elective. Part of the international studies program, European track. (0525-462 or equivalent; students must take the placement test if this is their first RIT German class.) Class 4, Credit 4 (offered annually)
Intermediate German II
Intermediate German II is the second course of a three-course sequence at the intermediate level. This sequence provides students with the tools necessary to increase their ability to function in German. Communicative activities, contemporary texts, vocabulary study, and grammar are used to expand all communication skills, especially oral proficiency. A study of contemporary German life and culture is part of the course. Part of the German language/culture concentration and minors and may also be taken as an elective. Part of the international studies program, European track. (0525-463 or equivalent; students must take the placement test if this is their first RIT German class.)
Class 4, Credit 4 (offered annually)

Intermediate German III
Intermediate German III is the third course in a three-course sequence at the intermediate level. This sequence provides students with the tools necessary to increase their ability to function in German. Communicative activities, contemporary texts, vocabulary study, and grammar are used to expand all communication skills, especially oral proficiency. A study of contemporary German life and culture is part of the course. Part of the German language/culture concentration and minors and may also be taken as an elective. Part of the international studies program, European track. (0525-464 or equivalent; students must take the placement test if this is their first RIT German class.)
Class 4, Credit 4 (offered annually)

Advanced German I
This course is the first course of the three-course sequence at the advanced level. It provides advanced students of German with the tools necessary to refine their speaking, writing, reading and listening skills. The course includes a study of advanced grammar. Literary and non-literary texts will be read and analyzed. Part of the German language/culture concentration and minors and may also be taken as an elective. Part of the international studies program, European track. (0525-465 or equivalent; students must take the placement test if this is their first RIT German class.)
Class 4, Credit 4 (offered annually)

Advanced German II
This course is the second course of the three-course sequence at the advanced level. It provides advanced students of German with the tools necessary to refine their speaking, writing, reading and listening skills. The course includes a study of advanced grammar. Literary and non-literary texts will be read and analyzed. Part of the German language/culture concentration and minors and may also be taken as an elective. Part of the international studies program, European track. (0525-466 or equivalent; students must take the placement test if this is their first RIT German class.)
Class 4, Credit 4 (offered annually)

Advanced German III
This course is the last course of the three-course sequence at the advanced level. It provides students of German with the tools necessary to refine their speaking, listening, reading and writing skills. The course includes a study of advanced grammar. Literary and non-literary texts will be read and discussed. A study of the contemporary German-speaking world is included. Part of the German language/culture concentration and minors and may also be taken as an elective. Part of the international studies program, European track. (0525-467 or equivalent; students must take the placement test if this is their first RIT German class.)
Class 4, Credit 4 (offered annually)

Beginning Japanese I
This is the first course in the first-year sequence designed for students with no prior exposure to Japanese. It provides a sound introduction to the language as it is spoken and written today. A strong emphasis is placed on proficiency and the appropriate use of language in the Japanese society. Students continue to learn how to use language in real-life situations for different communication purposes. Approximately 50 Kanji characters are also introduced for written communication. The course is a prerequisite for the KIT/RIT summer program in Kanazawa, Japan. Part of the Japanese language/culture concentration and minors; and may also be taken as an elective. Students must have a good command of Hiragana and Katakana to take this course. Part of the international studies program, East Asian track. (0525-480 or equivalent; students must take the placement test if this is your first RIT Japanese class.) See instructor for placement. Class 4, Credit 4 (offered regularly)

Beginning Japanese II
This is the second course in the first-year sequence. It provides a sound introduction to the language as it is spoken and written today. A strong emphasis is placed on proficiency and the appropriate use of language in the Japanese society. Students continue to learn how to use language in real-life situations for different communication purposes. Approximately 50 Kanji characters are also introduced for written communication. The course is a prerequisite for the KIT/RIT summer program in Kanazawa, Japan. Part of the Japanese language/culture concentration and minors; and may be taken as an elective. Students must have a good command of Hiragana and Katakana to take this course. Part of the international studies program, East Asian track. (0525-481 or equivalent; students must take the placement test if this is your first RIT Japanese class.) See instructor for placement. Class 4, Credit 4 (offered regularly)

Beginning Japanese III
This is the third course in the first-year sequence. It provides a sound introduction to the language as it is spoken and written today. A strong emphasis is placed on proficiency and the appropriate use of language in the Japanese society. Students continue to learn how to use language in real-life situations for different communication purposes. Approximately 60 new Kanji are introduced. Students learn approximately 60 Kanji in this course. Students must have a good command of Hiragana and Katakana and some basic Kanji to take this course. The course is a prerequisite for the KIT/RIT summer program in Kanazawa, Japan. Part of the Japanese language/culture concentration and minors; and may also be taken as an elective. Part of the international studies program, East Asian track. (0525-482 or equivalent; students must take the placement test if this is your first RIT Japanese class.) See instructor for placement. Class 4, Credit 4 (offered regularly)

Intermediate Japanese I
This is the first course in the second-year sequence designed to give students more advanced instruction and practice in the skills of speaking, reading, writing, and comprehending contemporary Japanese. A strong emphasis is placed on proficiency through reading, writing, and speaking activities. Students learn cultural information and practice using the language in real-life situations in Japanese society. Approximately 90 new Kanji are introduced. The course is a prerequisite for the KIT/RIT summer program in Kanazawa, Japan. Part of the Japanese language/culture concentration and minors; and may also be taken as an elective. Part of the international studies program, East Asian track. (0525-483 or equivalent; students must take the placement test if this is your first RIT Japanese class.) See instructor for placement. Class 4, Credit 4 (offered twice annually)

Intermediate Japanese II
This is the first course in the second-year sequence designed to give students more advanced instruction and practice in the skills of speaking, reading, writing, and comprehending contemporary Japanese. A strong emphasis is placed on proficiency through reading, writing, and speaking activities. Students learn cultural information and practice using the language in real-life situations in Japanese society. Approximately 90 new Kanji are introduced. Part of the Japanese language/culture concentration and minors; and may also be taken as an elective. Part of the international studies program, East Asian track. (0525-484 or equivalent; students must take the placement test if this is your first RIT Japanese class.) See instructor for placement. Class 4, Credit 4 (offered twice annually)

Advanced Japanese I
This course provides advanced students of Japanese with training in all four language skills. Students will practice oral communication with a high degree of proficiency in various social settings. They will improve communicative skills with discussions and debates. Students will also receive training in reading semi-authentic materials with the help of a dictionary and in writing for a specific purpose, such as news reports and critical essays. Part of the Japanese language/culture concentration and minors; and may also be taken as an elective. Class 4, Credit 4 (offered annually).

Advanced Japanese II
This course provides advanced students of Japanese with training in all four language skills. Continuing Advanced Japanese I students will practice oral communication with a high degree of proficiency in various social settings. They will improve communicative skills with discussions and debates. Students will also receive training in reading semi-authentic materials with the help of a dictionary and in writing for a specific purpose, such as news reports and critical essays. Part of the Japanese language/culture concentration and minors; and may be taken as an elective. Part of the international studies program, East Asian track. See instructor for placement. (0525-486 or equivalent; students must take the placement exam if this is your first RIT Japanese class.) Class 4, Credit 4 (offered annually).

Advanced Japanese III
This course provides advanced students of Japanese with training in all four language skills. Students will practice oral communication with a high degree of proficiency in various social settings. They will improve communicative skills with discussions and debate. They will also receive training in reading semi-authentic and authentic materials with the help of a dictionary, as well as training in writing for a specific purpose, such as news reports and critical essays. Part of the Japanese language/culture concentration and minors; and may also be taken as an elective. Part of the international studies program, East Asian track. See instructor for placement. (0525-475, 0525-487 or equivalent; students must take the placement test if this is your first RIT Japanese class.) Class 4, Credit 4 (offered annually).

Professional Japanese
This course is designed to improve the four skills (i.e., speaking, listening, reading and writing) developed in the elementary/intermediate sequence to master formal interactions in Japanese. The students will learn the formal expressions through conversations as well as selected reading materials. The students will have an opportunity to deepen their knowledge of the structure of Japanese society as well as to practice conversation in Japanese, especially in professional and formal contexts used in business settings. The course will be useful for students who are planning to seek employment in Japanese companies or in companies doing business in Japan. Part of the Japanese language/culture concentration and minors and may also be taken as an elective. (0525-485 or equivalent) Class 4, Credit 4 (offered occasionally).

Structure of the Japanese Language
This course aims to increase the students' understanding of basic characteristics of the Japanese language, which will help their learning of the Japanese language. The topics include the genetic affiliation of the Japanese language, sound system, word formation, syntactic structures, sociocultural factors in language use, and historical development of the writing system. Students will become acquainted with the language from a linguistic perspective and develop analytical skills by solving linguistic problems pertinent to Japanese language. Part of the Japanese language/culture concentration and minor; and may also be taken as an elective. (0525-495 or equivalent) Class 4, Credit 4 (offered annually).

Languages in the Japanese Society
This course aims to introduce students to modern Japanese society, its rich cultural heritage, and the use of Japanese language that reflects the societal norms. It provides students with a fundamental, yet diverse knowledge of Japanese culture and Japanese language use. The course work will include lectures, readings, discussions, and working with multi-media resources. Knowledge of Japanese helpful but not necessary. Part of the Japanese language/culture concentration and minor; and may also be taken as an elective. Class 4, Credit 4 (offered annually).

Special Topic: Japanese Foreign Language
Study of a topic or area in one of the Japanese foreign languages or cultures not normally offered in any other concentration or minor course. May be part of a foreign language/culture concentration and minors; and may be taken as an elective. Class 4, Credit 4 (offered occasionally).
Advanced Italian I
This is the first course of a three-course sequence at the advanced level. This course is designed to further develop proficiency in the four language skills of listening, speaking, reading, and writing. This sequence develops the ability to understand and communicate more freely by expansion of vocabulary and grammar, and by exposure to authentic cultural materials. The course seeks to analyze contemporary Italian culture, politics and economics through its representation in films and the press. Students are required to analyze, form opinions and participate in discussions. Students will pursue a topic of research of their choice and submit a portfolio at the end. Part of the Italian language/culture concentration and minors; and may be taken as an elective. Part of the international studies program, European track. (0525-505 or equivalent; students must take the placement test if this is their first RIT Italian class.) Class 4, Credit 4 (offered annually)

Intermediate Portuguese I
Beginning Portuguese III, in the SILP/WORLD Languages Program, is the third course in the beginning year of Portuguese. This course advances work in the basic skills of speaking, listening, reading, writing and culture, including work on the subjunctive mood. Topics include past tenses, subjunctive, commands, future, impersonal subject, relative pronouns, passive voice, diminutives and augmentatives, work place and professions, orders and instructions, the body, health, medicine, emotions and opinions, goals, travel, directions, denial and uncertainty, states and conditions, environment. Part of the Latino/Latin American concentration and may also be taken as an elective. Part of the international studies program, Latin American/European tracks. (0525-521 or equivalent; students must take the placement test if this is their first RIT Portuguese class.) Class 4, Credit 4 (offered regularly)

Beginning Portuguese I
Beginning Portuguese I, in the SILP/WORLD Languages Program, is the first course in the second year, intermediate-level Portuguese. This course advances work in the basic skills of speaking, listening, reading, writing and culture, including work on the subjunctive mood. (0525-545 or equivalent; students must take the placement test if this is their first RIT Russian class.) Class 4, Credit 4 (offered regularly)

0525-547 Advanced Russian II
This is the second advanced level course in Russian, in the SILP/WORLD Languages Program in a three-course sequence at the advanced level in Russian. The course will help to further develop proficiency at the advanced level in all skills of the language. Students will increase their ability to communicate and to understand the language and culture of Russian-speaking countries through intensive study of grammar and vocabulary, reading selected literature and nonfiction prose, and discussion of culture. Topics include contemporary Russian life, literature, art, newspapers, journals, social customs. Part of the Russian language/culture concentration and minors and may also be taken as an elective. Part of the international studies program, European track. (0525-546 or equivalent; students must take the placement test if this is their first RIT Russian class.) Class 4, Credit 4 (offered regularly)

0525-548 Advanced Russian III
This is the third advanced level course in Russian in the SILP/WORLD Languages Program. The course will help to further develop proficiency at the advance level in all skills of the language. Students will increase their ability to communicate and to understand the language and culture of Russian-speaking countries through intensive study of grammar and vocabulary, reading of literature and nonfiction prose, and discussion of culture. Topics include contemporary Russian life, literature, art, newspapers, journals, social customs, business customs, cross-cultural communication, grammar. Part of the Russian language/culture concentration and minors and may also be taken as an elective. Part of the international studies program, European track. (0525-547 or equivalent; students must take the placement test if this is their first RIT Russian class.) Class 4, Credit 4 (offered regularly)

0525-560 Beginning Spanish I
Beginning Spanish I is the first course in a three-course sequence. This sequence of courses provides students with a basic foundation in all skills in Spanish through intensive practice in a variety of media. Course I is for true beginners, and it (or an equivalent proficiency) is a prerequisite for courses II and III. Topics include autobiographical information, greetings, introductions, social expressions, description, family and friends, classroom objects and expressions, numbers, colors, telling time, weather, calendar, ownership, nationality. This course may be taken as the prerequisite for the Spanish language/culture concentration and minors; and may be taken as an elective or for arts of expression credit. Part of the international studies program, Latin American/European tracks. (Students must take the placement test if you have prior study of the language.) Class 4, Credit 4 (offered regularly)
0525-561 **Beginning Spanish II**
This is the second course in the Beginning Spanish sequence continuing through the basic language structures, vocabulary, situations, and emphasis on past tenses. Part of the Latino/Latin American concentration; the Spanish language/culture concentration and minors; and may also be taken as an elective. Topics include food, meals, restaurant, market, clothing, shopping, comparisons, holidays, vacation, travel, hotel, directions, parties, celebrations, relationships, object pronouns, commands, requests, information about various countries. Part of the international studies program, Latin American/European tracks. (0525-560 or equivalent; students must take the placement test if this is their first RIT Spanish class.) *Class 4, Credit 4 (offered regularly)*

0525-562 **Beginning Spanish III**
This is the third course in the Beginning Spanish sequence continuing through the basic structures, vocabulary and situations, and expanding practice in all skills. Emphasis on the subjunctive mood. Topics include subjunctive, future, conditional, if-clauses, work-related situations, rural vs. urban, environment, information on various countries. Part of the Latino/Latin American concentration; the Spanish language/culture concentration and minors; and may also be taken as an elective. Part of the international studies program, Latin American/European tracks. (0525-561 or equivalent; students must take the placement test if this is their first RIT Spanish class.) *Class 4, Credit 4 (offered regularly)*

0525-563 **Intermediate Spanish I**
This is the first course in the Intermediate Spanish sequence. Emphasis is on grammar review, survival situation dialogues, and culture, expanding practice in all skills, including information on various countries. Part of the Latino/Latin American concentration; the Spanish language/culture concentrations and minors; and may also be taken as an elective. Part of the international studies program, Latin American/European tracks. (0525-562 or equivalent; students must take the placement test if this is their first RIT Spanish class.) *Class 4, Credit 4 (F)*

0525-564 **Intermediate Spanish II**
This is the second course in the Intermediate Spanish sequence. Intermediate II emphasizes professional vocabulary in the student’s major field of study, business correspondence (letters and job interview), grammar review and culture of various countries with work in all skills. Part of the Latino/Latin American concentration; the Spanish language/culture concentration and minors; and may also be taken as an elective. Part of the international studies program, Latin American/European tracks. (0525-563 or equivalent; students must take the placement test if this is their first RIT Spanish class.) *Class 4, Credit 4 (W)*

0525-565 **Intermediate Spanish III**
This is the third of the intermediate Spanish courses emphasizing conversation, composition and culture with intensive grammar review. Topics include culture of various countries, advanced-level tourist situation dialogues, literary selections, and cross-cultural communication problems. Part of the Latino/Latin American concentration; the Spanish language/culture concentration and minors; and may also be taken as an elective. Part of the international studies program, Latin American/European tracks. (0525-564 or equivalent; students must take the placement test if this is their first RIT Spanish class.) *Class 4, Credit 4 (S)*

0525-566 **Advanced Spanish I**
This advanced Spanish course aims to develop and refine students’ listening, reading, speaking, and writing skills within a distinctive Hispanic cultural framework, which will include literary texts and visual materials. Part of the Latino/Latin American concentration; the Spanish language/culture concentration and minors; and may also be taken as an elective. Students must take the placement test if this is your first RIT Spanish class. *Class 4, Credit 4 (offered annually)*

0525-567 **Advanced Spanish II**
This is the second third-year course for advanced students of Spanish See instructor for placement in appropriate course. Part of the Latino/Latin America concentration; the Spanish language/culture concentration and minors; and may also be taken as an elective. Students must take the placement test if this is their first RIT Spanish class. Part of the international studies Latin American/European tracks. Advanced Spanish I, II, III may be taken in any order. (0525-566 or equivalent) *Class 4, Credit 4 (offered annually)*

0525-568 **Advanced Spanish III**
This advanced Spanish course aims to develop and refine students’ listening, reading, speaking, and writing skills within a distinctive Hispanic cultural framework, which will include literary texts and visual materials. Part of the Latino/Latin American concentration; the Spanish language/culture concentration and minors; and may also be taken as an elective. Part of the international studies program, Latin American/European tracks. Advanced Spanish I, II, and III may be taken in any order. (0525-567 or equivalent; students must take the placement test if this is your first RIT Spanish class.) *Class 4, Credit 4 (offered annually)*

0525-578 **Women in Hispanic World**
This course explores the contributions to history, literature, art, and politics by a number of prominent Hispanic women. We will look at writings and visual art by these women, read critical essays about their work, and view films inspired by their lives. The critical approach that will inform this course is feminist thought. Part of the Spanish language/culture concentration and minor and the Latino/Latina American concentration. It may also be taken as an elective. *Class 4, Credit 4 (F)*

0525-579 **Special Topic: Spanish Culture**
Study of a topic or area in one of the Spanish foreign languages or cultures not normally offered in any other concentration or minor course. May be part of Spanish language/culture concentration and minors; the Latino/Latin America concentration; and may be taken as an elective. (0525-565) *Class 4, Credit 4 (offered occasionally)*

0525-580 **Spanish for Technology**
This course is intended for students with an intermediate level of Spanish who want to develop a specialized knowledge of technical language. The contents of the course include areas such as computing, video and photography, automotive, construction, and energy production. The technical areas will be complemented by cultural content such as technical universities, licensing/accreditation systems, technology-related professions, current trends in technology development, and important technological infrastructure in Spanish interaction between class participants will be done both in face-to-face and computer-mediated formats. Part of the Spanish language/culture concentration and minor and may also be taken as an elective. (0525-565 or equivalent) *Class 4, Credit 4 (offered occasionally)*

0525-595 **American Sign Language Literature**
In this course, students will explore a wide range of literary works representing the various genres of ASL literature. Students will be expected to analyze works in terms of literary conventions/techniques as well as relevant cultural symbols and themes. Attention will be given to historical context, deaf cultural values, and the style/conventions used by individual literary artists. Each student will be required to complete literary analysis papers. In addition, students will be expected to create original ASL literary works and/or retell well-known ASL literary works as individuals or in collaboration with other students. This course is conducted in ASL and will require considerable reading and viewing of videotaped materials. This course is part of the ASL concentration; the deaf studies concentration and minor. (Fluency in ASL or approval of instructor) *Class 4, Credit 4 (offered annually)*

0525-596 **Special Topics: Deaf Cultural Studies**
Part of the deaf cultural studies concentration and minor; and may be taken as an elective.

**Urban and Community Studies**
**0526-440** **Quantitative Methods**
The research conducted by sociologists and anthropologists generates large, complex data sets that are difficult to interpret subjectively. Multivariate quantitative methods are an important tool for the interpretation of the data. This course presents a variety of quantitative methods for the analysis of large population data set in the context of sociological and anthropological reach. Topics include: research design, collecting and coding data, screening data, data display, non-parametric, comparing groups, exploratory data analysis, and classification and grouping. The course features laboratory exercises in which the methodologies are applied to actual data sets and an individual final project in which the student selects a research problem and data set which they analyze and present to the class. (Data analysis I and II) *Class 4, Credit 4 (offered annually)*
GIS Applications in UCS
This course will examine GIS applications in urban and community studies such as spatial analysis at individual and household levels, spatial analysis of ethnic neighborhoods with census data, as well as spatial perspectives and analytical frameworks in urban research and the role of spatial analysis in demographic research. This course includes an introduction to GIS technology where in-class lab projects are designed to teach the student to assess spatial and temporal data in solving urban and community planning problems. (Data analysis I and II and cultural anthropology or foundations of sociology) Class 4, Credit 4 (offered annually)

Social Order of the City
Social order of the city studies the major constituents of urban social organization, such as city governance bodies, business communities, community organizations, and organized labor, and how these parts interact to define and make the major decisions cities face. These decisions concern such issues as land use, city budget, urban-suburban relations, and quality of city life. The social organization of the city is also understood within the wider state, national and global contexts. This course may be used as an elective for the Urban and Community studies degree program; part of the sociology concentration; as a general education elective or as a free elective. (0510-210, 0515-210 or equivalent) Cross-listed with public policy, 0521-449, 749. Class 4, Credit 4 (offered annually)

People, Politics and Planning
The city of Rochester will serve as a laboratory for perspectives and insights in the sociology and the anthropology of urban and community studies. Students will observe and assess the workings of the city's social order within various historical and social contexts. The course will examine the industrial transformation of this city, the diversity of its major population groups and dynamics of these groups’ interrelations, and the city’s past and present process of policy formation. This course may be used as an elective for the urban and community studies degree program; part of the sociology concentration; as a general education elective; or as a free elective. (0515-210, 0510-210 or equivalent) Cross-listed with public policy, 0521-449, 749. Class 4, Credit 4 (offered annually)

City and Countryside
Cities cannot exist in isolation but depend upon rural areas for food, natural resources, labor, housing, and recreation. Drawing upon examples from the U.S. and the developing world, this course examines the mutual dependencies and flows between city and countryside and the social and cultural consequences of these interactions. The course considers the implications for rural-urban dynamics of specific trends such as: the mechanization of agriculture, export oriented agriculture, offshore manufacturing, free trade agreements, circular migration, tourism, immigration policy, and international labor migration. This course may be used as an elective in the urban and community studies degree program; as part of the sociology concentration; and as a free elective. (0510-210, 0515-210 or equivalent) Cross-listed with public policy, 0521-449, 749. Class 4, Credit 4 (offered annually)

Urban Planning and Policy
This course analyzes social and spatial characteristics of cities and considers reasons for urban development, ecological factors, types and network of settlements, and urbanism as a way of life. It also examines the issues of neighborhoods, suburbia “ghetto” enclaves, metropolitan regions, urban social and political structures, planning and urban policy. Professional elective for the urban and community studies program and may be taken as an institute elective. Cross-listed with sociology, 0515-413. Class 4, Credit 4 (offered occasionally)

Senior Thesis in Urban and Community Studies
The senior thesis is the final requirement in the urban and community studies degree program. Students will conduct and present research on a selected major issue in the field of urban and community studies. The course will provide students the opportunity to develop skills of expressing their research in written and oral forms. The completed written thesis will be presented to the department faculty and then orally defended before a committee of three faculty members. This is a required course for seniors in the urban and community studies degree program. It may be taken by students in any liberal arts degree program with interest in urban and community studies and who satisfy the prerequisites. (0515-442, 0515-406 and 0526-440) Class 4, Credit 4 (offered biannually)

Material Cultural Studies
GIS Applications: Urban and Community Studies
This course will examine GIS applications in urban and community studies such as spatial analysis at individual and household levels, spatial analysis of ethnic neighborhoods with census data, as well as spatial perspectives and analytical frameworks in urban research and the role of spatial analysis in demographic research. This course includes an introduction to GIS technology where in-class lab projects are designed to teach the student to assess spatial and temporal data in solving urban and community planning problems. (Data analysis I and II and either cultural anthropology or foundations of sociology) Part of the material culture science concentration and may be taken as an elective. Cross-listed with urban and community studies, 0526-441. (Data analysis I and II and either cultural anthropology or foundations of sociology) Class 4, Credit 4 (offered annually)

Economics of Native America
This course will explore current and historic economic issues faced by Native Americans. It will also examine policies enacted by and directed toward Native America with a focus on their economic implications. This will be done via the use of standard economic models of the labor market, poverty, trade, development, and gambling. Part of the Native American science and technology concentration. (0511-210 or equivalent) Class 4, Credit 4 (offered annually)

Native American Repatriation
NAR addresses issues surrounding cultural objects, contested ownerships, repatriation, reparations, legal compliance, museum technologies and the ever-changing role of repositories. This course facilitates experiential learning including work with the Rochester Museum and Science Center. Lectures, round-table discussions, and instruction are provided by museum professionals, nationally renowned speakers, and Native American representatives. Students will comprehend the breadth of federal legislation regulating human remains and objects of culture patrimony, the complex legal and social issues facing museums and communities, and the opportunities that exist as NAGPRA enters into its third decade since ratification in 1990. Part of the Native American science and the material cultural science concentrations and may be taken as an elective. Class 4, Credit 4 (offered annually)

Survey of Metallurgy
This course introduces students to the anthropological study of metallurgy. The course begins with the survey of the earliest uses of metals and examines some of the early metallurgical treatises. Using archaeologically-derived and modern data, we will explore ancient and current mining and extraction techniques. We will also explore the meanings of metallurgical processes as presented in ethnographic accounts. Using information and data derived from scientific inquiry, archaeological excavations, and ethnographies, we will examine basic metal refining and working techniques. Students will also learn to interpret phase diagrams and study microstructures of metal samples. Part of the material culture science and archaeology concentrations. May be taken as an elective. Class 4, Credit 4 (offered annually)

Field Methods in Archaeology
This course introduces students to the methods of archaeological field work. The course begins with the student’s development of a research question and design. We then explore the feasibility of this research through the examination of sampling techniques, site survey, and excavation. Field methods of recording, photography and artifact conservation will also be discussed. Students will be able to analyze the usefulness of the field techniques in light of the anthropological scientific methods for dating, and organic and inorganic analyses. Students should emerge from the course understanding the values of the techniques necessary for proper archaeological excavation towards the reconstruction of the past and the development of an understanding of our present. Part of the material cultural science and archaeology concentrations. May be taken as an elective. Class 4, Credit 4 (offered annually)

Native North Americans
The resilience of Native North Americans continues to amaze anthropologists and those who once proclaimed them certain for extinction. What can now be acclaimed as a remarkable revival of dead Indians, these cultures are rich and thriving. They maintain their world views but in a drastically changed and contemporary setting. Many tribes own casinos, hotels, resorts, and other successful businesses. Not only are the values and their heritage alive and well, they are quite successful in reviving the formerly outlawed traditions of the past such as potlatch, medicine lodge, and ghost dance. This course is taught from a Native American perspective and addresses both past and current issues that affect their culture, heritage, and tribal sovereignty. Part of the material culture science concentration. May be taken as an elective. Class 4, Credit 4 (offered annually)
0531-488 Native Americans in Film
From visions of romantic fantasy to imagery of the barbaric and horrific, Native Americans have been misrepresented in film since the invention of motion pictures. Tonito, Pochantos, Hiawatha, and how the west was won—how do you know what is real and what is imagined? This course examines the genre of Native American films and intends to critically analyze stereotypes, false imagery, and how these have infatuated even the most educated of viewers. While anthropologists studied diligently among Native Americans, they too fed Hollywood the embellished images that dominate the big screen. We will identify the roles anthropologists have played in the emergence and correction of these Native American stereotypes. Part of the Native American science and technology concentration. May be taken as an elective. Cross-listed with anthropology, 0510-488. Class 4, Credit 4 (offered annually)

0531-450 Cultural Resource Management
This course will introduce students to the objectives of CRM and historic preservation. The methods of designing research in the CRM/historic preservation context that will make contributions to our knowledge of the past. We will address the myriad considerations modern archaeologist and preservationists confront in their efforts to carry out archaeological research and historic preservation within a complex legal and ethical framework. Part of the archaeology concentration. May be taken as an elective. (0510-210 or 0512 210) Cross-listed with anthropology, 0510-450. Class 4, Credit 4 (offered annually)

0531-484 Islamic Culture/Mid-East
This interdisciplinary course focuses on introducing the fundamentals of the Middle East with an emphasis on Islam to students with little or no prior background in the region or the culture. The framework of Islam is used to explore the significance of how religion constructs and shapes ways of knowing and understanding material and performance culture. The rationale for this course is to help students recognize and interpret fundamental concepts of Islamic cultures, to demonstrate how Islamic culture has shaped technologies used in the Middle East, to encourage students’ independent thinking about topical events concerning Islam and the Middle East, and to inspire students to examine how their own cultures change and adapt. Part of the material culture science concentration; women and gender studies minor; Arabic foreign language concentration and minor. May be taken as an elective. Class 4, Credit 4 (offered annually)

0531-502 Archaeology and the Human Past
Archaeology is the study of the human past, from the origin of our species through the development of modern, industrial states. In studying the past, archaeology seeks to explain how we, as modern humans, came to be. This course discusses how archaeologists study the past and explain how human society has changed over time, and presents an overview of world prehistory; examining key developments in the human past. Specific topics will include the evolution of modern humans, the peopling of the world, the development of agriculture, the rise of states and the development of urban society. Case studies will be used throughout the course. Part of the archaeology concentration. May be used as an elective. Cross-listed with anthropology, 0510-502. Credit 4, Class 4 (offered annually)

0531-506 Great Discoveries in Archaeology
Archaeology conjures a romantic image in the minds of many people and almost everyone is at least familiar with some of the greatest discoveries made by archaeologists. Finds such as King Tut’s tomb, the ancient city of Troy, the jungle cities of the Maya, and Ötzi the Ice Man excite almost anyone who hears of them. But what is it, aside from fabulous wealth, romantic locale, or incredible preservation that makes them great? Although great discoveries are always exciting, archaeology is not only about finding things, but also about using these findings to explain the human past. This course helps us understand how and why human society has changed over time. It explores some of the great discoveries of archaeology, many of which will be familiar to students. Part of the archaeology concentration and may be taken as an elective. Cross-listed with anthropology, 0510-506. Class 4, Credit 4 (offered annually)

0532-507 Archaeological Science
Archaeology is one of the few social sciences that lends itself well to the application of analytical techniques from the physical sciences. This is largely due to the fact that archaeology relies primarily on physical evidence. It covers a number of specific analytical techniques including the age and origin of materials, how things are made; what people ate; their daily activities; their state of health; and how archaeological scientists are able to answer these questions using techniques from biology, chemistry, and physics. The course includes in-class labs in which students apply some of these techniques and a final research project in which the student picks their own archaeological question and methodology to answer it. Part of the material culture science and archaeology concentration and may be taken as an elective. Cross-listed with science, 0508-507. Class 4, Credit 4 (offered annually)

0531-508 Archaeology of Cities
This course will focus on the pre-historical trajectories of urban development, the multiple roles of cities, and their impact on the development of complex societies in different world regions. We will attempt to explain how, in its multiple forms and manifestations, the city has developed and contributed to the constitution of modern, industrial society. The course will consist of lectures, in-class discussions and activities, group presentations, and a final research paper that will be presented to the class. Part of the material culture science and archaeology concentrations. May be taken as an elective. Cross-listed with anthropology, 0510-508. Class 4, Credit 4 (offered annually)

0531-509 Garbage Archaeology
This course introduces students to the study of archaeological methods with a focus on garbage (also known in colloquial speaking s rubbish, waste, and refuse). By studying garbage, we are studying material culture, and by studying material culture, we can study human behaviors in both the present and past. This course’s hands-on component enables students to learn about their immediate environment of Rochester through the collection, sorting, and processing of garbage in their neighborhoods. We also learn and employ the techniques of ethnoarchaeology in order to understand the differences between what people do and what people say they do. Through weekly readings on the role of garbage in other cultures past and present, we will consider how such topics as migration and settlement, disease vectors, ethnicity and identity, and public policy are seen and interpreted. Cross-listed with anthropology, 0510-512. Class 4, Credit 4 (offered annually)

0531-510 Exploring Ancient Technology
While it is a common place to describe the present era as one dominated by technology, humans have been critically dependent on technology for as long as we have existed as a species. Some of today’s key technologies were indeed invented before the dawn of recorded history. We will explore these ancient technologies; how they came to be invented, how they evolved, and how they were integrated into the social and economic life of ancient and modern peoples. Key concepts and themes will be explored in a series of hands-on labs in which students will seek to replicate and understand a variety of ancient technologies. The course concludes with either an individual project or a class project. Part of the archaeology concentration. May be taken as an elective. Cross-listed with anthropology, 0510-485. Class 4, Credit 4 (offered annually)

0531-511 Archaeology Field Methods
This course introduces students to the methods of archaeological field work. The course begins with the student’s development of a research question and design. We then explore the feasibility of this research through the examination of sampling techniques, site survey, and excavation. Field methods of recording, photography and artifact conservation will also be discussed. Students will be able to analyze the usefulness of the field techniques in light of the archaeological scientific methods for dating, and organic and inorganic analyses. Students should understand the values of the techniques necessary for proper archaeological excavation towards the reconstruction of the past and the development of an understanding of our present. Part of the archaeology, material culture science and Native American studies concentrations. May be taken as an elective. Class 4, Credit 4 (offered annually)

Culture Resource Studies
0533-370 Introduction to Museums and Collecting
This course examines the history, theory, ideology, and practice of collecting within the institutional context of the museum. It considers the formation of the modern museum, and focusing on the American context, it investigates various types of museums, ranging from natural history, anthropology, science and technology, history, and art. The course explores the governance and operations of museums in the areas of collections management, collections care, and gallery/museum management. The course also focuses on issues of contemporary concern and examines museums and their practices. The course includes field trips to local museums and collections throughout the quarter. Part of the art history concentration and minor and is a required course for the cultural resource studies program. Cross-listed with fine arts, 0505-421. Class 4, Credit 4 (offered annually)

0533-422 Art Materials/Photography
This is a lecture-studio/lab course on materials and tools, supports and techniques of works of art on paper and other organic art materials. Topics include the application, development and manufacture of artists’ materials: drawings, watercolors, furniture, textiles, prints and photographs. This course includes studio reconstructions of masterworks, lectures, and library research. Part of the art history concentration and minor. May be taken as an elective. Cross-listed with fine arts, 0505-422. Class 4, Credit 4 (offered annually)
0533-423 Art Materials/Panel Painting
This is a lecture-studio/lab course on materials and tools, supports and techniques of inorganic art materials. Topics include the application, development and manufacture of artists' materials: glass, ceramics, sculpture, gilding, pigments, patinas. This course includes studio reconstructions of masterworks, lectures, and library research. Required course for the cultural resource studies program. Part of the art history concentration and minor and may be taken as an elective. Cross-listed with fine arts, 0505-423. Class 4, Credit 4 (offered annually)

0533-424 Legal and Ethical Issues for Collecting Institutions
This course presents an overview of the legal and ethical issues that govern the institutions and personnel involved in collecting cultural resources. Collecting institutions are governed by national, state, and local laws that define how facilities and collections are used. It will consider the evolution of the museum and the law and how the legal system increasingly defined minimum standards for maintaining collections. The facilities in which they are housed, and guaranteeing public access; in addition legal standards for the collection will be studied including definitions of ownership; what this means in terms of intellectual property rights, copyright, reproduction and deaccessioning/disposal. Required course for the GCRS degree program. Part of the art history concentration and minor and may be taken as an elective. Cross-listed with fine arts, 0505-424. Class 4, Credit 4 (offered annually)

0533-425 Display and Exhibition Design
This course examines the history and practice of display and exhibition design. It considers the history of display as found in a variety of private collections and the history of exhibitions with the development of museum-like institutions. It investigates various types of displays and exhibitions, ranging from natural history, anthropology, science and technology, history, and art; and compares these to commercial displays at large international fairs. The course explores the development of a display and exhibition budget in light of budgetary constraints. It considers the professional parameters of display and exhibition design as well as ethical issues related to material. The course includes field trips to local institutions and collections throughout the quarter. Required course for GCRS degree program. Part of the art history concentration and minor and may be taken as an elective. Cross-listed with fine arts, 0505-425. Class 4, Credit 4 (offered annually)

0533-426 Collections Management and Museum Administration
This course presents an overview of the administration and management of museums and their collections. The course examines the governance structure of museums, focusing on personnel responsible for their administration, curation and education, and operations, as well as on the mission statement and policies they determine. The course also details the management of collections, including the development of a collections policy, management of that policy, documentation and record keeping acquisitions, and the creation/management of exhibitions. Finally, the course considers collections care or preventive conservation, looking at both the facility and collections. Throughout the quarter, legal and ethical issues pertaining to museums and their collections will be emphasized. Required course for the GCRS degree program and may be taken as an elective. Cross-listed with fine arts, 0505-426. Class 4, Credit 4 (offered annually)

0533-427 Fund Raising, Grant Writing, and Marketing
This course examines the growing autonomy of collecting institutions as they are cut off from various forms of governmental sponsorship and public subsidy and their subsequent needs for raising money from outside, non-traditional sources. The course looks at issues of needs assessment, budgeting, and strategic planning. It focuses on the design and implementation of effective fundraising campaigns, as well as on the organization and writing of successful grant proposals. It also considers the importance of marketing to overall institutional success. Required course for the GCRS degree program and may be taken as an elective. Cross-listed with fine arts, 0505-427. Class 4, Credit 4 (offered annually)

0533-437 The Forensic Investigation of Art
This course introduces the study and examination of artistic and historic materials within a humanities oriented forum in which students present and defend published research on several famous case studies including: the Shroud of Turin, the Getty Kouroi, and the Han van Meegeren forgeries of Vermeer paintings. Emphasis will be placed on using resources from the interdisciplinary fields of art history, art and materials science supported by a virtual lab in which the application of instrumental techniques to the materials is demonstrated. Required course in the GCRS degree program. Part of the art history concentration and minor and may be taken as an elective. Cross-listed with fine arts, 0505-437. Class 4, Credit 4 (offered annually)

0533-438 Conservation of Cultural Materials
This course examines the philosophies, ethics, art conservation methods and principles of collection management. An overview of deterioration characteristics, and conservation strategies for a variety of materials including: stone, glass, ceramic, wood, paper, new media, metals, textiles, oil paintings and archaeological materials will be presented. Required course for GCGRS degree program. Part of the art history concentration and minor and may be taken as an elective. Cross-listed with fine arts, 0505-438. Class 4, Credit 4 (offered annually)

0533-510 Senior Thesis in Cultural Resource
The senior thesis in cultural resource studies is the final requirement in the degree program. Students will formulate a research question that will entail some physical interaction with objects, they will conduct the appropriate research to address that question, and will present their results in both written and oral formats. The course provides students the opportunity to develop their research and hand skills and to share the results with the department faculty and students. (forensic investigation of art and research methods) Class 4, Credit 4 (offered annually)

Communication

0535-200 Foundations of Communication
Introduces students to the history of human communication from speech to computers. Spoken, written and visual communication in a variety of contexts is surveyed. The course introduces students to the department and its faculty, the discipline of communication and to other communication students. The faculty coordinator acquaints students with research indexes, communication journals, and the academic resources available at the Wallace Library. Required course for professional and technical communication and advertising and public relations majors. Cannot be taken to fulfill liberal arts requirements. Class 4, Credit 4 (offered twice annually)

0535-201 Introduction to Journalism
The course covers the impact/effect of journalism on American society, with an introduction to the history, freedom, technologies, ethics and functions of the news media. Students will learn how to assess news value, develop news judgment and analyze news stories. Required course for journalism majors. Part of the journalism minor; elective for professional and technical communication majors and advertising and public relations majors. Class 4, Credit 4 (F)

0535-311 Rhetorical Theory
Students develop an understanding of public communication as a humanistic study concerned with the formation of judgment and moral-ethical choice. The course focuses on the systematic relationships among the various ways and means human beings use communication to influence action and describe objects and events in the world. The class centers on verbal and nonverbal human symbolic action. Required course for professional and technical communication majors; a professional elective for advertising and public relations majors. Class 4, Credit 4 (offered annually)

0535-315 Quantitative Research Methods
An introduction to the methods and ethics of scientific, scholarly communication research, including methods of locating, analyzing and critiquing communication research literature. This course focuses on social scientific empirical research methods and culminates in the development of a research project proposal suitable for implementation as the senior thesis in communication. Required course for professional and technical communication majors and advertising and public relations majors, and a professional elective for journalism majors. Cannot be taken to fulfill liberal arts requirements. (0535-445 or equivalent) Class 4, Credit 4 (offered twice annually)

0535-316 Qualitative Research Methods
Introduction to the methods and ethics of qualitative research, including participant observation, naturalistic study, and focus group interviewing. Qualitative research methods rely on the researcher's observational, analytic and critical skills, and seek to understand the behaviors, beliefs, values, attitudes, assumptions, rituals and symbol systems that characterize relationships between the source, message, media and audience of specific communication acts. Students develop a research proposal suitable for implementation as the senior thesis in communication. Required course for advertising and public relations majors, and a professional elective for professional technical communication majors and journalism majors. Cannot be taken to fulfill liberal arts requirements. (0535-445 or equivalent) Class 4, Credit 4 (offered annually)
emphasizing both conceptual and practical dimensions. Participants engage in public speaking, small group problem solving and leadership, and professional writing exercises while acquiring theoretical background appropriate to understanding these skills. Restricted to software engineer majors only. Cannot be taken as a liberal arts elective. Class 4, Credit 4 (offered quarterly)

0535-352 Professional Communication for Business
An introduction to professional communication contexts and processes emphasizing both conceptual and practical dimensions. Participants engage in public speaking, small group problem solving and leadership, and professional writing exercises while acquiring theoretical background appropriate to understanding these skills. Restricted to the college of business programs. Cannot be taken as a liberal arts elective. Class 4, Credit 4 (offered quarterly)

0535-403 Effective Technical Communication
This course provides knowledge and practice of written and oral communication skills generally required in technical professions. Focus is on individual and group writing and speaking tasks. Required course for various programs. Cannot be taken to fulfill liberal arts requirements. Class 4, Credit 4 (offered quarterly)

0535-410 Computer-mediated Communication
Readings, discussions, and observations of online behavior introduce students to computer-mediated communication (CMC) terms and theories to further develop their skills. CMC was originally defined as a form of electronic written communication. As networking tools advanced, CMC expanded to include new software developments, such as instant messenger and the internet. Today, the term computer-mediated communication is used to refer to a wide range of technologies that facilitate both human communication and the interactive sharing of information through computer networks. Professional elective for professional and technical communications majors, advertising and public relations majors and journalism majors. Part of the communication minor and may be taken as an elective. Class 4, Credit 4 (offered occasionally)

0535-411 Health Communication
An introduction to the subject of communication in health care delivery and in public health campaigns, with an emphasis on interpersonal, organizational, and mass communication approaches. Also covered is the interrelationship of health communication, health education and behavior change. Professional elective for professional and technical communication majors, advertising and public relations majors and journalism majors. Class 4, Credit 4 (offered twice annually)

0535-412 Communication, Law and Ethics
An examination of the major principles and trends in communication law. The course analyses a broad range of issues related to the First Amendment, intellectual property, and media regulation. Special attention is paid to new communications technologies and to discussing the major ethical perspectives and issues surrounding contemporary communication behavior. Required course for professional and technical communication majors and a professional elective for advertising and public relations majors. May also be taken as an elective. Class 4, Credit 4 (offered annually)

0535-414 Interpersonal Communication
Analysis and situational applications of the major theories of interpersonal communication. The course allows the student to look into, out of and at relationships in regard to communication. The focus is on perception of self and others; language use, nonverbal communication and symbolic interaction in face-to-face situations. Professional elective for professional and technical communication majors and advertising and public relations majors. Part of the communication concentration and minor and may also be taken as an elective. Class 4, Credit 4 (offered annually)
0535-445 Theories of Communication
An introduction to communication theories, including the history of the major stages in the development of modern humanities and social sciences theories of communication. Required course for professional and technical communication majors, advertising and public relations majors and journalism majors. Cannot be taken to fulfill a liberal arts requirement. Class 4, Credit 4 (offered twice annually)

0535-446 Writing the Technical Manual
Continuing from technical writing (0502-444), this course develops skills necessary for researching, planning, designing, writing and editing full-length technical documents such as manuals. Students apply techniques learned in technical writing, for instance physical and process description writing, to put together a complete and detailed piece of technical documentation. Required course for professional and technical communication majors and a professional elective for advertising and public relations majors. Part of the communication minor and may also be taken as an elective. Class 4, Credit 4 (offered annually)

0535-450 Visual Communication
An introduction to the study of visual communication through the use of resources and first-hand experience. Differences between verbal and visual modes of communication are explored. Iconic and symbolic demonstrations of visual images used in a variety of media are stressed. The course includes a number of class and individual visits to museums, galleries and exhibits. The goal of the course is to examine visual messages as intentional communication that seeks to inform, persuade and/or propagate specific target audiences. Required course for professional and technical communication majors and advertising and public relations majors. Part of the communication minor and may also be taken as an elective. Class 4, Credit 4 (offered twice annually)

0535-452 Uses and Effects of the Mass Media
Through the use of theory and scientific research, this course provides an analysis of the media’s “effects” on people and the audience’s “uses and gratifications” of various mass communication forms. The course focuses on building and refining mass communication theory. Professional elective for professional and technical communication majors, advertising and public relations majors and journalism majors. Part of the communication minor and may also be taken as an elective. (0502-448 or equivalent) Class 4, Credit 4 (offered occasionally)

0535-460 Copywriting and Visualization
Students learn the verbal and visual thinking skills utilized in the creation of advertising messages. To create an effective strategy for an advertising campaign, the advertising copywriter/art director team needs to combine linguistic and visual metaphors into a persuasive message. Students develop creative advertising messages by researching and writing a creative brief and then implementing the plan by transforming concepts into actual advertising messages and campaigns. Required course for advertising and public relations majors and a professional elective for professional and technical communication majors and journalism majors. Part of the communication minor and may also be taken as an elective. Class 4, Credit 4 (offered annually)

0535-461 Principles of Advertising
An introduction to the advertising communication process showing how advertising is integrated into the larger discipline of marketing communications. Marketing communications is the integration of internal and external communication systems. It involves coordinating the various promotional mix elements (advertising, sales promotion, publicity and public relations) along with other marketing activities to more effectively communicate with a company’s customers. Required course for advertising and public relations majors and a professional elective for professional and technical communication majors and journalism majors. Part of the communication minor and may also be taken as an elective. Class 4, Credit 4 (offered annually)

0535-462 Digital Design in Communication
An introduction to essential software applications for communication majors, including desktop publishing, image manipulation, presentation graphics and statistical applications. Required course for professional and technical communication majors, advertising and public relations majors and journalism majors. Class 4, Credit 4 (offered twice annually)

0535-463 Campaign Management and Planning
An introduction to managing and planning advertising and public relations campaigns. The course takes a team project approach thereby helping students learn how to work together in class as well as in a competitive agency. Service-learning is used to expose students to community causes. Required course for advertising and public relations majors and a professional elective for professional technical communication majors and journalism majors. Part of the communication minor and may also be taken as an elective. Class 4, Credit 4 (offered annually)

0535-464 Public Relations Writing
An overview of a variety of forms of writing for public relations, including news releases, newsletters, backgrounders, public service announcements, magazine queries, interviews, coverage memos, media alerts, features, trade press releases, and public presentations. Students write for a variety of media including print, broadcast, and the Web. Required course for advertising and public relations majors and journalism majors, and a professional elective for professional and technical communication majors. Part of the communication minor and may also be taken as an elective. Class 4, Credit 4 (offered annually)

0535-465 Rhetoric of Political Campaigns
An overview of the rhetorical dimensions, history and functions of political communication. Students read communication and rhetorical theory that relates to the ways in which the form, content and context of campaign rhetoric invite citizens to conceive of themselves, the candidates, the nation, the government and the political process. Professional elective for professional and technical communication majors and advertising and public relations majors. Part of the communication minor and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0535-467 Media Planning
An introduction to developing, executing and managing media plans for advertising and public relations. This course covers the characteristics and uses of advertising media, media terms and calculations, media strategies and tactics, and media plan development and implementation. Required course for advertising and public relations majors. Professional elective for professional and technical communication majors and journalism majors. (0535-461 or equivalent) Class 4, Credit 4 (offered annually)

0535-470 Law and Ethics of the Press
An introduction to the American legal system and its relationship to journalists and other communication practitioners. The ethical boundaries and applications of law are explored to help students better understand how they influence journalism as an industry and profession. Students will strengthen their understanding of basic legal principles by applying them to existing and emerging issues in mass communication. Required course for journalism majors. Professional elective for professional and technical communication majors and advertising and public relations majors. Part of the communication minor and the journalism minor, and part of the photojournalism minor. Class 4, Credit 4 (offered twice annually)

0535-471 History of Journalism
The history of American journalism from colonial times to the present, including the advance of press freedom under the First Amendment and how it has affected the development of American media. Journalism's relationship to politics, institutions and culture are investigated. Newspaper, magazine and broadcast industries are examined for ideas that have changed American journalism. Required course for journalism majors. Professional elective for professional and technical communication majors and advertising and public relations majors. Part of the communication and the journalism minors. Class 4, Credit 4 (offered annually)

0535-472 News Editing
An introduction to the principles and practices of editing hard news and feature articles, including news judgment, story selection, headline writing, copy editing, and picture editing. The course emphasizes reader interest, readability, clarity, verification and style, as well as legality, ethics and propriety. Required course for journalism majors. Professional elective for professional and technical communication majors and advertising and public relations majors. Part of the journalism minor and may also be taken as an elective. Class 4, Credit 4 (offered twice annually)

0535-474 Reporting in Specialized Fields
An in-depth study, analysis and practicum of a selected advanced and focused subject in professional journalism. Specific subject matter of the course varies according to faculty assigned and is published when the course is offered; students may enroll in this class no more than twice as long as the specific subject matter is different. Examples include education journalism, health journalism, business journalism, reporting public affairs, sports journalism, reporting for alternative media. Required course for journalism majors. Professional elective for professional and technical communication majors and advertising and public relations majors. Part of the journalism minor. Class 4, Credit 4 (offered annually)
0535-475 eJournalism
An introduction to the principles and practices of online news reporting, including writing for mainstream news sites, journalistic blogs (Web logs), share and discussion sites, and other, evolving online news outlets. The course familiarizes students with the tools of the online reporter and explores the cultural and ethical terrain unique to the digital environment. Required course for journalism majors. Professional elective for professional and technical communication majors and advertising and public relations majors. Part of the journalism minor and may also be taken as an elective. Class 4, Credit 4 (offered annually)

0535-476 eJournalism II
Further development of skills learned in eJournalism, with an emphasis on writing and design skills for rich (online) media and an overview of new trends. Course will cover writing, designing and packaging content to attract and inform online news consumers. Required course for journalism majors. Part of the journalism minor and a professional elective for the professional and technical communication majors and advertising and public relations majors. (0535-475 or equivalent) Class 4, Credit 4 (offered annually)

0535-480 Human Communication
An overview of the field of communication, including the contexts of interpersonal, group, mass and public communication. Part of the communication concentration and minor. May also be taken as an elective. Closed to communication majors. Class 4, Credit 4 (offered twice annually)

0535-481 Persuasion
A study of the theories, practices and effects of persuasion. Persuasion is human communication designed to influence another’s attitudes, beliefs, values and actions. Objectives of this course include developing an understanding of how contemporary persuasion continually shapes our society, while seeking to heighten our abilities to detect and analyze persuasive appeals. The course is specifically designed to investigate the prevalence of persuasive communication in various facets of our culture. Required course for professional and technical communication majors and advertising and public relations majors. Part of the communication concentration and minor and may also be taken as an elective. Class 4, Credit 4 (offered quarterly)

0535-482 Mass Communications
An introductory analysis of newspapers, television, radio, magazines and other mass media in the United States. The course focuses on the history, development, economics and law and regulation of the mass media in the U.S., and explores theoretical consideration of contemporary mass communication issues. Required course for professional and technical communication majors and advertising and public relations majors. Part of the communication concentration and minor and may also be taken as an elective. Class 4, Credit 4 (offered quarterly)

0535-483 Small Group Communication
Focuses on the importance of cooperation and understanding as essential prerequisites to effective communication and to becoming adept in the analysis and evaluation of communication in small groups. This class is highly experiential in nature; you should expect to engage in a variety of activities that explore the concepts and topics being studied. Professional elective for professional and technical communication majors and advertising and public relations majors. Part of the communication concentration and minor. May also be taken as an elective. Class 4, Credit 4 (offered twice annually)

0535-484 Rhetoric of Race Relations
Examines the history of the struggle for freedom and equality for Blacks in American society. The course traces the rhetoric of key spokespersons from the pre-Civil War period through the 20th Century as evidenced in texts of selected public speeches and reactions to them. Professional elective for professional and technical communication majors and advertising and public relations majors. Part of the minority relations concentration and the communication minor. May also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0535-490 Persuasion and Social Change
Focusing on the persuasive strategies used by individuals and groups to change society, this course stresses the history and patterns of persuasion influencing social change in human rights and race, human rights and gender, war and peace, and environmental policy. Persuasive strategies that promote, agitate, maintain and reinforce change and/or resistance to change are examined in legal, political, polemical and social campaigns. Professional elective for professional and technical communication majors and advertising and public relations majors. Part of the global justice and peace studies concentration and the communication minor. May also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0535-497 Communication Portfolio
All communication majors create a portfolio comprised of projects, papers and related professional materials compiled during their college career. Each spring quarter the department hosts a portfolio review day when the communication seniors present their portfolio work in a public space for review and comment by faculty, staff and peers. All communication students must register once in their final year for the communication portfolio. The course requirement is fulfilled by presenting the portfolio at review day. Restricted to undergraduate communication degree programs in fourth year status. Class 0, Credit 0 (offered annually)

0535-501 Public Speaking
Public Speaking equips students with knowledge of the theories and principles of formal public speaking. Informative and persuasive speeches are the focus, with emphasis on organization, evidence, language use, audience analysis, situational demands, strategy, delivery and effective use of media technology. Required course for professional and technical communication majors and advertising and public relations majors. Part of the communication concentration and minor. May also be taken as an elective and for arts of expression credit. Class 4, Credit 4 (offered quarterly)

0535-502 Speech Writing
An advanced course for those who wish to increase their abilities to write professional public speeches for themselves or others. This course focuses on acquiring the skills necessary for contemporary professional speechwriting. Professional elective for professional and technical communication majors and advertising and public relations majors. Part of the communication minor and may also be taken as an elective. Class 4, Credit 4 (offered occasionally)

0535-503 Advanced Public Speaking
Further development of knowledge and skills learned in public speaking (0535-501). This course emphasizes language, delivery, and speech organization, requiring students to develop and deliver speeches for various occasions, using a variety of delivery methods. Students will present out-of-the-classroom speeches as well as practice ghostwriting. Part of the communication minor; a professional elective for advertising and public relations majors and the professional and technical communication majors; and may also be used as an institute elective. (0535-501). Class 4, Credit 4 (S)

0535-520 Intercultural Communication
An examination of the role of culture in face-to-face interpersonal and small group interaction. Professional elective for professional and technical communication majors, advertising and public relations majors and journalism majors. Part of the Arabic and French language/culture concentrations; the communication concentration and minor; and may also be taken as an elective. Class 4, Credit 4 (offered annually)

0535-525 Special Topics in Communication
A focused, in-depth study and analysis of a selected advanced topic in communication and associated issues. Specific topic varies according to faculty assignment and is published when the course is offered. Topics may include semiotics, communication technologies, gender differences in communication, and censorship and propaganda. Professional elective for professional and technical communication majors, advertising and public relations majors and journalism majors. (For junior/senior communication majors, permission of instructor required for all others) Class 4, Credit 4 (offered occasionally)

0535-532 Professional Writing
Students develop writing, research, and interviewing skills necessary for the composition of articles for magazines, newsletters, and other similar publications. In addition students learn how to investigate the market for and “sell” their writing, and how to write query letters. Much of the course is conducted as a workshop, during which students appraise each other’s work and make suggestions for revision. Required course for professional and technical communication majors and a professional elective for advertising and public relations majors and journalism majors. Part of the communication and journalism minors. Class 4, Credit 4 (offered occasionally)

0535-550 Film and Society
An inquiry concerning the relationship between motion pictures and society that uses historical, humanistic and social science research to achieve an understanding of movies as a social force, industry and art form. Professional elective for professional and technical communication majors, advertising and public relations majors and journalism majors. May be taken as an elective. Class 4, Credit 4 (offered occasionally)
0535-580 International Media
An introduction to media technology use in the international setting and in various countries and regions of the world. Selective theories about the media, international communication developments, and governmental challenges and restrictions also are considered. Professional elective for professional and technical communication majors, advertising and public relations majors and journalism majors. Class 4, Credit 4 (offered occasionally)

0535-590 Senior Project in Journalism
Senior capstone course culminating in the production of a long-form piece of journalism, a Web site and a digital portfolio of select works. The course brings together each participant’s work in journalism and the professional core. Required course for journalism majors. (0535-416, 462, 475, 476 or equivalent) Class 4, Credit 4 (S)

0535-595 Senior Thesis in Communication
A research seminar that provides students with the opportunity to initiate and complete an original research project. The course guides students through the early decisions necessary to plan and complete the thesis; provides instruction for specific methods of research; provides a guided time line to keep work on schedule; offers instructional feedback for individual sections of your thesis and affords opportunities for peer review. The course culminates in a public presentation of the completed senior thesis. Required course for professional and technical communication majors and advertising and public relations majors only. Cannot be taken to fulfill liberal arts requirements. (0535-315, 445 or equivalent) Class 4, Credit 4 (offered twice annually)

Honors Courses

0550-325 Honors Colloquium
The honors colloquium is an advanced introduction to the disciplines of the liberal arts general education core. It combines inquiry into the foundations of the disciplines with discussion of emerging trends within and interrelationships among the disciplines. Preferably, students will register for this colloquium in the fall or winter quarters of their first year in the program, receiving four credits towards their liberal arts core. The purpose of the colloquium is to provide honors students with an intellectually rich, diverse and discussion-based engagement with scholarly readings and presentations by representatives of the disciplines. A faculty member will be responsible for organizing the presentations, facilitating discussion and evaluating the oral and written participation of the students. Class 4, Credit 4 (offered occasionally)
College of Science

Index

1001-200 Freshman Symposium
An introduction to academic and student life in the biological sciences department. Class 1, Credit 1 (F)

1001-201 General Biology I
A study of the characteristics and origin of life; basic principles of modern cellular biology, including cell organelle structure; chemical basis and functions of life, including enzyme systems, cellular respiration and photosynthesis; nutrient procurement in plants and animals. (High school biology and chemistry; biological sciences program major; or permission of instructor) Class 3, Credit 3 (F, W, S)

1001-202 General Biology II
A study of the physiological processes of gas exchange, internal transport, osmoregulation, excretion and hormonal control in plants and animals; nervous system and behavior in animals. (1001-201 or permission of instructor) Class 3, Credit 3 (W, Su)

1001-203 General Biology III
A study of cellular and organismal reproduction, the principles of genetics and developmental biology, and an introduction to evolution and ecology. (1001-202 or permission of instructor) Class 3, Credit 3 (S, Su)

1001-205 General Biology Laboratory I
Laboratory work to complement the lecture material of General Biology (1001-201). The experiments are designed to illustrate concepts; develop laboratory skills and techniques; and improve ability to make, record and interpret observations. (Corequisite 1001-201) Lab 3, Credit 1 (E, F, Su)

1001-206 General Biology Laboratory II
Laboratory work to complement the lecture material of general biology (1001-202). The experiments are designed to illustrate concepts; develop laboratory skills and techniques; and improve ability to make, record and interpret observations. (Corequisite 1001-202) Lab 3, Credit 1 (W, Su)

1001-207 General Biology Laboratory III
Laboratory work to complement the lecture material of general biology (1001-203). The experiments are designed to illustrate concepts, develop laboratory skills and techniques, and improve ability to make, record and interpret observations. (Corequisite 1001-203) Lab 3, Credit 1 (S, Su)

1001-251 Introduction to Biology I
A study of the chemical basis of life, including biologically important molecules, the structure and function of cells, the inheritance of genetic traits, and control of the expression of genes. The course emphasizes an evolutionary perspective and the integration of different levels of biological organization. Lab consists of two multi-week projects in which teams of students apply biological information and laboratory techniques in real-world applications. (High school biology and chemistry; biological sciences program major; or permission of instructor) Class 3, Lab 3, Credit 4 (F)

1001-252 Introduction to Biology II
A study of archaea, bacteria, viruses, protists, and plants that emphasizes the value of an evolutionary approach in biomedicine, bioinformatics, and biotechnology. Lab consists of two multi-week projects in which teams of students expand on basic studies of real world biological problems to develop their own hypotheses and design experiments to test them. (Biological sciences program major and 1001-251, or permission of instructor) Class 3, Lab 3, Credit 4 (W)

1001-253 Introduction to Biology III
A study of animal physiology, behavior, and ecology that explores the relationship between structure and function from an evolutionary perspective with emphasis on the application of basic biological information. Lab includes a project that is selected and carried out by teams of students and culminates in a poster session in the final week of the quarter. (Biological Sciences program major and 1001-252, or permission of instructor) Class 3, Lab 3, Credit 4 (S)

1001-255 Preparation for Graduate Studies
This course prepares students to apply to MS and Ph.D. programs in the biological sciences. The students select one or more schools in which they are interested and are certain they meet all the requirements for admission to the school of their choice (e.g. physics courses, GRE exams). The students prepare a personal statement required in the application and also take practice GRE exams (both general and subject). Students will gain insight into the interview process for graduate school from discussions with former students who are currently applying and interviewing for graduate school. Students currently working on their MS and Ph.D. degrees will come and discuss their experiences. Class 1, Credit 1 (S)

1001-260 Introduction to Bioinformatics
This course is intended to provide an overview of bioinformatics for those who are either curious about what this exciting field entails or about whether bioinformatics represents a sound career path. Pursuant to this goal we will touch upon many subjects but will not explore any one in particular detail. Nevertheless, suggestions are welcome from anyone regarding projects to pursue outside of class in order to gain a deeper understanding of any aspect of bioinformatics that appeals to a personal interest. Class 2, Credit 2 (F)

1001-265 Unix Under the Hood
This course will explore Unix from a practical standpoint in order to either prepare students for further studies of computer science or to simply increase their appreciation of this pervasive operating system. Students from any department are welcome to take this course. Class 2, Credit 2 (F)

1001-280 Laboratory Teaching Experience
This course provides qualified undergraduate students the opportunity to gain experience in a laboratory instructional setting under the direct guidance of a faculty member. Students are required to prepare and present pre-lab discussions, assist in the design and set up of labs, answer enrolled-student questions, and perform lab demonstrations and other associated duties and responsibilities. (Contact faculty member for specific eligibility criteria.) Class 0, Lab 3, Credit 1 (E, W, S)

1001-289 Independent Study
Faculty-directed study of appropriate topics on a tutorial basis. Enables an individual to pursue studies of existing knowledge in the literature. (One year of Introductory Biology or equivalent) Class variable, Credit variable (E, W, S, Su)

1001-291 Biological Science Research
Faculty-directed research projects involving field or laboratory work including data collection and analysis. (Permission of instructor) Class variable (E, W, S, Su)
Antibody production and scale up of hybridoma cells. (1001-311 and 1001-314)

Introduction to Co-op Seminar
Instruction in all of the steps and documents necessary to carry out a successful search for a suitable co-op to include: resources that list co-op opportunities, setting criteria for a co-op, search techniques, resume preparation, cover letters, seeking letters of recommendation, securing transcripts and other required documents, the application process, and application follow-up. (Majors in the Biological Sciences Department) Class 1, Credit 1 (W)

Invertebrate Zoology
A study of the biology of invertebrate animals with emphasis on phylogenetic and functional morphology. (One year of introductory biology or equivalent or permission of instructor) Class 3, Lab 3, Credit 4 (F, S)

Vertebrate Zoology
A study of the morphology, physiology, behavior, classification and ecology of chordates. (One year of introductory biology or equivalent or permission of instructor) Class 3, Lab 3, Credit 4 (F)

Perl for Bioinformatics
This is an introductory course in Perl scripting language and its applications to biological data. The use of Perl for processing sequence data, managing a variety of biological data types, and providing effective web and graphical interfaces to existing tools for analysis of these data will be investigated. (4003-231, 4003-232 or equivalent) Class 2, Credit 2 (S)

Cell Biology
Principles of cell biology including internal cell structure, cell cycle and growth control, cell interactions, cell differentiation and the extracellular matrix with an emphasis on the observations and experimental evidence supporting them. (One year of introductory biology or equivalent) Class 4, Credit 4 (F, W)

Immunology
An introduction to all of the fundamental facts and concepts related to immunology to include: innate immunity and adaptive immunity; cells, molecules, tissues and organs of the immune “system”; cell communication and interaction; antibody structure and function; and the applications of these concepts to infectious diseases, vaccine design, autoimmune diseases, cancer, transplantation, regulation of the immune response, allergic reactions and immunosuppression. (One year of introductory biology; 1001-311) Class 3, Credit 3 (F, W)

Sports Biology
An introduction to the human physiology and anatomy of all types of sporting activities. Body systems studied include musculoskeletal, cardiovascular, neuromuscular and pulmonary. Motion, mobility, flexibility, strength, endurance and nutrition are other topics included in a comprehensive investigation of the biology of athletic performance. Class 2, Credit 2 (F, S)

Tissue Culture
Study of the techniques and applications of culturing eukaryotic cells, tissues and organs in vitro. Emphasis is on mammalian systems. Lectures will cover the historical background of tissue culture, how to authenticate cell lines, basic cell culture techniques as well as stem cells, tissue engineering, and the role of cell culture in regenerative medicine. In laboratory, students will be introduced to growth curves, cloning techniques, primary cell culture, making a cell line as well as detecting mycoplasma and other cell culture contaminants. (One year of introductory biology or equivalent) Class 3, Lab 4, Credit 5 (W)

Hybridoma Techniques
This course is designed to acquaint each student with the basic methods employed in the production of hybridoma cell lines and monoclonal antibodies. Includes preparation of viable cell suspensions, lymphocyte-myeloma cell fusion using polyethylene glycol, selection for and culturing of hybridoma cells, cloning by limiting dilution, ELISA, immunization of mice, monoclonal antibody production and scale up of hybridoma cells. (1001-311 and 1001-314 required; 1001-312 recommended) Lab 4, Credit 2 (S)

Bioinformatic Analysis of Macromolecules
Course will introduce the fundamental concepts of bioinformatics, especially in regards to computational analysis of nucleic acids and proteins. The nature and extent of information available in bioinformatic databases will be presented. Discussion and utilization of computational programs for analysis of individual and multiple sequences for functional and evolutionary information will be discussed. The computational laboratory will highlight the multitude of web-based applications available for analysis of molecular sequences. (Introductory or General Biology sequence; 1001-311) Class 2, Lab 2, Credit 3 (W)

General Ecology
Introduction to ecosystem ecology stressing the dynamic interrelationships of plant and animal communities within their environments. A study to include such ecological concepts as energy flow and trophic levels in natural communities, plant responses and animal behavior, population dynamics, biogeography and representative ecosystems. (One year of introductory biology or equivalent) Class 3, Lab 3, Credit 4 (F, W, S)

Molecular Biology
The study of structure, function and organization of proteins, nucleic acids and other biological macromolecules in prokaryotic and eukaryotic cells. Major topics of this course include organization of the genome, replication and repair of the genome, and regulation of gene expression. The laboratory portion of this course emphasizes basic techniques of molecular biology with emphasis on recombinant DNA technology. (One year of introductory biology or equivalent; 1001-311) Class 3, Lab 3, Credit 4 (W, S)

Evolutionary Biology
Topics covered will include the historical framework of evolutionary biology, the meaning and nature of evidence pertinent to biological evolution, Earth history, the evolution of proteins and the genetic code, cellular and metabolic evolution, molecular evolution, neutral theory vs. selection, genetic variation, natural selection, migration, mutation, genetic drift, fitness, population dynamics and genetics, species concepts and speciation, systematics and classification systems, molecular phylogenetics, the evolution of protozoans, plants, fungi, invertebrates and vertebrates, behavioral evolution, interactions among species, historical biogeography, human evolution and variation. (1001-251-253 or 1001-201-203) Class 3, Lab 3, Credit 4 (F)

Biological Writing
A study of written technical communication in the biological sciences with emphasis on components of report writing: analysis, definition, description, instruction, data presentation, literature research, abstracting and editing. Class 3, Credit 3 (S)

Galapagos: Evolution and Biogeography
The course examines geological and biological factors that made the Galapagos Islands a crucible in which Darwin formed the theory of evolution and discusses the origins of the islands by the twin mechanisms of plate tectonics and volcanism. Students observe recent lava flows and see initial biological colonists as well as ancient flows in advanced stages of colonization. The islands reveal the interaction between ocean currents, marine life, and mammalian and avian fauna that thrive on this rich sea life. Students observe many endemic species and subspecies and gain an understanding of adaptive radiation. The 11-day trip includes a visit to the Darwin Scientific Research Station. Students learn of the dangers of human infringement on the fragile ecology and efforts to conserve unique plant and animal species. Enrollment limited. Contact instructor fall quarter. Travel fee required. (1001-251-253 or 201-203) Credit 4

Vertebrate Evolution
A study of the major changes in vertebrate functional morphology through time, beginning with fish and ending with humans; fossil evidence depicting major transitions between the vertebrate classes; modern taxonomy, including cladistic analysis, geologic time and stratigraphy; and plate tectonics. (1001-253 or equivalent) Class 4, Credit 4 (F)

Evolution and Creationism
A lecture/discussion course that explores the current controversy over the teaching of evolution in the public schools. Topics covered include pre-Darwinian views of natural history, Natural Theology and the argument from design, pre-Darwinian views of evolution, On the Origin of Species, and the public and scientific reception of natural selection. The major 20th and 21st century court cases, beginning with Scopes, and the Creationist responses, will be presented. The social and philosophical implications of evolution will be a major underlying theme. (1004-211, 212, and 259; or 1001-201, 202, 203; or 1001-253, or permission of instructor) Class 4, Credit 4 (W)
1001-395 Ethical Issues in Medicine and Biology
Students will explore major ethical issues in medicine and biology via lecture, readings, films, and presentation and discussion of cases. Students will also be encouraged to report on current events in ethics as researched via the library, computer search facilities and the internet. The first two weeks of the course will be lecture. Students will learn about various theories of ethical analysis that are in current use. Subsequent classes will be devoted to particular ethical areas. Relevant cases will be given to the students for presentation, any additional background material that may be required to discuss the cases will be presented by the instructor, and the remainder of the period will be taken up with discussion based on the philosophical foundation provided at the beginning of the course. (Second-year or above) Class 3, Credit 3 (W)

1001-403 Cell Physiology
A study of functional eukaryotic cellular physiology with an emphasis on the role of global gene expression in cellular function and disease. Nuclear and cytoplasmic regulation of macromolecular synthesis, regulation of cellular metabolism, control of cell growth, and the changes in cell physiology in disease are covered. Lectures will also cover the scientific technology for studying changes in gene expression associated with cell differentiation and disease. In the associated laboratory students will learn the experimental techniques to do a micro-array experiment. Students will design and carry out an experiment to acquire gene expression data, learn how to analyze their acquired data using simple computer programs (MAGIC), and write a research paper explaining their findings. (1001-350) Class 3, Lab 3, Credit 4 (F)

1001-404 Introduction to Microbiology
An introduction to microorganisms and their importance. Principles of structure and function, metabolic diversity, taxonomy, environmental microbiology, bioremediation and infectious diseases of bacteria are discussed. Basic laboratory techniques: microscopy; staining, culturing, isolation and identification of bacteria; isolation and identification of normal flora; antibiotic resistance; metabolic tests; detection and counting of bacteria in environmental samples (foods, water, soils). (1001-253, 1001-311 required; 1013-233, 235 strongly recommended) Class 3, Lab 3, Credit 4 (F, S)

1001-405 Plants, Medicine, and Technology
Plants have played a significant role in the shaping of our world from the beginning to the present day. This course will explore our utilization of plants as food, fuels, materials, medicines, gene sources, and social aspects over time in different cultures. The world depends on about fifteen plant species most of which have been changed by plant improvement methods. We will explore the changes that have occurred in these important crops. This course will be a blend of the uses of plants and plant constituents in medicine and how technology is used to produce, purify, and provide the plant produced constituents. (Third-year status in the College of Science or consent of instructor) Class 4, Credit 4 (F)

1001-406 Virology
This course is an introduction to virology with specific emphasis on the molecular mechanisms of virus infection of eukaryotic cells and virus-cell interactions. Virus structure, genetics, the infectious cycle, replication strategies, pathogenesis, persistence, effects on host macromolecular synthesis, viral oncogenesis, viral vectors, emerging viral diseases, and strategies to protect against and combat viral infection will be discussed. (1001-350, 1001-421) Class 4, Credit 4 (W, S)

1001-408 Comparative Vertebrate Anatomy
A comparative study of organ systems of representative members of the vertebrates with emphasis on structural changes that occur during evolution. (1001-302 or 1001-365, or permission of instructor) Class 3, Lab 6, Credit 5 (W)

1001-411 Histology
This course provides a detailed exploration of the microscopic and structural anatomy of normal human tissues and organs, with special emphasis given to the relationships between the cellular architecture of human organs and organ systems and their functions. The course also examines human disease as manifested by alterations in histological features. (1026-350, 360 or equivalent recommended) Class 3, Lab 3, Credit 4 (S)

1001-412 Parasitology
An introduction to parasites of medical importance and diseases they cause, with an enhanced appreciation for the diverse implications of parasitism in the global community. An investigation of a variety of parasites classified by diseases such as blood and intestinal protozoan parasites, nematodes, trematodes and cestodes. Diseases of importance include malaria, sleeping sickness, elephantiasis, river blindness, leishmaniasis, amebic dysentery, trichomoniasis, babesiosis, etc. Distribution and transmission pathogenesis, clinical signs and symptoms, diagnosis, treatment and control, and the role of parasitic diseases in global economic and health inequities between developed and developing countries is examined. (One year of introductory biology or equivalent, 1001-311) Class 3, Credit 3 (F)

1001-413 Comparative Animal Physiology
A comparative study of fundamental physiological mechanisms. A broad range of organisms are studied from the standpoint of evolution of functional systems, the mechanisms and morphological variations that exist to deal with functional problems posed by the environment, and the special mechanisms used to cope with extreme environments. (One year of general biology or 1001-253, and 1001-365) Class 3, Lab 3, Credit 4 (W)

1001-416 Plant Biotechnology
The course will investigate fundamental aspects of plant tissue culture and manipulation, the genetic transformation of plant cells, and the construction, characterization and application of transgenic plants to agriculture, plant molecular biology and novel product development. The laboratory will provide experiences to complement the lecture information in plant cell culture and in the use of Agrobacterium as the gene shuttle to introduce genetic information into plants. (1001-311, 1001-350, 1001-404) Class 3, Lab 4, Credit 5 (W)

1001-417 Industrial Microbiology
Practical applications of yeasts, fungi and bacteria in industrial fermentations. Industrial aspects of fermentor design, pilot plant operations, strain development, generation of competent vectors, media development, economics of production, bio-process simulation software, and examples of plant design and process development using various simulation software. The lab will consist of a ten week project in the optimization of media and process parameters for the production of Pichia pastoris or E. coli to be used in recombinant protein production. Microbiology, biochemistry and engineering of large-scale processes are also discussed. (1001-404 and one biochemistry course) Class 3, Lab 3, Credit 4 (W)

1001-418 Plant Molecular Biology
This course focuses on advanced approaches in plant biotechnology and emphasizes the crop model systems currently being used to study plant molecular biology and plant-microbe associations. Arabidopsis is the model organism used to unravel the developmental, genetic and bio-chemical basis of the plant. The course includes current applications and social/economic aspects of plant biotechnology to crop improvement for the production of food, horticultural and specialty products. Students will develop and write a research proposal related to plant molecular biology. (1001-416) Class 4, Credit 4 (S)

1001-420 Plant Ecology
A consideration of the nature and variation of plant communities with discussion of factors that limit, maintain and modify communities both locally and world wide. Laboratory centers on a student-designed project, including proposal, experimental design, data gathering and analysis, and presentation of results. (1001-340, 341) Class 3, Lab 3, Credit 4 (S)

1001-421 Genetics
An introduction to the principles of inheritance; the study of genes and chromosomes at molecular, cellular, organismal and population levels. (1001-253 or equivalent) Class 4, Credit 4 (F, W, S)

1001-422 Developmental Biology
A study of the processes of growth, differentiation and development that lead to the mature form of an organism. (1001-253 or equivalent, 1001-311, 421) Class 3, Lab 3, Credit 4 (W)

1001-427 Microbial and Viral Genetics
The study of molecular genetics of bacteria, bacteriophages, fungi and eukaryotic viruses. (1001-350, 421; one biochemistry course) Class 3, Lab 3, Credit 4 (F)
1001-429  Population Genetics  
Population genetics consists of the study of genetic variation, architecture and change within and among populations of organisms through an examination of genetic variation, its importance, how it originates, and how it is maintained. Topics discussed include inbreeding, random mating, mutation, migration, selection, genetic drift, the effects of small population size, fitness, population subdivision, neutral theory, molecular evolution, molecular clocks, multigene families, gene conversion, artificial selection, the genetic basis of quantitative traits and the fundamental theorem of natural selection.  
(1001-365 or 1001-550 or 1001-421) Class 4, Credit 4 (W)

1001-443  Tropical Ecology  
This course is designed to provide an introduction to the concepts of tropical ecology and ecosystems, including elements of structure and function. Both biotic and abiotic components will be considered. Following a survey of the major tropical ecosystem types, case studies of tropical rain forests and mangrove swamps will be covered in depth.  
(1001-340 or permission of instructor) Class 4, Credit 4 (W)

1001-450  Genetic Engineering  
An introduction to the theoretical basis, laboratory techniques and applications of gene manipulation.  
(1001-350) Class 2, Lab 5, Credit 5 (S)

1001-451  Introduction to Infectious Diseases  
Mechanisms of bacterial and fungal diseases, including topics in host response to pathogen invasion; subversion of host defenses; virulence factors; clinical signs and symptoms, treatment, diagnosis and prevention. The class will also feature the discussion of various clinical cases found in the Weekly Morbidity and Mortality Report produced by the Center for Disease Control.  
(1001-312, 1001-404) Class 6, Credit 4 (W)

1001-460  Basic Pathology  
An introduction to pathophysiology: the study of disease and its consequences. Major topics of lecture discussions and laboratory exercises deal with general pathologic processes, including cell injury/cell death, inflammation, immunological deficiencies, hemodynamic and fluid derangements and neoplasia. Clinical correlations are made as often as possible as examples of how physiological processes can go awry in the generation of a particular disease.  
(1001-251, 252, 253 or equivalent required; 1026-350, 360 strongly recommended) Class 3, Lab 3, Credit 4 (S)

1001-462  Human Gross Anatomy  
This course exposes students to details of human anatomy through cadaver dissection. Lecture material stresses functional and clinical correlates corresponding to laboratory exercises. (1026-350, 360 and permission of instructor) Class 3, Lab 6, Credit 5 (S)

1001-467  Advanced Microbial Fermentation  
This is an advanced course in industrial microbial fermentations. The students are presented with advanced topics in fermentation design, operation, and the economics of operation. The course will also present various scientific papers pertaining to issues of scale up and process development at the industrial scale including topics in media development, impeller optimization, and plant design. The laboratory consists of a ten week project in the optimization of product titers utilizing the SIXFORS computer controlled fermentation system. The students will be using either Ralstonia eutrophica to produce PHAs, Xanthomonas campestris to produce xanthan gum, Pichia pastoris (cell yield for recombinant protein production) or E. coli (for recombinant protein production).  
(1001-404, 1001-417) Class 3, Lab 3, Credit 4 (S)

1001-471  Freshwater Ecology  
A study of the physics, chemistry and biology of inland waters. The course emphasizes the physical and chemical properties of water and how these properties affect the associated biological communities. Planktonic, benthic, and littoral communities are considered. Field trips to streams and lakes are conducted to gather physical, chemical and biological data.  
(1001-340 or permission of instructor) Class 3, Lab 3, Credit 4 (W)

1001-473  Marine Biology  
This course explores marine biology by focusing on the diversity of life and influence of oceanography on the various ecosystems. Morphological and physiological adaptations, and environmental threats will also be investigated.  
(One year of introductory biology or equivalent, or permission of instructor) Class 3, Credit 3 (S)

1001-474  Animal Behavior  
A comparative study of animal behavior from an evolutionary perspective. Lectures will examine the physiological organization of behaviors, survival behaviors, social dynamics, and human behavior.  
(1001-365, 1016-319) Class 3, Credit 3 (F)

1001-475  Conservation Biology  
This course concentrates on the application of ecological principles to conservation issues. Human impact on species diversity will be emphasized as it relates to agricultural, forest, coastal and wetland ecosystems. Case studies of management practices used to manage and restore disturbed ecosystems will be included. Laboratory exercises will concentrate on methodologies for assessing human impacts on ecosystems, including the use of GIS technology.  
(1001-340, 341) Class 3, Lab 3, Credit 4 (W)

1001-481  Independent Research  
Faculty-directed projects of research usually involving original field or laboratory work. (Third-year status with a GPA of 2.5 in science and mathematics courses and consent of faculty) Class variable, Credit variable (F, W, S, Su)

1001-482  Independent Research  
Faculty-directed projects of research usually involving original field or laboratory work. (Third-year status with a GPA of 2.5 in science and mathematics courses and consent of faculty) Class variable, Credit variable (F, W, S, Su)

1001-483  Independent Research  
Faculty-directed projects of research usually involving original field or laboratory work. (Third-year status with a GPA of 2.5 in science and mathematics courses and consent of faculty) Class variable, Credit variable (F, W, S, Su)

1001-492  Genomics  
Genomics will introduce students to the analysis of complex genomes. Emphasis will be placed on genetic information derived from the human genome project but advances with genomes of other model systems will be discussed. Lectures will cover scientific techniques used to map and sequence the human genome, as well as strategies for identification of disease susceptibility genes. The wet-bench laboratory will utilize an automated DNA sequencer to demonstrate the acquisition of genetic sequences. Laboratory sessions will emphasize cycle sequencing of cloned DNA fragments using an automated fluorescent DNA sequencer and mapping tactics using radiation hybrid cell panels.  
(1001-350) Class 3, Lab 3, Credit 4 (F)

1001-493  Bioinformatics  
Bioinformatics will introduce students to the analysis of genetic sequences. Emphasis will be placed on genetic information derived from the human genome project but findings from genomes of other model systems will be presented. Lectures will discuss available computational tools for extracting biological information from nucleotide and protein sequences. The computer-based laboratory will utilize bioinformatics software to demonstrate how to manage, search and analyze genetic sequences. Laboratory sessions will cover sequence prediction programs, DNA fragment assembly, multiple sequence analysis, secondary structure predictions, phylogenetic constructions and web access to public databases.  
(1001-350) Class 3, Lab 3, Credit 4 (W)

1001-494  Molecular Modeling and Proteomics  
The course will explore two facets of protein molecules: their structure and their expression. The structure component will build upon information from the Bioinformatics course and will add further sophistication with analysis of intermolecular interactions and ligand/receptor pairing. Software that permits molecular docking experiments will be employed. Tissue-specific protein expression will be addressed in lectures with description of micro-array technology and, in the laboratory, with two-dimensional protein gel electrophoresis.  
(1001-492, 493) Lab 6, Credit 4 (S)

1001-499  Biology Co-op  
Cooperative education experience for undergraduate biological sciences students. Credit 0 (offered every quarter)
<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1001-525</td>
<td>Eukaryotic Gene Regulation and Disease</td>
<td>This course serves as an overview of gene expression in eukaryotic systems, with an emphasis on how disease can result when gene regulation is disrupted. Points of control that will be examined include: chromatin structure, transcription initiation, transcript processing, stability and modification, RNA transport, translation initiation, post-translational events, and protein stability. The mechanisms involved in regulation at these control points will be discussed by exploring specific well studied cases. The significance of these processes will be highlighted by a discussion of several diseases that have been shown to be due to defects in gene regulation. (1001-350, 1001-421) Class 4, Credit 4 (F)</td>
</tr>
<tr>
<td>1001-530</td>
<td>Bioremediation: A Practical Approach</td>
<td>An introduction to bioremediation focusing on the interactions between engineers, chemists, biochemists, hydrologists, agronomists, and microbiologists to develop, design, and implement strategies to remediate soils or waters contaminated with various pollutants. The course will include topics in site assessments, risk assessments, characterization of contaminated sites, economics of remedial design, in situ processes, and ex situ processes. (1001-404 or permission of instructor) Class 3, Lab 3, Credit 4 (S)</td>
</tr>
<tr>
<td>1001-531</td>
<td>Microbe-Host Interactions</td>
<td>This course focuses on the mechanisms bacteria use to interact with plants and animals during both pathogenesis and symbiosis. The emphasis is at the molecular level, drawing on the disciplines of genetics, biochemistry, molecular biology and cell biology. Several of the agonistic and antagonistic interactions will illustrate broader principles and contribute to our fundamental understanding of biological processes. The results of these interactions have a strong impact on biological productivity, and so are also important in applied systems. (1001-350, 1001-404) Class 4, Credit 4 (F)</td>
</tr>
<tr>
<td>1001-550</td>
<td>Biology Seminar</td>
<td>The seminar consists of written and oral reports and their discussion by class members covering topics of current interest in the biological sciences. (40 quarter credits in biology and successful completion of the departmental writing requirement) Class 2, Credit 2 (W, S)</td>
</tr>
<tr>
<td>1001-555</td>
<td>Modeling Population Genetics for Non-programmers</td>
<td>This course focuses on the mathematical modeling of population genetics and the implication for studies of human genetic diversity. Emphasis is placed on the use of these models in medical research, forensics, and pharmacogenomics. Labs apply the lecture material in computer simulation models using Excel. (1001-421 or equivalent; or permission of instructor) Class 3, Lab 3, Credit 4 (F)</td>
</tr>
<tr>
<td>1001-559</td>
<td>Special Topics: Biology</td>
<td>Special topics are advanced courses of current interest and/or logical continuations of the courses already being offered. These courses are structured as ordinary courses and have specified prerequisites, contact hours and examination procedures. Class variable, Credit variable (offered upon sufficient request) (F, W, S)</td>
</tr>
<tr>
<td>1001-567</td>
<td>Environmental Microbiology</td>
<td>This is an advanced course in the principles of soil microbiology, groundwater microbiology, wastewater microbiology and composting microbiology. The class will also focus on practical applications of microorganisms isolated from various types of environments. Examples of commercial use of microorganisms will also be presented. The lab consists of a series of experiments looking at the microbial flora of soils and water. Students will also determine the biological oxygen demand of various water sources and sediment samples found in Western New York. (1001-404) Class 3, Lab 3, Credit 4 (F)</td>
</tr>
<tr>
<td>1001-570</td>
<td>Research Scholars I</td>
<td>This course is taken in the first quarter of the Research Scholars Program. Students undertake long-term research projects under the mentorship of a faculty sponsor. Students must apply to the Research Scholars Program and be accepted prior to registration. Class variable, Credit variable 1-4 (F, W, S, Su)</td>
</tr>
<tr>
<td>1001-571</td>
<td>Research Scholars II</td>
<td>This course is taken in the second quarter of the Research Scholars Program. Students undertake long-term research projects under the mentorship of a faculty sponsor. Students will give oral presentations on their research projects which will be evaluated by a faculty committee. Students must have an A or B in Research Scholars I and submit an updated research plan to the Research Scholars Committee in order to register. Class variable, Credit variable 1-4 (F, W, S, Su)</td>
</tr>
<tr>
<td>1001-572</td>
<td>Research Scholars III</td>
<td>This course is taken in the third quarter of the Research Scholars Program. A student must earn at least a B in this course to be designated as a “Research Scholar.” Students undertake long-term research projects under the mentorship of a faculty sponsor. Students must have received an A or B in Research Scholars II and submit an updated research plan to the Research Scholars Committee in order to register. Class variable, Credit variable 1–4 (F, W, S, Su)</td>
</tr>
<tr>
<td>1004-210</td>
<td>Microbiology in Health and Disease</td>
<td>This course is an introduction to microorganisms; their relationship to the environment and human health; the causes, prevention and treatment of infectious diseases; and the role of microorganisms in the preparation and spoilage of foods. (One year of high school biology or equivalent) Class 4, Credit 4 (F)</td>
</tr>
<tr>
<td>1004-211</td>
<td>Human Biology I</td>
<td>This course is a general study of human anatomy and physiology. The course includes discussions of cellular biology, skeletal, muscular, nervous and endocrine systems. Class 3, Credit 3 (F)</td>
</tr>
<tr>
<td>1004-212</td>
<td>Human Biology II</td>
<td>This course is a general study of human anatomy and physiology with emphasis on mechanisms by which the nervous and endocrine systems coordinate and integrate body functions. This second course includes discussion of nutrition, metabolism and respiratory, circulatory, lymphatic, urinary and reproductive systems. Class 3, Credit 3 (W)</td>
</tr>
<tr>
<td>1004-213</td>
<td>Human Biology III</td>
<td>This is the final course in a three quarter sequence in which we investigate the biology of the human body through an examination of its structure (anatomy), its function (physiology), and the various disease states (pathology) that affect its health. This course focuses on human health and the various systems that work in an integrated fashion to defend us from disease and repair our injuries. The course will explore a wide range of diseases, including infections, genetic disease, metabolic disease, heart disease, cancer and traumatic injury to the body and it will explore recent medical advances in the diagnosis and treatment of human disease. Class 3, Credit 3 (S)</td>
</tr>
<tr>
<td>1004-231</td>
<td>Human Biology I Laboratory</td>
<td>This laboratory complements the lecture material of 1004-211. Experiments are designed to illustrate the dynamic characteristics of cells, tissues and organ systems. Lab 2, Credit 1 (F)</td>
</tr>
<tr>
<td>1004-232</td>
<td>Human Biology II Laboratory</td>
<td>A laboratory for dietetic and medical illustration students to complement the lecture material of 1004-212. Experiments are designed to illustrate the dynamic anatomy and physiology of major organ systems. Lab 2, Credit 1 (W)</td>
</tr>
<tr>
<td>1004-233</td>
<td>Human Biology III Laboratory</td>
<td>This laboratory course complements the lecture material presented in 1004-213. The hands-on laboratory experiments and computer simulations utilize some of the procedures used by scientists and clinicians to diagnose and study a variety of diseases, including bacterial infections, genetic disease, metabolic disease, heart disease, and cancer. (Corequisite 1004-213 or permission of instructor) Lab 2, Credit 1 (S)</td>
</tr>
<tr>
<td>1004-240</td>
<td>Cell and Molecular Biology for Engineers</td>
<td>This is the first course of a two-quarter sequence designed to introduce biomedical engineering students to the molecular and cellular basis of life with a particular emphasis on the integration of molecular systems that underscore human physiology. This course will start with the basic chemistry of biological macromolecules and then explore the cell starting from the nucleus and moving outward. Major topics will include: DNA replication; molecular basis of inheritance; the biology of RNA; gene expression; protein synthesis; the secretory pathway; and enzyme kinetics. In lab students will develop a core competency in modern molecular techniques and explore the problems and challenges faced by molecular biologists by molecularly characterizing their own genomic DNA. (High school biology and chemistry required. Restricted to Engineering majors, or permission of instructor) Class 3, Lab 3, Credit 4 (F)</td>
</tr>
</tbody>
</table>
1004-241 Cell and Molecular Biology for Engineers II
The second course of a two-quarter sequence designed to introduce biomedical engineering students to the molecular and cellular basis of life with particular emphasis on the integration of molecular systems that underscores human physiology. This course will continue exploring subcellular systems by touring the function of each cellular organelle and describing the pathologic consequences that result from interruption of its normal function. Major topics will include: cell energy production; cytoskeleton; lysosomes; plasma membrane; vesicle transport; cell-cell communication; signaling pathways; cell cycle; and cell division. In lab students will develop a core competency in modern cell biology techniques by manipulating cells in culture and participating in an open-ended research project that emphasizes engineering. (1004-240, restricted to Engineering majors, or permission of instructor) Class 3, Lab 3, Credit 4 (W)

1004-242 Biocompatibility and the Immune System
This course combines a basic immunology course with an introduction to principles of human tissue response to biomaterial implantation. Topics include: organization of the immune system and its myriad cells and cytokines, review of bacterial and viral life cycles, antibody/antigen specificity, inflammation, bacterial adhesion, biomaterial surface characterization and sterilization. Students will explore biocompatibility testing, and learn the molecular basis for surface recognition and masking in implanted materials. The course emphasizes the interaction of the immune system components with engineered biological devices, implants, cells and tissues, and explores strategies and solutions for biocompatibility of engineered bio-materials with the immune system. (1004-241) Class 3, Credit 3 (S)

1004-289 Contemporary Science: Biology
A study in various biological topics relevant to contemporary problems of society. Topics may include population biology, pollution, disease control, human heredity, contagious diseases, marine biology, bioethics. Class 4, Credit 4 (Su)

1004-315 Medical Genetics
A survey of selected human variations and diseases of medical importance, with emphasis on the underlying genetic principles. (1001-203 or equivalent) Class 2, Credit 2 (F)

Field Biology
1005-210 Field Biology for Non-science Students
This course is an introduction to the ecology of individuals, populations, and communities. The dynamic interaction between organisms and their environment will be stressed. Included will be the concepts of energy flow and nutrient cycling in ecosystems, population dynamics, food webs, and the causes of temporal and spatial changes in communities. Class 3, Lab 3, Credit 4 (S)

1005-250 Galapagos: Ecology and Evolution
This is an 11-day field course in Ecuador and the Galapagos Islands. Students meet weekly on the RIT campus during spring quarter to learn about the wildlife and geology of the islands and about their influence on Darwin’s Theory of Evolution. The difficulties of balancing human problems with environmental conservation are ongoing problems in the Galapagos. The actual field trip occurs in May, right after graduation. We charter a boat and cruise among the islands for one week. There are daily snorkeling and frequent snorkeling opportunities. The course provides outstanding opportunities for nature photography. Although this is a spring quarter offering, students must contact the instructor during the previous fall quarter. Enrollment is limited to 11 students. A travel fee is required. Credit variable (S)

1005-305 Bird Banding
This course is designed to prepare the student to safely band passerine species of birds and to safely engage in research using banding methods. The course is also designed to meet requirements of the United States Fish and Wildlife Service and the North American Banding Council for banders and for bander training. This course constitutes the first step toward obtaining a USFWS permit to band birds and to conduct research. (One year of biology or permission of instructor) Class 2, Lab 6, Credit 2

Environmental Science
1006-202 Concepts of Environmental Science
This course introduces the interdisciplinary nature of environmental science through the study of topics like ecosystems and biodiversity, land cover change, energy, pollution, and global climate change. A unifying theme is the concept of sustainability. This is part of the required course sequence for all students in the environmental science degree program. Class 3, Lab 3, Credit 4 (F)

1006-203 Environmental Science Field Skills
This course introduces students to problem-based learning by focusing on a watershed assessment while learning about water quality and water quantity issues and analyses, land cover change, wetlands, and soils. The watershed project will also involve environmental education and outreach activities linked to Earth Day. Part of the required course sequence for all students in the environmental science degree program. Class 3, Lab 3, Credit 4 (S)

1006-350 Applications of Geographic Information Systems
Through hands-on projects and case studies, this course illustrates concepts and applications of vector geographic information systems (GIS) in a variety of disciplines, such as environmental science, biology, geology, geography, sociology, and economics. Students will learn how to use GIS software, plan a project, create a database, and conduct independent analysis. No official prerequisites, but students should be comfortable working with computers and experience with programming is also useful. Class 3, Lab 3, Credit 4 (F)

1006-450 Raster Applications of GIS
This course focuses on raster data and surfaces, digital imagery, and the integration of raster geographic information systems (GIS) data and analyses with vector GIS. Topics will include vector-to-raster conversions; managing raster layers, attributes and databases; overlay analyses; neighborhood analyses; map algebra; surface modeling (2-D and 3-D); and basic remote sensing applications. Students will read and discuss case studies from a variety of disciplines using raster analyses, learn and apply similar tools and analyses in a series of lab experiments, and conduct an independent project based on lab exercises or a topic of their own interest. No prerequisite, but 1006-350 Applications of GIS is strongly recommended. Class 3, Lab 3, Credit 4 (W)

1006-499 Environmental Science Co-op
Cooperative education experience for undergraduate environmental science students. Credit 0

1006-503 Environmental Science Capstone
This course is linked to the Great Lakes course sequence (0508-463, 464) and will bring together all of the principles of environmental science the student has learned during his or her four year undergraduate education at RIT. To accomplish this, students will work in teams to provide solutions to a real environmental problem or issue. In addition to working with RIT faculty, the students will work with practicing environmental scientists and the public. (0508-463, 464)

1006-559 Special Topics
Courses that are of current interest and/or logical continuations of the courses already being offered. These courses are structured as ordinary courses and may have specified prerequisites, contact hours, and examination procedures. Class variable, Credit variable (F, W, S, Su)

1006-599 Environmental Science Independent Study
Independent study is a faculty-directed study of appropriate topics on a tutorial basis that enables an individual to pursue studies of existing knowledge available in literature. Class variable, Credit variable (F, W, S, Su)

Analytical Chemistry
1008-261 Quantitative Analysis I
This course is designed for chemistry, polymer chemistry and biochemistry majors or those interested in pursuing the major. Topics include theoretical introduction to quantitative methods, including gravimetric techniques, equilibria, statistical methods and solution chemistry. (Corequisites 1008-265, 1010-252) Lecture 3, Credit 3 (W)

1008-262 Quantitative Analysis II
This course is designed for chemistry department majors or those interested in pursuing the major. Topics include equilibria for polyprotic acids, electrochemistry and redox reactions, spectroscopy, potentiometry and electrogravimetric determinations. (1008-261, 265; corequisite 1008-266) Lecture 4, Credit 4 (S)

1008-265 Quantitative Analysis I Laboratory
This laboratory is designed for chemistry department majors or those interested in pursuing the major. Experiments include statistics, calibration of equipment, spectroscopy, volumetric analyses and kinetics. (Corequisites 1008-261, 1010-252) Lab 4, Credit 4 (W)
1008-266 Quantitative Analysis II Laboratory
This laboratory is designed for chemistry department majors or those interested in pursuing the major. Experiments include statistics and calibration of equipment; Gran Plot, double endpoint titration (carbonate/bicarbonate), potentiometric titration, electrogravimetric and photometric determination of copper; water hardness. Lab report writing is emphasized. (1008-261, 265, 1010-252; corequisite 1008-262) Lab 6, Credit 2 (S)

1008-311 Analytical Chemistry: Instrumental Analysis
This course provides an elementary treatment of instrumental theory and techniques: properties of light and its interaction with matter; ultraviolet, visible and infrared absorption spectroscopy; atomic absorption and molecular fluorescence spectroscopy; nuclear magnetic resonance spectroscopy. (1010-252 or 1011-217; corequisite 1008-318) Class 3, Credit 3 (F, W)

1008-312 Analytical Chemistry: Separations
The theory of current chemical separations methods will be discussed. This will include solvent extraction, planar chromatography, gas chromatography and various mechanisms of high performance liquid chromatography. Current theory and applications of mass spectroscopy will also be covered. (1008-262 or 1011-217 or equivalent; corequisite 1008-319) Class 3, Credit 3 (S, Su)

1008-318 Instrumental Analysis Laboratory
This lab accompanies 1008-311 and provides quantitative and qualitative experiments in ultraviolet, visible, infrared, fluorescence and atomic absorption spectroscopies. Laboratory report writing is emphasized. (1010-252 or equivalent; corequisite 1008-311) Lab 4, Credit 1 (F, W)

1008-319 Separations Laboratory
This lab accompanies 1008-312 and provides experiments with chemical separations techniques including extractions (both solution and solid phase), thin layer chromatography, HPLC, gel filtration, gas chromatography and mass spectroscopy. Laboratory report writing is emphasized. (1008-262 or 1011-217 or equivalent; corequisite 1008-312) Lab 4, Credit 1 (S, Su)

1008-511 Advanced Instrumental Analysis
Theory, applications and limitations of selected instrumental methods in qualitative, quantitative, and structural analysis are discussed. Possible topics include electrochemistry, surface analysis, NMR spectroscopy, mass spectroscopy, ICP and other modern instrumentation. (1014-441) Class 3, Credit 3 (F, W-X)

1008-620 Building Scientific Apparatus
Basic skills associated with the construction of scientific laboratory apparatus—some of which is not commercially available are covered: machine shop skills, working with glass, vacuum technology, optics and electronics. Special emphasis is on function-structure relationship between an instrument and its intended use. Several references on construction techniques are provided, and information about current manufacturers and suppliers of necessary components is given. (1014-441, 1017-212, 213 or 312, 313; corequisite 1018-621) Class 3, Credit 3 (Offered upon sufficient request)

1008-621 Instrumental Analysis Laboratory
This lab is a capstone course requiring students to develop experimental protocols to accomplish assigned experiments involving advanced techniques in instrumental analysis. Library, literature and textbook research will be required. Upon agreement with instructor, two to four major experimental techniques will be required. (1014-441, 445; Corequisite 1008-511 or 711) Lab 6, Credit 2 (F, W X*)

Biochemistry

1009-230 Freshman Symposium for Biochemistry
This course will explore biochemistry and related biochemical sciences. It will include discussion of biochemistry-related opportunities including research, co-op, and careers. The biochemistry curriculum and biochemical resources will also be discussed. Class 1, Credit 1 (F)

1009-300 Introduction to Biochemistry
This course describes the field of biochemistry in relation to the traditional fields of biology and chemistry. Biochemical approaches to problems in medicine, industry and forensics are presented. Students identify a topic of current interest that is related to biochemistry and present it to the class as a skit or dialogue. Issues of ethical concern also are discussed. (1013-231 or 1013-431) Class 1, Credit 1 (F)

1009-502 Biochemistry: Conformation and Dynamics
This course provides a foundation for the biochemistry course sequence and for participation in undergraduate research in biochemistry. The relationship between the three-dimensional structure of proteins and their function in oxygen transport and enzymatic catalysis is examined. In preparation for the next course in the sequence (1009-503 Biochemistry: Metabolism), membrane structure and the physical laws that apply to metabolic processes are also discussed. (1013-231 or 1013-433, or permission of instructor) Class 3, Credit 3 (F, W, S)

1009-503 Biochemistry: Metabolism
Introduction to the metabolic pathways used for energy production and for the synthesis and degradation of the building blocks of living organisms. The pathways are presented individually, then integrated to show the balance between pathways; for example, the products generated by one pathway that are necessary for a second pathway. The efficiency of chemical synthesis in biological organisms is discussed. Finally, the metabolic basis of selected diseases is examined. (1009-502 or permission of the instructor) Class 3, Credit 3 (F, W, S)

1009-504 Biochemistry: Nucleic and Molecular Genetics
Nucleic acid structures, including the classical Watson-Crick DNA secondary structure, as well as more recently discovered forms, are described. Nucleic acid metabolism and the flow of genetic information including replication of DNA, its transcription into RNA and the translation of messenger RNA into protein, as well as regulation of gene expression in prokaryotes are presented. DNA sequencing and recombinant DNA techniques having practical applications in medicine, agriculture and forensics are described. The nucleic acid biochemistry of viruses and oncogenes is surveyed. (1009-502) Class 3, Credit 3 (F, W, S)

1009-505 Biochemistry: Experimental Techniques
An introduction to the theory and practice of modern experimental biochemical laboratory techniques and concepts. The weekly one-hour lecture provides a theoretical framework for the course and includes a discussion of the properties of biomolecules and how those properties are exploited in the separation and characterization of the molecules. Practical laboratory techniques include the preparation of buffers, centrifugation, gel exclusion chromatography, electrophoretic methods, and UV-visible and fluorescence spectrophotometry as applied to the isolation and characterization of proteins and nucleic acids. The manipulation of genetic material in E. coli will also be examined. Class 1, Lab 3, Credit 2 (F, W)

1009-510 Advanced Protein Biochemistry: Structure and Function
In this course, we will analyze protein structure-function relationships. We will investigate how proteins function and how the structure relates to that function. The principles that explain enzyme rate enhancements, mechanistic enzymology will be examined. We will also explore protein superfamilies for phylogenetic relationships to enhance our understanding of protein structure function relationships. We will do this by reading and discussing current scientific literature and classic papers. (1009-502) Class 3, Credit 3 (S)

1009-541 Advanced Biochemistry Research I
Faculty-directed student projects or research in biochemistry, usually involving laboratory work and/or calculations that would be considered original. (Permission of research adviser) Class variable, Credit variable (F, W, S, Su)

1009-542 Advanced Biochemistry Research II
Faculty-directed student projects or research in biochemistry, usually involving laboratory work and/or calculations that would be considered original. (Permission of research adviser) Class variable, Credit variable (F, W, S, Su)

1009-543 Advanced Biochemistry Research III
Faculty-directed student projects or research in biochemistry, usually involving laboratory work and/or other types of scholarship that would be considered original. (Permission of research adviser) Class variable, Credit variable (F, W, S, Su)

1009-561 Advanced Biochemistry Research I
Student research in biochemistry, usually involving laboratory work and/or other types of scholarship that would be considered original. (Permission of research adviser) Class variable, Credit variable (F, W, S, Su)

1009-562 Advanced Biochemistry Research II
Student research in biochemistry, usually involving laboratory work and/or other types of scholarship that would be considered original. (Permission of research adviser) Class variable, Credit variable (F, W, S, Su)

1009-563 Advanced Biochemistry Research III
Student research in biochemistry, usually involving laboratory work and/or other types of scholarship that would be considered original. (Permission of research adviser) Class variable, Credit variable (F, W, S, Su)

*X, extended day (after 5 p.m.)
Chemistry

1010-543 Chemical Research
Faculty-directed student projects or research usually involving laboratory
work and/or calculations that would be considered original. (Permission of research
adviser) Class variable, Credit variable (F, W, S, Su)

1010-559 Special Topics: Undergraduate Chemistry
Courses in which topics of special interest to a sufficiently large group of stu-
dents, and not covered in other courses, may be offered upon request. Class
variable, Credit variable (offered upon sufficient request)

1010-561 Advanced Undergraduate Chemistry Research 1
Course provides an opportunity for undergraduates to participate in a research
project with chemistry faculty, requiring a more formalized presentation of
results than the 1009-541 or 1010-541 series. Results from the research must be
reported in a public forum (such as a written report, poster, and/or oral presen-
tation) as determined by the research adviser and the head of the depart-
ment of chemistry. (Permission of the research adviser and approval by the head of
the department of chemistry) Class/lab variable, Credit variable (F, W, S, Su)

1010-562 Advanced Undergraduate Chemistry Research 2
Course provides an opportunity for undergraduates to participate in a research
project with chemistry faculty, requiring a more formalized presentation of
results than the 1009-541 or 1010-541 series. Results from the research must be
submitted in a formal written report, following American Chemical Society
guidelines. Public presentations of results, such as a poster or oral presentation,
may also be required by the research adviser and the head of the depart-
ment of chemistry. (Permission of the research adviser and approval by the head of
the department of chemistry) Class/lab variable, Credit variable (F, W, S, Su)

1010-563 Advanced Undergraduate Chemistry Research 3
Course provides an opportunity for undergraduates to participate in a research
project with chemistry faculty, requiring a more formalized presentation of
results than the 1009-541 or 1010-541 series. Results from the research must be
submitted in a formal written report, following American Chemical Society
guidelines. Public presentations of results, such as a poster or oral presentation,
may also be required by the research adviser and the head of the depart-
ment of chemistry. (Permission of the research adviser and approval by the head of
the department of chemistry) Class/lab variable, Credit variable (F, W, S, Su)

1010-599 Chemistry Independent Study: Undergraduate
Faculty-directed study of appropriate topics on a tutorial basis. Enables an
individual to pursue studies of existing knowledge available in the literature.
(Permission of independent study adviser) Class variable, Credit variable (F,
W, S, Su)

General Chemistry

1011-201 Foundations of General Chemistry
A survey course in general chemistry. Fundamentals include: dimensional
analysis; matter and energy; atomic theory; molecular structure; chemical
bonding; chemical reactions; solution chemistry; and the Gas Laws. The ma-
terial will emphasize the relationship between chemistry and modern sociologi-
cal, nutritional, and environmental issues. (Credit or co-registration in 1011-
205) Class 4, Credit 4 (F, W)

1011-202 Foundations of Organic Chemistry
A survey course in organic chemistry. Fundamentals include reaction rates,
equilibrium, and acid/base chemistry. Organic functional groups covered
include hydrocarbons, alcohols, carbonyls, and amines. The course will
familiarize the students with the relationship between organic chemistry
and modern pharmaceutical, nutritional and environmental issues. (Credit or co-
registration in 1011-207) Class 4, Credit 4 (W)

1011-203 Foundations of Biochemistry
A survey course in biochemistry. Application of carbohydrates, lipids, pro-
teins, and amino acid metabolism to nutrition and health is covered. The roles
of DNA, RNA, and proteins are investigated. The relationship of fundamental
biochemical topics to nutrition and energy will be discussed. (1011-202) Class
3, Credit 3 (S)

1011-205 Chemistry Principles I Laboratory
Laboratory course to introduce basic laboratory techniques: gravimetric,
volumetric, thermal and titration analyses. Experiments complement material
in first-quarter lecture. Also offered in distance learning format. (Corequisite
1011-201, 215, or 271) Lab 3, Credit 1 (F, W, S, Su)
1011-207 Introduction to Organic Chemistry Laboratory
An introduction to organic laboratory techniques. Methods of separating, purifying and characterizing organic compounds are covered. Also offered in distance learning format. (1011-207; corequisite 1011-202) Lab 3, Credit 1 (F, W, S, Su)

1011-208 College Chemistry
This course is primarily for, but not limited to, engineering students. Topics include an introduction to some basic concepts in chemistry, stoichiometry, First Law of Thermodynamics, thermochemistry, electronic theory of composition and structure, chemical bonding. Class 4, Credit 4 (F, W)

1011-215 General and Analytical Chemistry I
This is a general chemistry course for students in the life and physical sciences. College chemistry is presented as a science based on empirical evidence that is placed into the context of conceptual, visual, and mathematical models. Students will learn the concepts, symbolism, and fundamental tools of chemistry necessary to carry on a discourse in the language of chemistry. Emphasis will be placed on the relationship between atomic structure, chemical bonds, and the transformation of these bonds through chemical reactions. (Corequisite 1011-205) Class 4, Credit 4 (F, W)

1011-216 General and Analytical Chemistry II
This course covers the relationship between chemical structure, energetics, and kinetics. Chemical structure is treated through an introduction to organic compounds. The course then deals with the energy and entropy changes that drive chemical reactions. After a brief coverage of the rates of reactions the course finishes with an introduction to chemical equilibrium. (1011-215; corequisite 1011-206) Class 3, Credit 3 (W, S)

1011-217 General and Analytical Chemistry III
Comprising 80% of our bodies and 2/3 of the Earth’s surface, water is arguably the most important compound. This course uses the tools and concepts introduced in the previous two courses of the sequence to focus on the chemistry of aqueous solutions. It takes a quantitative look at: 1) solubility equilibrium, 2) acid-base equilibrium, and 3) oxidation-reduction equilibrium, to illustrate the importance of the interaction of ions in aqueous solutions. (1011-216; Corequisite 1011-227) Class 3, Credit 3 (F, S)

1011-227 General and Analytical Chemistry III Laboratory
This is a continuation of 1011-206 laboratory. Topics include quantitative analysis of a multicomponent mixture using complexation and double endpoint titration, pH measurement, buffers and pH indicators, and the electrophysical analysis of osmosis and oxidation reduction reactions. Experiments are designed to complement lecture material of 1011-217. The course emphasizes the use of experiments as a tool for chemical analysis. Also offered in distance learning format. (1011-206; corequisite 1011-217) Class 3, Credit 1 (S, Su)

1011-230 Principles of Chemistry I
This course offers a rigorous, in-depth study of general chemistry in a distance-learning format. This distance learning format will provide excellent value for the self-directed and self-disciplined student. Topics include atomic structure, chemical bonding, chemical equations and quantitative analysis, acid-base and redox chemistry, periodic chemical trends, and molecular geometry. The course can be taken in lieu of 1011-208, 215 or 271. (Corequisite 1011-205) Class 3, Credit 3 (W, S, Su)

1011-231 Principles of Chemistry II
This course is a continuation of 1011-230, maintaining the same rigor and focusing on some of the more physical aspects of reactions as chemical equilibrium is approached. The course includes the study of the three phases (gases, liquids, and solids), enthalpy and entropy as chemical driving forces, the rates of chemical reactions and an advanced treatment of the atomic nucleus and subatomic particles. The course can be taken in lieu of 1011-216 or 273 and is offered only in distance-learning format. This format provides excellent value for the self-directed and self-disciplined student. (1011-230; corequisite 1011-206) Class 3, Credit 3 (F, S, Su)

1011-232 Principles of Chemistry III
This course is a continuation of 1011-231, maintaining the same rigor and in-depth approach. It provides opportunity for application of equilibrium and redox concepts towards familiar chemical systems such as acids and bases, buffers, sparingly soluble solids and galvanic cells (batteries). The course also provides solid introductions to organic chemistry and the chemistry of metals. The course can be taken in lieu of 1011-217 and is offered only in distance-learning format. This format provides excellent value for the self-directed and self-disciplined student. (1011-231; corequisite 1011-207) Class 3, Credit 3 (F, W, S)

1011-271 Fundamentals of Chemistry
This is an introduction to basic concepts of chemistry, assuming no prior experience. Topics include atomic theory, chemical bonding, stoichiometry, states of matter and the periodic table. The online course 1011-230 can be used as a substitute for 1011-271. (Corequisite 1011-205) Class 3, Credit 3 (F, W, S)

1011-272 Chemistry of Water and Waste Water
This course discusses the chemistry of water analyses, including solids, pH, alkalinity, acidity chloride, phosphate, BOD, COD, nitrogen, metals, radioactivity, residual chlorine and chlorine demand. Polymers are also covered. (1011-271 or equivalent; corequisite 1011-276) Class 3, Credit 3 (F)

1011-273 Introduction to Chemical Materials
This course applies the basic concepts of chemistry to energy conversion (thermochemistry, nuclear chemistry), reaction kinetics and equilibria, electrochemistry and materials (metals, ceramics and polymers). (1011-271 or 1011-208; Corequisite 1011-277) Class 3, Credit 3 (W, S, Su)

1011-276 Chemistry of Water and Waste Water Laboratory
This laboratory is to be taken concurrently with 1011-272. Techniques used in water and waste water analysis are covered. (1011-271 or equivalent) Lab 3, Credit 1 (F)

1011-277 Introduction to Chemical Materials Laboratory
Experiments in thermochemistry, kinetics, equilibrium, oxidation reduction and the properties of matter that complement the lecture material. (1011-205 or 211; Corequisite 1011-276) Lab 3, Credit 1 (W, S, Su)

1011-308 Introduction to Hydrogen Technology
This course will discuss hydrogen as a fuel with an emphasis on the sources of renewable energies and the principles of utilization including the issue of global warming. The technical aspects of hydrogen requirement for kilowatts of power generation, rate of production of water and the fuel cross-over problem will be reviewed. The fundamentals of chemistry will be covered to develop a foundation for an understanding of renewable energy and hydrogen technology. This course will concentrate on clean energy sources, theories of fuel cell operations, hydrogen infrastructure, and the introduction of devices that employ hydrogen. (1011-208 or 1011-215 or 1011-230 or 1011-271 or 1011-251, or permission of instructor) Class 4, Credit 4 (F, W)

1012-562 Inorganic Chemistry
For common elements, mastery of chemical reactions that describe their: (1) isolation, (2) characteristic chemical reactivities with other common reagents, (3) use in nano-structured materials, (4) large-volume industrial processes, and (5) environmental impacts is required. Nomenclature and isomerism are included. (1013-433, 1014-441) Class 4, Credit 4 (F, W)

1012-563 Inorganic Chemistry II
This course provides a view of how bonding theories endeavor to account for and predict the physical properties of a wide variety of inorganic compounds; e.g., color, magnetism, stability, chemical potential and electrical conductivity. Applications of bonding theory to current research areas are included. (1012-562, 1014-442 or permission of instructor) Class 4, Credit 4 (S)

1012-564 Modern Inorganic Chemistry
This course introduces the more sophisticated tools with which an inorganic chemist investigates inorganic molecules and materials. These physical methods are applied to current research directions in the field. An oral presentation is required. (1014-441) Class 4, Credit 4 (S)

1012-565 Preparative Inorganic Chemistry Laboratory
In this laboratory, the chemistries of different areas of the periodic table are examined; advanced synthetic and characterization methods are utilized. (1012-562 or permission of instructor) Recitation 1, Lab 7, Credit 3 (W, S)
Organic Chemistry

1013-231 Organic Chemistry I
This course is a survey of the structure, nomenclature, reactions and synthesis of the major functional groups. (1011-216 or permission of instructor; corequisite 1013-235) Class 3, Credit 3 (F, W X*, Su)

1013-232 Organic Chemistry II
In this course the mechanisms of main classes of reactions are discussed. (1013-231; corequisite 1013-236) Class 3, Credit 3 (W, S-X*, Su)

1013-233 Organic Chemistry III
Structure, nomenclature, reactions and properties of the important classes of bio-organic molecules (carbohydrates, lipids, amino acids, proteins and nucleic acids) are covered in depth. Emphasis is on structure and reactivity in relation to biochemical processes. (1013-232; corequisite 1013-237) Class 3, Credit 3 (S, F-X*)

1013-235 Organic Chemistry Laboratory I
Laboratory work emphasizes techniques, preparations and analyses. (Corequisite 1013-231) Lab 3, Credit 1 (F, W-X*, Su)

1013-236 Organic Chemistry Laboratory II
Laboratory work emphasizes techniques, preparations, and analyses. (Corequisite 1013-232) Lab 3, Credit 1 (W, S-X*, Su)

1013-237 Organic Chemistry Laboratory III
Laboratory work emphasizes reactions and properties of biomonomers and polymers. (Corequisite 1013-233) Lab 3, Credit 1 (S, F-X*)

1013-431 Organic Chemistry I
This course is a rigorous survey of the mechanisms and reactions of organic functional groups, emphasizing alkanes, alkenes and alkynes. Stereochemistry is also included. (1010-252; corequisite 1013-435) Class 3, Credit 3 (F, W)

1013-432 Organic Chemistry II
This course is a continued survey of reactions and mechanisms of organic functional groups including aromatic compounds, alcohols, ethers, aldehydes and organometallics. Spectral analysis (IR, UV, NMR) is also included. (1013-431; corequisite 1013-436) Class 3, Credit 3 (W, S)

1013-433 Organic Chemistry III
This course is a continued survey of reactions of major organic functional groups, including carboxylic acids, carboxylic acid derivatives, amines and enolate anions. Structure, nomenclature, reactions and properties of important classes of bio-organic molecules are also included. (1013-432; corequisite 1013-437) Class 3, Credit 3 (F, S)

1013-435 Preparative Organic Chemistry I Laboratory
This laboratory is designed for chemistry department majors to complement 1013-431, Organic Chemistry I. Synthesis, purification and characterization of organic compounds are conducted. (1010-252; corequisite 1013-431) Lab 4, Credit 1 (F, W)

1013-436 Preparative Organic Chemistry II Laboratory
This laboratory is designed for chemistry department majors to complement 1013-432, Organic Chemistry II. Emphasis is on synthesis, functional group reactivities, separations, IR and NMR analysis and introduction to microscale synthesis. (1013-431; corequisite 1013-432) Lab 4, Credit 1 (W, S)

1013-437 Systematic Identification of Organic Compounds
This is a laboratory course utilizing synthesis, chemical and spectral (IR, NMR and GC/MS) techniques to identify and characterize organic compounds. (1008-319, 1013-432, 436; should be taken concurrently with 1013-433) Lab 6, Credit 2 (F, S)

1013-510 Literature Exploration of Organic Synthesis
This course will be a survey of the recent literature in organic chemistry with a focus on the chemistry concerning those that synthesize natural products and/or methodology towards synthesizing natural products. During each week of the course a student is selected to lead a discussion based on an article from a premier journal. Repeatable for credit. (1013-537 or 1013-757 or permission of instructor) Class 1, Credit 1 (F, W)

1013-537 Advanced Organic Chemistry Synthesis
This course will revisit undergraduate organic chemistry topics at a more advanced level with specific examples from the current chemical literature. Multi-step synthesis and synthesis of complex multi-functional molecules will be emphasized. Students requiring 4 credits should register for 1013-737. (1013-433) Class 3, Credit 3 (F)

Physical Chemistry

1014-441 Chemical Thermodynamics
Properties of gases; temperature and the First Law of Thermodynamics; entropy and the Second and Third laws; Helmholtz and Gibbs free energies; criteria for equilibrium and spontaneity; chemical equilibrium; phase equilibrium; equilibrium in ideal and non ideal solutions; and electrochemistry are discussed. (1010-252, 1016-282, 1017-211 or 311; corequisite 1014-445) Class 4, Credit 4 (F, W-X*)

1014-442 Quantum Chemistry
This course is an introduction to quantum mechanics and spectroscopy; Planck’s Law; photoelectric effect; the Bohr atom; deBroglie, Schrodinger and Heisenberg theories; eigenvalue/eigenfunction equations; variation and perturbation theory; quantum statics; Heitler-London theory of covalent bonds; selection rules and spectroscopy; and matrices applicable to quantum chemistry. (1014-441, 1016-306; corequisite 1014-446) Class 4, Credit 4 (W, S X*)

1014-443 Chemical Kinetics
Kinetic molecular theory; transport properties of gases, chemical kinetics, surface chemistry, photochemical kinetics, irreversible processes in solution and an introduction to statistical mechanics are discussed. (1014-441; corequisite 1014-447) Class 4, Credit 4 (F, S)

1014-445 Chemical Thermodynamics Laboratory
This is an introduction to physical chemistry laboratory; chemical thermodynamics and equilibrium. (Should be taken concurrently with 1014-441) Lab 3, Credit 1 (F, W-X*)

1014-446 Quantum Chemistry Laboratory
Experiments in the application of quantum chemistry, atomic and molecular spectroscopy are performed. (Should be taken concurrently with 1014-442) Lab 3, Credit 1 (W, S-X*)

1014-447 Chemical Kinetics Laboratory
Laboratory experiments in chemical dynamics are conducted. (Should be taken concurrently with 1014-443) Lab 3, Credit 1 (F, S)

Environmental Chemistry

1015-520 Environmental Chemistry
Students will be introduced to sources, reactions, transport, effects and fate of chemical species in air, soil, water and living systems. (Organic chemistry) Class 3, Credit 3 (S-X*)

1015-521 Atmospheric Chemistry
This course is an overview of the major forces controlling the chemical composition of Earth’s atmosphere with emphasis on the role of the biosphere and the changes induced by human activity. Emphasis is placed on urban pollution, acid rain, stratospheric ozone depletion, and climate change. (1014-443) Class 3, Credit 3 (S-X*) (offered every other year)

1015-522 Aquatic Toxicology and Chemistry
This course is an introduction to key chemical, biological, microbiological and toxicological concepts and processes that govern the presence and fate of pollutants in the aquatic environment; environmental fate of specific inorganic, organic and pathogenic pollutants; analytical testing and modeling methods used to assess the toxicity impact of aquatic pollutants. (Organic chemistry, 1011-201) Class 3, Credit 3 (S-X*) (offered every other year)

Polymer Chemistry

1029-301 Introduction to Polymer Technology
This course is a survey of polymer science, including terminology, synthesis, structures, properties, applications and processing techniques of commercially significant polymers. (General chemistry, 1016-251 or equivalent) Class 2, Credit 2 (F)
1029-501 Organic Chemistry of Polymers
The synthesis of high molecular weight organic polymers and their properties are introduced. Mechanisms of step growth and chain growth polymerization reactions, polymer reactions and degradation are also considered. The end properties of polymers can be “tailored” by their method of synthesis. Controlled synthesis is particularly achievable when using coordinate polymerization, which will be discussed in detail. (1013-433) Class 4, Credit 4 (F-X*).

1029-502 Polymer Chemistry: Chains and Solutions
Although most polymeric materials find utility as solids, polymer fabrication and characterization techniques are general liquid-phase processes. This course is concerned with the fundamental physical chemistry of polymers in liquid solutions. Topics to be addressed include polymerization kinetics and chain structure, molecular weight distributions and determination, polymer solution thermodynamics and transport phenomena, and solution phase transitions. The study of polymeric solids is the focus of 1029-502 Polymer Chemistry: Properties of Bulk Materials. (1029-301, 1014-442) Class 4, Credit 4 (S-X*).

1029-503 Polymer Chemistry: Properties of Bulk Materials
This course is designed to give the student with a chemistry or materials science background a thorough grounding in the main concepts that describe bulk polymer structure, behavior and properties. The course follows a synthetic process; the structure property relationships for polymeric materials are built up from a microscopic to a macroscopic level. One of the most important lessons of the course is that polymers are almost never in a thermodynamically stable state. Consequently, the behavior of polymers and the properties they display are time dependent and vary with the thermo-mechanical history of the materials. (1029-301, 502) Class 4, Credit 4 (F-X*).

1029-504 Polymer Characterization Laboratory
This course introduces, and gives the student experience with, analytical techniques commonly employed to characterize high polymers. To accomplish this, the course is divided into five sections, each high-lighting a particular characteristic of polymeric materials: 1) molecular weight distributions; 2) spectroscopic analysis of chemical structure; 3) thermal stability; 4) morphology and phase transitions, and 5) mechanical properties. The experiments, each requiring eight lab hours to complete, are designed to give students exposure to laboratory techniques not generally covered in undergraduate science/engineering curriculum. Although the documentation of experimental results is important, and will be evaluated, the main purpose is to give the student hands-on experience, hopefully piquing his/her interest in and enthusiasm for the field. (1008-319, 1029-301) Lab 6, Credit 2 (offered alternate years).

1029-505 Synthesis of High Polymers Laboratory
Students will carry out about eight experiments. They will conduct in about half of those experiments step-growth polymerizations and in the other half chain-addition polymerizations. Among the polymers produced will be Nylon 6-10, Nylon II, polystyrene, high-density polyethylene, linear low density polyethylene, copolymer of styrene and methyl methacrylate and polyurethane. The most specific types of polymerizations and reactions introduced will be cross-linking polymer, interfacial and bulk step-growth polymerizations, cyclopolymerization, radical, ionic, and coordinative chain polymerizations. Instructors may add or delete polymer-related experiments of their choice. Experiments also include basic characterization of products by at least one method. (1015-337) Lab 6, Credit 2 (offered alternate years) (F).

Mathematics and Statistics

1016-200 Algebra
An algebra course including such topics as operations involving polynomials, algebraic fractions, factoring, exponents and radicals, solution of linear and quadratic equations, and graphing linear equations. (High school algebra and geometry) Class 4, Credit 4 (F, W, S).

1016-204 College Algebra
This course prepares students to enter a non-trigonometry-based, introductory level calculus course. Topics include a review of the fundamentals of algebra; solution of linear, fractional and quadratic equations; functions and their graphs; polynomials; exponential, logarithmic and rational functions; systems of linear equations. (Two years of high school algebra and score below 55% on the Mathematics Placement Exam) Class 4, Credit 4 (F, W, S, Su).

1016-205 Discrete Math for Technologists I
An introduction to topics of discrete mathematics for students of Information Technology, including number systems, sets and logic, relations, and Boolean algebra. (1016-206) Class 4, Credit 4 (F, W, S).

1016-206 Discrete Math for Technologists II
A continuation of an introduction to topics of discrete mathematics for students of Information Technology, including an introduction to combinatorial methods, graph theory, regular sets, vectors and matrices. (1016-205 or 1016-265) Class 4, Credit 4 (F, W, S, Su).

1016-210 Mathematics and Statistics Seminar I
An introductory course for freshmen and some transfers that explores the three majors and shows typical problems that applied mathematicians, computational mathematicians and applied statisticians solve in academic and industrial settings. Class 1, Credit 1 (F).

1016-211 Mathematics and Statistics Seminar II
A continuation of 1016-210 with three to four weeks spent on an introduction to co-op and five to six weeks spent on introducing the types of technical writing mathematicians and statisticians do. Students will model and write about a mathematical problem at the calculus level. Class 1, Credit 1 (W).

1016-214 Elementary Calculus I
This course is an introduction to the study of differential calculus. The following topics are covered: functions and graphs, limits, continuity, the derivative concept, derivative formulas, and applications of derivatives, with an emphasis on manipulative skills. (1016-204) Class 5, Credit 3 (W).

1016-215 Elementary Calculus II
This course is a continuation of 1016-214, with an emphasis on an introduction to integral calculus. The major topics covered are: the definite integral, the fundamental theorem of calculus, techniques of integral approximation, exponential and logarithmic functions, techniques of integration, an introduction to differential equations, and geometric series. Various applications relevant to the students’ majors are made throughout the development of these topics. (1016-214) Class 3, Credit 3 (S).

1016-225 Algebra for Management Science
This course is an introduction to functions, including linear, quadratic, polynomial, exponential, logarithmic and rational functions with applications to supply and demand, cost, revenue and profit functions. Additional topics include matrices, linear programming and mathematics of finance. (Three years of high school mathematics) Class 4, Credit 4 (F, W, S).

1016-226 Calculus for Management Science
This course stresses applications of calculus concepts to solving problems in business and allied health. Topics include the limit concept, differentiation, partial differentiation and integration. (1016-225) Class 4, Credit 4 (F, W, S, Su).

1016-230 Precalculus
This course prepares students to enter a trigonometry-based, introductory level calculus course. It covers a study of functions and their graphs, and concentrates on a thorough coverage of trigonometric functions. (Three years of high school mathematics or a score less than 55% on the School of Mathematical Sciences Placement Exam) Class 3, Workshop 1, Credit 4 (F, W).

1016-231 Calculus for Engineering Technology I
This is the first course in the sequence of two courses. Topics covered in this course include limits, derivatives, indefinite and definite integrals, and numerical approximations. Applications to physical and engineering technology problems are emphasized. (Grade of “C” or better in 1016-230 or a score between 55% and 75% on the School of Mathematical Sciences Placement Exam) Class 3, Workshop 1, Credit 4 (F, W, S).

1016-232 Calculus for Engineering Technology II
This is the second course in a sequence of two courses. Topics covered in this course are applications of the integral calculus, differential and integral calculus of the transcendental functions, and basic techniques of integration with emphasis on applications to engineering technology problems. (Grade of “C” or better in 1016-231) Class 3, Workshop 1, Credit 4 (F, W, S).

1016-258 Introduction to Symbolic Computing
This course is an introduction to a symbolic computing language, its uses and applications in several undergraduate courses. Symbolic manipulations, numerical calculations, and graphics techniques are explored, as well programming techniques. (Corequisites: A basic calculus course such as 1016-281, 1016-281, 1016-227 or 1016-214) Class 2, Credit 2 (S).

1016-260 Statistical Computing with Excel and Minitab
This course is an introduction to statistical computing using the Excel and Minitab software packages. (Permission of instructor) Class 2, Credit 2 (W, S).
1016-261 Calculus with Foundations I
This course integrates the learning of calculus concepts with precalculus. A study of functions, particularly polynomial and rational functions, exponential and logarithmic functions and their graphical representations and algebraic manipulation are covered. Limits of functions, one-sided limits, continuity, and derivatives, including basic rules of differentiation, chain rule and implicit differentiation of polynomials, rational functions and exponential functions are also part of this course. (Two years of high school mathematics and a score between 35% and 55% on the School of Mathematical Sciences Placement Exam) Class 3, Workshop 1, Credit 4 (F, W)

1016-262 Calculus with Foundations II
This is the second course in the sequence that integrates the learning of calculus concepts with precalculus. Related rates and a study of trigonometric functions and inverse functions and their graphical representations, and algebraic manipulation, and their differential calculus are covered. (A grade of “C” or better in 1016-261) Class 3, Workshop 1, Credit 4 (W, S)

1016-265 Discrete Mathematics I
This course is an introduction to discrete mathematics with applications in computer science and mathematics with an emphasis on proof techniques. Sets, functions, the natural numbers, the integers modulo n and simple combinatorics are covered. (Corequisites: 1016-272 or 1016-282 or permission of instructor) Class 4, Credit 4 (F, W, S)

1016-271 Calculus A
First course in a sequence of four: 1016-271, 272, 273, 283. The first three cover the equivalent of 1016-281, 282 Project-based Calculus I and II, with algebra and trigonometry inserted into the curriculum in a “just in time” fashion. The course consists of a study of functions, continuity, and differentiability. The study of functions includes the definition, representations and the trigonometric functions. Limits of functions are used to study continuity and differentiability. The study of derivative includes the definition, the basic rules including the chain rule and implicit differentiation. Applications to the derivative include problems in related rates. (At least three years of high school math and a score between 55% and 75% on School of Mathematical Sciences Placement Exam) Class 4, Workshop 2, Credit 4 (F, W, S)

1016-272 Calculus B
This is the second course in a sequence of four courses (1016-271, 272, 273, 283). The first three courses cover the equivalent of our current Project-based Calculus I and II, with algebra and trigonometry inserted into the curriculum in a “just in time” fashion. The course consists of a study of applications of differentiation to curve sketching, optimization problems, Newton’s method, and linear approximations. The course also covers indeterminate forms, antiderivatives, Riemann Sums, the Fundamental Theorem of Calculus, and the calculus of the natural logarithmic function. (Grade of “C” or better in either 1016-271 or 1016-282) Class 4, Workshop 2, Credit 4 (F, W, S)

1016-273 Calculus C
This is the third course in a sequence of four courses (1016-271, 272, 273, 283). The first three courses cover the equivalent of our current Project-based Calculus I and II, with algebra and trigonometry inserted into the curriculum in a “just in time” fashion. The course consists of a study of techniques of integration, applications of the definite integral and improper integrals. The techniques of integration include substitution, integration by parts, and partial fractions. The applications of the definite integral include areas between curves, volumes, work, arc length, and average values of functions. (Grade of “C” or better in 1016-272) Class 4, Workshop 2, Credit 4 (F, W, S)

1016-281 Project-based Calculus I
This is the first course in a sequence of three courses. Project-based Calculus is intended for students majoring in mathematics, science or engineering with the major emphasis on understanding the concepts and using them to solve a variety of physical problems. Project-based Calculus I covers two-dimensional analytic geometry, functions, limits, continuity, the derivative and its formulas, and applications of the derivative. (Three years of high school mathematics and a grade of 75% or higher on the School of Mathematical Sciences Placement Exam) Class 4, Workshop 2, Credit 4 (F, W)

1016-282 Project-based Calculus II
This is the second course in a sequence of three courses. Project based calculus is intended for students majoring in mathematics, science or engineering with the major emphasis on understanding the concepts and using them to solve a variety of physical problems. Project-based Calculus II covers optimization problems and Newton’s method, integral calculus and techniques of integration with emphasis on applications of integration. (Grade of “C” or better in 1016-281) Class 4, Workshop 2, Credit 4 (F, W, S)

1016-283 Project-based Calculus III
This is the third course in a sequence of three courses intended for students majoring in mathematics, science or engineering with the major emphasis on understanding the concepts and using them to solve a variety of physical problems. Major themes are techniques of integration, representing functions by infinite series, and the convergence and divergence of series. (Grade of “C” or better in 1016-282 or 1016-273) Class 4, Workshop 2, Credit 4 (F, W, S)

1016-289 Contemporary Science: Mathematics
A basic survey of mathematical structures as well as an introduction to problem solving. Topics are chosen from foundations of mathematics, algebra, topology, number theory, graph theory, probability and statistics. These structures are examined as they occur naturally in modern settings. NOTE: Not acceptable as science credit for College of Science majors. Class 4, Credit 4 (offered upon sufficient request)

1016-304 Differential Equations for Engineering Technology
This course is a continuation of 1016-232. Course covers selected applied mathematics topics, including differential equations, Laplace transforms, numerical methods and the calculus of functions of two variables. Emphasis is on the application of these topics to engineering technology problems. (1016-232) Class 4, Credit 4 (F, W, S)

1016-305 Multivariable Calculus
This course is a study of the calculus of functions of two or more variables, including limits and partial derivatives of these functions, as well as a study of three dimensional analytic geometry and vector algebra, and multiple integrals with applications in engineering and science. (Grade of “C” or better in 1016-273 or in 1016-282) Class 4, Credit 4 (F, W, S, Su)

1016-306 Differential Equations I
This course is an introduction to the study of ordinary differential equations and their applications. Topics include solutions to common first-order equations and linear second-order equations, method of undetermined coefficients, variation of parameters, linear independence and the Wronskian, numerical solution techniques, vibrating systems and Laplace transforms. (1016-283) Class 4, Credit 4 (F, W, S, Su)

1016-307 Differential Equations II
This is a second-quarter course in ordinary differential equations that includes power series solutions to ordinary differential equations about ordinary and regular singular points; orthogonal polynomials; solution of systems of linear differential equations; phase plane analysis, stability and chaos. (1016-305, 306) Class 4, Credit 4 (offered upon sufficient request)

1016-309 Introduction to Biostatistics
An introduction to the use of statistical techniques for solving problems in the health and biological sciences. The statistical software package Minitab will be used to reinforce these techniques and to introduce the students to the use of computers in statistical analysis. This is a general introductory course for students interested in the applications of statistics to the health and biological sciences. (1016-204 or equivalent) Class 4, Credit 4 (F, W, S, Su)

1016-314 Engineering Statistics
Basic statistical concepts including descriptive statistics, probability, inference, and quality control are covered in this course. The statistical package Minitab will be used to reinforce these techniques. The focus of this course is on statistical applications and quality improvement in engineering. This course is intended for engineering programs and has a calculus prerequisite. NOTE: This course may not be taken for credit if credit is to be earned in 1016-319. (1016-283) Class 4, Credit 4 (F, W, S)

1016-318 Matrices and Boundary Value Problems
This course is an introduction to matrix algebra and boundary value problems. Topics include matrix operations with applications to the solution of linear systems of algebraic equations, Fourier series, separation of variables, the heat equation and the wave equation. Matrix Algebra material should be covered first. (1016-305, 1016-306) Class 4, Credit 4 (F, S, Su)

1016-319 Data Analysis I
This course will study the statistical principles of presenting and interpreting data. Topics covered will include: descriptive statistics and displays, random sampling, the normal distribution, confidence intervals and hypothesis testing. The statistical software package Minitab will be used to reinforce these principles and to introduce students to the use of technology in statistical analysis. This is a general introductory statistics course and is intended for a broad range of programs. NOTE: This course may not be taken for credit if credit is to be earned in 1016-314. (1016-204) Class 4, Credit 4 (F, W, S, Su)
1016-320 Data Analysis II
This course is an elementary introduction to the topics of regression and analysis of variance. The statistical software package MINITAB is used to reinforce these techniques. The focus of this course is on business applications. This is a general introductory statistics course and is intended for a broad range of programs. (1016-319 or equivalent) Class 6, Credit 6 (F, W, S, Su)

1016-328 Engineering Mathematics
This course is an introduction to matrix algebra and vector calculus. Topics include matrix operations with applications to the solution of linear systems of algebraic equations; gradient, divergence and curl; line and surface integrals; independence of path and the divergence theorem; and Stoke's theorem with discussion of engineering applications and analysis. NOTE: Credit may not be included in the course. The students work on a research topic. (1016-331 or permission of instructor) Class 4, Credit 4 (S)

1016-331 Linear Algebra I
This course is an introduction to the basic concepts of linear algebra, with an emphasis on matrix manipulation. Topics include Gaussian elimination, matrix arithmetic, determinants, Cramer's rule, vector spaces, linear independence, basis, nullspace, row and column spaces of a matrix, eigenvalues and eigenvectors. Various applications are studied throughout the course. (1016-305 or 1016-366) Class 4, Credit 4 (F, W, S)

1016-345 Probability and Statistics for Engineers
This course will introduce students to: sample spaces and events; axioms of probability; counting techniques; conditional probability and independence; distributions of discrete and continuous random variables; joint distributions (discrete and continuous); central limit theorems; descriptive statistics; interval estimation; applications of probability and statistics to real-world problems. (1016-305) Class 4, Credit 4 (F, W, S)

1016-351 Probability
This course covers descriptive statistics; sample spaces and events; axioms of probability; counting techniques; conditional probability and independence; distributions of discrete and continuous random variables; joint distributions; and central limit theorem. (1016-273 or 1016-282) Class 4, Credit 4 (F, W, S)

1016-352 Applied Statistics
This course covers basic statistical concepts, sampling theory, hypothesis testing, confidence intervals, point estimation and simple linear regression. A statistical software package is used for data analysis and statistical applications. (1016-351) Class 4, Credit 4 (F, W, S)

1016-354 Introduction to Regression Analysis
This course is a study of regression techniques with applications to the type of problems encountered in real-world situations. It includes use of statistical software. Topics include review of simple linear regression, residual analysis, multiple regression, matrix approach to regression, model selection procedures, various other models as time permits. (1016-353 and 331 or equivalent) Class 4, Credit 4 (W)

1016-355 Design of Experiments
This course is a study of the design and analysis of experiments and includes extensive use of statistical software. Topics include single factor analysis of variance; multiple comparisons and model validation; multifactor factorial designs; fixed, random and mixed models; expected mean square calculations; confounding; randomized block designs; other designs and topics as time permits. (1016-314 or 1016-352) Class 4, Credit 4 (F)

1016-358 Statistical Quality Control
This course is a review of probability models associated with control charts; control charts for continuous and discrete data; interpretation of control charts; and some standard sampling plans. A statistical software package is used for data analysis. (1016-314 or 1016-352) Class 4, Credit 4 (S)

1016-365 Combinatorial Mathematics
This is an introduction to the mathematical theory of combination, arrangement, and enumeration of discrete structures. Topics include enumeration, recursion, inclusion-exclusion, block design, generating functions. (1016-265 or permission of instructor) Class 4, Credit 4 (W)

1016-366 Discrete Mathematics II
This course is a continuation of 1016-265 Discrete Mathematics I with applications in computer science. Topics include relations, their closures, equivalence relations, partial orderings, recursively defined sets, countable and uncountable sets, and an introduction to graph theory. (1016-265) Class 4, Credit 4 (F, W, S)

1016-370 Introduction to Undergraduate Research I
This is an introduction to the skills necessary for independent research on a mathematical or statistical problem with a focus on a specific research problem or problems. Literature search techniques, writing, and presentations are included in the course. The students work on a research topic. (1016-331 or permission of instructor) Class 4, Credit 4 (S)

1016-385 History of Mathematics
This is an introduction to the history of mathematics that provides the student the opportunity to study the historical background of some topics in the mathematical sciences and to write about those topics. The set of topics studied will vary. (1016-306) Class 4, Credit 4 (offered upon sufficient request)

1016-399 Mathematics Co-op Seminar
This course provides an exploration of cooperative education opportunities, practice in writing letters of application, resume writing and interviewing procedures. Class 1, Credit 0 (W)

1016-407 Dynamical Systems
The course revisits the equations of spring-mass, RLC circuits and pendulum systems in order to view and interpret the phase space representations of these dynamical systems. This begins with linear systems followed by a study of the stability analysis of nonlinear systems. Matrix techniques are introduced to study higher order systems. The Lorentz equation will be studied to introduce the presence of chaotic solutions. A computer algebra system will be used. (1016-306, 1016-331) Class 4, Credit 4 (S)

1016-410 Vector Calculus
This course is a continuation of multivariable calculus. Stokes' and Gauss' theorems and the divergence theorem are covered along with an introduction to the applications of these theorems in physics. NOTE: Credit may not be earned in both 1016-328 and 1016-410 (1016-305) Class 4, Credit 4 (W)

1016-411 Real Variables I
This course is an investigation and extension of the theoretical aspects of elementary calculus. Topics include mathematical induction, real numbers, functions, limits, continuity, differentiation, L'Hospital's rule, Taylor's theorem. (1016-265 and 1016-305 or permission of instructor) Class 4, Workshop 2, Credit 4 (F, W)

1016-412 Real Variables II
This is a continuation of 1016-411 which concentrates on integration: definition of the definite integral, its existence and properties, improper integrals, infinite series, sequences and power series. (1016-411) Class 4, Credit 4 (W, S)

1016-415 Statistical Analysis for Bioinformatics
This course is an introduction to the probabilistic models and statistical techniques used in computational molecular biology. Probabilistic and/or statistical techniques will be presented for the understanding of pairwise and multiple sequence alignment methods, gene and protein classification methods, and phylogenetic tree construction. (1016-273 or 1016-282, 1016-265 and 1016-319) Class 4, Credit 4 (W)

1016-420 Complex Variables
This course is a brief discussion of preliminaries leading to the concept of analyticity, complex integration, Cauchy's integral theorem and integral formulas, Taylor and Laurent series, residues, and real integrals by complex methods. (1016-283, 1016-305) Class 4, Credit 4 (F, W, Su)

1016-432 Linear Algebra II
This course provides a further development of the basic concepts of linear algebra, including orthogonality. Topics include similarity, linear transformations, diagonalization, inner products, Gram Schmidt, quadratic forms and various numerical techniques. Several applications of these ideas are also presented. (1016-331) Class 4, Credit 4 (F, W, S)

1016-451 Mathematical Statistics I
This course provides a brief review of basic probability concepts and distribution theory; mathematical properties of distributions needed for statistical inference. (1016-352 or 1016-314) Class 4, Credit 4 (W)

1016-452 Mathematical Statistics II
This is a continuation of 1016-451 covering classical and Bayesian methods in estimation theory; chi-square test; Neyman-Pearson lemma; mathematical justification of standard test procedures; sufficient statistics and further topics in statistical inference. (1016-451) Class 4, Credit 4 (S)
1016-454 Non-parametric Statistics
This is an in-depth study of inferential procedures that are valid under a wide range of shapes for the population distribution. Topics include tests based on the binomial distribution, contingency tables, statistical inferences based on ranks, runs tests and randomization methods. A statistical software package is used for data analysis. (1016-314 or 1016-352) Class 4, Credit 4 (F)

1016-457 Research Sampling Techniques
This course provides a basis for understanding the selection of the appropriate tools and techniques for analyzing survey data. Topics include design of sample surveys, methods of data collection, a study of standard sampling methods. A statistical software package is used for data analysis. (1016-352 or 1016-314) Class 4, Credit 4 (S)

1016-461 Mathematical Modeling
This course explores problem solving, formulation of the mathematical model from physical considerations, solution of the mathematical problem, testing the model, and interpretation of results. Problems are selected from the physical sciences, engineering and economics. (1016-305, 306, 331, 352) Class 4, Credit 4 (F, W)

1016-465 Linear Optimization
This course is a presentation of the general linear programming problem. A review of pertinent matrix theory, convex sets and systems of linear inequalities; the simplex method of solution; artificial bases; duality; parametric programming; and applications are covered. (1016-331) Class 4, Credit 4 (offered upon sufficient request)

1016-466 Advanced Optimization
This course provides a study of the theory of optimization of linear and nonlinear functions of several variables with or without constraints. Applications of this theory to solve problems in business, management, engineering, and the sciences are considered. Algorithms for practical applications will be analyzed and implemented. Students taking this course will be expected to complete applied projects and/or case studies. (1016-465 or equivalent) Class 4, Credit 4 (offered upon sufficient request)

1016-467 Graph Theory
The basic theory of graphs and networks, including the concepts of circuits, trees, edge and vertex separability, planarity and vertex coloring, and partitioning are discussed. There is a strong emphasis on applications to physical problems and on graph algorithms such as those for spanning trees, shortest paths, non-separable blocks and network flows. (1016-265) Class 4, Credit 4 (F, S)

1016-469 Mathematical Simulation
This is an introduction to computer simulation, simulation languages, model building and computer implementation, and mathematical analyses of simulation models and their results using techniques from probability and statistics. (1016-352, 4003-231, 232 or permission of the instructor) Class 4, Credit 4 (offered upon sufficient request)

1016-470 Undergraduate Research
The students work on a research topic under the supervision of a faculty member. A form describing the research goals must be signed by the faculty member and the head of the school before registration. (Permission of instructor) Credit 2 to 4 (F, W, S, Su)

1016-481 Topics in Mathematical Problem Solving
This course helps students develop strategies for solving problems that are chosen from a wide variety of areas in mathematics. Emphasis is on attempting problem solutions and presentation of efforts to the class or to the instructor. (One year of calculus or permission of instructor) Class 2, Credit 2 (F)

1016-485 Number Theory
This course is a study of the structure of the set of integers. Topics such as divisibility, congruences, arithmetic functions, primitive roots, quadratic residues, and the nature and distribution of primes are investigated. (1016-265) Class 4, Credit 4 (W)

1016-501 Advanced Differential Equations
A study of first order, linear higher order and systems of differential equations including such topics as existence, uniqueness, properties of solutions, Green’s functions, Sturm-Liouville systems, and boundary value problems is provided. (1016-305, 1016-306; 1016-331 desirable) Class 4, Credit 4 (offered upon sufficient request)

1016-502 Advanced Differential Equations II
A study of first order, linear higher order and systems of differential equations including such topics as existence, uniqueness, properties of solutions, Green’s functions, Sturm-Liouville systems and boundary value problems. (1016-301) Class 4, Credit 4 (offered upon sufficient request)

1016-511 Numerical Analysis
This course covers numerical techniques for the solution of nonlinear equations, interpolation, differentiation, integration, initial value problems. (1016-306, 1016-331 and some programming knowledge) Class 4, Credit 4 (F)

1016-512 Numerical Linear Algebra
This course covers numerical techniques for the solution of systems of linear equations, eigenvalue problems, singular-values and other decompositions, applications to least squares, boundary value problems, and additional topics at the discretion of the instructor. (1016-305, 1016-306, 1016-432 and some programming knowledge) Class 4, Credit 4 (W)

1016-521 Topics in Probability and Statistics
Selected topics in applied probability and statistics to meet the need and interest of the students are presented. (1016-305, 352 or permission of instructor) Class 4, Credit 4 (offered upon sufficient request)

1016-524 Introduction to Time Series
A study of the modeling and forecasting of time series is provided. Topics include ARMA and ARIMA models, autocorrelation function, partial autocorrelation function, detrending, residual analysis, graphical methods and diagnostics. A statistical software package is used for data analysis. (1016-352 or 1016-314) Class 4, Credit 4 (offered upon sufficient request) (S)

1016-525 Stochastic Processes
This course explores Poisson processes and Markov chains with an emphasis on applications. Extensive use is made of conditional probability and conditional expectation. Further topics, such as renewal processes, Brownian motion, queuing models and reliability, are discussed as time allows. (1016-331, 391, or permission of instructor) Class 4, Credit 4 (W)

1016-531 Abstract Algebra I
This course covers basic set theory and number theory, groups, subgroups, cyclic and permutation groups, Lagrange’s theorem, quotient groups, isomorphism theorems, and applications to scientific problems. (1016-265, 1016-432) Class 4, Workshop 2, Credit 4 (W)

1016-532 Abstract Algebra II
The basic theory of rings, integral domains, ideals and fields GF (pn), applications to coding theory or abstract vector spaces, function spaces, direct sums, applications to differential equations, and to scientific problems are discussed. (1016-331) Class 4, Credit 4 (F, S)

1016-542 Actuarial Mathematics
Students study challenging problems in probability and statistics whose solutions require a combination of skills that one acquires in a typical mathematical statistics curriculum. Course work synthesizes basic, essential problem-solving ideas and techniques as they apply to actuarial mathematics. (1016-451 or permission of instructor) Class 2, Credit 2 (offered upon sufficient request)

1016-551 Topics in Algebra
Topics in abstract algebra to be chosen by the instructor either to give the student an introduction to topics not taught in 1016-531, 532 or to explore further the theory of groups, rings or fields. (1016-532) Class 4, Credit 4 (offered upon sufficient request)

1016-552 Topics in Analysis
Topics in analysis to be chosen by the instructor, either to introduce the student to topics not covered in 1016-411, 412 or to explore further the topics covered there. (1016-265, 1016-412) Class 4, Credit 4 (offered upon sufficient request)

1016-555 Statistics Seminar
The seminar introduces the student to statistical situations not encountered in the previous course of study. Topics include open ended analysis of data, motivating use of statistical tools beyond the scope of previous courses, introduction to the statistical literature, development of statistical communication skills and the pros and cons of statistical software packages. (1016-354, 1016-355) Class 4, Credit 4 (S)

161 | College of Science
1016-558 Multivariate Analysis
A study of the multivariate normal distribution, statistical inference on multivariate data, multivariate analysis of covariance, canonical correlation, principal component analysis and cluster analysis. A statistical software package is used for data analysis. (1016-354, 1016-331) Class 4, Credit 4 (offered upon sufficient request)

1016-559 Special Topics
Topics of special interest to a sufficiently large group of students, and not covered in other courses, may be offered upon request. (Permission of instructor) Class variable, Credit variable (offered upon sufficient request)

1016-561 Complex Analysis I
This course is an introduction to the theory of functions of one complex variable. Limits, continuity, differentiability; analytic functions; complex integration; Cauchy integral theorem and formula; sequences and series; Taylor and Laurent series; singularities; residues; analytic continuation; and conformal mapping are discussed. This is a more in-depth study of analytic function theory than 1016-420. (1016-411) Class 4, Credit 4 (offered upon sufficient request)

1016-562 Complex Analysis II
This course provides an introduction to the notion of Cauchy integration theory, analytic function by power series and the calculus of residues. (1016-561) Class 4, Credit 4 (offered upon sufficient request)

1016-565 Game Theory
This is an introduction to the theory of games with solution techniques and applications. Topics include game trees, matrix games, linear inequalities and programming, convex sets, the minimax theorem, n-person games. (1016-331 or permission of instructor) Class 4, Credit 4 (offered upon sufficient request)

1016-566 Nonlinear Optimization Theory
The theory of optimization of nonlinear functions of several real variables is presented. Topics include unconstrained optimization (Newton-Raphson, steepest ascent and gradient methods), constrained optimization (Lagrangian multipliers, Kuhn-Tucker theorem, penalty concept, dynamic programming) and computational aspects (rates of convergence, computational complexity). (1016-305, 1016-432) Class 4, Credit 4 (offered upon sufficient request)

1016-571 Topology I
Metric spaces, topological spaces, separation axioms, compactness, connectedness, and product spaces are discussed. (1016-412 or permission of instructor) Class 4, Credit 4 (offered upon sufficient request)

1016-572 Topology II
A continuation of topics from 1016-571. (1016-571 or permission of instructor) Class 4, Credit 4 (offered upon sufficient request)

1016-581 Introduction to Linear Models
This course is an introduction to the theory of linear models. Least squares estimators and their properties; matrix formulation of linear regression theory; random vectors and random matrices; the normal distribution model and the Gauss-Markov theorem; variability and sums of squares; distribution theory; the general linear hypothesis test; confidence intervals; confidence regions; correlations among regressor variables; ANOVA models; geometric aspects of linear regression; and less than full rank models are introduced. (1016-331, 1016-354) Class 4, Credit 4 (offered upon sufficient request)

1016-599 Mathematics: Independent Study
Faculty-directed study of appropriate topics on a tutorial basis. Used to enable an individual to pursue studies of existing knowledge available in the literature and not taught in regularly offered courses. Class variable, Credit variable

Physics

1017-200 Introduction to Special Relativity
Students will learn aspects of Einstein’s Theory of Special Relativity including time dilation, length contraction, Lorentz transformations, velocity transformations, relativistic Doppler effect, issues with simultaneity, and relativistic expressions for energy and momentum. (High school physics and algebra) Class 3, Credit 2 (F)

1017-202 Exploration in Physics
This is an activity-based course in which topics will encompass a range of physical phenomena. Scientific concepts are introduced to provide a basis for understanding phenomena such as sight and optics, motion, rainbows, cloud formation, and global warming. Typically two topics per quarter will be covered. The main emphasis will be on the process of scientific investigation, with students developing hands on projects throughout each quarter. Class 4, Lab 2, Credit 4 (W, S)

1017-211 College Physics I
This is an introductory course in algebra-based physics focusing on mechanics. The course is taught in a lecture/workshop format that integrates material traditionally found in separate lecture and laboratory courses. Topics include kinematics, planar motion, Newton’s Laws, gravitation; rotational kinematics and dynamics; work, kinetic and potential energy; momentum and impulse; conservation laws; data presentation and analysis, error propagation. (Competency in algebra, geometry and trigonometry.) Class 6, Credit 4 (F, W, S, Su)

1017-212 College Physics II
This is an introductory course in algebra-based physics focusing on topics in oscillatory motion, wave motion, sound, geometrical optics, physical optics, fluids, heat, and thermodynamics. The course is taught in a lecture/workshop format that integrates material traditionally found in separate lecture and laboratory courses. (1017-211 College Physics I) Class 6, Credit 4 (F, W, S, Su)

1017-221 College Physics III
This is an introductory course in algebra-based physics focusing on the topics of electrostatics, DC and AC electrical circuits, magnetic forces and fields, electromagnetic induction, Bohr model of the atom, radioactivity. The course is taught in a lecture/workshop format that integrates material traditionally found in separate lecture and laboratory courses. (1017-211 College Physics I; 1017-212 College Physics II recommended). Class 6, Credit 4 (F, S)

1017-230 Stellar Astronomy
An introduction to the basic concepts of celestial astronomy, including celestial sphere, constellations, nomenclature, physical properties of the stars, principles of spectroscopy as applied to astronomy, double stars, variable stars, star clusters, stellar evolution, gaseous nebulae, stellar motions and distribution, and the Milky Way system is provided. This course is not recommended for students required to take University Physics. (Competency in algebra; may be taken before or after 1017-235, 240) Class 3, Credit 3 (F)

1017-231 Stellar Astronomy Laboratory
This laboratory course includes experiments related to the principles and theories discussed in the corresponding lecture. Observational exercises utilizing the RIT observatory and associated equipment are emphasized. (Credit or co-registration in 1017-230) Class 2, Credit 1 (F)

1017-235 Solar System Astronomy
This course is an introduction to basic concepts of solar system astronomy, including celestial sphere, zodiac, astronomical telescopes, sun, moon, eclipses, earth as a planet, planets and their satellites, comets, meteors, and theories of the origin of the solar system. This course is not recommended for students required to take University Physics. (Competency in algebra; may be taken before or after 1017-230, 240) Class 3, Credit 3 (S)

1017-236 Solar System Astronomy Laboratory
This laboratory course includes experiments related to the principles and theories discussed in the corresponding lecture. Observational exercises utilizing the RIT observatory and associated equipment are emphasized. (Credit or co-registration in 1017-235) Class 2, Credit 1 (S)

1017-240 Extragalactic Astronomy
An introduction to extragalactic astronomy, including the history of our discovery of the external galaxies and their classification, the “cosmic distance ladder,” quasars and other distinct objects, the Big Bang theory of cosmology, and the future of the universe. This course is not recommended for students required to take University Physics. (Competency in algebra; may be taken before or after 1017-230, 235) Class 3, Credit 3 (W)

1017-241 Electronics for Technologists
This course is an introduction to analog circuit theory and applications for engineering technology students. Topics include: the concepts of voltage and current sources, constructing Thevenin and Norton equivalent circuits, applications of Kirchhoff’s Laws, measuring DC and AC device characteristics, characterization and measurement of time-dependent waveforms, transient and frequency-dependent behavior of circuits and devices. The associated laboratory will reinforce the lecture material and teach practical skills essential to modern engineering. (1016-232, 1017-213) Class 3, Lab 3, Credit 4 (S)
1017-289 Contemporary Science: Physics
This is an introductory science for non-science students. One or more topics such as astronomy, space exploration, relativity, nuclear energy and lasers are discussed and simply explained to give an appreciation of the significance of physics in our contemporary technological society. A minimum of mathematics is used. A laboratory or discussion option may be offered for small group meetings once a week, which reinforces the material given in demonstration lectures and audiovisual presentations. NOTE: Not acceptable for science credit for College of Science majors. (Competency in algebra) Class 4, Credit 4 (offered upon sufficient request) (F, W, S)

1017-300 Introduction to Semiconductor Device Physics
An introductory survey, using some calculus, of the physics underlying operation and manufacture of modern semiconductor devices used in integrated circuits and microcomputers. Review of classical physics, classical free-electron gas, atomic physics, molecular bonds and band theory, theory of metals, structure and properties of semiconductors and semiconductor devices will be provided. (1017-213, 1016-304) Class 4, Credit 4 (offered upon sufficient request) (S)

1017-301 University Astronomy
This course is an introduction to the basic concepts of astronomy and astrophysics for scientists and engineers. Topics include the celestial sphere, celestial mechanics, methods of data acquisition, planetary systems, stars and stellar systems, cosmology, and life in the universe. (1017-311 or equivalent; 1016-281 or 1016-271/272, or equivalent) Class 4, Credit 4 (F, S)

1017-311 University Physics I
This is an intensive course in calculus-based physics for science and engineering majors. The course is taught in a lecture/workshop format that integrates the material traditionally found in separate lecture and laboratory courses. Topics include kinematics, planar motion, Newton's Laws, gravitation; work, kinetic and potential energy; momentum and impulse; conservation laws; systems of particles; data presentation and analysis; and error propagation. (Grade of C or better in 1016-281; credit or co-registration in 1016-282) Important: Revised prerequisite information; please go to www.rit.edu/cos/physics/UPrequirements.html Class 6, Credit 5 (F, W, S, Su)

1017-312 University Physics II
This course is a continuation of University Physics I (1017-311). The course is taught in a lecture/workshop format that integrates the material traditionally found in separate lecture and laboratory courses. Topics include rotational kinematics and dynamics, rigid body motion, angular momentum, static equilibrium, oscillatory motion, wave motion, sound, and physical optics. (Grade of C or better in 1017-311 or 1016-282) Important: Revised prerequisite information; please go to www.rit.edu/cos/physics/UPrequirements.html Class 6, Credit 5 (F, W, S)

1017-313 University Physics III
This course is a continuation of University Physics II (1017-312). The course is taught in a lecture/workshop format that integrates the material traditionally found in separate lecture and laboratory courses. Topics include statistical thermodynamics, Gauss' law, electric field and potential, capacitance, resistance, DC circuits, magnetic field, Ampere's law, and induction. (Grade of C or better in 1017-312 or University Physics II A and in 1016-273 or in 1016-282, co-registration in 1016-305) Important: Revised prerequisite information; please go to www.rit.edu/cos/physics/UPrequirements.html Class 6, Credit 5 (F, W, S)

1017-314 Modern Physics I
An introductory survey of elementary quantum physics at the sophomore level. Relativistic dynamics, quantization, photons, wave-particle duality, de Broglie waves, Bohr model, introduction to wave mechanics, the Schrödinger equation, energy levels, degeneracy, hydrogen atom, spin, multi-electron atoms. (1017-313) Class 4, Credit 4 (F, W, S)

1017-315 Modern Physics II
A continuation of a survey of modern physics at the sophomore level. This course introduces the fundamentals of multi-electron atoms, statistical treatment of systems of particles, elementary solid state physics, applications to semiconductors and nuclear and particle physics. (1016-314) Class 4, Credit 4 (S)

1017-316 Particle Physics, Stars and The Big Bang
This course is a second course in modern physics and designed for students who have completed the introductory modern physics course. Topics include an introduction to the structure of nuclei, nuclear reactions, and elementary particle physics; the creation of the elements through the lives of stars, hydrogen fusion, black holes, supernovae; and the origin and fate of the universe from the Big Bang to the unknown future. (1017-314 or permission of instructor) Class 4, Credit 4 (offered upon sufficient request) (S)

1017-317 Introduction to Computational Physics and Programming
An introduction to techniques of computational physics, such as numerical differentiation, integration, solutions of the equations of Newtonian mechanics, coupled differential equations. The course includes a very brief introduction to computer programming, focusing on documentation, style and clarity, as well as introducing functional programming language. (Credit or co-registration in 1017-312 or equivalent and 1016-282 or 1016-273) Class 4, Credit 4 (S)

1017-318 Vibrations and Waves
An introduction to the physics of vibrations and waves. (1017-312, 1016-282 or 1016-273; Credit or co-registration in 1017-313, Credit or co-registration in 1016-283) Class 4, Credit 4 (S)

1017-320 Principles of Optics
An introductory course in physical and geometrical optics. Wave and photon description of light; propagation of electromagnetic waves in vacuum and transparent media; mirrors, lenses, and simple optical instruments; basics of optical fibers; polarization of light and polarizing optical elements; interference; Michelson interferometer; Fraunhofer and Fresnel diffraction; diffraction gratings. (1017-213, 1016-206) Class 4, Credit 4 (W)

1017-321 Introduction to Laboratory Techniques
An introduction to common techniques used in the physics laboratory including data acquisition using LabVIEW, thermometry, optical systems, vacuum systems, and methods of dealing with small signals and noise. (1017-313, 1017-317, 1017-431) Class 3, Lab 3, Credit 4 (S)

1017-331 Introduction to Electricity & Electronics
Fundamentals of electricity; construction and measurements of electrical and electronic circuits encountered in a scientific laboratory. (1017-211, 212) Class 3, Lab 3 Credit 4 (offered upon sufficient request) (S)

1017-341 Foundations of Scientific Thinking
Definition of science; historical perspective; ingredients of the scientific quest; the scientific method; scientific explanation, laws, theories and hypotheses; the role of mathematics; probability and induction; science and other disciplines. (At least a year of basic sciences at the college level) Class 2, Credit 2 (offered upon sufficient request) (F, W)

1017-350 Sophomore Physics Seminar
A study of concepts that unify the diverse topics covered in the introductory physics sequence. Preparation for Comprehensive Oral Exam I. Techniques of physics literature searches and the preparation and organization of technical papers and oral presentations. Physics majors must pass this course before going on to 400-level courses. (1017-311, 312, 313; Credit or co-registration in 1017-314) Class 2, Credit 1 (F, W, S)

1017-374 Experiments in Modern Physics I
This course consists of experiments representative of the experimental foundations of modern quantum physics, including experiments investigating wave particle duality, measurement of fundamental constants, and the earliest of quantum mechanical models. Experiments include electron diffraction, the photoelectric effect, optical diffraction and interference, atomic spectroscopy, charge to mass ratio of an electron, and black-body radiation. (1017-313, 314) Class 1, Lab 3, Credit 2 (S)

1017-378 Experiments in Modern Physics II
This course consists of more experiments investigating the foundations of modern quantum physics and its applications. These experiments span topics in atomic and nuclear physics, semiconductor physics, and phase transitions and critical phenomena. Experiments include the Franck-Hertz experiment, Ramsauer-Townsend effect, optical pumping in rubidium atoms, nuclear spectroscopy, radioactive half-life, the Hall effect in semiconductors and metals, properties of light emitting diodes, transistors, ferromagnetic and superconducting phase transitions. (1017-313, 314) Class 1, Lab 3, Credit 2 (F)
1017-395  Physics Research
Faculty-directed student project or research involving laboratory work or theoretical calculations that could be considered of an original nature. The level of study is appropriate for students in their first three years of study. (Permission of instructor) Class variable, Credit variable (offered every year)

1017-399  Physics: Intermediate Independent Study
Faculty-directed study of appropriate topics on a tutorial basis. The level of study is appropriate for students in their first three years of study. Class variable, Credit variable

1017-400  Capstone Preparation
This course is a preparation for the two-quarter physics capstone project to be carried out in the following year. It includes selection of a project and faculty mentor, preparation of a feasibility study, preparation of a paper and a public oral presentation. (1017-350, Departmental approval required) Class 1, Credit 1 (S)

1017-401  Intermediate Mechanics I
Particle dynamics in one, two and three dimensions; systems of particles; conservation laws; rigid body motion; gravitational fields and potentials. (1016-306, 1017-312, 313; credit or co-registration in 1017-480) Class 4, Credit 4 (F)

1017-402  Intermediate Mechanics II
Translating and rotating coordinate systems, mechanics of continuous media, wave motion, Lagrangian formulation of mechanics. (1017-401, 480, Credit or co-registration in 1017-350) Class 4, Credit 4 (W)

1017-411  Electricity and Magnetism I
Electric and magnetic fields using vector methods, Gauss’s law, theory of dielectrics, Ampere’s law and Faraday’s law, vector potential, displacement current, Maxwell’s equations, wave propagation in dielectrics and conductors; and production and propagation of radiation. (1016-306; 1017-312, 313, 350, 480) Class 4, Credit 4 (W)

1017-412  Electricity and Magnetism II
Electric and magnetic fields using vector methods, Gauss’s law, theory of dielectrics, Ampere’s law and Faraday’s law, vector potential, displacement current, Maxwell’s equations, wave propagation in dielectrics and conductors; and production and propagation of radiation. (1016-306; 1017-312, 313, 350, 411, 480) Class 4, Credit 4 (S)

1017-415  Thermal Physics
Introduction to the principles of classical thermodynamics and kinetic theory. Equations of state, the First and Second Laws of Thermodynamics, entropy, thermodynamic potentials, applications of thermodynamics, and kinetic theory of gases. (1016-305; 1017-312, 313) Class 4, Credit 4 (S)

1017-421  Experimental Physics I
The elements of advanced laboratory work, including the importance of detailed experiment planning, are presented. The requirement of effective communication of results is also an integral part of the course. Experiments are chosen from any area of physics compatible with department facilities: optics, thin films, cryogenics, semiconductors, acoustics, nuclear, etc. (1017-314, 321, 374, 431 plus co-registration or credit in one of these: 1017-401, 411, 415, 455) Class 1, Lab 5, Credit 3 (W)

1017-422  Experimental Physics II
The elements of advanced laboratory work, including the importance of detailed experiment planning, are presented. The requirement of effective communication of results is also an integral part of the course. Experiments are chosen from any area of physics compatible with department facilities: optics, thin films, cryogenics, semiconductors, acoustics, nuclear, etc. (1017-314, 321, 431 plus co-registration or credit in any one of these: 1017-401, 411, 415, 455) Class 1, Lab 5, Credit 3 (S)

1017-431  Electronic Measurements
An introduction to electronic measurement and instrumentation for analog and digital circuits. Building and testing circuits using discrete components and integrated circuits. (1017-313 or 1017-213, college level calculus) Class 3, Lab 3, Credit 4 (F)

1017-432  Computer Interfacing to Laboratory Equipment
An introduction to microcomputer interfacing with associated laboratory exercises. Emphasis on the interface circuits using an 80286-based microprocessor. Covers elementary logic circuits, computer architecture, assembly language programming, serial and parallel interfaces, A/D and D/A conversion, RS-232C, IEEE488 and other industry standards. (1017-331 or 431 or equivalent) Class 3, Lab 3, Credit 4 (offered upon sufficient request) (F or W)

1017-435  Introduction to Chaotic Dynamics of Physics
Basic concepts for visualizing the behavior of nonlinear physical systems. Use of the computer as an exploratory tool for generating and observing transitions between periodic and chaotic behavior. The driven, damped pendulum as a model dynamical system for exploring such concepts as sensitivity to initial conditions, routes to chaos, strange attractors and fractal basin boundaries. Students are asked to extend general ideas to a specific physical system by performing a term project. (1017-317, 401) Class 4, Credit 4 (offered upon sufficient request) (F or W)

1017-440  Stellar Astrophysics
A survey of basic concepts of the astrophysics of stars and stellar systems. Observed characteristics of stars, stellar atmospheres, stellar structure, stellar evolution, interstellar medium, and the Milky Way. (1017-301 or permission of instructor) Class 4, Credit 4 (offered upon sufficient request) (W)

1017-442  Galactic Astrophysics
This course is a survey of the astrophysics of galaxies and other stellar systems. Emphasis is on the structure and dynamics of the Milky Way galaxy. (1017-301 or permission of instructor, 1017-314) Class 4, Credit 4 (offered upon sufficient request) (W)

1017-443  Extragalactic Astrophysics and Cosmology
This course is a survey of our current understanding of the structure, origin, and evolution of the universe. (1017-301 or permission of instructor, 1017-314) Class 4, Credit 4 (offered upon sufficient request) (S)

1017-444  Observational Astronomy
This course provides a practical, hands-on introduction to optical astronomy. Students will use the ROT Observatory telescopes and CCD cameras to take images of celestial objects, reduce the data, and analyze the results. The course will emphasize the details of image processing required to remove instrumental effects from CCD images. (1017-301 or permission of instructor) Class 4, Credit 4 (offered upon sufficient request) (S)

1017-455  Physical Optics
Physical optics including interference, diffraction, and polarization. Brief introduction to modern optics. (1016-305; 1017-312, 313, 480) Class 4, Credit 4 (S)

1017-480  Mathematical Methods in Physics I
This course serves as an introduction to the tools needed to solve intermediate and upper-level physics problems. Topics to be covered include matrix algebra, vector calculus, Fourier analysis, and partial differential equations in rectangular coordinates. (1016-306, 1017-312, 313) Class 4, Credit 4 (F)

1017-481  Mathematical Methods in Physics II
This course is a continuation of 1017-480. In the context of intermediate-level physics problems, this course serves as an introduction to the tools needed to solve those encountered in upper-level physics courses. Topics typically covered include series solutions to ordinary differential equations, solving partial differential equations in various coordinate systems, phase-space treatment of differential equations (stability, non-linear systems), matrix eigenvalue problems, and the calculus of variations. (1017-480) Class 4, Credit 4 (W)

1017-502  Capstone Project I
In collaboration with faculty mentor(s), students will carry out the first phase of an experimental, theoretical or computational physics research project, will prepare an interim paper, and will present a short talk on their progress to physics faculty and students. The projects are those planned during the capstone preparatory course taken during the prior spring quarter (1017-350, 400) Lab 12, Credit 4 (F)

1017-503  Capstone Project II
In collaboration with faculty mentor(s), students will carry out the second phase of an experimental, theoretical or computational physics research project and will prepare a written paper and present an oral report and a poster on their project to physics faculty and students. The projects are those planned during the capstone preparatory course taken during spring quarter, and commenced during the prior fall quarter. (1017-350, 502) Lab 12, Credit 4 (W)
1017-511 Experimental Optics
Advanced laboratory course with experiments based on topics in Optical Physics I and II. Laboratory work includes experimental design, construction, data collection, analysis and reporting. (1017-455) Lab 6, Credit 3 (offered upon sufficient request) (F or W)

1017-521 Advanced Experimental Physics
Advanced laboratory experiments and projects in atomic physics, nuclear physics or solid state physics. Special emphasis on experimental research techniques. (1017-412, 421) Lab 6, Credit 2 (F)

1017-522 Quantum Mechanics I
A study of the concepts and mathematical structure of non-relativistic quantum mechanics. Wave functions and the Schrödinger equation. Solutions to the one-dimensional and three-dimensional time independent Schrödinger equation. Stationary states and their superposition to produce time-dependent states. Quantum-mechanical operators, commutators, and uncertainty principles. Solutions to central potential problems, including the hydrogen atom. (1017-314, 350, 402, 480) Class 4, Credit 4 (F)

1017-523 Quantum Mechanics II
Continued study of the concepts and mathematical structure of non relativistic quantum mechanics presented in Quantum Mechanics I, with an emphasis on applications to real physical systems. Topics to be covered include: orbital angular momentum, effect of magnetic field on spinning charged particles, systems of identical particles, many electron atoms and band structure solids, and absorption and emission of radiation by atoms. (1017-350, 522) Class 4, Credit 4 (W)

1017-531 Solid State Physics
The structure of solids and their thermal, mechanical, electrical and magnetic properties. (1017-315, 350, 415, 480), and 522) Class 4, Credit 4 (offered upon sufficient request)

1017-539 Astrophysics Research
Faculty-directed student project or research involving observational or theoretical work that could be considered of an original nature. (1017-445 or permission of instructor) Class variable, Credit variable (offered upon sufficient request)

1017-540 Astronomical Instrumentation and Techniques
A survey of modern instrumentation and techniques used in astronomical data acquisition. Topics include astronomical sources, observational limits, telescopes, atmospheric effects, spectrographs, dilute apertures and detectors. (1017-455 or permission of instructor) Class 3, Credit 3 (offered upon sufficient request)

1017-553 Nuclear Physics
A study of the structure of the atomic nucleus as determined by experiments and theory. Description and quantum mechanical analysis of nuclear properties, radioactivity and nuclear reactions. (1017-522) Class 4, Credit 4 (offered upon sufficient request)

1017-555 Optical Physics II
This course is an extension of Optical Physics I (1017-455). It covers coherence theory, Fourier optics, holography, gradient index optics, and other modern optics topics. (1017-455) Class 4, Credit 4 (offered upon sufficient request)

1017-556 Laser Physics
The semi-classical theory of the operation of a laser, characteristics and practical aspects of laser systems, applications of lasers in scientific research. (1017-455) Class 4, Credit 4 (offered upon sufficient request)

1017-559 Special Topics
Advanced courses that are of current interest and/or logical continuations of the courses already being offered. These courses are structured as ordinary courses and have specific prerequisites, contact hours and examination procedures. Topics could include introductory statistical mechanics, plasma physics, general relativity, linear integrated circuits, cryogenics, radio astronomy, history of physics, astrophysics, or astronomy. (The level of study is appropriate for students in their fourth or fifth years of study.) Class variable, Credit variable (offered upon sufficient request)

1017-595 Advanced Physics Research
Faculty-directed student project or research involving laboratory work or theoretical calculations that could be considered of an original nature. The level of study is appropriate for students in their fourth and fifth years of study. (Permission of instructor) Class variable, Credit variable (offered upon sufficient request)

1017-599 Physics: Advanced Independent Study
Faculty-directed study of appropriate topics on a tutorial basis. The level of study is appropriate for students in their fourth or fifth years of study. Class variable, Credit variable

1017-602 Statistical Physics
Introduction to the statistical description of systems of particles with mechanical, electrical, and thermal interactions. Statistical calculation of thermodynamic quantities. Basic methods and results of statistical mechanics. Applications of statistical mechanics to elementary classical and quantum systems. (1017-314, 1017-415, 1017-480) Class 4, Credit 4 (offered upon sufficient request)

1018-210 General Science Exploration Seminar I
This course provides an introduction to the opportunities available within the College of Science and RIT. It offers the students the opportunity to increase their knowledge of science programs and careers, develop group skills, and establish a sense of community within the group. Class 2, Credit 1 (F, W)

1018-621 Building Scientific Apparatus Laboratory
Basic skills associated with the construction of scientific laboratory apparatus, some of which is not commercially available, are covered: machine shop skills, working with glass, vacuum line technology, optical spectrometer design and instrument electronics. (1014-441; 1017-212, 213 or 312, 313; or permission of instructor; corequisite 1008-620) Lab 4, Credit 1 (offered upon sufficient request)

1026-205 Introduction to Medical Diagnostic Imaging
This course provides an overview of four diagnostic medical imaging modalities: radiography, magnetic resonance imaging, nuclear medicine, and ultrasound. The history, current uses, and different trends of each modality, as well as comparisons among the modalities, will be discussed. Class 2, Credit 2 (F, S)

1026-220 Medical Laboratory Procedures
This first part of a three-course sequence (see 1026-221, 222 following) is a survey of the most frequently performed laboratory tests used in the diagnosis and treatment of disease. The fundamentals of medical laboratory procedures are reinforced by laboratory experiences in microscopy, urinalysis, clinical chemistry, hematology, serology, and bacteriology. Laboratory safety and quality assurance are also stressed. This course may not be taken by medical sciences majors to fulfill degree requirements. Class 3, Lab 2, Credit 4 (F)

1026-221 Human Diseases
A general survey of human diseases from a systematic approach with emphasis on disease symptoms, etiology, diagnosis, and prognosis. Also included are the topics of immunology, oncology, endocrinology, and pathophysiology. Upon completion of this course students will have a basic knowledge of many diseases that afflict mankind. Class 3, Lab 2, Credit 4 (S)

1026-305 Sports Physiology and Life Fitness
A contemporary science course that provides a foundation for understanding the importance of nutrition and energy transfer in maximizing the potential for exercise and training. In addition to the basic principles of exercise physiology, a variety of contemporary issues are covered, including use of legal and illegal aids, cardiovascular fitness and disease prevention, training methodologies, and fitness assessment. Particularly appropriate for individuals interested in maintaining their level of physical fitness and wellness, participating in competitive athletics, or working in recreation or physical therapy. (Distance learning offering) Class 4, Credit 4 (F, W, Su)
1026-350 Anatomy and Physiology I
An integrated approach to the structure and function of the nervous, endocrine, integumentary, muscular, and skeletal systems. Laboratory exercises include histological examinations, anatomical dissections, and physiological experiments using human subjects. (1001-253 or equivalent or permission of instructor for non-science majors) Class 4, Lab 3, Credit 5 (F)

1026-353 New Medical Technologies
A seminar series that provides students with exposure to the latest techniques and scientific discoveries modernizing the clinical laboratory. Class 1, Credit 1 (S)

1026-355 Physiology and Anatomy for Engineers I
The first of a two-quarter sequence designed for engineering students enrolled in the biomedical and bioengineering options that offers an integrated approach with an emphasis on structures and functions of the musculoskeletal and nervous systems. Other details associated with the integumentary and endocrine systems are also included. Laboratory exercises include practical physiology experiments and projects to complement lecture material. This course does not meet premed requirements. Class 6, Credit 4 (F)

1026-360 Anatomy and Physiology II
An integrated approach to the structure and function of the gastrointestinal, cardiovascular, immunological, respiratory, excretory, and reproductive systems with an emphasis on the maintenance of homeostasis. Laboratory exercises include histological examinations, anatomical dissections, and physiological experiments using human subjects. (1026-350 or permission of instructor) Class 4, Lab 3, Credit 5 (W)

1026-365 Physiology and Anatomy for Engineers II
The second of a two-quarter sequence designed for engineering students enrolled in the biomedical and bioengineering options that offers an integrated approach with an emphasis on structure and function of the cardiovascular, respiratory, and excretory systems. Additional information includes details of the gastrointestinal and immune systems. Laboratory exercises include anatomical study and physiological experiments with a focus on cardiovascular and respiratory systems. This course does not meet premed requirements. Class 6, Credit 4 (W)

1026-420 Introduction to Neuroscience
This course will focus on the mammalian central nervous system and how it regulates behavior. Background information on neuroanatomy, cellular physiology, neurotransmission, and signaling mechanisms will pave the way for an in-depth analysis of specialization at the systems level. Course goals will be to understand the cellular and molecular mechanisms underlying normal human behaviors as well as pathogenic states. (1001-251-253 or 1001-201-203; 1001-350, 1026-350, 360 recommended) Class 4, Credit 4 (S)

1026-501 Medical Botany
This course is intended to introduce the student to the subject of medical botany. A detailed study will be made of those members of the plant kingdom that are medically useful in preventing, treating, or curing disease states. Where possible, the active chemical ingredient(s) will be defined for each medicinal plant described. Emphasis will be placed on those plant substances that are useful in the treatment of cancers, nervous system disorders, heart and circulatory diseases, metabolic disorders, sensory organ diseases, dental disease, gastrointestinal disorders, respiratory diseases, urogenital diseases, skin diseases, infections, and mental disorders. When available, the data from clinical trials and clinical studies will be discussed. (1001-203 and 1013-233) Class 3, Credit 3 (W) (offered alternate years)

1026-519 Radiation Protection
A course designed to familiarize the student with the daily routine of safe handling of radioactive materials. Radiation protection, licensing regulations, decontamination procedures, waste disposal and area surveys are covered. Class 2, Credit 2 (W)

1026-540 Undergraduate Biomedical Science Research
An undergraduate level introduction to research that affords students the chance to work under the guidance of a faculty mentor in learning about applications of the scientific method to established scientific problems and questions. Students are required to enroll in at least two quarters of undergraduate research in consecutive quarters and, under guidance of research mentor, to report results in a public forum such as a written report, poster, and/or oral presentation. (Permission of research adviser and approval by biomedical sciences program director) Class/Lab variable, Credit variable (F, W, S, Su)

1026-541 Undergraduate Biomedical Science Research
An undergraduate level introduction to research that affords students the chance to work under the guidance of a faculty mentor in learning about applications of the scientific method to established scientific problems and questions. Students are required to enroll in at least two quarters of undergraduate research in consecutive quarters and, under guidance of research mentor, to report results in a public forum such as a written report, poster, and/or oral presentation. (Permission of research adviser and approval by biomedical sciences program director) Class/Lab variable, Credit variable (F, W, S, Su)

1026-542 Undergraduate Biomedical Science Research
An undergraduate level introduction to research that affords students the chance to work under the guidance of a faculty mentor in learning about applications of the scientific method to established scientific problems and questions. Students are required to enroll in at least two quarters of undergraduate research in consecutive quarters and, under guidance of research mentor, to report results in a public forum such as a written report, poster, and/or oral presentation. (Permission of research adviser and approval by biomedical sciences program director) Class/Lab variable, Credit variable (F, W, S, Su)

1026-559 Special Topics: Medical Sciences
Advanced courses that are of current interest and/or logical continuations of the courses already being offered. These courses are structured as ordinary courses and have specified prerequisites, contact hours and examination procedures. Class variable, Credit variable (F, W, S)

1026-599 Independent Study: Medical Sciences
Faculty-directed study of appropriate topics on a tutorial basis. Enables an individual to pursue studies of existing knowledge available in the literature. Class variable, Credit variable (F, W, S)

1030-409 Ultrasound Instrumentation I
Principles of ultrasound physics are directly applied to the use of ultrasound instrumentation in medical imaging. Transducers, signal production, memory systems, data display, manipulation of controls, and artifacts are discussed. Considered as a pivotal course in which the student learns to integrate previous knowledge of anatomy with ultrasound physics and instrumentation. Considered as a prerequisite course for Ultrasound Instrumentation II (1030-410). Emphasis is on the creation of high-quality images on laboratory ultrasound equipment. (Third year in the ultrasound program or permission of instructor) Class 4, Credit 4 (W)
1030-410 Ultrasound Instrumentation II
This course is a continuation of Ultrasound Instrumentation I (1030-409). It provides a foundation of the basic physical principles of ultrasound and the fundamentals of fluid dynamics, Doppler physics including color, power, and spectral Doppler, quality control, Doppler artifacts, and biological effects. Considered as a pivotal course in which the student learns to integrate previous knowledge of anatomy, ultrasound physics and instrumentation with Doppler skills and techniques. Development of scanning techniques, use of instrument controls, and production of high quality diagnostic images utilizing laboratory equipment are stressed. (Third year in the ultrasound program or permission of instructor) Class 4, Credit 4 (S)

1030-412 Cross-sectional Anatomy
Basic sectional anatomy of the abdomen and pelvis is discussed. The course builds on the basic knowledge of anatomy and prepares the student to recognize sectional anatomy of major human structures, especially as they relate to medical imaging techniques. Lectures are augmented with exercises using prepared human sections, organ modeling and diagnostic imaging units. (1026-350, 360, or permission of instructor) Class 4, Credit 4 (W)

1030-414 General Vascular Evaluation
Provides basic knowledge of general vascular evaluation with an emphasis on the sonographic approach. Two-dimensional real-time imaging and Doppler techniques are presented as well as a discussion of other imaging modalities and their use in vascular evaluation. Performance of examinations on laboratory equipment is stressed. This is an internship course. (Fourth year in the ultrasound program or permission of faculty) Class 4, Credit 4 (S)

1030-552 Introduction to Obstetrical Ultrasound
Provides the ultrasound candidate with basic knowledge necessary to perform obstetrical examinations. High-quality image production, recognition of normal structures and basic pathologic states are stressed. Examination protocols, review of specific anatomy, film reading, and use of other imaging techniques are addressed. This is an internship course. (Fourth year in the ultrasound program or permission of faculty) Class 3, Credit 3 (F)

1030-553 Introduction to Gynecological Ultrasound
Information necessary to perform basic gynecologic sonographic examinations is presented. Examination strategies for various procedures are explored, as well as the integration of ultrasound into established clinical practices. This is an internship course. (Fourth year in the ultrasound program or permission of faculty) Class 3, Credit 3 (F)

1030-554 Advanced Obstetrical Ultrasound
Provides information necessary to perform more sophisticated obstetrical procedures utilizing ultrasound. Examination strategies for various procedures are explored as well as the integration of ultrasound into established clinical practices. This is an internship course. (Fourth year standing in ultrasound program or permission of faculty) Class 4, Credit 4 (W)

1030-556 Abdominal Ultrasound I
Laboratory simulation and classroom instruction are used to develop practical skills and clinical knowledge necessary to perform basic abdominal examinations utilizing ultrasound. High-quality image production, recognition of normal abdominal structures and basic pathologic states are stressed. Examination protocols, review of anatomy, film reading and use of other scanning techniques are addressed. This is an internship course. (Fourth year in the ultrasound program or permission of faculty) Class 3, Credit 3 (F)

1030-557 Abdominal Ultrasound II
A continuation of 1030-556. Laboratory simulation and classroom instruction are used to develop practical skills and clinical knowledge necessary to perform basic abdominal examinations utilizing ultrasound. High-quality image production, recognition of normal abdominal structures and basic pathologic states are stressed. Examination protocols, review of anatomy, film reading, and use of other scanning techniques are addressed. This is an internship course. (Fourth year in the ultrasound program or permission of faculty) Class 3, Credit 3 (F)

1030-558 Small Parts Ultrasound
Provides the classroom and clinical knowledge necessary to perform basic sonographic examination of anatomy classified as small parts, usually utilizing specialized equipment and high megahertz frequencies. Examination strategies for various procedures are discussed, as well as the role of ultrasound in established clinical practices utilizing small parts imaging. This is an internship course. (Fourth year in the ultrasound program or permission of faculty) Credit 3 (S)

1030-559 Further preparation of the ultrasound candidate for advanced imaging. Techniques of fetal imaging, Doppler skills and techniques, color Doppler and power Doppler imaging are stressed. Examination protocols, review of anatomy, film reading and use of other scanning techniques are addressed. This is an internship course. (Fourth year in the ultrasound program or permission of faculty) Class 4, Credit 4 (F)

1030-560 Seminar in Ultrasound
Candidates prepare a complete plan for an ultrasound department as if they had been hired to establish a new department in a hospital setting. The candidate will work together to develop the physical, administrative and financial aspects of a department. This is an internship course. (Fourth year in the ultrasound program or permission of faculty) Class 2, Credit 2 (S)

1030-561 Advanced Seminar in Ultrasound
Speaking, writing and researching skills are explored. Methods of basic research, develops writing strategies and oral presentations. Students develop or critique a research project and prepare a written document following common publishing guidelines in addition to making oral presentations. This is an internship course. (Fourth year in the ultrasound program or permission of faculty) Class 2, Credit 2 (W)

1030-570 Clinical Diagnostic Medical Sonography I
Prepares the student for application of classroom knowledge to the practice of ultrasound by means of a clinical internship. Performing basic, general ultrasound examinations in both the laboratory and clinical settings is stressed. Nursing procedures, ethical issues and medico-legal considerations also are discussed as they relate to the practice of ultrasound examination. This is an internship course. (Fourth year in the ultrasound program or permission of director) Credit 7 (F)

1030-571 Clinical Diagnostic Medical Sonography II
Further prepares the candidate for application of classroom knowledge to the practice of ultrasound by means of a clinical internship. Performing basic, general ultrasound examinations in both the laboratory and clinical settings is stressed. The candidate is expected to perform basic examinations with little, if any, assistance by the end of this course. This is an internship course. (Fourth year in the ultrasound program or permission of director) 1030-570 Credit 7 (W)

1030-572 Clinical Diagnostic Medical Sonography III
Final development of ultrasound examination skills by means of clinical internship. The candidate is expected to perform general ultrasound examinations with no assistance by the end of this course. This is an internship course. (Fourth year in the ultrasound program or permission of director, 1030-571) Credit 7 (S)

Physician Assistant

1032-200 Behavioral Medicine
Familiarizes physician assistant students with biological concepts and the human life cycle. Provides students with a foundation in basic psychopathology and its relationship to understanding human illness. Addresses basic principles of patient care in the context of biopsychosocial, cultural, and ethical issues while examining social structures in contemporary Western society. (Third year in the PA program) Credit 2 (S)

1032-210 Physician Assistant Seminar
Introduces the student to the role of the physician assistant in relationship to patients, supervising physicians, colleagues and other physician assistants. Emphasis is on developing a high degree of professionalism in conjunction with health care. Topics include legislation, certification, registration, professional organizations, sociomedical issues, ethics, legal and economic aspects of medicine, health care organization and medical records. (Third year in the PA program) Class 1, Credit 1 (W)

1032-330 Law and Medicine
This course will provide an overview of health care law, principles and ethics as it relates to the health care provider. Lecture topics will cover an introduction to law, criminal aspects of health care, patient consent issues, legal reporting obligations, contracts and antitrust, information management and health care records, HIPPA regulations, legal risk to the health care provider, end of life issues and malpractice issues. (Third year in the PA program or permission of instructor) Class 2, Credit 2 (W)

1032-401 Patient History and Physical Exam I
This first part of a three-quarter sequence introduces and develops the clinical psychosocial skills and anatomic/physiologic science involved in interviewing and examining patients. Includes practical medical terminology, attitude development and values clarification strategies to aid students in adopting a humanistic approach, interviewing techniques used during patient interaction, comprehensive database, demonstrated techniques for a complete physical examination of all body systems and explanation/implementation of the Problem Oriented Medical Record (POMR), Weekly patient contact. (Third year in the PA program or permission of instructor) Class 2, Credit 2 (F)
The systems to be covered this quarter include the assistant student to normal and abnormal function of cells and organ function. Corequisites: 1032-401, 420, 440.

This quarter, the students will predict common clinical and laboratory manifestations of important disease states. Third-year Physician Assistant program status; 1032-424; corequisites: 1032-402, 421, 441.

Assists in understanding the biology of human pathogens. The students study how this understanding can lead to therapeutic modalities for the treatment of human disease. Students have the opportunity to master specific skills that will be central to their roles as practicing physician assistants. Second year in the PA program. Credit 4 (S).

Provides the PA student requisite skills for professional courses and internships. Emphasis is on developing competence in basic skills in conjunction with patient care. Third year in the PA program or permission of instructor. Class 1, Credit 1 (S).

A study of the mechanics of medications: indications, effects, distribution, absorption, metabolism, excretion, interactions, pharmacokinetics and administration/dosing. Emphasizes agents commonly prescribed in the diagnosis and treatment of disease. A body systems approach is utilized to study cardiology, pulmonology, infectious diseases, dental diseases, otorhinolaryngology, neurology and ophthalmology. Third year in the PA program or permission of instructor. Class 3, Credit 3 (F).

Continuation of 1032-420: Indications, effects, distribution, absorption, metabolism, excretion, interactions, pharmacokinetics and administration/dosing. Emphasizes agents commonly prescribed in the diagnosis and treatment of disease. A body systems approach is utilized to study fluids/electrolytes/nutrition, gastroenterology, nephrology, urology, endocrinology and dermatology. Third year in the PA program or permission of instructor. Class 3, Credit 3 (W).

Continuation of 1032-421. Indications, effects, distribution, absorption, metabolism, excretion, interactions, pharmacokinetics and administration/dosing. Emphasizes agents commonly prescribed in the diagnosis and treatment of disease. A body systems approach is utilized to study hematology, obstetrics, gynecology, orthopedics, geriatrics, pediatrics and psychiatry. Prescribing and dispensing are discussed. Third year in the PA program or permission of instructor. Class 2, Credit 2 (S).

Pathophysiology is the systematic study of abnormal cell and organ function. The goal in medical practice is to rationally and systematically assess this abnormal function when making a diagnosis, and then to reverse the pathological process using therapy. This course will introduce the physician assistant student to normal and abnormal function of cells in general; and then how these cellular abnormalities affect function of certain organ systems. The systems to be covered include: musculoskeletal, thyroid, liver, pancreas, heart/circulatory and renal. The students will also be introduced to laboratory markers of abnormal organ function. Using the knowledge acquired in this class, the students will predict common clinical and laboratory manifestations of important disease states. Third-year Physician Assistant program status; corequisites 1032-402, 421, 441. Class 4, Credit 4 (F).

This course is a continuation of 1032-424 and will introduce the physician assistant student to normal and abnormal function of cells and organ function. The system to be covered this quarter include the renal/continuous, hematologic, and immunologic systems. In addition, students will be introduced to mechanisms and manifestations of neoplasia, and general principles of cancer diagnosis. The students will be introduced to laboratory markers of abnormal organ function. Using the knowledge acquired in this class, the students will work in small groups and present the results of their critical evaluation of assigned clinical case presentations. Third-year Physician Assistant program status; 1032-424; corequisites: 1032-402, 421, 441. Class 4, Credit 4 (W).

Introduces PA students to the principles of diagnostic imaging: physical foundations, recognition of gross abnormalities, determination of a diagnostic impression and application of different diagnostic procedures. Emphasis is on correlating body systems with findings of specific radiographic studies. Third year in the PA program or permission of instructor. Class 1, Credit 1 (S).

In Society and Patient Care, students will explore the many factors that can influence appropriate access to health care. In particular, we will examine how stereotypes and provider’s inappropriate/lack of knowledge might contribute to suboptimal care among at-risk patients. Topics that will be explored include issues related to race, religious, ethnic, and family diversity; sexual orientation; gender identity; limitations in access due to socioeconomic issues and homelessness. We will explore ways in which barriers to appropriate care can be minimized or eliminated. Students will also be given tools to recognize risk factors for and signs/symptoms of child abuse, intimate partner abuse and drug/alcohol abuse. Third year of the PA program. Class 3, Credit 3 (F).

The clinical medicine courses give the PA student the necessary foundation of knowledge and understanding to deal with the patient in the clinical context. This preparation precedes the clinical rotations in which students apply their knowledge in examining and expanding their expertise in evaluation, clinical procedures and problem solving. A body systems approach is utilized to study cardiology, pulmonology, nephrology, hematology, psychiatry and obstetrics/gynecology. Third year in the PA program or permission of instructor. Class 15, Credit 4 (F).

This section covers fluids/electrolytes/nutrition, gastroenterology, neurology, orthopedics, rheumatology/allergy, infectious disease, endocrinology and dermatology. Third year in the PA program or permission of instructor. Class 15, Credit 4 (W).

Continuation of 1032-441. Further areas of study encompass emergency medicine, oncology, ophthalmology, dermatology and preventive medicine, surgery, geriatrics, pediatrics. Third year in the PA program or permission of instructor. Class 15, Credit 4 (S).

Mandatory rotations are in fields of general clinical practice that build a solid basic understanding and groundwork. These required rotations are inpatient medicine, family practice, orthopedics, emergency medicine, OB/GYN, pediatrics, general surgery, geriatrics, and psychiatry. Students also are able to select one elective rotation. These latter rotations allow students to individualize their experiences according to their own areas of interest. Fourth year in the PA program. Credit 12 (SU).

Continuation of PA Clinical Rotation I. Fourth-year standing in PA program. Credit 12 (F).

Continuation of PA Clinical Rotation II. Fourth-year standing in PA program. Credit 12 (W).

Continuation of PA Clinical Rotation III. Fourth-year standing in PA program. Credit 12 (S).

This course will introduce the student to the IDL environment as a data visualization tool and a programming language. The student will learn the various capabilities of the package and how they can rapidly prototype solutions to various science and engineering problems. As these solutions are developed, fundamental concepts of programming and data structures will be introduced. Programming assignments will include fundamental problems as well as a project involving use of computer simulation packages. Students will complete the course with a project in an area of their choosing. (Third-year Physician Assistant program status; 1032-440; corequisites: 1032-402, 421, 441). Class 4, Credit 4 (F).

Continuation of PA Clinical Rotation III. Fourth-year standing in PA program. Credit 12 (S).

Programming for Imaging Science

This course will introduce the student to the IDL environment as a data visualization tool and a programming language. The student will learn the various capabilities of the package and how they can rapidly prototype solutions to various science and engineering problems. As these solutions are developed, fundamental concepts of programming and data structures will be introduced. Programming assignments will include fundamental problems as well as a project involving use of computer simulation packages. Students will complete the course with a project in an area of their choosing. (Third-year Physician Assistant program status; 1032-440; corequisites: 1032-402, 421, 441). Class 4, Credit 4 (F).

1051-211

Imaging Science

This course will introduce the student to the IDL environment as a data visualization tool and a programming language. The student will learn the various capabilities of the package and how they can rapidly prototype solutions to various science and engineering problems. As these solutions are developed, fundamental concepts of programming and data structures will be introduced. Programming assignments will include fundamental problems as well as a project involving use of computer simulation packages. Students will complete the course with a project in an area of their choosing. (Third-year Physician Assistant program status; 1032-440; corequisites: 1032-402, 421, 441). Class 4, Credit 4 (F).
1051-215 Imaging Science Fundamentals
An exploration of the fundamentals of imaging science and the imaging systems of the past, present and future. Imaging systems studied include the human visual system, consumer and entertainment applications (e.g., traditional and digital photography; television, digital television and HDTV, virtual reality); medical applications (e.g., X-ray, ultrasound, MRI); business/document applications (e.g., impact and non-impact printing, scanners, printers, fax machines, copiers); and systems used in remote sensing and astronomy (e.g., night-sky systems, ground- and satellite-based observatories). The laboratory component includes experiments related to the principles and theories discussed in the corresponding lecture. Laboratory experiments give students experience with many imaging systems and exposure to the underlying scientific principles. (Competency in algebra) Class 3, Lab 2, Credit 4 (E, W)

1051-217 Fundamentals of Astronomical Imaging
Familiarizes students with the goals and techniques of astronomical imaging. The broad nature of astronomical sources is outlined in terms of requirements on astronomical imaging systems. These requirements are then investigated in the context of the astronomical imaging chain. Imaging chains in the optical, X-ray, and/or radio wavelength regimes will be studied in detail as time permits. Laboratory assignments will range from construction and characterization of a hand-held telescope to analysis of images collected at the RIT Observatory. (1051-215 or permission of instructor) Class 3, Lab 2, Credit 4 (W)

1051-253 Special Topics: Imaging Science
Topics of special interest, varying from quarter to quarter, selected from the field of imaging science and not currently offered in the curriculum. Specific topics are announced in advance. (Not offered every quarter; for more information see www.cis.rit.edu/node/309 or consult director of the Center for Imaging Science) Class variable, Credit variable

1051-290 Introduction to Scientific Research
This course will expose a student who is at the early stages of their post-secondary education or at the end of their secondary education to the process of conducting scientific research in an established university research laboratory setting. The student will perform experiments, document results, present their findings, and work closely with a faculty mentor who will design the research to be conducted. It is anticipated that this may be the student's first exposure to the field in which they are conducting research and the importance of background research and literature review will be emphasized. (Permission of instructor) Credit variable (F, W, S, Su)

1051-300 Introduction to Imaging Systems
This course provides a framework for the study of imaging science. Elements of imaging science taxonomy, including the imaging chain, image analysis and imaging systems characterization are introduced or reviewed. Practical examples from familiar imaging systems such as digital and film still cameras, LCD displays, NTSC video, etc., are introduced and selected systems are studied in depth. Current events in the development or use of imaging science will be incorporated at the discretion of the instructor to reinforce understanding of the structure of the field of imaging science. The student will master basic laboratory skills in the use of still and video cameras, including effects of and control of illumination, exposure, focus and depth of field, focal length, and flat field calibration. (1017-311, or equivalent and permission of department) Class 3, Lab 3, Credit 4 (F)

1051-303 Geometrical Optics
This course introduces the description of optical imaging systems based on the ray model of light. Topics include refraction, reflection, imaging with lenses, stops and pupils, and optical system design using computer software. (1017-313) Class 3, Lab 3, Credit 4 (W)

1051-313 Interactions Between Light and Matter
Fundamental aspects of the interaction of electromagnetic radiation and materials. The course is designed to provide students with an understanding of the physical mechanisms underlying instruments used to detect, measure, and image electromagnetic energy (CCDs, silver halide film, OPC, vidicon, etc.). Basic concepts of quantum theory, atomic structure and the particle/wave duality of light and matter are introduced. Electronic transitions in materials and the physical and chemical results of light absorption are explored, with practical examples in image detection. Applications in detector sensitivity, spectroscopy, human vision, and colorimetry will be touched on. (1016-283, 1017-314) Class 4, Credit 4 (W)

1051-320 Linear Mathematics for Imaging
This course applies the concepts of complex numbers, vectors, and matrices to represent models of discrete linear imaging systems. Representations of discrete imaging systems are considered and the representation in the frequency domain is derived via the discrete Fourier transform. The continuous Fourier transform is introduced. (1016-305) Class 4, Credit 4 (W)

1051-350 Vision and Psychophysics
The final "component" in many imaging systems is visual perception. The human visual system can also be considered as an imaging system itself; arguably the most complex system, from visual optics through high-level cortical processing such as the perception of depth and motion. An understanding of the characteristics and limitations of the visual system aids in designing and evaluating imaging systems. Unlike other elements of imaging systems, it is difficult or impossible to get objective measures of visual perception; psychophysics provides tools for measuring perceptual mechanisms. This course presents an overview of the organization and function of the human visual system and some of the psychophysical techniques used to study visual perception. (1051-300 or permission of instructor) Class 4, Credit 4 (W)

1051-361 Digital Image Processing I
This course is an introduction to the basic concepts of digital image processing. The student will be exposed to image capture and image formation methodologies, sampling and quantization concepts, statistical descriptors and enhancement techniques based upon the image histogram, point processing, neighborhood processing, and global processing techniques based upon kernel operations and discrete convolutions as well as the frequency domain equivalents, geometrical operations for scale and rotation, and gray-level resampling techniques. Emphasis is placed on applications and efficient algorithmic implementation using the IDL programming language. (1016-283, 1016-305, 1051-211 or equivalent) Class 4, Credit 4 (F)

1051-370 Radiometry
This course introduces the concepts of quantitative measurement of electromagnetic energy. The basic radiometry terms are introduced using calculus-based definitions. Governing equations for source propagation and sensor output are derived. Simple source concepts are reviewed and detector figures of merit are introduced and used in problem solving. The radiometric concepts are then applied to simple imaging systems so that a student could make quantitative measurements with imaging instruments. (1016-283, 1017-313) Class 3, Lab 3, Credit 4 (S)

1051-402 Color Science
This course presents an introduction to color perception, measurement, and reproduction. Based upon an understanding of the human visual system, psychophysics, and radiometric measurements and computations, this course explores in more detail the basis of color perception, applies those principles to the measurement of color stimuli, and then explores applications of color science in imaging. (1051-350, 370) Class 4, Credit 4 (F)

1051-420 Environmental Applications of Remote Sensing
An introduction to the wide range of environmental applications of remote sensing. Systems for detecting physical phenomena and analysis techniques for extracting useful information are described for active and passive sensors operating throughout the electromagnetic spectrum from both airborne and spaceborne sensors. The Earth's atmospheric, hydropheric and terrestrial processes are examined at a global scale. Application areas studied include monitoring vegetation health, identifying cultural features, assessing water resources, and detecting pollution and natural hazards. (1017-213 or permission of instructor) Class 4, Credit 4 (W)

1051-446 Multi-wavelength Astronomical Imaging
Survey of modern imaging techniques in astronomy. Students analyze astronomical imaging systems in terms of the requirements placed on the systems, and the strengths and limitations of each component in the imaging chain. Examples of specific techniques covered include optical CCD cameras and spectrometers, X-ray CCD imaging spectroscopy, and radio molecular mapping. (1017-314, 1017-301 also recommended) Class 3, Lab 1, Credit 4 (S)

1051-452 Modulation Transfer Function
This course applies the mathematical and computational skills acquired in previous courses to the analysis and modeling of spatial properties of both linear and non-linear systems of both discrete and continuous processes. Experimental techniques for measuring resolution, MTF, CTF, PSF, and LSF of individual and complex systems will be described. These functions will be modeled mathematically for both individual imaging processes and for sequences of linear and non-linear processes. Physical mechanisms (including finite detectors and sampling, optical turbidity, and electronic time constraints) will be treated mathematically for their impact on MTF. (1051-320) Class 3, Credit 3 (W)
1051-453 Noise and Random Processes
This course applies the mathematical and computational skills acquired in previous courses to the analysis and modeling of noise and random processes in a sequence of imaging processes. Experimental techniques for measuring noise will be studied and practiced. Noise characteristics of imaging systems will be modeled based on mathematical probability and moment theory. Jacobian operators and Fourier theory will be used to model correlated noise and to propagate noise properties through complex sequences of imaging processes. Practical metrics of noise and signal/noise ratios will be examined for their utility as figures of merit for imaging systems. (1051-452, 1016-351 or equivalent) Class 3, Credit 3 (S)

1051-455 Physical Optics
Physical principles are used to develop a firm fundamental understanding of optics and imaging. Main topics include light as an electromagnetic wave, light at an interface, polarization, interference, and diffraction. Also includes a brief introduction to modern optics. Emphasis is placed on the fundamental limitations of an optical system on resulting images. (1017-313, 1051-320 or 1017-480) Class 3, Lab 1, Credit 4 (S)

1051-462 Digital Image Processing II
This course is an introduction to the more advanced concepts of digital image processing. The student will be exposed to image reconstruction, noise sources and techniques for noise removal, information theory, image compression, video compression, wavelet transformations and the basics of digital watermarking. Emphasis is placed on applications and efficient algorithmic implementation using the IDL programming language. (1051-361) Class 4, Credit 4 (W)

1051-463 Digital Image Processing III
This course discusses the digital image processing concepts and algorithms used for the analysis of hyperspectral, multispectral, and multi-channel data in remote sensing and other application areas. Concepts are covered at the theoretical and implementation level using current, popular commercial software packages and high-level programming languages for examples, homework and programming assignments. The requisite multivariate statistics are presented as an extension of the univariate statistics to which the students have been previously exposed. Topics to be covered will include methods for supervised data classification, clustering algorithms and unsupervised classification, multispectral data transformations, data redundancy reduction techniques, image-to-image rectification, and data fusion for resolution enhancement. (1051-211 or equivalent, 1051-462, 1016-314) Class 4, Credit 4 (S)

1051-465 Detectors
This course provides an overview of the underlying physical concepts, designs, and characteristics of detectors used to sense electromagnetic radiation having wavelengths ranging from as short as X-rays to as long as millimeter radiation. The basic physical concepts common to many standard detector arrays will be reviewed. Some specific examples of detectors to be discussed include photomultipliers, microchannel plates, hybridized infrared arrays, PIN detectors, and SIS mixers. The use of detectors in fields such as astronomy, high energy physics, medical imaging, and digital imaging will be discussed. (1051-313, 1051-370) Class 3, Demonstration 1, Credit 4 (S)

1051-490 Undergraduate Research
This course engages a student in the process of conducting scientific research in an established university research laboratory. The student will work with a research team (with at least the sponsoring faculty mentor), perform experiments, document results, present findings, and work closely with the faculty mentor. The interaction will allow the student to develop approaches to solving the particular problem based on their experiences and through detailed technical discussions/presentations to the members of the research team. The team will critically review the results of the experimental work and the student's proposed plans as well as offer suggestions concerning options for future work. The student will have a firm scientific foundation in imaging science. Domain-specific knowledge for the course will be gained through review of the literature. (Permission of instructor) Class variable, Credit variable (F, W, S, Su)

1051-499 Imaging Science Co-op
Cooperative education experience for undergraduate imaging science students. Credit 0 (offered every quarter)

1051-501 Research Practices
Develops skills in scientific research, including use of library resources, technical report writing, technical presentations. Students are required to research, write and present a proposal for a research project. The proposed research may be performed in 1051-302, 503. (Matriculation in SIMG) Class 3, Credit 3 (S)

1051-502 Senior Project I
Students perform the independent research project defined in 1051-501 under the direction of a faculty member in imaging science. The student presents the results of the project to a public meeting. Class 1, Credit 4

1051-503 Senior Project II
Students perform the independent research project defined in 1051-501 under the direction of a faculty member in imaging science. The student presents the results of the project to a public meeting. Class 1, Credit 4 (minimum 3)

1051-528 Design and Fabrication of a Solid State Camera
The purpose of this course is to provide the student with hands-on experience in building a CCD camera. The course provides the basics of CCD operation including an overview, CCD clocking, analog output circuitry, cooling and evaluation criteria. (Senior status imaging science or permission of instructor) Class 1.5, Lab 7.5, Credit 4 (W)

1051-553 Special Topics: Imaging Science
Topics of special interest, varying from quarter to quarter, selected from the field of imaging science and not currently offered in the curriculum. Specific topics are announced in advance. (Not offered each quarter. For more information see www.cis.rit.edu/node/309 or consult director of the Center for Imaging Science) Class variable, Credit variable

1051-599 Independent Study
A student-proposed advanced project sponsored by an instructor. Approval required by the department chairperson and the director. Available to upper-level students with a GPA of 3.0 or greater. Credit variable

Honors Courses

1055-265 Honors Discrete Mathematics
This is an honors course in discrete mathematics designed to challenge honors students and others capable of excellence in mathematics with demanding problems and proofs in introductory number theory, set theory, logic, and combinatorics. (Honors student status or permission of instructor) Class 4, Credit 4 (F)

1055-300 The Greening of RIT
This course seeks to teach students about the concept of sustainability by using the campus of RIT as their laboratory. During the quarter, students will investigate methods and strategies used by other colleges and universities to minimize environmental impacts in areas such as energy use, solid and hazardous waste management, transportation, landscaping and construction, food production and consumption, and purchasing. They will assess their personal and RIT’s environmental impacts, develop strategies for minimizing the impacts, implement changes where possible, and prepare reports designed to guide RIT to becoming a greener campus. (Honors student status) Class 3, Lab 3, Credit 4 (S)

1055-302 Adventures in Ornithology
In this course we will explore some of the incredible adaptations of physiology and behavior that characterize birds as a class of organisms and as an individual species. Specific topics will include, but are not limited to, adaptations for flight, navigation during migration, communication by song, cooperative behavior, and avian conservation. Unique adventures through field experience will be an important component of this course, including a three-day camping trip to Pt. Pelee, Canada, during a weekend in May. Other possible adventures include participation at the RIT bird-banding site and at Braddock’s Bay Observatory, a trip to the Seneca Park Zoo, and a variety of other activities designed to complement the classroom portion of the course. (Corequisites: 1001-235 or 1008-202, or permission of instructor) Class 3, Field work 25 per quarter, Credit 4 (S)

1055-304 Science of Forensics
This course will address the scientific, ethical, and legal aspects of forensic analyses. The course includes a critical overview of ethical and legal issues, and will concentrate on the explanation and description of the scientific bases of chemical and biological assays used in the crime laboratory. Also included will be discussions of issues related to evidence handling and conflicts between law and science. Each major topic will be presented in the context of an actual case and discussed in class. (One year of biology or equivalent, one year of chemistry or equivalent, and permission of instructor) Class 3, Credit 3 (S)
1055-319 Honors Research Statistics
This is a project-based introductory statistics course for RIT honors students. Students will learn to formulate research problems in statistical terms, summarize data, draw inferences about populations, and then state results in the context of an application. The statistical software package Minitab and a graphing calculator will be used. This course may be taken in place of 1016-319 or 1016-314. (1016-204, honors student status or permission of instructor) Class 4, Credit 4 (W)

1055-351 Honors Probability
Topics discussed in this course include: descriptive statistics; sample spaces and events; axioms and probability; counting techniques; conditional probability and independence; distributions of discrete and continuous random variables; joint distributions; and central limit theorem. (1016-283 and Honors student status, or permission of instructor) Class 4, Credit 4 (S)

1055-361 Honors Codes and Ciphers
This course will introduce, explain, and employ the basic techniques of cryptography, both classical and modern. Topics will include: shift, Vignere, affine, Hill ciphers, one-time pad, Enigma and modern day cryptosystems: Data Encryption Standard (DES) and Advanced Encryption Standard (AES), public key encryption schemes-RSA, and hash functions. The course will include a brief introduction to number theoretic tools used in cryptography. (Honors standing or permission of instructor) Class 4, Credit 4 (upon sufficient demand)

1055-366 Honors Discrete Mathematics II
This course is a continuation of 1055-265 Honors Discrete Mathematics I. Topics include, relations, their closures, equivalence relations, partial orderings, recursively defined sets, countable and uncountable sets, algebra and an introduction to graph theory. (1055-265 and Honors student status and corequisite 1016-283, or permission of instructor) Class 4, Credit 4 (W)

Interdisciplinary Courses

1099-200 Introduction to Calculus and Physics
This class enables students to develop foundation skills and knowledge in mathematics and physics in order to increase their success in future calculus and physics classes. This course does not count towards general education credit in mathematics and science. Class 4, Credit 4 (SU)

1099-260 Frontiers of Science I
This class enables students to develop knowledge and skills in four areas of frontier scientific research undertaken on the RIT campus. Class 3, Lab 2, Credit 4 (W)

1099-261 Frontiers of Science II
Students will extend their knowledge and skills in an area chosen from 1099-260 Frontiers of Science I. They will work independently as individuals or in teams to advance their scientific literacy and communication skills. (1099-260 or permission of instructor) Class 3, Lab 2, Credit 4 (S)

Course numbering: RIT courses are generally referred to by their seven-digit registration number. The first two digits refer to the college offering the course. The third and fourth digits identify the discipline within the college. The final three digits are unique to each course and identify whether the course is noncredit (less than 99); lower division (100–399); upper division (400–699); or graduate level (700 and above).

Unless otherwise noted, the following courses are offered annually. Specific times and dates can be found in each quarter’s schedule of courses, published by the Office of the Registrar. Prerequisites and/or corequisites are noted in parentheses near the end of the course description.

Interdisciplinary Courses

0806-101 Job Search Process
Course goals are to prepare students to secure a cooperative or professional work experience in the student's major and to assist the student in acquiring the skills for accessing information, networking, developing resumes and letters, completing various employment-related forms, interviewing, and using various communication techniques in preparing students for the job search process. Class 2, Credit 2 (F, W)

0806-201 Employment Seminar
Provides the student with an opportunity to synthesize a work experience with knowledge gained in technical and liberal arts courses in order to prepare for permanent employment. Experiences will include resume revisions, further research into potential permanent employment, including accessing professional journals, electronic networks and interviewing for permanent employment. Discussions relating to financial considerations to be used in evaluating employment opportunities and individual roles with the organization will also be included. Class 1, Credit 1 (F, W, S)

0887-100 Wide World of Technology
This survey course introduces undecided students to technology, its evolution, future, and influence on all aspects of life. It examines current technologies and their impact on individuals and society. It explores the symbiotic relationship between technology and values. Class 2, Credit 2 (F)

0887-200 Freshman Seminar
Provides entering NTID students with opportunities to enhance personal, social, intellectual, academic and ethical decision making in order to maximize their college experience. Students have opportunities to explore and negotiate the college environment, confront questions of identity and social roles, deal with ethical issues with faculty members and peer mentors, expand critical thinking skills, and learn and use academic skills. Course emphasizes student self-assessment of current strengths and areas of needed improvement along with development of plans for ongoing growth, rather than attainment of skill mastery within a quarter-length course. Class 2, Credit 2 (F, W, S)

0887-210 Career Decision Making
This course provides students with information and experience regarding career choices and selecting a major using a career decision-making model. Students develop a career plan after completing career and self-assessments and gathering information from career and direct exposure to academic disciplines. Includes program sampling. (0887-200 or permission of CES department) Class 2, Lab 1, Credit 2 (F, W, S)

0887-398 Credit variable (F, W, S)

0887-399 Credit variable (F, W, S)

American Sign Language I
0875-201 American Sign Language I
This course expands the basic principles presented in ASL I. ASL II teaches students to use linguistic features, cultural protocols and core vocabulary to function in basic ASL conversations that include ASL grammar for giving directions, describing, making requests, talking about family, occupations and routines, and attributing qualities to others. To progress to the next course in the series (0875-202) students must complete the course with a grade of C or better. Class 3, Lab 2, Credit 4 (F, W)

American Sign Language II
0875-202 American Sign Language II
This course expands the basic principles presented in ASL I. ASL II teaches students to use linguistic features, cultural protocols and core vocabulary to function in basic ASL conversations that include ASL grammar for giving directions, describing, making requests, talking about family, occupations and routines, and attributing qualities to others. To progress to the next course in the series (0875-203), students must complete the course with a grade of C or better. (0875-201 with grade of C or better) Class 3, Lab 2, Credit 4 (F, W)

American Sign Language III
0875-203 American Sign Language III
This course expands on principles presented in ASL I and II courses. The ASL III course focuses on ASL features related to time, subject/object, classifiers, non-manual behaviors, and fingerspelling (including number and loan signs). In addition, ASL semantics and syntax (including conversational regulators) are introduced. To progress to the next course in the series (0875-301), students must complete the course with a grade of C or better (0875-202 with grade of C or better) Class 3, Lab 2, Credit 4 (W, S, Su)

Deaf Culture and Community
0875-212 Deaf Culture and Community
This course is designed to introduce students to aspects of Deaf culture and the deaf community. The distinction between these two groups will be reviewed and characteristics of both will be identified. Students will learn about the language, norms of behavior, values, traditions and possessions (materials) of D/deaf people. The evolution of a pathological view of D/deaf people to a cultural one will be analyzed from a historical and sociological perspective. Intercultural issues relating to the role of hearing people within the Deaf community will also be covered. (0875-302) Class 4, Credit 4 (S)

Introduction to the Field of Interpreting
0875-213 Introduction to the Field of Interpreting
This course provides students with information regarding the role and function of an interpreter. Information about the history of interpreting, terminology, employment options with regard to various settings, and the function of assessing as part of the interpreting process is presented. Additional topics include values and characteristics of a profession and cumulative trauma disorders (CTDs). Class 4, Credit 4 (F)

Intermediate Fingerspelling and Number Skills Development
0875-300 Intermediate Fingerspelling and Number Skills Development
This course is designed to help students develop intermediate receptive and expressive fingerspelling and number skills. Students will develop expressive clarity and fluency suitable for signing. Attention will be on whole-word and phrase comprehension and expression in isolation; comprehension of fingerspelled words and numbers embedded in signed text; management strategies to request repetition of fingerspelled words and numbers; and production of short narratives that include fingerspelling, lexicalized fingerspelling and numbers. Students will be expected to produce fingerspelling and numbers clearly, accurately and without hesitation while signing. Spelling accuracy will also be required. (0875-301) Class 4, Credit 4 (W)
0875-301 American Sign Language IV
This course builds upon information taught in ASL I-III and introduces new grammatical features of ASL and specialized vocabulary, while continuing to increase fingerspelling and numbers receptive and expressive skills. In addition, some features of ASL discourse are taught in organizing and explaining contextual information. To progress to the next course in the series (0875-302, students must complete the course with a grade of C or better. (0875-203 with grade of C or better) Class 4, Credit 4 (F)

0875-302 American Sign Language V
This course builds upon information taught in ASL I-V. Various structures of ASL discourse are the focus of this class. Students continue learning and using ASL vocabulary, fingerspelling, numbers, and grammatical features of ASL. To progress to the next course in the series (0875-303), students must complete course with a grade of C or better. (0875-301 with grade of C or better) Class 4, Credit 4 (W)

0875-303 American Sign Language VI
This course builds upon information taught in ASL I - V. Students continue learning and using ASL vocabulary, grammatical principles and discourse features related to narratives in ASL. Students analyze multiple meaning English words and English Idioms for expressing concepts in ASL. Issues related to Deaf culture continue to be introduced based on unit topics. To progress to courses English to ASL Interpreting I and ASL to English Interpreting I (0875-315 & 0875-316), students must complete the course with a grade of C or better. (0875-302 with grade of C or better) Class 4, Credit 4 (S)

0875-305 Deaf Expressions
Students will explore historical, philosophical, linguistic, social, cultural, educational, medical and artistic past, present, and future of deaf/Deaf/hard-of-hearing people. This course uses an on-line format to discuss concepts and perspectives found in the assigned book(s) and visual media (film, tv, etc). Each time the course is offered the book and visual media will be different so students may take this course multiple times. Books/media will be chosen from areas with relevance to Deaf Culture and community, such as D/ deaf literature & the Arts, D/deaf history, D/deaf issues, significant D/deaf people, and ASL. This course is designed for students unfamiliar with ideatools software, an optional face-to-face orientation meeting with the instructor is offered in the first week of class.
Class 1, Credit 1 (F, W, S)

0875-311 Processing Skills Development
This course is an introduction to the mental processing skills (pre-interpreting skills) of consecutive and simultaneous interpretation. This course includes an overview of the theoretical models of interpretation, provides skills development activities for isolated interpreting sub-tasks and practice activities for the integration of these tasks in translation and consecutive interpreting activities. Course content includes interpreting theory, visualization, listening and comprehension, shadowing, paraphrasing, abstracting, dual task training, text analysis (including identification of main point, summarizing and structuring), cloze skills and translation. (0875-302) Class 4, Credit 4 (S)

0875-315 English to ASL Interpreting I
This is the first course in a three-course sequence in which students develop the ability to produce an equivalent ASL message from a spoken English source message. The focus of this course is text analysis and consecutive production of an equivalent message in the target language. Content also includes interpreting management strategies for spoken English to ASL interpreting. Students will interpret both rehearsed and unrehearsed monologues and dialogues. Warm-up exercises will be performed as part of the self-care regimen recommended for sign language interpreters. To progress to course English to ASL Interpreting II (0875-325), students must complete course with a grade of C or better. (0875-303 with grade of C or better) Class 4, Credit 4 (F)

0875-316 ASL to English Interpreting I
This is the first course in a three-course sequence in which students develop the ability to produce an equivalent spoken English message from an ASL source message. The focus of this course is text analysis and consecutive production of an equivalent message in the target language. Content also includes interpreting management strategies for ASL to spoken English interpreting. Students will interpret both rehearsed and unrehearsed monologues and dialogues. Warm-up exercises will be performed as part of the self-care regimen recommended for sign language interpreters. To progress to course ASL to English Interpreting II (0875-326), students must complete course with a grade of C or better. (0875-303 with grade of C or better) Class 4, Credit 4 (F)

0875-320 Practical and Ethical Applications
Students examine the underlying principles of the code of professional conduct and discuss application of the various situations and settings in which sign language interpreters work. Students will explore how professional interpreters apply these principles in their daily work and how deaf consumers perceive the ethical role and function of interpreters. In addition to ethical considerations, etiquette and protocol for each setting will be discussed. Settings include K-12, post-secondary, religious, medical, mental health, deaf-blind, performing arts, business and industry, and vocational rehabilitation. To progress to Practicum and Seminar I (0875-350), students must complete course with a grade of C or better. (0875-213, 315, 316) Class 4, Credit 4 (W)

0875-325 English to ASL Interpreting II
This is the second in a three-course sequence in which students develop the ability to produce an equivalent ASL message from a spoken English source message. Specific discipline areas will be addressed. Students will develop the ability to apply text analysis skills to the simultaneous English-to-ASL interpreting task. Additionally, students will develop the ability to apply the principles of diagnostic feedback. One special area of emphasis will include affect equivalency between source and target languages. Warm-up exercises will be performed as part of the self-care regimen recommended for sign language interpreters. To progress to Practicum and Seminar I (0875-350), students must complete course with a grade of C or better. (0875-315 with a grade of C or better) Class 4, Credit 4 (W)

0875-326 ASL to English Interpreting II
This is the second in a three-course sequence in which students develop the ability to produce an equivalent English message from an ASL source message using simultaneous interpreting strategies. Specific discipline areas will be addressed. Students will develop the ability to apply text analysis skills to the simultaneous ASL-to-English interpreting task. Additionally, students will develop the ability to apply the principles of diagnostic feedback. One special area of emphasis will include affect equivalency between source and target languages. Warm-up exercises will be performed as part of the self-care regimen recommended for sign language interpreters. To progress to Practicum and Seminar I (0875-350), students must complete course with a grade of C or better. (0875-316 with a grade of C or better) Class 4, Credit 4 (W)

0875-350 Practicum and Seminar I
The student experiences a practicum placement under the immediate supervision of a professional interpreter who functions as the student’s mentor, and the seminar instructor (supervision instructor). The practicum will involve such activities as observing the mentor and a variety of other interpreters at work; preparing videotapes for mentor critique; interpreting under the supervision of the mentor; and meeting weekly with the mentor to discuss the practicum experience. Additionally, practicum students will meet together weekly to share observations and experiences gained from the practicum placement. Class discussions focus on linguistic issues in interpretation, ethical dilemmas, situational concerns and problem solving. Students must complete this course with a grade of C or better. (Permission of instructor, cumulative GPA 2.5; 0875-320, 325, 326 with grades of C or better; and in good standing) Field experience a minimum of 100 hours. Class 2, Credit 4 (F, W, S, Su)

0875-398 Special Topics: ASL-English Interpretation
Credit variable (F, W, S)

0875-399 Independent Study: ASL-English Interpretation
Credit variable (F, W, S)

0875-400 Interactive Interpreting
In this course students advance their skills in interpreting alone and with team interpreters for interactive assignments within small group and one-to-one settings. Students will expand their understanding and use of ASL and English vocabularies related to content areas that are of current interest to Deaf and hard-of-hearing individuals locally and nationally. Students will also advance their interpreting analysis skills. (0875-325, 326) Class 2, Lab 4, Credit 4 (S)

0875-411 Interpreting Frozen and Literary Texts
This course will focus on skills and techniques for the interpretation of frozen texts in English and ASL. Work includes translation, analysis and interpretation (between English and ASL) of source texts, including prayers, music, poetry, drama, etc. Class 4, Credit 4 (offered annually)
This course is designed to prepare students to interpret in middle and second-
ary school settings. Students will learn about interpreting for foreign language
students to request and work with interpreters in community and post-
second settings. The course addresses strategies for interpreting classroom discourse
and interpreting issues that are pertinent to elementary students. The course
provides students with the opportunity to interpret and analyze issues in
the field of interpreting. While the course content and focus will vary depending on current
issues and student interest/experiences, the course will provide an advanced
experience of problem solving and value clarification. Students will develop
and demonstrate their abilities to define a research topic or problem, gather
and evaluate scholarly evidence, and present their findings in a paper and presen-
tation. (0875-501, 502) Class 4, Credit 4 (W, S)

This course includes an overview of the history and current status of educa-
tional interpreting throughout the United States. Content includes the role, practices
and skills of educational interpreters in K-12 settings; communica-
tion systems; pertinent laws and regulations; resources, information and strat-
egies for consumer awareness and education; administrative practices and
personal structure of school systems; assessment and management of educa-
tional interpreters; and topics that concern educational interpreters. (0875-400)
Class 4, Credit 4 (S)

In this course students advance their skills in simultaneously producing
equivalent spoken English messages from ASL or contact language source
messages. Single-speaker texts on specific topical areas for large group settings
will be the focus of this course. Students will continue to develop their English
vocabulary, ASL vocabulary, interpreting analysis skills, and strategies for team
interpreting. To progress to Practicum and Seminar II (0875-510), students must complete course with a grade of C or better. (0875-400) Class 4, Credit 4 (F)

This course provides the student with experiential education under the super-
vision of a professional interpreter who functions as the student’s mentor. The 10-week practicum consists of a minimum of 100 hours and will focus on
gaining experience interpreting. The student may select a practicum placement in the post-secondary, K-12 or community setting. Additionally, students will meet two hours weekly in seminar, with other practicum students, to share
observations and experiences gained from the practicum placement. Seminar
discussions will focus on linguistic issues in interpretation, application of
professional and business ethics, situational concerns and problem solving.
The seminar instructor will be the practicum student’s supervising instructor. Students must complete this course with a grade of C or better. (Permission of instructor; cumulative GPA of 2.5 or better; 0875-501, 502 with grades of C or better; and in good standing) Field experience a minimum of 100 hours. Class 2, Credit 4 (F, W, S, Su)

This course is designed to prepare students to interpret in elementary school
settings. Content will include an orientation to activities, discipline content
and sign vocabulary, language development, psycho-social development and
interpreting issues that are pertinent to elementary students. The course
addresses strategies for interpreting classroom discourse and various content
areas. Vocabulary for various elementary content areas will be introduced. Students will do English-to-ASL and ASL-to-English interpreting for elemen-
tary-level texts. (0875-530) Class 4, Credit 4 (W, S)

This course is designed to prepare students to interpret in middle and second-
ary school settings. Students will learn how to prepare the middle/second-
ary students to request and work with interpreters in community and post-
second settings. Students will learn about interpreting for foreign language
courses. Students will do English-to-ASL and ASL-to-English interpreting for
middle- and secondary-school-level texts. (0875-430) Class 4, Credit 4 (W, S)
This course is the first in a series of two managerial accounting courses for students in the associate of science in business degree transfer program. Students develop problem-solving, critical-thinking and decision-making skills related to managerial accounting concepts. Students gain an understanding of the mechanics and processes of the complete accounting cycle with an emphasis on the manufacturing environment. Students learn generally accepted accounting principles and their impact on the preparation of financial statements. Skills in reading, understanding and analyzing financial reports will be emphasized. (0801-212) Class 4, Credit 4 (F)

This course is the second in a series of two managerial accounting courses for students in the associate of science in business degree transfer program. Students continue to develop problem-solving, critical-thinking and decision-making skills related to managerial accounting concepts. Students gain an understanding of the mechanics and processes of the complete accounting cycle with an emphasis on the manufacturing environment. Students continue to learn generally accepted accounting principles and their impact on the preparation of financial statements. Skills in reading, understanding and analyzing financial reports will be emphasized. (0801-221) Class 4, Credit 4 (W)

This course introduces students to cost accounting with an emphasis on job order costing. Topics covered include manufacturing statements; cost theory; and integration of materials, labor and overhead to the computerized job cost situation. Students complete a comprehensive practice set. Computerized spreadsheet applications are emphasized. (0801-203) Class 6, Credit 4 (W)

This course is a continuation of cost accounting, with particular concentration on process and managerial aspects. Topics covered include average and FIFO process costing methods; equivalent units; multiple products; changes in units, budgeting, cost classification and computerized applications. Students complete a comprehensive practice set. Computerized spreadsheet applications are emphasized. (0801-252) Class 6, Credit 4 (S)

This course gives students an opportunity to reinforce and apply accounting topics and skills previously studied. Students work in a simulated accounting office as accounting clerks and perform a variety of general and process costing duties. Computerized spreadsheet applications are emphasized. (0801-252) Lab 6, Credit 2 (F, S)

Designed to give the student an opportunity to gain experience on the job, to apply what has been learned and to self-evaluate personal and communication skills. A job relating to the student’s field of study could be taken near the student’s hometown. Placement assistance is provided to help the student find a work experience job. One work experience session is required. Credit 0 (W, S, Su)

This course is offered on a quarterly basis to students who have special requirements not met in other accounting courses. This course is arranged on an individual basis and is flexible in design to meet individual needs. Credit variable (F, W, S)

A broad overview of the form and structure of American business. It provides students with a basic knowledge of the history, organization and operation of business and its particular vocabulary. Class 4, Credit 3 (F, S)

This course provides proofreading and editing skills as they relate to computer-generated business communications. Course content includes rules for word division, capitalization, numbers, abbreviation style, spelling, and business letter writing. Designed specifically for students enrolled in courses in the business studies department. Class 3, Credit 3 (F, S)

This course is for students with limited keyboarding experience and for those who keyboard below 25 net words per minute. Keyboarding focuses on skill development, introduction to the computer and basic formatting. Keyboarding students are expected to exit this course with a proficiency of 20 net words per minute for five minutes. Class 1, Lab 3, Credit 2 (F, S)

This course is for students with little or no knowledge of word processing software, limited keyboarding experience, and a minimum of 20 net words per minute. Emphasis is on keyboarding skill development, introduction to the computer and basic word processing formatting skills. Students key and format business correspondence, reports and tables. The expectation is to exit this course with a proficiency of 25 net words per minute for five minutes. (0801-111) Class 1, Lab 4, Credit 3 (F, W)

This course focuses on enhancements to business correspondence, reports and tables produced on a microcomputer using word processing software. Skill development continues with an expected exit speed to 30 net words per minute for five minutes. Class 3, Lab 2, Credit 4 (F, W, S)

This course develops basic skills in current business procedures related to general office functions. Skills include current records management applications, introductory database techniques and business calculation methods. Students develop skills applicable to a variety of office settings. Class 5, Credit 3 (W, S)

This course develops basic skills in current business procedures related to general office functions. Students learn basic database and spreadsheet techniques. Students complete payroll records using both manual and computerized systems. Students develop skills applicable to a variety of office settings. Class 5, Credit 3 (F, W)

This course is for students with little or no knowledge of word processing software, limited keyboarding experience, and a minimum of 20 net words per minute. Emphasis is on keyboarding skill development, introduction to the computer and basic formatting. Keyboarding students are expected to exit this course with a proficiency of 20 net words per minute for five minutes. (0801-212)

This course develops basic skills in current business procedures related to general office functions. Students learn basic database and spreadsheet techniques. Students complete payroll records using both manual and computerized systems. Students develop skills applicable to a variety of office settings. Class 5, Credit 3 (W, S)

This course provides students with an opportunity to prepare for employment through team presentation, mentoring and guest lectures. Topics for discussion are identified by students enrolled in the seminar. Topics covered may include time management, career development and personal/social development skills necessary for job success. Students are expected to participate in planning class sessions. Class 4, Credit 3 (S)

Focuses on theory and practice basic to the management process. Students use case studies, lectures and simulations to study planning, organizing, directing, staffing and controlling functions. Also introduces students to motivation and leadership theory as it relates to the role of a manager. (0801-101)

Introduction to the field of marketing and its strategies. Topics include consumer behavior and its effect in the marketplace, product research and planning, pricing, distribution channels, marketing institutions, advertising and promotion and organization. (0801-101) Class 4, Credit 3 (W, S)

This is an elective course designed for the business student but available to a student from another technical major who has completed the prerequisites and who has a desire to learn entrepreneurial skills to allow starting a business. Each student will develop a business plan. Class 4, Credit 3 (S)

Gives students an opportunity to review skill-oriented course work on a microcomputer prior to graduation and job entry. Skill review includes production and speed typing, payroll procedures, records management techniques, word processing and database applications using current software packages. (0804-302) Class 4, Credit 2 (F, W, S)
0804-299 Co-op: Administrative Support Technology/ Business Technology
Designed to give the student an opportunity to gain experience on the job, to apply what has been learned and to self-evaluate personal and communication skills. A job relating to the student’s field of study could be taken near the student's hometown. Placement assistance is provided to help the student find a work experience job. One work experience session is required. Credit 0 (Su)

0804-302 Advanced Applications for Word Processing
This course provides an introduction to advanced document formatting and applications using various types of word processing, spreadsheets, databases, slide presentations and electronic office procedures. Students learn new skills using current software on a PC. (0804-221) Class 4, Credit 4 (F, W, S)

0804-303 Business Graphics
This self-paced course provides a continuation of the word processing concepts and applications presented in the previous course. Students use current software on a PC to create basic business and data-driven graphics that are prepared in the office environment. An introduction to desktop publishing basics also is included. (0804-302) Class 4, Credit 4 (W, S)

0804-304 Database Applications for Business
This course contains the concepts and applications for creating, maintaining, retrieving and printing files. Using current database software on PC, equipment, students use files to create various forms and reports. (0804-302) Class 4, Credit 4 (F, W, S)

0804-305 Business Ethics
This course introduces ethical issues facing the business community. It will focus on issues and perspectives of right and wrong in American companies. Students will learn about common work-related ethical issues, and evaluate problems concerning professional conduct and moral conflict. Students will also learn about ethical behavior, how to recognize ethical behavior, and how to model ethical behavior in the workplace. Individual, organizational and societal needs will be taken into consideration during the students’ decision-making process. Class 3, Credit 3 (F, W, S)

0804-310 Desktop Publishing for Business
This course for students in the administrative support technology program provides further study in the field of desktop publishing, utilizing word processing and microcomputer equipment. Students create documents that contain business graphics, clip art and self-created graphics. Current software programs are used and provide a working knowledge of microcomputer-based desktop publishing. In addition to required projects, students select and design documents of their choice. (0804-303) Class 4, Credit 3 (F, S)

0804-312 International Dimensions of Business
This course will increase students’ awareness about international developments impacting the American work force and market conditions and the impact of the global marketplace relating to their future employment in an American or foreign owned business. Class 4, Credit 3 (S)

0804-315 Preparation for Microsoft Word Certification
This course is intended to prepare students to take a certification exam for Microsoft Word. The exam tests proficiency through hands-on assessment in simulated Microsoft Office Word applications. Skill sets include: Creating and customizing documents, formatting content, working with visual content, organizing content, reviewing documents, sharing and securing content. (0804-221) Class 2, Credit 1 (F, W, S)

0804-316 Preparation for Microsoft PowerPoint Certification
This course is intended to prepare students to take a certification exam for Microsoft PowerPoint. The exam tests proficiency through hands-on assessment in simulated Microsoft Office PowerPoint applications. Skill sets include: Creating and formatting presentations, creating and formatting slide content, working with visual content, collaborating on and delivering presentations. (0804-303) Class 2, Credit 1 (F, W, S)

0804-317 Preparation for Microsoft Excel Certification
This course is intended to prepare students for Microsoft Excel certification. The exam tests proficiency through hands-on assessment in simulated Microsoft Office Excel applications. Skill sets include: creating and manipulating data, formatting data and content, creating and modifying formulas, presenting data visually, collaborating and securing data. (0804-212) Class 2, Credit 1 (F, W, S)

0804-318 Preparation for Microsoft Access Certification
This course is intended to prepare students to take a certification exam for Microsoft Access. The exam tests proficiency through hands-on assessment in simulated Microsoft Office Access applications. Skill sets include: structuring a database, creating and formatting database elements, entering and modifying data, creating and modifying queries, presenting and sharing data, managing and maintaining databases. (0804-304) Class 2, Credit 1 (F, W, S)

0804-398 Special Topics: Administrative Support Technology/ Business Technology
Credit variable

0804-399 Independent Study: Administrative Support Technology/ Business Technology
Credit variable

American Sign Language
These courses satisfy the humanities distribution requirement. C-level courses satisfy the AOS requirement. These courses may also satisfy the deaf cultural studies/American Sign Language requirement as noted.

Fundamental (Level B)
0886-199 American Sign Language I* Designed for students who have no previous knowledge of American Sign Language, ASL I includes the linguistic features, cultural protocols and core vocabulary for students to function in basic ASL conversations that include ASL grammar for asking and answering questions while introducing oneself; exchanging personal information; talking about family, friends and surroundings; and discussing activities. Classroom and lab activities include practicing conversations and videotaping. (0804-199 or equivalent; NTID supported students or permission of instructor) Class 4, Credit 4 (F, W, S)

Intermediate (Level C)
0886-200 American Sign Language II* Expands the basic principles presented in ASL I. The course teaches students to use linguistic features, cultural protocols and core vocabulary to function in additional basic ASL conversations, including ASL grammar for giving directions; describing others; making requests; talking about family, occupations and routines; and attributing qualities to others. Classroom and lab activities include practicing conversations and videotaping. (0886-199 or equivalent; NTID supported students or permission of instructor) Class 4, Credit 4 (F, W, S)

0886-201 American Sign Language III* This course is a continuation of ASL II expanding the emphasis on ASL grammar, syntax, spatial referencing and vocabulary development. ASL III teaches further communicative competencies in ASL conversations beyond the basic level that include telling life events, describing events in time, asking for clarification, correcting, conforming, elaborating on information, agreeing and disagreeing, resolving conflicts and giving directions. Classroom and lab activities include practicing dialogues, short stories, narratives and short conversations. (0886-200 or equivalent) Class 4, Credit 4 (W, S)

0886-249 Structure of American Sign Language*† Provides students with basic knowledge about the linguistic structure of American Sign Language (ASL). Through an introduction to language components, students examine the phonology, morphology and syntax of ASL. Information regarding historical and cultural aspects of ASL is also introduced and discussed. This course is taught in ASL. Class 3, Credit 3 (F, W, S)

Bridging (Level D)
0886-250 Introduction to ASL Teaching*† Provides overview of how second languages have traditionally been taught, what the current methods and theories are, and their applications to the teaching of sign language. Students are provided opportunities to practice basic teaching techniques, select appropriate materials, learn basic curriculum design and evaluation techniques, including how to teach cultural and grammatical features in lessons. Students learn about resources to support their efforts to teach sign language. Class 3, Credit 3 (W, S)

0886-398 Special Topics: American Sign Language
Credit variable

0886-399 Independent Study: American Sign Language
Credit variable

*This course satisfies the Deaf Studies/American Sign Language requirement.
†This course satisfies the humanities requirement.

176 | National Technical Institute for the Deaf
Applied Computer Technology

0805-201 Applications Software
This course is an introduction to computers and problem solving using general-purpose application software. Students solve a variety of problems by using application software tools such as a word processor, a spreadsheet, a presentation package and a database program. Class 3, Credit 3 (F, W, S)

0805-211 Web Development for Business
This course will provide students with the tools to design and develop Web sites containing multiple linked Web pages using a current Web development application. Topics will include inserting and formatting text and images, creating links and navigation bars, and creating Web page layouts and tables. Class 2, Lab 2, Credit 3 (S)

0805-215 PC Operating Systems
This course is designed to acquaint students with the structure and function of Windows and DOS operating systems and to provide the skills required to install, configure and maintain them. Topics include system concepts, system-level commands and commands relating to program, file and applications management. Students perform a variety of functions, including OS installation and configuration, application program installation and management, creation and management of directories and file structures, partitioning and preparation of storage media. (0805-216) Class 2, Lab 2, Credit 3 (F, S)

0805-216 PC Hardware I
This course introduces the fundamental hardware concepts of personal computer (PC) systems, including their structure and components. The skills required to install, upgrade and maintain PCs are presented. Hands-on topics include the identification and handling of basic computer hardware, input/output devices and data communications. Various methods of upgrading computers are presented. Class 2, Lab 2, Credit 3 (F, W)

0805-217 PC Hardware II
This course provides students with methodologies and hands-on activities related to the configuration, diagnosis, repairing, and preventive maintenance of personal computers (PCs). Topics include familiarization with the basic functions and use of test equipment, logical troubleshooting of internal system conflicts and faulty peripherals, electrical safety, and methods of maintaining computer equipment. (0805-216) Class 2, Lab 2, Credit 3 (W, S)

0805-220 Introduction to UNIX
This course is designed to address the basics of the UNIX computer operating system. Salient features of mainstreamed operating systems covered in PC operating systems and other systems are reviewed in this course and compared with similar UNIX functions to illustrate efficiencies of various operating systems. Topics include language commands; mail; network communications; directory and file structure; the editor; shell; pipe and filter concepts. (0805-201) Class 3, Lab 1, Credit 3 (F, W)

0805-224 Introduction to Networking and Security
This first course focuses on stand-alone local area networks (LANs) of microcomputers. Students study network configurations, cabling, physical layer protocols, and network operating systems. Students add computer equipment to a LAN, install software and identify and correct hardware and software incompatibility problems. Class 2, Lab 2, Credit 3 (F, W)

0805-225 Networking Essentials
This second course in networking builds on concepts learned in Introduction to Networking and Security. Topics focus on connecting local area networks (LANs) of personal computers with other LANs, wide area networks (WANs) and maincomputer/mainframe computers. (0805-224) Class 2, Lab 3, Credit 3 (W, S)

0805-226 Client/Server Networks
This third course is designed to provide students with skills in implementing and maintaining the network infrastructure required to support intranets/internet. Topics include implementing and administering internet/intranet services of the appropriate server platform, applications, WAN technologies, security, reliability and coordination with content providers. There is heavy emphasis on hands-on problem solving. (0805-225) Class 2, Lab 3, Credit 3 (F, S)

0805-230 Introduction to Programming
A first course in programming that introduces students to general programming concepts and enables them to design simple Windows-based business applications. Course focus is on problem-solving methods, design and writing of simple Windows-based applications with an emphasis on logic skill development. The course serves as a foundation for future programming courses. Programming projects are required. (0805-251) Class 3, Lab 1, Credit 3 (F, W)

0805-251 Introduction to Web Development
This course addresses Internet-related topics, including Web browsers, multimedia for the Web, and creating basic Web pages using valid coding techniques. (0805-201) Class 3, Lab 1, Credit 3 (W, S)

0805-252 Web Applications
This course continues Web Development I by addressing intermediate topics for the World Wide Web, including more advanced coding techniques to enhance Web pages, and advanced multimedia techniques. (0805-251) Class 3, Lab 1, Credit 3 (F, S)

0805-298 General Work Experience
This course serves as an introduction to work experience. Students are expected to seek supervised employment to apply skills that promote desirable work habits, effective communication, awareness of employer expectations and the ability to make cooperative and productive interpersonal choices. This work experience need not be related to the student's technical educational goals. Credit 0 (F, W, S, Su)

0805-299 Client-Side Scripting
The course is an introduction to client-side programming for the Internet using a common scripting language. Students will be introduced to the syntax of the scripting language and then learn to build practical and interactive client-side applications. (0805-231, 252) Class 2, Lab 2, Credit 3 (W)

0805-310 Microcomputer Database Software
Creating, inquiring, reporting and other functions of databases. A leading database software product for microcomputers is studied. Students design a database, establish criteria for data to be accepted and coded, and prepare views of the database contents. Database utilization in the business environment and application to the student's expected work environment is presented. (0805-201) Class 3, Lab 1, Credit 3 (F, W)

0805-320 Advanced Web Development
This capstone course bringing together the skills learned in all previous Web development courses to create a single large-scale Web project. Students will first be introduced to the newest trends in Web technology, currently XML, so that they are on the cutting edge of the technology they will encounter in the workplace. Skills in Web programming and scripting, database applications, Web development tools and Web graphics will then be brought together to solve a Web-based problem by creating a large-scale Web project. (0805-320, 321; corequisite 0805-322) Class 2, Lab 2, Credit 3 (S)

0805-323 LAN/WAN Design
This course is designed to provide a hands-on introduction to multi-protocol routers and multi-switched networks. The class will include basic router operations, architecture, and configuration; switched Ethernet networks; virtual LAN technology; configuration of switching devices; and troubleshooting. Students will set up, wire, and configure expansion technologies in an internet work environment. (0805-226) Class 2, Lab 3, Credit 3 (W)

0805-335 Advanced Web Development
This course introduces the fundamental hardware concepts of personal computer (PC) systems, including their structure and components. The skills required to install, upgrade and maintain PCs are presented. Hands-on topics include the identification and handling of basic computer hardware, input/output devices and data communications. Various methods of upgrading computers are presented. Class 2, Lab 2, Credit 3 (F, W)

0805-217-212 Microcomputer Database Software
Creating, inquiring, reporting and other functions of databases. A leading database software product for microcomputers is studied. Students design a database, establish criteria for data to be accepted and coded, and prepare views of the database contents. Database utilization in the business environment and application to the student's expected work environment is presented. (0805-201) Class 3, Lab 1, Credit 3 (F, W)

0805-320-321 Advanced Database Integration
This course is an introduction to integrating relational databases with the World Wide Web. Students will learn to form basic database queries and then create interactive Web pages that combine queries with current server technologies to create dynamic, data-driven Web sites. (0805-252, 310) Class 2, Lab 2, Credit 3 (W)

0805-322 Web Server Technologies
This course is an introduction to server-side technologies for the Web. Students will be introduced to the principles and details of how a Web server works as well as issues related to Web server installation, performance and security. The role of server-side scripts and CGIs will also be studied, and students will get experience modifying scripts to solve user specifications. (0805-226, 320) Class 2, Lab 2, Credit 3 (S)
Network Security
This course will provide students with a deeper understanding of computer and data network security. Students will examine an infrastructure design process for securing computer systems and data networks, as well as methodologies and best practices for implementing security, security policies, security testing, and incident response. The underlying principles used to secure networks including security technologies, intrusion detection, authentication, and cryptography basics will be discussed. This course will also introduce students to network security planning, technology, and organization, and the legal and ethical issues associated with network security. (0805-225) Class 2, Lab 3, Credit 3 (W)

Server Management and Security
The course is an introduction to server management. Students taking the course will learn to implement and administer network servers by managing server devices, file system, users and groups, and application software. Students will also learn how to monitor and fine-tune server security and performance and to implement backup and fault tolerance. (0805-226) Class 2, Lab 3, Credit 3 (S)

Fiber Optic Cable: Uses and Maintenance
This course introduces fiber optics and parallels the objectives of the National Association of Communication Contractors fiber optic cable installer training. Students will learn the basic fiber systems, which consist of a light-emitting diode or laser transmitter, fiber optic cable, connectors and a receiver. The course is primarily oriented to connectorization of cable ends and their evaluation using the optical time domain reflectometer (OTDR). (0805-224) Class 2, Lab 2, Credit 3 (W, S)

Telecommunication Concepts
This course introduces concepts in both analog (voice) and digital (data) telecommunications. Topics covered include plain old telephone service (POTS), in-home wiring service, telephone operation, number coding, routing, transmission media and other appropriate telephony topics. Private branch exchanges (PBX) and Centrex also will be discussed. (0805-225) Class 2, Lab 2, Credit 3 (S)

A+ Core Hardware Certification Preparation
The course will prepare students to take and pass the first part of the CompTIA’s A+ Core Hardware certification exam. Students will review material from previous courses and complete practice exams and troubleshooting exercises in preparation for the exam. In addition to textbook(s), students will be required to purchase a certification exam voucher for this course. Students must pass the certification exam to pass the course. (0805-215, 226) Class 1, Lab 2, Credit 2 (F)

A+ OS Technologies Certification Preparation
The course will prepare students to take and pass the second part of the CompTIA's A+ Operating Systems Technologies certification exam. Students will review material from previous courses and complete practice exams and troubleshooting exercises in preparation for the exam. In addition to textbook(s), students will be required to purchase a certification exam voucher for this course. Students must pass the certification exam to pass the course. (0805-215) Class 1, Lab 2, Credit 2 (W)

Network+ Certification Preparation
The course will prepare students to take and pass the CompTIA's Network+ certification exam. Students will review material from previous courses and complete practice exams and troubleshooting exercises in preparation for the exam. In addition to textbook(s), students will be required to purchase a certification exam voucher for this course. Students must pass the certification exam to pass the course. (0805-335) Class 1, Lab 2, Credit 2 (S)

Security+ Certification Preparation
The course will prepare students to take and pass the CompTIA’s Security+ certification exam. Students will review material from previous courses and complete practice exams and troubleshooting exercises in preparation for the exam. In addition to textbook(s), students will be required to purchase a certification exam voucher for this course. Students must pass the certification exam to pass the course. (0805-336) Class 1, Lab 2, Credit 2 (S)

Programming Fundamentals
This pre-programming course is for students pursuing a major in the Golisano College of Computing and Information Sciences (GCCIS) and is designed to help them develop the programming, logic and problem-solving skills needed for success in the GCCIS majors. This course will provide students with a study of the fundamental concepts, logical structures and algorithms inherent to computer programming. Students will learn how to write basic object-oriented programs in a contemporary programming language. (0502-111, 1016-204 or 0804-275) Class 3, Lab 2, Credit 4 (F, S)

ACT Technical Capstone
This course provides an opportunity for students to work on technical projects that integrate the skills they have developed in earlier Applied Computer Technology courses. Students will work both independently and in teams to solve real-life computer support problems in a professional manner. (Completion of all ACT Technical course requirements.) Class 1, Lab 4, Credit 3 (F)

Special Topics: Applied Computer Technology
Credit variable (F, W, S)

Independent Study: Applied Computer Technology
Credit variable (F)

Applied Optical Technology
Introduction to Optical Technology I
A sampling of optical finishing technology, including an overview of the career, admissions and graduate requirements; sources of employment; and expectations of students in the program. Students learn the titles, roles and responsibilities of vision-care personnel, including the M.D., O.D., dispensing optician and optical finishing technologist. Class 2, Credit 2 (F)

Introduction to Optical Technology II
The function and use of optical laboratory equipment necessary to the production of single-vision eyewear. Students learn the basic concepts of sphere, cylinder, axis and geometric center. Class 2, Credit 2 (W)
0827-107 Introduction to Optical Technology III
Introduces the concept of writing functions of given vertometer parts. Students learn the process of writing step-by-step sequential procedures for equipment operation. They practice determining lens powers from vertometer readings and calculating deviation from given prescription information. They also learn the meanings of various optical terms found on prescription forms. (0827-106 or permission of department) Class 2, Credit 2 (S)

0827-102 Optical Math I
This course focuses on the rules of transposition, including transposition of lens powers. Students learn to apply mathematical functions, solving for binocular and monocular P.D.s, near-vision prescriptions and bifocal segment height and inset. The concepts of plus and minus cylinder prescription powers are discussed, and definitions and determinations of lens powers from given base curves, cross curves and inside curves are taught. (0884-180) Class 4, Credit 3 (F)

0827-112 Optical Math II
Students learn how to select and determine appropriate base curves, cross curves and inside curves of given lens powers. Students learn mathematical formulas used in determining effective diameter, smallest lens blank and prism. They also learn to apply mathematical functions related to vertometer power readings, heat treat times and lens gauge readings. (0884-180, 0827-111) Class 4, Credit 3 (W)

0827-115 Prescription Analysis
Teaches students the meaning of various optical terms found on prescription forms. Students learn what information should be on a complete prescription and how to analyze single-vision and multifocal prescriptions for laboratory processing. Class 4, Credit 3 (F)

0827-161 Optical Terminology I
Emphasizes comprehension, spelling and application of terminology related to the optical profession, including the laboratory environment, function and disorders of the eye, and optics/lens characteristics. Class 5, Credit 3 (F, W, S)

0827-162 Optical Terminology II
Emphasizes the comprehension, spelling and application of terminology related to the vertometer, lensometer, pattern maker, heat treat units, and ceramic and diamond-head beveling wheels. (0827-161) Class 5, Credit 3 (F, W, S)

0827-200 Optical Processes I
Teaches students basic techniques of using the vertometer to analyze single-vision lenses, layout marker, heat treat units, and pattern maker, automatic edging machines and development of hand-beveling skills. (0885-201 or 0885-201) Class 1, Lab 6, Credit 4 (S)

0827-201 Optical Processes II
Teaches students the theory and techniques of centering, power verification and spotting of single-vision and selected multifocal lenses. Students are taught the mechanics of lens centration using layout markers and lens edging using a variety of edging systems. The concepts and techniques of vee-beveling, rimless bevels, and hide-a-bevel are emphasized. (0827-200) Class 1, Lab 6, Credit 4 (S)

0827-202 Optical Processes III
Emphasis is on individual fabrication of given prescriptions. Students are given a variety of single-vision and multifocal prescriptions to be completed during the quarter. Finished prescriptions are evaluated using ANSI standards. (0827-201) Class 9, Credit 5 (S)

0827-210 Fundamentals of Photonics
This course provides a general introduction to the nature of light. Course emphasis is on the properties of light; interaction of light in various materials; how laser light is generated, controlled and detected and the role of light in human vision. (0885-200 or 0885-201) Class 5, Credit 3 (F)

0827-220 Optics of Imaging and Design
This course focuses on the basic concepts related to image formation and image characteristics. Students perform basic calculations using the lens equation to determine image size and position. Students learn about various image forming optical systems and their use in today’s society. Class 3, Credit 3 (S)

0827-225 Optical Laboratory Simulation I
Provides practice in the total processing of actual eyeglass prescriptions from uncut stage through completion and final inspection. Students practice assembling lenses into frames and symmetrical alignment of the finished product. Students assume the duties of supervisors and rotate positions to demonstrate competence in all phases of operation. Class 9, Credit 5 (W)

0827-226 Optical Laboratory Simulation II
Teaches the techniques of rimless mounting, drilling, grooving, frame repair (soldering), lens dying and the use of the spectrometer. Students select frame and lenses for layout and processing to finished product. (0827-225) Class 9, Credit 5 (S)

0827-235 Fundamentals of Optical Testing
In this course students learn basic techniques used for testing spherical surfaces, flats and prisms. Topics include measurement of surface quality, focal length, power, basic interferometry and aberrations. Specific measuring techniques include autocollimation, laser two-beam, spherometer, sagittal gauge, nodal slide bench, Fizeau interferometer, test plates and surface profilers. (0813-255 and 0885-200 or 0885-201) Class 1, Lab 4, Credit 3 (F)

0827-251 Optical Technology Seminar
Students learn how attitude, aptitude and personal/social factors contribute to successful employment. Students also receive instruction regarding such topics as the Americans with Disabilities Act (ADA), effective person-to-person interviewing, interviewing using telecommunications techniques, corporate culture, and the American Board of Opticianry Testing. Class 2, Credit 2 (W)

0827-270 Orientation to Lens Surfacing
This course is an overview of the basic concepts and procedures needed to produce prescription lenses. Students are introduced to the basic operation of the surfacing layout marker, lens blocking system, surface curve generator and finishing/polishing machine(s). Students will also learn terminology and techniques to assess the quality of finished lens surfaces. Class 2, Lab 2, Credit 3 (F)

0827-280 Applications of Lens Surfacing
In this course, students continue to learn and expand on skills introduced in Orientation to Lens Surfacing. Students are introduced to the process of producing lens power through the procedures of lens surfacing. Emphasis is on the advanced operation of the lens layout marker, lens blocking system, surface curve generator and cylinder machine(s). Students will learn terminology and techniques used to assess lens surfaces. (0827-270) Class 2, Lab 4, Credit 4 (F)

0827-299 Co-op: Applied Optical Technology
This course provides a 10-week experience in the optical field. Co-op provides students with an opportunity to apply and expand skill sets acquired in the classroom. (0827-101) Credit 0 (F, W, S, Su)

0827-399 Independent Study—Applied Optical Technology
Credit variable (F, W, S)

Arts and Imaging Studies

0855-251 Bitmap Graphics I
This course introduces students to the skills needed for the successful production and manipulation of raster images using image manipulation software. Students will master the application of painting and editing tools and techniques offered by the software program such as selection techniques, basic layer controls, digital masking, image correction and enhancement. Additional topics will include the relevance of image size, resolution and file format specifications when working with raster images. Comprehension and correct usage of terminology and concepts are emphasized. Class 2, Lab 3, Credit 3 (F, W)

0855-252 Vector Graphics
This course introduces student to using vector graphic applications to generate professional looking vector based layouts. Emphasis is placed on mastering vector-based tools as preparation for intermediate and advanced digital imaging and publishing skills development. Page layout, type specification, and graphics integration are covered. Class 2, Lab 3, Credit 3 (F, W)

0855-253 Typography I
Typography is an integral element of all good design, affecting both aesthetics and functionality. In this course, students learn the fundamentals and principles of typography, including type measurement/ point sizes, type classification/ type families, identification of typefaces, effective use of letter-spacing, word-spacing, line-spacing, line length and type arrangements. Students will learn type terminology, font selection guidelines, font management, and strategies/methods to ensure optimal readability and legibility. Students will develop typographic design skills that can be applied in a wide variety of graphic applications. Class 2, Lab 3, Credit 3 (F, W)
This course includes the study of color for design, printing, Web, and photographic imaging systems and procedures. Students will use and apply correct technical vocabulary, various concepts, and procedures regarding the perception, recognition, selection, specification, application, and evaluation and correction of color in various graphic arts workflows and application. Students will use and apply the artist’s color wheel, various color models, and specification systems. Class 2, Lab 3, Credit 3 (W, S)

Principles of Design
This course provides an introduction to the art and science of graphic design and the applications of graphic design. Students will learn how to develop design solutions by creating clear, well-executed idea sketches and final comprehensive layouts for a variety of design problems using appropriate design techniques, color, and typography. Emphasis will be placed on identifying clients' needs, target audiences and successful communication of clients’ messages. In addition, students will be introduced to graphic design business practices and ethics as well as an overview of printing, paper selection and finishing/binding methods. Focus will also be on verbal presentation of layout ideas, group production meeting times, and group critiques. (0855-251, 252, 253, 255) Class 2, Lab 3, Credit 3 (F, S)

Co-op: Arts & Imaging Studies
This course provides a ten-week (350 hours) work experience in the field. (45 AIS technical program credits.) Credit 0 (F, W, S, Su)

Visual Idea Development
This course gives students the opportunity to see themselves, their experiences and their environment as sources of creativity, through a variety of activities which include classroom discussions, field trips, guest lecturers and keeping written journals and sketchbooks. Students learn strategies for developing concepts and organization of thought processes as well as systems to formulate solutions to design problems. The library is used for development of research skills. Class 2, Lab 3, Credit 3 (F, W)

Basic Drawing
This course is an introduction to freehand drawing of basic forms, with an emphasis on perspective, including one-point and multi-point techniques and figure drawing. Perspective concepts will also be applied to more complex objects and environments, including tonal values. Figure drawing will be focused on the study of line, gesture, contour, construction, and tonal values. Class 2, Lab 3, Credit 3 (F, W)

Intermediate Drawing
This course continues the principles and skills developed in Basic Drawing, with special emphasis on the human form, including proportion, shading, lighting, head/ facial features, sustained study, and the use of the figure within compositions, including still life. Students will also be exposed to a range of media and materials. (0855-311) Class 2, Lab 3, Credit 3 (W, S)

Advanced Drawing
This course extends the various skills and concepts learned in the previous drawing courses and applies them to still life, architecture, various environments, and the human form within various environments. The use of sketchbooks will be emphasized for development of composition skills; students will use the library and other resources and will further explore various kinds of media. (0855-312) Class 2, Lab 3, Credit 3 (F, S)

Color in Design
In this course, color theory is emphasized and concepts learned in Basic Design are applied, using color media and materials to solve basic design problems. Technical quality in presentation of design concepts is emphasized. Class 2, Lab 3, Credit 3 (W, S)

Applied Color Theory
This course includes the study of a survey of art and design movements, designers, and typographers who have made significant contributions to the field of Graphic Design. Class 3, Credit 3 (W, S)

Typography I
This course includes the study of survey of major historical developments in the visual arts, specifically examining art from prehistoric times to the Renaissance. Class 3, Credit 3 (F, S)

Typography II
In this course, students focus on selection of appropriate type to best communicate a message, use of type as an integral part of a design, including how to choose letterspacing, wordspacing, linespacing, line length and type arrangement to best work in a design. There is also emphasis on working with type and grids, legibility and readability, proofreaders’ marks and proofreading and copy specification. (0855-252, 253) Class 2, Lab 3, Credit 3 (F, S)

Image Acquisition
The student will build on the skills previously learned in Bitmap Graphics course. Topics include: determining and applying resolution and magnification settings appropriate to the characteristics of the specified output goal; setting highlight and shadow points, removing color cast, sharpening, and tone-adjustment of acquired images; use desk-top scanners hardware/software; use appropriate color settings/modes and file formats. (0855-251, 254) Class 2, Lab 3, Credit 3 (F, S)

Bitmap Graphics II
The students will build on the skills previously learned in Bitmap Graphics. Topics include applying production planning techniques to image manipulation, production quality standards, advanced methods and quality criteria for image manipulation, legal and ethical issues. This is a production-oriented course with the emphasis on producing photographic quality (raster) digital images. (0855-251, 254) Class 2, Lab 3, Credit 3 (F, S)

Digital Photography I
This course gives students an introduction to the tools, techniques and terminology of electronic imaging through a series of hands-on activities that will permit each student to investigate the applications of digital photography. Students will be expected to capture images using digital cameras, process digital images using the appropriate software, create quality picture files and participate in project-related critiques. Class 2, Lab 3, Credit 3 (F, S)

Wide Format Graphics
Wide format ink jet printing is one of the fastest growing market segments. Products include large display signage and decals, vehicle wraps, packaging mock-ups, point-of-purchase display elements, vinyl appliqué, magnetic and tie-back signage, and large-scale presentation displays, and other large-scale signage. This course provides students with a unique set of knowledge and skills required for the preparation, production, finishing, material handling, mounting and displaying of wide format products. (0855-251, 252, 253, 254) Class 2, Lab 3, Credit 3 (F, W)

Desktop Publishing I
The students will use page layout (desktop publishing) applications to design pages and documents and to produce pages and documents to given specifications; importing and placing text and graphic files; the application of style sheets, templates, snippets, libraries, and color specifications. The application of design and typographic principles, industry terminology and measurement systems, font management, and file management are emphasized. Class 2, Lab 3, Credit 3 (F, S)
The students will study the Portable Document Format (PDF) file format including defining and applying specifications for color management, file optimization and file security; recognizing and editing PDF documents; and using PDF files in a variety of print and non-print media production workflows. (Class 2, Lab 3, Credit 3 (F, S))

The students will study the use of page layout applications to produce book, magazine, and long format publications. Topics include techniques for defining and applying publication templates; font management and selection; page formats; page and section numbering; headers and footers; text editing; graphics creation, preparation, and placement; color specification and usage; automating a table of contents; using a colophon and other features typical for book and long document publishing formats. Students are introduced to the repurposing of documents for interactive digital media and XML-based document production. (Class 2, Lab 3, Credit 3 (F, W))

The students will study the principles and techniques of database construction, manipulation, and reporting. This course provides the opportunity to develop expertise in creating graphically attractive and informationally useful reports both within the layout capabilities of a database application, and through importation into a page layout program, and conversion into a form compatible with a Web server. Topics include database formation, document tagging, template generation, style sheets, HTML coding, and database publishing techniques and procedures. (Class 2, Lab 3, Credit 3 (F, S))

This course provides an overview of creating graphics for the web, including an introduction to Internet graphics and how they are related to the World Wide Web. Students gain in-depth knowledge of graphics preparation and optimizing graphics for use on the Internet. Course content includes exploring the Internet, using various programs to create and optimize images for use on the Internet, and the use of basic HTML programming. There will also be a focus on the vocabulary of the Internet, various graphic file formats, compression schemes, and concepts of effective graphic communication on the Internet. (Class 2, Lab 3, Credit 3 (F, S))

This course introduces students to the fundamental skills needed to create designs that work on the World Wide Web. Students are introduced to the Internet, learn basic HTML programming for graphics, and legal issues of the Internet. Text based technology is used to separate design from content using Internet, learn basic HTML programming for graphics, and legal issues of the Internet. Text based technology is used to separate design from content using tags, and HTML coding. (Class 2, Lab 3, Credit 3 (F, S))

In this course, students will learn how to create illustrations, create web animations, develop web-based and stand-alone interactive media, and develop design elements that are used to enhance web design. Course content includes understanding staging, timelines, frame rates, keyframes, transitions, and object attributes. Both vector and raster animation applications are taught and used in the course. Throughout the quarter, students will learn the vocabulary and skills necessary to create basic to intermediate skill level computer animation projects. (Class 2, Lab 3, Credit 3 (F, S))

This course provides an overview of videography for the web. This is a basic digital video course that will introduce the participants to the process and procedures involved in digital video production from start to finish. Students will be introduced to Videography production techniques, cameras, digital non-linear editing, and lighting for video. Emphasis is on proper operation of video and computer equipment for productions and post-production of digital non-linear edited sequences and their adaptation to different presentation formats for online delivery. (Class 2, Lab 3, Credit 3 (F, W))

This course reinforces the students' skills learned in core courses. Students are introduced to procedures that are used in an actual graphic communications production environment, understanding the cost of doing business, estimating procedures and quality control requirements. This course enables the student to develop and apply team-building and problem-solving skills as they complement integrated activities from creation to final product in both print and non-print media workflows. (45 AiS program credits) (Class 2, Lab 3, Credit 3 (F, W))

The students will study color management system (CMS) software and color measurement devices as they are used to control color quality in the digital imaging and publishing disciplines. CMS concepts are introduced and applied to imaging equipment (input, display, and output), systems, and documents. (Class 2, Lab 3, Credit 3 (F, W))

This course will give students in the Arts and Imaging Studies Department an opportunity to prepare and submit a portfolio of their work in preparation for a job search or application to a baccalaureate degree program. The course will emphasize professional procedures for making a traditional, PDF-based, and Web-based portfolio. (Class 2, Lab 3, Credit 3 (F, S))

This elective two-course sequence provides an environment where students and customers interact in order to produce completed graphics projects and finished print jobs. Students work in a simulated design and production environment where they can develop their technical skills, work habits, and customer relations. (Class 2, Lab 3, Credit 3 (F, S))

This elective two-course sequence provides an environment where students and customers interact in order to produce completed graphics projects and finished print jobs. Students work in a simulated design and production environment where they can develop their technical skills, work habits, and customer relations. (Class 2, Lab 3, Credit 3 (F, S))

This course will provide students with the knowledge needed to understand and utilize grids to organize graphic design elements for readability and consistency in various media. Students will be first asked to use pre-designed grid systems for layout and design, and as they become proficient in the understanding and use of these systems will develop their own grid systems to solve graphic design problems. Assignments will be completed using page layout software that is consistent with industry standards. (Class 2, Lab 3, Credit 3 (W, S))

In this course, focus will be placed on layout and design of multi-paged printed graphics including brochures, booklets, calendars, and magazine spreads and the use of grids and other organizational systems. Issues such as page sequencing and pagination, design flow and consistency through the layout/design and successful communication of the client's needs will be addressed. Assignments will be completed using page layout software consistent with industry standards. (Class 2, Lab 3, Credit 3 (W, S))

In this course, students will learn about various classifications and areas of identity design and will develop identity symbols and systems of identification and branding for businesses and organizations as well as individuals, including components such as business cards, letterheads, envelopes and invoices. Focus will be on identifying client need, budget and target audience in order to develop appropriate identity design solutions with components that are compatible, consistent, and practical to use. Students are expected to find a real client for at least one of the assignments for this course. In addition, students will be familiarized with current top identification system designers and current design trends in identity design. (Class 2, Lab 3, Credit 3 (W, S))

This course will provide students with skills and techniques used in areas of digital illustration, including comparison, techniques and functions of vector and bitmap software programs to create professional-quality renderings. Various kinds of illustration will be introduced, including editorial, book, and information illustration such as illustrated charts and graphs. Students will have the opportunity to create professional quality illustrations for various audiences and media. (Class 2, Lab 3, Credit 3 (F, W, S))
0855-371  Dynamic Image Preparation
This course will address various technologies for the capturing and converting of multiple static images into more dynamic presentations of environments, and objects. Topics will include panoramic stitching, creating virtual tours, creating 360 degree views of 3D objects, and creating dynamic slideshows. (0855-251, 252, 323) Class 2, Lab 3, Credit 3 (F, W, S)

0855-372  Composite Imaging
This course includes specialized image manipulation techniques applied to produce images that blend images together into a single composite image. Emphasis is given to developing efficient production techniques for this advanced image manipulation concept. (0855-322) Class 2, Lab 3, Credit 3 (F, S)

0855-373  Digital Photography II
This course is a continuation of Digital Photography I. Students will continue to use and apply correct technical vocabulary, various concepts, and procedures regarding the technical understanding and use of digital photography equipment and software. Aesthetic/composition considerations will be emphasized as well. Various genres and markets will be discussed such as Photo Journalism, Portraiture, Fine art, Advertising and Marketing, and Sports. (0855-323) Class 2, Lab 3, Credit 3 (W)

0855-374  Image Retouch and Restore
This course includes specialized image manipulation techniques used to reconstruct, restore, and enhance images. Emphasis is given to developing skills for image evaluation and for production work plan strategies. (0855-322) Class 2, Lab 3, Credit 3 (W, S)

0855-381  Desktop Publishing II
This course builds on topics presented in Desktop Publishing I. Students will define and apply techniques and procedures for optimizing document design and production efficiency. Topics include defining Paragraph, Character, and Object styles; making and using templates; saving and accessing object snippets and libraries; recognizing and applying proofreaders marks and notations; defining and applying advanced typographic techniques, advanced page layout procedures, object transparency and other image effects; building and editing tables; and, defining and applying color specifications and effects. Students will continue to develop knowledge and skills in the industry leading page layout software applications. (0855-331) Class 2, Lab 3, Credit 3 (W, S)

0855-382  Interactive PDF Publishing
Interactive digital document files in the Portable Document Format (PDF) have become an effective and widely-used strategy for presentations, training materials, and information collection and distribution. In this course students will use Adobe Acrobat for making and using interactive PDF files. Topics include adding interactive features including bookmarks, action button, hyperlinks to internal anchors, hyperlinks to other documents and Web content. Emphasis is given to file optimization for interactive display size formats, color, and resolution. (0855-332) Class 2, Lab 3, Credit 3 (W, S)

0855-383  Publication Production II
In this course, students will build on the concepts and skills learned in Publication Production I. Students will understand and apply techniques and procedures specific to the layout and production of multi-section/multi-chapter publications for on-demand, mass market, and PDF digital document output and distribution (0855-333) Class 2, Lab 3, Credit 3 (F, S)

0855-384  Digital Printing Systems
This course will focus on the operating features of the black & white and color digital production printing systems. Students will learn the job and market capability of the various systems, xerography concepts in monochrome printing, image and paper quality considerations, creation of electronic files and file transfer, and operating procedures. Additional topics include the digital workflow for on-demand book printing and small-format binding. Class 2, Lab 3, Credit 3 (W)

0855-391  Web Design II
This is a required course that provides an understanding of basic web site creation. This course introduces students to the fundamental skills needed to create content and layouts that work on the World Wide Web. Graphics based technology is used to create interactive pages. Topics include rollover buttons, using image slices to maximize delivery speeds, using image maps, graphic behaviors, GIF animations, design and development of navigation systems. Usability issues will be introduced and studied, especially focusing on the ADA accessibility laws. Students are expected to create web pages that demonstrate their understanding and use of basic publishing and coding principles. (0855-342) Class 2, Lab 3, Credit 3 (W, S)

0855-392  Web Design III
This course provides an overview of designing multi-page web sites. In this course, students will continue to learn how to use design elements successfully to create a multi-page web site. Students will continue the study and application of concepts of Web site design, site navigation theories, and the management of a multi-page web site. In this course, students will develop a web site combining the advantages of text based production techniques for content management with graphics based design for appeal and animation. Audience interactivity will be incorporated throughout. Effective use of color, typography, and design will be applied. (0855-391) Class 2, Lab 3, Credit 3 (F, S)

0855-394  Interactive Digital Media
This is a required course that provides an overview of designing interactive digital media. In this course, students will continue to learn how to use design elements successfully to create a multi-page web site. Students will be introduced to the concepts of designing and developing interactive digital media, user interface theories, and the management and development of an interactive digital media file. Students will also create and prepare digital elements for network use. Issues of file size, quality, format, client/server interaction are covered. 2D/3D vector and raster graphics will be used along with animation, video and presentation applications. (0855-342, 343) Class 2, Lab 3, Credit 3 (W, S)

0855-398  Special Topics: Arts & Imaging Studies
Credit variable (F, W, S)

0855-399  Independent Study: Arts & Imaging Studies
Credit variable (F, W, S)

0891-210  Pneumatics and Hydraulic Systems
The basics of fluid power is the course focus. Areas of study include pressure, viscosity, turbulence, flow, thermal properties and displacement. Hydraulic/pneumatic components such as pumps, actuators, valves, accumulators, lines, directional controls, sealing devices and servomechanisms are introduced, as are the tools and procedures used to install and maintain hydraulic/pneumatic systems. (0855-201) Class 1, Lab 6, Credit 3 (S)

0891-212  Industrial Electronics
This course will introduce students to basic electrical concepts, circuits and devices used in automated systems. Students will study different forms of electrical power and the laws associated with them. Various electrical/electronic devices used in controlling, filtering and displaying power states will be studied. Safely and correctly connecting and installing devices and cables using schematic diagrams and electrical instrumentation will be included. (0813-222, 0890-214) Class 2, Lab 6, Credit 4 (S)

0891-214  Electromechanical Devices
This course introduces various devices used in the manufacturing environment for automation control. The most commonly used AC and DC motors, stepper motors, motor controllers and servomotor drives are used in laboratory set-ups along with sensors and transducers used in monitoring or controlling the manufacturing process. Relays, contacts, starters, symbols, ladder diagrams, motor connections, overload protection and interlocking schemes are studied. In addition, control loops, feedback, rate response, proportional control, process instruments and sensor interfaces as they apply to automatic control systems are studied in detail. (0805-240; corequisite: 0805-245) Class 2, Lab 6, Credit 4 (F)

0891-216  Programming Concepts
This course introduces problem-solving processes and programming concepts as they can be used to guide automation control designs and other automated systems. Programming structure and flowcharting are studied. Students are exposed to programming applications with automated control systems and are expected to write simple programs. (0813-222, 0890-214) Class 3, Lab 3, Credit 4 (S)

0891-220  Automated Systems I
This course reinforces previously learned subsystem-level skills while introducing additional concepts and skills at a system level. System assembly, wiring, programming, networking, monitoring (data collection and analysis) and troubleshooting are addressed. Basic robotic technology is introduced as part of an automated system. (0891-210, 214, 216) Class 2, Lab 6, Credit 4 (W)

0855-389  Automation Technologies

Class 2, Lab 6, Credit 4 (W)

Class 1, Lab 6, Credit 3 (S)

Class 2, Lab 6, Credit 4 (S)

Class 2, Lab 6, Credit 4 (F)

Class 2, Lab 6, Credit 4 (S)

Class 2, Lab 6, Credit 4 (W)
0891-230 Automated Systems Troubleshooting I
This course introduces skills associated with performing basic system maintenance and troubleshooting. Maintenance sheets, along with the appropriate equipment manuals, procedures, tools and instrumentation to safely and correctly perform the maintenance functions, are considered. Data from system performance charts are interpreted and used to make necessary process or equipment adjustments. Skills needed to diagnose and repair a system fault in a safe and logical manner are introduced and performed according to manufacturer specifications. (0891-220) Class 2, Lab 6, Credit 4 (S)

0891-299 Co-op: Automation Technologies (0891-230)
Credit 0 (F, W, S)

0891-314 Programmable Logic Controllers (PLC) Programming
Students begin to learn about the use of programmable logic controllers (PLCs). Content includes the concepts of PLC programming and interfacing and the development of PLC applications. Students use PLC program development software, test PLC applications and modify PLC programs to effect process changes as indicated. (0891-212) Class 2, Lab 6, Credit 4 (F)

0891-316 Mechanical Devices and Systems
This course builds on course work introduced in prior physics and automated system courses. Students learn about mechanical components found in transmission pathways of automated systems, including drive mechanisms, pallet changers, shifters, conveyors, gears and linkages. Students analyze factors contributing to mechanical failure such as load and torque. Effects of changes in pressure, direction, force, speed and other physical parameters are also studied. Students work with simulated modules and automated systems with mechanical components. (0885-201; corequisite: 0891-220) Class 1, Lab 6, Credit 3 (W)

0891-318 Applied Robotics
Students use, maintain, develop and debug robotic programs. Course content requires that students learn the concepts related to robotic programming and interfacing as well as the applications that use robotics. Using lab experiments and robotics program development software, students learn to set up, install, download, diagnose, write, manipulate and test programs in automated manufacturing environments. (0891-220) Class 2, Lab 6, Credit 4 (S)

0891-320 Automated Systems II
This course builds on the system-level skills developed in Automated Systems I and Automated Systems Troubleshooting I. Students encounter advanced robotic operations, process and equipment control using programmable logic controllers and material transport systems as they learn to work with product changovers relative to upgrading or retooling a flexible manufacturing cell. Human machine interfaces (HMI) and electronic operator interfaces (EOI) are used for machine user interfacing. (0891-220, 314) Class 2, Lab 6, Credit 4 (S)

0891-330 Automated Systems Troubleshooting II
This advanced troubleshooting course not only incorporates all the maintenance and troubleshooting skills developed in Automated Systems Troubleshooting I for basic system maintenance, diagnosis and repair but also introduces maintenance and troubleshooting of the more difficult and advanced system areas such as networked controllers, vision systems, advanced robotics, programmable logic controllers, and other system and subsystem components where hardware and software are heavily integrated for system operation. (0891-320) Class 2, Lab 6, Credit 4 (F)

0891-398 Special Topics: Automation Technologies
Credit variable (F, W, S)

0891-399 Independent Study: Automation Technologies
Credit variable (F, W, S)

Communication Studies
Communication studies may satisfy the social sciences, humanities or, in some cases, deaf cultural studies/ASL graduation requirements. The 200-level courses satisfy the AOS requirement for general education. Interpersonal Relationships, Group Dynamics and Effective Teams, and Organizational Communication and the Deaf Employee satisfy the AOS communication requirement.

0880-101 Foundations of Critical Thinking
This course sharpens students' ability to think clearly, logically, and creatively and to communicate knowledge effectively in an academic setting. Critical thinking strategies are learned for examining issues and solving problems. Course topics include problem solving using a five-step model; analyzing and giving directions; classifying and sequencing information; identifying multiple perspectives on an issue; analyzing arguments used to support a position; and creating visual representations of problems and solutions. The importance of thinking critically for effective communication regardless of modality (writing, reading, signing, speaking, listening) is stressed. (ACT reading score 1–11 or permission of instructor; corequisite: NTID English levels A or B, 0883-100 through -199) Class 3, Credit 3 (F, W, S)

0880-201 Interpersonal Relationships¶
This course examines the role of communication as it relates to establishing, maintaining and ending relationships. Topics include: relationship development; self-concept; perceptions and first impressions; stereotyping, prejudice and discrimination; conflict resolution; active and passive listening; personal and social values; self-disclosure, gender-related communication, and communication among Deaf and hearing people. (Qualified to enter an AOS degree program or permission of instructor) Class 3, Credit 3 (F, W, S)

0880-202 Intercultural Communication¶
This course is intended to provide students with an introduction to the concepts of culture, communication and intercultural communication as they relate to face-to-face communication. The students will learn about the relationship between culture and communication and how to reduce potential conflict. Skills learned in this course apply to communication in everyday situations as well as the work setting. (ACT reading score 14–16 or permission of instructor) Class 3, Credit 3 (W, S)

0880-204 Effective Presentations¶
This course assists students in developing the ability to research, prepare and deliver effective presentations. Students learn to specify a topic, research sources of information, evaluate the value of the information using critical thinking skills, develop an outline and investigate strategies for delivery, including visual aids. Students also learn to analyze intended audiences for appropriateness of language use, communication mode and register. (ACT reading score 14–16 or permission of instructor) Class 3, Credit 3 (W, S)

0880-206 Group Dynamics and Effective Teams¶
This course focuses on the information and skills needed to be a knowledgeable, effective participant in small groups. Topics related to group dynamics and team building are addressed at the practical and theoretical levels. These topics include characteristics of effective teams, stages of group development, techniques for group self-analysis, how groups operate for different outcomes, group vs. personal goals, the role of diversity, and group decision-making and problem-solving techniques. (Qualified to enter an AOS degree program or permission of instructor) Class 3, Credit 3 (F, W, S)

0880-207 Organizational Communication and the Deaf Employee¶
This course examines interpersonal and small group communications in organizational settings in today’s corporate climate, with emphasis on important aspects of communication for deaf individuals entering a professional career. Students become familiar with the business environments of large and small companies and the implication of company size regarding personnel decisions. Case studies from selected corporations provide insights into elements of communication processes such as networks (electronic and non-electronic), organizational structures, managerial decision making, interviewing, organizational development and conflict resolution. Companies’ perspectives on hiring culturally and ethically diverse individuals and deaf individuals are discussed. Laws, such as ADA, related to the hiring and support of disabled workers are addressed. (Qualified to enter an AOS degree program or permission of instructor) Class 3, Credit 3 (F, W, S)

0880-398 Special Topics: Communication Studies
Credit variable (F, W, S)

*This course satisfies the Deaf Studies/American Sign Language requirement.
†This course satisfies the humanities requirement.
‡This course satisfies the social sciences requirement.
0890-208 A/E/C Measurement Systems
This course provides students with hands-on experience with basic measuring instruments used in the architectural/engineering/construction (A/E/C) industry. Students practice measurement skills in lab and field settings and use computer simulations. Care and handling of the instruments, data collection, management, analysis and other calculations are developed. Students learn standard procedures to report and display measurement information. (0890-214) Class 1, Lab 5, Credit 2 (S)

0890-210 Construction CAD I
In this course students learn computer aided drafting (CAD) skills to produce contract documents, manage files and organize graphic content for construction projects. Students will produce working drawings for a variety of architectural/engineering construction types. (0890-212) Lab 12, Credit 4 (S)

0890-212 Computing Tools for Engineering Technology
This course provides a foundation of computer skills common to classroom and work environments in engineering-related fields. These include skills with using operating systems, networks, the Internet, common office productivity tools and graphics tools. Most assignments will include engineering communication and problem-solving components. Class 2, Lab 4, Credit 4 (F)

0890-214 CAD Applications in Engineering Technology
Students continue developing engineering skills in engineering graphics and solid modeling. Students will primarily use computer aided drafting (CAD) as a tool to generate 2D graphics and 3D models. The course is laboratory oriented and provides the student with basic skills in spatial visualization, freehand sketching, parametric solid modeling, and creation of engineering drawings that meet industrial drafting standards. (0813-220, 0890-212; corequisite: 0813-222) Class 2, Lab 4, Credit 4 (W)

0890-216 Design, Dimensioning and Tolerancing
Students continue developing basic engineering skills through project-based problem-solving and design exercises. Geometric dimensioning and tolerancing (GD&T) skills are the focus of this course. Course work requires students to evaluate the functional requirements of parts and assemblies, use GD&T to specify those requirements, and relate process capabilities to design specifications. (0890-214; corequisite: 0813-224) Class 2, Lab 4, Credit 4 (S)

0890-220 Construction CAD II
Students learn to apply 3-D CAD techniques to a bi-level construction project situated on a site with modest topographic features. Concepts associated with the structural system are integrated into the construction of the 3-D model. Students will extract a series of orthographic and pictorial views from the model, producing a comprehensive set of working drawings. (0890-210) Lab 12, Credit 4 (F)

0890-230 Construction CAD III
Students learn to apply 3-D CAD techniques to a multi-level construction project situated on a site with significant topographic features. Students will function as a team to create a total project model. Concepts of structural systems will be integrated into the construction of the building models. Students will extract and refine a series of orthographic views from the site and building models such that a comprehensive set of working drawings is produced. (0890-220) Lab 12, Credit 4 (W)

0890-255 Construction Materials and Methods I
Students begin to learn about the common structural materials used in construction. Content includes vocabulary, identification, characteristics, origins, sources, standard sizes and shapes, units of measure, and methods for testing and acceptance. Students use standard references and classification systems for materials and products. (0890-208) Class 2, Lab 3, Credit 3 (F)

0890-265 Construction Materials and Methods II
This course is a continuation of the Construction Materials and Methods I course. Students learn standard classification systems and use reference sources to investigate materials and products. Students select construction materials and products and integrate their selections into design solutions. This course focuses on non-structural materials and products associated with the construction industry. (0890-255) Class 2, Lab 3, Credit 3 (W)

0890-275 Principles of Structural Systems
Students learn the basic concepts of loads and stresses and how the structural members of a construction project support loads. This overview includes the practical aspects of how structural elements are assembled and incorporated into construction projects. (0890-255) Class 3, Credit 3 (W)

0890-280 GIS Fundamentals
Students develop basic skills in applications of geographic information systems (GIS). Through hands-on projects, students will learn how to use GIS software, plan a project, create a database, conduct spatial analysis and create presentation graphics. No official prerequisites are required, but students should have basic computer literacy skills. Class 2, Lab 3, Credit 3 (F)

0890-299 Co-op: Computer Aided Drafting Technology
Designed to give the student an opportunity to gain experience on the job, to apply what has been learned and to self-evaluate personal and communication skills. Placement assistance is provided to help the student find a relevant work experience. Credit 0 (F, W, S, Su)

0890-310 Advanced Construction CAD
Students develop the CAD drafting skills gained in previous courses by adding skills in design development. The project, a building of two or more stories, requires the synthesis of information and principles both from previous courses and from reference sources. The use of these reference sources is an important part of the instruction. (0890-230, 265, 275) Lab 12, Credit 4 (S)

0890-320 Presentation Graphics
Students gain specialized skills and knowledge in production of presentation graphics using CAD. Using their general CAD skills as a starting point, they learn to produce various types of 3-D views, fly-throughs, virtual reality, and Web graphics for presentation of construction projects to clients, agencies, boards and the public. Students will also gain basic skills and knowledge in geographic information systems using GIS software. (0890-310) Lab 12, Credit 4 (F)

0890-355 Site Utilities, Mechanical and Electrical Systems for A/E/C
Students learn to identify the basic equipment, requirements and operation of site utilities and mechanical and electrical systems for construction projects. The systems include water supply, sanitary sewers and treatment, storm drainage, solid waste handling, gas, power, telephone, cable services, fire protection, heating, ventilating, air conditioning, lighting, communication systems and conveying systems. Students become acquainted with the graphic representations of this equipment and these systems on construction documents. (0890-220, 265) Class 3, Credit 3 (F)

0890-375 Construction Regulations
Students gain a general knowledge of laws, codes, ordinances, regulations, approval processes and approving agencies or bodies that affect construction projects. Students gain a basic understanding of how these regulations and processes are applied to the work they will perform. (0890-255, 265, 275) Class 3, Credit 3 (S)

0890-398 Special Topics: Computer Aided Drafting Technology
Credit variable (F, W, S)

0890-399 Independent Study: Computer Aided Drafting Technology
Credit variable (W)

Computer Integrated Machining Technology

0813-220 Engineering Fundamentals
Students develop basic engineering skills through project-based problem-solving and design exercises. Data collection, analysis and technical communication skills are emphasized. Course work requires students to apply knowledge and skills related to mathematics, science and English courses. (Corequisite: 0890-212) Class 2, Lab 4, Credit 4 (F)

0813-222 Manufacturing Processes
This course focuses on understanding and applying basic manufacturing processes. Students will learn how typical industrial piece parts and assemblies are manufactured. Topics emphasize safety and focus on processes and related theory for material removal, sheet metal forming, joining, casting and molding in a project-based format. (0813-220, 0890-212; corequisite: 0890-214) Class 2, Lab 4, Credit 4 (W)

0813-224 Industrial Processes
This course will focus on the understanding and application of non-traditional manufacturing processes such as electrical discharge machining (EDM), electrochemical machining (ECM), photochemical machining (PCM), ultrasonic machining, laser cutting, plasma cutting, rapid prototyping, etc. This is a project-based course; the student will, alone or in a team, investigate one of the processes in depth and give a presentation on how it is applied to a specific part. (0813-222, 0890-214; corequisite: 0890-216) Class 2, Lab 4, Credit 4 (S)
0813-231 CIMIT 1
Students develop basic skills for operating computer-controlled machine tools. Laboratory instruction simulates introductory-level work in an industrial environment; student work is held to ISO-referenced standards for dimensional and geometric accuracy. Safety work habits are highly stressed during this course. (0813-220, 222; 0809-212, 214; corequisite: 0813-239, 255) Class 1, Lab 5, Credit 3 (S)

0813-232 CIMIT 2
Students deepen basic skills in operating and programming computer-controlled machine tools. Laboratory instruction simulates intermediate-level work in an industrial environment. The student’s work is held to ISO-referenced standards for dimensional and geometric accuracy. Safety in the operation and programming of automated machines is an integral part of the course. (0813-205, 231; corequisite: 0813-252) Class 1, Lab 8, Credit 4 (F)

0813-233 CIMIT 3
Students develop advanced skills in programming computer-controlled machine tools. A progressively more difficult series of projects sets the pace of the course. Laboratory instruction continues to simulate an industrial environment; student work is held to ISO-referenced standards for dimensional and geometric accuracy. Safety work habits for programming, set-up and operation of automated machines are an integral part of the course. (0813-222, 252; corequisite: 0813-254) Class 1, Lab 8, Credit 4 (W)

0813-234 CIMIT 4
Students continue to develop advanced skills in programming computer-controlled machine tools. The most challenging projects of the CIMIT series are presented in this course. Laboratory instruction simulates the atmosphere of the demanding industrial environment. Student work is rigorously held to ISO-referenced standards for dimensional and geometric accuracy. Safety work habits for programming, set-up and operation of automated machines are an integral part of the course. (0813-233, 254; corequisite: 0813-242 or 0813-257) Class 1, Lab 8, Credit 4 (S)

0813-239 Blueprint Reading
Students develop the skills necessary to read and interpret engineering drawings of details and assemblies. (0884-180) Class 1, Lab 3, Credit 2 (S)

0813-240 Lens Design and Applications
This course provides a general introduction to the nature of light. The course concentrates on the properties of light and interaction of light in various materials. This course teaches students how to design lens systems based on specific optical factors such as lens material, lens thickness, lens curvature, and index of refraction. Class 3, Credit 3 (W)

0813-241 Advanced Blueprint Reading
Students develop the skills necessary to read and interpret prints of engineering drawings of details and assemblies. (0813-239) Class 1, Lab 3, Credit 2 (W)

0813-242 Optical Testing
In this course, students learn techniques used for testing spherical surfaces, flats, and prisms. Topics include measurement of surface quality, focal length, power, irregularity, angle of deviation, basic interferometry, fringe analysis, and lens aberrations. Specific measuring techniques and instruments include auto collimation, distance object, laser two-beam, spherometers, micrometers, Ronchi test lenses, and test plating. (0813-255; corequisite: 0813-254) Lab 6, Credit 3 (S)

0813-244 Precision Optics Manufacturing I
In this course students learn and apply basic optical principles used in conventional manufacturing of precision optical flat elements. Procedures and techniques include blocking, rough bench grinding, double-sided lapping/grinding, polishing, deblocking, and centering. Students practice and apply appropriate handling and visual inspection techniques. (0813-239, 255) Lab 6, Credit 2 (S)

0813-245 Precision Optics Manufacturing II
This course is the second in a sequence of courses in which students learn to apply basic principles of conventional and CNC manufacturing of optical elements. The emphasis in this course will be on the production of simple convex and concave spherical elements. Procedures and techniques include curve generating, blocking, rough and fine grinding, stick polishing, deblocking, and centering. Students practice and apply appropriate handling and visual inspection techniques. (0813-244) Lab 12, Credit 6 (F)

0813-250 Introduction to Computer Numerical Control
Students develop basic knowledge in principles, concepts and terminology of computer numerical controlled machining (CNC). Students review CNC history, development and applications and learn basic programming formats and techniques. (0813-222) Class 1, Lab 2, Credit 2 (S)

0813-251 Industrial Materials
Introduction to the many materials used in industry and the reasons why the final cost of producing a part is influenced by material selection. Metals, plastics and ceramics are covered from the perspectives of physical, mechanical and dimensional properties. (0813-231) Class 3, Credit 3 (F)

0813-252 CNC Graphics
Students develop basic skills in programming CNC machine tools. Laboratory instruction simulates an industrial environment; student work is held to ISO-referenced standards for dimensional and geometric accuracy. Safety in the operation of automated machines is an integral part of the course. (0813-231, 250; corequisite: 0813-232) Lab 6, Credit 3 (F)

0813-254 CNC Solids
Students develop skills in using solid modeling techniques to program CNC machine tools. Laboratory instruction simulates an industrial environment; student work is held to ISO-referenced standards for dimensional and geometric accuracy. Safety in the operation of automated machines is an integral part of the course. (0813-232, 252; corequisite: 0813-233) Lab 6, Credit 3 (W)

0813-255 Precision Measurement
Students develop the skills necessary to measure to the highest tolerances commonly used in industry. They measure parts or groups of parts using industrial methods and equipment. Analysis of measurements and problem solving are stressed. Class 1, Lab 3, Credit 2 (S)

0813-257 CNC Toolpaths
Students develop skills in creating, editing and verifying toolpaths; copying and pasting parameters, toolpaths and tool associative geometry; and modifying geometry and machining parameters to update toolpaths. Laboratory instruction simulates an industrial environment; student work is held to ISO referenced standards for dimensional and geometric accuracy. Safety in the operation of automated machines is an integral part of the course. (0813-233, 254; corequisite: 0813-234) Lab 6, Credit 3 (S)

0813-258 Automated Machining
Students continue to develop advanced skills in programming computer-controlled machine tools. Projects involve the production of fixtures and planning for short- and long-run production. Laboratory instruction simulates an industrial environment; student work is held to ISO referenced standards for dimensional and geometric accuracy. Safety in the operation of automated machines is an integral part of the course. (0813-234, 257, 299) Lab 12, Credit 6 (F)

0813-299 Co-op: Computer Integrated Machining Technology
Credit 0 (Su)

0813-398 Special Topics: Computer Integrated Machining Technology
Credit variable (W)

0813-399 Independent Study: Computer Integrated Machining Technology
Credit variable (W)

Deaf Cultural Studies

Deaf cultural studies/American Sign Language courses also satisfy social sciences and humanities requirements as noted. C-level courses or above satisfy the AOS requirement.

Fundamental (Level B)

0880-190 Introduction to Deaf Cultural Studies and ASL
Introduces students to major concepts and issues in the field of Deaf Cultural Studies. The course integrates the fields of history, anthropology, linguistics, creative arts and literature as they apply to Deaf culture and the Deaf community. The course is designed to foster students’ active participation as a means of developing strong leadership and advocacy skills among NTID students. After completing this course, students will be able to pursue specific areas of interest within the deaf cultural studies/ASL program. (ACT arts/literature reading score 1–4 or permission of instructor) Class 3, Credit 3 (F, W)

185 | National Technical Institute for the Deaf
0881-166 Sign Mime and Creative Movement
Focuses on the dominant historical form of expression used by theaters of the Deaf. Topics include principles for effective use of space, creative movement strategies and expression of original ideas in sign-mime. This course satisfies the deaf cultural studies/ASL requirement. (ACT arts/literature reading score 1-4 or permission of instructor) Class 3, Credit 3 (F, W)

0886-150 Introduction to American Sign Language
Introduces knowledge about American Sign Language (ASL), provides a basic understanding of ASL, and discusses principles of sign formation. The course also compares aspects of different visual communication modalities and spoken language. Strategies for learning ASL will be discussed. Class 3, Credit 3 (F)

0886-199 American Sign Language I
Designed for students who have no previous knowledge of American Sign Language. ASL I includes the linguistic features, cultural protocols and core vocabulary for students to function in basic ASL conversations: ASL grammar for asking and answering questions while introducing oneself; exchanging personal information; talking about family, friends and surroundings; and discussing activities. Classroom and lab activities include practicing conversations and videotaping. (SIPI/LCBQ:1) Class 4, Credit 4 (F, W, S)

Intermediate (Level C)

0880-207 Organizational Communication and the Deaf Employee†
Examines interpersonal and small group communications in organizational settings in today’s corporate climate, with emphasis on important aspects of communication for deaf individuals entering a professional career. Students become familiar with the business environments of large and small companies and the implications of company size regarding personnel decisions. Case studies from selected corporations provide insights into elements of communication processes such as networks (electronic and non-electronic), organizational structures, managerial decision making, interviewing, organizational development and conflict resolution. Companies’ perspectives on hiring culturally and ethnically diverse individuals and deaf individuals are discussed. Laws, such as ADA, related to the hiring and support of disabled workers are addressed. (Qualified to enter an AOS program or permission of instructor) Class 3, Credit 3 (F, W, S)

0880-247 Deaf Art/Deaf Artists†
Examines art works and artists’ statements, goals and intentions. The artwork and the statements of artists are examined to determine if the artists focus on being deaf as the subject of their art or if the focus of their art is related to Deaf issues or other subjects. By examining these connections and influences and comparing the varieties of choices artists have made, a definition of Deaf Art is developed. From the readings and reviews, students develop a list of issues that lead to identification of a person as a Deaf artist or an artist who is deaf. The question of what is culture and what is art is examined, and comparisons to cultural groups are made. An in-depth analysis of Deaf View/Image Art (De‘VIA) will be conducted, and parallels will be drawn to other disenfranchised groups’ artwork. Furthermore, students will create their own self-portrait using De‘VIA themes and/or motifs. Class 3, Credit 3 (F, S)

0881-204 Deaf Theater History†
Examines the Deaf experience in theater and the roles that deaf people have played in theater history. Particular attention is given to the documented achievements of individuals and companies in the 19th and 20th centuries. This course satisfies the deaf cultural studies/ASL requirement. (ACT arts/literature reading score 5-7 or permission of instructor; 0881-202 or 0882-221) Class 3, Credit 3 (W)

0882-221 Deaf Heritage†
The course will examine the lives of deaf people throughout history, particularly during critical events such as revolutions, wars, the Great Depression and into the modern era with legislative acts that have led to significant changes in education and employment. Simultaneously, the formation of the Deaf community and Deaf culture will be studied to illustrate the meaning of “Deaf heritage.” Hard-of-hearing and late-deafened individuals involved in the Deaf community will be included, and racial, ethnic and gender issues will be discussed as they relate to this heritage. Students learn how technology has impacted the lives of deaf people, as have local, state and national organizations of the deaf. The achievements of many deaf people in a variety of fields will underscore self-identity and self-advocacy issues. (0882-200) Class 3, Credit 3 (F, W, S)

0882-222 Deaf Culture and Community†
Introduces students to aspects of Deaf culture and community around the world. The distinction between these is reviewed, and characteristics of each are identified. Students learn about the language, norms of behavior, values, traditions and possessions of deaf people. Deaf culture and community are analyzed from a historical and sociological perspective. Cross-cultural issues relating to the role of hearing people with the Deaf community are also covered. (0882-200 or permission of instructor) Class 3, Credit 3 (W)

0882-223 Deaf Women’s Studies†
This course provides a historical review of deaf women in their professional and personal lives. The issues covered in this course include the exploration of the social, political and economic conditions affecting deaf women and how this compares to other women in society. Hard-of-hearing and late-deafened women and ethnic/minority women with hearing loss are included in this course. Students will be able to summarize trends from the social/political analysis and apply their learning to their own personal development and empowerment. (0882-200 or permission of instructor) Class 3, Credit 3 (F, S)

0882-245 Deaf People and the Holocaust†
The study of cultural, economic and political history is an important part of social sciences as it broadens our understanding of the events in present times. Events leading up to World War II and the Nazi Final Solution will be examined. The eugenics movement toward preventing life, terminating unborn life, and eliminating “useless eaters” will be explored in understanding how the Nazis implemented their doctrine and mechanisms to the “final solution.” Lives of deaf people during the Nazi regime will be investigated. The course will explore the implications of Nazi laws that restricted the rights and lives of “undesirable people,” i.e., the disabled, gays and lesbians, Jehovah’s Witnesses, communists, Romi (gypsies), Jewish people, and particularly deaf people. (0882-200 or permission of the instructor) Class 3, Credit 3 (W)

0886-200 American Sign Language II†
Expands the basic principles presented in ASL I. The course teaches students to use linguistic features, cultural protocols and core vocabulary to function in additional basic ASL conversations, including ASL grammar, for giving directions; describing others; making requests; talking about family, occupations and routines; and attributing qualities to others. Classroom and lab activities include practicing conversations and videotaping. (0886-199 or equivalent) Class 4, Credit 4 (F, W, S)

0886-201 American Sign Language III†
This course is a continuation of ASL II, expanding the emphasis on ASL grammar, syntax, spatial referencing and vocabulary development. ASL III teaches further communicative competencies in ASL conversations beyond the basic level that include telling life events, describing events in time, asking for clarification, correcting, conforming, elaborating on information, agreeing and disagreeing, resolving conflicts and giving directions. Classroom and lab activities include practicing dialogues, short stories, narratives and short conversations. (0886-200 or equivalent) Class 4, Credit 4 (W, S)

0886-249 Structure of American Sign Language†
Provides students with basic knowledge about the linguistic structure of American Sign Language (ASL). Through an introduction to language components, students examine the phonology, morphology and syntax of ASL. Information regarding historical and cultural aspects of ASL is also introduced and discussed. This course is taught in ASL. Class 3, Credit 3 (F, W, S)

Bridging (Level D)

0881-259 Creative Translation for Stage†
Focuses on different translation forms used by theater, mime and dance companies. Students learn to distinguish between English and American Sign Language (ASL). They translate stories, poems and plays into ASL and other sign languages. Theatrical integrity dealing with translation issues and visual access is a central goal. (ACT arts/literature reading score 8-10 or permission of instructor; 0881-210 or 256) Class 3, Credit 3 (S)

0882-285 Civil Rights and Deaf People* Reviews the history of oppressed groups in the United States and their struggle for equality. Parallels will be drawn between various groups with a focus on deaf people. Patterns of oppression and empowerment will be compared and contrasted for black Americans, Native Americans, women, lesbians and gays, and deaf people. Specific strategies and techniques employed to gain civil rights are covered. (ACT social studies/science reading score 9-11 or permission of instructor) Class 3, Credit 3 (W, S)

†This course satisfies the humanities requirement.
‡This course satisfies the social sciences requirement.
0886-250 Introduction to ASL Teaching†
This course satisfies the humanities requirement.

0883-102 English A I
This is the first course in a two-course developmental sequence in which students work on the reading and writing skills necessary for all degree programs at NTID. Students develop the English language knowledge, reading comprehension strategies and written language skills included in Nonfiction Reading I and Academic Writing I. Students also learn strategies for integrating the use of reading and writing. Upon successful completion of this two-course sequence, students continue their academic reading and writing skill development in Nonfiction Reading II and Academic Writing II courses. (NTID Reading Test score below 80 and NTID Writing Test score below 40) Class 5, Credit 5 (F)

0883-103 English A II
This is the second course in a two-course developmental sequence in which students work on the reading and writing skills necessary for all degree programs at NTID. Students develop the English language knowledge, reading comprehension strategies and written language skills included in Nonfiction Reading I and Academic Writing I. Students also learn strategies for integrating the use of reading and writing. Upon successful completion of this two-course sequence, students continue their academic reading and writing skill development in Nonfiction Reading II and Academic Writing II courses. (NTID Reading Test score below 80, NTID Writing Test score below 40 and 0883-102) Class 5, Credit 5 (W)

0883-112 English B I
This is the first course in a three-course developmental English language sequence at the second level offered at NTID in which students work on reading and writing skills necessary for AOS programs at NTID. General topics in science and humanities provide the context in which students learn about resources to support their teaching techniques, select appropriate materials, and learn basic curriculum design and evaluation techniques, including how to teach cultural and grammatical features in lessons. Students learn about resources to support their efforts to teach sign language. Class 3, Credit 3 (W, S)

0883-113 English B II
This is the second course in a three-course developmental English language sequence at the second level offered at NTID for students who begin with reading skills higher than those in English B-I or have completed English B-I. Students work on reading and writing skills necessary for AOS programs at NTID. General topics in science and humanities provide the context in which students use the skills included in English B-I, develop skills for comprehending and using additional complex sentence elements, increase their content word vocabulary to about 6000 words, learn to use additional independent reading strategies, and develop skills for writing paragraphs and longer compositions. Upon successful completion of this course, students will continue their reading and writing skill development in Career English courses. (Completion of English B-II, 0883-113) Class 4, Credit 4 (F, W, S)

0883-114 English B III
This is the third course in a three-course developmental English language sequence at the second level offered at NTID for students who have completed English B-II. Students continue to work on reading and writing skills necessary for AOS programs at NTID. General topics in science and humanities provide the context in which students use the skills included in English B-II, develop skills for comprehending and using additional complex English sentence elements, increase their content word vocabulary to about 7000 words, begin to evaluate reading tasks to select appropriate reading strategies, and expand their skills for writing paragraphs and longer compositions. Upon successful completion of this course, AOS students will continue their reading and writing skill development in Career English courses. (Completion of English B-II, 0883-113) Class 4, Credit 4 (F, W, S)

0883-212 Career English I
This is the first course in a three-course sequence. It is designed to develop reading, writing, grammar, and vocabulary skills that students need for AOS course work and for the work environment. The reading and writing components are thoroughly integrated with approximately equal time being devoted to each. Grammar and vocabulary are thoroughly integrated into the reading and writing components. Course content includes general and technical articles, memorandums, letters, electronic communication, directions, work-related forms, and short reports. (The three NTID level-B courses.) Class 4, Credit 4 (F, W, S)

0883-213 Career English II
This is the second course in a three-course sequence. It is designed to improve reading, writing, grammar, and vocabulary skills that students need for AOS course work and for the work environment. The reading and writing components are thoroughly integrated with approximately equal time being devoted to each. Grammar and vocabulary are thoroughly integrated into the reading and writing components. Course content includes general and technical articles, memorandums, letters, electronic communication, directions, work-related forms, and short reports. (Career English I 0883-212) Class 4, Credit 4 (F, W, S)

0883-214 Career English III
This is the third and final course in a three-course sequence. It is designed to refine reading, writing, grammar, and vocabulary skills that students need for AOS course work and for the work environment. The reading and writing components are thoroughly integrated with approximately equal time being devoted to each. Grammar and vocabulary are thoroughly integrated into the reading and writing components. Course content includes general and technical articles, memorandums, letters, electronic communication, directions, work-related forms, and short reports. (Career English II 0883-213) Class 4, Credit 4 (F, W, S)

0883-221 Intensive English I
Intensive English I (0883-221) is the first course in a series of five which are offered in one academic year. This course, as with all of the others in the sequence, uses a thematic approach to reading and writing. Throughout the year, attention is focused on many aspects of English—reading, writing, grammar, and vocabulary. At the end of this sequence of courses, students will have the skills necessary to successfully place in Written Communication I or II. To progress to the next courses in the series (0883-222 and 0883-223), students must complete course with a grade of C or better. Students may not repeat any Intensive English course. Class 4, Credit 4 (F, S)

0883-222 Intensive English II
Intensive English II (0883-222) is the second course in a series of five courses which are offered in one academic year and is taken in the same quarter as Intensive English III (0883-223). Throughout the year, attention is focused on many aspects of English—reading, writing, grammar, and vocabulary. At the end of this sequence of courses students will have the skills necessary to successfully place in Written Communication I or II. To progress to the next courses in the series (0883-224 and 0883-225), students must complete this course with a grade of C or better. Students may not repeat any Intensive English course. Each Intensive English course must be taken in conjunction with its corequisite course. (0883-221 with grade of C or better; corequisite: 0883-223) Class 4, Credit 4 (F, W)
Intensive English III (0883-223) is the third course in a series of five courses offered in one academic year and is taken in the same quarter as Intensive English II (0883-222). Like the other courses in the sequence, this course uses a thematic approach to reading and writing. These courses focus on many parts of English—grammar, writing, reading and vocabulary. The end of this sequence of courses, students will have the skills necessary to successfully enter Written Communication I or II. To progress to the next course in the series (0883-224 and 0883-225), students must complete this course with a grade of C or better. Students may not repeat any Intensive English course. Each Intensive English course must be taken in conjunction with its corequisite course. (0883-221 with grade of C or better; corequisite: 0883-222) Class 4, Credit 4 (F, W)

Intensive English IV (0883-224) is the fourth course in a series of five courses offered in one academic year and is taken in the same quarter as Intensive English V (0883-225). Like the other courses in the sequence, this course uses a thematic approach to reading and writing. These courses focus on many parts of English—grammar, writing, reading, and vocabulary. At the end of this sequence of courses, students will have the skills necessary to enter Written Communication I or II and be successful. Learning how these topics function in texts will help students become better readers as well as better writers. To progress to the next course (0802-110 or 0802-111) students must complete this course with a grade of C or better. Students may not repeat any Intensive English course. Each Intensive English course must be taken in conjunction with its corequisite course. (0883-222 and 0883-223 with grades of C or better; corequisite: 0883-225) Class 4, Credit 4 (F, W, S)

Intensive English V (0883-225) is the fifth course in a series of five courses offered in one academic year and is taken in the same quarter as Intensive English IV (0883-224). Like the other courses in the sequence, this course uses a thematic approach to reading and writing. These courses focus on many parts of English—grammar, writing, reading, and vocabulary. At the end of this sequence of courses, students will have the skills necessary to enter Written Communication I or II and be successful. Learning how these topics function in texts will help students become better readers as well as better writers. To progress to the next course (0802-110 or 0802-111) students must complete this course with a grade of C or better. Students may not repeat any Intensive English course. Each Intensive English course must be taken in conjunction with its corequisite course. (0883-222 and 0883-223 with grades of C or better; corequisite: 0883-224) Class 4, Credit 4 (F, W, S)

Themes and Symbols in Literature (0883-250) is a course in which students with experience in literary analysis will apply their knowledge and ability to independently comprehend literary works in preparation for entry to College of Liberal Arts literature course work. Students will effectively report in writing the results of such activities as individual literary analyses, critiquing and research study. In addition, students will examine the multicultural voices and views expressed through literature. (ACT arts/literature reading score 5–7 or 0883-200 or permission of instructor)Class 4, Credit 4 (F, W)

Nonfiction Reading IV (0883-260) is a course designed to help students become better readers as well as better writers. Students will have the skills necessary to enter Written Communication I or II and be successful. Learning how these topics function in texts will help students become better readers as well as better writers. To progress to the next course (0802-110 or 0802-111) students must complete this course with a grade of C or better. Students may not repeat any Intensive English course. Each Intensive English course must be taken in conjunction with its corequisite course. (0883-222 and 0883-223 with grades of C or better; corequisite: 0883-224) Class 4, Credit 4 (F, W, S)

Academic Writing IV (0883-261) is a course designed to equip students to write effectively and to communicate their ideas coherently and persuasively. Students will have the skills necessary to enter Written Communication I or II and be successful. Learning how these topics function in texts will help students become better readers as well as better writers. To progress to the next course (0802-110 or 0802-111) students must complete this course with a grade of C or better. Students may not repeat any Intensive English course. Each Intensive English course must be taken in conjunction with its corequisite course. (0883-222 and 0883-223 with grades of C or better; corequisite: 0883-224) Class 4, Credit 4 (F, W, S)

Special Topics: English (0883-398) is a course designed to equip students to write effectively and to communicate their ideas coherently and persuasively. Students will have the skills necessary to enter Written Communication I or II and be successful. Learning how these topics function in texts will help students become better readers as well as better writers. To progress to the next course (0802-110 or 0802-111) students must complete this course with a grade of C or better. Students may not repeat any Intensive English course. Each Intensive English course must be taken in conjunction with its corequisite course. (0883-222 and 0883-223 with grades of C or better; corequisite: 0883-224) Class 4, Credit 4 (F, W, S)

Independent Study: English (0883-399) is a course designed to equip students to write effectively and to communicate their ideas coherently and persuasively. Students will have the skills necessary to enter Written Communication I or II and be successful. Learning how these topics function in texts will help students become better readers as well as better writers. To progress to the next course (0802-110 or 0802-111) students must complete this course with a grade of C or better. Students may not repeat any Intensive English course. Each Intensive English course must be taken in conjunction with its corequisite course. (0883-222 and 0883-223 with grades of C or better; corequisite: 0883-224) Class 4, Credit 4 (F, W, S)

Perspectives on Literature and the Arts (0880-185) is a course designed to equip students to write effectively and to communicate their ideas coherently and persuasively. Students will have the skills necessary to enter Written Communication I or II and be successful. Learning how these topics function in texts will help students become better readers as well as better writers. To progress to the next course (0802-110 or 0802-111) students must complete this course with a grade of C or better. Students may not repeat any Intensive English course. Each Intensive English course must be taken in conjunction with its corequisite course. (0883-222 and 0883-223 with grades of C or better; corequisite: 0883-224) Class 4, Credit 4 (F, W, S)

Introduction to Deaf Cultural Studies and ASL* (0880-190) is a course designed to equip students to write effectively and to communicate their ideas coherently and persuasively. Students will have the skills necessary to enter Written Communication I or II and be successful. Learning how these topics function in texts will help students become better readers as well as better writers. To progress to the next course (0802-110 or 0802-111) students must complete this course with a grade of C or better. Students may not repeat any Intensive English course. Each Intensive English course must be taken in conjunction with its corequisite course. (0883-222 and 0883-223 with grades of C or better; corequisite: 0883-224) Class 4, Credit 4 (F, W, S)

Diversity and Identity in Literature (0880-235) is a course designed to equip students to write effectively and to communicate their ideas coherently and persuasively. Students will have the skills necessary to enter Written Communication I or II and be successful. Learning how these topics function in texts will help students become better readers as well as better writers. To progress to the next course (0802-110 or 0802-111) students must complete this course with a grade of C or better. Students may not repeat any Intensive English course. Each Intensive English course must be taken in conjunction with its corequisite course. (0883-222 and 0883-223 with grades of C or better; corequisite: 0883-224) Class 4, Credit 4 (F, W, S)

The American Past: An Introduction to the History of the United States (0880-230) is a course designed to equip students to write effectively and to communicate their ideas coherently and persuasively. Students will have the skills necessary to enter Written Communication I or II and be successful. Learning how these topics function in texts will help students become better readers as well as better writers. To progress to the next course (0802-110 or 0802-111) students must complete this course with a grade of C or better. Students may not repeat any Intensive English course. Each Intensive English course must be taken in conjunction with its corequisite course. (0883-222 and 0883-223 with grades of C or better; corequisite: 0883-224) Class 4, Credit 4 (F, W, S)

The Big Questions: An Introduction to Philosophy (0880-240) is a course designed to equip students to write effectively and to communicate their ideas coherently and persuasively. Students will have the skills necessary to enter Written Communication I or II and be successful. Learning how these topics function in texts will help students become better readers as well as better writers. To progress to the next course (0802-110 or 0802-111) students must complete this course with a grade of C or better. Students may not repeat any Intensive English course. Each Intensive English course must be taken in conjunction with its corequisite course. (0883-222 and 0883-223 with grades of C or better; corequisite: 0883-224) Class 4, Credit 4 (F, W, S)

Deaf Art/Deaf Artists’ (0880-247) is a course designed to equip students to write effectively and to communicate their ideas coherently and persuasively. Students will have the skills necessary to enter Written Communication I or II and be successful. Learning how these topics function in texts will help students become better readers as well as better writers. To progress to the next course (0802-110 or 0802-111) students must complete this course with a grade of C or better. Students may not repeat any Intensive English course. Each Intensive English course must be taken in conjunction with its corequisite course. (0883-222 and 0883-223 with grades of C or better; corequisite: 0883-224) Class 4, Credit 4 (F, W, S)
0879-200 Laboratory Science Technology: Laboratory Applications I
This course introduces students to the laboratory science technology (LST) program's curriculum, content, entry requirements, graduation requirements and employment options. Topics will also include an introduction to historical and current issues in the field of laboratory testing, concepts of analytical testing, basic laboratory applications and fundamental technical skills used in the laboratory. Class 1, Lab 2, Credit 2 (F)

0879-201 Laboratory Science Technology: Laboratory Applications II
This is the second of a six-course sequence that focuses on the application of laboratory tools, techniques and procedures. Each course builds on the knowledge and skills developed in previous laboratory applications courses. This introductory course establishes an expectation of high performance and introduces the concepts of lab protocols and standards. Course topics include laboratory safety, laboratory notebooks and information management, scientific reference and information sources, the identification and use of laboratory equipment and glassware, and maintaining a laboratory environment. This course integrates and reinforces information learned in previous and concurrent technical courses. Students begin to organize a laboratory science technology portfolio. (0879-200) Class 1, Lab 2, Credit 2 (W)

0879-202 Laboratory Science Technology: Laboratory Applications III
This is the third of a six-course sequence that focuses on the application of laboratory tools, techniques and procedures. This course continues to reinforce an expectation of high performance and introduces concepts surrounding quality control. Course topics also include the analytical process, laboratory organizational set-up, chain-of-custody and record keeping and computer skills related to the field. This course integrates and reinforces information learned in previous and concurrent technical courses. A laboratory science technology portfolio will continue to be developed. (0879-201) Class 1, Lab 2, Credit 2 (S)

0879-203 Laboratory Science Technology: Laboratory Applications IV
This is the fourth of a six-course sequence that focuses on the application of laboratory tools, techniques and procedures. Course topics include laboratory information management systems (LIMS), technical writing and the reporting and presentation of scientific information. Students also synthesize information learned in previous and concurrent courses by participating in job-related simulations. A laboratory science technology portfolio will continue to be developed. (0879-203) Class 1, Lab 2, Credit 2 (F)

0879-204 Laboratory Science Technology: Laboratory Applications V
This is the fifth of a six-course sequence that focuses on the application of laboratory tools, techniques and procedures. Professional and ethical behavior standards in the science laboratory environment are central to this course. Qualities of valued team members and their contribution to the overall performance of the laboratory are introduced, practiced and critiqued. This course also serves as a final mechanism for co-op preparation. This course integrates and reinforces information learned in previous and concurrent technical courses. A laboratory science technology portfolio will continue to be developed. (0879-204) Class 1, Lab 2, Credit 2 (S)

0879-205 Laboratory Science Technology: Laboratory Science Technology Microbiology
This general microbiology course includes basic concepts for the evaluation of bacteria, virus, fungi (molds and yeasts), algae and protozoa. Students learn laboratory procedures in the collection of samples; selection of media; techniques in sterilization; asepsis; staining, cultural, microscopic, biochemical and molecular identification; and antimicrobial susceptibility. This course provides an opportunity to synthesize their cooperative work experience with previous course experiences. This course also serves as a final mechanism for co-op preparation. This course integrates and reinforces information learned in previous and concurrent technical courses. Students finalize a laboratory science technology portfolio. (0879-205; corequisite: 0885-205) Class 1, Lab 2, Credit 2 (F)

0879-206 Laboratory Science Technology: Laboratory Science Technology Microbiology
This microbiology course focuses on concepts related to microorganisms common in the fields of laboratory science. The emphasis is on the major families of microorganisms that are important in food processing, preservation, distribution, utilization and public health. Students will study the organisms' roles in ecology, recycling and biogeochemical cycles and the testing procedures for microbes in water, air, soil, wastewater and the pathogens that affect humans. Students will develop knowledge and skills in the collection of samples, identification procedures and in understanding the laws related to public health and sanitation. (0885-205; 0879-218; corequisite: 0885-206) Class 2, Lab 3, Credit 3 (W)

0879-207 Sampling and Testing Soils and Groundwater
Students begin to learn about soil and groundwater and how it is contaminated. Content includes vocabulary, origin, identification, classification, characteristics, and methods for sampling and testing. Students use standard references and classifications. (0879-231 or 0879-311) Class 3, Lab 3, Credit 4 (F, S)

0879-208 Co-op: Laboratory Science Technology
This 10-week, full-time experience gives students matriculated in the laboratory science technology (LST) program a practical sampling of working in the laboratory testing field. Students will work under the supervision of qualified professionals, performing a variety of tasks pertaining to the field. As part of this experience, students complete a student evaluation form. This experience must be satisfactorily completed before graduation. Credit 0 (Su)

0879-209 Instrumental Analysis I
In this course students learn and apply basic concepts and principles of analytical testing using laboratory instruments, instrumentation theory and procedures. Concepts surrounding spectroscopy and electroanalytical methods of analysis are presented. Techniques including sample preparation, instrumentation setup and maintenance, calibration, precision measurement, safety, and data collection and analysis are introduced. Selected instrumentation presented in this course includes analytical balances, electroanalytical meters and probes, and atomic and molecular spectrophotometers. (0879-202, 0885-206, 0884-231) Class 2, Lab 3, Credit 3 (F)
In this course students learn and apply advanced concepts and principles in analytical testing using sophisticated laboratory instruments, instrumentation theory and procedures. Concepts surrounding chromatography methods of analysis are presented. Techniques including sample preparation, instrumentation set-up and maintenance, calibration, precision measurement, safety, and data collection and analysis are introduced. Selected instrumentation presented in this course includes liquid and gas chromatography, mass spectrometry and electrophoresis. (0879-203, 301, 0885-291, 0884-232) Class 2, Lab 3, Credit 4 (W)

In this course students learn and apply advanced concepts and principles in analytical testing using sophisticated laboratory instruments, instrumentation theory and procedures. Concepts related to advanced and automated methods of instrumental analysis are presented. Techniques including sample preparation, instrumentation set-up and maintenance, calibration, precision measurement, safety, and data collection and analysis are introduced and reinforced. Selected procedures presented in this course include advanced techniques in atomic and molecular spectroscopy, liquid and gas chromatography, mass spectrometry, and automated and computer-based instrumentation. (0879-204, 302, 0885-292) Class 3, Lab 3, Credit 4 (W)

This course prepares students to perform industry-specific applications of chemical analysis. Standard methods, operating procedures and protocols are introduced and reinforced. Sampling, testing and reporting in the fields of environmental, industrial, forensic, pharmaceutical and food testing are covered. Instrumental, volumetric and gravimetric techniques are practiced as they relate to the fields of chemical technology. (0879-203, 301, 0885-291, 0884-232, or permission of department) Class 3, Lab 3, Credit 4 (W)

This course prepares students to perform biotechnical applications in industry-specific fields of analysis. Standard methods, operating procedures and protocols are introduced and reinforced. Sampling, testing and reporting in the field of biotechnology are covered. (0879-204, 218, 302, 0885-215, 292, or permission of department) Class 3, Lab 3, Credit 4 (S)

This course prepares students to follow standard protocols to perform laboratory procedures commonly used in the food industry. Product analysis includes testing for protein and moisture. Emphasis is on precise and accurate data collection, data analysis and presentation, and practicing laboratory information management systems (LIMS). Federal regulations governing the food industry are examined and applied. Additional topics related to prepared foods and food additives are presented. (0879-301, 0885-291, 0884-231) Class 3, Lab 3, Credit 4 (W)

This course builds on concepts of microbiology in the fields of laboratory science with an emphasis on food-borne pathogens and environmental pathogens in water, air and soil and current methods for detecting, isolating and identifying microorganisms. Students study food and industrial fermentation with a focus on biotechnology and genetic engineering as it applies to agriculture, manufacture of food ingredients and bioremediation or decomposition of materials and pollution. Students develop knowledge and skills in the technology and instrumentation used in testing laboratories and in industrial applications according to the standards set by the regulating agencies. (0879-241, 305 and 0879-311 or 0879-312) Class 3, Lab 3, Credit 4 (F)

This course explores advanced concepts and principles in analytical testing using sophisticated laboratory instruments, instrumentation theory and procedures. Topics related to advanced and automated methods of instrumental analysis are presented. Techniques including sample preparation, instrumentation set-up and maintenance, calibration, precision measurement, safety, and data collection and analysis are introduced and reinforced. Additional topics related to quality control schemes, regulatory protocols and protocols governing sample collection are presented. (0879-302, 321, 0885-292) Class 3, Lab 3, Credit 4 (S)

This course prepares students to perform industry-specific applications of environmental, industrial, forensic, pharmaceutical and food testing are covered. Instrumental, volumetric and gravimetric techniques are practiced as they relate to the fields of chemical technology. (0879-203, 301, 0885-291, 0884-232, or permission of department) Class 3, Lab 3, Credit 4 (W)

This course explores concepts in mathematics and basic algebra, as they relate to applications in business. (0884-100 or equivalent) Class 3, Lab 1, Credit 3 (W)

This course is designed for students with no significant algebra experience. Topics include signed numbers, an introduction to variables and modeling, work with solving simple equations, introductions to the coordinate plane, and interpreting and displaying data. Estimation, calculator use and language are emphasized and problem solving stressed. (0884-100 or equivalent) Class 5, Lab 5, Credit 4 (F, W)

This course explores the mathematical concepts involving linear measurement, proportion and percent through the use of examples from printing, photo/media and applied art. (0884-100 or equivalent) Class 4, Credit 3 (W)

This course explores concepts in mathematics and basic algebra, as they relate to applications in business. (0884-100 or equivalent) Class 3, Lab 1, Credit 3 (W)

This introductory course consisting of a lecture and a lab component in which the basics of evaluating algebraic expressions, solving linear equations and inequalities and graphing linear functions are studied. Technology, in particular the graphing calculator, is an integral part of the learning and problem solving in this course. To progress to 0884-210 or 0884-212, student must pass 0884-180 with a grade of C or better. (0884-120) Class 3, Lab 2, Credit 4 (F, W, S)

This course is an extension of Basic Algebra and includes a more detailed treatment of linear equations, polynomial algebra, rational algebra, radical expressions and quadratic equations. Emphasis is placed on application. (0884-120) Class 2, Lab 2, Credit 3 (S)

This course is a continuation of Trigonometry for Coordinate Analysis I and continues the development of problem solving using right-angle trigonometry with an emphasis on concepts and applications related to computer integrated machining technology (CIMT). Topics include complex machine applications, compound angles, slots and pockets, irregular-shaped grooves, Law of Sines, Law of Cosines, and 3-D coordinate geometry. (0884-205) Class 2, Lab 2, Credit 3 (F)

This course is a continuation of Trigonometry for Coordinate Analysis I and continues the development of problem solving using right-angle trigonometry with an emphasis on concepts and applications related to computer integrated machining technology (CIMT). Topics include complex machine applications, compound angles, slots and pockets, irregular-shaped grooves, Law of Sines, Law of Cosines, and 3-D coordinate geometry. (0884-205) Class 2, Lab 2, Credit 3 (F)
Applications of Algebra
An intermediate algebra course consisting of a lecture and a lab component in which exponents, rational expressions, polynomials, roots and radicals, and non-linear functions are studied. Technology, in particular the graphing calculator, is an integral part of the learning and problem solving in this course. Students may not take both 0884-210 and 0884-212 for credit without permission of the department. To progress to 0884-260 student must pass 0884-210 with a grade of C or better. (0884-180 with grade of C or better) Class 3, Lab 2, Credit 4 (F, W, S)

Integrated Algebra
An intermediate algebra course consisting of a lecture and a lab component in which non-linear functions and graphs, systems of linear equations, exponents, polynomials, roots, and properties of the complex numbers are considered. There is significant emphasis on scientific and geometric models, as well as the use of a variety of graphing utilities. Integrated algebra is recommended for students enrolled in applied computer technology, lab science technology, computer aided drafting technology and automation technologies programs as well as for students preparing for baccalaureate programs in science, engineering and computer-related fields. Students may not take both 0884-210 and 0884-212 for credit without permission of the department. To progress to 0884-275, student must pass 0884-212 with a grade of C or better. (0884-180, with a grade of C or better) Class 3, Lab 2, Credit 4 (F, W, S)

Elements of Trigonometry
This course includes topics from trigonometry with an emphasis on the study of right and oblique triangles, rotational angles, trigonometric functions and their graphs. An introduction to trigonometric identities is also provided. (0884-212) Class 3, Lab 2, Credit 4 (F, W, S)

Laboratory Mathematics I
This course addresses classic laboratory calculations and elementary descriptive statistics in the context of modern information technology and computing power. Use of hand-held calculators and computer spreadsheet software to exchange, analyze and chart electronically-stored data is a central focus. Study is closely coordinated with work in associated technical courses. Application areas encountered in this course may include basic gas laws, preparation and dilution of solutions, and analysis of chemical composition. (0884-212 or permission of department) Class 2, Lab 2, Credit 3 (S)

Laboratory Mathematics II
This course continues study of computations relating to laboratory procedures in the context of modern information technology and computing power. Emphasis is on the capture and analysis of realistic laboratory data and the preparation of formal reports. Topics studied include the use of statistical procedures in quality control. (0884-212) Class 2, Lab 2, Credit 3 (F)

Preparation for Statistics
An introductory statistics course consisting of a lecture and a lab component in which statistics concepts, elements of probability and probability distributions, and bivariate data are studied. The course emphasizes number sense and algebraic concepts as they relate to statistics and probability. Technology, in particular the graphing calculator, is an integral part of the learning and problem solving in this course. (0884-210 or equivalent) Class 3, Lab 2, Credit 4 (S)

Explorations in College Algebra
Students will study topics from algebra with an emphasis on functions and graphs. Topics include the algebra of functions and the study of inverse functions, rational, radical, exponential and logarithmic functions and systems of linear equations are also studied. Exploration of mathematical concepts through use of a graphing calculator is an integral feature of the course. Students may not take both 0884-260 and 0884-275 for credit without permission of the department. (0884-210 with a grade of C or better) Class 3, Lab 2, Credit 4 (F, W, S)

Advanced Mathematics
Topics from precalculus mathematics are studied with an emphasis on functions and graphs. Topics include the algebra of functions and the study of inverse functions. Exploration of mathematical concepts through the use of a graphing calculator is an integral feature of the course. Students may not take both 0884-260 and 0884-275 for credit without permission of the department. (0884-212 with a grade of C or better, and 0884-220) Class 3, Lab 2, Credit 4 (F, W, S)

Concepts of Calculus
Explores topics traditionally encountered in a first calculus course. Limits, continuity and the derived function are studied. A graphing calculator is used extensively to develop concepts and to aid in problem solving. (0884-275) Class 4, Credit 4 (F)

Special Topics: Mathematics
Credit variable (F, W, S)

Independent Study: Mathematics
Credit variable (F, W, S)

Performing Arts

Fundamental (Level B)

Sign Mime and Creative Movement
Focuses on the dominant historical form of expression used by theaters of the Deaf. Topics include principles for effective use of space, creative movement strategies and expression of original ideas in sign-mime. This course satisfies the deaf cultural studies/ASL requirement. (ACT arts/literature reading score 1–4 or permission of instructor) Class 3, Credit 3 (F, W)

Dance Performance
Provides an introduction to dance that gives students access to the language as well as the fundamental movements of dance. The styles and technique of Martha Graham (contraction) and José Limón (fall and rebound) are explored. Ensemble work, performance standards and creation of character and theme are stressed. This course counts as one course towards the wellness activity graduation requirement. (ACT arts/literature reading score 1–4 or permission of instructor) Class 3, Credit 3 (W)

Jazz
Provides students with a wider range of dance vocabulary, which is created from ballet, modern dance and ethnic dance traditions. The styles of Bob Fosse and the fall and rebound style of José Limón are a basis for this course. This course counts as one course towards the wellness activity graduation requirement. (ACT arts/literature reading score 1–4 or permission of instructor) Class 3, Credit 3 (F, S)

Intermediate (Level C)

History of Theater†
Examines theater from its early origins in primitive societies to contemporary types of theater and issues in dramatic presentation. The role of theater in society and in a variety of cultures is examined with particular attention to the role of deaf performers, directors and play creators in specific historical periods. (ACT arts/literature reading score 5–7 or permission of instructor) Class 3, Credit 3 (W)

Deaf Theater History†
Examines the Deaf experience in theater and the roles that deaf people have played in theater history. Particular attention is given to the documented achievements of individuals and companies in the 19th and 20th centuries. This course satisfies the deaf cultural studies/ASL requirement. (ACT arts/literature reading score 5–7 or permission of instructor) Class 3, Credit 3 (W)

Acting I†
Covers fundamental vocabulary for developing the actor’s craft, process and technique. The vocabulary is Stanislavsky-based and explored through improvisation and simple monologue work. This course is crucial for character development, which is the core of Acting II. (ACT arts/literature reading score 5–7 or permission of instructor) Class 3, Credit 3 (F, W)

Stage Combat†
Explores fundamentals of safe stage combat historically, analytically and physically. Focus is on physical scene work related to hand-to-hand combat, with some stage fencing, Falls, tumbling, punches, kicks and the eight basic positions for single rapier engagement are included. A final scene is created from classroom vocabulary and evaluated as part of the final exam. This course counts as one course towards the wellness activity graduation requirement. (ACT arts/literature reading score 5–7 or permission of instructor) Class 3, Credit 3 (offered biennially)

*This course satisfies the Deaf Studies/American Sign Language requirement.
†This course satisfies the humanities requirement.
0881-218 Dance History†
Examines early examples of dance in Western and non-Western societies, initially as a form of religious and dramatic expression. Development of ethnic styles; formalization of ballet in France, England and Russia; the evolution of modern dance; and the role of dance in visual theater are explored. (ACT arts/literature reading score 5–7 or permission of instructor) Class 3, Credit 3 (S)

0881-222 Scenic Technology I†
Provides hands-on exploration of basic construction techniques utilized in theater productions. Students gain an understanding of scenic construction methods and technology as well as the safe and proper use of equipment. Readings on the production process and formal critiques are also required. (ACT arts/literature reading score 5–7 or permission of instructor) Class 3, Credit 3 (W, S)

0881-223 Scenic Technology II†
This project-oriented class focuses on methods, materials, rigging and props. Students use and apply the skills learned in Scenic Technology I to individual projects. The course allows students the opportunity to work with more advanced materials. This course prepares students for more specialized work in the theater practicum. (ACT arts/literature reading score 5–7 or permission of instructor; 0881-222) Class 3, Credit 3 (W, S)

0881-224 Scene Painting†
Provides an introduction to the craft of scene painting. Techniques, communication with designers and use of appropriate materials and tools are emphasized. (ACT arts/literature reading score 5–7 or permission of instructor) Class 3, Credit 3 (F, W, S)

0881-231 Costume Technology I†
Provides hands-on exploration of basic costume techniques utilized in theater. Students gain an understanding of costume construction techniques, research and terminology as well as the role of the costume shop in the production process. (ACT arts/literature reading score 5–7 or permission of instructor) Class 3, Credit 3 (W)

0881-232 Costume Technology II†
Advanced course in costume construction develops students’ sewing skills, problem solving and knowledge of costume history. The course prepares students for design courses, application of skills to a historical garment and costume assistantship through theater practicum. (ACT arts/literature reading score 5–7 or permission of instructor) Class 3, Credit 3 (W)

0881-233 Stage Make-up†
Introductory course explores basic stage make-up techniques (e.g., corrective, aging, gender change, scarring, bruising, and fantasy). Student designers and actors learn through demonstration and hands-on experience. The course prepares students for the use of the stage manager's prompt book. The course also addresses the preparation of materials and tools for special makeup applications. (ACT arts/literature reading score 5–7 or permission of instructor; 0881-231) Class 3, Credit 3 (F, S)

0881-241 Lighting Technology I†
Teaches the basic understanding of lighting software, equipment and practices that are utilized in theater production. This course prepares students for supervised practicum experience. (ACT arts/literature reading score 5–7 or permission of instructor) Class 3, Credit 3 (F, S)

0881-242 Lighting Technology II†
Introduces the student to the mechanics and guidelines of lighting design. The structure of this course is designed to take the student through the step-by-step process of building a solid design foundation prerequisite to all lighting design application. (ACT arts/literature reading score 5–7 or permission of instructor; 0881-241 or permission of instructor) Class 3, Credit 3 (F, W)

Bridging (Level D)

0881-250 Introduction to Performing Arts†
Studies the characteristics and elements of theater/performance arts, emphasizing the principles that have guided theater productions through history. The course examines the ways that theater influences and is influenced by cultures and by individual life experience. Particular attention is paid to the development of performing arts by and for deaf persons. This course satisfies part of the humanities requirement. (ACT arts/literature reading score 8–10 or permission of instructor) Class 3, Credit 3 (F, W)

0881-253 Arts Management†
Addresses the skills required to manage artistic/theatrical projects and programs while maintaining artistic vision. Topics include the relationship of art and management, communication skills, fundraising in private and public sectors, and marketing strategies. (ACT arts/literature reading score 8–10 or permission of instructor) Class 3, Credit 3 (offered biennially)

0881-256 Script Analysis†
Explores the prominent questions an actor/dancer/designer must research before and during the time a text can develop into playable action. The course uses texts from world literature, American Sign Language literature and dance choreography. Particular attention is paid to the physical, emotional and mental actions a character reveals to his/her audience. (ACT arts/literature reading score 8–10 or permission of instructor) Class 3, Credit 3 (S)

0881-257 Introduction to Dramatic Literature†
Introduces students to the play script as literature, genres of dramatic literature, critical periods in the development of dramatic literature and the use of analytical literary vocabulary. (ACT arts/literature reading score 8–10 or permission of instructor) Class 3, Credit 3 (W)

0881-258 Introduction to Play Creating†
Uses a workshop approach to explore what being a playwright/play creator means. Class topics include exploring each writer’s values and points of view, bringing their viewpoints to life on the stage, developing rounded characters, structuring action, creating dialogue and taking a play through workshop critique. The goals of the course for each student are to develop a more finely tuned theatrical sensitivity and to have a playable scene, act, or one-act play by the end of the quarter. These plays may be scripted in English, American Sign Language or visual theater systems. (ACT arts/literature score 8–10 or permission of instructor) Class 3, Credit 3 (S)

0881-259 Creative Translation for Stage‡
Focuses on different translation forms used by theater, mime and dance companies. Students learn to distinguish between English and American Sign Language (ASL). They translate stories, poems and plays into ASL and other sign languages. Theatrical integrity dealing with translation issues and visual access is a central goal. (ACT arts/literature reading score 8–10 or permission of instructor; 0881-210 or 0881-256) Class 3, Credit 3 (S)

0881-260 Acting II‡
Covers vocabulary for developing the actor’s craft, process and technique related to basic scene-study and character development. The work is Stanislavsky-based. Improvisation and some work focus on characterization and engaging conflict. (ACT arts/literature reading score 8–10 or permission of instructor; 0881-210 or audition with instructor) Class 3, Credit 3 (W, S)

0881-261 Audition Technique†
Emphasizes preparation for career research. Major topics include interviewing, portfolio, résumé, photo selection, monologue repertoire development and cold reading. (ACT arts/literature reading score 8–10 or permission of instructor; 0881-210, 260 or permission of instructor) Class 3, Credit 3 (offered biennially)

0881-266 Ballet†
Introduces the art of ballet, its vocabulary (French, Sign and English), discipline base, protocols and specific movements. Students are introduced to key concepts through lecture demonstration; video; and floor, center and barre work. This course counts as one course towards the wellness activity graduation requirement. (ACT arts/literature reading score 8–10 or permission of instructor) Class 3, Credit 3 (F)

0881-267 Fundamentals of Choreography†
This course explores the freedom and discipline that balance the art of choreography. Visualization and notation systems are studied. Students are required to both choreograph for student ensembles and perform in original works of other students in the class. (ACT arts/literature reading score 8–10 or permission of instructor; 0881-218, 266 or permission of instructor) Class 3, Credit 3 (W)

0881-272 Stage Management‡
Advanced course designed to train stage managers. Leadership and organizational skills are developed in relation to rehearsal schedules, production meetings and performance. Projects include setting up and understanding the use of the stage manager’s prompt book. The course also addresses the protocols of dealing with designers, actors, directors and crew members as well as the rehearsal process and calling the cues for the run of the show. This is a required course for stage managing any of the college’s/department’s main stage shows. (ACT arts/literature reading score 8–10 or permission of instructor) Class 3, Credit 3 (W, offered biennially)

*This course satisfies the Deaf Studies/American Sign Language requirement.
†This course satisfies the humanities requirement.
0885-151 Processes of Science: Astronomy
Covers introductory science processes using the content of astronomy as a vehicle to establish an appreciation of the scientific method, critical thinking and problem solving. The basic processes of observing, classifying, comparing and measuring using metric units are addressed in both class and laboratory using the concepts of astronomy. Class 2, Lab 2, Credit 3 (S)

0885-153 Processes of Science: Environmental Studies
Covers introductory science processes using the content of environmental studies as a vehicle to establish an appreciation of the scientific method, critical thinking and problem solving. The basic processes of observing, classifying, comparing and measuring using metric units are addressed in both class and laboratory using the concepts of environmental studies. Class 2, Lab 2, Credit 3 (F, W)

0885-154 Processes of Science: Physics of Matter
This course focuses on introductory science processes using the content of physical properties of matter as a vehicle to establish an appreciation of the processes of science. The basic processes of observing, collecting data, classifying, comparing, analyzing and forming hypotheses will be addressed using the concepts of physics. (0884-180 or equivalent) Class 2, Lab 2, Credit 3 (F, W)

0885-155 Processes of Science: Biological Studies
This course focuses on introductory science processes using the content of biological studies as a vehicle to establish an appreciation of the processes of science. The basic processes of observing, collecting data, classifying, comparing, analyzing and forming hypotheses will be addressed using the concepts of biology. Students will investigate microorganisms, metabolism, nutrition, physiology and embryology and prepare laboratory reports with appropriate detail and accuracy. Class 2, Lab 2, Credit 3 (F, W)

0885-156 Processes of Science: Forensics
This course focuses on introductory science processes using the content of forensic studies as a vehicle to establish an appreciation of the processes of science. The basic processes of observing, collecting data, classifying, comparing, analyzing and forming hypotheses will be addressed using the concepts of forensics. Students will analyze crime scenes, perform tests on blood, fingerprints, chemicals and DNA and prepare laboratory reports with appropriate detail and accuracy. Class 2, Lab 2, Credit 3 (F, W)

**Science**

**Fundamental (Level B)**

0885-151 Processes of Science: Astronomy
Covers introductory science processes using the content of astronomy as a vehicle to establish an appreciation of the scientific method, critical thinking and problem solving. The basic processes of observing, classifying, comparing and measuring using metric units are addressed in both class and laboratory using the concepts of astronomy. Class 2, Lab 2, Credit 3 (S)

0885-153 Processes of Science: Environmental Studies
Covers introductory science processes using the content of environmental studies as a vehicle to establish an appreciation of the scientific method, critical thinking and problem solving. The basic processes of observing, classifying, comparing and measuring using metric units are addressed in both class and laboratory using the concepts of environmental studies. Class 2, Lab 2, Credit 3 (F, W)

0885-154 Processes of Science: Physics of Matter
This course focuses on introductory science processes using the content of physical properties of matter as a vehicle to establish an appreciation of the processes of science. The basic processes of observing, collecting data, classifying, comparing, analyzing and forming hypotheses will be addressed using the concepts of physics. (0884-180 or equivalent) Class 2, Lab 2, Credit 3 (F, W)

0885-155 Processes of Science: Biological Studies
This course focuses on introductory science processes using the content of biological studies as a vehicle to establish an appreciation of the processes of science. The basic processes of observing, collecting data, classifying, comparing, analyzing and forming hypotheses will be addressed using the concepts of biology. Students will investigate microorganisms, metabolism, nutrition, physiology and embryology and prepare laboratory reports with appropriate detail and accuracy. Class 2, Lab 2, Credit 3 (F, W)

0885-156 Processes of Science: Forensics
This course focuses on introductory science processes using the content of forensic studies as a vehicle to establish an appreciation of the processes of science. The basic processes of observing, collecting data, classifying, comparing, analyzing and forming hypotheses will be addressed using the concepts of forensics. Students will analyze crime scenes, perform tests on blood, fingerprints, chemicals and DNA and prepare laboratory reports with appropriate detail and accuracy. Class 2, Lab 2, Credit 3 (F, W)

**Intermediate (Level C)**

0885-200 Applied Optical Physics
Studies light, reflection and refraction. These principles are applied to the study of the behavior of spherical and plano mirrors, prisms and lenses. The usefulness and application of dioptric power, the lens maker’s equation, image and object dimensions and focal-length measurements are addressed. Also included is study of the electromagnetic spectrum. Emphasis is on geometrical (ray) optics. Includes a comprehensive laboratory experience that supplements and closely follows classroom instruction. (0884-180 or permission of department) Class 4, Lab 1, Credit 4 (W)

0885-201 Physics I
Physics I is designed to provide a broad background in general physics. Required for students entering NTID engineering technology programs. Students are provided with hands-on laboratory experience in a supervised setting. Topics, which are presented in a lecture/lab format, include kinematics and dynamics, Newton’s Laws of Motion, forces, analysis of vectors. (Permission of department) Class 4, Lab 1, Credit 4 (W, S)

0885-205 Fundamentals of Chemistry I
This course is an introduction to the fundamental theories and principles of chemistry governing the structure and behavior of matter at the atomic and molecular levels. The language of chemistry, including nomenclature, chemical reactions and equations, is introduced as well as the computational strategies used in chemistry. Basic laboratory skills and techniques are used to investigate chemical components. Activities focus on precision and accuracy in the collection of data. Chemical hygiene and safety procedures in the laboratory are emphasized. Class 3, Lab 3, Credit 4 (W)

0885-206 Fundamentals of Chemistry II
This course is the continuation of an introduction to the fundamental theories and principles of chemistry governing the structure and behavior of matter at the atomic and molecular levels. Topics include stoichiometry, solution chemistry, electrolytes, acid/base and redox theories. Computational and laboratory skills and techniques related to solution chemistry, including application in concentration expressions, acid/base and redox, are presented. Activities focus on precision and accuracy in the collection of data and sample tracking. Chemical hygiene and safety procedures in the laboratory are emphasized. Class 3, Lab 3, Credit 4 (F)

0885-215 Fundamentals of Cellular Biology
This course provides students with the fundamentals of cellular biology on the molecular level. Principles governing chemical components of cells, cellular processes and molecular genetics are introduced. Methods used to record and present data and write formal lab reports are emphasized. Laboratory activities complement classroom activities. Class 3, Lab 3, Credit 4 (F)

0885-216 Fundamentals of Human Biology
Provides students with the fundamentals of human biology, beginning with organization at the tissue level. Body systems and their interrelationships are presented on a structural, functional and homeostatic level. Skills necessary for success in future science courses will be emphasized. Laboratory activities, including the use of prepared specimens, complement classroom activities. (0885-215) Class 3, Lab 3, Credit 4 (W)

**Bridging (Level D)**

0885-251 Biological Concepts I
Develops and/or enhances knowledge and skills necessary for success in a college-level general biology course. Themes include chemistry in living systems, movement through membranes, macromolecules, metabolism and enzymes. Laboratory activities complement each theme. (Permission of instructor) Class 3, Lab 3, Credit 4 (F, S)

0885-252 Biological Concepts II
Develops and/or enhances knowledge and skills necessary for success in a college-level general biology course. Themes include molecular genetics, microevolution, cell functions, cell nutrition and regulation of homeostasis. Laboratory activities complement each theme. Successful completion of Biological Concepts I (0885-251) is suggested but not required. (0885-252 or permission of instructor) Class 3, Lab 3, Credit 4 (W)

1This course satisfies the humanities requirement.
0885-281 Human Genetics and Evolution
Introduces basic human genetics, basic human evolution and the relationship between 21st century discoveries in genetics and current human evolution dogma. The history of scientific discovery in both fields is paired with a study of current concepts in molecular biology, and bridges between genetics and evolution are explored. This presentation/discussion/laboratory course includes topics in human reproductive history, cytology, embryology, molecular biology of the gene, the origin of life, human origins, heredity, genetic variations, population genetics, biotechnology, and Old World and New World evolutionary theory. (Permission of instructor) Class 3, Lab 3, Credit 4 (F)

0885-282 Scientific Basis of Social Responsibility
Interactive course designed to provide students with both tools and confidence to become more literate in the sciences. Students select and analyze contemporary social issues and/or problems with a basis in science utilizing basic processes of scientific inquiry. Sample topics include the following: infectious disease processes; traditional vs. alternative medicine; biogenetics; lifestyle; euthanasia; environmental resources and management; world population trends; and stem cell research. Following a definition of the issue/problem, students formulate research questions and share their collective findings. They then complete weekly topic summaries that articulate their positions. Topic-related laboratory exercises and community interactions provide hands-on lab opportunities to experience contemporary science and technology. (Permission of instructor) Class 3, Lab 3, Credit 4 (S)

0885-283 Developmental Human Anatomy and Physiology
Introduces basic human development and maturation from a multidisciplinary perspective. In this course, the fields of human anatomy and physiology are merged with developmental psychology for the purpose of examining the human life cycle from a holistic perspective. Changes that take place in the structure and function of the human body are studied over nine stages of the human life span. Concurrently, psychological and cognitive development are discussed, beginning with conception and ending with death processes. (Permission of instructor) Class 3, Lab 3, Credit 4 (W)

0885-291 Principles of Analytical Chemistry
This course introduces quantitative analysis utilizing both gravimetric and volumetric techniques. Topics include the evaluation of analytical data, gravimetric analysis, acid/base and redox titrations. Chemical hygiene and safety procedures in the laboratory are emphasized. (0885-206 or equivalent, 0884-231) Class 3, Lab 3, Credit 4 (F)

0885-292 Principles of Organic Chemistry
This course provides an introduction to the principles of organic chemistry. Topics include structure, nomenclature and properties of organic molecules. Concepts surrounding carbon chemistry and bonding, functional groups and polymers are also presented. Investigations involving data collection and qualitative and quantitative analyses provide a framework for laboratory activities. Chemical hygiene and safety procedures in the laboratory are emphasized. (0885-205 or equivalent, 0884-231) Class 3, Lab 3, Credit 4 (W)

0885-398 Special Topics: Science
Credit variable (F, W, S)

0885-399 Independent Study: Science
Credit variable (F, W, S)

Social Sciences
The social sciences distribution requirement can also be satisfied by completing courses in communication studies. See courses listed under this heading. C-level courses satisfy the AOS requirement. Social courses may also satisfy the deaf cultural studies/American Sign Language requirement as noted.

Intermediate (Level C)

0882-200 Introduction to Social Sciences
This course is intended to explore the understanding of human behavior and everyday life using important concepts from social sciences. This course covers the fields of psychology, sociology and political science. Materials from anthropology and economics may be used as well. The course focuses on the application of the social sciences to the study of business, art, education, government and other areas of interest. (ACT social studies/science reading score 6–8) Class 3, Credit 3 (F, W, S)

0882-205 The Changing American Family
Students are introduced to basic concepts and terminology in the study of the evolving American family from its Judeo-Christian roots to its multi-cultural reality in the 21st century. Students will learn about the nature of the family unit, the contributions of its members to the family organization, and the family’s contribution to society. (0882-200 or permission of instructor) Class 3, Credit 3 (F, W, S)

0882-210 The Black Experience
This course helps students pursuing an AOS, AAS, or BS degree gain an understanding of the experiences of black people in America. This course offers a historical perspective of black people from their origins in Africa to their settlement in America. This perspective includes the period of slavery, the reconstruction period, the civil rights struggle and modern race relations among black people (hearing and deaf) and other groups in America. (0882-200 or permission of instructor) Class 3, Credit 3 (S)

0882-215 Current Social Problems
Studies social issues that impact individuals who live in the United States and Canada. Important issues covered include cultural pluralism, the inequity among various ethnic and racial groups, and public and political policies. These social issues are related to the global environment, health care and family. Special consideration is given to how these issues impact the Deaf community. (0882-200 or permission of instructor) Class 3, Credit 3 (W, S)

0882-221 Deaf Heritage
Introduces students to aspects of Deaf culture and community around the world. The distinction between these is reviewed, and characteristics of each are identified. Students learn about the language, norms of behavior, values, traditions and possessions of Deaf people. Deaf culture and community are analyzed from a historical and sociological perspective. Cross-cultural issues relating to the role of hearing people with the Deaf community are also covered. (0882-200 or permission of instructor) Class 3, Credit 3 (F, W, S)

0882-222 Deaf Culture and Community
Introduces students to aspects of Deaf culture and community around the world. The distinction between these is reviewed, and characteristics of each are identified. Students learn about the language, norms of behavior, values, traditions and possessions of Deaf people. Deaf culture and community are analyzed from a historical and sociological perspective. Cross-cultural issues relating to the role of hearing people with the Deaf community are also covered. (0882-200 or permission of instructor) Class 3, Credit 3 (W)

0882-223 Deaf Women’s Studies
This course provides a historical review of deaf women in their professional and personal lives. The issues covered in this course include the exploration of the social, political and economic conditions affecting deaf women and how this compares to other women in society. Hard-of-hearing and late-deafened women and ethnic/minority women with hearing loss are included in this course. Students will be able to summarize trends from the social/political analysis and apply their learning to their own personal development and empowerment. (0882-200 or permission of instructor) Class 3, Credit 3 (F, S)

0882-235 Individual and Social Identity
Provides an introduction to examining social constructs and perspectives in a broad spectrum of experiences related to race, ethnicity, gender, class, religion, age, sexuality, disability and other cultural identities. This course also focuses on analysis of diversity within groups as well as the multiple interactions between them. Students develop an understanding of how the power and complexities inherent in groups influence individual, as well as group, identity. (0882-200 or permission of instructor) Class 3, Credit 3 (W, S)

0882-242 Law and Society
This course introduces students to general issues regarding the American legal system, jurisprudence and the responsibilities of free society and individual citizens of that society. The course provides an overview of the historical aspects of the American constitution, legislative intent of law making and how laws are made and interpreted at the local, state and federal levels. The course explores the roles of lawyers and other practitioners within the legal system and specifically addresses situations with criminal law, juvenile justice, tort law, consumer and mercantile laws, family law, and individual rights and liberties. (0882-220 or permission of instructor) Class 3, Credit 3 (F, W, S)
Deaf People and the Holocaust

The study of cultural, economic and political history is an important part of social sciences as it broadens our understanding of the events in present times. Events leading up to World War II and the Nazi Final Solution will be examined. The eugenics movement toward preventing life, terminating unborn life, and exterminating “useless eaters” will be explored in understanding how the Nazis implemented their doctrine and mechanisms to the “final solution.” Lives of deaf people during the Nazi regime will be investigated. The course will explore the implications of Nazi laws that restricted the rights and lives of “undesirable people,” i.e., the disabled, gays and lesbians, Jehovah’s Witnesses, communists, Romi (gypsies), Jewish people, and particularly deaf people. (0882-200 or permission of the instructor) Class 3, Credit 3 (W)

Bridging (Level D)

Civil Rights and Deaf People

Reviews the history of oppressed groups in the United States and their struggle for equality. Parallels will be drawn between various groups with a focus on deaf people. Patterns of oppression and empowerment will be compared and contrasted for Black Americans, Native Americans, women, lesbians and gays, and deaf people. Specific strategies and techniques employed to gain civil rights are covered. Court cases are reviewed and discussed. (ACT social studies/science reading score 9-11 or permission of instructor) Class 3, Credit 3 (W, S)

Capstone: Society and Technology

In today’s global society, we face challenges of seemingly epic proportions... but with problems come solutions, often in the form of innovative technology or policy. In this course, students will draw on their previous studies to address a specific problem related to their majors. Students will review and internalize a general research “process” (with emphasis on critical thinking and problem solving skills) in order to produce and effectively communicate a “product” in the form of a presentation with supporting documentation. This course will explore topics with a broad focus on corporations, communities, government or society. Students will also explore their personal values and beliefs on these global issues, with the goal of applying them to their work environments. (Students must be within two quarters of graduation with the AOS or AAS degree.) Class 3, Credit 3 (F, W, S)

Special Topics: Social Sciences

Credit variable (F, W, S)

Independent Study: Social Sciences

Credit variable (F, W, S)

Deaf Studies Certificate

The Deaf studies certificate for non-matriculated students has been discontinued effective June 2011. The program is not admitting new students.

RIT students, faculty and staff, and people in the Rochester community who are interested in a basic introductory experience in American Sign Language (ASL) and Deaf Culture should refer to Introduction to American Sign Language (ASL) and Deaf Culture in the Part-time Undergraduate Studies Guide.

*This course satisfies the Deaf Studies/American Sign Language requirement.
First-Year Enrichment

Index
1720 FYE.........................................................196

Course numbering: RIT courses are generally referred to by their seven-digit registration number. The first two digits refer to the college offering the course. The third and fourth digits identify the discipline within the college. The final three digits are unique to each course and identify whether the course is noncredit (less than 099), lower division (100–399), upper division (400–699), or graduate level (700 and above).

Unless otherwise noted, the following courses are offered annually. Specific times and dates can be found in each quarter’s schedule of courses, published by the Office of the Registrar. Prerequisites/corequisites are noted in parentheses near the end of the course description.

First-Year Enrichment

First-Year Enrichment (FYE I and FYE II) is a required course for first-year students that must be completed in their first year at RIT. Transfer students who have successfully completed the equivalent of two full-time quarters (24 credits) at an accredited institution of higher education and/or a comparable transition course, and students who are at least 20 years of age, may request exemption from the FYE requirement from the director of FYE. Students may drop, withdraw from, or be exempt from FYE courses only with the prior approval of the director of FYE.

1720-050 & 1720-051 First-Year Enrichment I
The first part of the two-quarter First-Year Enrichment (FYE) series is a survey course with an integrated coaching component that is designed to enhance the academic, personal, and professional success of first-year students and to facilitate their academic and social integration into RIT. Credit 1

1720-052 & 1720-053 First-Year Enrichment II
The second course and coaching experience in the two-quarter First-Year Enrichment series is designed to reinforce principles introduced in FYE I and advance the development of skills that lead to academic and personal success at RIT. Credit 1
Center for Intercollegiate Athletics and Recreation

Course numbering: RIT courses are generally referred to by their seven-digit registration number. The first two digits refer to the college offering the course. The third and fourth digits identify the discipline within the college. The final three digits are unique to each course and identify whether the course is noncredit (less than 999), lower division (100–399), upper division (400–699), or graduate level (700 and above).

Unless otherwise noted, the following courses are offered annually. Specific times and dates can be found in each quarter's schedule of courses, published by the Office of the Registrar. Prerequisites/corequisites are noted in parentheses near the end of the course description.

Health and Wellness

1107-026 Wellness for Life
This core wellness course is designed specifically to assist students in making healthy decisions regarding lifestyle behaviors. Students will be presented with wellness information (multidimensional) that will help students prepare for co-op, job interviews, the workplace and the building of healthy, lifelong relationships. Key areas that are covered: Behavior change strategies, stress, high risk behaviors, physical wellness, emotional wellness, psychological well being, safety and spirituality. Unique in design, this course meets once per week and includes ice breakers, instructional sessions and interactive group activities. Successful completion of this course can be used as 1 activity credit toward the graduation requirement. No course fee. (All quarters)

1107-027 Wellness Challenge Exam
This core wellness course is designed specifically as a "test out" option for students wishing to complete a wellness activity class for graduation. Strong wellness background is required (multidimensional). Textbooks are available to prepare for the exam in the RIT Bookstore (Wellness: Concepts and Applications (Anspach, Hamrick and Rosato). If students the exam, this fulfills one (1) activity credit requirement for graduation. Contact Degan Davies degan.davies@rit.edu, SLC 1260). A course fee applies. Study guides are available in the SLC lobby. **Students may contact the instructor directly for more info and set up exam date. A course fee applies via SFS bill. (All quarters)

1107-028 Massage: Wholistic Therapy
Massage is an accepted part of many physical rehabilitation programs and has proven beneficial to many chronic conditions such as low back pain, arthritis and burnouts. It helps relieve the stress and tension of everyday living. It provides relief to people from all walks of life-the weekend or competitive athlete, home gardener, overstressed executive struggling to keep pace in today’s economy, secretaries, laborers, waitresses - anyone can feel a need for massage at some point in time. There are more than 200 variations of massage. This course is designed to provide students with the basics of massage therapy. Students will learn the “how to’s” of providing and receiving a therapeutic massage, from upper body-lower. A course fee applies via SFS bill. (All quarters)

1107-030 Motivation and Leadership
What inspires you? Who motivates you? Would you like to learn more about how you can motivate others? Many people, past and present, stand out as great leaders, but what makes them great? Each one of us can learn from our experiences and challenges, using these opportunities to lead, inspire, and motivate in our own way. Can you? Register for this course and find out! LEARN about leadership styles and discover your own along the way. EXPLORE what keeps you motivated through stressful and challenging times. LEARN from past examples by examining great leaders-their characteristics, and their great speeches. GET STARTED on the road to becoming a better leader and motivator! Successful completion of this course can be applied as a wellness activity credit. A course fee applies via SFS bill. (All quarters)

1107-040 Eating, Body Image and Food
This course is designed to focus on the Psychology of eating behaviors, body image, and attitudes toward food. Issues that will be addressed include: the meaning of food, factors which influence body image, dieting behaviors, cultural influences on eating and body image, obesity, eating disorders, and finally-healthy eating. This course is taught by the Women’s Center staff. Successful completion of this course counts as one (1) activity course (toward the graduation requirement). A course fee applies via SFS bill. (All quarters)

1107-050 Sexuality and Safety
This course is designed to provide students with educational concepts and strategies regarding relationships while keeping personal safety in mind. Instructors and students will explore the topic of relationships (friends, dating, and partnerships) and being able to set appropriate boundaries: so that relationships are able to thrive. Issues of relationship violence, stalking, and sexual assault will also be addressed throughout the course. This course is taught by Women's Center staff. Successful completion of this course can be used as one (1) activity course credit toward the graduation requirement. A course fee applies via SFS bill. (All quarters)

1107-070 Health Bonus Pass
The Bonus Pass is a program offered to students who have successfully completed 2 different wellness activity courses and are focused on continuing to improve their fitness levels. It is perfect for student interested in taking a variety of fitness classes each quarter. A quarterly schedule will be provided to students registered in this class that outlines the possible fitness based classes they can freely attend. This course will provide activities and includes 25 hours of fitness instruction. Students will receive an “audit” (X) grade (audits only). This course is restricted. To enroll, students must see the Instructor (Michelle Schrouder, mabcst@rit.edu; 475-6995 to register.) A course fee applies via SFS bill. (All quarters)

1107-080 Health/Fitness Challenge
The course is based on the RIT health challenge. This class is designed to assist and motivate individuals who are interested in making changes to live healthier. Participants will be setting and reaching goals in the three following areas: fitness, nutrition and wellness. Students will monitor their progress using a customized website at www.rithealthchallenge.com. Examples of past accomplishments include: cutting down on caffeine, getting more sleep, eating healthier, training for a marathon or 10k, running 3 miles a day/4x per week, added weight training to exercise routines and much more. Topics that will be covered include: fad diets, exercise options, healthy eating and caloric levels, weight management, disease prevention and healthy permanent habits.

1107-100 Stress Management
This course focuses on the dynamic ways that students can effectively manage stress. Today's faced-paced daily grind can easily become overwhelming for people. It is difficult to balance the various duties and responsibilities that we, as a society face on a daily basis. This course will examine what stress is, how stress affects the body and how to effectively manage stress in a healthy fashion. Students will have the opportunity to experience a variety of different stress management techniques in order to determine which ones are best suited for them: Deep breathing, massage, tai chi practices, yoga, and muscle relaxation are just a few of the techniques that will be introduced. This course can be applied to 1 “activity” credit toward the wellness graduation requirement. A course fee applies via SFS bill. (All quarters)

1107-110 How to Become Smoke Free
This course is a self-help, low stress and “no test” class. If you have tried to quit smoking before, take comfort in the fact that most smokers try several times before successfully quitting. Your past attempts are not failures, but rather a step in the process toward becoming a non-smoker! The information presented in this class will help to ease your way through the quitting process. Discussions will include techniques to become “smoke free,” healthy behavior changes, stress management strategies, and more! Options to obtain nicotine replacement therapy are available through the N.Y. Quits and RIT Student Health. So, join your friends and learn how to quit together! A course fee applies. (All quarters)
1107-130 Spirituality and Health
This interactive course, through multiple aspects of spiritual exploration, will focus on understanding some of the laws that govern all of life. A human is a four-fold being governed by physical, mental, emotional and spiritual laws. When you learn to live and apply these teachings, you solve many human problems. These self mastery techniques: Meditation, contemplation, mysticism, color therapy, the power of intentions, sacred spaces, shamanic, chanting, labyrinths, dowsing, visualization, healing and developing intuition are aimed at the spirit which has no boundaries and therefore is universal and non-denominational. This course faces on the discovery of the wisdom within and developing the capacity to sense, understand and tap into the highest parts of yourself, others and the world around you. A course fee applies via SFS bill. (All quarters)

1107-135 Meditation Practices
Learn and practice a variety of meditation techniques that develop mindfulness, concentration, tranquility and insight. This approach to Wellness is one that can assist you in reducing stress and anxiety by the way of thought, contemplation and reflection. Through this course students will gain an understanding of the physical as well as the emotional benefits of meditative practices. Successful completion of this course can be applied as an activity course credit toward the graduation requirement. A course fee applies via SFS bill (All quarters)

Dance

1108-070 Ballet
Ballet is a form of dancing performed for theatre audiences. Like any other dance forms, ballet may tell a story, express a mood, or simply reflect the body, but when these movements are well executed, they look natural and beautiful. This course will focus on the various ballet movements, from the very fundamental to more complex movements.

1108-090 Ballroom Dance
This foundational course is designed for the complete beginners to advanced, covering dances that are currently socially trendy and popular. The focus is on a mixture of melodies and Latin rhythms to give the student an overall feel for social dancing. The intent is to create a sense of student competency as an above average ballroom dancer. Major course objectives include: Body and self-awareness, how to mix well with the same and opposite sexes, boosting self confidence, developing natural body rhythms and improving posture and poise. Dances covered are: Fox trot, Merengue, Swing, Salsa, Jazz, Tango, Waltz, Cha cha, Ballet and Jitterbug. A course fee applies. (All quarters)

1108-080 Beginner’s Dance
This beginner level dance class will focus on all the basic dance fundamentals, including but not limited to: Steps, swings, footwork, rhythms, body awareness, arm movements and partner dance movements. Additionally, a variety of different dances will be introduced and practiced throughout the quarter so that the beginner level dancer can advance to the next level of dance expertise! Contemporary music selections are presented to motivate and drive the energy of the class to a high level of activity and enjoyment. A course fee applies via SFS bill. (All quarters)

1108-100 Jazz Dance
This course provides students with a wide range dance vocabulary which is created from ballet, modern dance and ethnic traditions. The style styles of Bob Fosse and the fall and rebound style of Jose Limon are a basis for this course. It focuses on the fundamental movements required for successful and enjoyable jazz dancing. The class is offered through NTID Dept. of Cultural and Creative Studies in LBJ Building (Building 60). Instructor uses sign language, but classes are open to both hearing and deaf/hard of hearing students. Check SIS for more detailed quarterly offering information. (S)

1108-180 Dance/Jazz/NTID Special Topics
This course provides students with a wider range of dance vocabulary, which is created from ballet, modern dance, and ethnic traditions. The styles of Bob Fosse and the fall and rebound style of Jose Limon are a basis for this course. It focuses on the fundamental movements required for successful and enjoyable jazz dancing. The class is offered through NTID Dept. of Cultural and Creative Studies in LBJ Building (Building 60). Instructor uses sign language. Classes are open to both hearing and deaf/hard of hearing students. Check SIS for more detailed quarterly offering information. (S)

1108-240 Fundamentals of Choreography (NTID Special Topics)
This course explores the freedom and discipline that balance the art of choreography. Visualization and notation systems are studied. Students are required both to choreograph for student ensembles and to perform in original works of other students in the class. The class is offered through NTID Dept. of Cultural and Creative Studies in LBJ Building (Building 60). Instructor uses sign language, but classes are open to hearing and deaf/hard of hearing students. Check SIS for more detailed quarterly offering information. (W)

1108-260 Hip Hop Dance
Hip Hop dance refers to styles primarily danced to hip hop music or that have evolved as a part of the hip hop culture. Hip hop dances are often considered street dances because of how they were formed and are being practiced. This hip hop class offers basic to more advanced skills that will encourage students to use their bodies in ways that help to develop/execute many different stylistic techniques. This class is high-paced and challenging and allows students to emphasize their creative rhythmic talents. As hip hop a broad genre in dance studios the instructor has the freedom/room for personal interpretation thus allowing the class to be highly creative. This class is offered in the SLC Dance Studio. A course fee applies via SFS bill. (All quarters)

1108-270 Irish Step Dance
Often marked with a blur of flashing feet, Irish step dancing has emerged from the pubs of Ireland to the international stage. This course teaches the style of dance made famous by the shows River Dance and Lord of the Dance. In addition to being introduced to the rich history of Irish dance, students will learn soft shoe, hard shoe and ceili (group) dances. Be prepared for a great cardiovascular workout! Irish dance requires endurance, coordination and strength. The first dances (reels, jigs and slip jigs) are taught in soft shoe. These dance begin to teach the fundamentals of Irish dance. As you progress, you will start to learn more complex soft shoe dances, and then move onto learning hard shoe dances (trebbe jigs and hornpipes). A course fee applies via SFS bill. (All quarters)

1108-280 Hip Hop Hustle
For decades, everyone has loved “the Hustle.” We’ve gone a step further and come up with “Hip Hop Hustle”! This class takes the fun factor up a notch with super hot moves that will have everyone wanting more. This class incorporates all the great Hip Hop moves you can imagine, with outstanding music, and gears up the cardiovascular system like never before. Enjoy dancing while you get an outstanding aerobic workout! No experience required! This class is a completely pre-designed hip-hop class that’s easy to follow and easy to teach. Which, by the way, makes it even better, because anyone can do the moves and make them their own. Successful completion of this course can be used as 1 activity course credit toward the graduation required. A course fee applies via SFS bill. (All quarters)

1108-160 Dance/Ballet-NTID Special Topics
This course introduces the art of ballet, its vocabulary (French, Sig and English), discipline base, protocols, and specific movements. Students are introduced to key concepts through lecture-demonstration video, and floor, center, and barre work. Class offered through NTID Dept. of Cultural and Creative Studies in the LBJ Building (Building 60) Instructor uses sign language, but classes are open to hearing and deaf/hard of hearing students. (F, W, S)

1108-180 Dance/Ballet-NTID Special Topics
This course introduces the art of ballet, its vocabulary (French, Sig and English), discipline base, protocols, and specific movements. Students are introduced to key concepts through lecture-demonstration video, and floor, center, and barre work. Class offered through NTID Dept. of Cultural and Creative Studies in the LBJ Building (Building 60) Instructor uses sign language, but classes are open to hearing and deaf/hard of hearing students. (F, W, S)

1108-160 Country Line Dance
Covering the latest line dances, club, and studio couples dances, Country Line Dancing is designed for beginning to intermediate dancers. Traditional dances give depth and background to the various basic terminology and techniques. Becoming familiar with today’s social sector, dance adds excitement to body coordination, improved memorization, gained confidence, partner skills, self-confidence and enhanced creativity. The Electric Slide, Chabootbocho, Dr. CC, Earthquake and Bubba are line dances of distinction. Couples pursue the Cha-Cha, Two Step, Waltz and the Sugar Waltz (full of turns and spins). Beginning with music beats and basic dance choreography counting, students pursue understanding that lays foundation to all. A course fee applies via SFS bill. (All quarters)
1108-340 **Swing Dance**
Swing Dance is a popular social dance. This course includes two styles of Swing Dance: The Lindy and East Coast Swing. The Lindy Hop, or Jitterbug, is a joyous, flowing style that closely reflects its music from the late 30’s to the early 40’s big band. Partners are connected smoothly to each other while relating closely to the music. The energetic East Coast Swing is a variation of the Lindy Hop, while the footwork is somewhat different, the basic lead and follow partnering skills are the same. A fun way to meet new friends, dance, and hear great music! Beginner and advanced (Winter and Spring/Advanced) classes are offered. A course fee applies via SFS bill. (All quarters)

1108-360 **Tango**
Tango Dancing covers several subjects, including tango step patterns. Class sessions will focus on breaking down these patterns into a few very simple patterns of no more than 3 individual steps. Students will learn a few easy ways to vary and combine these basic patterns and create an understanding to learn new complex patterns very quickly and easily, also allowing for individual creativity. The “steps” of a dance are the most visible part of Tango, so every student should be eager to learn them—both to lead and to follow—and how to navigate the dance floor. This is Argentine Tango. Students will also learn about one of the most important parts of any dance—its MUSIC. A course fee applies via SFS bill. (All quarters)

1108-380 **Tap Dance**
Smooth dance movement, quick style changes, transitional moves, and the all-familiar sound of the known tap shoe can be yours. Beneficial cardiovascular improvement along with muscular coordination, self-presentation, musical accompaniment and sheer expression grace this course. Experience will grow with participation. Tap dance history, development, art-form presentation, skill expression and step improvement will be enhanced. Tap shoes may be purchased locally. Building new dance steps will conclude with individual and group presentation. Skill sharing and learning include musical selection and choreographic recommendation. Tap is offered periodically throughout the school year (depending on instructor and facility availability). A course fee applies via SFS bill. (All quarters)

**Fitness**

1109-002 **Power Sculpt**
This fitness course is designed to facilitate cardiovascular fitness as well as increase muscular strength, endurance and flexibility. All aerobics classes combine a balance of high and low impact moves that include a sequence of muscular strengthening and stretching exercises. In addition to the benefits of improved heart and lung function, students will have an opportunity to burn calories, increase muscular strength and endurance, and increase flexibility. Throughout the course students will be encouraged to work at individual paces, utilizing high or low impact moves where appropriate. Through instructor lead group movements, with the use of music, brief explanations of basic aerobics principles, definitions and guidelines for proper technique will be covered. A course fee applies via SFS bill. (All quarters)

1109-003 **Aqua: Tone & Conditioning**
Aqua: Tone and Condition is an excellent cardio and strength training workout in the pool. Some classes will use both the recreation pool and the diving well, and some just the recreation pool. It is a total body workout in the water—with music. This energizing class will incorporate upper body workout outs using aqua-barbells to focus on toning/conditioning of the arms. Lower body workouts include kickboxing moves and resistance exercises and water running to tone the legs. The entire class works core muscles for a 50 minute workout as well. No need to know how to swim for this class since aqua belts are provided. A perfect class for weight loss and toning with no pressure on your joints. A course fee applies via SFS bill. (All quarters)

1109-005 **Fitness for Photographers**
This course is designed to give photographers a useful fitness plan to help prepare for the physical requirements of professional photography. Students will essentially be assessed in terms of their baseline physical fitness norms (cardiovascular fitness, muscular strength and endurance, flexibility, body composition and blood pressure). Class activities will also address an individual’s endurance, upper and lower body strength, managing load (carrying of heavy and sometimes awkward equipment), avoiding injuries, clothing essentials, and body fuels (proper food and hydration). Spring 2010 is the “Pilot Class”. A course fee applies via SFS bill. (All quarters)

1109-006 **Power Cardio-Boxing**
Cardio-Boxing (also known as Aeroboxing) is a combination of high/low intensity aerobics combined with boxing movements such as 3 different types of punches and a variety of kicks. This type of course allows students to fully engage their cardiovascular endurance. Class consists of warm-ups, choreographed routines, cool downs and challenging abdominal work outs! Options for this course are “kickboxing” and Abs. Gloves recommended but not required and can be purchased (please see Instructor for information about purchasing gloves. This course does NOT involve contact with a kicking bag. A course fee applies via SFS bill. (All quarters)

1109-008 **Waterwalking**
Using the concept of ‘drag’ versus ‘propulsion’ to increase resistance, Water Walking is a workout that can range from high to low intensity and can be done in both shallow and deep water. Water Walking has an extremely effective cardiovascular component minus the wear and tear on the joints. Proper positioning, foot placement, full range of motion allows strengthening of muscles around joint areas, increase flexibility and maintain tendon/ligament function. Water Walking is a smooth and continuous movement targeting the whole body: Enhancing muscle strength, toning and definition and develops core body stabilization. Class will end with a dynamic mix of conditioning, stretching and balance exercise leaving participants invigorated, yet calm and serene. Non-swimmers and swimmers will both enjoy this beneficial, fun, low-impact workout! A course fee applies via SFS bill. (All quarters)

1109-009 **Turbo Kick**
Want to burn 700 calories in a 50 minute class? If yes, Turbo kick is perfect for you. You will love the music which keeps the energy high and the calories burning. This is an ultra-effective workout that strengthens upper and lower body. If you are looking to tone and condition your whole body, this is the workout for you. It is also an intense ab workout since every punch comes from the core. This class is offered at over 2,000 fitness clubs in the United States and has become more popular since the Turbo Jam infomercial started. For additional information go to www.turbokick.com. A course fee applies via SFS bill. (All quarters)

1109-010 **Turbo Ball**
This fitness-based group exercise class is designed to provide students with a new way to “have a ball and get in great shape” at the same time. Based on high level Turbo exercises, the exercise ball is used during the exercise routines for a whole new workout. This class is fun, funky, fast-paced and targets the core abdominal muscles like no other workout can. The “Turbo Ball’s” round surface delivers quick results by working the core muscles harder from every angle. This group exercise course is a fantastic new way to fit by using an exercise ball to maximize core strength and development. A course fee applies via SFS bill. (All quarters)

1109-011 **Cardio Core and Sculpt**
This low-impact activity class is designed to benefit beginner, intermediate and advanced fitness enthusiasts. The class is organized to provide work sessions on muscle groups using hand weights and/or Resist-a-Balls to tone and shape muscles resulting in improved overall fitness. Alternative exercises will be demonstrated to accommodate all levels of fitness. Also offered as Step Conditioning and “Total Body Conditioning.” A course fee applies via SFS bill. (All quarters)

1109-012 **Personal Training & Diet**
This course is designed for students who desire “1 on 1” Personal Training and Nutritional consultation services. The course offers nine individual personal training sessions as well as a weekly lecture and a requirement to commit to an additional nine hours of independent study outside of class times. The course also includes an on-line component to track progress and as a forum for class discussion. Registration is conducted via the SIS system. Students will be contacted by their assigned personal trainer to establish training session dates/times. A course fee applies via SFS bill. (All quarters)

1109-013 **Core Glutes and Abs**
Core Glutes and Abs course will focus on developing/strengthening the body’s core muscles, lower back, abdominals, hips, and gluteus. The body’s core muscles are the foundation for all other movements of the body. Through use of Resist-a-Balls, weights, bands and conditioning exercises, the focus will be to develop and strengthen the body’s trunk and pelvis area where the center of gravity is located. Benefits include improved posture, increased flexibility and range of motion, increased strength and protection of the spine, more stable center of gravity and controlled movement. This class is designed for all fitness levels. Instructor lead exercises and explanation of core principles and proper technique will be covered. A course fee applies via SFS bill. (All quarters)
This course is designed for students who enjoy running as a means to cardiovascular health: designed for all types of runners who want to improve their running form and efficiency, improve their overall cardiovascular health, or even train for a race. This course benefits all fitness levels. Every-other class is active running, the other will be a classroom session/teach the different training methods of aerobic running, lactate threshold, VO2 max training, etc. The how to’s of structuring one’s own running program will be covered. There will also be components on proper nutrition and shoes. Students will also learn about the resources available to race and train with others in their community. The overall goal is to provide for proper training while also improving running performance. A course fee applies via SFS bill. (All quarters)

1109-018 
Endurance Spinning
This group exercise course will be lead by an Instructor who will take students through fairly high levels of endurance spinning workouts. At the end of this course, students will be at a higher level of fitness based on workouts during class sessions. This is an indoor group cycling class which uses motivating music and disco lights to create a challenging yet motivating class environment for endurance fitness development. Top of the line Johnny G Spinning bikes are used with a high intensity, low impact workout. The general fitness goals are to facilitate a high heart-fitness workout, enhance overall fitness, development coordination and balance and improve overall muscle tone and flexibility. A course fee applies via SFS bill. (All quarters)

1109-019 
Walking for Fitness
This Walking for Fitness Course is designed to be beneficial for individuals of all fitness levels and we will enjoy the outdoors as weather permits. The major course objectives are to improve cardiovascular endurance, increase energy expenditure, develop overall toning, improve circulation, and relieve tension. There are additional benefits of a prolonged low impact physical activity such as purposeful walking done regularly. One can substantially reduce the risk of heart disease, lower total cholesterol, lower blood pressure. Course content will include stretching, warm-up, proper form, pace management, interval training, determining intensity and heart rate and individual goal setting. A course fee applies via SFS bill. (All quarters)

1109-020 
Cardio Kickboxing
This fairly new and exciting course is designed to develop physical fitness, strength, stamina, power, speed, endurance and flexibility. Students will have the opportunity to develop self-defense skills by utilizing the combination of boxing and karate techniques. Instructors will introduce basic kicking and punching skills and combine the element of aerobic activity with music to provide an outstanding workout! Students will be encouraged to enhance their overall health, thus helping them look and feel good about themselves. Teaching methods include explanation, demonstration, program guidance and motivational lecturing. New students to class must purchase training gloves for Instructor. A course fee applies via SFS bill. (All quarters)

1109-021 
Spinning
This course is an indoor group cycling class which uses motivating music and lights. Bikes are used for a moderate to high-intensity, low-impact aerobic and endurance program. The general fitness goals for the course are to facilitate a healthy level of cardiovascular fitness and enhance overall fitness and endurance, develop coordination and balance, and improve or maintain muscular tone, strength and flexibility. At the end of the course, students should be able to properly set up the adjustments on the spinner bikes to insure safe cycling, know the 3 basic hand positions and when they are appropriate and learn the 5 basic movements used for safe and effective indoor cycling/learn ways to monitor heart rate. A course fee applies via SFS bill. (All quarters)

1109-022 
Run for Fitness & Competition
This fitness and conditioning activity course is designed for students who enjoy running as a high energy class combines the exercise “ball,” drumsticks and dynamic movements to give students a complete workout, strengthening the core muscles groups as well as the upper and lower body. Students should wear sneakers to class and should bring a towel as well. A course fee applies via SFS bill. (All quarters)

1109-023 
Zumba Fitness
Zumba is like no other workout you will ever experience. Zumba Fitness was created in the mid-90’s for international pop superstars. Inspired by cumbia, salsa, samba and merengue, paired with Latin rhythms the red-hot international dance steps Zumba Fitness was born! Zumba Fitness (slang for “to move fast and have fun”) has become one of the fastest growing dance-based crazes in the country. The music is infectious and the dance moves are easy to follow and have body-beautiful benefits. The instructor for this class will guide students through initial competence to highly challenging moves. A course fee applies via SFS bill. (All quarters)

1109-024 
Drums Alive
Drums Alive is a course that combines traditional aerobic movements with strong rhythms to create a fun, powerful percussion workout for the entire body. This high energy class combines the exercise “ball,” drumsticks and dynamic movements to give students a complete workout, strengthening the core muscles groups as well as the upper and lower body. Students should wear sneakers to class and should bring a towel as well. A course fee applies via SFS bill. (All quarters)

1109-025 
Swimming for Fitness
This fitness and conditioning activity course is designed for students who enjoy the venue of swimming to develop cardiovascular health. Designed for intermediate-advanced swimmers. This is NOT an instructional swimming class. The course will focus on: General aquatic fitness; stretching; all swimming stroke refinement and development; lap swims, sprints, combinations of times laps and outlined swim practices. Cool down sessions will take place followed by ideas for muscular strength and endurance development (outside of aquatic environment). This course is a perfect fit for individuals who wish to pursue physical fitness development in a “non-impact” situation. Students must provide their own swimming attire. A course fee applies via SFS bill. (All quarters)

1109-026 
Water Polo
This exciting aquatic-oriented activity course is designed for students who wish to learn the sport of water polo. Students must be able to swim comfortably and at times challenging, before deciding to take this course, which is a basic-advanced skills of water polo. The general course outline covers: Basic swimming/sculling skills; individual physical building blocks (strength, flexibility, speed, fitness) and core individual skills; game rules/history/basic strategies; offensive skills and strategies; defensive skills and strategies; goalkeeping; plays; refereeing; and tournament play. Students must provide their own swimming attire (suit, goggles if desired, deck shoes, towels). RIT provides all other equipment. Class meets in the competitive pool and provides an excellent fitness workout! A course fee applies via SFS bill. (All quarters)
1109-046 **Bootcamp**

“BOOTCAMP” is an exciting full-body conditioning fitness program that is designed to challenge, tone, trim, stretch and completely exercise your body in 10 intense weeks. Whether you’re a workout novice looking to jump-start a healthier lifestyle, training for a special event such as a wedding or high school reunion, or an athlete looking for a new challenge, this program can help you reach your fitness goals while enjoying it! Boredom is not an option in this 2 day a week program based on philosophies from both personal training and group fitness by combining calisthenics, plyometrics, resistance training, cardio, challenge classes, relaz races and partner drills, you get an action packed work out in one exciting hour. A course fee applies via SFS bill. *(All quarters)*

1109-048 **Introduction to Weight Training**

Basic weight training fundamentals offer beginners-intermediates the chance to build strength through method discovery. Content includes: Stretching; flexibility; spotting; safety; free weights; Cybex; the different kinds of program designs; and cardiovascular development. Course design will focus on individual need and desire, leading to unique and successful program designs. Instructors will present information on muscle development, basic CV training; use of free weights and Cybex equipment. Highlight: Individual program effort. Class work involves initial orientation, handouts/discussion, definitions, Cybex station techniques; free weight specifics, and routine development for total body work. Beginner, Intermediate, Advanced and Women’s sections are offered. A course fee applies via SFS bill. *(All quarters)*

---

### Health and Safety

1110-012 **CPR and First Aid**

This course is designed to provide certification by the American Red Cross for CPR and First Aid. Upon successful completion of the course, students will receive certification cards for CPR and for First Aid. Class sessions are generally 2-4 hour formats, meeting once/week. Students will be presented with information on the following skills that apply to: Infants, Children and Adults: Rescue Breathing, Blocked Airway for a conscious/unconscious person, CPR; responding to an emergency situation, controlling bleeding and splinting techniques. Class sessions include the use of video tapes, lectures, demonstrations, partner practice and skill evaluation (by the instructor). All equipment (mannequins, mats, wraps) are provided by RIT. “CPR Pro” is offered optionally. A course fee applies via SFS bill. *(All quarters)*

1109-049 **Lifeguarding**

RIT’s Lifeguarding course is designed to provide students with a certification by the American Red Cross (ARC). Training consists of methods for individual rescue around and in the water. Basic skills and concepts will be presented. Objectives are: Successful completion and certification for each individual by the final class day, following a ten-week course. Prerequisites for this course include a continuous 500 yard swim and demonstrated accomplishment in the front crawl, side stroke, and breast stroke. Students are required to have or purchase a lifeguarding textbook. This course covers all skills required by ARC. A course fee applies via SFS bill that includes the required face mask. The textbook can be purchased at the RIT bookstore. *(All quarters)*

1110-060 **Water Safety Instruction**

Water Safety Instruction (WSI), a certification course through The American Red Cross, enables students to teach swimming and lifesaving classes following successful completion. Preparation for teaching proper Red Cross classes follows instruction in lifeguarding skill review, strokes, teaching methods, class structuring and organization. Current Lifeguarding certification is required as a class prerequisite. Assignments, quiz evaluation and a written course final are given. Purchase of a book is necessary for course completion. An intriguing and exploring teaching methods and problems, WSI allows actual teaching experience within the class curriculum. A course fee applies via SFS bill that includes all the required textbook materials. *(All quarters)*

### Lifetime Recreation Activities

1111-001 **Archery**

This course is designed to present the lifetime recreational activity of archery in a broad perspective for future use as a recreational and/or competitive pursuit. A major objective of the course is to develop strength in the upper back, neck and shoulder girdle. Students will be presented with the proper shooting techniques and forms. Instruction in the proper selection, use and care of archery tackle (equipment) will be provided. Students will be introduced to the rules, safety, etiquette of archery and archery competition. Once the fundamental skills have been well mastered, students will participate in a variety of class competitions (field, American, hunter, golf, clout and flight). Equipment provided by RIT. A course fee applies via SFS bill. *(All quarters)*

1111-003 **Badminton**

Most people regard badminton as a gentle, noncompetitive, backyard diversion for relaxing summer afternoon play. However, the best setting has been found to be indoors or a breezy court. Here the shuttlecock (“birdie”) can zip back and forth under great control and amazing speed: It becomes a very exciting game! Because it is physically/mentally demanding, it is one of the most invigorating and challenging sports in the world. It is also a great reducer of stress/tension and a wonderful muscle-toning activity. For the competitive person, badminton offers limitless opportunity to develop skills and for others, a wonderful recreational activity. A course fee applies via SFS bill. *(All quarters)*
1111-004 Basketball Bootcamp
This course is designed for beginner-advanced male and female students. It is designed to emphasize basic skill development and refinement, team competition and tournament play. Students will learn the basics of basketball, develop individualized skills of the game of basketball: Passing, shooting, dribbling, rebounding, offensive and defensive movement techniques. Objectives of the course are to enjoy playing the game of basketball/team competition, physical conditioning enhancement, to become more informed as to the strategies of the game and to benefit from the sociological aspects of becoming involved with a team sport. The general format of each class will include a warm-up, basic and advanced drills and in class competitions. Students must be dressed in appropriate athletic attire and sneakers. A course fee applies via SFS bill. (All quarters)

1111-005 Basketball Bootcamp
This Basketball Bootcamp class is designed for all skill levels and for both men and women. The class will focus on Basketball skills from basic to advanced. Additionally, students will train in a variety of fitness skills (jumping, strength training, sprint work, footwork, abdominal work outs, upper/lower body fitness training) in order to move students to the next level of desired basketball skills. New to RIT, this course will provide and outstanding, challenging yet fun work-out while at the same time allow students to refine basketball skills and compete in pick-up games during class sessions. A course fee applies via SFS bill. (All quarters)

1111-009 Pocket Billiards
“Pocket Billiards” is enjoyed by many of all ages and of all levels of proficiency and skill. The purpose of this course is to develop the fundamentals of a sound game. Emphasis is placed on stance, grip, bridges, stroking and aiming. Other topics introduced are: Stop shots, follow, draw, “english,” position play, banks, caroms, combinations, eliminations, break shots and safety play. Games taught and played are: 8-Ball, 9-Ball, Straight (14.1) and Cutthroat. Each class period is divided into three segments: Lecture/demonstration/practice and play. All equipment is provided by RIT and no previous experience is necessary for beginner’s sections. 24 student limit. Meets in the SAU game room. Advanced sections offered. A course fee applies via SFS bill. (All quarters)

1111-012 Bowling/Off-campus
This course is designed for beginner, intermediate/advanced students who wish to participate in the lifetime recreational sport of bowling. The course is designed to practice the basic techniques of bowling and covers the following: Stance, push-away, back swing, approach and release (fundamental skills of the game). Students will learn the importance of proper ball selection and care of equipment (balls, shoes, gloves). The class will be presented with the rules and etiquette of the game. Once averages have been established, students will be placed on teams and will bowl as a competitive league (format) for the remainder of the quarter. Course held off campus Terrace Gardens. Directions in the SLC. RIT does not provide transportation. A course fee applies via SFS bill. (All quarters)

1111-028 Fencing
Introduction to the sport of fencing, basic moves, rules knowledge and understanding in combination with conditioning principles, stretching and flexibility design a class full of detail, competition and tactics. Objectives include basic footwork proficiency, Fencing blade work skills, rules understanding, experiential learning and the opportunity to direct (officiate) for one another. Classes begin with a light warm-up, followed by stretching and conditioning exercises. Focus on the basics and teaching fencing moves, also includes competition discussion and outing situations. Grading is on attendance. Variety in class options include and Advanced Fencing Section (experience required). A course fee applies via SFS bill. (All quarters)

1111-030 Introduction to Fencing: Sabre
Introduction to the sport of Sabre, basic moves, rules, conditioning and stretching/flexibility will be taught. Focus will be on footwork, Sabre blade work and skills, experiential learning and the opportunity to direct (officiate) for one another. Classes begin with warm ups and stretching followed by sabre moves and discussions on competitions and bouts will take place. Grading is on attendance. Final weeks include mini competitions, games, Olympic video and free “Sabre” time. An advanced section offered periodically in the Spring. A course fee does apply via SFS bill. (All quarters)

1111-032 Fresh Water Fly Fishing
This “Fresh Water Fly Fishing” course introduces students to fly fishing skills. This includes: identifying trout species, understanding trout behavior and trout habitat, basic entomology and hatch calendar, recognizing common artificial wet and dry patterns, tying wet and dry fly patterns, viewing some popular trout streams in the northeast and western united states, and reading stream conditions. This course includes hands-on sessions for fly casting techniques. A course fee applies (via student financial services bill). Equipment is provided for students who need it (rod, reel, leader material and flies). Class meets weeks 4-8 of the quarter, with the last class meeting off site at the same regular class time. RIT does not provide transportation. Car pooling with others in class exists. A course fee applies via SFS bill. (All quarters)

1111-033 Flag Football
Flag football offers a chance to experience football at its best. Sport equipment will be provided. Individual skills combine in an atmosphere of teamwork, goal attainment, leadership awareness and excitement. Skill presentation, demonstration, drill work and play allow students of all levels to benefit from flag football activity involvement. Passing, catching, flag techniques, offensive/defensive play, creativity, kickoffs, point after attempts, handoffs and rule review will highlight the course. Active participation progresses fitness levels in many areas. Flag football will be offered at various times throughout the school year (depending on instructor/facility availability). A course fee applies via SFS bill. (All quarters)

1111-035 Dodgeball
Dodgeball
Re-live the glory days of summer camp and middle school by taking part in one of the fastest growing activities on college campuses across the country. Dodgeball is a great way to exercise, relieve stress and most importantly- have fun! This course will focus on the recreational game of Dodgeball as it is sanctioned by many leading organizations such as: The World Dodgeball Association (WDA), The National Amateur Dodgeball Association (NADA), the International Dodgeball Federation (FDA) and the National Dodgeball League (NDL). Students will play the game of Dodgeball using different rules, formats and balls, court and team sizes. This will be an intense, competitive class but with a relaxed, open environment that will accommodate all ability levels. A course fee applies via SFS bill. (All quarters)

1111-036 Ultimate Frisbee
Ultimate Frisbee
Ultimate Frisbee is a non-contact disc sport played by two teams of 7 players. The object of the game is to score goals. A goal is scored when a player catches any legal pass in the end zone of the opposing team. The disc (frisbee) is advanced by throwing or passing it to team mates. The disc may be passed in any direction. Any time a pass is incomplete, intercepted, knocked down, or contacts an out of bounds area, a turnover occurs. A turnover results in an immediate change of team possession of the frisbee (disc). Students will learn the rules, basic throws and strategies of this exciting game while developing levels of physical fitness. A course fee applies via SFS bill. (All quarters)

1111-038 Golf
Beginning golf familiarizes the student with basic principles of technique, rules, etiquette, equipment and various course layouts. Players will benefit from play alongside novice and experienced level players. Unique individual critiques, etiquette discussion, grip coverage, stance, posture and swing planes are learned, as well as use of irons, woods and putters. When appropriate, videotaped presentations are shown. Stretching, technique demonstration and review combine with various club hitting practice to fill fifty minutes of experiential golf education. Professional presentation delivery and breadth of information in combination with practice, lead to a 27-hole class required performance. Written examination tests learning levels, as well as a self-performance videotape. A course fee applies via SFS bill. (All quarters)

1111-041 Horseback/English
Horseback/English
Student equitation skills, horse control, walking work, the trot and canter develop within this beginning Horseback/English course. Moving on to higher level intermediate and advanced courses, students learn fence jumping and fence course introduction, while further refining equitation skills. Course objectives include riding and stable safe work techniques, developing correct positioning, riding control and specifics dealing with a variety of horses and challenging situations. Ground work education such as horse care, existing, ground leading and correct mounting procedures along with walking, sitting, posting and two-point positioning, walking without stirrups, trotting and cantering lead into intermediate skills. Must call Huntington Meadows Stables to set up lesson times (872-6286). Please leave phone #! Course and instructor fee applies. (All quarters)
1111-042  Horseback/Western
Enjoy scenic trail riding while learning how to safely work and commun-icate with western trained horses at Liberty Stables in Bloomfield, NY. This class includes weekly discussions/rides. Designed with the novice in mind, students will learn to ride at a walk, trot, and canter. However, the variety of 15 lesson allows for varied experience levels. Class discussions/ demonstrations include ground and riding safety, basic care/maintenance of horses as well as a bit of history of the human/horse relationship over the past 3000 years! With 80 beautiful acres of rolling countryside, open fields and forested areas as well as outdoor/indoor lesson rings, you are sure to develop your riding foundation. Attendance is key to success in this class. Course and instructor fee applies (All quarters)

1111-047  Lacrosse
The sport of Lacrosse brings excitement to activity. This course is designed for students who have either played Lacrosse or have an interest in gaining basic skills and knowledge of the game. Beginners as well as advanced players are welcome. Students must bring their own Lacrosse stick to each class. RIT will provide safety goggles along with all other required equipment and instruction. Objectives of the class include: Learning to catch/pass/dodge and shoot while playing in a team setting. Students must be dressed in appropriate athletic attire and sneakers. Variations of course options are: men’s Lacrosse, co-ed Lacrosse and women’s Lacrosse depending on instructor and facility availability. Check SIS for quarterly offerings. A course fee applies via SFS bill. (All quarters)

1111-049  Ice Hockey
This course is designed for beginning to advanced ice hockey players. Students must provide their own skates, helmet, hockey stick and gloves. Course objectives: To learn the basics of equipment, safety, skating acceleration, stick handling, skating agility (forward and backward), and basic drills. The advanced classes (POWER SKATING) are NOT for beginners! These classes will cover advanced hockey skills, including: Shooting, passing for accuracy, advanced drills, defensive zone coverage and competitive play. If the class is above average in ability, a session on Power Plays and Penalty Kills may be added. There is NO body checking allowed in class. All penalties during class will be penalty shots. Students may rent skates (rental fee applies). A course fee applies via SFS bill. (All quarters)

1111-050  Ice Skating
This course is designed for beginner-advanced ice skaters. Instructional emphasis will be placed on safely learning the life - long activity of ice skating. Early in the quarter, students will be introduced to aspects of basic use and care of equipment and safety implications. Once basic skills have been obtained, students will progress as follows: Gliding and snow plough stop; forward glide and sculling; backward glide and sculling; forward cross-overs; short jumps/turns; two foot spins; forward chasses; Killian hold; backward chasses waltz hold; foxtrot hold; forward drag, bunny hop and lunge; forward arabesque; combination jumps and spins; Sal chow and basic program develop-ment. Students may use their own skates or can rent skates at the rink. A course fee applies via SFS bill. (All quarters)

1111-053  Juggling
This course is designed to acquaint students with the art of juggling in theory and practice while at the same time conditioning their minds and bodies. Course concentrates on 3 and 4 ball juggling patterns and is geared to accommodate all levels of learners. Instructor will teach one-on-one as well as group demonstration. Clubs, rings, combination cigar boxes, scarves, club swinging and 5 ball juggling will be taught (where appropriate to advanced students). Personal instruction will be supplemented with juggling movies, literature and video taping. The goal of the course is not only for each student to achieve maximum juggling ability, but also to increase their mental concentration and physical coordination. A course fee applies via SFS bill. (All quarters)

1111-060  Officiating: Basketball
Class provides competencies necessary for officiating basketball. Basic rule review covers detailed aspects of the game. Officiating techniques are presented, as well as practiced, in an understandable, growth-providing approach. Fitness level is improved through drills, on-court experience and playing options. Explanation through tape review, discussion and experiential learning provides useful skill enhancement. Basketball officiating is offered at varied times throughout the academic year (depending on instructor and facility availability). Basketball coaching skills and basics will also be covered in this class. A course fee applies via SFS bill. (All quarters)

1111-065  Racquetball
Racquetball is designed to teach skill development from beginners to advanced level players. Focus for the beginner is on skill development and refinement, while intermediates to advanced focus on perfecting the strokes and competitive strategies. Activity level is high. Students will have the opportunity to develop overall fitness elements. The basic course objectives are: skill understanding, enhancement of the social/emotional components, CV fitness, basic shots, equipment, warm up/cool down, training and game strategies. This course meets 2x/week for 50 minutes in the SLC racquetball courts. Racquets and balls are provided. Eye guards are required and may be purchased locally. All students must bring their RIT ID to every class. A course fee applies via SFS bill. (All quarters)

1111-075  Skiing and Snowboarding
Skiing begins early January/runs for 6 weeks Tuesday nights only. Fees vary depending on the SECTION. Section 1 includes lift ticket/optional lessons (no rental). Section 2 includes lift ticket and rental with lessons optional. Students will receive credit after completing 20 hours of either skiing or snowboarding. Class meets Tuesday early December in the Field House. Skiing and boarding can begin as early as 4 p.m. Class takes place at Bristol Mountain. All fees subject to change per Bristol Mountain. Directions are in the SLC lobby. RIT does not provide transportation, although car-pooling options exist. For more details call 475-7372 (Instructor Lex Sleeiman) or e mail at atsdead@rit.edu. Course fees are via SFS bill. (All quarters)

1111-078  Soccer
Soccer, the sport of all the world, is a game of constant action. Each player involved in this game must be able to perform as an individual, as well as be an essential part of team play. In this class, we will cover fundamentals of ball control, trapping, dribbling, passing, heading, shooting, defensive (zone, man-to-man) techniques, offensive techniques, goal keeping and soccer terms. In this class, we will also discuss how every team is comprised of individual skill, group skill and team tactics. Class format will follow a warm-up ses-sion with skill practice, instruction for the day, along with mini-games in a controlled scrimmage situation. Winter offering will be indoors. A course fee applies via SFS bill. (All quarters)

1111-079  Sports Smorgasbord
The “Sports Smorgasbord” class is designed to incorporate the more traditional sports of Volleyball and Basketball, along with additional varied sports throughout the quarter to assist and motivate students who are interested in making positive lifestyle changes to live healthier. Participants will be able to play Volleyball, Basketball, Badminton, Indoor Soccer and Dodgeball throughout the 10 week quarter, so students are not limited to just one sport but to a “Sports Smorgasbord!” A course fee applies via SFS bill. (All quarters)

1111-081  Softball: Slow Pitch
Co-ed activity class designed for beginner to advanced players of the game of slow-pitch softball. Class will meet outdoors on the turf field or the Intramural field, weather permitting. During inclement weather, class will meet in Clark gym, and play a modified game of softball; Mushroom. Course consists of basic fundamentals of slow-pitch softball, with “speed up” rules of 3 balls and 2 strikes; including rules, out-field play, infield defensive skills, hitting, pitching techniques, base running, basic game strategies and umpiring. No metal spikes will be allowed. First class: Meets indoors and consists of orientation session and instruction regarding rules of the game. Most other classes: Outdoor drills and skill refinement. A course fee applies via SFS bill. (All quarters)

1111-083  Swimming: Beginner’s Only
Participation, enjoyment, improvement, knowledge, fitness conditioning and safety, class shares the latest swimming information and techniques. Course procedure includes individual and group instruction. Objectives involve work on skill improvement, safety development, all stroke recommendations, endur-ance improvement and swimming enjoyment. Course content delivers begin-ner, intermediate and advanced swimming skill work, freestyle, side, back, breast, fly and elementary backstroke. In addition to turns and variation, water orientation and entry, stroke mechanics, understanding fitness conditioning, games, diving and safety skills, students explore water enjoyment. Note: This is strictly a “beginner’s” class. A course fee applies via SFS bill. (All quarters)

203 | Center for Intercollegiate Athletics and Recreation
Tennis

Participation, enjoyment, and lifetime game appreciation fulfill class expectations. Introduction to beginning fundamentals and skills will be covered. Objectives of the course reflect game skills, rules, etiquette, tennis appreciation, and attaining a level of play that allows competition with comparable players. Court layout, surfaces, scoring, equipment, individual skills (forehand, backhand, serve, volley, overheads) and footwork allow progression into preliminary games and round robin play.**Note Indoor Tennis periodically are now offered in the Winter/focuses on tennis drills aimed at increasing cardiovascular strength/breathing and advanced footwork. Students will do circuit training, court positioning and continuous feeding drills. A course fee applies. (All quarters)

Volleyball

Course designed for all levels of players of the lifetime recreational and competitive game of volleyball. Course evaluation is based on attendance, effort, improvement and enthusiasm. The basic course outline includes instruction and rehearsal of basic volleyball skills (underhand pass, overhead pass, spike and serve); rules; basic formations/ positions/strategies; and tournament play. Students will have ample time to practice/refine basic-advanced skills of the game. Tournament play will take place in the form of a random team selection from class to class. Students should dress in athletic wear, with comfortable sneakers and knee pads (if desired). Advanced section offered periodically. A course fee applies. (All quarters)

Table Tennis

Table tennis is the second most popular sport in the world. It is a sport played by all ages. At the beginner level it is recreational. At the top level, it is a world class sport requiring years of dedication and top notch training/fitness! It combines technique, speed, spin, power, touch, smarts and concentration. Course content includes: basic strokes, footwork, drills, strategies and rules. Games and matches will also be played, based on practice drills, and then a tournament near the end of the quarter. All equipment is provided. Must wear sneakers. This course is designed for beginners who want to learn more about how table tennis is played and practiced. Successful completion of this course can be applied as (1) activity course credit toward the graduation requirement. A course fee applies via SFS bill. (All quarters)

Curling

This course will focus on the Olympic sport of Curling. Curling is a competition between two teams with 4 players each. The game is played on ice, and the teams take turns pushing a 19.1kg stone towards a series of concentric circles. The object is to get the stone as close to the center of the circles as possible scoring more points than the opposing team. Instruction will cover all rules, equipment, safety, basic-intermediate skills and competitions. All classes will meet off campus (Rochester Curling Club). The core of these classes that meet will take place at the Rochester Curling Club on 71 Deep Rock Rd. (11 minutes from campus). RIT does not provided transportation. For directions call 235-8246 or e-mail Dave Hoffman (Instructor) at www.rochestercurling.com. A course fee applies via SFS bill. (All quarters)

Interactive Adventures

Snowshoeing/Biking

This class is designed to utilize the sport of snowshoeing as a means of promoting and imparting physical fitness, outdoor preparedness, outdoor winter skills and knowledge of our local parks and natural resources. Students can expect to gain the necessary knowledge to continue enjoying this sport on their own. This class will typically meet at the Red Barn and depart for one of our many local trails and parks. In the event of a “no snow” day, hiking will be the substitute activity for the day. Equipment is provided by RIT. Offered in Winter periodically. Please refer to SIS for possible offerings and/or visit www.interactiveadventures.rit.edu (Interactive Adventures website). Course fee applies via SFS bill. (All quarters)

Adirondack Snowshoeing

This class consists of a mandatory pre-trip meeting followed by a weekend trip to the Adirondack State Park. Skills introduced include: snowshoe use, cold-weather preparedness and backcountry travel. This class meets for the (mandatory) pre-trip meeting and the weekend trip only. Must attend both for full activity course credit. Check the SIS system for more detailed class information. A course fee applies (via SFS bill) that includes all equipment, transportation, lodging, and instruction. (All quarters)

Ice Climbing

This class is designed to teach basic ice climbing skills, that will include belaying, ice tool and crampon use as well as special skills and safety considerations particularly climbing on the ice. After required pre-trip meeting, the class will take day trips to local frozen waterfalls for climbing. This class is appropriate for all experience levels and all necessary gear and equipment is provided. Check quarterly schedule on SIS for possible offerings and/or visit the Interactive Adventures website: www.interactiveadventures.rit.edu Course fee applies via SFS bill. (All quarters)

Cross Country Skiing

This course is designed for anyone interested in Cross Country Skiing and will accommodate all ability levels. In this class we will travel to a local cross country venue and spend a weekend enjoying this amazing sport. Topics include equipment, basic movement technique, preparedness, dealing with terrain, and safe skiing practices. Equipment and transportation will be provided. Students are welcome to bring their own skiing equipment if possible. All students will need to supply their own winter clothing and will be required to spend much of the time outside regardless of weather conditions. A course fee applies via SFS bill. (All quarters)

Women's Cross Country Skiing Trip

This class is designed for women interested in Cross Country Skiing and will accommodate all ability levels. In this class we will travel to a local cross country venue and spend the weekend enjoying this amazing sport. Topics will include equipment, basic movement techniques, preparedness, dealing with terrain, and safe skiing practices. Equipment and transportation will be provided. Students will need to supply their own winter clothing and will be required to spend much of the time outside regardless of weather conditions. A course fee applies via SFS bill. (All quarters)

Team Building Tools

Progressing into the 21st Century working collaboratively in teams will be a key competitive advantage to individuals and groups that can attract them. Providing those we work with the insight and experience of working collaboratively will give them and us workforce advantage. In this series will present and discuss how to create experiences in team building without the benefit of having a ropes course. We will discuss the history and use of experiential activities, stages of group development, activity briefing/debriefing and safety considerations. We will spend time setting up and experiencing a variety of activities and games that can be easily transported and will discuss where to find additional activities, curriculum ideas and local resources. A course fee applies via SFS bill. (All quarters)
1112-050 Rock Climbing/Indoor
This class is designed to introduce and educate students about the sport of indoor rock climbing. Subject matter includes a variety of climbing techniques and terminology, gear and equipment use, as well as safety practices and protocols specific to the indoor climbing environment. Each class will consist of a lecture, demonstration and practice components—allowing students to learn and practice the skills presented. All necessary gear and equipment will be provided. This is an introductory course set up for individuals with little or no climbing experience. A course fee applies via SFS bill. (All quarters)

1112-051 Climbing Gyms Tour
This class meets for (3) day trips to different climbing gyms in the western New York and southern Ontario area. Skills taught/reviewed: bouldering with a “grigri”, tying in and various other indoor climbing techniques and strategies that apply to the multitude of routes, features, boulder problems, caves and climbing walls that exist among the gyms visited. Students will also gain knowledge of where to go during the colder months to satisfy various climbing cravings. **A passport and/or a birth certificate for travel to Canada is required for this class** Check SIS for more detailed quarterly offerings and trip dates/times. A course fee applies (via student financial services bill) that includes all equipment, transportation, gym passes, and instruction. (All quarters)

1112-052 Rock Climb Training
This class is designed for those with previous climbing experience and that are proficient in basic climbing movement and terminology (it is not required that students have knowledge of belay techniques and rope related skills for this class). We will explore various training techniques and establish a regular training schedule that will be followed throughout the quarter. Training techniques will include the use of standard weight training practices, cardio-respiratory equipment, climbing specific training tools such as campus walls and finger boards, along with other exercises involving your own body weight. Programs will be developed based on individual need and will be tailored so that you progress throughout the quarter. Class sessions will meet in both the Fitness Center (SLC) and the Red Barn. A course fee applies. (All quarters)

1112-055 Rock Climbing/Outdoor
This class is designed as an introduction to outdoor rock climbing. Subject matter includes a variety of climbing techniques, proper use of gear and equipment as well as all safety practices related to outdoor climbing. Class consists of one evening session and an all-day trip. The evening session will acquaint classmates with each other, cover all rope handling and climbing techniques and prepare the class for the outdoor trip. The trip usually takes place in Ontario, Canada and transportation is provided. Here, students will have the opportunity to spend the day climbing on the cliffs of the Niagara Escarpment. All necessary gear is provided. You must attend the evening session to go on the trip, and both sessions are required for a passing grade. A course fee applies via SFS bill. (All quarters)

1112-060 Rock Climbing/Bouldering
Bouldering is the sport of climbing typically short distances without ropes or harnesses. These safety precautions are replaced with spotters and crash pads. This class is designed to expose students to the sport of bouldering, while teaching a variety of climbing techniques, mental and physical preparedness, proper spotting and other areas of climbing safety. The first session(s) will meet at the Red Barn and future sessions will take place in Niagara Glen bouldering area. All gear and transportation are provided. A course fee applies via SFS bill. For more detailed information please visit the website for interactive adventures. (All quarters)

1112-062 Bouldering/Adirondacks
This course is designed to expose students to the sport of Bouldering in an amazing outdoor setting. Climbing techniques, mental/physical preparedness, proper spotting and other areas of safety for climbing are presented. The sport of “Bouldering” involves shorter climbs or “problems” that require more difficult movements than in roped climbing. First class meets @ the Red Barn (REQUIRED MEETING) followed by a weekend trip to the Adirondack where students will climb for two days at a premier outdoor location. A course fee applies (via SFS bill) that covers equipment, transportation and lodging. Visit www.interactiveadventures.rit.edu. (All quarters)

1112-063 Bouldering/Cooper's Rock
This course is designed to expose students to the sport of Bouldering in an amazing outdoor setting. Climbing techniques, mental and physical preparedness, proper spotting and other safety techniques are presented. The sport of “Bouldering” is a type of rock climbing that involves shorter climbs or “problems” that require strategy and physical ability to complete. This is a physically demanding class! The first class meets at the Red Barn (required meeting) followed by a long weekend (Thursday-Sunday) trip to Cooper’s Rock, WV—a large bouldering area just east of Morgantown, WV. Students will climb for two full days at a premier outdoor location. Visit www.interactiveadventures.rit.edu for more information. Course fee applies (via SFS bill, all quarters) that covers equipment, transportation and lodging.

1112-065 Rock Climb/Toprope Set-up
This class is designed to teach students how to assemble safe and reliable anchors for toprope climbing using natural anchors (no artificial protection will be used). Participants should know how to belay and have had some climbing experience. Skills taught will include: Basic knowledge of all gear and equipment being used, choosing an anchor, tying off anchors, creating equalized and redundant anchor systems, anchoring the belay, redirected belays, top belays, escaping the belay and basic mechanical advantage systems. Class consists of one evening session and a full day trip. The trip will be to Ontario, Canada where participants will learn to set up and use their own climbs. Both sessions are mandatory. All necessary gear and transportation are provided. A course fee applies via SFS bill. (All quarters)

1112-067 Climbing/Technical Skill
This class is designed for those with some outdoor climbing experience. The class will be taught inside, but in simulated outdoor situations, covering such skills as anchor building and management in a variety of situations; various belay methods and considerations; belay escapes and basic rescue skills; mechanical advantage and hauling systems; and, above all, safety and it’s many components in the climbing discipline. Climbing movement will only be covered inasmuch as it pertains to rope work and other technical considerations. A course fee applies via SFS bill. For more Information and detailed information: www.interactiveadventures.rit.edu. (All quarters)

1112-080 Backpacking
This class will impart basic backpacking skills such as fitting and properly packing your backpack, camping skills, and general outdoor awareness and preparedness. These skills will be put to use on an overnight backpacking/camping trip. The difficulty of the hike will be based on the abilities of the class. A course fee applies via SFS bill. For more information visit our website at: www.interactiveadventures.rit.edu. (All quarters)

1112-081 Backpacking/Trail Maintenance
This course is designed to provide experience in backpacking and volunteer trail maintenance. Students will learn how to choose proper gear, work together as a team, and care for the trail they’re hiking on. Students will gain basic knowledge of backpacking skills and equipment selection, learn how to work with trail organizations and trail maintenance projects, learn to demonstrate basic backpacking skills and gear terminology, participate in trail cleanup and preservation, and practice “leave no trace” camping/hiking ethics. This course consists of both a mandatory pre-trip session(s) and a weekend backpacking and trail maintenance excursion. Basic backpacking and camping gear are provided. A course fee applies via SFS bill. (All quarters)

1112-085 Hiking/Adirondack Peak
This class meets for one evening preparatory session and one overnight trip. The evening session will cover: Acquainting the group, appropriate gear for the trip, outdoor preparedness, and general expectations and logistics for the trip. The overnight trip will depart from RIT Friday afternoon in an RIT van. That night, the class will stay in the Adirondacks with bunk-style accommodations. Saturday we will hike one of the many peaks in the Adirondack region. Hiking is typically strenuous on average, but the pace will be moderate and effort will be made to accommodate the abilities of the class when selecting a hike. Because of changing weather conditions and other unforeseeable factors, a peak may not be summed. Participants should possess dependable hiking boots/clothing. A course fee applies via SFS bill. (All quarters)
1112-100 Canoeing
This class meets for one evening session and one full day trip. The evening session will cover: acquainting the group, basic canoe/paddle parts and terminology, launching the canoe, paddle strokes and maneuvers, and basic canoeing safety with opportunity to practice skills learned on flat or slow moving water. The trip will be an all-day venture on moving water with sections of mild white water. Skills taught include: Review of evening session skills and strokes/skills for negotiating moving water. Participants should expect to be on the water for both sessions. Both sessions are mandatory. A course fee applies via SFS bill. For more detailed information visit our website: Interactive Adventures website at www.interactiveadventures.rit.edu. (All quarters)

1112-101 Canoeing/Beginner
This course is designed to provide instruction and experience in flat water canoeing. Students will learn how to choose the right equipment and learn the proper canoeing power and steering strokes. Areas of instruction also include canoeing safety, basic knowledge of canoeing skills and equipment selection, gear terminology, and basic rescue/recovery techniques. This course is designed to enable students to participate in future recreational and occupational canoeing skills and experiences in a safe and comfortable way. A course fee applies via SFS bill. (All quarters)

1112-105 Canoe Camping
Camping meets canoeing; learn to experience how a canoe allows for unique access to otherwise impractical camping opportunities, while being able to carry a payload greater than what could be feasibly carried on your back. This class involves a required pre-trip training meeting followed by a weekend-long trip to the Adirondacks. Skills to be covered include: Basic paddling, safety and navigation; Camping skill skills: tenting, fire-building, camp-cooking, and water purification as well as invaluable first-hand knowledge of one of the finest parks in the United States. Course fee applies via SFS bill. (All quarters)

1112-120 Kayaking/Rolling
This class is taught as an introduction to kayaking. It is typically taught in the pool and covers the following skills: Kayak parts, accessories and terminology, wet exits, hip snaps, paddle strokes, j-leans, Eskimo rescue and Eskimo rolls. All skills are taught in progression using drills, games and exercises leading up to a full roll. This class is taught in white water kayaks. All necessary gear and equipment is provided. Participants should expect to be in the water each class. Course fee applies via SFS bill. (All quarters)

1112-125 Whitewater Kayaking
This course is an intermediate approach to whitewater kayaking. The participants should have some, but not necessarily extensive, kayaking experience. A preliminary class meeting will take place in the RIT competitive pool. This meeting will address/review the basics of whitewater paddling, maneuvering, righting and rescue techniques. An all-day trip will follow on easy to moderate whitewater. The meeting and the class trip are required to receive full activity course credit. Additional skills taught will include: whitewater safety skills, river reading/navigation, ferrying, eddying and peeling. Depending on the skill level of the class, other more advanced skills may be introduced as well. A course fee applies via SFS bill for instruction, all equipment (boats, gear), transportation, park fees. (All quarters)

1112-150 Wilderness Skills
This class will cover a variety of topics and is designed to impart a number of skills that pertain to safely and effectively enjoying the backcountry. Skills covered will include water treatment, bear bagging, camping skills, orienteering, backcountry first aid, environmental awareness and preparedness, wilderness ethics, and more. This class will be taught both in and outdoors. A course fee applies via SFS bill. For more detailed information and listings visit: www.interactiveadventures.rit.edu. (All quarters)

1112-151 Leave No Trace Trainer
This course is for hikers, climbers, campers and explorers. The Interactive Adventures Program presents its first ever “Leave No Trace (LNT)” Trainer Course for outdoor recreation students looking to lessen their environmental impacts on the backcountry and to educate others to do the same. Being more cognizant of the effects of our actions on the environment, we can work to sustain a healthy future. The seven Leave No Trace principles help to guide our awareness in all of our outdoor adventures. The goal of this course is to prepare participants to practice the seven leave No Trace principles and to train others in the principles through this weekend trip. The course is 1 pre-trip meeting + 1 weekend @ the Finger Lakes Trails learning and applying their skills. Course fee applies via SFS bill. (All quarters)

1112-155 Camp Cooking
This is a hands-on course that focuses on the safe operation and practical use of a variety of camping stoves and other backcountry cooking methods to prepare meals in the backcountry. Topics covered will include: stove method selection, safe and effective use of the chosen apparatus, backcountry nutrition and related considerations, water purification, meal planning and preparation, food dehydrier methods, non-cooked nutrition options and a variety of other factors and considerations. Students will be given a light-weight camp stove to keep. A course fee applies via SFS bill. For more detailed listings: www.interactiveadventures.rit.edu. (All quarters)

1112-160 Orienteering
Interactive adventures is pioneering an introductory course in Orienteering. This is for all students who have heard about a compass, a map, and topographic lines but never learned how to use them. In a blended classroom and outdoor learning environment, students will be introduced to navigating using the sun, landmarks, and a watch. Students will also have hands-on experience incorporating “Leave No Trace” Ethics and leadership into their navigation techniques. If you are looking to step out of the world of VGR (Vehicular GPS Reliance) and back into the world of true human navigation, this course is for you. We may even work on ways to incorporate your car’s GPS into field application. Compass and maps provided. A course fee applies via SFS bill. (All quarters)

1112-165 Backcountry Living
This is an introductory course in backcountry living. We will work in and out of the classroom to incorporate essential outdoor skills involved in backcountry camping and overnight basics. Students will leave this course with a strong base in fire-building; campsite selection and set up; outdoor cooking; rope work; shelter building; wilderness first aid; hypothermia prevention, detection and care; and Leave-No-Trace ethics. A course fee applies via SFS bill. (All quarters)

1112-170 Bicycle Care/Maintenance
This 20 hour course is taught as a “hands-on” introduction to caring for and maintaining your own bicycle. Students are supplied with a basic “bicycle repair kit,” which is theirs to keep. The focus of the course is to use the repair kit and repair book to discover the mechanical systems of your bicycle, including; brakes, drive train, bearings, derailleurs, wheel truing and more. Instruction location will be split between the SLC classroom and the Red Barn. The first 4 weeks are spent in the SLC classroom completely dismantling and re-assembling 2 bicycles. The last 6 weeks are spent in the Red Barn working on your own bike (students must bring their own bicycle to the last 6 classes only). NOTE: Repair kit tools are designed for bikes 1995 and newer with external gears (if older, you may need to buy proper tools). A course fee applies via SFS bill. (All quarters)

1112-171 Bicycling for Fitness
This class is designed for intermediate riders who feel comfortable operating and maintaining their own bicycle. Class will introduce riders to techniques such as cift ear pedaling, cadence, shifting and breathing to increase efficiency and fitness. The class will also look at riding etiquette and road safety by practicing and obeying VNY laws for cyclists. Students will also learn how to use a heart rate monitor and bicycle computer to increase fitness level. Weekly group rides will be 20-30 miles per class, which includes drills to improve fitness and efficiency. IMPORTANT NOTE: Class requires a road or hybrid bicycle (no mountain bikes). Students should be comfortable riding, shifting and controlling their bicycle (Not for beginners). Class will meet on indoor spin bikes during March and when weather is unfavorable (TBA by instructor). A course fee applies. (All quarters)

1112-180 Mountain Biking
Do you have a mountain bike and want to learn how to use it on something other than pavement? Come with your bike and helmet (required) to an on-campus meeting, then two Saturday classes at Dryer Rd. Park in Victor, NY. We will spend the first Saturday working on basic skills and using different trails based on ability and experience. The second Saturday will be spent further developing your abilities and exploring the park. This course is for all ability levels and beginners are welcome. The instructor will help rank your competency and hone the course to your needs as a rider. A course fee applies via SFS bill. (All quarters)
1112-500 Facetime Pilot
The FACetime outdoor orientation program for freshmen coming to RIT consists of a one day orientation and training on the RIT campus, a camping overnight at the Red Barn, and a four-day backpacking trip in the High Peaks region of New York’s Adirondack State Park. This is a collaborative effort between Interactive Adventures and the New Student Orientation. Topics covered include both those related to productive and healthy campus life as well as skills related to backpacking and backcountry travel. Details about this program are available at http://rit.edu/studentaffairs/facetime/. No on-line registration will take place; all students will be manually added via the Registrar’s office. Program fee includes all meals, transportation and most outdoor gear/equipment needed for the trip.

1112-550 Adirondack Spring Break
This class consists of two mandatory pre-trip meetings followed by a week-long trip to the Adirondack State Park. Students will spend two days at Gore Mountains ski resort or snowboarding, two days snowshoeing in the Marcy Dam area, and one day cross-country skiing at Cascade Cross-Country Ski Center. Skills introduced include: Snowshoe and cross-country ski use, cold-weather preparedness and backcountry travel. This class meets for the (mandatory) pre-trip meetings and the week trip only. Students must attend ALL for full activity course credit. Check SIS for more detailed class information. A course fee applies via SFS bill that includes all equipment, transportation, lodging, and instruction. (All quarters) This course is restricted. To register, students must contact Tom Connelly at tpcsce@rit.edu.

1113-021 Karate
Course designed to help students increase their stamina, flexibility and basic techniques in self-defense. Main course objectives: become more physically fit to enhance self-esteem; develop self-confidence to help students deal with everyday situations; relieve stress by providing an outlet to “blow off steam”; and to gain self-discipline to enable students develop better study, work and life habits. Course content: calisthenics; stretching; upper body/lower body exercises; kata (a prearranged set of movements which deal with being attacked). Course options include: Level I, Level II, (Advanced). Please note that students MUST have successfully completed a Karate Level I class before enrolling into the Karate Level II class. A course fee does apply via SFS bill. (All quarters)

1113-022 Self-Defense
This empowering self-defense course, designed for students is designed to help students increase their stamina, flexibility, and basic fundamental techniques needed to feel confident in the ability to protect oneself. In this positive, non-threatening environment, the class will teach proper use of hands and feet as weapons, how to fend off multiple attackers, as well as techniques that can be used against a person with a knife, gun, or club. Main course objectives: become more physically fit; enhance self-esteem and gain necessary awareness of potential dangers, develop confidence and self-discipline to help deal with everyday situations, relieve stress, provide resources needed to develop better study, work and life habits. A course fee applies via SFS bill. (All quarters)

1113-023 Kali Level I
This course is a study of Filipino Indigenous Martial Arts used in Pre-Hispanic colonial periods of the Philippines known as Kali, Arnis and Eskrima. The practice of this art was trained in the guise of cultural dances and theatrical plays to hide the Martial applications from the colonial powers. This course will explore the system’s unique training method that begins with weapons and transfers the same movement to empty handed defensive applications using a 3 dimensional thought provoking process of deciphering and understanding body mechanics. Class includes skills through the use of double/single sticks in place of blades and use of these tools to develop plyometric and 2 main dynamic drills. Course fee applies via SFS bill plus $20 rattan stick fee. (All quarters)

1113-030 Kung Fu: Shaolin System
Welcome to the Duteau Northern Shaolin Kung Fu Wu Su Academy. Typical classes are 1-2 hours, depending on the class where all students work together. Most classes start with exercises, which are followed by the introduction of basic technique and their application. Students progress throughout the quarter learning more advanced skills and gain more self-discipline and confidence. Kung Fu is an excellent method of getting in shape. Students will feel a definite improvement in overall well-being as they develop their offensive and defensive abilities. Students can also learn the philosophy, history and analysis of Kung Fu techniques in the Review class (1113-032). For more detailed information about Kung Fu classes: http://www.rit.edu/~kungfu/. Course fee applies via SFS bill. (All quarters)

1113-031 Kung Fu: Open Practice
This class is designed to provide extra practice time for students outside of their regular class and to give students the opportunity to receive more individual instruction on techniques they have questions about or feel they need help with. Typically class will run for about an hour and 20 minutes, starting out with a set of warm-up exercises, which will then be followed by a review of techniques or one-on-one bouts with a senior instructor present. The format of the class is open, providing the opportunity for previous students to rejoin and refresh on techniques they may have learned several quarters, or years ago.![](http://www.rit.edu/~kungfu/). For more information about this class or the Kung Fu Academy: http://www.rit.edu/~kungfu/. A course fee applies via SFS bill. (All quarters)

1113-032 Kung Fu/Rank Test Review
A typical review class will be about 1 hour and 20 minutes. The class consists mainly of lectures of philosophy, history, and analysis of Kung Fu techniques. This class is required for any students wishing to test for their first rank, but would be beneficial for any student wishing to learn more in the depth knowledge of this style of Kung Fu. For more information about this class or the Kung Fu Academy please visit: http://www.rit.edu/~kungfu/A course fee applies via SFS bill. (All quarters)

1113-033 Kung Fu Self-Defense
This self defense class is designed to teach the students the physical and mental techniques/attitudes they need to protect themselves both on campus and off. During class students will learn a variety of self-defense applications and techniques that can be used anywhere and in any situation. Over the course of the quarter students will gain an increase in physical fitness, self-confidence, and awareness, which will better enable them to deal with any situations they may encounter- whether walking back to the dorms late at night or walking home to your off-campus apartment, you’ll learn how to stay safe and out of danger. The techniques taught in this course will be based in Shaolin Kung Fu. A course fee applies. (All quarters)

1113-040 Tai Chi: Slow-Paced
This course is designed to teach 24 forms of Tai Chi movements with popular meditation ideas. Focus on creating strong internal energy and strength. Pursue and maintain good health, the “qi” sensations. Learn to balance the body with gentle movements that improve health conditions with each progressive section. Tai Chi was created 400 years ago and repeats simple movements again and again in certain frequency, allowing students to develop a special routine for maximal energy, skills and string internal power for application in defense and self-healing. First-time learners are welcomed! A course fee applies via SFS bill. (All quarters)

1113-042 Tai Chi: Fast-Paced
This fast-paced Tai Chi class will focus on ALL the 88 forms of Tai Chi movements. Students will have the opportunity to obtain the strength, knowledge and capabilities that will bring them to the level of “mastering.” Activities during class sessions involve pushing hands in continuous and fluid movements and teaching the release of tensions created by opposing forces thereby enhancing internal strength. This practice simulates devotional fighting in real life. First-time learners welcome! A course fee applies via SFS bill. (All quarters)

1113-050 Qigong
This martial arts course focuses on ‘internal energy exercise’ based on practices from 2000 years ago. The powerful combination of slow movement, breathing, postures and meditation practices allow the body to open energy channels instantly, thus dramatically healing disease that conventional medicine has failed to overcome. Students will focus on using ‘health energy’ to pursue success, peace and happiness. Basic course content: Flying Crane Qigong (combines movement with mental concentration); Fragrance Qigong (repeats simple movements in specific frequency for maximal biophysical energy); and Qigong Meditation (involves applying physical pressure to transform ‘bad’ energy to ‘good’ energy) to heal at a subconscious state. A course fee applies via SFS bill. (All quarters)

1113-060 Aikido
Aikido was founded by Master Morhei Uyeshiba as a synthesis primarily of Aiki-jutsu, Aiki-kon, Judo and founder's philosophy of peaceful reconciliation of conflict. One of the founder’s students, Koichi Tohei Sensei, founded a branch school called the Ki-Society, which emphasizes the development of personal “ki” through Aikido practice. RIT aikido traces its lineage back to the original Hombu dojo in Japan. The objective of this course is to provide physical conditioning by educating and coordinating the whole body-mind-spirit system. Basic ideas and techniques will be taught. The four basic principles to be presented: ‘Keep one-point,’ ‘Relax completely,’ ‘Keep weight underside,’ and ‘Extend Ki.’ Course fee applies via SFS bill. (All quarters)
Karate: Sparring

This exciting martial arts course is designed to help students increase their stamina, flexibility and basic techniques in self-defense, with emphasis on controlled fighting bouts (2 students matching their skills against each other). Main course objectives: develop confidence through physical fitness, relieve tension by providing a healthy forum for stress relief and gain the self discipline to enable students to lead a more productive lifestyle. Course content: calisthenics, stretching, and punching and kicking drills (include bag work and sparring with other students) to promote the development of footwork, distancing, timing, focus and strategies needed to be a skillful fighter. A course fee applies via SFS bill. (All quarters)

Brazilian Capoeira

This exciting martial art course is one of the few, if not the only one still in existence, native to Americans, developed in Brazil by the descendants of African slaves brought there by the Portuguese during the era of the Atlantic Slave trade. Capoeira is characterized by dynamic body play, kicking, sweeping, takedowns, aggressive feinting and head butt movements. It is played within a circle of onlookers and fellow participants, called a “Roda.” The game is played when two contestants enter the circle and begin to “ginga” (“to swing” in Portuguese), launching various attacks, counters and initiating defense. Class meets @ Murray’s Martial Arts Center at the Greece location / intersection of Latta and Dewey Rd. Maps available in the SLC lobby or call 663-0040, also see www.MMASC.US. A course fee applies via SFS bill. (All quarters)

Military Sciences

Air Force ROTC Physical Training

This course is designed to help the individual establish a physical readiness program. “Physical Readiness” are those factors that determine one’s ability to perform heavy, physical work and those that help maintain good health and appearance. Factors/components of readiness: muscular strength, muscular endurance and cardio-respiratory endurance. Major goals of the course: To physically challenge students and help students develop self-confidence, discipline and spirit. Students will work to develop physical readiness to a degree that will enable them to achieve or exceed the physical readiness standard established by the U.S. Air Force. Must be enrolled in RIT ROTC Air Force. There is no course fee.

Air Force ROTC Leadership Lab

The ROTC course is an Air Force Leadership Lab. Formerly Air Force Physical Training II, this revised course is designed to provide the students with a foundational understanding of the benefits, privileges and opportunities as well as responsibilities associated with an Air Force commission. Students will also be introduced to Air Force customs, courtesies, environment, drill, flight movement and ceremonies. Must be enrolled in the RIT ROTC Air Force Program. No course fee applies.

Army ROTC Conditioning Drills

This course is designed to help the individual establish a physical readiness program. “Physical Readiness” are those factors that determine one’s ability to perform heavy, physical work and those that help maintain good health and appearance. Factors/components of readiness: muscular strength, muscular endurance and cardio respiratory endurance. Major goals of course: To physically challenge students and help them develop self-confidence, discipline, and spirit. Students will work to develop readiness to a degree that will enable them to achieve or exceed the physical readiness standard established by the U.S. Army Evaluation will be determined by the use of the Army’s Physical Readiness Test. Must be enrolled in U of R ROTC Army. No course fee applies.

Army ROTC Leadership Lab

PREREQUISITE: Successful completion of Army Conditioning Drills (must be enrolled in Army ROTC). Course offered fall, winter and spring quarters. See section notes on SIS under the “Military Sciences” discipline, 1114) for more information on this required Army ROTC class. No course fee applies.

Navy Drill: ROTC University of Rochester

This course is designed to help the individual establish a physical readiness program. “Physical Readiness” is those factors that determine one’s ability to perform heavy, physical work and those that help maintain good health and appearance. Factors/components of readiness: muscular strength, muscular endurance and cardio respiratory endurance. Major goals of the course: to physically challenge students and help them develop self-confidence, discipline, and spirit. Students will work to develop physical readiness to a degree that will enable them to achieve or exceed the physical readiness standard established by the U.S. Naval Sciences. Must be enrolled in U of R ROTC Navy. There is no course fee. Call 275-4275 @ U of R for more information.
